Status Bits/OPC dependencies	<p>The active marker position determines where the centering will be attempted</p> <p>If the instrument is in a measurement such as averaging when centering is initiated, the act of centering the preselector restarts averaging, but the first average trace will not be taken until the centering is completed</p> <p>The offset applied to do the centering reads out on the "Preselector Adjust" on page 2591 control</p> <p>When centering the preselector, *OPC does not return true until the process is complete and a subsequent measurement has completed, nor are results returned in response to :READ or :MEASure queries</p> <p>The Measuring bit remains set while this command is operating, and does not go false until the subsequent sweep/measurement has completed</p>
------------------------------	---

Proper Preselector Operation

Certain considerations should be observed to ensure proper operation:

1. If the selected marker is **Off**, the instrument turns on a marker, performs a peak search, and adjusts the preselector using the selected marker's frequency. It uses the "highest peak" peak search method unqualified by threshold or excursion, so that there is no chance of a 'no peak found' error. It continues with that peak, even if it is the peak of just noise. Therefore, for this operation to work properly, there should be a signal on-screen in a preselected range for the peak search to find
2. If the selected marker is already **On**, the instrument attempts the centering at that marker's frequency. There is no preselector for signals below about 3.6 GHz, so if the marker is on a signal below 3.6 GHz, no centering will be attempted, and an advisory message generated
3. In some models, the preselector can be bypassed. If it is bypassed, no centering will be attempted in that range and a message will be generated

Preselector Adjust

Allows you to manually adjust the preselector filter frequency to optimize its response to the signal of interest. This function is only available when **"Presel Center" on page 2589** is available.

For general purpose signal analysis, using **Presel Center** is recommended. Centering the filter minimizes the impact of long-term preselector drift. **Preselector Adjust** can be used instead to manually optimize the preselector. One application of manual optimization would be to peak the preselector response, which both optimizes the signal-to-noise ratio and minimizes amplitude variations due to small (short-term) preselector drifting.

When **Presel Center** is performed, the offset applied to do the centering becomes the new value of **Preselector Adjust**.

Remote Command	<code>[:SENSe]:POWer[:RF]:PADJust <freq></code> <code>[:SENSe]:POWer[:RF]:PADJust?</code>
Example	<code>:POW:PADJ 100KHz</code> <code>:POW:PADJ?</code>
Notes	The value on the control reads out to 0.1 MHz resolution
Dependencies	<ul style="list-style-type: none"> - Does not appear in CXA-m - Does not appear in VXT Models SP900B/11A - Grayed-out if microwave preselector is off - Grayed-out if entirely in Band 0, that is, if Stop Freq is lower than about 3.6 GHz - Grayed-out if entirely above 50 GHz, that is, if Start Freq is higher than 50 GHz - Blank in models that do not include a preselector, such as Option 503. If the command is sent in these instruments, it is accepted without error, and the query always returns 0 - Grayed-out in the Spectrogram View
Preset	0 MHz
State Saved	The Preselector Adjust value set by " Presel Center " on page 2589, or by manually adjusting Preselector Adjust Not saved in instrument state, and does not survive a Preset or power cycle
Min	-500 MHz
Max	500 MHz
Backwards Compatibility SCPI	<code>[:SENSe]:POWer[:RF]:MW:PADJust</code> <code>[:SENSe]:POWer[:RF]:MMW:PADJust</code>
Notes	The command has no effect, and the query always returns MWAVE
Backwards Compatibility SCPI	<code>[:SENSe]:POWer[:RF]:PADJust:PRESelector MWAVE MMWave EXTERNAL</code> <code>[:SENSe]:POWer[:RF]:PADJust:PRESelector?</code>

Internal Preamp

Accesses a menu of controls for the internal preamps. Turning on the preamp gives a better noise figure, but a poorer inter-modulation distortion (TOI) to noise floor dynamic range. You can optimize this setting for your measurement.

The instrument takes the preamp gain into account as it sweeps. If you sweep outside of the range of the preamp, the instrument will also account for that. The displayed result always reflects the correct gain.

For some measurements, when the preamp is on and any part of the displayed frequency range is below the lowest frequency for which the preamp has specifications, a warning condition message appears in the status line. For example, for a preamp with a 9 kHz lowest specified frequency: "Preamp: Accy unspec'd below 9 kHz".

Selection	Example	Note
Off	<code>:POW:GAIN OFF</code>	
Low Band	<code>:POW:GAIN ON</code> <code>:POW:GAIN:BAND LOW</code>	Sets the internal preamp to use only the low band. The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Low Band selection in the dropdown
Full Range	<code>:POW:GAIN ON</code> <code>:POW:GAIN:BAND FULL</code>	Sets the internal preamp to use its full range. The low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model) is supplied by the low band preamp and the frequencies above low band are supplied by the high band preamp The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Full Range selection in the dropdown. If the high band option is not installed the Full Range selection does not appear

NOTE

The maximum **Center Frequency** for Low Band, displayed in square brackets, can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as SP900S& SP900P), IFBW values ≤ 40 MHz have a maximum Low Band frequency of 3.6 GHz, while $40 \text{ MHz} < \text{IFBW} \leq 1 \text{ GHz}$ have a maximum of 3.3 GHz, and $1 \text{ GHz} < \text{IFBW} \leq 1.5 \text{ GHz}$ have a maximum of 3.5 GHz. IFBW values $> 1.5 \text{ GHz}$ do not support a **Center Frequency** that can reach the Low Band maximum frequency. In these cases, **N/A** is displayed in the square brackets for Low Band.

Remote Command	<code>[:SENSe]:POWer[:RF]:GAIN:BAND LOW FULL</code> <code>[:SENSe]:POWer[:RF]:GAIN:BAND?</code> <code>[:SENSe]:POWer[:RF]:GAIN[:STAtE] OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:GAIN[:STAtE]?</code>
Example	<code>:POW:GAIN:BAND LOW</code> <code>:POW:GAIN:BAND?</code> <code>:POW:GAIN OFF</code> <code>:POW:GAIN?</code>
Dependencies	Not available on all hardware platforms. If the preamp is not present or is unlicensed, this control is not shown Does not appear in VXT Models SP900B/11A/15A/16A

	If <code>:POW:GAIN:BAND FULL</code> is sent when a low band preamp is available, the preamp band parameter is set to <code>LOW</code> instead of <code>FULL</code> , and an "Option not installed" message is generated Not available when the electronic/soft attenuator is enabled
Preset	<code>LOW</code> <code>OFF</code>
State Saved	Saved in instrument state
Annotation	When the USB Preamp is not connected to USB, the Preamp annotation in the Meas Bar says "Off" if the preamp is off and displays the frequency range of the low band or full range preamp depending on the setting. For example, if the Preamp is set to Low Band and the Low Band is 3.6 GHz the annotation says "3.6 GHz". If it is a 13.6 GHz preamp and it is set to Full Range the annotation says "13.6 GHz" When the USB Preamp is connected to USB, the Preamp annotation says "Preamp: USB" if the internal preamp is off or "Preamp: USB, Int" if the internal preamp is on (only for measurements that support the USB preamp)

LNA

Lets you turn the Low Noise Amplifier (**LNA**) on or off.

LNA is an additional preamplifier that provides superior DANL and frequency range compared to "**Internal Preamp**" on page 2592. LNA provides lower system noise figure, especially at frequencies above 100 MHz, and can be operated up to the full range of 50 GHz instruments.

For best possible sensitivity, **LNA** can be turned on *together* with "**Internal Preamp**" on page 2592, although if you operate both preamps together, note that the TOI (distortion) specifications are impacted. The sensitivity improvement of this combination is substantial when operating in high band (frequencies above 3.6 GHz).

For more details about annotation, see "**More Information**" on page 1186

Remote Command	<code>[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe] OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe]?</code>
Example	<code>:POW:GAIN:LNA ON</code>
Dependencies	Requires Option LNA, except for VXT models SP900B/16A Does not appear in VXT models SP900B/10A/11A May not appear in some measurements LNA is not available when the electronic/soft attenuator is enabled
Preset	<code>OFF</code>
State Saved	Saved in State
	More Information

When **LNA** is installed, the preamp annotation changes to show the state of both **LNA** and **Internal Preamp**. Below is an example:

```
Atten: 8 dB
Pre: Int on, LNA on
μW Path: LNP, On
Source: Off
```

Note that when operating entirely in the low band (below about 3.6 GHz), if **LNA** is on, **Internal Preamp** is switched off (even if you have its switch set to **ON**). This is because the noise performance is actually degraded in low band if both preamps are on. In this case, the annotation reflects the actual state of the two preamps, but the **Internal Preamp** annotation displays in amber, to warn you that the actual state of **Internal Preamp** does not match its switch control display:

```
Atten: 8 dB
Pre: Int off, LNA on
μW Path: LNP, On
Source: Off
```

μW Path Control

Options for this control include **μW Preselector Bypass** (Option MPB), **Low Noise Path** (Option LNP) and **Full Bypass Enable** in the High Band path circuits.

When the μW Preselector is bypassed, flatness is improved, but will be subject to spurs from out of band interfering signals. When **Low Noise Path Enable** is selected, the instrument automatically bypasses certain circuitry in the high frequency bands that can contribute to noise, when it is appropriate based on other instrument settings.

For most applications, the preset state is **Standard Path**, which provides the best remote-control throughput, minimizes acoustic noise from switching and minimizes the risk of wear in the hardware switches, particularly in remote test scenarios where both low band and high band setups will follow in rapid succession. In this path, the bypass of the low band/high band switch and microwave preamp is never activated, which can cause some noise degradation but preserves the life of the bypass switch.

For applications that utilize the wideband IF paths, the preset state is **μW Preselector Bypass**, if option MPB is present. This is because, when using a wideband IF such as the 140 MHz IF, the μW Preselector's bandwidth can be narrower than the available IF bandwidth, causing degraded amplitude flatness and phase linearity, so it is desirable to bypass the preselector in the default case.

You may choose **Low Noise Path Enable** for a lower noise floor, especially in the 21–26.5 GHz region, though without improving many measures of dynamic range, and without giving the best possible noise floor. The preamp, if purchased and used, gives better noise floor than does **Low Noise Path Enable**, but the preamp's compression threshold and third-order intercept are much poorer than that of **Low Noise Path Enable**.

A fourth choice is **Full Bypass Enable**, which combines **μ W Preselector Bypass** and **Low Noise Path Enable**. Because this can bypass most of the circuitry between the input and the first mixer, care should be taken when using this setting to avoid damaging the mixer. **Full Bypass Enable** is only available if both options LNP and MPB are present, as well as option FBP.

Path	Example	Note
Standard Path	:POW:MW:PATH STD	Normal setting for most measurements. μ W Preselector in circuit, Low Noise Path disabled
Low Noise Path Enable	:POW:MW:PATH LNP	See " Low Noise Path Enable " on page 1191
μ W Preselector Bypass	:POW:MW:PATH MPB	See " μW Preselector Bypass " on page 1193
Full Bypass Enable	:POW:MW:PATH FULL	See " Full Bypass Enable " on page 1194

Remote Command	:SENSe:POWer[:RF]:MW:PATH STD LNPath MPBypass FULL [:SENSe]:POWer[:RF]:MW:PATH?
Example	:POW:MW:PATH LNP Enables the Low Noise path :POW:MW:PATH?
Notes	If " Presel Center " on page 2589 is performed, the instrument will momentarily switch to the Standard Path, regardless of the setting of μW Path Control The DC Block will always be switched in when the low noise path is switched in, to protect succeeding circuitry from DC. Note that this does not mean "when the low noise path is enabled" but when, based on the Low Noise Path rules, the path is actually switched in. This can happen when the selection is Low Noise Path Enable or Full Bypass Enable . In the case where the DC Block is switched in the instrument is now AC coupled. However, if you selected DC coupling, the UI would still behave as though it were DC coupled, including all annunciation, warnings, status bits, and responses to SCPI queries. This is because, based on other settings, the instrument could switch out the low noise path at any time and hence go back to being DC coupled Alignment switching ignores the settings in this menu, and restores them when finished
Dependencies	Does not appear in CXA-m, VXT Models SP900B/11A, nor in BBIQ and External Mixing <ul style="list-style-type: none"> The Low Noise Path Enable selection does not appear unless Option LNP is present and licensed The μW Preselector Bypass selection does not appear unless Option MPB is present and licensed The Full Bypass Enable selection does not appear unless options LNP and MPB are both present as well as option FBP <p>In any of these cases, if the required options are not present and the SCPI command is sent, error - 241, "Hardware missing; Option not installed" is generated</p> <p>Low Noise Path Enable and Full Bypass Enable are grayed-out if the current measurement does not support them</p> <p>Low Noise Path Enable and Full Bypass Enable are not supported in Avionics and MMR Modes (non-</p>

modulation measurements). In any of these cases (that is, the feature is not supported in either measurement or Mode), if the SCPI command is sent, the following error is generated: -221, "Setting Conflict; Feature not supported for this measurement"

Couplings	See the tables above
Preset	<code>ON</code>
Range	<code>ON OFF</code>

Low Noise Path Enable

Low Noise Path Enable provides a lower noise floor under some circumstances, particularly when operating in the 21–26.5 GHz region. With the Low Noise Path enabled, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

3 5G NR Mode

3.6 Spurious Emissions Measurement

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz
- The internal preamp is not installed, or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Low Noise Path Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

For measurements that use IQ acquisition, the low noise path is used when **Center Frequency** is in High Band (> 3.6 GHz) and no preamp is in use. In other words, the rules above are modified to use only the center frequency to qualify which path to switch in. This is not the case for FFTs in the Swept SA measurement; they use the same rules as swept measurements.

Note that the Low Noise Path, while giving improved DANL, has the disadvantage of decreased TOI performance and decreased gain compression performance relative to the standard path.

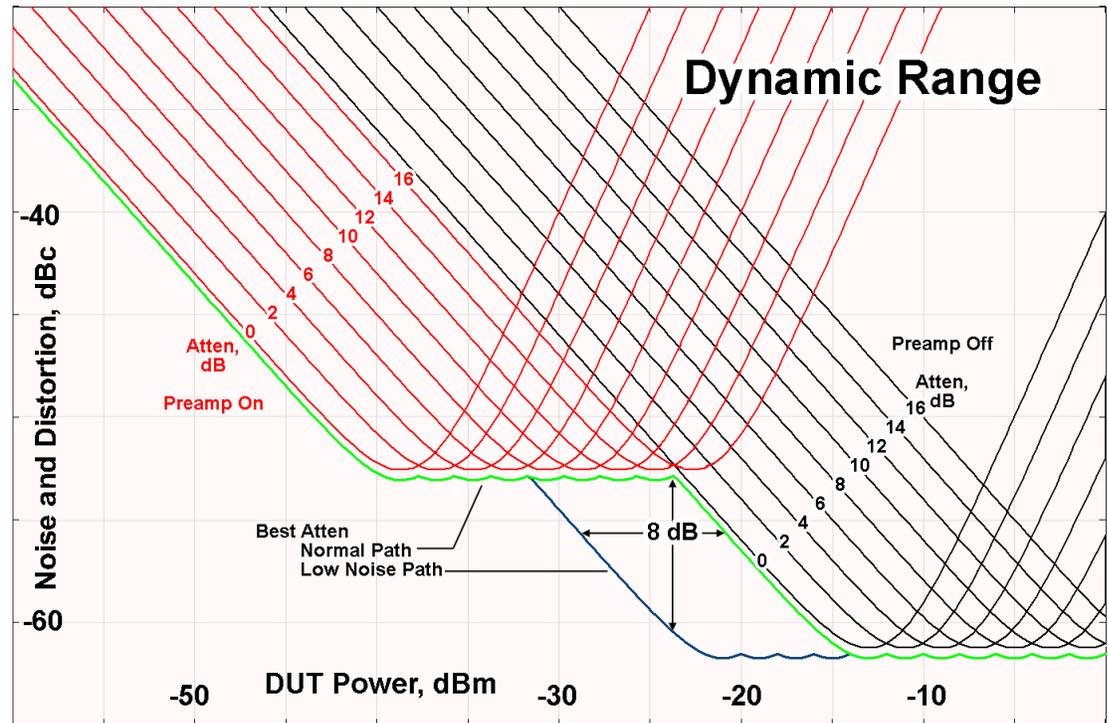

Note also that the bypass switch is a mechanical switch and has finite life, so if the **Low Noise Path Enable** is selected, it is possible to cause frequent cycling of this switch by frequently changing instrument settings such that the above conditions hold true only some of the time. A user making tests of this nature should consider opting for the **Standard Path**, which will never throw the bypass switch, at the expense of some degraded noise performance.

The low noise path is useful for situations where the signal level is so low that the instrument performance is dominated by noise even with 0 dB attenuation, but still high enough that the preamp option would have excessive third-order intermodulation or compression. The preamp, if purchased and used, gives better noise floor than does the “Low Noise Path.” However, its compression threshold and third-order intercept are much poorer than that of the non-preamp path.

There are some applications, typically for signals around –30 dBm, for which the third-order dynamic range of the standard path is good enough, but the noise floor is not low enough even with 0 dB input attenuation. When the third-order dynamic range of the preamp path is too little and the noise floor of the standard path is too high, the Low Noise Path can provide the best dynamic range

The graph below illustrates the concept. It shows, in red, the performance of an instrument at different attenuation settings, both with the preamp on and off, in a measurement that is affected by both instrument noise and instrument TOI. The green shows the best available dynamic range, offset by 0.5 dB for clarity. The blue

shows how the best available dynamic range improves for moderate signal levels with the low noise path switched in. In this illustration, the preamp improves the noise floor by 15 dB while degrading the third-order intercept by 30 dB, and the low noise path reduces loss by 8 dB. The attenuator step size is 2 dB.

There are other times where selecting the low noise path improves performance, too. Compression-limited measurements such as finding the nulls in a pulsed-RF spectrum can profit from the low noise path in a way similar to the TOI-limited measurement illustrated. Accuracy can be improved when the low noise path allows the optimum attenuation to increase from a small amount like 0, 2 or 4 dB to a larger amount, giving better return loss at the instrument input. Harmonic measurements, such as second and third harmonic levels, are much improved using the low noise path because of the superiority of that path for harmonic (though not intermodulation) distortion performance.

μW Preselector Bypass

Toggles the preselector bypass switch for band 1 and higher. When the microwave preselector is on, the signal path is preselected. When the microwave preselector is off, the signal path is not preselected. The preselected path is the normal path for the instrument.

The preselector is a tunable bandpass filter which prevents signals away from the frequency of interest from combining in the mixer to generate in-band spurious signals (images). The consequences of using a preselector filter are its limited

bandwidth, the amplitude and phase ripple in its passband, and any amplitude and phase instability due to center frequency drift.

Option MPB or pre-selector bypass provides an unpreselected input mixer path for certain X-Series signal analyzers with frequency ranges above 3.6 GHz. This signal path allows a wider bandwidth and less amplitude variability, which is an advantage when doing modulation analysis and broadband signal analysis. The disadvantage is that, without the preselector, image signals will be displayed. Another disadvantage of bypassing the preselector is increased LO emission levels at the front panel input port.

Image responses are separated from the real signal by twice the 1st IF. For IF Paths of 10 MHz and 25 MHz, the 1st IF is 322.5 MHz, so the image response and the real signal will be separated by 645 MHz. The 1st IF will be different for other IF Path settings. When viewing a real signal and its corresponding image response in internal mixing, the image response will be to the left of the real signal.

Also, the image response and the real signal typically have the same amplitude and exhibit the same shape factor.

However, if Option FS1 (Fast Sweep Capability) is enabled, the image response in the Swept SA measurement appears lower in amplitude and has a much wider shape factor compared to the real signal.

Full Bypass Enable

With **Full Bypass Enable** selected, the microwave preselector is bypassed. In addition, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz.
- the internal preamp is not installed or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Full Bypass Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

CAUTION

When **Full Bypass Enable** is selected, and "**Y Scale**" on page 2562 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq >3.6 GHz and the Preamp is either not licensed, set to Low Band, or Off). This puts the first converter at high risk

to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:
Full Bypass Enabled, maximum safe input power reduced

Microwave Preselector Bypass Backwards Compatibility

Example	<code>:POW:MW:PRES OFF</code> Bypasses the microwave preselector
Notes	Included for Microwave Preselector Bypass backwards compatibility The ON parameter sets the STD path (<code>:POW:MW:PATH STD</code>) The OFF parameter sets path MPB (<code>:POW:MW:PATH MPB</code>)
Preset	ON
Backwards Compatibility SCPI	<code>[:SENSe] :POWer [:RF] :MW:PRESelector [:STATe] ON OFF 0 1</code> <code>[:SENSe] :POWer [:RF] :MW:PRESelector [:STATe] ?</code>

Frequency Extender Preselection Bypass

Only applies to the high frequency path of the Frequency Extender, and only if the Frequency Extender allows it. For example, the V3050A high frequency path is 50 – 110 GHz and *does* allow control of the preselector bypass.

When the Frequency Extender’s preselection is bypassed, flatness is improved, but will be subject to spurs from out-of-band interfering signals. For bandwidths greater than 2.5 [GHz], it is recommended that the signal bypass the Frequency Extender Preselector since the max bandwidth of the Preselector can be as narrow as 2.5 [GHz].

For most applications, the preset state is **OFF**, which gives the best remote-control throughput, minimizes acoustic noise from switching, minimizes out of band spurs, and minimizes the risk of wear in the hardware switches.

Preselector and Bandwidth Conflict

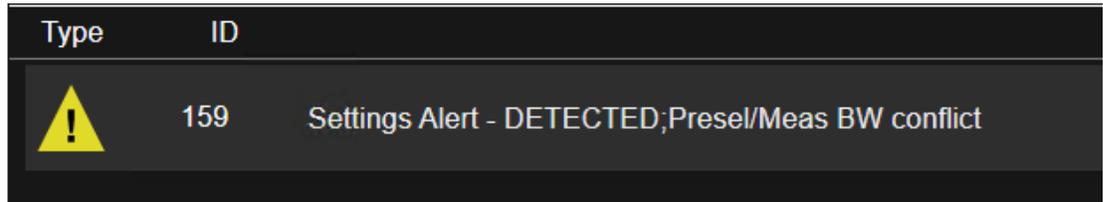

When the Frequency Extender Preselector is applied and the signal bandwidth is greater than 2.5 [GHz], then a settings alert message will show to warn the user that the signal may be distorted due to the limitation of the Frequency Extender Preselector bandwidth.

An example of the settings alert message is shown below.

Settings Alert message in the Status Bar at the bottom of the display.

Settings Alert message in the error queue

Allow Full Bypass in Auto

Enable or disable Full Bypass in μ W Path Auto rule. See " [\$\mu\$ W Path Control](#)" on page 2594.

When this function is **ON**, and " [\$\mu\$ W Path Control](#)" on page 2594 is in **AUTO**, it is possible for the auto rules to select the **FULL** Bypass state, wherein both the Preamp and the Microwave Preselector are bypassed. Otherwise, the auto rules never select the **FULL** Bypass state. This is convenient when making wideband measurements, but it also adds some risk of damage to the first converter.

CAUTION

When **Full Bypass Enable** is selected, and "[Y Scale](#)" on page 2562 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq > 3.6 GHz and the Preamp is either not licensed, set to **Low Band** or **Off**). This puts the first converter at high risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:

Full Bypass Enabled, maximum safe input power reduced

Remote Command	<code>[:SENSe]:POWer[:RF]:MW:PATH:AUTO:FULL ON OFF 1 0</code> <code>[:SENSe]:POWer[:RF]:MW:PATH:AUTO:FULL?</code>
Example	<code>:POW:MW:PATH:AUTO:FULL ON</code> <code>:POW:MW:PATH:AUTO:FULL?</code>
Dependencies	Only appears if Option FBP is installed, and in the following measurements <ul style="list-style-type: none"> - 5GNR Modulation Analysis and IQ Waveform - WLAN IQ Waveform - Channel Quality Group Delay
Preset	OFF

Software Preselection

Provided in some instruments, either to compensate for issues with provided hardware preselection or to provide the preselection function when there is no hardware preselector.

SP900S

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

In SP900S, **Software Preselection** only applies for frequencies above 50 GHz, therefore it is only used for RF Input 2. Even if turned on, it is not used for other inputs, and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that in SP900S, in Swept SA measurement, **Software Preselection** works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT sweep type.

SP900S+V3050A

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

For SP900S+V3050A, Software Preselection only applies for frequencies above 50 GHz, therefore it is only used for External RF. Even if it is turned on, it will not be used for other inputs and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that for SP900S+V3050A, in the Swept SA measurement, Software Preselection works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT Sweep Type.

VXT models SP900B/11A

Software Preselection is used to provide the preselection function, as there is no hardware preselector in these models. Two background traces are taken and compared point by point, and the point with the lowest amplitude from the two traces is used. This provides a method to reduce spurs that are internally generated

within the VXT, but you should note the following when using Software Preselection:

- There is some speed cost due to the need to take multiple captures
- Taking the point with the lowest amplitude in each trace will make the average noise level lower at all points that do not have a spur. This can reduce the accuracy of the measurement of noise and noise-like signals

Because of the difficulty in identifying spurs manually, you are recommended to leave Software Preselection **ON** at all times in VXT models SP900B/11A. If you turn it off in order to speed up your measurement or improve noise accuracy, be aware of unwanted onscreen spurs.

Remote Command	<code>[:SENSe]:POWer[:RF]:SWPreSel:STATe 0 1 ON OFF</code> <code>[:SENSe]:POWer[:RF]:SWPreSel:STAT?</code>						
Example	<code>:POW:SWPR:STAT 1</code> <code>:POW:SWPR:STAT?</code>						
Dependencies	Only appears in SP900S, SP900S+V2050A, and VXT models SP900B/11A. Does not appear in all measurements						
Couplings	Affects Sweep Time Auto Tune supports Software Preselection , so Auto Tune should be performed after setting the Software Preselection state						
Preset	<table border="1"> <tr> <td>SP900S</td> <td>OFF</td> </tr> <tr> <td>SP900S+V3050A</td> <td>ON</td> </tr> <tr> <td>SP900B/11A</td> <td>ON</td> </tr> </table>	SP900S	OFF	SP900S+V3050A	ON	SP900B/11A	ON
SP900S	OFF						
SP900S+V3050A	ON						
SP900B/11A	ON						
State Saved	Saved in instrument state						

SW Preselection Type

Specifies the algorithm used for software preselection.

Two hidden sweeps are taken in succession. The second sweep is offset in LO frequency by $2 * IF / N$. For each point in each trace, the smaller amplitude from the two traces is taken and placed in that point in the selected trace. The Peak detector is auto-selected to improve the image suppression effectiveness. Responses of each trace that lie on top of one another will remain and are valid signals. Other signals are images and are suppressed. The action of taking the smaller of the two traces will make the average noise level lower in all points that do not have an image, thus reducing the accuracy of the measurement of noise and noise-like signals.

- **NORMa1** - mathematically removes all image and multiple responses of signals present at the input
- **ADVanced** - any trace processing (such as “max hold” or trace averaging) is performed on the points of both candidate traces before the “select minimum” operation occurs. This form of processing works better for non-stationary signals, such as pulsed-RF signals

Remote Command	<code>[:SENSe]:POWer[:RF]:SWPResel NORMa1 ADVanced</code> <code>[:SENSe]:POWer[:RF]:SWPResel?</code>
Example	<code>:POW:SWPR NORM</code> <code>:POW:SWPR?</code>
Dependencies	Only appears in SP900Sand SP900S+V3050A. Only appears in measurements that use the Swept method When " Software Preselection " on page 2604 is disabled, this control is grayed-out. The grayout message is “Unavailable unless SW Presel enabled”
Preset	SP900S ADVanced SP900S+V3050A NORMa1
State Saved	Saved in instrument state

SW Preselection BW

Specifies the effective bandwidth to be used for Software Preselection.

The options are:

- **NORMa1** – when making Swept measurements, a software preselection algorithm is used which takes up to 4 background acquisitions, then post-processes the result. This algorithm can remove images from signals with an occupied bandwidth up to around 3 GHz. (Default/Preset setting). When making FFT measurements, this algorithm is not used, instead the same algorithm is used as for **NARRow** (below)
- **NARRow**– a software preselection algorithm is used which takes two background acquisitions, then post-processes the result to detect and remove images from wideband signals with occupied bandwidths up to 2 GHz. This increases the risk of images failing to be rejected, but improves the measurement speed

Remote Command	<code>[:SENSe]:POWer[:RF]:SWPResel:BW NORMa1 NARRow</code> <code>[:SENSe]:POWer[:RF]:SWPResel:BW?</code>
Example	<code>:POW:SWPR:BW NARR</code>
Dependencies	Only appears in SP900Sand SP900S+V3050A. Only appears in measurements that use the Swept

	method				
	When " Software Preselection " on page 2604 is disabled, this control is grayed-out. The grayout message is "Unavailable unless SW Presel enabled"				
	For SP900S+V3050A, the parameter is SCPI-only, and always set to NARRow when Software Preselection is enabled				
Preset	<table border="1"> <tr> <td>SP900S</td> <td>NORMa1</td> </tr> <tr> <td>SP900S+V3050A</td> <td>NARRow</td> </tr> </table>	SP900S	NORMa1	SP900S+V3050A	NARRow
SP900S	NORMa1				
SP900S+V3050A	NARRow				
State Saved	Saved in instrument state				

High Freq Prefilter

Lets you set the state of Prefilter for Center Frequencies above 1310 MHz.

In VXT Models SP900B/11A, the Receiver RF path has a bank of filters that come after the RF Attenuator in the signal path. Since this bank of filters precedes the mixer they are known as the "Prefilter" bank. Their purpose is to eliminate unwanted in-band mixing products by filtering out all but the desired frequencies before the signals get to the mixer. There are 13 prefilter bands to cover the frequencies between 9 kHz and 6000 MHz. The Prefilter provides the necessary rejection of the unwanted signal.

Remote Command	<code>[:SENSe] : <measurement> : PFILter [:STATe] ON OFF 1 0</code> <code>[:SENSe] : <measurement> : PFILter [:STATe] ?</code>
Example	For example, to enable High Freq Prefilter in IQ Analyzer Mode: For the Complex Spectrum Measurement: <code>:SPEC:PFIL ON</code> For the IQ Waveform Measurement: <code>:WAV:PFIL ON</code>
Dependencies	Only appears in VXT models SP900B/11A with center frequency above 1310 MHz
Preset	See " Prefilter Presets " on page 1200 below
State Saved	Saved in instrument state

Prefilter Presets

Meas	Mode	Preset
SPEC	BASIC	OFF
WAV	BASIC, WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA	OFF
MON	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA	OFF
RHO	WCDMA	OFF
CDP	WCDMA	OFF

Meas	Mode	Preset
PCON	WCDMA	OFF
EVMQ	WCDMA	OFF
CHP	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
OBW	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
ACP	WCDMA, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
SEM	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
PST	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
PVT	WLAN, LTEAFDD, LTEATDD, 5GNR	OFF
EVM	WLAN, LTEAFDD, LTEATDD, 5GNR	OFF
FLAT	WLAN	OFF
EVMM	WLAN	OFF
CEVM	LTEAFDD, LTEATDD	OFF
PAVT	5GNR, VMA	OFF
DDEM	VMA	OFF
OFDM	VMA	OFF
SAN	SA	ON
HARM	SA	ON

3.6.4 BW

There is no **BW** functionality in the Spurious Emissions Measurement.

3.6.5 Display

Opens the **Display** menu, which lets you configure display items for the current Mode, Measurement View or Window.

3.6.5.1 View

Contains controls for selecting the current **View**, and for editing User Views.

Views

The Spurious Emissions measurement has two views:

1. Graph + Metrics (RESult)
2. ALL Ranges

These Views are multiple-window Views. When in a multiple window View, you select a window by touching it. The menu controls may sometimes change depending on which window is selected.

Remote Command	<code>:DISP:SPURious:VIEW[:SElect] RESult ALL</code> <code>:DISP:SPURious:VIEW[:SElect]?</code>
Example	<code>:DISP:SPUR:VIEW RANG</code> <code>:DISP:SPUR:VIEW?</code>
Preset	<code>RESult</code>
State Saved	No
Range	Graph + Metrics All Ranges

Graph + Metrics

Windows: ["Graph" on page 1156](#), ["Table" on page 1157](#)

Select Graph + Metrics to view measurement results.

- The upper window displays a trace of the range that contains the currently selected spur
- The lower window displays a list of spurs detected in a measurement cycle. The currently selected spur, which is highlighted, can be changed by the Spur control in the Meas Setup menu

Example	<code>:DISP:SPUR:VIEW RES</code>
---------	----------------------------------

All Ranges

Windows: ["Graph" on page 1156](#), ["All Range Table" on page 1158](#)

Select All Ranges to view measurement results for all the ranges.

- The upper window displays a merged trace of all the ranges
- The lower window displays a list of spurs detected in a measurement cycle. The currently selected spur, which is highlighted, can be changed by the Spur control in the Meas Setup menu

Example	<code>:DISP:SPUR:VIEW ALL</code>
---------	----------------------------------

User View

Lets you choose a View from the saved User Views for the current measurement. This panel only appears if a User View exists for the current measurement.

Remote Command	<code>:DISPlay:VIEW:ADVanced:SElect <alphanumeric></code> <code>:DISPlay:VIEW:ADVanced:SElect?</code>
Example	Select Baseband as the current View <code>:DISP:VIEW:ADV:SEL "Baseband"</code>
Notes	<p>You must be in the measurement whose View you are trying to set to send the command. You can only set Views for the current measurement using this command</p> <p>For predefined views, the parameter is derived from the view name that is shown in the View list in the user interface. For example, if you are trying to select the Trace Zoom view in the Swept SA measurement, you send:</p> <pre>:DISP:VIEW:ADV:SEL "Trace Zoom"</pre> <p>because "Trace Zoom" is the name of the View as seen in the Mode/Meas dialog or in the Display, View menu</p> <p>You <i>cannot</i> use the legacy View parameter (which in this case would be <code>TZOOM</code>) with</p> <pre>:DISP:VIEW:ADV:SEL</pre> <p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case. Thus, both of the following forms work:</p> <pre>:DISP:VIEW:ADV:SEL "Trace Zoom"</pre> <pre>:DISP:VIEW:ADV:SEL "TRACE ZOOM"</pre> <p>If the specified view is not a valid View, the query returns the error message "-224, Illegal parameter value; View with the name <alphanumeric> does not exist"</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated</p>
Backwards Compatibility SCPI	<p>The legacy node</p> <pre>:DISPlay:VIEW[:SElect]</pre> <p>is retained for backwards compatibility, but it only supports predefined views</p>

Restore Layout to Default

Restores the Layout to the default for Basic.

Modified Views are very temporary; if you exit the current measurement they are discarded, and they are not saved in State. To retain this View for later use, and to be able to return easily to your original Basic View, you can save your edited View as a "User View".

Save Layout as New View

Saves your new View as a User View. An alpha keyboard appears, which lets you name your new View; the default is the old View name plus a number.

Remote Command	<code>:DISPlay:VIEW:ADVanced:NAME <alphanumeric></code>
----------------	---

Example	<code>:DISP:VIEW:ADV:NAME "Baseband"</code> Creates a new View named Baseband from the current View, and selects it as the current View
Notes	<code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If <code><alphanumeric></code> name already exists as a View, the error message "-224, Illegal parameter value; View <alphanumeric> already exists" is generated If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message "-221, Settings conflict; User View SCPI cannot be used while Display is disabled" is generated

Re-Save User View

You can re-edit a User View; if you make changes, then an asterisk will appear next to the User View's name. You can then tap **Re-Save User View** to save it back to its existing name, or **Save Layout as New View** to add another, new User View.

This is a front panel function only, there is no remote command available to perform this function. To do this remotely, you must first perform **Save Layout as New View**, then delete the old User View and rename the new one with the name of the View you just deleted.

Rename User View

You can rename the current View by giving it a new unique name. Only User Views can be renamed, if the current View is a Predefined View, an error occurs.

Remote Command	<code>:DISPlay:VIEW:ADVanced:REName <alphanumeric></code>
Example	<code>:DISP:VIEW:ADV:REN "Baseband"</code>
Notes	<code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If the <code><alphanumeric></code> specifying the new name is already present in the list of View names, the error message "-224, Illegal parameter value; View <alphanumeric> already exists" is generated If the current View is a Predefined View, the error message "-224, Illegal parameter value; Cannot rename a Predefined View" is generated If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated

Delete User View

You can delete the current View if it is a User View. The default view becomes the current view for the Measurement.

Remote Command	<code>:DISPlay:VIEW:ADVanced:DELeTe</code>
Example	<code>:DISP:VIEW:ADV:DEL</code>
Notes	<p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case</p> <p>If the <code><alphanumeric></code> is not present in the list of View names, the error message “-224, Illegal parameter value; View <code><alphanumeric></code> does not exist” is generated</p> <p>If the current View is a Predefined View, the error message “-224, Illegal parameter value; Cannot delete a Predefined View” is generated</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message “-221, Settings conflict; View SCPI cannot be used while Display is disabled” is generated</p>

Delete All User Views

Deletes all previously saved User Views. The default view becomes the current view for the Measurement if a User View was the current view when this command was executed.

Remote Command	<code>:DISPlay:VIEW:ADVanced:DELeTe:ALL</code>
Example	<code>:DISP:VIEW:ADV:DEL:ALL</code>
Notes	Disabled if there are no User Views

View Editor Remote Commands

The following remote commands help you manage Views and User Views. Note that the SCPI node for User Views handles both Predefined and User Views. The legacy nodes, `:DISPlay:VIEW[:SElect]` and `:DISPlay:VIEW:NSEL`, are retained for backwards compatibility, but they only support predefined views.

View Listing Query

Returns a string containing a comma-separated list of names for *all* the Views, including User Views, available for the current Measurement.

Remote Command	<code>:DISPlay:VIEW:ADVanced:CATalog?</code>
Example	<code>:DISP:VIEW:ADV:CAT?</code>
Notes	<p>Returns a quoted string of the available Views for the current measurement, separated by commas. The list includes names for <i>all</i> the Views, including User Views, available for the current Measurement</p> <p>Example:</p> <p><code>"Normal,Trace Zoom,Spectrogram,Baseband,myView1,yourView1"</code></p>

No distinction is made between Predefined and User Views
If you switch measurements with the display disabled (via `:DISP:ENAB OFF`), then query the list of available Views, the result is undefined

User View Listing Query

Returns a string containing a comma-separated list of names for *only* the User Views available for the current Measurement.

Remote Command	<code>:DISPlay:VIEW:ADVanced:USER:CATalog?</code>
Example	<code>:DISP:VIEW:ADV:USER:CAT?</code>
Notes	Returns a quoted string of the available User Views for the current measurement, separated by commas. Example: <code>"Baseband,myView1,yourView1"</code> If you switch measurements with the display disabled (see "Display Enable (Remote Command Only)" on page 2616), then query the list of available Views, the result is undefined

3.6.5.2 Annotation

Contains controls for setting up the annotation for the current Mode or Measurement.

Graticule

Turns the display graticule On or Off for all windows with graticules in all measurements in the current Mode. Also turns the graticule Y-Axis annotation on and off.

Remote Command	<code>:DISPlay:GRATicule[:STATe] OFF ON 0 1</code> <code>:DISPlay:GRATicule[:STATe]?</code>
Example	<code>:DISP:GRAT OFF</code>
Notes	The graticule is the set of horizontal and vertical lines that make up the grid/divisions for the X-Axis and Y-Axis
Preset	<code>ON</code>
State Saved	Saved in instrument state
Backwards Compatibility SCPI	<code>:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe] OFF ON 0 1</code> <code>:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe]?</code> This command is accepted for backwards compatibility with older instruments, but the <code>WINDow</code> , <code>TRACe</code> and <code>GRID</code> parameters are ignored

Screen Annotation

Controls the display of the annunciation and annotation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) and the Y-Axis annotation, for all windows with screen annotation in all measurements in the current Mode.

This does *not* include marker annotation (or the N dB result). When **OFF**, the graticule expands to fill the entire graticule area, leaving only the 1.5% gap above the graticule, as described in the **Trace** section.

Remote Command	<code>:DISPlay:ANNotation:SCReen[:STATe] OFF ON 0 1</code> <code>:DISPlay:ANNotation:SCReen[:STATe]?</code>
Example	<code>:DISP:ANN:SCR OFF</code>
Dependencies	Grayed-out and forced to OFF when System Display Settings, Annotation is OFF
Preset	ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF
State Saved	Saved in instrument state

Trace Annotation

Turns on and off the labels on the traces, showing their detector (or their Math Mode) as described in the **Trace** section, for all windows in all measurements in the current Mode for which Trace Annotation on/off is supported.

If Trace Math is being performed on a trace, then the Trace Math annotation replaces the detector annotation.

For measurements that support limit lines, this key also turns on and off the labels on the Limit Lines. The label is the Limit number annotation and Limit Comment displayed on the graph. If the length of the comment is greater than 20 characters, the first 8 characters and the last 8 characters are displayed, joined with

Remote Command	<code>:DISPlay:ANNotation:TRACe[:STATe] ON OFF 1 0</code> <code>:DISPlay:ANNotation:TRACe[:STATe]?</code>
Example	<code>:DISP:ANN:TRAC OFF</code>
Preset	OFF
State Saved	Saved in instrument state

Control Annotation

Turns on and off the display of values on the Active Function controls for all measurements in the current Mode. This is a security feature.

Remote Command	<code>:DISPlay:ACTivefunc[:STATe] ON OFF 1 0</code> <code>:DISPlay:ACTivefunc[:STATe]?</code>
Example	<code>:DISP:ACT OFF</code>
Dependencies	Grayed out and forced to OFF when System Display Settings, Annotation is OFF
Preset	ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF
State Saved	Saved in instrument state

Meas Bar

Turns the Measurement Bar at the top of the screen on and off for all measurements in the current Mode. When **OFF**, the graticule area expands to fill the area formerly occupied by the Measurement Bar.

Remote Command	<code>:DISPlay:ANNotation:MBAR[:STATe] OFF ON 0 1</code> <code>:DISPlay:ANNotation:MBAR[:STATe]?</code>
Example	<code>:DISP:ANN:MBAR OFF</code>
Dependencies	Grayed out and forced to OFF when System Display Settings, Annotation is OFF
Preset	ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF
State Saved	Saved in instrument state

Display Enable (Remote Command Only)

Turns the display on/off, including the display drive circuitry. The backlight stays lit to confirm that the instrument is on. The display enable setting is mode global. There are three reasons for turning the display off:

1. To increase speed as much as possible by freeing the instrument from having to update the display
2. To reduce emissions from the display, drive circuitry
3. For security purposes

If you have turned off the display:

- and you are in local operation, the display can be turned back on by pressing any key or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor `:SYSTem:PRESet` enable the display)
- and you are in remote operation, the display can be turned back on by pressing the **Local** or **Esc** keys, or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor `:SYSTem:PRESet` enable the display)
- and you are using either the `:SYSTem:KLOCK` command or GPIB local lockout, then *no* front-panel key press will turn the display back on. You must turn it back on remotely.

If the display is **OFF**, many SCPI commands related to User Views and Multiscreen functionality do not work, and return the error messages “-221, Settings conflict; Screen SCPI cannot be used when Display is disabled” or “221, Settings conflict; View SCPI cannot be used while Display is disabled”. These commands include:

Name	Command
Select User View	<code>:DISPlay:VIEW:ADVanced:SElect</code>
Rename User View	<code>:DISPlay:VIEW:ADVanced:REName</code>
Delete User View	<code>:DISPlay:VIEW:ADVanced:DELeTe</code>
Create User View	<code>:DISPlay:VIEW:ADVanced:NAME</code>
Select Screen	<code>:INSTrument:SCReen:SElect</code>
Delete Screen	<code>:INSTrument:SCReen:DELeTe</code>
Delete All But This Screen	<code>:INSTrument:SCReen:DELeTe:ALL</code>
Add Screen	<code>:INSTrument:SCReen:CREate</code>
Rename Screen	<code>:INSTrument:SCReen:REName</code>
Sequencer On/Off	<code>:SYSTem:SEQuencer</code>

Remote Command	<code>:DISPlay:ENABle OFF ON 0 1</code> <code>:DISPlay:ENABle?</code>
Example	<code>:DISP:ENAB OFF</code>
Couplings	<code>:DISP:ENAB OFF</code> turns Backlight OFF and <code>:DISP:ENAB ON</code> turns Backlight ON , but changing Backlight settings does <i>not</i> change the state of <code>:DISP:ENAB</code>
Preset	ON Set by <code>:SYST:DEF MISC</code> , but not affected by <code>*RST</code> or <code>:SYSTem:PRESet</code>
State Saved	Not saved in instrument state
Backwards Compatibility Notes	<code>:SYST:PRES</code> no longer turns on <code>:DISPlay:ENABle</code> as it did in legacy analyzers

3.6.6 Frequency

Opens the **Frequency** menu, which contains controls that allow you to control the Frequency and Channel parameters of the instrument.

Some settings in the **Frequency** menu are the same for all measurements in the current Mode – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by Meas Preset. For example, the Center Freq setting is the same for all measurements – it does not change as you change measurements.

3.6.6.1 Settings

Contains controls that pertain to the X axis parameters of the measurement. These parameters control how data on the vertical (X) axis is displayed and control instrument settings that affect the horizontal axis.

Carrier Reference Frequency

Sets Carrier Reference Frequency. The center frequencies of carriers are defined as offset frequency from this value. This reference frequency is also the reference of carrier configuration preset.

Because LTE-A, MSR and 5G NR measurements often deal with multiple carriers with distinct bandwidths, the simple Center Frequency parameter used in most measurements does not apply here. Instead, the Carrier Reference Frequency is the key parameter. This must be distinct from the Center Frequency parameter used in other measurements, as Center Frequency can be a global parameter, and it would not make sense for Carrier Reference Frequency to take on this global value.

In LTE-A and 5G NR modes, if the following conditions are satisfied at the same time:

- the Number of Component Carrier equals to 1
- the Center Freq Offset equals to 0 Hz
- the mode of the Center Freq is Auto

then Center Freq is equivalent to Carrier Ref Freq. When Center Freq changes in such conditions, the mode of Center Freq remains Auto and Carrier Ref Freq will be changed to the same value. The major purpose of this coupling is to maintain backwards compatibility with legacy LTE/LTE TDD, in which

:SENSe:FREQuency:CENTer is used to set up the Frequency of the measurement.

See "[More Information](#)" on page 1211

Remote Command	<p>For LTE-A, 5G NR: <code>[:SENSe]:CCARrier:REFeRence <freq></code> <code>[:SENSe]:CCARrier:REFeRence?</code></p> <p>For MSR: <code>[:SENSe]:CARRier:REFeRence <freq></code> <code>[:SENSe]:CARRier:REFeRence?</code></p>
Example	<p>For LTE-A, 5G NR: <code>:CCAR:REF 2GHz</code> <code>:CCAR:REF?</code></p> <p>For MSR: <code>:CARR:REF 2GHz</code> <code>:CARR:REF?</code></p>
Dependencies	Only available in LTE-A FDD/TDD, 5G NR and MSR Modes
Preset	1GHz
State Saved	Saved in instrument state
Min/Max	Depends on instrument minimum center frequency. Same as Center Freq

More Information

In most applications, **Center Frequency** is generally where the carrier center is located, and thus plays a very important role. However, in LTE-Advanced TDD/FDD mode, the measurements are based on carrier center frequencies and bandwidths, both of which are calculated or obtained according to the carriers' configuration.

The Center Frequency defined here is only for the Monitor Spectrum, IQ Waveform and CCDF measurements, because these are general type measurements and focus on a certain frequency range, which may be the entire BS RF bandwidth, a frequency range of one of the component carriers, or a range far away from the component carriers to see spurious. The Center Frequency in these three measurements has a different meaning, therefore it is a separate setting from Carrier Reference Frequency.

Carrier center frequencies are defined using offsets from Carrier Reference Frequency, which determines absolute frequency locations, and which can be set as both absolute and relative frequency from the carrier reference frequency.

Since Center Frequency is only used in those three measurements, Monitor Spectrum, IQ Waveform and CCDF, this control only appears on the Frequency menu of these measurements.

Considering the legacy LTE usability in the converged LTE & LTE-A application, when the mode of the Center Frequency is Auto and the Number of Component Carrier equals 1 and the Center Frequency Offset equals 0 Hz, the Center

Frequency is equivalent to Carrier Reference Frequency, which is used to set up the Frequency of all the measurements.

3.6.7 Marker

Accesses a menu that enables you to select, set up and control the markers for the current measurement. If there are no active markers, **Marker** selects marker 1, sets it to Normal and places it at the center of the display. If the selected marker is Off, it is set to Normal and placed it at the center of the screen on the trace determined by the **Marker Trace** rules.

3.6.7.1 Select Marker

Specifies the selected marker. The term “selected marker” is used throughout this document to specify which marker will be affected when you change marker settings, perform a Peak Search, etc.

The **Select Marker** control appears above the menu panel, indicating that it applies to all controls in the Marker menu panels. **Select Marker** is blanked if you select a tab whose controls do *not* depend on the selected marker (for example, Counter).

On any menu tab that displays **Select Marker**, the first control is always **Marker Frequency|Time**.

Notes	The selected marker is remembered even when not in the Marker menu and is used if a Search is done or a Band Function is turned on or for Signal Track or Continuous Peak
Preset	Marker 1
State Saved	The number of the selected marker is saved in instrument state
Annunciation	Appears in the marker results block label for Normal and Delta markers

3.6.7.2 Settings

The controls on this tab include the Marker active function and a radio button selection for the marker control mode (Normal, Delta, or Off) for the selected marker, as well as additional functions that help you use markers.

Marker Frequency

Sets the marker X-Axis value in the current marker X-Axis Scale unit. It has no effect if the control mode is **OFF**, but is the SCPI equivalent of entering an X value if the control mode is **Normal (POsition)** or **DELTA**.

Remote Command	<code>:CALCulate:SPURious:MARKer[1] 2 ... 12:X <freq></code> <code>:CALCulate:SPURious:MARKer[1] 2 ... 12:X?</code>
Example	<code>:CALC:SPUR:MARK2:X 25 kHz</code> <code>:CALC:SPUR:MARK3:X?</code>
Notes	If no suffix is sent, uses the fundamental units for the current marker X Axis Scale. If a suffix is sent that does not match the current marker X Axis Scale unit, an error "Invalid suffix" is generated The query returns the marker's absolute X Axis value if the control mode is Normal , or the offset from the marker's reference marker if the control mode is Delta . The query is returned in the fundamental units for the current marker X Axis scale: Hz for Frequency and Inverse Time, seconds for Period and Time
Preset	After a preset, all markers are turned OFF , so Marker X-Axis Value query returns Not A Number (NAN) After Mode Preset, change Sweep/Measure to Single
State Saved	Saved in instrument state
Min	-9.9E+37
Max	9.9E+37
Annotation	Mkr # <X value> and <Marker value> upper right on graph

Marker X Axis Position (Remote Command Only)

Sets the marker X-Axis Scale position in trace points. This setting has no effect if the control mode is **Off**, but is the SCPI equivalent of entering a value if the control mode is **Normal** or **Delta** - except in trace points rather than X-Axis Scale units. The entered value is immediately translated into the current X-Axis Scale units for setting the value of the marker.

Remote Command	<code>:CALCulate:SPURious:MARKer[1] 2 ... 12:X:POStion <real></code> <code>:CALCulate:SPURious:MARKer[1] 2 ... 12:X:POStion?</code>
Example	<code>:CALC:SPUR:MARK10:X:POS 300</code> <code>:CALC:SPUR:MARK10:X:POS?</code>
Notes	The query returns the marker's absolute X-Axis value in trace points if the control mode is Normal , or the offset from the marker's reference marker in trace points if the control mode is Delta . The value is returned as a real number, not an integer, corresponding to the translation from X-Axis Scale units to trace points . When a Marker is turned on, it is placed center of the screen on the trace. Therefore the default value depends on instrument condition. If the marker is OFF , the response is Not A Number
Preset	After a preset, all markers are turned OFF , so Marker X-Axis Value query returns Not A Number (NAN)
State Saved	Saved in instrument state
Min	-9.9E+37
Max	9.9E+37

Marker Y Axis Value (Remote Command only)

Returns the marker Y Axis value in the current marker Y Axis unit.

Remote Command	<code>:CALCulate:SPURious:MARKer[1] 2 ... 12:Y?</code>
Example	<code>:CALC:SPUR:MARK11:Y?</code>
Notes	<p>Returns the marker Y-Axis result, if the control mode is Normal or Delta. If the marker is OFF, the response is Not A Number</p> <p>In the Complex Spectrum measurement, when the marker is on and Marker Trace is set to IQ, it returns I and Q values</p> <p>Case #1 - MarkerTrace SPEC, I or Q: returns a single double value</p> <ul style="list-style-type: none"> - <code>>:CALC:SPEC:MARK1:Y?</code> - <code>-2.402406506109E+001</code> <p>Case #2 - MarkerTrace IQ: returns a double array of two values, the first is I, and the second is Q</p> <ul style="list-style-type: none"> - <code>>:CALC:SPEC:MARK1:Y?</code> - <code>-3.006944493834E-003,+9.9870666467354E-004</code> <p>The IQ selection is for backward compatibility purposes. It is recommended that the users use the I and/or Q selection instead</p>
Preset	Result dependent on Marker setup and signal source
State Saved	No
Backwards Compatibility SCPI	<code>:CALCulate:SPURious:MARKer[1] 2 ... 12:FUNction:RESult?</code>

Marker Mode

Sets the marker control mode to **POSition** (**Normal**), **DELta**, or **OFF**. All interactions and dependencies detailed under the control description are enforced when the remote command is sent. If the selected marker is **OFF**, pressing **Marker** sets it to **POSition** and places it at the center of the screen on the trace determined by the **Marker Trace** rules. At the same time, **Marker X Axis Value** appears on the Active Function area.

The default active function is the active function for the currently selected marker control mode. If the current control mode is **OFF**, there is no active function and the active function is turned off.

Remote Command	<code>:CALCulate:SPURious:MARKer[1] 2 ... 12:MODE POSition DELTa OFF</code> <code>:CALCulate:SPURious:MARKer[1] 2 ... 12:MODE?</code>
Example	<code>:CALC:SPUR:MARK:MODE POS</code> <code>:CALC:SPUR:MARK:MODE?</code>

Preset	OFF
State Saved	Saved in instrument state
Range	POSiTion DELTA OFF
Annotation	Mkr # <X value> and <Marker value> upper right on graph When Marker Trace is Polar in WCDMA mode: Mkr # <Chip Value (RHO & QPSKEVM)/Symbol Value (CDP)>, <X value> and <Y value> upper right on graph

Backwards Compatibility SCPI Commands

Sets or queries the state of a marker. Setting a marker that is **OFF** to **ON** (1) puts it in **POSiTion** mode and places it at the center of the screen.

Example	:CALC:SPUR:MARK3:STAT 1 :CALC:SPUR:MARK3:STAT?
Preset	OFF
State Saved	Saved in instrument state
Range	OFF ON
Backwards Compatibility SCPI	:CALCulate:SPURious:MARKer[1] 2 ... 12:STATE OFF ON 0 1 :CALCulate:SPURious:MARKer[1] 2 ... 12:STATE?

Delta Marker (Reset Delta)

Pressing this control has exactly the same effect as selecting **Delta** in "**Marker Mode**" on page 1214. The selected marker becomes a Delta Marker. If the selected marker is already a Delta marker, the reference marker is moved to the current position of the selected marker, thus resetting the Delta to zero.

Marker Settings Diagram

Lets you configure the Marker system using a visual utility.

All Markers Off

Turns off all markers.

Remote Command	:CALCulate:SPURious:MARKer:AOFF
Example	:CALC:SPUR:MARK:AOFF

Couple Markers

When this function is **ON**, moving any marker causes an equal X-Axis movement of every other marker that is not **OFF**. By “equal X-Axis movement” we mean that we preserve the difference between each marker’s X-Axis value (in the fundamental x-axis units of the trace that marker is on) and the X-Axis value of the marker being moved (in the same fundamental X-Axis units).

This may result in markers going off screen.

Remote Command	<code>:CALCulate:SPURious:MARKer:COUPle[:STATe] ON OFF 1 0</code> <code>:CALCulate:SPURious:MARKer:COUPle[:STATe]?</code>
Example	<code>:CALC:SPUR:MARK:COUP ON</code> <code>:CALC:SPUR:MARK:COUP?</code>
Preset	OFF Presets on Mode Preset and All Markers Off
State Saved	Saved in instrument state

3.6.7.3 Peak Search

The controls on this tab allow you to move the marker to selected peaks of the signal, giving you enormous analysis capabilities, particularly when combined with the Delta Marker function.

NOTE Pressing the **Peak Search** hardkey automatically moves you to the **Peak Search** page of the **Marker** menu *and* performs a Peak Search. Pressing the **Peak Search** tab once you are already *in* the **Marker** menu does *not* perform a Peak Search.

Marker Frequency

This is the fundamental control that you use to move a marker around on the trace. This is the same as "**Marker Frequency**" on page 1212 on the **Settings** tab.

Peak Search

Moves the selected marker to the trace point that has the maximum y-axis value for that marker’s trace.

NOTE

Pressing the **Peak Search** hardkey automatically moves you to the **Peak Search** page of the **Marker** menu *and* performs a **Peak Search**.

Remote Command	<code>:CALCulate:SPURious:MARKer[1] 2 ... 12:MAXimum</code>
Example	<code>:CALC:SPUR:MARK2:MAX</code> <code>:SYST:ERR?</code> can be used to query the errors to determine if a peak is found. The message “No peak found” will be returned after an unsuccessful search
Notes	Sending this command selects the subopcoded marker In W-CDMA Mode, this command does not work when the selected marker is located on the polar trace. In this case, the command is ignored

Next Peak

Moves the selected marker to the peak that is next lower in amplitude than the current marker value.

If the selected marker was **OFF**, then it is turned on as a **POSition** marker and a peak search is performed.

Remote Command	<code>:CALCulate:SPURious:MARKer[1] 2 ... 12:MAXimum:NEXT</code>
Example	<code>:CALC:SPUR:MARK2:MAX:NEXT</code>
Notes	Sending this command selects the subopcoded marker
State Saved	Not part of saved state

Next Pk Right

Moves the selected marker to the nearest peak right of the current marker.

If the selected marker was **OFF**, then it is turned on as a **POSition** marker and a peak search is performed.

Remote Command	<code>:CALCulate:SPURious:MARKer[1] 2 ... 12:MAXimum:RIGHT</code>
Example	<code>:CALC:SPUR:MARK2:MAX:RIGH</code>
Notes	Sending this command selects the subopcoded marker
State Saved	Not part of saved state

Next Pk Left

Moves the selected marker to the nearest peak left of the current marker.

If the selected marker was **OFF**, then it is turned on as a **POSition** marker and a peak search is performed.

Remote Command	:CALCulate:SPURious:MARKer[1] 2 ... 12:MAXimum:LEFT
Example	:CALC:SPUR:MARK2:MAX:LEFT
State Saved	Not part of saved state

Minimum Peak

Moves the selected marker to the minimum Y-Axis value on the current trace.

If the selected marker is **OFF**, it is turned **ON** before the minimum search is performed.

Remote Command	:CALCulate:SPURious:MARKer[1] 2 ... 12:MINimum
Example	:CALC:SPUR:MARK:MIN
Notes	Sending this command selects the subopcoded marker
State Saved	Not part of saved state

Pk-Pk Search

Finds and displays the amplitude and frequency (or time, if in zero span) differences between the highest and lowest y-axis value. It places the selected marker on the minimum value on its selected trace, and places that marker's reference marker on the peak of its selected trace.

This function turns on the reference marker and sets its mode to **Fixed** or **Normal** if it is not already on. (These markers may be on two different traces.)

If the selected marker is **OFF**, a delta type marker is turned on and the peak-to-peak search is done. If the selected marker is on, but it is not a **DELTA** marker, then it is changed to delta which turns on the reference marker if needed, and then it performs the peak-to-peak function.

Remote Command	:CALCulate:SPURious:MARKer[1] 2 ... 12:PTPeak
Example	:CALC:SPUR:MARK:PTP
Notes	Turns on the Marker D active function Sending this command selects the subopcoded marker
Dependencies	Pk-Pk Search is not available when Coupled Markers is ON
Couplings	The selected marker becomes a delta marker if not already in delta mode
State Saved	Not part of saved state

Marker Delta

Pressing this control has exactly the same effect as selecting **Delta** in "**Marker Mode**" on page 1214 on the **Settings** tab. The selected marker becomes a Delta Marker. If the selected marker is already a Delta marker, the reference marker is moved to the current position of the selected marker, thus resetting the Delta to zero.

The control is duplicated here to allow you to conveniently perform a peak search, and change the marker's control mode to Delta without having to access two separate menus.

3.6.7.4 Properties

The controls on this tab are used to set certain properties of the selected marker.

Marker Frequency

This is the fundamental control that you use to move a marker around on the trace. This is the same as "**Marker Frequency**" on page 1212 on the **Settings** tab.

Relative To

Selects the marker to which the selected marker is relative (its reference marker).

Every marker has another marker to which it is relative. This marker is referred to as the "reference marker" for that marker. This attribute is set by the **Marker, Properties, Relative To** control. The marker must be a **Delta** marker to make this attribute relevant. If it is a **Delta** marker, the reference marker determines how the marker is controlled and how its value is displayed. A marker cannot be relative to itself.

Remote Command	<code>:CALCulate:SPURious:MARKer[1] 2 ... 12:REFerence <integer></code> <code>:CALCulate:SPURious:MARKer[1] 2 ... 12:REFerence?</code>
Example	<code>:CALC:SPUR:MARK3:REF 5</code> <code>:CALC:SPUR:MARK:REF?</code>
Notes	This command causes the marker specified with the subopcode to become selected Range (for SCPI command): 1 to 12. If the range is exceeded the value is clipped A marker cannot be relative to itself, so that choice is not available, and if sent from SCPI generates error -221: "Settings conflict; marker cannot be relative to itself" When queried a single value is returned (the specified marker numbers relative marker)
Couplings	The act of specifying the selected marker's reference marker makes the selected marker a Delta

	marker If the reference marker is off it is turned on in Normal mode at the delta marker location
Preset	The preset default "Relative To" marker (reference marker) is the next higher numbered marker (current marker +1). For example, if marker 2 is selected, then it's default reference marker is marker 3. The exception is marker 12, which has a default reference of marker 1 Set to the defaults by using Restore Mode Defaults . This is not reset by Marker Off , All Markers Off , or Preset
State Saved	Saved in instrument state. Not affected by Marker Off and hence not affected by Preset or power cycle
Min	1
Max	12
Annunciation	Appears in the marker label of a Delta marker

Marker Trace

Selects the trace on which you want your marker placed. A marker is associated with one and only one trace. This trace is used to determine the placement, result, and X-Axis Scale of the marker. All markers have an associated trace; it is from that trace that they determine their attributes and behaviors, and it is to that trace that they go when they become Normal markers.

Specifying a Marker Trace manually or with this command associates the marker with the specified trace. If the marker is not **OFF**, it moves the marker from the trace it was on to the new trace. If the marker is **OFF**, it stays off but is now associated with the specified trace.

The query returns the number of the trace on which the marker is currently placed.

Remote Command	<code>:CALCulate:SPURious:MARKer[1] 2 ... 12:TRACe:ATTached TRACe1 TRACe2 TRACe3</code> <code>:CALCulate:SPURious:MARKer[1] 2 ... 12:TRACe:ATTached?</code>
Example	<code>:CALC:SPUR:MARK2:TRAC:ATT TRAC2</code> <code>:CALC:SPUR:MARK2:TRAC:ATT?</code>
Notes	A marker may be placed on a blanked and/or inactive trace, even though the trace is not visible and/or updating. An application may register a trace name to be displayed on the control instead of a trace number
Couplings	The state of Marker Trace is not affected by "Auto Couple" on page 2629 Sending the remote command causes the addressed marker to become selected
Preset	<code>TRACe1</code>
State Saved	Saved in instrument state
Range	<code>TRACe1 TRACe2 TRACe3</code>

Marker Settings Diagram

Lets you configure the Marker system using a visual utility. This is the same as "[Marker Settings Diagram](#)" on page 1215 on the **Settings** tab.

3.6.8 Meas Setup

Contains functions for setting up the measurement parameters and also contains functions for setting up parameters global to all measurements in the mode.

3.6.8.1 Settings

Contains frequently-used Meas Setup functions, to which you will want the fastest access.

Avg/Hold Num

Specifies the number of measurement averages used to calculate the measurement result. The average is displayed at the end of each sweep.

Remote Command	<code>[:SENSe] :SPURious :AVERage :COUNt <integer></code> <code>[:SENSe] :SPURious :AVERage :COUNt?</code>
Example	<code>:SPUR :AVER :COUN 2500</code> <code>:SPUR :AVER :COUN?</code>
Preset	10
State Saved	Saved in instrument state
Min/Max	1/10000

Continue Averaging

Continue Averaging is designed for acquiring the trace average through multiple sets of DUT conditions, in order to meet requirements such as those for an OTA measurement.

NOTE

You must be in **Single** sweep/measurement to use **Continue Averaging**. Go to **Single** and press **Restart** to get your first set of averages, then **Continue Averaging** will be available.

Use `:FETCh:<meas>?` query to retrieve the data as it waits for completion of **Continue Averaging**. `*OPC?` doesn't wait for completion and returns true immediately.

Pressing this control adds a number of Averages that matches the Avg|Hold number to the already averaged trace or measurement. Every time you press it, the terminal count increases to 2N, 3N and so on. You can change the DUT position or antenna when each set of average count is reached to the terminal count and the measurement is complete.

Since the measurement results are valid for each completed average conditions, the user doesn't have to pre-determine the number of set of DUT conditions.

Remote Command	<code>[:SENSe]:SPURious:AVERage:CONTinue</code>
Example	<code>:SPUR:AVER:CONT</code>
Dependencies	This control is enabled when you change the Sweep mode to Single and the Average Count reaches the Average Number, otherwise it is grayed-out

Terminal Count (Remote Command Only)

Query only.

This returns the terminal count that shows the target average number after "**Continue Averaging**" on page 1221 is pressed. Every time you press **Continue Averaging**, the terminal count increases to 2N, 3N and so on. The value is the same as the Avg|Hold Number unless **Continue Averaging** is pressed and it is reset to match the Avg|Hold Number when **Restart** is pressed.

Remote Command	<code>[:SENSe]:SPURious:AVERage:COUNT:TERMinal?</code>
Example	<code>:SPUR:AVER:COUN:TERM?</code>

Averaging On/Off

Turns Averaging on or off.

NOTE

In this measurement, the **Average Type** is preset to the **Log-Pwr Avg (Video)** method. Other averaging methods are not available.

Remote Command	<code>[:SENSe]:SPURious:AVERage[:STATe] ON OFF 1 0</code> <code>[:SENSe]:SPURious:AVERage[:STATe]?</code>
Example	<code>:SPUR:AVER ON</code> <code>:SPUR:AVER?</code>

Preset	OFF
State Saved	Saved in instrument state
Range	ON OFF

Average Mode

Enables you to set the Averaging Mode. Options are:

- **EXponential**: The measurement averaging continues using the specified number of averages to compute each averaged value. The average will be displayed at the end of each sweep
- **REPeat**: The measurement resets the average counter each time the specified number of averages is reached

Remote Command	<code>[:SENSe]:SPURious:AVERage:TCONtrol EXPonential REPeat</code> <code>[:SENSe]:SPURious:AVERage:TCONtrol?</code>
Example	<code>:SPUR:AVER:TCON REP</code> <code>:SPUR:AVER:TCON?</code>
Preset	EXPonential
State Saved	Saved in instrument state
Range	EXPonential REPeat

Average Type

Enables you to control the way averaging is done by choosing one of the following averaging scales: Log-Power (Video) or Power (RMS).

There are three different averaging processes in the measurement, and all of them are affected by this setting: Trace Averaging, the Average detector, and VBW filtering.

Control Selection	SCPI	Type
Log-Pwr (Video)	LOG	Simulates the traditional spectrum analyzer type of averaging by averaging the log of the power
Power (RMS)	RMS	True power averaging that is equivalent to taking the RMS value of the voltage. This is the most accurate type of averaging

Remote Command	<code>[:SENSe]:SPURious:AVERage:TYPE LOG RMS</code> <code>[:SENSe]:SPURious:AVERage:TYPE?</code>
Example	<code>:SPUR:AVER:TYPE LOG</code> <code>:SPUR:AVER:TYPE?</code>

Couplings	Sending this command will affect the VBW Average Type
Preset	LOG
State Saved	Yes
Range	Log-Pwr (Video) Power (RMS)

Meas Type

Selects either **EXAMine** or **FULL** measurement type. This parameter is coupled to **"Average Mode" on page 1223**. Therefore, if the **EXAMine** measurement type is selected, the measurement sets the Average Mode to exponential. If the **FULL** measurement type is selected, the measurement sets the Average Mode to repeat. The behavior of each measurement type is described in the table below. When averaging is on, trace averaging is used as each active range is measured. Averaging is not used at any other time.

Type	Single		Continuous	
	No Spurs Found	Spurs Found	No Spurs Found	Spurs Found
EXAMine	All active ranges are measured. On completion the measurement is set to the idle state and the 'No Spurs' happening is displayed	All active ranges are measured and the spurs found reported. On completion the measurement is set to the idle state and the trace containing the worst spur restored. The spur control is enabled. A marker is also added which is set to the frequency of the worst spur	All active ranges are measured. On completion the SA remains set to last range checked with an active trace and the 'No Spurs' happening is displayed	All active ranges are measured and the spurs found reported. On completion the SA is set to the range containing the worst spur found and continually sweeps this range. Note that the trace is continually updated but the metrics results aren't updated until restart to keep the initial results as references. Use marker readouts to refer the latest results. The spur control is

Type	Single		Continuous	
	No Spurs Found	Spurs Found	No Spurs Found	Spurs Found
FULL	All active ranges are measured. On completion measurement is set to idle state and the 'No Spurs' happening is displayed	All active ranges are measured and spurs found reported. On completion the measurement is set to the idle state, displaying the trace of the last active range	Measurement continually cycles through all active ranges	enabled. A marker is also added which is set to the frequency of the worst spur All active ranges are measured and spurs found reported. On each cycle of the active ranges the spurs found are reset. This ensures any remote queries retrieve the trace data that matches the currently displayed results

Remote Command	<code>[:SENSe]:SPURious:TYPE EXAMine FULL</code> <code>[:SENSe]:SPURious:TYPE?</code>
Example	<code>:SPUR:TYPE FULL</code> <code>:SPUR:TYPE?</code>
Preset	<code>EXAMine</code>
State Saved	Saved in instrument state
Range	<code>EXAMine FULL</code>

Spur

Displays any spurs found. Only enabled when the measurement type is set to `EXAMine`, and turns on upon completion of a measurement. Once the **Spur** control has been enabled, you can view any spur. The measurement sets the instrument to the range in which the currently selected spur was found. The range settings only change if the spur selected is in a range that is different from the current range settings. A marker is used to identify the currently selected spur on the trace.

Remote Command	<code>[:SENSe]:SPURious:SPUR <integer></code> <code>[:SENSe]:SPURious:SPUR?</code>
Example	<code>:SPUR:SPUR 55</code> <code>:SPUR:SPUR?</code>
Preset	1
State Saved	No
Min/Max	1/200

Range

Selects the sweep range to show the trace in the display. Marker operation such as peak search is performed in the selected range.

Preset	1
State Saved	No
Min/Max	1/20

Spur Report Mode

Selects the spurious report mode. Options are:

Limit Line Test	<code>LIMTest</code>	Report only spurs above the limit line. Any spurs reported will cause the measurement to fail. See Abs Start Limit for more information
All Spurs	<code>ALL</code>	Report all spurs detected by Peak Threshold and Peak Excursion
Minimum Margin	<code>MMARgin</code>	Report only the spur with the minimum margin from the limit line. For the spur above the limit, its margin is defined as the negative margin. If there are more than one spurs above the limit, only one spur with the largest negative margin is reported

Remote Command	<code>[:SENSe]:SPURious:REPT:MODE ALL LIMTest MMARgin</code> <code>[:SENSe]:SPURious:REPT:MODE?</code>
Example	<code>:SPUR:REPT:MODE LIMT</code> <code>:SPUR:REPT:MODE?</code>
Dependencies	<code>MMARgin</code> is available only when option N9060A-7FP is installed
Preset	<code>ALL</code>
State Saved	Saved in instrument state
Range	All Spurs Limit Test Minimum Margin

Range Settings

This dialog enables you to set range parameters. As you change values, the instrument settings are updated with the new parameter values.

In Spectrum Analyzer Mode, and most other Modes, each Range is defined by its Start Freq and Stop Freq. The index tabs which appear on the left side of the dialog let you change different sets of Range parameters; the Ranges themselves (Start Freq and Stop Freq) are the same in each of these tabs. In some tabs, Center Freq and Span are also shown, but these are dependent on the Start Freq and Stop Freq parameters for each Range.

In MSR Mode, each Range is defined by the parameters under the **Frequency** Index tab. The parameters for each Range are defined using the other index tabs, tied to the **Frequency** tab by the Range number, which appears in the leftmost column of each table.

Each Range has an **Enabled** checkbox, which lets you decide whether to use the Range or not. The checkbox state is the same for all tabs.

Bandwidth

Lets you set RBW and VBW parameters for each range, as well as Filter Type. The **Bandwidth** tab appears in all Modes except MSR.

Frequency Range

Allows you to switch the displayed Frequency Range columns. When **ALL** is selected, Start Frequency, Stop Frequency, Center Frequency, and Span are displayed.

This control appears only in instruments with a 4U size front panel.

Remote Command	<code>:DISPlay:SPURious:VIEW:RANGe:TABLE:FMODe ALL SStop CSPan</code>
Example	<code>:DISP:SPUR:VIEW:RANG:TABL:FMOD ALL</code> <code>:DISP:SPUR:VIEW:RANG:TABL:FMOD?</code>
Preset	<code>SStop</code>
State Saved	Saved in instrument state
Range	All Start/Stop Frequency Center Frequency Span

When sending the remote command, missing values are not permitted. If you want to change values 2 and 6 you must send all values up to 6. Subsequent values will remain as they were.

The query always returns 20 values.

Remote Command	<pre>[:SENSe]:SPURious[:RANGe][:LIST]:FREQuency:STARt <freq>, <freq> [:SENSe]:SPURious[:RANGe][:LIST]:FREQuency:STARt?</pre>
Example	<pre>:SPUR:FREQ:STAR 9 kHz, 150 kHz, 30 MHz, 1GHz, 1.5 GHz, 1.5 GHz, 1.5 GHz, 1.5 GHz,1.5 GHz :SPUR:FREQ:STAR?</pre>
Preset	<pre>SA: +1.92000000E+009, +1.89350000E+009, +2.10000000E+009, +2.17500000E+009, +8.00000000E+008, +1.50000000E+009, +1.50000000E+009 WCDMA: 9kHz, 150kHz, 30MHz, 1GHz, 2.1GHz, 2.1GHz, 2.1774GHz, 2.18GHz, 1.5GHz, 1.5GHz LTETDD, LTEATDD, 5G NR: 9 kHz, 150 kHz, 30 MHz, 1 GHz, 1.90GHz, 2.01 GHz, 2.025 GHz, 1.5 GHz LTE, LTEAFDD: 9 kHz, 150 kHz, 30 MHz, 1 GHz, 1.92GHz, 1.98 GHz, 2.18 GHz, 1.5 GHz WLAN: 9 kHz, 150 kHz, 30 MHz, 1GHz, 1.5 GHz, 1.5 GHz MSR: 9 kHz, 150 kHz, 30 MHz, 1 GHz, 1.92GHz, 1.98 GHz, 2.18 GHz, 1.5 GHz</pre>
State Saved	Saved in instrument state
Min/Max	<pre>-80 MHz/Hardware Dependent: - Option 503: 3699999990 - Option 508: 8499999990 - Option 513: 13799999990 - Option 526: 26999999990</pre>

Stop Freq

Sets the stop frequency of the instrument. This parameter can send up to 20 values.

3 5G NR Mode
3.6 Spurious Emissions Measurement

When sending the remote command, missing values are not permitted. If you want to change values 2 and 6, then you must send all values up to 6. Subsequent values will remain as they were.

The query always returns 20 values.

Remote Command	<code>[:SENSe]:SPURious[:RANGe][:LIST]:FREQuency:STOP <freq>, <freq></code> <code>[:SENSe]:SPURious[:RANGe][:LIST]:FREQuency:STOP?</code>
Example	<code>:SPUR:FREQ:STOP 150kHz, 30MHz, 1GHz, 2.1GHz, 2.1GHz, 2.1774GHz, 2.18GHz, 12.75GHz, 2.5GHz, 2.5GHz</code> <code>:SPUR:FREQ:STOP?</code>
Preset	SA: +1.98000000E+009, +1.91960000E+009, +2.10150000E+009, +2.18000000E+009, +1.00000000E+009, +2.50000000E+009, +2.50000000E+009 WCDMA: 150kHz, 30MHz, 1GHz, 2.1GHz, 2.1GHz, 2.1774GHz, 2.18GHz, 12.75GHz, 2.5GHz, 2.5GHz LTETDD, LTEATDD, 5G NR: 150kHz, 30MHz, 1GHz, 1.90GHz, 2.01GHz, 2.025GHz, 12.75GHz, 2.5GHz, 2.5GHz LTE, LTEAFDD: 150kHz, 30MHz, 1GHz, 1.92GHz, 1.98GHz, 2.1GHz, 12.75GHz, 2.5GHz, 2.5GHz WLAN: 150kHz, 30 MHz, 1GHz, 12.75GHz, 2.5 GHz, 2.5 GHz MSR: 150kHz, 30MHz, 1GHz, 1.92GHz, 1.98GHz, 2.1GHz, 12.75GHz, 2.5GHz, 2.5GHz
State Saved	Yes
Min/Max	-79999990/Hardware Dependent: - Option 503: 3.7 GHz - Option 508: 8.5 GHz - Option 513: 13.8 GHz - Option 526: 27.0 GHz

Center Frequency

Sets the center frequency of the instrument. This parameter can send up to 20 values. The location where the center frequency occurs in the list sent to the measurement corresponds to the range the value is associated with.

When sending the remote command, missing values are not permitted. If you want to change values 2 and 6 you must send all values up to 6. Subsequent values will remain as they were.

The query always returns 20 values.

Remote Command	<code>[:SENSe]:SPURious[:RANGe][:LIST]:FREQuency:CENTer <freq>, <freq></code> <code>[:SENSe]:SPURious[:RANGe][:LIST]:FREQuency:CENTer?</code>
Example	<code>:SPUR:FREQ:CENT 9 kHz, 150 kHz, 30 MHz, 1GHz, 1.5 GHz, 1.5 GHz, 1.5 GHz, 1.5 GHz,1.5 GHz</code> <code>:SPUR:FREQ:CENT?</code>
Preset	(Preset of Start Freq + Preset of Stop Freq)/2
State Saved	No
Min/Max	-79.999995 MHz/ Instrument maximum frequency - 5 Hz

Span

Sets the span of the instrument. This parameter can send up to 20 values. The location where the span occurs in the list sent to the measurement corresponds to the range the value is associated with.

When sending the remote command, missing values are not permitted. If you want to change values 2 and 6, then you must send all values up to 6. Subsequent values will remain as they were.

The query always returns 20 values.

Remote Command	<code>[:SENSe]:SPURious[:RANGe][:LIST]:FREQuency:SPAN <freq>, <freq></code> <code>[:SENSe]:SPURious[:RANGe][:LIST]:FREQuency:SPAN?</code>
Example	<code>:SPUR:FREQ:SPAN 9 kHz, 150 kHz, 30 MHz, 1GHz, 1.5 GHz, 1.5 GHz, 1.5 GHz, 1.5 GHz,1.5 GHz</code> <code>:SPUR:FREQ:SPAN?</code>
Preset	(Preset of Stop Freq) - (Preset of Start Freq)
State Saved	No
Min/Max	0Hz/Instrument maximum frequency + 80MHz

Res BW

Sets the resolution bandwidth of the instrument. This parameter can send up to 20 values.

The location of where the resolution bandwidth occurs in the list sent to the measurement corresponds to the range the value is associated with.

When sending the remote command, missing values are not permitted. In other words, if you want to change values 2 and 6, then you must send all values up to 6. Subsequent values will remain as they were.

The query always returns 20 values.

Remote Command	<pre>[:SENSE]:SPURious[:RANGe][:LIST]:BANDwidth[:RESolution] <freq>, <freq> [:SENSE]:SPURious[:RANGe][:LIST]:BANDwidth[:RESolution]? [:SENSE]:SPURious[:RANGe][:LIST]:BANDwidth[:RESolution]:AUTO OFF ON 0 1, OFF ON 0 1 [:SENSE]:SPURious[:RANGe][:LIST]:BANDwidth[:RESolution]:AUTO?</pre>
Example	<pre>:SPUR:BAND 1kHz, 10kHz, 100kHz, 1MHz, 1MHz, 1MHz, 1MHz, 3MHz, 3MHz :SPUR:BAND? :SPUR:BWID:AUTO ON, ON, ON, OFF, OFF, OFF, OFF, OFF, ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, ON, ON :SPUR:BWID:AUTO?</pre>
Preset	<pre>SA: 1.2MHz, 0.51MHz, 0.1MHz, 0.1MHz, 4MHz, 3MHz, 3MHz WCDMA:1kHz, 10kHz, 100kHz, 1MHz, 1MHz, 1MHz, 1MHz, 1MHz, 3MHz, 3MHz LTETDD, LTEATDD, 5G NR: 1kHz, 10kHz, 100kHz, 1MHz, 1MHz, 1MHz, 1MHz, 3MHz, 3MHz LTE, LTEAFDD: 1kHz, 10kHz, 100kHz, 1MHz, 100kHz, 1MHz, 1MHz, 3MHz, 3MHz WLAN: 1kHz, 10kHz, 100kHz, 1MHz, 3MHz, 3MHz MSR: 1kHz, 10kHz, 100kHz, 1MHz, 100kHz, 1MHz, 1MHz, 3MHz, 3MHz SA: OFF, OFF, OFF, OFF, OFF, ON, ON WCDMA: OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, ON, ON</pre>

OFFSet The frequency range is determined based on Offset Start Freq and Offset Stop Freq. Abs Start Freq and Abs Stop Freq are coupled with the offset parameters and show the actual frequency ranges. The following coupling equations are used to calculate Abs Start Freq and Abs Stop Freq

When Offset Side is Negative:

$$[\text{Abs Start Freq}] = [\text{OB Start Freq}] - [\text{Offset Stop Freq}]$$

$$[\text{Abs Stop Freq}] = [\text{OB Start Freq}] - [\text{Offset Start Freq}]$$

When Offset Side is Positive:

$$[\text{Abs Start Freq}] = [\text{OB Stop Freq}] + [\text{Offset Start Freq}]$$

$$[\text{Abs Stop Freq}] = [\text{OB Stop Freq}] + [\text{Offset Stop Freq}]$$

When changing OB Start/Stop Freq, Abs Start/Stop Freq is changed and Offset Start/Stop Freq remains unchanged.

When changing Offset Start/Stop Freq, Abs Start/Stop Freq is changed and OB Start/Stop Freq remains unchanged.

Remote Command	<pre>[:SENSe]:SPURious[:RANGe][:LIST]:FREQuency:TYPE ABSolute OFFSet, ABSolute OFFSet</pre> <pre>[:SENSe]:SPURious[:RANGe][:LIST]:FREQuency:TYPE?</pre>
Example	<pre>:SPUR:FREQ:TYPE OFFS, OFFS, ABS, ABS, ABS</pre> <pre>:SPUR:FREQ:TYPE?</pre>
Couplings	Freq Type automatically changes to OFFSet when you change a value of Offset Start Freq, Offset Stop Freq or Offset Side, and automatically changes to ABSolute when you change a value of Abs Start Freq or Abs Stop Freq
Preset	ABSolute, ABSolute, ABSolute
State Saved	Saved in instrument state
Range	ABSolute OFFSet

Abs Start Freq

Sets the start frequency of the instrument. This parameter can send up to 20 values. The location where the start frequency occurs in the list sent to the measurement corresponds to the range the value is associated with.

This parameter is coupled with either Offset Start Freq or Offset Stop Freq. The coupling equations are shown in ["Enabled" on page 1235](#).

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6 you must send all values up to 6. Subsequent values will remain as they were.

The query always returns 20 values.

Remote Command	<code>[:SENSe]:SPURious[:RANGe][:LIST]:FREQuency:STARt <freq>, <freq></code> <code>[:SENSe]:SPURious[:RANGe][:LIST]:FREQuency:STARt?</code>
Example	<code>:SPUR:FREQ:STAR 9 kHz, 150 kHz, 30 MHz, 1GHz, 1.5 GHz, 1.5 GHz, 1.5 GHz, 1.5 GHz,1.5 GHz</code> <code>:SPUR:FREQ:STAR?</code>
Preset	9 kHz, 150 kHz, 30 MHz, 1 GHz, 1.92GHz, 1.98 GHz, 2.18 GHz, 1.5 GHz
State Saved	Saved in instrument state
Min/Max	-80 MHz/Hardware Dependent <ul style="list-style-type: none"> - Option 503: 3699999990 - Option 508: 8499999990 - Option 513: 13799999990 - Option 526: 26999999990

Abs Stop Freq

Sets the stop frequency of the instrument. This parameter can send up to 20 values. The location in the list sent corresponds to the range the value is associated with.

This parameter is coupled with either ["Offset Start Freq" on page 1238](#) or ["Offset Stop Freq" on page 1239](#). The coupling equations are shown in ["Enabled" on page 1235](#).

The location of where the stop frequency occurs in the list sent to the measurement corresponds to the range the value is associated with.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6 you must send all values up to 6. Subsequent values will remain as they were.

The query always returns 20 values.

Remote	<code>[:SENSe]:SPURious[:RANGe][:LIST]:FREQuency:STOP <freq>, <freq></code>
--------	--

3 5G NR Mode
3.6 Spurious Emissions Measurement

Command	<code><freq>, <freq>, <freq></code> <code>[:SENSe] :SPURious [:RANGe] [:LIST] :FREQuency :STOP?</code>
Example	<code>:SPUR:FREQ:STOP 150kHz, 30MHz, 1GHz, 2.1GHz, 2.1GHz, 2.1774GHz, 2.18GHz, 12.75GHz, 2.5GHz, 2.5GHz</code> <code>:SPUR:FREQ:STOP?</code>
Preset	150kHz, 30MHz, 1GHz, 1.92GHz, 1.98GHz, 2.1GHz, 12.75GHz, 2.5GHz, 2.5GHz
State Saved	Yes
Min/Max	-79999990/Hardware Dependent: <ul style="list-style-type: none"> - Option 503: 3.7 GHz - Option 508: 8.5 GHz - Option 513: 13.8 GHz - Option 526: 27.0 GHz

Offset Start Freq

Sets the range frequency as offset from one of the operating band edges. This parameter can send up to 20 values. The location where the start frequency occurs in the list sent to the measurement corresponds to the range the value is associated with. When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6 you must send all values up to 6. Subsequent values will remain as they were.

The query always returns 20 values.

This parameter is coupled with either ["Abs Start Freq" on page 1236](#) or ["Abs Stop Freq" on page 1237](#) using the coupling equations shown in ["Enabled" on page 1235](#).

This value is clipped to keep Abs Start/Stop Freq within the available frequency range. This clipping applies even when OB Start Freq, OB Stop Freq or Offset Side is changed.

Remote Command	<code>[:SENSe] :SPURious [:RANGe] [:LIST] :OFFSet :FREQuency :START <freq>, <freq></code> <code>[:SENSe] :SPURious [:RANGe] [:LIST] :OFFSet :FREQuency :START?</code>
Example	<code>:SPUR:OFFS:FREQ:STAR 9 kHz, 150 kHz, 30 MHz, 1GHz, 1.5 GHz, 1.5 GHz</code> <code>:SPUR:OFFS:FREQ:STAR?</code>
Preset	10 MHz, 20 MHz, 30 MHz

	MHz, 30 MHz
State Saved	Saved in instrument state
Min/Max	-80 MHz/SA Max Freq - 10Hz (Hardware Dependent)

Offset Stop Freq

Sets the range frequency as offset from one of operating band edges. This parameter can send up to 20 values. The location in the list sent corresponds to the range the value is associated with.

The location of where the stop frequency occurs in the list sent to the measurement corresponds to the range the value is associated with.

When sending the remote command, missing values are not permitted. If you want to change values 2 and 6, then you must send all values up to 6. Subsequent values will remain as they were. The query always returns 20 values.

This parameter is coupled with either ["Abs Start Freq" on page 1236](#) or ["Abs Stop Freq" on page 1237](#) using the coupling equations shown in ["Enabled" on page 1235](#).

This value is clipped to keep Abs Start/Stop Freq inside the available frequency range. This clipping applies even when OB Start Freq, OB Stop Freq or Offset Side is changed.

Remote Command	<code>[:SENSe]:SPURious[:RANGe][:LIST]:OFFSet:FREQuency:STOP <freq>, <freq></code> <code>[:SENSe]:SPURious[:RANGe][:LIST]:OFFSet:FREQuency:STOP?</code>
Example	<code>:SPUR:OFFS:FREQ:STOP 150kHz, 30MHz, 1GHz, 2.1GHz, 2.1GHz, 2.1774GHz, 2.18GHz, 12.75GHz, 2.5GHz, 2.5GHz</code> <code>:SPUR:OFFS:FREQ:STOP?</code>
Preset	20 MHz,30 MHz, 30 MHz
State Saved	Yes
Min/Max	-79999990/SA Max Frequency (Hardware Dependent)

Offset Side

Sets the offset side to either Negative or Positive. This parameter indicates which side of the operation band the specified range is on. It also determines which coupling equations defined in Frequency Type section are used to couple the absolute frequencies and the offset frequencies. This setting is effective only when ["Frequency Type" on page 1235](#) is **OFFset**.

Remote Command	<pre>[:SENSe]:SPURious[:RANGe][:LIST]:OFFSet:SIDE NEGative POSitive, NEGative POSitive</pre> <pre>[:SENSe]:SPURious[:RANGe][:LIST]:OFFSet:SIDE?</pre>
Example	<pre>:SPUR:OFFS:SIDE NEG, NEG, POS, POS :SPUR:OFFS:SIDE?</pre>
Preset	<pre>NEG, NEG, POS, POS</pre>
State Saved	Saved in instrument state
Range	Negative (From Op. Band Start Edge) Positive (From Op. Band Stop Edge)

Filter/Atten

Lets you set Attenuation and IF Gain values for each Range. This tab appears in all Modes except MSR.

Frequency Range

Same as Frequency Range under the **Bandwidth** index tab. See "[Frequency Range](#)" on page 1227.

Enabled

Same as Enabled under the **Bandwidth** index tab. See "[Enabled](#)" on page 1228.

Start Freq

Same as the Start Freq column under the **Bandwidth** index tab. See "[Start Freq](#)" on page 1228.

Stop Freq

Same as the Stop Freq column under the **Bandwidth** index tab. See "[Stop Freq](#)" on page 1229.

Detector/Sweep

Lets you set Sweep, IF Gain, and Detector parameters for each Range.

Frequency Range

Same as **Frequency Range** under the **Bandwidth** index tab. See "[Frequency Range](#)" on page 1227. This control does not appear in MSR mode.

Enabled

Same as the **Enabled** checkbox under the **Bandwidth** index tab. See "[Enabled](#)" on page 1228.

Start Freq

Same as the Start Freq column under the **Bandwidth** index tab. See "[Start Freq](#)" on page 1228. This column does not appear in MSR mode.

Stop Freq

Same as the Stop Freq column under the **Bandwidth** index tab. See "[Stop Freq](#)" on page 1229. This column does not appear in MSR mode.

Center Frequency

Same as the Center column under the **Bandwidth** index tab. See "[Center Frequency](#)" on page 1230. This column does not appear in MSR mode.

Span

Same as the Span column under the **Bandwidth** index tab. See "[Span](#)" on page 1231. This column does not appear in MSR mode.

Sweep Time

Sets the **Sweep Time** mode of the instrument. This can be **Auto**, where the instrument determines the optimum setting, or **Manual**, where you determine the setting.

This parameter can send up to 20 values. The location in the list sent corresponds to the range of the associated value. When sending the remote command, missing values are not permitted. If you want to change values 2 and 6, then you must send all values up to 6. Subsequent values will remain as they were.

The query always returns 20 values.

Remote Command	<pre>[:SENSe]:SPURious[:RANGe][:LIST]:SWEep:TIME <time>, <time> [:SENSe]:SPURious[:RANGe][:LIST]:SWEep:TIME? [:SENSe]:SPURious[:RANGe][:LIST]:SWEep:TIME:AUTO OFF ON 0 1,OFF ON 0 1</pre>
Example	<pre>:SPUR:SWE:TIME 10,10,10,10,10,10,10,10,10,10,10,10,10,10,10,10,10,10,10,10 :SPUR:SWE:TIME? :SPUR:SWE:TIME:AUTO ON,ON,ON,ON,ON,ON,ON,ON,ON,ON,ON,ON,ON,ON,ON,ON,ON,ON,ON,ON :SPUR:SWE:TIME:AUTO?</pre>
Preset	<p>Automatically calculated</p> <pre>ON,ON,ON,ON,ON,ON,ON,ON,ON,ON,ON,ON,ON,ON,ON,ON,ON,ON,ON,ON</pre>
State Saved	<p>Saved in instrument state</p> <p>Saved in instrument state</p>
Range	<pre>OFF ON</pre>
Min/Max	<pre>1.0E-3/2.0E+3</pre>

Points

Sets the number of points per sweep for the measurement. This parameter can send up to 20 values. The location in the list sent corresponds to the range of the associated value. When sending the remote command, missing values are not permitted. If you want to change values 2 and 6, then you must send all values up to 6. Subsequent values will remain as they were. The query always returns 20 values.

The Points mode can be manual, where you determine the setting or auto, where the instrument determines the number of trace points to ensure the sweep points resolution equals RBW/2. This is calculated using the following algorithm:

$$\text{Points} = (\text{Stop Freq} - \text{Start Freq}) / (\text{ResBW} / 2)$$

3 5G NR Mode
3.6 Spurious Emissions Measurement

	<pre> NEGative NORMal POSitive SAMPlE RMS, AVERage NEGative NORMal POSitive SAMPlE RMS [:SENSe]:SPURious[:RANGe][:LIST]:DETEctor[1][:FUNction]? </pre>
Example	<pre> :SPUR:DET NORM, NORM :SPUR:DET? </pre>
Notes	For backwards compatibility, NORMal is available as a command parameter. However, this is treated the same as RMS internally, so the query never returns NORMal
Preset	POS, POS
State Saved	Saved in instrument state
Range	Normal Average Peak Sample Negative Peak

Detector 2

Sets the detector to be used by the trace for display purposes only.

Remote Command	<pre> [:SENSe]:SPURious[:RANGe][:LIST]:DETEctor2[:FUNction] OFF AVERage NEGative NORMal POSitive SAMPlE RMS, OFF AVERage NEGative NORMal POSitive SAMPlE RMS [:SENSe]:SPURious[:RANGe][:LIST]:DETEctor2[:FUNction]? </pre>
Example	<pre> :SPUR:DET2 AVER, AVER :SPUR:DET2? </pre>
Notes	For backward compatibility, “ NORMal ” is available as a SCPI command parameter. However, this is treated same as “ RMS ” internally, so the query never returns “ NORMal ” as its results.

Preset	OFF, OFF
State Saved	Saved in instrument state
Range	Off Normal Average Peak Sample Negative Peak

Limits

Lets you set Start and Stop Limits and Threshold values for each Range.

Frequency Range

Same as **Frequency Range** under the **Bandwidth** index tab. See "[Frequency Range](#)" on page 1227.

Enabled

Same as the **Enabled** checkbox under the **Bandwidth** index tab. See "[Enabled](#)" on page 1228.

Start Freq

Same as the Start Freq column under the **Bandwidth** index tab. See "[Start Freq](#)" on page 1228. This column does not appear in MSR.

Stop Freq

Same as the Stop Freq column under the **Bandwidth** index tab. See "[Stop Freq](#)" on page 1229. This column does not appear in MSR.

Center Frequency

Same as the Center column under the **Bandwidth** index tab. See "[Center Frequency](#)" on page 1230. This column does not appear in MSR mode.

Span

Same as the Span column under the **Bandwidth** index tab. See "[Span](#)" on page 1231. This column does not appear in MSR mode.

Abs Start Limit

Determines the limit above which spurs will report a failing. If Abs Stop Limit Mode is set to **Auto**, this is coupled to **Abs Stop Limit** to make a flat limit line. If set to **Man**, Abs Start Limit and Abs Stop Limit can take different values to make a sloped limit line.

If the Limit Line Test parameter is off, then any spurs that are found to be above the current 'Peak Excursion' are added to the results table. From these spurs, the amplitude is checked using the abs limit start and abs limit stop parameters, then the limit is calculated. An 'F' is appended to the amplitude value of the spur if the measured amplitude is above the limit. If the Limit Line Test is on, only the spurs whose amplitudes exceed the limit are reported.

This parameter can send up to 20 values. The location in the list sent corresponds to the range of the associated value. When sending the remote command, missing values are not permitted. If you want to change values 2 and 6, then you must send all values up to 6. Subsequent values will remain as they were.

The query always returns 20 values.

Remote Command	<code>:CALCulate:SPURious[:RANGE][:LIST]:LIMit:ABSolute[:UPPer]:DATA[:START] <ampl>, <ampl></code>
Example	<code>:CALCulate:SPURious[:RANGE][:LIST]:LIMit:ABSolute[:UPPer]:DATA[:START]?</code> <code>:CALC:SPUR:LIM:ABS:DATA 0,0,0,0,0,0,0,0,0,0,0,0,0,0,0,0,0,0,0,0</code> <code>:CALC:SPUR:LIM:ABS:DATA?</code>

Min/Max	-200.0 dBm/50.0 dBm

Peak Excursion

Sets the minimum amplitude variation of signals that can be identified as peaks. If a value of 6 dB is selected, peaks that rise and fall more than 6 dB above the peak threshold value are identified.

This parameter can send up to 20 values. The location in the list sent corresponds to the range of the associated value. When sending the remote command, missing values are not permitted. If you want to change values 2 and 6 you must send all values up to 6. Subsequent values will remain as they were.

The query for this parameter always returns 20 values.

Remote Command	<pre>[:SENSe]:SPURious[:RANGe][:LIST]:PEAK:EXCursion <rel_ampl>, <rel_ampl></pre> <pre>[:SENSe]:SPURious[:RANGe][:LIST]:PEAK:EXCursion?</pre>
Example	<pre>:SPUR:PEAK:EXC 20,20, 20, 20, 20, 20, 20, 20, 20, 20, 20, 20, 20, 20, 20, 20, 20, 20, 20, 20, 20</pre> <pre>:SPUR:PEAK:EXC?</pre>

Preset	<code>-9.00000000E+001, -9.00000000E+001, -9.00000000E+001</code>
State Saved	Saved in instrument state
Min/Max	-200/0

Meas Setup Summary Table

Lets you view and access many of the parameters in the Meas Setup menus on one screen.

Auto Couple

Immediately puts all Auto/Man functions into Auto. The **Auto Couple** action is confined to the current measurement only. It does not affect other measurements in the Mode.

In the Auto state, Auto/Man functions are said to be “coupled”, meaning their values change as you make changes to other values in the measurement. This helps ensure accurate measurements and optimum dynamic range. **Auto Couple** is an immediate action function, and when it is executed, all the Auto/Man controls for the current measurement are set to Auto, and all measurement settings coupled to the Auto/Man parameters are automatically set to their optimal values.

For further details of measurement-specific settings (if any), see ["Measurement-Specific Details" on page 1254](#) below.

Remote Command	<code>:COUPlE ALL</code>
Example	<code>:COUP ALL</code>
Backwards	<code>:COUPLE ALL NONE</code>

Compatibility
SCPI

Backwards
Compatibility
Notes

:COUP:NONE puts all Auto/Man parameters in manual mode, decoupling all the coupled instrument parameters. It is retained for backwards compatibility and is *not* recommended for making measurements or new designs

All Auto/Man parameter couplings in the measurement are set to Auto. This includes couplings that may be unavailable or grayed-out due to the current state. For example, in the Swept SA measurement, there is no Auto/Man coupling for **RBW** while in Zero Span. Nonetheless, if **Auto Couple** were executed while in Zero Span it would set **RBW** to Auto "behind the scenes" so that, on exit from Zero Span, it would be in Auto.

Any Auto/Man selection specific (local) to the other measurements in the current Mode will not be affected by **Auto Couple**. Any functions that are *not* coupled with other instrument parameters, such as ranging or leveling variables, such as "AutoRange" or "AutoScale", will not be affected.

Executing the **Auto Couple** command generates the informational message, "All Auto/Man functions have been set to Auto".

Each parameter, upon being set to Auto, selects and sets the appropriate auto-coupled value based on that parameter's coupling rules. The Dependency Resolver orchestrates the couplings for parameters that are dependent on one or more other parameters. The coupling and dependency rules for each parameter are defined in the chapter describing that parameter.

Executing the **Auto Couple** command *does not* affect markers, marker functions, trace or display attributes, or any other instrument setting other than those specifically mentioned above.

Measurement-Specific Details

TOI

Parameters affected by Auto Couple are:

- Center Frequency Step
- Resolution Bandwidth
- Span/RBW Ratio
- Sweep Time
- Video Bandwidth VBW/RBW ratio
- Upper and Lower Tone (set to Sense)

- Zero span measurement Resolution Bandwidth
- Zero span measurement Dwell Time
- Center Frequency Step
- Resolution Bandwidth
- Span/RBW Ratio
- Sweep Time
- Video BandwidthVBW/RBW ratio
- Upper and Lower Tone (set to Sense)
- Zero span measurement Resolution Bandwidth
- Zero span measurement Dwell Time

Harmonics

For Harmonics, these parameters are:

- Resolution Bandwidth
- Fundamental Frequency
- Dwell Time
- Range Table Resolution Bandwidths
- Range Table Dwell Times

Meas Preset

Restores all measurement parameters to their default values.

Remote Command **:CONFigure:SPURious**

Example **:CONF:SPUR**

Fast Spurious Meas (Remote Command only)

This command is the backward compatibility command for the Fast Spurious Measurement. Since this command is another representation of Spurious Report Mode, it is coupled with that command.

3 5G NR Mode
 3.6 Spurious Emissions Measurement

- When set to **ON**, only spurs above the limit line are reported. This is the same as Spurious Report Mode **LIMTest**.
- When set to **OFF**, all detected spurs are reported. This is the same as Spurious Report Mode **ALL**.

Remote Command	<code>[:SENSe]:SPURious:FSMeas ON OFF 1 0</code> <code>[:SENSe]:SPURious:FSMeas?</code>
Example	<code>:SPUR:FSM ON</code> <code>:SPUR:FSM?</code>
Couplings	If <code>:SPUR:REPT:MODE</code> is ALL , this parameter is OFF If <code>:SPUR:REPT:MODE</code> is LIMTest , this parameter is ON
Preset	OFF
State Saved	Saved in instrument state

3.6.8.2 Radio

The Radio tab contains controls to select link direction.

Direction

Direction specifies whether the 5G NR signal is an uplink signal or a downlink signal.

This control allows you to set the Direction of the signal being measured.

Remote Command	<code>[:SENSe]:RADio:STANdard:DIRectioN DLINK ULINK</code> <code>[:SENSe]:RADio:STANdard:DIRectioN?</code>
Example	<code>:RAD:STAN:DIR DLIN</code>
Dependencies	When N9085EM0E is not installed and N9085EM4E is installed, only Uplink is available
Couplings	Changing the direction affects the gate source as follows <ul style="list-style-type: none"> – If changed to uplink: RF burst – If changed to downlink: External 1 <p>In Transmit On Off Power, changing the direction affects the trigger source as follows</p> <ul style="list-style-type: none"> – If changed to uplink: Periodic – If changed to downlink: External 1 except for models with the H1G option. With the H1G option, the trigger source changes as follows. <ul style="list-style-type: none"> – External 1, when Info BW \leq 255 MHz – External 3, when Info BW \geq 256 MHz

	Changing the direction affects many other modulation analysis setup parameters
Preset	ULINK when N9085EM0E is not installed and N9085EM4E is installed Otherwise, DLINK
State Saved	Yes
Range	Uplink only when N9085EM0E is not installed and N9085EM4E is installed Otherwise, Downlink Uplink

Interfering Signal Present

Sets whether interference signal for the intermodulation tests exists or not. If exists, limits are not evaluated over the interference signal frequency range specified by the span and the center frequency parameters in Adjacent Channel, Spectrum Emission Mask and Spurious Emissions measurements.

NOTE This setting is available for ACP, EVM, SEM and Spur.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference[:STATe] OFF ON 0 1</code> <code>[:SENSe]:RADio:IMODulation:INTerference[:STATe]?</code>
Example	<code>:RAD:IMOD:INT 1</code> <code>:RAD:IMOD:INT?</code>
Preset	OFF
State Saved	Saved in instrument state
Range	On Off

Freq Offset From Edge

Sets the center frequency of the interference signal for intermodulation tests. The frequency is set as offset frequency from the BS RF bandwidth edge. Interference Offset Side determines on which side of the BS RF bandwidth the interference signal exists.

NOTE This setting is available for ACP, EVM, SEM and Spur.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference:FREQuency:OFFSet <freq></code> <code>[:SENSe]:RADio:IMODulation:INTerference:FREQuency:OFFSet?</code>
Example	<code>:RAD:IMOD:INT:FREQ:OFFS 5MHz</code> <code>:RAD:IMOD:INT:FREQ:OFFS?</code>
Preset	5MHz

State Saved	Saved in instrument state
Min	0 Hz
Max	400 MHz

Span

Sets the span of the interference signal for intermodulation tests.

NOTE

This setting is available for ACP, EVM, SEM and Spur.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference:SPAN <freq></code> <code>[:SENSe]:RADio:IMODulation:INTerference:SPAN?</code>
Example	<code>:RAD:IMOD:INT:SPAN 5MHz</code> <code>:RAD:IMOD:INT:SPAN?</code>
Preset	5 MHz
State Saved	Saved in instrument state
Min	200 kHz
Max	400 MHz

Offset Side

Sets which side of the BS RF bandwidth the interference signal exists on.

NOTE

This setting is available for ACP, EVM, SEM and Spur.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference:SIDE NEGative POSitive</code> <code>[:SENSe]:RADio:IMODulation:INTerference:SIDE?</code>
Example	<code>:RAD:IMOD:INT:SIDE POS</code> <code>:RAD:IMOD:INT:SIDE?</code>
Preset	<code>POSitive</code>
State Saved	Saved in instrument state

Non-Contiguous Interference Region

Sets the region the interfering signal exists at in the Non-Contiguous mode:

- Inner – The interfering signal exists at the inner region. This setting is only effective when Carrier Alloc is Non-Contiguous. When in Contiguous, the

interference region is always outside regardless of the selection of this parameter

- Outer – The interfering signal exists at either of the outer regions

NOTE

This setting is available for ACP, EVM, SEM and Spur.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference:REGion INNER OUTER</code> <code>[:SENSe]:RADio:IMODulation:INTerference:REGion?</code>
Example	<code>:RAD:IMOD:INT:REG OUT</code> <code>:RAD:IMOD:INT:REG?</code>
Preset	<code>OUTer</code>
State Saved	Saved in instrument state

3.6.8.3 Component Carriers

Contains settings that let you configure the analyzer to match the component carriers in your 5G NR signal.

Number of Component Carriers

Specifies how many component carriers are included in the 5G NR measurements. The 5G NR supports the maximum of 16 component carriers.

Remote Command	<code>[:SENSe]:CCARrier:COUNT <integer></code> <code>[:SENSe]:CCARrier:COUNT?</code>
Example	<code>:CCAR:COUN 1</code> <code>:CCAR:COUN?</code>
Preset	1
State Saved	Yes
Min	1
Max	16

Carrier Allocation

Specifies the carrier frequency allocation. There are two types of allocation, contiguous and non-contiguous. Non-Contiguous frequency allocation is defined as an allocation where two sub-blocks are separated with a sub-block gap:

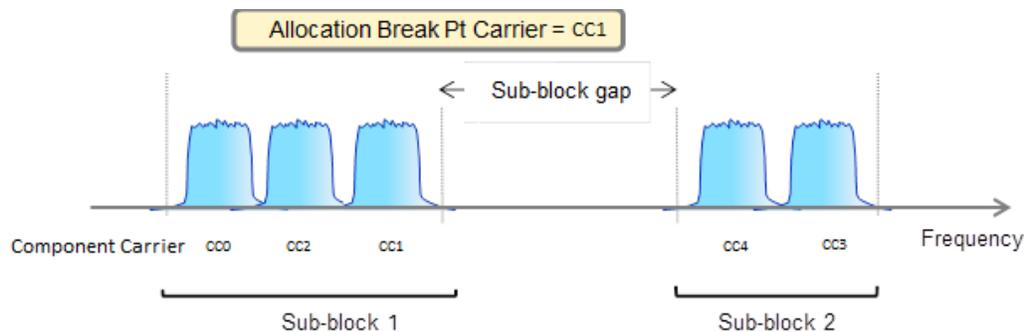

- Contiguous – All the component carriers belong to one block and no sub-block gap exists
- Non-Contiguous – Component carriers are separated into two sub-blocks. Allocation Break Pt Carrier determines how sub-blocks are configured

Remote Command	<code>[:SENSe] :CCARrier :CONFig :ALLocation CONTiguous NCONtiguous</code> <code>[:SENSe] :CCARrier :CONFig :ALLocation ?</code>
Example	<code>:CCAR :CONf :ALL CONT</code> <code>:CCAR :CONf :ALL ?</code>
Preset	<code>CONtiguous</code>
State Saved	Saved in instrument state
Range	Contiguous Non-Contiguous

Non-Contiguous Break at

Specifies an allocation break point in non-contiguous carrier allocation. First sub-block starts from the lowest frequency carrier and stops at the allocation break point carrier. Next sub-block starts from the next upper frequency carrier and ends at the highest frequency carrier.

one example is shown below. In the example carrier indices are not in the order of carrier frequency. In the example, Allocation Break Pt Carrier is CC1. It means that sub-block 1 ends at carrier CC1 and sub-block 2 starts at carrier CC4. Sub-block gap is located between carrier CC1 and CC4.

Remote Command	<code>[:SENSe] :CCARrier :CONFig :ALLocation :NCONtiguous :ABPoint CC0 ... CC15</code> <code>[:SENSe] :CCARrier :CONFig :ALLocation :NCONtiguous :ABPoint ?</code>
Example	<code>:CCAR :CONf :ALL :NCON :ABP CC0</code> <code>:CCAR :CONf :ALL :NCON :ABP ?</code>
Dependencies	Allocation Break Point is coupled to Number of Component Carriers. For example, Allocation Break Point list will include CC0-CC1 if the number of Component Carriers is 2

Preset	CC0
State Saved	Saved in instrument state
Range	CC0 ... CC15

Configure Comp Carriers

This dialog lets you perform a detailed configuration of your component carriers, including number of carriers, bandwidth, offset, integration bandwidth, and so on.

Configure CCs

Lets you configure bandwidth, frequency offsets, and integration bandwidth, and also lets you exclude certain carriers from the measurement.

More Information

"Measure Carrier" on page 2636	"Sidelink" on page 2637	"Bandwidth" on page 2637	"Freq Range" on page 2638

Number of Component Carriers

This is the same as the control on the menu panel. See ["Number of Component Carriers" on page 2633](#).

Auto Frequency Offset

Changing this value will automatically calculate frequency offset based on a specified set of rules (For the rules, see 5.4.1.1 and 5.4.1.2 in 3GPP TS 38.104 V15.4.0).

Remote Command	<code>[:SENSe]:CCARrier:AFOffset OFF ACRA100K ACRA15K ACRA60K CARA100K CARA15K CARA60K</code> <code>[:SENSe]:CCARrier:AFOffset?</code>
----------------	---

3 5G NR Mode
 3.6 Spurious Emissions Measurement

Example	<code>:CCAR:AFOF ACRA100K</code> <code>:CCAR:AFOF?</code>								
Notes	When you change the value to OFF , nothing happens								
Dependencies	Changing Number of Component Carriers, CC's Bandwidth, or CC's Frequency Range will recalculate frequency offset unless OFF is selected When CC's Frequency Offset is manually changed, this parameter is set to OFF This feature isn't supported when Carrier Allocation is set to Non-Contiguous. When Auto Freq Offset is set to a value other than OFF with Number of Component Carriers = 1, then, CCO Freq Offset is automatically adjusted to 0 Hz								
Preset	OFF								
State Saved	Yes								
Range	The cascading list is shown below								
	<table border="1"> <tr> <td>Channel Spacing for</td> <td>Channel Raster</td> </tr> <tr> <td>Adjacent NR Carriers</td> <td>100 kHz</td> </tr> <tr> <td>Carrier Aggregation</td> <td>15 kHz</td> </tr> <tr> <td>Off</td> <td>60 kHz</td> </tr> </table>	Channel Spacing for	Channel Raster	Adjacent NR Carriers	100 kHz	Carrier Aggregation	15 kHz	Off	60 kHz
Channel Spacing for	Channel Raster

Carrier Aggregation									
Off									

Carrier Allocation

This is the same as the control on the menu panel. See "[Carrier Allocation](#)" on page 2633.

Non-Contiguous Break at

This is the same as the control on the menu panel. See "[Non-Contiguous Break at](#)" on page 2634.

Measure Carrier

This column sets whether to measure this component carrier or not.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15[:STATe] OFF ON 0 1</code> <code>[:SENSe]:CCARrier[0] 1 ... 15[:STATe]?</code>
Example	<code>:CCAR0 ON</code> <code>:CCAR0?</code>
Notes	The command is used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers
Couplings	Measure Carrier of the CCs that are within "Number of Component Carriers" is set to ON when the action "Apply Preset (to All CCs)" is executed X
Preset	ON
State Saved	Saved in instrument state

Sidelink

Allows the user to select the mode of component carrier from either normal 5G NR uplink or 5G NR V2X sidelink when Direction is Uplink.

- OFF: The component carrier is 5G NR uplink carrier. The 5G NR uplink parameters per carrier are in scope.
- ON: The component carrier is 5G NR V2X sidelink carrier. The sidelink parameters per carrier are in scope.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:SLINk ON OFF 1 0</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:SLINk?</code>
Example	<code>CCAR4:RAD:SLIN ON</code> <code>CCAR4:RAD:SLIN?</code>
Dependencies	Available when the required license is installed and Direction is Uplink Unavailable when " Bandwidth " on page 2637 is 35 MHz, 45 MHz, 800 MHz, 1600 MHz, and 2000 MHz
Preset	OFF
State Saved	Saved

Bandwidth

This column enables you to set the bandwidth of each component carrier for 5G NR signal (which also determines the total number of resource blocks for Modulation Analysis measurement).

3 5G NR Mode
3.6 Spurious Emissions Measurement

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:BANDwidth B5M B10M B15M B20M B25M B30M B35M B40M B45M B50M B60M B70M B80M B90M B100M B200M B400M B800M B1600M B2000M</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:BANDwidth?</code>
Example	<code>:CCAR4:RAD:STAN:BAND B50M</code>
Dependencies	When "Sidelink" on page 2637 is enabled, 35 MHz, 45 MHz, 800 MHz, 1600 MHz, and 2000 MHz are not available. Selecting any of those BWs turns Sidelink off and the column becomes grayed out
Couplings	This value will be preset to the Bandwidth value in the Meas Standard menu when the action "Apply Preset (to All CCs)" is executed
Preset	B100M
State Saved	Yes
Range	5 MHz 10 MHz 15 MHz 20 MHz 25 MHz 30 MHz 35 MHz 40 MHz 45 MHz 50 MHz 60 MHz 70 MHz 80 MHz 90 MHz 100 MHz 200 MHz 400 MHz 800 MHz 1600 MHz 2000 MHz

Freq Range

This column enables you to set which frequency range to which each component carrier belongs.

Frequency Range affects CC Bandwidth, Max RB Numbers, ACP Measurement Noise Bandwidth and SEM Integ BW.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:FRANge FR1 FR2</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:FRANge?</code>
Example	<code>:CCAR1:RAD:STAN:FRAN FR1</code>
Dependencies	Available selections differ depending on "Bandwidth" on page 2637 as follows: <ul style="list-style-type: none"> - 50 MHz and 100 MHz: FR1 and FR2 - 200 MHz or wider: FR2 only - Other than above: FR1 only
Couplings	This value will be preset to the Frequency Range value in the Meas Standard menu when the action "Apply Preset (to All CCs)" is executed
Preset	FR1
State Saved	Yes
Range	FR1 FR2

Freq Offset

This column sets the component carrier center frequency as offset from the Carrier Ref Frequency.

Remote Command	<code>[:SENSe]:CCARrier<n>:FREQuency:OFFSet <freq></code> <code>[:SENSe]:CCARrier<n>:FREQuency:OFFSet?</code>
Example	<code>:CCAR4:FREQ:OFFS 10MHz</code> <code>:CCAR4:FREQ:OFFS?</code>
Notes	Used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers Frequency Offset of CC0 to CC15 is recommended to be set in ascending order for the best related couplings. You can see whether sub-blocks are configured as you expect in the trace of Monitor Spectrum by turning on Sub-block Attribute under Display > Meas Display. If sub-blocks are not configured correctly, results related to sub-block gap such as ACP/SEM inner offset results are not measured correctly Also, in some cases, make sure if the “Non-Contiguous Break at” parameter is set to the intended value since it’s often left unchanged after Frequency Offset of CCs are changed
Preset	0 Hz
State Saved	Saved in instrument state
Min	-50 GHz
Max	50 GHz

Cell ID Auto

Enable and disable Cell ID auto detection based on SSB.

NOTE This setting is available for EVM measurement only.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:CID:MODE AUTO MANua1</code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:CID:MODE?</code>
Example	<code>:EVM:CCAR:CID:MODE MAN</code> <code>:EVM:CCAR:CID:MODE?</code>
Preset	<code>MANua1</code>
State Saved	Saved in instrument state

Cell ID Value

Specify Cell ID for the component carrier.

NOTE This setting is available for EVM measurement only.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:CID <integer></code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:CID?</code>
----------------	---

Example	<code>:EVM:CCAR4:CID 0</code> <code>:EVM:CCAR4:CID?</code>
Couplings	Invalid when Cell ID Auto is on
Preset	0
State Saved	Saved in instrument state
Min	0
Max	1007

Demod Spectrum

This column determines if the spectrum of the incoming data is mirrored or not. The actual mirroring is accomplished by conjugating the complex time data.

Note that only the Modulation Analysis measurement and Conformance EVM measurement support this feature.

Remote Command	<code>[[:SENSe]:CCARrier[0] 1 ... 15:SPECTrum NORMal INVert</code> <code>[[:SENSe]:CCARrier[0] 1 ... 15:SPECTrum?</code>
Example	<code>:CCAR0:SPEC INV</code> <code>:CCAR0:SPEC?</code>
Preset	<code>NORM</code>
State Saved	Yes
Range	Normal Invert

CHP Power Integration Bandwidth

This column specifies the range of integration used in calculating the power in the component carrier s in the CHP measurement.

NOTE This setting is *not* available for EVM.

Remote Command	<code>[[:SENSe]:CCARrier[0] 1 ... 15:CHPower:BANDwidth:INTEgration <freq></code> <code>[[:SENSe]:CCARrier[0] 1 ... 15:CHPower:BANDwidth:INTEgration?</code>
Example	<code>:CCAR0:CHP:BAND:INT 20MHz</code> <code>:CCAR0:CHP:BAND:INT?</code>
Couplings	When Bandwidth of the parameter set is changed, this parameter also changes to that value
Preset	100 MHz
State Saved	Saved in instrument state

Min	100 kHz
Max	2000 MHz

ACP Power Integration Bandwidth

This column specifies the Measurement Noise Bandwidth used to calculate the power in the component carriers in the ACP measurement.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:ACPpower:BANDwidth[1] 2:INTEgration <freq></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:ACPpower:BANDwidth[1] 2:INTEgration?</code>
Example	<code>:CCAR0:ACP:BAND:INT 20MHz</code> <code>:CCAR0:ACP:BAND:INT?</code>
Notes	Carrier sub op code, 1 is for BTS, 2 for MS. Default is BTS

Couplings When either Bandwidth of the parameter set, Freq Range, or Direction is changed, the value of this parameter also changes as shown in the following table
When Freq Range is FR1

Bandwidth	Downlink ACP Meas Noise BW (MHz)	Uplink ACP Meas Noise BW (MHz)
5 MHz	4.500	4.515
10 MHz	9.360	9.375
15 MHz	14.220	14.235
20 MHz	19.080	19.095
25 MHz	23.940	23.955
30 MHz	28.800	28.815
35 MHz	33.840	33.855
40 MHz	38.880	38.895
45 MHz	43.560	43.575
50 MHz	48.600	48.615
60 MHz	58.320	58.350
70 MHz	68.040	68.070
80 MHz	78.120	78.150
90 MHz	88.200	88.230
100 MHz	98.280	98.310

When Freq Range is FR2

Bandwidth	Downlink ACP Meas Noise BW	Uplink ACP Meas Noise BW
-----------	----------------------------	--------------------------

3 5G NR Mode
3.6 Spurious Emissions Measurement

	(MHz)	(MHz)
50 MHz	47.520	47.580
100 MHz	95.040	95.160
200 MHz	190.080	190.20
400 MHz	380.160	380.280
800 MHz	714.24	715.20
1600 MHz	1428.48	1429.44
2000 MHz	1704.96	1705.92
Preset	98.280 MHz 98.310 MHz	
State Saved	Yes	
Min	100 kHz	
Max	2000 MHz	

SEM Power Integration Bandwidth

This column specifies the integration bandwidth used to calculate the power in the component carriers in SEM measurement.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:SEMAsk:BANDwidth[1] 2:INTEgration <freq></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:SEMAsk:BANDwidth[1] 2:INTEgration?</code>
Example	<code>:CCAR0:SEM:BAND:INT 20MHZ</code> <code>:CCAR0:SEM:BAND:INT?</code>
Notes	Bandwidth sub op code, 1 is for BTS, 2 for MS. Default is BTS
Couplings	When Bandwidth of the parameter set is changed, this parameter also changes to that value
Preset	100 MHz
State Saved	Saved in instrument state
Min	100 kHz
Max	2000 MHz

SCS (Power Meas)

Queries the SCS (Power Meas), the smallest SCS among the enabled SCSs of the selected component carrier set with **"SCS Enabled" on page 1547**.

It is used to calculate the aggregated channel bandwidth when Power Reference is set to Aggregated Chan BW.

Power Integration Bandwidth values are not affected even if SCS (Power Meas) is changed.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RGRid:PMSCs?</code>
Example	<code>:CCAR3:RGR:PMSC?</code>
Notes	<p>Query-only</p> <p>Returns one of the following values: NONE, SCS15K, SCS30K, SCS60K, SCS120K, SCS240K, SCS480K, SCS960K</p>

3.6.8.4 Meas Standard

The tab contains settings which let you configure the analyzer to match the measurement standard in your 5G NR signal.

The section entitled “Configure Preset” lets you configure the preset values for the Component Carriers. Once you have set all the controls in the “Configure Preset” section to the desired value, press the “Apply Preset (to all CCs)” control and your presets will be applied to each Component Carrier. Furthermore, any new Component Carriers will take on the same values you have applied.

NOTE

You must press *Apply Preset (to all CCs)* or the values on the controls will *not* affect the Component Carriers.

When you need to configure more parameters, select Advanced Preset Parameters to open a dialog and set advanced parameters for multiple measurements on one screen.

Bandwidth

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the **“Bandwidth” on page 2637** of each component carrier in the same way you would do so using the table in the **Configure Comp Carriers** dialog on the **Component Carriers** tab.

Set the value you want for this control and the other controls in the “**Configure Preset**” section then press **Apply Preset (to all CCs)**.

NOTE

You must press *Apply Preset (to all CCs)* or the value on this controls will *not* affect the Component Carriers.

Once you have applied this preset value, any new CCs created by setting the **“Number of Component Carriers” on page 2633** will also take on this value.

Remote Command	<code>[:SENSe]:RADio:STANDard:PRESet:CARRier[:BANDwidth] B5M B10M B15M B20M B25M B30M B35M B40M B45M B50M B60M B70M B80M B90M B100M B200M B400M B800M B1600M B2000M</code>
----------------	---

	<code>[:SENSe]:RADio:STANdard:PRESet:CARRier[:BANDwidth]?</code>
Example	<code>:RAD:STAN:PRES:CARR B5M</code> <code>:RAD:STAN:PRES:CARR?</code>
Dependencies	Selections other than 10 MHz, 20 MHz, 30 MHz, and 40 MHz are unavailable when "Uplink Carrier Mode" on page 2648 is Sidelink - V2X If you change "Uplink Carrier Mode" on page 2648 to Sidelink - V2X when this parameter is set to a value other than 10 MHz, 20 MHz, 30 MHz, or 40 MHz, it is forcefully set to 10 MHz
Preset	When N9085EMOE is not installed and N9085EM4E is installed: B10M Otherwise: B100M
State Saved	Yes
Range	5 MHz 10 MHz 15 MHz 20 MHz 25 MHz 30 MHz 35 MHz 40 MHz 45 MHz 50 MHz 60 MHz 70 MHz 80 MHz 90 MHz 100 MHz 200 MHz 400 MHz 800 MHz 1600 MHz 2000 MHz
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:STANdard:PRESet[:BANDwidth]</code>

Frequency Range

This control is part of the "Configure Presets" section of **Meas Standard**. It lets you set the "Freq Range" on page 2638 of each component carrier in the same way you would do so using the table in the **Configure Comp Carriers** dialog on the **Component Carriers** tab.

Set the value you want for this control and the other controls in the "Configure Preset" section then press **Apply Preset (to all CCs)**.

NOTE

You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

Once you have applied this preset value, any new CCs created by setting the "Number of Component Carriers" on page 2633 will also take on this value.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:FREQuency:RANGe FR1 FR2</code> <code>[:SENSe]:RADio:STANdard:PRESet:FREQuency:RANGe?</code>
Example	<code>:RAD:STAN:PRES:FREQ:RANG FR1</code> <code>:RAD:STAN:PRES:FREQ:RANG?</code>
Dependencies	Available selections differ depending on Bandwidth as follows: <ul style="list-style-type: none"> - 50 MHz and 100 MHz: FR1 and FR2 - 200 MHz or wider: FR2 only - Other than above: FR1 only When "Uplink Carrier Mode" on page 2648 is Sidelink - V2X, FR2 is unavailable

Preset	FR1
State Saved	Yes
Range	FR1 FR2
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:STANdard:PRESet:FRANge</code>

Duplex Mode

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the Duplex Mode of each component carrier. Set the value you want for this control and the other controls in the “Configure Preset” section then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the **“Number of Component Carriers” on page 2633** will also take on this value.

Two types of Duplex Mode (FDD and TDD) are supported.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DMODE FDD TDD</code> <code>[:SENSe]:RADio:STANdard:PRESet:DMODE?</code>
Example	<code>:RAD:STAN:PRESet:DMOD TDD</code> <code>:RAD:STAN:PRESet:DMOD?</code>
Dependencies	Available selections depend on Frequency Range When FR1 is selected, both TDD and FDD are available. When FR2 is selected, only TDD is available
Preset	TDD
State Saved	Yes
Range	FDD TDD

SCS

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the subcarrier spacing of each component carrier. Set the value you want for this control and the other controls in the “Configure Preset” section then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

3 5G NR Mode
3.6 Spurious Emissions Measurement

Once you have applied this preset value, any new CCs created by setting the "Number of Component Carriers" on page 2633 will also take on this value.

In 5G, subcarrier spacing is governed by $2^n * 15$ kHz subcarrier spacings (where n is 0, 1, 2, or 3). 15, 30, and 60 kHz subcarrier spacings are used for the lower frequency bands, and 60 and 120 kHz subcarrier spacings are used for the higher frequency bands.

Remote Command	<pre>[:SENSe]:RADio:STANdard:PRESet:SCS SCS15K SCS30K SCS60K SCS120K SCS480K SCS960K [:SENSe]:RADio:STANdard:PRESet:SCS? [:SENSe]:RADio:STANdard:PRESet:SCS:AUTO[:STATe] OFF ON 0 1 [:SENSe]:RADio:STANdard:PRESet:SCS:AUTO[:STATe]?</pre>																																	
Example	<pre>:RAD:STAN:PRE:SCS SCS30K :RAD:STAN:PRE:SCS? :RAD:STAN:PRE:SCS:AUTO 0 :RAD:STAN:PRE:SCS:AUTO?</pre>																																	
Notes	SCS will not be preset to the selected one until the action "Apply Preset (to All CCs)" is executed

RB Alloc Preset

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the Resource Block Allocation Preset of each component carrier. Set the value you want for this control and the other controls in the “Configure Preset” section then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the **“Number of Component Carriers” on page 2633** will also take on this value.

The RB Alloc Preset presets the Resource Block (RB) allocation mapping to a selected predefined pattern in the list:

“Fulfilled-xxx” is to fill out all maximum available RBs in each CC with one specified modulation type (Pi/2-BPSK | QPSK | 16 QAM | 64 QAM | 256 QAM | 1024 QAM), and “DL-NR-TM x.x” is to map RBs in each CC based on the NR Test Model definition according to the section 4.9.2 in 3GPP TS38.141-1 or -2.

Remote Command `[:SENSe]:RADio:STANdard:PRESet:RBAlloc FQPSK | FQAM16 | FQAM64 | FQAM256 | FQAM1024 | DLTM1DOT1 | DLTM1DOT2 | DLTM2 | DLTM2Q16 | DLTM2QPS | DLTM2A | DLTM2B | DLTM3DOT1 | DLTM3DOT1Q16 | DLTM3DOT1QPS | DLTM3DOT1A | DLTM3DOT1B | DLTM3DOT2 | DLTM3DOT3 | FPIBPSK | DLTM1DOT1P1 | DLTM1DOT1L2`

`[:SENSe]:RADio:STANdard:PRESet:RBAlloc?`

Example `:RAD:STAN:PRES:RBAL DLTM1DOT1`

`:RAD:STAN:PRES:RBAL?`

Notes Resource Block Allocation Preset will not be preset to the selected one until the action “Apply Preset (to All CCs)” is executed

Dependencies Available selections vary depending on the Radio Direction and Frequency Range as follows:
Uplink:

- Fulfilled xxxx except for Fulfilled 1024 QAM
- Note that Fulfilled Pi/2-BPSK is available only when OFDM Type is DFT-s-OFDM

Downlink:

- FR1: All except for Fulfilled Pi/2-BPSK/TM2 (16-QAM)/TM2 (QPSK)/TM3.1 (16-QAM)/TM3.1 (QPSK)
- FR2: All except for Fulfilled Pi/2-BPSK/TM1.2/TM2b/TM3.1b/TM3.2/TM3.3

Advanced Preset Parameters

Lets you access advanced preset parameters on one screen.

Uplink Carrier Mode

Allows you to select the uplink carrier mode: either Normal Uplink or Sidelink - V2X.

Remote Command	<code>[:SENSe]:RADIo:STANdard:PRESet:ULINK:CARRier NORMal V2X</code>
----------------	---

	<code>[:SENSe]:RADio:STANdard:PRESet:ULINk:CARRier?</code>
Example	<code>RAD:STAN:PRES:ULIN:CARR NORM</code> <code>RAD:STAN:PRES:ULIN:CARR?</code>
Dependencies	Available when the required license is installed and Direction is Uplink
Preset	When N9085EMOE is not installed and N9085EM4E is installed: V2X Otherwise: NORMa1
State Saved	Saved
Range	Normal Uplink Sidelink-V2X

DL FR1 NR-TM Reference Standard Selection

Enables you to select the 3GPP Standard for the DL FR1 TDD NR-TM lists of Resource Block Allocation Preset to be referred to; one is 3GPP TS38.141-1 and the other is 3GPP TS37.141 BC3 CS16/17, which define different TDD burst On/Off profiles.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DLINk:NRTM TS38 TS37CS1617</code> <code>[:SENSe]:RADio:STANdard:PRESet:DLINk:NRTM?</code>
Example	<code>RAD:STAN:PRES:DLIN:NRTM TS38</code> <code>RAD:STAN:PRES:DLIN:NRTM?</code>
Dependencies	Grayed out when Radio Direction is Uplink.
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed.
Preset	TS38
State Saved	Yes
Range	TS38.141-1 TS37.141 BC3 CS16/17

OFDM Type

This control is part of the “Preset for Mod Analysis” section of the Advanced Preset Parameters dialog. It lets you specify the OFDM Type to configure preset values for the Component Carriers:

- CP-OFDM
- DFT-s-OFDM

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press *Apply Preset (to all CCs)* or the value on this controls will *not* affect the Component Carriers.

Once you have applied this preset value, any new CCs created by setting the Number of Component Carriers will also take on this value.

This parameter is valid only for the Modulation Analysis measurement.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:OTYPe CPOFdm DFTSofdm</code> <code>[:SENSe]:RADio:STANdard:PRESet:OTYPe?</code>
Example	<code>:RAD:STAN:PRES:OTYP CPOF</code> <code>:RAD:STAN:PRES:OTYP?</code>
Dependencies	DFT-s-OFDM is grayed out when Radio Direction is Downlink DFT-s-OFDM is grayed-out when "Uplink Carrier Mode" on page 2648 is Sidelink - V2X
Couplings	Values to be preset will not be preset until the action "Apply Preset (to All CCs)" is executed
Preset	<code>CPOFdm</code>
State Saved	Yes
Range	CP-OFDM DFT-s-OFDM

Adjust Limit Mask for Freq Range

This control is part of the "Preset for ACP, SEM, Spur, Tx On|Off Power" section of the Advanced Preset Parameters dialog. It lets you specify the frequency range for preset.

Set the value you want for this control and the other controls in the "Configure Preset" section, and then press "Apply Preset (to all CCs)".

NOTE

You must press *Apply Preset (to all CCs)* or the value on this controls will *not* affect the Component Carriers.

When in Auto, this value changes when f value is changed, where f is the center frequency of Component Carrier 0. Values to be preset will be preset to the values described in the Values for Meas Standard section when Apply Preset is executed.

When in Manual, values to be preset will be preset to the values described in Values or Meas Standard according to this value when Apply Preset is executed.

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ADJust:FRANge NONE FT01 F1T03 F3T04P2 F4P2T06 F6T07 F24P25T029P5 F37T040 F43T048 F52T071</code>

BS Type

This control is part of the “Preset for ACP, SEM, Spur, Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you specify the BS Type for preset:

- 1-C (FR1 Conducted)
- 1-O (FR1 Radiated)
- 2-O (FR2 Radiated)

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DLINK:BS:TYPE FR1C FR1O FR2O</code> <code>[:SENSe]:RADio:STANdard:PRESet:DLINK:BS:TYPE?</code>
Example	<code>:RAD:STAN:PRES:DLIN:BS:TYPE FR1C</code> <code>:RAD:STAN:PRES:DLIN:BS:TYPE?</code>
Dependencies	Grayed out when Radio Direction is Uplink
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	FR1C
State Saved	Yes
Range	1-C (FR1 Conducted) 1-O (FR1 Radiated) 2-O (FR2 Radiated)

BS Category

This control is part of the “Preset for ACP, SEM, Spur, Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you specify the BS Category for preset:

- Category A Wide Area BS
- Category B Wide Area BS
- Category A Medium Range BS
- Category B Medium Range BS
- Category A Medium Range BS (Low Power rated)
- Category B Medium Range BS (Low Power rated)
- Category A Local Area BS
- Category B Local Area BS

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press *Apply Preset (to all CCs)* or the value on this controls will *not* affect the Component Carriers.

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Example	<code>:RAD:STAN:PRES:DLIN:BS:CAT BWAR</code> <code>:RAD:STAN:PRES:DLIN:BS:CAT?</code>
Dependencies	Grayed-out when Radio Direction is Uplink
Couplings	Values to be preset will not be preset to the selected one until the action “Apply Preset (to All CCs)” is executed
Preset	<code>BWARea</code>
State Saved	Yes
Range	Category A Wide Area BS Category B Wide Area BS Category A Medium Range BS Category B Medium Range BS Category A Medium Range BS (Low Power rated) Category B Medium Range BS (Low Power rated) Category A Local Area BS Category B Local Area BS

Assumed Adjacent Channels

This control is part of the “Preset for ACP, Mod Analysis” section of the Advanced Preset Parameters dialog. It lets you set the Assumed Adjacent Channels for carrier configuration preset. Set the value you want for this control and the other controls

in the “Configure Preset” section, then press “Apply Preset (to all CCs)” to execute preset. See the Values for Meas Standard section for the parameters to be preset.

Downlink

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DLINK:ACHannel[:TYPE] NR EUTra NREutra</code> <code>[:SENSe]:RADio:STANdard:PRESet:DLINK:ACHannel[:TYPE]?</code>
Example	<code>:RAD:STAN:PRES:DLIN:ACH NR</code> <code>:RAD:STAN:PRES:DLIN:ACH?</code>
Dependencies	UTRA and NR+UTRA are grayed-out when “Uplink Carrier Mode” on page 2648 is Sidelink - V2X
Preset	NR
State Saved	Yes
Range	NR (same BW) E-UTRA NR + E-UTRA

Uplink

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:ACHannel[:TYPE] NR UTRa NRUTra</code> <code>[:SENSe]:RADio:STANdard:PRESet:ULINK:ACHannel[:TYPE]?</code>
Example	<code>:RAD:STAN:PRES:ULIN:ACH NR</code> <code>:RAD:STAN:PRES:ULIN:ACH?</code>
Preset	NR
State Saved	Yes
Range	NR (same BW) UTRA NR + UTRA

UE Power Class

This control is part of the “Preset for ACP, Mod Analysis” section of the Advanced Preset Parameters dialog. It lets you select the UE Power Class for preset from Power Class 1 to 4.

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.

This parameter is valid for the ACP and Mod Analysis measurement.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:PClass CLASS1 ... CLASS4</code>
----------------	---

	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:PCLass?</code>
Example	<code>:RAD:STAN:PRES:ULIN:PCL CLASS3</code> <code>:RAD:STAN:PRES:ULIN:PCL?</code>
Dependencies	Grayed out when Radio Direction is Downlink Power Class 4 is grayed out when Frequency Range is FR1 Power Class 1, 2, and 4 are grayed-out when " Uplink Carrier Mode " on page 2648 is Sidelink - V2X
Preset	<code>CLASS3</code>
State Saved	Yes
Range	1 2 3 4

Uplink Channel Type

This control is part of the “Preset for Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you set the Uplink Channel Type to preset parameters for the Transmit On|Off Power measurement. Set the value you want for this control and the other controls in the “Configure Preset” section, then press “Apply Preset (to all CCs)” to execute preset. See the Values for Meas Standard section for the parameters to be preset.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:CTYPe NONE PUS PRA4 PRA160S15 PRA160S30 PRA12 PRA123S15 PRA123S30 SRS PRA0S60 PRA0S120</code> <code>[:SENSe]:RADio:STANdard:PRESet:ULINK:CTYPe?</code>
Example	<code>:RAD:STAN:PRES:ULIN:CTYP PUS</code> <code>:RAD:STAN:PRES:ULIN:CTYP?</code>
Dependencies	Available selections differ depending on the combination of Freq Range and Duplex Mode as follows: When Freq Range is FR1 and Duplex Mode is FDD: - PUSCH, PRACH Config Index4, PRACH Config Index160 and SRS When Freq Range is FR1 and Duplex Mode is TDD: - PUSCH, PRACH Config Index12, PRACH Config Index123 and SRS When Freq Range is FR2: - PUSCH, PRACH Config Index0, SRS
Preset	<code>PUS</code>
State Saved	Yes
Range	PUSCH PRACH Config Index 4 PRACH Config Index 160 (15 kHz SCS) PRACH Config Index 160 (30 kHz SCS) PRACH Config Index 12 PRACH Config Index 123 (15 kHz SCS) PRACH Config Index 123 (30 kHz SCS) PRACH Config Index 0 (60 kHz SCS) PRACH Config Index 0 (120 kHz SCS) SRS

More Advanced Preset Parameters

Enables you to configure more advanced Apply Preset features.

Include RB Alloc Preset for Mod Analysis

Enables you to select whether or not RB Alloc Preset is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EVM:RBALloc OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EVM:RBALloc?</code>
Example	<code>:RAD:STAN:PRES:INCL:EVM:RBAL 1</code> <code>:RAD:STAN:PRES:INCL:EVM:RBAL?</code>
Notes	When Exclude is selected, the indicator “Exclude EVM RB Alloc” appears on the Meas Setup menu panel
Preset	ON
State Saved	Yes

Include Gate Source

Enables you to select whether or not Gate Source is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EGATE:SOURce OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EGATE:SOURce?</code>
Example	<code>:RAD:STAN:PRES:INCL:EGAT:SOUR 1</code> <code>:RAD:STAN:PRES:INCL:EGAT:SOUR?</code>
Preset	ON
State Saved	Yes

Include Periodic Timer Period

Enables you to select whether or not Periodic Timer Period is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:PERiod OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:PERiod?</code>
Example	<code>:RAD:STAN:PRES:INCL:FRAM:PER 1</code> <code>:RAD:STAN:PRES:INCL:FRAM:PER?</code>
Preset	ON
State Saved	Yes

Include Periodic Timer Sync Source

Enables you to select whether or not Periodic Timer Sync Source is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC[:SOURce] OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC[:SOURce]?</code>
Example	<code>:RAD:STAN:PRESet:INCL:FRAM:SYNC 1</code> <code>:RAD:STAN:PRESet:INCL:FRAM:SYNC?</code>
Preset	ON
State Saved	Yes

Include Periodic Timer Sync Holdoff

Enables you to select whether or not Periodic Timer Sync Holdoff is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC:HOLDoff OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC:HOLDoff?</code>
Example	<code>:RAD:STAN:PRESet:INCL:FRAM:SYNC:HOLD 1</code> <code>:RAD:STAN:PRESet:INCL:FRAM:SYNC:HOLD?</code>
Preset	ON
State Saved	Yes

Apply Preset (to All CCs)

This is the same as the Apply Preset (to All CCs) control on the Meas Standard menu panel tab under Meas Standard.

See ["Apply Preset \(to All CCs\)" on page 2657](#).

Apply Preset (to All CCs)

When you press this control, parameters of each component carrier are configured to the values set on the ["Bandwidth" on page 2643](#), ["Frequency Range" on page 2644](#), ["Duplex Mode" on page 2644](#), ["SCS" on page 2645](#) and ["RB Alloc Preset" on page 2646](#) controls in the "Configure Presets" section of the menu panel. These values will also be used for any subsequent Component Carriers created.

NOTE

You must press “**Apply Preset (to all CCs)**” or the values on the controls in the “**Configure Presets**” section of the menu panel will *not* affect the Component Carriers.

Remote Command	<code>[:SENSe] :RADio :STANdard :PRESet :IMMediate</code>
Example	<code>:RAD :STAN :PRES :IMM</code>
Notes	Whenever any preset parameter is changed, including the following cases, the color of this control changes to amber, until “Apply Preset” is executed again <ul style="list-style-type: none"> - Start-up - Mode Preset - Recall

Values for Meas Standard

Meas Standard Setting Parameters for Apply Preset

The following parameters in Meas Setup > Meas Standard let you configure the preset values for Component Carriers.

Direction	Downlink	Uplink
Bandwidth	5, 10, 15, 20, 25, 30, 35, 40, 45, 50, 60, 70, 80, 90, 100, 200, 400, 800, 1600, 2000 MHz	5, 10, 15, 20, 25, 30, 35, 40, 45, 50, 60, 70, 80, 90, 100, 200, 400, 800, 1600, 2000 MHz
Frequency Range	FR1 FR2	FR1 FR2

ACP reference table selection represents the Relative Limit for Outer Offsets. (The table numbers for Absolute limits, Test Tolerances, and the limits for Inner Offsets/CACLR are not displayed.)

Direction = Uplink

When UL Carrier Mode = Normal Uplink:

Preset parameters		Reference spec doc, ACP and SEM table in the menu		
FR	Assumed Adjacent Channel (ACLR)	Test Spec	ACP (*)	SEM
FR1	NR (same BW)	TS38.521-1	Table 6.5.2.4.1.5-2	Table 6.5.2.2.5-1
	UTRA, NR + UTRA	v.17.6.1 (2022-10)	Table 6.5.2.4.2.5-2	
FR2		TS38.521-2 v.17.0.0 (2022-09)	Table 6.5.2.3.5-1	Table 6.5.2.1.5-1

When UL Carrier Mode = Sidelink / V2X:

Preset parameters		Reference spec doc, ACP and SEM table in the menu		
FR	Assumed Adjacent Channel (ACLR)	Test Spec	ACP (*)	SEM
FR1	NR (same BW)	TS38.521-1 v.17.6.1 (2022-10)	Table 6.5E.2.4.1.5-2	Table 6.5E.2.2.1.5-1

(*) ACP reference table selection represents the Relative Limit for Outer Offsets. (The table numbers for Absolute limits, Test Tolerances, and the limits for Inner Offsets/CACLR are not displayed.)

Measurement-Global parameters

The following parameters are configured as preset values.

- "Configure Component Carriers" on page 2664
- "Trigger/Gate Parameters" on page 2664

Configure Component Carriers

When Direction = Uplink:

Preset Configuration	Preset Value
UL Carrier Mode	Sidelink
Normal Uplink	Disabled (for all CCs)
Sidelink / V2X	Enabled (for all CCs)

Trigger/Gate Parameters

When executing "Apply Preset", preset the following parameters:

Trigger menu	Parameter	Preset values		
		Downlink (*1) FR1	Downlink (*1) FR2	Uplink
Trigger	Select Trigger Source (*2)	(no preset)	(no preset)	(no preset)
	Period (Periodic Timer) (*3)	5.000 ms	1.250 ms	10.000 ms
	(Periodic) Sync Source (*4)	RF Burst	RF Burst	RF Burst
Gate Source	Select Gate Source	Periodic	Periodic	Periodic
	Period (Periodic Timer) (*3)	5.000 ms	1.250 ms	10.000 ms
	(Periodic) Sync Source (*4)	RF Burst	RF Burst	RF Burst
	Sync Holdoff	On, 250 us	On, 250 us	On, 250 us
Gate Settings	Gate (*5)	On	On	(no preset)
	Gate Delay	5.000 ms	1.250 ms	(no preset)
	Gate Length	3.700 ms (*6) or 2.700 ms (*6)	927.5 us	(no preset)
	Gate Holdoff	(no preset)	(no preset)	(no preset)
Periodic Sync Src	Select Periodic Trigger Sync Source (*4)	RF Burst	RF Burst	RF Burst

3 5G NR Mode
3.6 Spurious Emissions Measurement

	Absolute Trig Level	(no preset)	(no preset)	(no preset)
	Trigger Slope	(no preset)	(no preset)	Positive
Auto Holdoff	Trig Holdoff	(no preset)	(no preset)	On, 250 us (*7)
	Holdoff Type	(no preset)	(no preset)	Below (*7)

Notes:

(*1) For Downlink case, these values are preset with the Apply Preset action when ["RB Alloc Preset" on page 2646](#) is any of NR-TM and ["Duplex Mode" on page 2644](#) is TDD.

(*2) Trigger Source is a separate parameter in each measurement, and is not preset with the Apply Preset action. Note that in the Tx On/Off Power measurement, it is forcefully changed to Periodic when the direction is switched to Uplink or to External 1 when the direction is switched to Downlink except for models with the H1G option. With the H1G option, it is changed to either External 1 (when Info BW \leq 255 MHz) or External 3 (when Info BW \geq 256 MHz) depending on the Info BW determined by the component carrier configuration.

(*3) Periodic Trigger Period and Gate Period are the same/shared parameter, so called "Periodic Timer Period".

(*4) Periodic Trigger Sync Source and Periodic Gate Sync Source are the same/shared parameter.

(*5) Gate is preset to Off with the Apply Preset action when ["Duplex Mode" on page 2644](#) is FDD.

(*6) Gate Length preset value for DL FR1 depends on ["DL FR1 NR-TM Reference Standard Selection" on page 2357](#) under the Advanced Preset Parameters menu: 3.700 ms for TS38.141-1 or 2.700 ms for TS37.141 BC3 CS16/17.

(*7) These Trig Holdoff & Holdoff Type settings make the trigger holdoff wait for an OFF power period at least 250 us (in any burst configuration preset in Uplink), and then triggers at the beginning of the power raise timing (with Trigger Slope = Positive) of the Burst ON power as expected. This is to avoid an unexpected triggering with other random power up or down.

Spurious Emissions

The parameters in the Range Table in Meas Setup > Settings are configured as preset values. See the following sections.

["Downlink, FR1 \(BS type = 1-C & 1-O\)" on page 1293](#)

["Downlink, FR2 \(BS type = 2-O\)" on page 1295](#)

["Uplink, FR1" on page 1297](#)

3.6.8.5 Advanced

Contains controls for setting advanced functions of the instrument.

This tab does not appear in VXT, M9393A, or M9391A.

Noise Floor Extension

Allows you to turn on/configure the **Noise Floor Extension** (NFE) function. Some Modes (such as Spectrum Analyzer Mode), support two states of NFE, Full and Adaptive. The ON state (in Modes which do not support Adaptive NFE) matches the FULL state (in Modes which DO support Adaptive NFE).

In ON or FULL NFE, the expected noise power of the instrument (derived from a factory calibration) is subtracted from the trace data. This will usually reduce the apparent noise level by about 10 dB in low band, and 8 dB in high band (>~3.6 GHz).

In Adaptive NFE, there is not the same dramatic visual impact on the noise floor as there is in Full NFE. Adaptive NFE controls the amount of correction that is applied based on other instrument settings like RBW, averaging and sweep time. Adaptive NFE controls the degree of potential improvement in the noise floor to give more improvement for those instrument settings that can make good use of the potential improvement, such as settings that provide more averaging. The result is that when not much averaging is being performed, the signal displays more like the NFE-off case; and when lots of averaging is being performed, the signal displays more like the full-NFE case.

Adaptive NFE (in Modes which support it) is recommended for general-purpose use. For fully ATE (automatic test equipment) applications, where the distraction of a person using the instrument is not a risk, Full NFE is recommended.

NFE works with any RBW, VBW, detector, any setting of Average Type, any amount of trace averaging, and any signal type. It is ineffective when the trace is not smoothed (smoothing processes include narrow VBWs, trace averaging, and long sweep times with the detector set to Average or Peak). It works best with extreme amounts of smoothing, and with the average detector, with the Average Type set to Power.

In those cases where the cancellation is ineffective, it nonetheless has no undesirable side-effects. There is no significant speed impact to having **Noise Floor Extension** on.

The best accuracy is achieved when substantial smoothing occurs in each point before trace averaging. Thus, when using the average detector, results are better with long sweep times and fewer trace averages. When using the sample detector, the VBW filter should be set narrow with less trace averaging, instead of a wide VBW filter with more trace averaging.

NOTE

Noise Floor Extension has no effect unless the RF Input is selected, therefore it does nothing when External Mixing is selected.

In Modes that support Adaptive NFE, the default state of NFE is Adaptive. In Modes that do not support Adaptive NFE, the default state of NFE is OFF. Prior to the introduction of Adaptive NFE (firmware version A.18.00), the default state of NFE was OFF for all Modes.

With the introduction of Adaptive NFE, the menu control is changed from On|Off to Full|Adaptive|Off. For SCPI Backwards Compatibility, the existing SCPI command to turn NFE on and off was retained, and a new command was added to set the state to turn Adaptive On and Off

`[:SENSe]:CORRection:NOISe:FLOOr ON|OFF|1|0` is retained, default changed to On for modes which support Adaptive NFE

`[:SENSe]:CORRection:NOISe:FLOOr:ADAPtive ON|OFF|1|0` is added (for certain Modes), default=On

FULL = `:CORRection:NOISe:FLOOr ON` plus
`:CORRection:NOISe:FLOOr:ADAPtive ON`

Remote Command	<code>[:SENSe]:CORRection:NOISe:FLOOr ON OFF 1 0</code> <code>[:SENSe]:CORRection:NOISe:FLOOr?</code>
Example	<code>:CORR:NOIS:FLO ON</code>
Dependencies	This control only appears in instruments with the NFE or NF2 license installed. In all others, the control does not appear, however the SCPI command will be accepted without error (but will have no effect)

3 5G NR Mode
3.6 Spurious Emissions Measurement

Couplings	If NFE is enabled in any Mode manually, a prompt is displayed reminding you to perform the Characterize Noise Floor operation if it is needed If NFE is enabled via SCPI and a Characterize Noise Floor operation is needed, an error will be entered in the system error queue
Preset	Unaffected by Mode Preset. Turned ON at startup and by Restore Mode Defaults in Modes which support Adaptive. Turned OFF at startup and by Restore Mode Defaults in Modes that do not support Adaptive
State Saved	No
Remote Command	<code>[:SENSe]:CORRection:NOISe:FLOor:ADAPtive ON OFF 1 0</code> <code>[:SENSe]:CORRection:NOISe:FLOor:ADAPtive?</code>
Example	First turn NFE on, this is Full mode <code>:CORR:NOIS:FLO ON</code> Then set it to Adaptive <code>:CORR:NOIS:FLO:ADAP ON</code>
Dependencies	Only available in Modes which support Adaptive NFE Only appears in instruments with the NFE or NF2 license installed. In all others, the control does not appear, however the SCPI command is accepted without error, but has no effect
Couplings	Sending <code>:CORR:NOIS:FLO ON</code> turns NFE Adaptive OFF for backwards compatibility, so to turn Adaptive on, you must issue the commands in the proper order, as shown in the example above
Preset	Not affected by Mode Preset, but set to ON at startup and by Restore Mode Defaults
State Saved	No

More Information

The instrument is characterized in the factory (or during a field calibration) with a model of the noise, referred to the input mixer, versus frequency in each band and path combination. Bands are 0 (low band) and 1 through 4 (high band) in a 26.5 GHz instrument, for example. Paths include normal paths, preamp paths, the electronic attenuator, etc.

In most band/path combinations, the noise can be well characterized based on just two parameters and the instrument frequency response before compensation for frequency-dependent losses.

After the noise density at the input mixer is estimated, the effects of the input attenuator, RBW, detector, etc. are computed to get the estimated input-port-referred noise level.

In the simplest case, the measured power (signal plus analyzer noise) in each display point (bucket) is compensated by subtracting the estimated noise power, leaving just the signal power. This is the operation when the detector is Average and the Average Type is set to Power.

In other cases, operation is often not quite as good but still highly effective. With peak detection, the noise floor is estimated based on the RBW and the duration of the bucket using the same equations used in the noise marker function. The voltage of the noise is subtracted from the voltage of the observed signal-plus-noise measurement to compute the estimated signal voltage. The peak detector is one example of processing that varies with detector to give good estimates of the signal level without the analyzer noise.

For best operation, the average detector and the power scale are recommended, as already stated. Peak detection for pulsed-RF can still give excellent effectiveness. FFT analysis does not work well, and does not do NFE well, with pulsed-RF signals, so this combination is not recommended. Negative peak detection is not very useful, either. Sample detection works well, but is never better than the average detector because it doesn't smooth as well. The Normal detector is a combination of peak and negative peak behaviors, and works about as well as these.

For best operation, extreme smoothing is desirable, as already stated. Using narrow VBWs works well, but using very long bucket durations and the average detector works best. Reducing the number of trace points will make the buckets longer.

For best operation, the power scale (Average Type = Power) is optimum. When making CW measurements in the presence of noise without NFE, averaging on the decibel scale has the advantage of reducing the effect of noise. When using NFE, the NFE does an even better job than using the log scale ever could. Using NFE with the log scale is not synergistic, though; NFE with the power scale works a little better than NFE with log averaging type.

The results from NFE with internal preamp can often be lower than the theoretical noise in a signal source at room temperature, a noise density of -174 dBm/Hz. This is expected and useful behavior, because NFE is designed to report the amount of input signal that is in excess of the thermal noise, not the amount that includes the thermal noise. This can be a useful behavior because thermal noise often interferes with what you want to measure, instead of being part of what you want to measure. Note that NFE is not adequately accurate to always be able to read below kTB .

Adaptive NFE provides an alternative to fully-on and -off NFE. Fully-on NFE can, notably in cases with little or no averaging of the spectrum, result in a display that is distractingly unfamiliar in the variability in response to low level signals. Fully-off NFE fails to achieve the potential improvement in dynamic range and associated accuracy of measurement of low level signals. Adaptive NFE controls the degree of potential improvement in the noise floor to give more improvement for those instrument settings that can make good use of the potential improvement—those settings with high degrees of variance reduction through some variant of averaging. When the potential improvement is small, the display acts like the NFE-off case, and when it is high, it acts like the fully-on case, and in-between, application is a compromise between attractiveness and effectiveness.

On instruments with the NF2 license installed, the calibrated Noise Floor used by Noise Floor Extensions should be refreshed periodically. Keysight recommends that the **Characterize Noise Floor** operation be performed after the first 500 hours of operation, and once every calendar year. The control to perform this is located in the **System, Alignments, Advanced** menu. If you have not done this yourself at the recommended interval, then when you turn on Noise Floor Extensions, the instrument will prompt you to do so with a dialog that says:

“This action will take several minutes to perform. Please disconnect all cables from the RF input and press Enter to proceed. Press ESC to cancel, or Postpone to postpone for a week”

If you Cancel, you will be prompted again the next time you turn NFE on. If you postpone, you will be prompted again after a week passes and you then turn NFE on.

3.6.8.6 Global

The controls in this menu apply to all Modes in the instrument.

Some controls (for example, **Global Center Freq**) allow you to switch certain Meas Global parameters to a Mode Global state. These switches apply to all Modes that support global settings. For example, no matter what Mode you are in when you set **Global Center Freq** to **ON**, it applies to all Modes that support Global Settings.

Other controls (for example, **Extend Low Band**) are actually set in this menu, but apply to all Modes.

Global Center Freq

The software maintains a Mode Global value called **Global Center Freq**.

When **Global Center Freq** is switched **ON**, the current Mode's center frequency is copied into the **Global Center Frequency**, and from then on all Modes that support global settings use the **Global Center Frequency**, so you can switch between any of these Modes and the **Center Freq** will remain unchanged.

Adjusting the Center Freq of any Mode that supports Global Settings, while **Global Center Freq** is **ON**, modifies the **Global Center Freq**.

When **Global Center Freq** is switched **OFF**, the Center Freq of the current Mode is unchanged, but now the Center Freq of each Mode is once again independent.

When **Mode Preset** is pressed while **Global Center Freq** is **ON**, the **Global Center Freq** is preset to the preset Center Freq of the current Mode.

This function is reset to **OFF** when **"Restore Defaults" on page 2680** (in this tab) is pressed, or when **System, Restore Defaults, All Modes** is pressed.

Remote Command	<code>:INSTRument:COUPle:FREQuency:CENTer ALL NONE</code> <code>:INSTRument:COUPle:FREQuency:CENTer?</code>
Example	<code>:INST:COUP:FREQ:CENT ALL</code> <code>:INST:COUP:FREQ:CENT?</code>
Preset	Set to OFF on Global Settings, Restore Defaults and System, Restore Defaults, All Modes
Range	ALL NONE
Preset	OFF
Backwards Compatibility SCPI	<code>:GLOBal:FREQuency:CENTer[:STATe] 1 0 ON OFF</code> <code>:GLOBal:FREQuency:CENTer[:STATe]?</code>

Global EMC Std

When this control is switched **ON**, the current Mode's EMC Std is copied into the **Global EMC Std**, and from then on all Modes that support global settings use the Global EMC Std, so you can switch between any of these Modes and the EMC Std will remain unchanged.

Adjusting the EMC Std of any Mode that supports Global Settings, while Global EMC Std is **ON**, will modify the **Global EMC Std**.

When **Global EMC Std** is switched **OFF**, the EMC Std of the current Mode is unchanged, but now the EMC Std of each Mode is once again independent. When **Mode Preset** is pressed while **Global EMC Std** is **ON**, the Global EMC Std is preset to the preset EMC Std of the current Mode.

This function is reset to **OFF** when "**Restore Defaults**" on page 2680 (in this tab) is pressed, or when **System, Restore Defaults, All Modes** is pressed.

Remote Command	<code>:INSTRument:COUPle:EMC:STANdard ALL NONE</code> <code>:INSTRument:COUPle:EMC:STANdard?</code>
Example	<code>:INST:COUP:EMC:STAN ALL</code> <code>:INST:COUP:EMC:STAN?</code>
Dependencies	Only available if option EMC is installed
Preset	Set to OFF on Global Settings, Restore Defaults and System, Restore Defaults, All Modes
Range	ALL NONE

Extend Low Band

The software maintains a Mode Global value called **Extend Low Band**.

Under the current sweep configuration crossing over two bands, when **Extend Low Band** is turned **ON**, the instrument checks whether one band can cover the whole sweep frequency range or not. If it can, then the instrument locks the band; otherwise, it does nothing (the band crossover occurs).

This function does *not* work when **Band Lock** under **System > Service > Lock Functions** is not -1 (no Band Lock). In that case, **Band Lock** takes priority over **Extend Low Band**.

This function is reset to **OFF** when "**Restore Defaults**" on page 2680 (in this tab) is pressed, or when **System, Restore Defaults, All Modes** is pressed.

This parameter is available for SA, RTSA, WCDMA, LTEAFDD, and LTEATDD Modes.

Remote Command	<code>:INSTRument:COUPle:FREQuency:BAND:EXTend 0 1 ON OFF</code> <code>:INSTRument:COUPle:FREQuency:BAND:EXTend?</code>
Example	<code>:INST:COUP:FREQ:BAND:EXT 1</code> <code>:INST:COUP:FREQ:BAND:EXT?</code>
Dependencies	Only applies to UXA, PXA, MXA and EXA
Preset	Set to OFF by Global Settings > Restore Defaults and System > Restore Defaults > All Modes
Range	ON OFF

Restore Defaults

Resets all the functions in the **Global > Settings** menu to **OFF**. This also occurs when **System, Restore Defaults, All Modes** is pressed.

Remote Command	<code>:INSTRument:COUPle:DEFault</code>
Example	<code>:INST:COUP:DEF</code>
Backwards Compatibility SCPI	<code>:GLOBal:DEFault</code>

3.6.9 Sweep

Accesses controls that enable you to configure and control the acquisition of data and the X-axis parameters of the instrument. These controls might include Sweep Time, Continuous/Single, Pause/Resume, X Scale and number of Points.

3.6.9.1 Sweep/Control

Accesses controls that enable you to operate the sweep and control functions of the instrument, such as **Sweep Time** and **Continuous/Single**.

Sweep/Measure

Allows you to toggle between **Continuous** and **Single** sweep or measurement operation. The single/continuous state is Meas Global, so the setting affects all measurements.

The front-panel key **Single/Cont** performs exactly the same function

See ["More Information" on page 1310](#)

Remote Command	<code>:INITiate:CONTinuous OFF ON 0 1</code> <code>:INITiate:CONTinuous?</code>
Example	Put instrument into Single measurement operation: <code>:INIT:CONT 0</code> <code>:INIT:CONT OFF</code> Put instrument into Continuous measurement operation: <code>:INIT:CONT 1</code> <code>:INIT:CONT ON</code>
Preset	ON Note that <code>:SYST:PRES</code> sets <code>:INIT:CONT</code> to ON , but <code>*RST</code> sets <code>:INIT:CONT</code> to OFF
State Saved	Saved in instrument state
Annunciation	The Single/Continuous icon in the Meas Bar changes depending on the setting: <ul style="list-style-type: none"> - A line with an arrow is Single - A loop with an arrow is Continuous
Backwards Compatibility Notes	For Spectrum Analysis Mode in ESA and PSA, there is no Cont hardkey, instead there is a Sweep Single/Cont softkey. In these instruments, switching the Sweep Single/Cont softkey from Single to Cont restarts averages (displayed average count reset to 1), but does not restart Max Hold and Min Hold X-Series A-models have Single and Cont hardkeys in place of the SweepSingleCont softkey. In the X-Series A-models, if in single measurement, the Cont hardkey (and <code>INIT:CONT ON</code>) switches to continuous measurement, but never restarts a measurement and never resets a sweep X-Series B-models have a Cont/Single toggle control instead of Single and Cont hardkeys, but it is still true that, if in single measurement, the Cont/Single toggle control never restarts a measurement and never resets a sweep For Spectrum Analysis Mode in ESA and PSA, the Single hardkey and the <code>INITiate:IMM</code> switched from continuous measurement to single measurement and restarted sweeps and averages (displayed average count reset to 1), but did not restart Max Hold and Min Hold . In the X-Series, the Restart control and the <code>INITiate:IMM</code> command initiate a sweep/ measurement/ average sequence/hold sequence including MaxHold and MinHold For Spectrum Analysis Mode in ESA and PSA, the Single hardkey restarted the sweep regardless of whether or not you were in an active sweep or sweep sequence. In the X-Series, Restart does this

More Information

Continuous Mode	<p>The instrument takes repetitive sweeps, averages, measurements, etc., when in continuous mode. If in average or Max/Min Hold, and the average/hold count reaches the Average/Hold Num, the count stops incrementing, but the instrument keeps sweeping</p> <p>See the Trace key description under Trace Average for the averaging formula used both before and after the Average/Hold Num is reached. The trigger condition must be met prior to each sweep</p> <p>The type of trace processing for multiple sweeps is set under the Trace key, with choices of Trace Average, Max Hold, or Min Hold</p>
Single Mode	<p>The instrument takes a single sweep when in Single mode, or if in average or Max/Min Hold, or if there is a Waterfall window displayed, it takes multiple sweeps until the average/hold count reaches the Average/Hold Num, then the count stops incrementing, and the instrument stops sweeping</p> <p>See the Trace key description under Trace Average for the averaging formula used. The trigger condition must be met prior to the sweep</p> <p>The type of trace processing for multiple sweeps is set under the Trace key, with choices of Trace Average, Max Hold, or Min Hold</p>

If the instrument is in **Single** measurement mode, pressing the **Cont/Single** toggle control does not zero the count and does not cause the sweep to be reset; the only action is to put the instrument into Continuous measurement operation.

If it is already in continuous sweep:

- **:INIT:CONT 1** has no effect
- **:INIT:CONT 0** places the instrument in Single Sweep but has no effect on the current sequence until $k = N$, at which point the current sequence will stop and the instrument will go to the idle state

See the "**Restart**" on page 2683 control description for details of **:INIT:IMMEDIATE**.

If the instrument is already in **Single** sweep, **:INIT:CONT OFF** has no effect.

If the instrument is already in **Single** sweep, then pressing **Cont/Single** in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing **Cont/Single** does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the instrument is waiting for a trigger). Even though pressing **Cont/Single** in the middle of a sweep does not restart the sweep, sending **:INIT:IMM** does reset it.

If the instrument is in **Single** sweep, and *not* Averaging/Holding, and you want to take one more sweep, press **Restart**.

If the instrument is in **Single** sweep, *and* Averaging/Holding, and you want to take one more sweep without resetting the Average trace or count, go to **Meas Setup** and increment the average count by 1 by pressing the **Step Up** key while

Average/Hold Num is the active function. You can also do this by sending **:CALC:AVER:TCON UP**.

Restart

Restarts the current sweep, or measurement, or set of averaged/held sweeps or measurements. If you are Paused, pressing **Restart** performs a Resume.

The front-panel key **Restart** performs exactly the same function.

The **Restart** function is accessed in several ways:

- Pressing the **Restart** key
- Sending **:INIT:IMM**
- Sending **:INIT:REST**

See "[More Information](#)" on page 1312

Remote Command	:INITiate[:IMMediate] :INITiate:REStart
Example	:INIT:IMM :INIT:REST
Notes	:INIT:REST and :INIT:IMM perform exactly the same function
Couplings	Resets average/hold count k. For the first sweep overwrites all active (update = on) traces with new current data. For application modes, it resets other parameters as required by the measurement
Status Bits/OPC dependencies	This is an Overlapped command The STATUS:OPERation register bits 0 through 8 are cleared , <i>except</i> bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous The STATUS:QUESTionable register bit 9 (INTegrity sum) is cleared The SWEEPING bit is set The MEASURING bit is set
Backwards Compatibility Notes	For Spectrum Analysis Mode in ESA and PSA, the Restart hardkey and the :INIT:REST command restart trace averages (displayed average count reset to 1) for a trace in Clear Write , but did not restart Max Hold and Min Hold In X-Series, the Restart hardkey and the :INIT:REST command restart not only Trace Average , but MaxHold and MinHold traces as well For wireless comms modes in ESA and PSA, the Restart hardkey and the :INIT:REST command restart every measurement, which includes all traces and numeric results. There is no change to this operation

More Information

The **Restart** function first aborts the current sweep or measurement as quickly as possible. It then resets the sweep and trigger systems, sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is in the process of aligning when a **Restart** is executed, the alignment finishes before the restart function is performed.

Even when set for **Single** operation, multiple sweeps may be taken when **Restart** is pressed (for example, when averaging/holding is on). Thus when we say that **Restart** "restarts a measurement", depending on the current settings, we may mean that it:

- Restarts the current sweep
- Restarts the current measurement
- Restarts the current set of sweeps if any trace is in Trace Average, Max Hold or Min Hold
- Restarts the current set of measurements if Averaging, or Max Hold, or Min Hold is on for the measurement

If there is no Average or Max/Min Hold function (no trace in Trace Average or Hold, or **Average/Hold Num** set to 1), and no **Waterfall** window is being displayed, a single sweep is equivalent to a single measurement. A single sweep is taken after the trigger condition is met; and the instrument stops sweeping once that sweep has completed. However, with **Average/Hold Num** >1, and at least one trace set to Trace Average, Max Hold, or Min Hold, or a **Waterfall** window being displayed, multiple sweeps/data acquisitions are taken for a single measurement. The trigger condition must be met prior to each sweep. The sweep is stopped when the average count k equals the number N set for **Average/Hold Num**.

Once the full set of sweeps has been taken, the instrument goes to the idle state. To take one more sweep without resetting the average count, increment the average count by 1, by pressing the **Step Up** key while **Average/Hold Number** is the active function, or by sending the remote command `:CALC:AVER:TCON UP`.

Trace Update

The numeric results are not blanked at any time during the restart cycle.

For slow sweeps (see **Trace Update** section in **Trace/Detector**), the traces are updated real-time during the sweep. There may be a special circumstance in

application mode measurements where an exception is made and the traces and/or results need to be blanked before displaying the new results.

To summarize, the following list shows what happens to the trace data on various events:

Event	Trace Effect
Clear/Write pressed (even if already in Clear/Write)	Set to mintracevalue
Max Hold pressed (even if already in Max Hold)	Set to mintracevalue
Min Hold pressed (even if already in Min Hold)	Set to maxtracevalue
Trace Average pressed (even if already in Trace Average)	Trace data unaffected but start new sweep/avg/hold
Restart pressed	Trace data unaffected but start new sweep/avg/hold
Parameter requiring restart changed (e.g., RBW)	Trace data unaffected but start new sweep/avg/hold

Sweep and Trigger Reset

Resetting the sweep system resets the average/hold count k to 0. It also resets the set point counter to 0. Resetting the trigger system resets the internal auto trig timer to the value set by the **Auto Trig** control.

Averaging

The weighting factor used for averaging is k . This k is also the average/hold count for how many valid sweeps (data acquisitions) have been done. This k is used for comparisons with N , as those comparisons always needs to be based on valid completed sweeps.

The displayed average/hold, K , shows the count for the sweep (data acquisition) in progress. $K = k + 1$, with a limit of N . The displayed value K changes from its previous value to 1 as soon as the trigger condition for the first data acquisition (sweep) is met.

Pause/Resume

Pauses a measurement after the current data acquisition is complete.

When paused, the label on the control changes to **Resume**. Pressing **Resume** unpauses the measurement. When paused, pressing **Restart** performs a Resume.

Remote Command **:INITiate:PAUSE**

	<code>:INITiate:RESume</code>
Example	<code>:INIT:PAUS</code> <code>:INIT:RES</code>
Dependencies	Not displayed in Modes that do not support Pausing
Annotation	Only on control

Abort (Remote Command Only)

Stops the current measurement. Aborts the current measurement as quickly as possible, resets the sweep and trigger systems, and puts the measurement into an "idle" state. If the instrument is in the process of aligning when `:ABORt` is sent, the alignment finishes *before* the abort function is performed, so `:ABORt` does not abort an alignment.

If the instrument is set for **Continuous** measurement, it sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is set for **Single** measurement, it remains in the "idle" state until an `:INIT:IMM` command is received.

Remote Command	<code>:ABORt</code>
Example	<code>:ABOR</code>
Notes	If <code>:INIT:CONT</code> is ON , then a new continuous measurement will start immediately, with sweep (data acquisition) occurring once the trigger condition has been met If <code>:INIT:CONT</code> is OFF , then <code>:INIT:IMM</code> is used to start a single measurement, with sweep (data acquisition) occurring once the trigger condition has been met
Dependencies	For continuous measurement, <code>:ABORt</code> is equivalent to the Restart key Not all measurements support this command
Status Bits/OPC dependencies	The <code>STATUS:OPERation</code> register bits 0 through 8 are cleared, <i>except</i> bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous The <code>STATUS:QUESTionable</code> register bit 9 (INTegrity sum) is cleared Since all the bits that feed into OPC are cleared by <code>:ABORt</code> , the Abort command will cause the <code>*OPC</code> query to return true

3.6.9.2 Sweep Config

Accesses controls that enable you to configure the Sweep and Control functions of the instrument, such as Sweep Rules.

Sweep Type

Sets the Sweep Type of the spurious measurement to either Auto or Swept.

When in Auto, the selections of swept type of ranges are governed by the Best Speed Sweep Type Rule, and FFT analysis might be chosen for some ranges if it speeds up the measurement.

Remote Command	<code>[:SENSe]:SPURious[:RANGe]:ALL:SWEEp:TYPE:AUTO OFF ON 0 1</code> <code>[:SENSe]:SPURious[:RANGe]:ALL:SWEEp:TYPE:AUTO?</code>
Example	<code>:SPUR:ALL:SWE:TYPE:AUTO 1</code> <code>:SPUR:ALL:SWE:TYPE:AUTO?</code>
Dependencies	This parameter is available only when option N9060A-7FP is installed
Preset	ON
State Saved	Saved in instrument state
Range	Auto Swept
Annotation	When in Auto and the instrument is in FFT analysis, an indicator, “FFT” is displayed at the right bottom of range spectrum trace window

Sweep Time Rules

Switches the instrument between **NORMa1** and **ACCuracy** sweep states.

Setting **Auto Sweep Time** to **Accy** (**ACCuracy**) results in slower sweep times, usually about three times as long, but yields better amplitude accuracy for CW signals. The instrument amplitude accuracy specifications only apply when **Auto Sweep Time** is set to **Accy**.

Additional amplitude errors which occur when **Auto Sweep Time** is set to **Norm** are usually well under 0.1 dB, though this is not guaranteed. Because of the faster sweep times and still low errors, **Norm** is the preferred setting of **Auto Sweep Time**. **Auto Sweep Time** is set to **Norm** on a **Preset**. This means that in the Preset state, instrument amplitude accuracy specifications do not apply.

Remote Command	<code>[:SENSe]:SPURious:SWEEp:TIME:AUTO:RULEs NORMa1 ACCuracy</code> <code>[:SENSe]:SPURious:SWEEp:TIME:AUTO:RULEs?</code>
Example	<code>:SPUR:SWE:TIME:AUTO:RUL ACC</code> <code>:SPUR:SWE:TIME:AUTO:RUL?</code>
Notes	This command is implemented as <code>[:SENSe]:SPURious[:RANGe]</code> <code>[:LIST]:SWEEp:TIME:AUTO:RULEs</code> to avoid illegal SCPI node definition, so this command should be used as <code>[:SENSe]:SPURious:SWEEp:TIME:AUTO:RULEs</code>
Dependencies	This control does not appear in Spectrum Analyzer Mode in VXT This control is not available in E7760
Preset	NORMa1
State Saved	Saved in instrument state
Range	NORMa1 ACCuracy

3.6.10 Trace

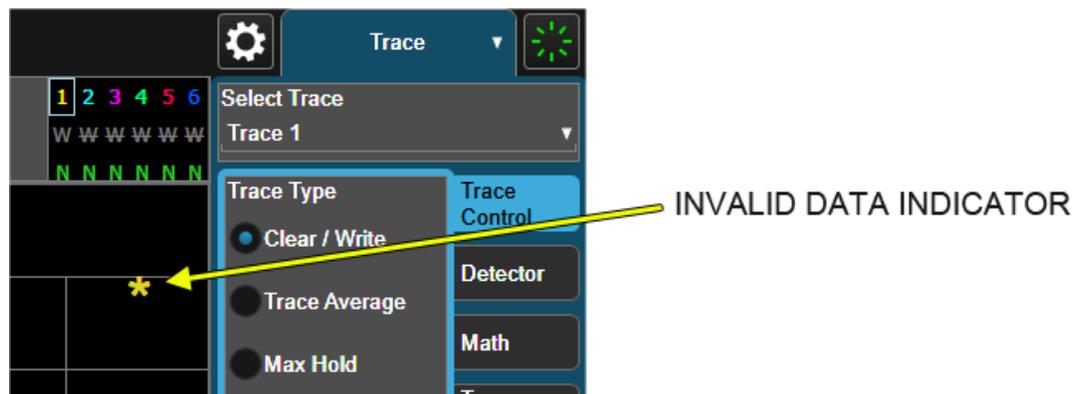

Lets you control the acquisition, display, storage, detection and manipulation of trace data for the available traces.

The "Trace Control" on page 2392 tab of this menu contains radio-button selections for the trace type (**Clear/Write**, **Trace Average**, **Max Hold**, **Min Hold**) and **View/Blank** setting for the selected trace.

A trace is a series of data points, each having an x and a y value. The x value is frequency (or time, in zero span) and the y value is amplitude. Each data point is referred to as a *trace point*. In any given trace, trace point 0 is the first point, and trace point (*sweep_points* - 1) is the last. For example, in a 1001 point trace, the first point is 0 and the last is 1000. Another term sometimes used to describe traces is *bucket*. A bucket is the frequency span of a trace point, equal to the point spacing. For swept analysis, the y value in each bucket is measured while the instrument is sweeping across the bucket. The selected detector determines how it is measured.

When in **Single** Mode, Measurements and their Views save the trace data from the last acquisition. This is true on multiple screens. The marker and trace data will be present whenever the measurement is brought back into focus. The measurement switches for these measurements do not clear the traces, so the data will be present until the next acquisition is completed.

Invalid Data Indicator

The Invalid Data Indicator is displayed whenever the data on the display does not match the settings of the instrument. The most common example of this is when instrument settings have changed in the time since the data in the traces on the display was taken. This means that the screen annotation cannot be guaranteed to match the trace data. For example, if you change **Center Frequency**, the Invalid Data Indicator will display until the trace has been retaken.

If any Trace is in View mode (displaying but not updating) and instrument settings are changed, the Invalid Data Indicator will display as long as that trace remains in View. Traces that are blanked do not turn on the Invalid Data Indicator.

Not all instrument settings require display of the invalid data indicator when they change; only changes that require a new acquisition will cause it to display. For example, changing the Y-Axis scale of the instrument does not cause the invalid data indicator to display, unless the attenuation changes.

The Invalid Data Indicator is also turned on:

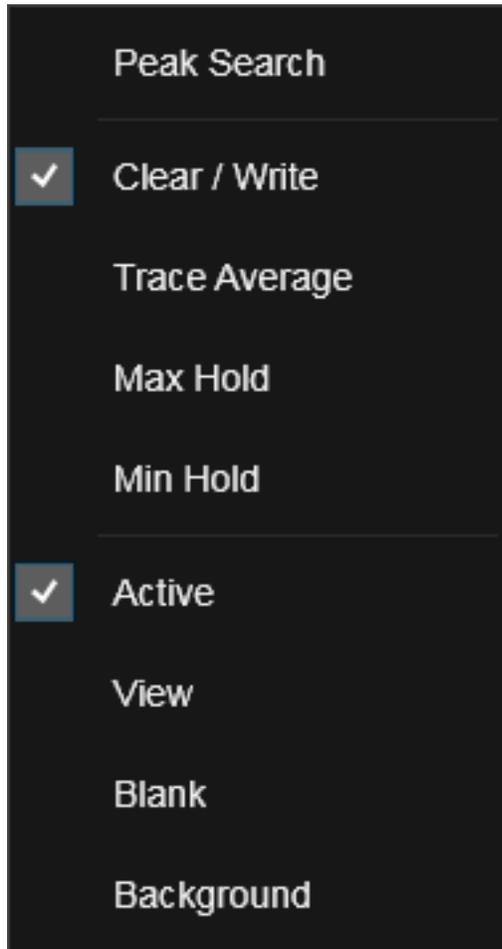

- When the counter is turned on, until the completion of the first count
- When a trace is imported from mass storage and the trace's parameters do not match the current instrument settings
- When a trace is sent to the instrument from a remote interface (since there is no way to know if its settings match)

NOTE

The Invalid Data Indicator has an associated status bit that can be checked at any time to determine whether the indicator is on.

Trace right-click menu

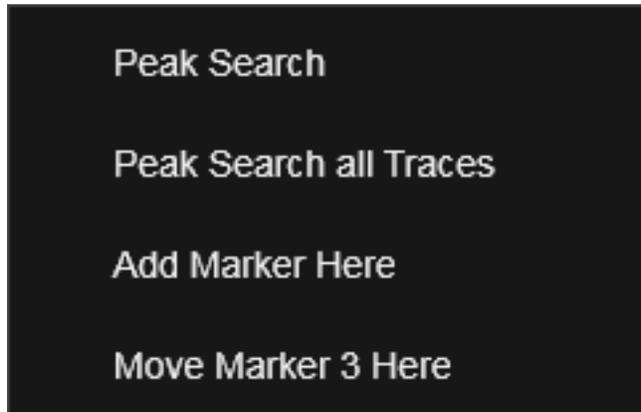

If you right-click on a trace (or touch and hold a trace and wait for the circle to close) you will see the Trace Right-Click Menu:

If you now tap or click on one of the items in this menu, the instrument will perform the corresponding function. **Peak Search** finds the highest peak on the selected Trace. **Clear/Write**, **Trace Average**, **Max Hold** and **Min Hold** set the "Trace Type" on [page 2393](#). **Active**, **View**, **Blank**, and **Background** set the "View/Blank" on [page 2398](#) type.

Waterfall Window

If you right-click on the trace (or touch and hold the trace and wait for the circle to close) in the **Waterfall** window (for example, in the Spectrogram View) you will see the Waterfall Trace Right-Click Menu:

In this menu, **Peak Search** works as above. **Peak Search all Traces** finds the highest peak in the Waterfall window. **Add Marker Here** takes the lowest numbered Marker that is currently Off and turns it On as a **Normal** marker in the Waterfall window at the point where you right-clicked (or touched-and-held). **Move Marker n Here** moves the currently selected Marker to the point in the Waterfall window where you right-clicked (or touched-and-held).

Trace Update Indicator

Trace updates can take one of two forms:

1. The trace is updated in a single operation that affects all of the points in the trace at once. This happens, for example, in the case of very fast (< 200 ms) sweeps, single-chunk FFT's, and the initial math operation after a math function is set for a trace
2. The trace is updated in a series of discrete steps, with measurement data being gathered between each step. This will be the case for slow sweeps, multi-chunk FFTs, gated sweeps, etc.

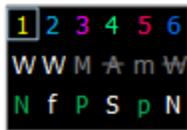

In the first case, no update indicator is required. In the second case, however, a visual indicator exists on the trace where the new data is being written. The indicator is a green caret (^), which moves across the bottom of the graticule showing the current trace point.

Trace Annunciator Panel

This panel appears on the right hand side of the Meas Bar. Here is an explanation of the fields in this panel, as shown below:

3 5G NR Mode
 3.6 Spurious Emissions Measurement

Top Line

On the top line, each trace number is shown, in the trace color. A box is drawn around the currently selected trace.

Middle Line

Below each trace number, is a letter signifying the trace type for that trace number, where

W	Clear/Write
A	Trace Average
M	Max Hold
m	Min Hold

If the letter is white, it means the trace is being updated (**Update = ON**); if the letter is dimmed, it means the trace is not being updated (**Update = OFF**). A strikethrough indicates that the trace is blanked (**Display = OFF**). Note that it is possible for a trace to be updating *and* blanked, which is useful if the trace is a trace math component.

Bottom Line

The third line shows the detector type for each trace, or, if trace math is on for that trace, it shows “f” (for “math function”). It is not always possible to have a unique detector for each trace, but the instrument hardware provides the maximum flexibility of detector selection in order to maintain the highest accuracy. The letters used for this readout are

N	Normal
A	Average
P	peak
p	negative peak
S	Sample
Q	Quasi Peak
E	EMI Average
R	RMS Average
f	math function

If the letter is green, the detector is in Auto. If white, the detector has been manually selected.

In the example above, the panel is indicating the following:

- Trace 1: Visible, being updated, in Clear/Write, with Normal detector auto selected
- Trace 2: Visible, being updated, in Clear/Write, being written to with a math function
- Trace 3: Visible, not updating, data was taken in Max Hold, with the peak detector auto selected
- Trace 4: Blanked, not updating, data was taken with Averaging turned on, Sample detector manually selected
- Trace 5: Visible, not updating, data was taken in Min Hold with Negative Peak detector auto selected
- Trace 6: Blanked, not updating, in Clear/Write, with Normal detector manually selected

Trace Annotation

When **Trace Annotation** (see **Display**) is **ON**, each non-blanked trace is labeled on the trace with the detector used to take it, unless a Trace Math function is on for that trace, in which case it is labeled with the **"Math Function"** on page 2111.

The detector labels are:

NORM	Normal
PEAK	Peak
SAMP	Sample
NPEAK	Negative Peak
RMS	Average detector with Power Average (RMS)
LG AVG	Average detector with Log-Pwr Average
VAVG	Average detector with Voltage Average
QPEAK	Quasi Peak
EMI AVG	EMI Average
RMS AVG	RMS Average

The trace math labels are:

PDIF	Power Difference
PSUM	Power Sum
LOFF	Log Offset
LDIF	Log Difference

3.6.10.1 Select Trace

Specifies the *selected trace*, which is the trace that will be affected when you change trace settings.

Select Trace appears above the menu panel, indicating that it applies to *all* controls in the menu panel. **Select Trace** is blanked if you select a tab whose controls do *not* depend on the selected trace (for example, **Trace Function**).

Notes	The selected trace is remembered even when not in the Trace menu
Dependencies	For the Swept SA measurement: <ul style="list-style-type: none"> - In Image Suppress mode, when you select a trace it becomes the active trace, and the formerly active trace goes into View - When you turn on Image Suppress, Update turns off for all traces except the selected trace For the ACP measurement, when Meas Method is RBW , FAST or FPOwer , Select Trace is disabled
Preset	Trace 1
State Saved	Yes

3.6.10.2 Trace Control

The controls on this tab allow you to set the "Trace Type" on page 2393 and its update mode.

There are four Trace Types:

- **Clear/Write**
- **Trace Average**
- **Max Hold**
- **Min Hold**

Each type handles data in a different way.

Each trace also has two values that determine whether it is being written or not, and whether it is being displayed or not. These values, **Update** and **Display**, are described fully in the "View/Blank" on page 2398 control description. Essentially, when **Update** is **ON**, a trace is updating, and when **Update** is **OFF** it is not. When **Display** is **ON**, it is visible and when **Display** is **OFF** it is not. These terms are used throughout the descriptions in this section.

Trace Type

There are four trace Types:

Option	Parameter	SCPI Example	Details
Clear/Write	WRITe	:TRAC2:TYPE WRIT	See: "Clear/Write" on page 1326
Trace Average	AVERage	:TRAC2:TYPE AVER	See: "Trace Average" on page 1326
Maximum Hold	MAXHold	:TRAC3:TYPE MAXH	See: "Max Hold" on page 1327
Minimum Hold	MINHold	:TRAC5:TYPE MINH	See: "Min Hold" on page 1327

Full descriptions of each type are provided below. You may select one of these types for each trace. Re-selecting the current **Trace Type** initiates the same action that selecting it the first time did, even though it is already selected. For example, selecting **Clear/Write** while **Clear/Write** is already selected will nonetheless clear the trace and begin rewriting it.

Besides the **Trace Type**, the ["View/Blank" on page 2398](#) state must be set to **Active** (**Update: ON**, **Display: ON**) for a trace to be updating and visible. Selecting any **Trace Type** automatically makes the trace **Active**.

See also: ["Trace Mode Backwards Compatibility Commands" on page 1324](#)

Remote Command	<p>For Swept SA Measurement (in SA Mode):</p> <pre>:TRACe[1] 2 ... 6:TYPE WRITe AVERage MAXHold MINHold</pre> <pre>:TRACe[1] 2 ... 6:TYPE?</pre> <p>For all other measurements:</p> <pre>:TRACe[1] 2 3:<meas>:TYPE WRITe AVERage MAXHold MINHold</pre> <pre>:TRACe[1] 2 3:<meas>:TYPE?</pre> <p>where <meas> is the identifier for the current measurement</p>

Preset	<p>Swept SA and Monitor Spectrum: WRITe</p> <p>All other measurements: AVERage</p> <p>Following Preset, all traces are cleared (all trace points set to mintracevalue)</p>

State Saved	The type of each trace is saved in instrument state
Annunciation	The type for each trace is indicated in the Trace annunciator panel on the Measurement Bar

Trace Mode Backwards Compatibility Commands

In earlier instruments, the “Trace Modes” were: Clear/Write, Max Hold, Min Hold, View and Blank. Averaging was global to all traces and was controlled under the **BW/Avg** menu.

In the X-Series, trace averaging can be done on a per-trace basis. The Trace Modes (now called Trace Types) are Clear/Write, Trace Average, Max Hold and Min Hold. View and Blank are set separately under "**View/Blank**" on page 2398.

While this provides more flexibility, it also gives rise to potential backwards compatibility problems. To mitigate these, the old Trace Mode command has been retained and a new Trace Type command has been added. The **:TRACe:MODE** command is retained for backwards compatibility, and the **:TRACe:TYPE**, **:TRACe:UPDate** and **:TRACe:DISPly** commands introduced for ongoing use. The old Trace Modes are selected using **:TRAC:MODE**, whose parameters are mapped into calls to **:TRACe:TYPE**, **:TRACe:UPDate** and **:TRACe:DISPly**, and the old global Averaging command **[:SENSe]:AVERage[:STATe]** is provided for backwards compatibility. See the individual command descriptions for details.

When **Average/Hold** in the **Mode Setup, Legacy Compatibility** menu is **ON**, the following is true for traces in Max Hold and Min Hold:

- They ignore the **Average/Hold** number; **Single** for Max Hold causes one sweep only, so switching to **Single** stops after the current sweep, and switching to **Cont** starts again without clearing the accumulated result
- Max Hold is not cleared on a **Restart**, **Single** or **:INIT:IMM**, but changing a measurement parameter, like frequency or bandwidth etc., still restarts the Max Hold

Preset	WRITe
State Saved	The trace mode is an alias only
Backwards Compatibility SCPI	:TRACe[1] 2 ... 6:MODE WRITe MAXHold MINHold VIEW BLANK :TRACe[1] 2 ... 6:MODE?
Backwards Compatibility Notes	The legacy :TRACe:MODE command is retained for backwards compatibility. In conjunction with the legacy :AVERage command, it works as follows: <ul style="list-style-type: none"> – :AVERage ON OFF sets/clears a variable that we will call average for the sake of this discussion. This variable is maintained by the instrument solely for backwards compatibility. See the [:SENSe]:AVERage[:STATe] command description below – :TRACe:MODE WRITe sets :TRACe:TYPE WRITe (Clear/Write) unless average is true, in which case it sets it to :TRACe:TYPE AVERage. It also sets :TRACe:UPDate ON,

`:TRACe:DISPlay ON`, for the selected trace

- `:TRACe:MODE MAXHold` sets `:TRACe:TYPE MAXHold` (Max Hold). It also sets `:TRACe:UPDate ON`, `:TRACe:DISPlay ON`, for the selected trace
- `:TRACe:MODE MINHold` sets `:TRACe:TYPE MINHold` (Min Hold). It also sets `:TRACe:UPDate ON`, `:TRACe:DISPlay ON`, for the selected trace
- `:TRACe:MODE VIEW` sets `:TRACe:UPDate OFF`, `:TRACe:DISPlay ON`, for the selected trace
- `:TRACe:MODE BLANK` sets `:TRACe:UPDate OFF`, `:TRACe:DISPlay OFF`, for the selected trace

The query returns the same value as `:TRACe:TYPE?`, meaning that if you set `:TRACe:MODE:VIEW` or `:TRACe:MODE:BLANK`, the query response will not be what you sent

`:TRACe[n]:MODE` was formerly used to set the type or “writing mode” of the trace. At that time, View and Blank were writing modes. The new `:TRACe:TYPE` command should be used in the future, but `:TRACe:MODE` is retained to provide backwards compatibility

In the X-Series, unlike earlier instruments, Max Hold and Min Hold now obey the Average Number and counts up to a terminal value as Average always has

As the **Average/Hold Number** now affects **Min Hold** and **Max Hold**, the operations that restart Averaging (for example, the **Restart** key) now also restart **Min Hold** and **Max Hold**

As a result of these changes, legacy code that restarts averaging while retaining a running Max Hold will need to be rewritten, because the Max Hold will now restart when the Average does

Also, previous to the X-Series:

- pressing **Max Hold** while already in **Max Hold** (or doing so remotely) had no effect. Now it will clear the trace and restart the sweep and the Max Hold sequence
- changing the vertical scale (Log/Lin or dB/div) of the display restarted **Max Hold** and **Min Hold**. This is no longer the case

Preset	<code>OFF</code>
State Saved	The state of Average is saved in Instrument State for ghosting purposes
Backwards Compatibility SCPI	<code>[:SENSe] :AVERage [:STATe] ON OFF 1 0</code> <code>[:SENSe] :AVERage [:STATe] ?</code>
Backwards Compatibility Notes	<p>Previous to the X-Series, Averaging (also sometimes known as trace averaging) was global to all traces, that is, it was either on or off for all active traces. The legacy command <code>[:SENSe] :AVERage [:STATe] ON OFF 1 0</code> was used to turn Averaging on or off</p> <p>In the X-Series, Averaging is turned on or off on a per-trace basis, so it can be on for one trace and off for another</p> <p>For backwards compatibility, the old global Average State variable is retained solely as a legacy variable, turned on and off and queried by the legacy command <code>[:SENSe] :AVERage [:STATe] OFF ON 0 1</code>. When Average is turned on, any trace in Clear/Write will get put into Average. While Average is on, any trace put into Clear/Write by the old <code>:TRAC:MODE</code> command will instead get put into Average. When Average is turned off, any trace in Average will get put into Clear/Write</p>

Further details of each Trace Mode type:

Clear/Write

Each trace update replaces the old data in the trace with new data.

Pressing **Clear/Write** for the selected trace, or sending `:TRAC:TYPE WRIT` for the specified trace, sets the trace type to **Clear/Write** and clears the trace, even if you are already in **Clear/Write**. Then a new sweep is initiated. Trigger conditions must be met before the sweep actually starts, and if in **Single** the sweep won't start until **Restart** is pressed.

Pressing **Clear/Write** stops the current sweep and initiates a new one, so **Trace Average**, **Max Hold** and **Min Hold** data may be interrupted in mid-sweep when **Clear/Write** is pressed, and therefore may not accurately reflect the displayed count. Therefore, when **Clear/Write** is pressed for one trace, **Trace Average**, **Max Hold** and **Min Hold** must restart for all traces.

When in **Clear/Write**, if a measurement-related instrument setting is changed (that is, one which requires new data to be taken, like **Center Frequency** or **Attenuation**), a new sweep is initiated but the trace is not cleared.

Trace Average

The instrument maintains and displays an average trace, which represents the cumulative average on a point-by-point basis of the new trace data and previous averaged trace data.

Pressing **Trace Average** (for the selected trace), or sending `:TRAC:TYPE AVER` (for the specified trace), sets the trace type to **Trace Average**, clears the trace, initiates a new sweep, and restarts the Average sequence.

Details of the count limiting behavior and the averaging calculations may be found under **Avg|Hold Number** and **Average Type** under **Meas Setup**.

When in **Trace Average**, if a measurement-related instrument setting is changed (that is, one which requires new data to be taken, like **Center Frequency** or **Attenuation**), the average restarts and a new sweep is initiated but the trace is not cleared.

Restarting the average means:

- The average/hold count k is set to 1, so that the next time the average trace is displayed it simply represents one trace of new data
- A new sweep is initiated
- Once the new sweep starts, the trace is overwritten with current trace data as the first trace of the new average

Remember that restarting averaging also restarts **Max Hold** and **Min Hold**, as there is only one count for Trace Average and Hold.

Max Hold

The instrument maintains and displays a max hold trace, which represents the maximum data value on a point-by-point basis of the new trace data and previous trace data. Details of the count limiting behavior may be found under **Avg|Hold Number** under **Meas Setup**.

Pressing **Max Hold** for the selected trace, or sending `:TRAC:TYPE MAXH` for the specified trace, sets the Trace Type to **Max Hold**, clears the trace, initiates a new sweep, and restarts the hold sequence, even if you are already in **Max Hold**.

When in **Max Hold**, if a measurement-related instrument setting is changed (that is, one which requires new data to be taken, like **Center Frequency** or **Attenuation**), the **Max Hold** sequence restarts and a new sweep is initiated but the trace is not cleared.

Restarting the **Max Hold** sequence means:

- The average/hold count k is set to 1, so that the next time the max hold trace is displayed it simply represents one trace of new data
- A new sweep is initiated.

Remember that restarting **Max Hold** also restarts averaging and **Min Hold**, as there is only one count for Trace Average and Hold.

Min Hold

The instrument maintains and displays a min hold trace, which represents the minimum data value on a point-by-point basis of the new trace data and previous trace data. Details of the count limiting behavior may be found under **Avg|Hold Number** under the **Meas Setup** functions.

Pressing **Min Hold** for the selected trace, or sending `:TRAC:TYPE MINH` for the specified trace, sets the Trace Type to **Min Hold**, clears the trace, initiates a new sweep, and restarts the hold sequence, even if you are already in **Min Hold**.

When in **Min Hold**, if a measurement-related instrument setting is changed (that is, one which requires new data to be taken, like **Center Frequency** or **Attenuation**), the **Min Hold** sequence restarts and a new sweep is initiated but the trace is not cleared.

Restarting the **Min Hold** sequence means:

- The average/hold count k is set to 1, so that the next time the min hold trace is displayed it simply represents one trace of new data

- A new sweep is initiated

Remember that restarting **Min Hold** also restarts **Max Hold** and averaging, because there is only one count for Trace Average and Hold.

Clear and Write | Restart Averaging | Restart Max/Min Hold

Starts the trace writing, as though the "Trace Type" on page 2393 had just been selected. The effect is exactly the same as reselecting the current **Trace Type** again – the control is provided because it may not be obvious that reselecting the same selection from a radio button menu will take any action.

This control displays different labels, depending on the selected Trace Type:

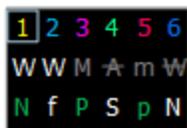

- **Clear/Write**: Clear and Write
- **Trace Average**: Restart Averaging
- **Max Hold**: Restart Max Hold
- **Min Hold**: Restart Min Hold

View/Blank

Lets you set the state of the two trace variables: **Update** and **Display**. The choices available in this dropdown menu are:

Active	Update and Display both ON
View	Update OFF ; Display ON
Blank	Update OFF ; Display OFF
Background	Update ON , Display OFF Allows a trace to be blanked <i>and</i> continue to update "in the background", which was not possible in the past

In the Swept SA measurement, a trace with **DisplayOFF** is indicated by a strikethrough of the type letter in the trace annotation panel in the Measurement Bar. A trace with **UpdateOFF** is indicated by dimming the type letter in the trace annotation panel in the Measurement Bar. In the example below, Traces 3, 4, 5 and 6 have **UpdateOFF**, and Traces 4 and 6 have **DisplayOFF**.

See: "[More Information](#)" on page 1330

Notes	For the commands to control the two variables, Update and Display, see "Trace Update State On/Off" on page 1329 and "Trace Display State On/Off" on page 1329 below
Dependencies	When Signal ID is on, this key is grayed-out
Couplings	<p>Selecting a Trace Type for a trace (pressing the key or sending the equivalent command) puts the trace in Active (Update ON and Display ON), even if that trace type was already selected</p> <p>Selecting a detector for a trace (pressing the key or sending <code>[:SENS] :DET :TRAC</code>) puts the trace in Active (UpdateON and DisplayON), even if that detector was already selected</p> <p>Selecting a Math Function other than OFF for a trace (pressing the key or sending the equivalent command) puts the trace in Active (UpdateON and DisplayON), even if that Math Mode was already selected</p> <p>Loading a trace from a file puts that trace in View regardless of the state it was in when it was saved; as does being the target of a Copy or a participant in an Exchange</p>

Trace Update State On/Off

Remote Command	<p>For Swept SA Measurement (in SA Mode):</p> <pre>:TRACe[1] 2 ... 6:UPDate[:STATe] ON OFF 1 0</pre> <pre>:TRACe[1] 2 ... 6:UPDate[:STATe]?</pre> <p>For all other measurements:</p> <pre>:TRACe[1] 2 3:<meas>:UPDate[:STATe] ON OFF 1 0</pre> <pre>:TRACe[1] 2 3:<meas>:UPDate[:STATe]?</pre> <p>where <meas> is the identifier for the current measurement</p>
Example	<p>Make trace 2 inactive (stop updating):</p> <pre>:TRAC2:UPD 0</pre>
Couplings	Whenever you set Update to ON for any trace, the Display is set to ON for that trace
Preset	<p>For Swept SA Measurement (in SA Mode):</p> <pre>1 0 0 0 0 0</pre> <p>ON for Trace 1; OFF for 2–6</p> <p>For all other measurements:</p> <pre>1 0 0</pre> <p>ON for Trace 1; OFF for 2 & 3</p>
State Saved	Saved in instrument state

Trace Display State On/Off

Remote Command	<p>For Swept SA Measurement (in SA Mode):</p> <pre>:TRACe[1] 2 ... 6:DISPlay[:STATe] ON OFF 1 0</pre> <pre>:TRACe[1] 2 ... 6:DISPlay[:STATe]?</pre> <p>For all other measurements:</p> <pre>:TRACe[1] 2 3:<meas>:DISPlay[:STATe] ON OFF 1 0</pre>
----------------	---

	<code>:TRACe[1] 2 3:<meas>:DISPlay[:STATe]?</code>
	where <meas> is the identifier for the current measurement
Example	Make trace 1 visible: <code>:TRAC2:DISP 1</code> Blank trace 3: <code>:TRAC3:DISP 3</code>
Couplings	Whenever you set Update to ON for any trace, the Display is set to ON for that trace
Preset	For Swept SA Measurement (in SA Mode): <code>1 0 0 0 0 0</code> ON for Trace 1; OFF for 2–6 For all other measurements: <code>1 0 0</code> ON for Trace 1; OFF for 2 & 3
State Saved	Saved in instrument state

More Information

When a trace becomes inactive, any update from the **:SENSe** system (detectors) immediately stops, without waiting for the end of the sweep. The trace data remains unchanged, but stops updating. If the trace is blanked, this still does not affect the data in the trace. Traces that are blanked (**Display=OFF**) do not display nor appear on printouts, but their data stays intact, they may be queried, and markers may be placed on them

In most cases, inactive traces are static and unchanging; however, there are cases when an inactive trace will update, specifically:

- if data is written to that trace from remote
- if trace data is loaded from mass storage
- if the trace is the target of a **Copy** or participant in an **Exchange**
- if the trace is cleared using **Clear Trace**

Inactive traces that are also being displayed (traces in **View**) are displayed at half intensity. Traces in **View** display across the entire X-Axis of the instrument. Their horizontal placement does not change, even if X-Axis settings subsequently are changed, although Y-Axis settings do affect the vertical placement of data.

When a trace becomes active (**Update=ON**), the trace is cleared, the average count is reset, and a new sweep is initiated.

Note that putting a trace into **Display=OFF** and/or **Update=OFF** does *not* restart the sweep and does *not* restart Averaging or Hold functions for any traces.

3.6.10.3 Math

Lets you turn on and configure Trace Math functions.

Math Function

Trace Math functions perform mathematical operations between traces and, in some cases, user-specified offsets. When in a Trace Math function, the indicated function is performed during the sweep with the math function used in place of a detector. The trace operands for the math function are set using the "Operand 1 / Operand 2" on page 2117 controls.

- See "How trace math is processed" on page 1335

Remote Command	<p>For option details, see "Trace Math Options" on page 1333</p> <p>For Swept SA Measurement (in SA Mode):</p> <pre style="font-family: monospace;">:CALCulate:MATH <trace_num>, PDIFference PSUM LOFFset LDIFference OFF, <trace_num>, <trace_num>, <real>,<real> :CALCulate:MATH? <trace_num></pre> <p>where <trace_num> is any one of:</p> <pre style="font-family: monospace;">TRACE1 ... TRACE6</pre> <p>For all other measurements:</p> <pre style="font-family: monospace;">:CALCulate:<meas>:MATH <trace_num>, PDIFference PSUM LOFFset LDIFference OFF, <trace_num>, <trace_num>, <real>,<real> :CALCulate[:<meas>]:MATH? <trace_num></pre> <p>where:</p> <p><meas> is the identifier for the current measurement, and</p> <p><trace_num> is any one of:</p> <pre style="font-family: monospace;">TRACe1 TRACe2 TRACe3</pre> <p>Note that the format of the TRACe<n> parameter differs from that for the Swept SA Measurement</p>
----------------	---

Example	<pre style="font-family: monospace;">:CALC:MATH TRACE3,PDIF,TRACE1,TRACE2,0,0</pre> <p>Sets Trace 3 to Power Diff trace math function, and sets the First Trace operand (for Trace 3) to Trace 1 and the Second Trace operand (for Trace 3) to Trace 2</p> <pre style="font-family: monospace;">:CALC:MATH TRACE3,PSUM,TRACE1,TRACE2,0,0</pre> <p>Sets Trace 3 to Power Sum trace math function and sets the First Trace operand (for Trace 3) to Trace 1 and the Second Trace operand (for Trace 3) to Trace 2</p> <pre style="font-family: monospace;">:CALC:MATH TRACE3,LOFF,TRACE1,TRACE2,-6.00,0</pre> <p>Sets Trace 3 to Log Offset trace math function, sets the First Trace operand (for Trace 3) to Trace 1, leaves the Second Trace operand (for Trace 3) unchanged (it is irrelevant for this function) and sets the Log Offset (for Trace 3) to -6 dB</p> <pre style="font-family: monospace;">:CALC:MATH TRACE3,LDIF,TRACE1,TRACE2,0,-6.00</pre>
---------	---

3 5G NR Mode
3.6 Spurious Emissions Measurement

	<p>Sets Trace 3 to Log Diff trace math function, sets the First Trace operand (for Trace 3) to Trace 1, sets the Second Trace operand (for Trace 3) to Trace 2, and sets the Log Difference reference (for Trace 3) to -6 dBm</p> <p><code>:CALC:MATH TRACE1,OFF,TRACE2,TRACE3,0,0</code></p> <p>Turns off trace math for trace 1</p>
Notes	<p>The Trace Math Function command has 6 main set of parameters:</p> <ul style="list-style-type: none"> - Set 1 defines the “result trace”: <code>TRACE1 ... TRACE6</code> - Set 2 defines the “function”: <code>PDifference PSUM LOffset LDifference OFF</code> - Set 3 is a “trace operand” (1): <code>TRACE1 ... TRACE6</code> - Set 4 is a “trace operand” (2): <code>TRACE1 ... TRACE6</code> - Set 5 defines the “Log Offset” (in dB) - Set 6 defines the “Log Difference Reference” (in dBm) <p>Note that the trace math mode is an enumeration; that is, when a math function is set for a trace, it turns off any math function that is on for that trace, then sets the new math function</p> <p>The parameters sent in the command are reflected in the values in the control menu. There is no default for any parameter; all 6 parameters must be sent to satisfy the parser. Failure to specify a parameter will result in a missing parameter message</p> <p>The query returns the math mode, the operand traces, the offset and the reference for the specified trace, all separated by commas</p>
Dependencies	<p>Trace Math is not available if Normalize is on</p> <p>Trace Math is not available if Signal ID is on</p> <p>None of the trace operands can be the destination trace. If any of the three trace math commands is sent with a destination trace number matching one of the operands, a warning is generated and the function does not turn on</p>
Couplings	When a math function is changed for a trace, that trace is set to Display = ON ; and Update = ON
Preset	<p>For Swept SA Measurement (in SA Mode):</p> <p><code>OFF,TRACE5,TRACE6,0,0 OFF,TRACE6,TRACE1,0,0 OFF,TRACE1,TRACE2,0,0 </code> <code>OFF,TRACE2,TRACE3,0,0 OFF,TRACE3,TRACE4,0,0 OFF,TRACE4,TRACE5,0,0</code></p> <p>For all other measurements:</p> <p><code>OFF,TRACE2,TRACE3,0,0 OFF,TRACE3,TRACE1,0,0 OFF,TRACE1,TRACE2,0,0</code></p>
State Saved	The trace math function for each trace is saved in instrument state
Annunciation	An “P” is shown on the trace annunciation panel in the Measurement Bar when a math function is on; and the function is annotated on the trace if Trace Annotation is on
Status Bits/OPC dependencies	*OPC can be used to detect the completion of a sweep, which will also correspond to the completion of the math operation, since all math takes place during the sweep

Trace Math Options

IMPORTANT

To generate a trace math result, *you must take a sweep*. The trace math engine, described below, operates in concert with the sweep engine in the instrument. Until a sweep has been taken, even if the constituent traces are not in Update mode, no result is generated.

Note that certain events can affect the trace in ways that affects all points at once. This can happen in any number of ways, including:

- A trace clear taking place
- A trace being loaded from the file system
- Trace data being sent in from the remote interface
- A copy or exchange of trace data

You should try to avoid these occurrences during a sweep, as they will tend to invalidate the math result being accumulated.

The Trace Math functions are:

Power Diff (Op1 - Op2)

Calculates a power difference between the **First Trace** operand and the **Second Trace** operand and puts the result in the destination trace.

During the sweep, the following formula is executed for each point in the trace operands, and the corresponding point is generated for the destination trace:

$$\text{DestinationTrace} = 10 \log_{10}(1/10)(\text{FirstTrace}) - 10(1/10)(\text{SecondTrace})$$

The values of the trace points are assumed to be in a decibel scale, as they are internally stored.

If a point in **FirstTrace** is equal to **maxtracevalue**, the resultant point is also **maxtracevalue**.

Otherwise, if the result of the subtraction is less than or equal to 0, the resultant point is **mintracevalue**.

Power Sum (Op1 + Op2)

Calculates a power sum between the **First Trace** operand and the **Second Trace** operand and puts the result in the destination trace.

During the sweep, the following formula is executed for each point in the trace operands, and the corresponding point is generated for the destination trace.

$DestinationTrace = 10 \log(10(1/10)(FirstTrace) + 10(1/10)(SecondTrace))$

The values of the trace points are assumed to be in a decibel scale, as they are internally stored.

If a point in either trace operand is equal to **maxtracevalue**, the resultant point is also **maxtracevalue**.

Log Offset (Op1 + Offset)

Calculates a log offset from the **First Trace** operand and puts the result in the destination trace. This is like the B-DL function in some older instruments. The offset is entered on the **Offset** control, which only appears when this math function is in force for the selected trace. Each destination trace has its own offset.

During the sweep, the following formula is executed for each point in the trace operand, and the corresponding point is generated for the destination trace.

$DestinationTrace = FirstTrace + Offset$

The values of the trace points are assumed to be in dBm (as they are internally stored) and the offset is in dB.

If a point in the trace operand is equal to **maxtracevalue**, the resultant point is also **maxtracevalue**.

If a point in the trace operand is equal to **mintracevalue**, the resultant point is also **mintracevalue**.

Example: If offset is 25 dB, then our destination trace will be higher than the operand trace by 25 dB.

Note that the **Second Trace** operand is not used for this function.

Log Diff (Op1 - Op2 + Ref)

Offsets the difference between the **First Trace** operand and the **Second Trace** operand by a reference and puts the result in the destination trace. This is like the A-B+DL function in some older instruments. The Reference is entered on the **Reference** control, which only appears when this math function is in force for the selected trace. Each destination trace has its own reference.

Offsets the difference between the **First Trace** operand and the **Second Trace** operand by a reference and puts the result in the destination trace. This is like the A-B+DL function in some older instruments. The Reference is entered on the **Reference** control, which only appears when this math function is in force for the selected trace. Each destination trace has its own reference.

During the sweep, the following formula is executed for each point in the trace operands, and the corresponding point is generated for the destination trace.

$DestinationTrace = (FirstTrace - SecondTrace) + Reference$

The values of the operand trace points are assumed to be in decibel units (as they are internally stored) and the reference is in dBm so the result is in dBm.

Example: If the first operand trace 1 is at 5 dBm, the second operand trace 2 is at -5 dBm, and the reference is -25 dBm, then the destination trace will be -15 dBm.

Example: If the first operand trace 1 is at 60 dBuV, the second operand trace 2 is at 50 dBuV, and the reference is 35 dBuV, then the destination trace will be 45 dBuV.

If a point in **FirstTrace** is equal to **maxtracevalue**, the resultant point is also **maxtracevalue**.

If a point in **FirstTrace** is equal to **mintracevalue**, the resultant point is also **mintracevalue**.

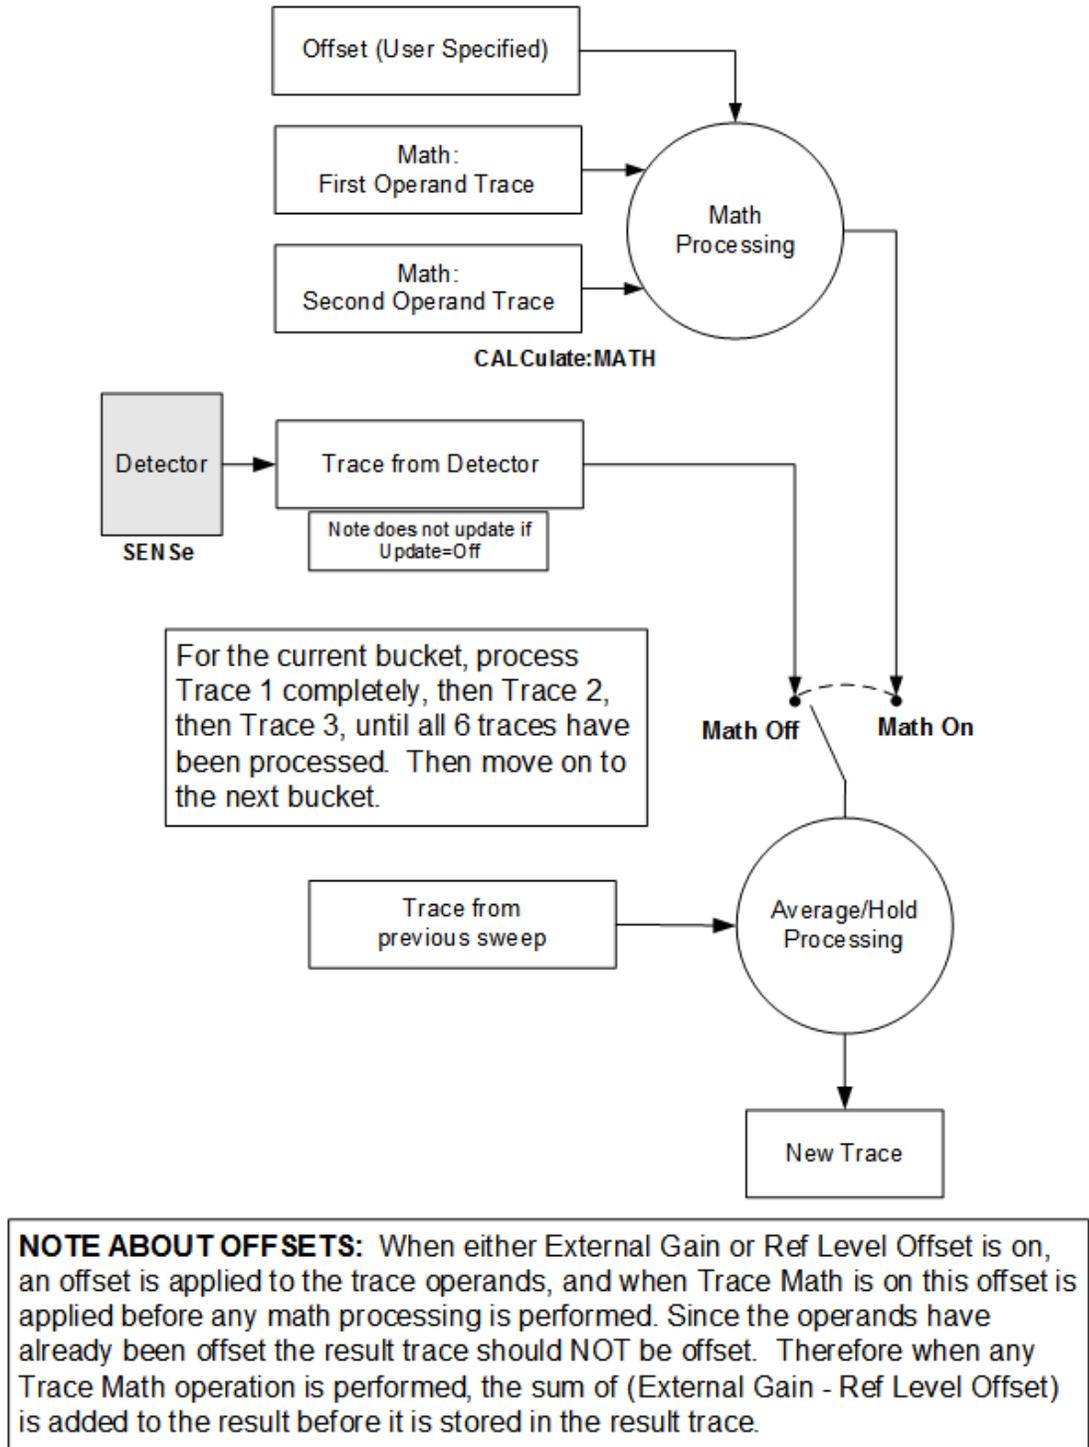

If neither of the above is true for a given point, then:

- If that point in **SecondTrace** is equal to **maxtracevalue**, the resultant point is **mintracevalue**.
- If that point in **SecondTrace** is equal to **mintracevalue**, the resultant point is **maxtracevalue**.

How trace math is processed

Whenever a trace math function is turned on, or the parameters and/or operands of an existing trace math function are changed, the destination trace is cleared. After the trace is cleared, all x-axis values in the trace, and the domain of the trace, are set to match the X-Axis settings of the first trace operand. When this is complete, a new sweep is initiated.

The process of acquiring data, processing it using the math and Average/Hold functions, and presenting it as trace data, consists of several functional blocks, as shown below:

For each active trace, the current trace point is processed for **Trace 1**, then **Trace 2**, then **Trace 3**, etc. Trace data is taken from either the detector for that trace, or

from the mathematical result of up to two other traces and an offset, depending on whether trace math is on or not. The resultant data is then fed to the Average/Hold processing block, where (if the trace type is **Average**, **Max Hold**, or **Min Hold**) it is processed with previous trace data. The new trace data resulting from this process is then available for display, storage or remote output.

When the processing is complete for **Trace 1**, **Trace 2** is processed, and so on until all six traces have been processed. This allows a downstream trace to use as one of its math components a fully processed upstream trace. In other words, if math is **ON** for **Trace 4**, and its operand traces are **Trace 2** and **Trace 3**, then all detector, math, average and hold processing for Traces 2 and 3 is completed before the math is performed for **Trace 4**. When the current trace point is completed for all traces, the instrument moves on to the next trace point.

This allows very flexible and powerful math functions to be configured. For example, **Trace 1** can be an average trace, which can be fed with an offset to **Trace 2**, which can also be in **Max Hold**, allowing you to obtain the **Max Hold** of an Average trace.

Note that none of this processing is performed on inactive traces.

Note also that for any active trace with math **ON**, the Operand traces should have *lower* numbers than the trace (for example, using **Trace 4** as an operand for **Trace 1** will cause the data coming from **Trace 4** to be delayed by one sweep).

Operand 1 / Operand 2

These two controls select the first and second trace operands to be used for the trace math functions for the destination trace. The operands are common to all math functions for a given trace. The most recently sent **:CALCulate:MATH** command for a given trace sets the operands for that trace. Those settings are displayed on the trace operand controls for that trace.

Example	<p>The following examples are for the Swept SA measurement</p> <p>Set Trace 3 to Power Diff trace math function. Set the First Trace operand (for Trace 3) to Trace 1 and the Second Trace operand (for Trace 3) to Trace 2:</p> <pre>:CALC:MATH TRACE3,PDIF,TRACE1,TRACE2,0,0</pre> <p>Set Trace 3 to Log Offset trace math function. Set the First Trace operand (for Trace 3) to Trace 1, leave the Second Trace operand (for Trace 3) unchanged (it is irrelevant for this function) and set the Log Offset (for Trace 3) to -6 dB:</p> <pre>:CALC:MATH TRACE3,LOFF,TRACE1,TRACE2,-6.00,0</pre>
Notes	See " Math Function " on page 2111 for how to specify Operands 1 and 2 using :CALCulate:MATH
Dependencies	The destination trace cannot be an operand. The destination trace number is grayed-out on the dropdown
Preset	Operand 1: Trace number minus 2 (wraps at 1). For example, for Trace 1, Operand 1 presets to Trace

	5; for Trace 6, it presets to Trace 4 Operand 2: Trace number minus 1 (wraps at 1). For example, for Trace 1, Operand 2 presets to Trace 6; for Trace 6, it presets to Trace 5
State Saved	Operands 1 and 2 for each trace are stored in instrument state

Offset

Used by the Log Offset math function.

Example	The following example is for the Swept SA measurement Set Trace 3 to Log Offset trace math function, set the First Trace operand (for Trace 3) to Trace 1, leave the Second Trace operand (for Trace 3) unchanged (it is irrelevant for this function) and set the Log Offset (for Trace 3) to -6 dB: <code>:CALC:MATH TRACE3,LOFF,TRACE1,TRACE2,-6.00,0</code>
State Saved	The Log Offset value for each trace is saved in Instrument State
Min	-100 dB
Max	100 dB

Reference

Used by the Log Diff math function.

Example	The following example is for the Swept SA measurement Set Trace 3 to Log Diff trace math function, set the First Trace operand (for Trace 3) to Trace 1, set the Second Trace operand (for Trace 3) to Trace 2, and set the Log Difference reference (for Trace 3) to -6 dBm: <code>:CALC:MATH TRACE3,LDIF,TRACE1,TRACE2,0,-6.00</code>
State Saved	The Log Difference reference value for each trace is saved in instrument state
Min/Max	Same as reference level

3.6.10.4 Trace Function

Contains controls to:

- Copy and Exchange traces
- Preset or Clear all traces

From Trace

Selects the trace to be copied to or exchanged with the **"To Trace" on page 2119** when a **"Copy" on page 2119** or **"Exchange" on page 2120** is performed

Preset 1

To Trace

Selects the trace to be copied from or exchanged with the **"From Trace" on page 2119** when a **"Copy" on page 2119** or **"Exchange" on page 2120** is performed

Preset 2

Copy

Executes a Trace Copy based on the **"From Trace" on page 2119** and **"To Trace" on page 2119** parameters. The copy operation is from the **From Trace** to the **To Trace**. The action is performed once.

The X-Axis settings and domain of a trace are also copied.

Remote Command For Swept SA Measurement (in SA Mode):
`:TRACe:COPIY TRACE1 | ... | TRACE6, TRACE1 | ... | TRACE6`
 For all other measurements:
`:TRACe:<meas>:COPIY TRACE1 | TRACe2 | TRACe3, TRACe1 | TRACe2 | TRACe3`
 where `<meas>` is the identifier for the current measurement
 Note that the format of the `TRACe<n>` parameter differs from that for the Swept SA Measurement

Example Copy Trace 1 to Trace 3 and put Trace 3 in Update=Off, Display=On
`:TRAC:COPIY TRACE1,TRACE3`

Notes The command is of the form:
`:TRACe:COPIY <source_trace>,<dest_trace>`

Dependencies When Signal ID is on, this key is grayed-out

Couplings The destination trace is put in **View** (Update = Off, Display = On) after the copy

Preset For Swept SA Measurement (in SA Mode):
`TRACE1, TRACE2`
 For all other measurements:
`TRACe1, TRACe2`

Exchange

Executes a Trace Exchange based on the "From Trace" on page 2119 and "To Trace" on page 2119 parameters. The **From Trace** and **To Trace** values are exchanged with each other. The action is performed once.

The X-Axis settings and domain of a trace are also copied when it is exchanged with another trace.

Remote Command	<p>For Swept SA Measurement (in SA Mode): <code>:TRACe:EXCHange TRACE1 ... TRACE6, TRACE1 ... TRACE6</code></p> <p>For all other measurements: <code>:TRACe:<meas>:EXCHange TRACE1 TRACE2 TRACE3, TRACE1 TRACE2 TRACE3</code></p> <p>where <code><meas></code> is the identifier for the current measurement</p> <p>Note that the format of the <code>:TRACe<n></code> parameter differs from that for the Swept SA Measurement</p>
Example	<p>Exchange Trace 1 and Trace 2 and put both traces in Update=OFF, Display=ON: <code>:TRAC:EXCH TRACE1,TRACE2</code></p>
Notes	<p>The command is of the form: <code>:TRACe:EXCHange <trace_1>,<trace_2></code></p>
Couplings	Both traces are put in View (Update=Off, Display=On) after the exchange

Preset All Traces

Turns on Trace 1 and blanks all other traces. This is useful when you have many traces on and you want to return to having only Trace 1 on the display. Does not affect the trace type, detector or any other aspect of the trace system.

Remote Command	<code>:TRACe[:<meas>]:PRESet:ALL</code>
Example	<code>:TRAC:PREs:ALL</code>
Dependencies	When Signal ID is on, this key is grayed-out

Clear All Traces

Clears all traces. Does not affect the state of any function or variable in the instrument. Loads `mintracevalue` into all of the points for all traces, except traces in **Min Hold**, in which case it loads `maxtracevalue`, even if **Update = OFF**.

Remote Command	<code>:TRACe[:<meas>]:CLEar:ALL</code>
Example	<code>:TRAC:CLE:ALL</code>
Dependencies	When Signal ID is on, this key is grayed-out

Multiple Traces for EIRP

Enables you to preset the following parameters.

Multi Channel Synchronous Acquisition	Off		
"From Trace" on page 2119	Trace 1		
"To Trace" on page 2119	Trace 2		
	Trace 1	Trace 2	Trace 3
"Trace Type" on page 2393	Trace Average	Trace Average	Clear / Write
"View/Blank" on page 2398	Active	View	Active
"Math Function" on page 2111	Off	Off	Power Sum =Trace 1 + 2
Operand 1	N/A	N/A	Trace 1
Operand 2	N/A	N/A	Trace 2

Remote Command :TRACe:<meas>:PRESet:EIRP

Example For OBW Meas:
:TRAC:OBW:PRES:EIRP

3.6.10.5 Advanced

PP_Substitute: cmn_trace/Advanced.htm

Measure Trace

Specifies which trace's scalar results are displayed in the Metrics window and retrieved by sending a :READ or :FETCh command:

- Trace 1
- Trace 2
- Trace 3

Remote Command :CALCulate:SPURious:MTRace TRACe1 | TRACe2 | TRACe3
:CALCulate:SPURious:MTRace?

Example :CALC:SPUR:MTR TRACe1
:CALC:SPUR:MTR?

Preset TRACe1

State Saved No

Range Trace 1 | Trace 2 | Trace 3

3.7 Modulation Analysis Measurement

The 5G NR Modulation Analysis measurement is used to test the Transmitted signal quality for both Base station and User equipment for E-UTRA according to 3GPP Specifications.

Once required parameters are specified, the demodulator will automatically lock onto the signal, and calculate various metrics, the output results of measurement include Frequency Error, Error Vector Magnitude, Time Alignment Error, Carrier Leakage, In-Band Emission, Equalizer Spectrum Flatness and so on.

Baseband I/Q Inputs Support

Baseband I/Q Input functionality is a hardware option and provides the ability to analyze baseband I/Q signal characteristics of mobile and base station transmitters. If the option is installed, this functionality is available in this measurement.

Because the measurement acquires the data in I/Q form regardless of RF or I/Q input selection, all the calculations for the measurement are the same regardless of RF or I/Q input selection.

Modulation Analysis Measurement Commands

The general functionality of ["CONFigure" on page 3414](#), ["INITiate" on page 3415](#), ["FETCh" on page 3415](#), ["MEASure" on page 3417](#), and ["READ" on page 3416](#) are described in the section **SCPI Operation and Results Query** in the topic **Programming the Instrument**.

The following commands and queries are used to configure the measurement, then retrieve the results:

```
:CONFigure:EVM  
:CONFigure:EVM:NDEFault  
:INITiate:EVM  
:FETCh:EVM[n]?  
:READ:EVM[n]?  
:MEASure:EVM[n]?
```

Remote Command Results for Modulation Analysis Measurement

For the [FETCh](#), [MEASure](#), and [READ](#) queries listed above, the results returned depend on the value of **n**. For this measurement, the value of **n** is derived by concatenating three 2-digit sub-fields, as follows:

Sub-field	Variable	Definition
Most Significant 2 Digits	CC	The CC index. The current valid range is 00-15 and 99 See " CC Index " on page 1343 below
Middle 2 Digits	BI	The SSB and BWP index See " SSB and BWP Index " on page 1343 below
Least Significant 2 Digits	RI	The result index for each CC See " Result Index " on page 1344 below

The general formula for calculating the desired value of **n** is:

$$n = 10000 * CC + 100 * BI + RI$$

Note that certain result types cannot be retrieved in this way. See "[Complex Results](#)" on page 1364.

CC Index

The [CC](#) digits specify:

00-15	CC0 to CC15
99	Results not for a specific CC

SSB and BWP Index

The [BI](#) digits specify:

00	Results not specific for SSB and BWP
01	Results specific to SSB with 15 kHz SCS for FR1 or 120 kHz SCS for FR2
02	Results specific to SSB with 30 kHz SCS for FR1 or 240 kHz SCS for FR2
03	First Sidelink SSB
04	Second Sidelink SSB
10	Results specific to PRACH
11-14	Results specific to UL BWP1-BWP4
	BWP1

3 5G NR Mode
 3.7 Modulation Analysis Measurement

	BWP2	12
	BWP3	13
	BWP4	14
20	DL initial BWP (BWP0)	
21-24	Results specific to DL BWP1-BWP4	
	BWP1	21
	BWP2	22
	BWP3	23
	BWP4	24
31-34	Results specific to Sidelink BWP1-BWP4	
	BWP1	31
	BWP2	32
	BWP3	33
	BWP4	34

Result Index

The current valid range for the **RI** digits is 01-31.

01	Demod Summary
02	Frame Summary
03	BWP Summary
04	In-Band Emission Limit (All)
05	In-Band Emission Trace

CC	BI	RI	Result Details		
			#	Result	Unit, if any
				- 3: PUSCH DMRS	
			10	Cell ID	
			11	Flatness results:	
				- 0: Pass	
				- 1: Fail	
			12	Flatness Widest Fail Margin	dB
			13	Flatness Widest Fail Slot	
			14	Flatness Widest Fail subcarrier	
			15	Flatness Ripple Range1	dB
			16	Flatness Ripple Range2	dB
			17	Flatness Max Range1 – Min Range2	dB
			18	Flatness Max Range2 – Min Range1	dB
			19	Flatness Min Range1	dB
			20	Flatness Max Range1	dB
			21	Flatness Min Range2	dB
			22	Flatness Max Range2	dB
			23	Channel Power (Active)	dBm
			24	Mag Error	%
			25	Phase Error	radian
			26	Gain Imbalance	dB
			27	Quad Error	degree
			28	Timing Skew	ps
			29	Freq Error (Worst)	Hz
			30	MIMO TAE	s
			31	Reserved	-

If "Report EVM in dB" is true, then the EVM result is in "dB"

For MIMO, Channel Power and Channel Power Active are for reference channel
IQ Offset, Gain Imbalance, Quad Error and Timing Skew are only available in SISO mode. MIMO IQ Offset will be provided separately (RI=06)

MIMO TAE result is available for MIMO/MISO modes

BWP1 Flatness results will be returned here for backwards compatibilities

00-15 01-02 02 Returns frame summary results of first and second SSB numerology for **CC** ("Component Carrier" on page 1454) when it is active

All the return values are floating-point

If no result is available, **NaN** (9.91E+37) is returned

22	Layer 5 IQ Offset	dB
23	Layer 6 IQ Offset	dB
24	Layer 7 IQ Offset	dB
25	Total composite EVM	%

If "Report EVM in dB" is set to true, then the EVM result is in "dB"

Note that, for MIMO, Total Channel Power and Total Channel Power Active are calculated based on each CC' reference channel

3-7, 9-16 and 25 are cross CC results, so they will return same value for each CC

17-24 are available only for MIMO mode. SISO IQ offset is provided separately (RI

CC	BI	RI	Result Details		
			#	Result	Unit, if any
			1	Column Number 4 for current version	
			2	BWP Index - 0: DL Initial BWP - 1: DL BWP1 - 2: DL BWP2 - 3: DL BWP3 - 4: DL BWP4 - 5: UL BWP1 - 6: UL BWP2 - 7: UL BWP3 - 8: UL BWP4 - 9: SSB1 - 10: SSB2 - 100: Composite	
			3	ccEVM	%
			4	Valid Points	
			5	Total Points	

Items 2-5 repeat for each line in ccEVM summary table
 If "Report EVM in dB" is true, then the EVM result is in "dB"

Complex Results

Some results are too lengthy and complex for SCPI, so instead they are returned via "Save Meas Results" as CSV files:

- Meas IQ
- Reference IQ
- Error Vector
- RE Power

- Channel Allocation
- Decode Bits
- Condition Number
- H Matrix

3.7.1 Views

The Modulation Analysis measurement has nine pre-defined views as follows.

View	Result
"Normal" on page 1431	"IQ Meas Time" on page 1374 "Detected Allocation" on page 1375 "Spectrum" on page 1373 "Raw Main Time" on page 1373 "Frame Summary" on page 1378 "Error Summary" on page 1378

View	Result
"MISO Summary" on page 1433	"Spectrum" on page 1373 "Raw Main Time" on page 1373 "MIMO Info" on page 1379
"MIMO Summary" on page 1434	"User Summary" on page 1379 "MIMO Info" on page 1379
"Auto Detect Summary" on page 1434	"IQ Meas Time" on page 1374 "Frame Summary" on page 1378 "Auto Detect Summary" on page 1379

Some of these are multiple-window Views. When in a multiple-window View, you select a window by touching it. The menu controls may sometimes change depending on which window is selected.

Whenever the View changes, the default menu is **Frequency**, unless otherwise specified in the View description.

View - Selection by Enum

Remote Command	<code>:DISPlay:EVM:VIEW[:SElect] NORMal IBEMission NRESults CCResults DECode MIMO ADEtect N3X3 MISO</code> <code>:DISPlay:EVM:VIEW[:SElect]?</code>
Example	Set Normal view: <code>:DISP:EVM:VIEW NORM</code>
Preset	<code>NORM</code>
State Saved	Saved in instrument state

3.7.1.1 Normal

This view has six windows:

- "IQ Meas Time" on page 1374
- "Detected Allocation" on page 1375
- "Spectrum" on page 1373
- "Raw Main Time" on page 1373
- "Frame Summary" on page 1378
- "Error Summary" on page 1378

Example	<code>:DISP:EVM:VIEW NORM</code>
---------	----------------------------------

3.7.1.2 Normal 3x3

This view has nine windows:

- "IQ Meas Time" on page 1374
- "Spectrum" on page 1373
- "Raw Main Time" on page 1373
- "Detected Allocation" on page 1375
- "RE Power 3D" on page 1375
- "Error Vector 3D" on page 1377
- "Frame Summary" on page 1378
- "Error Summary" on page 1378
- "User Summary" on page 1379

Example `:DISP:EVM:VIEW N3X3`

3.7.1.3 In-Band Emission

This view has two windows:

- "In-band Emission" on page 1377
- "BWP Summary" on page 1379

Example `:DISP:EVM:VIEW IBEM`

3.7.1.4 Result Summary

This view has four windows:

- "Error Summary" on page 1378
- "Frame Summary" on page 1378
- "User Summary" on page 1379
- "BWP Summary" on page 1379

Example `:DISP:EVM:VIEW NRES`

3.7.1.5 CC Summary

This view has a single window: "CC Summary" on page 1379

Example `:DISP:EVM:VIEW CCR`

3.7.1.6 Decode Summary

This view has three windows:

- "Decoded Info" on page 1381
- "Decoded Channels" on page 1381
- "Decoded Symbols" on page 1381

Example `:DISP:EVM:VIEW DEC`

3.7.1.7 MISO Summary

This view has three windows:

- "Spectrum" on page 1373
- "Raw Main Time" on page 1373
- "MIMO Info" on page 1379

Example `:DISP:EVM:VIEW MISO`

3.7.1.8 MIMO Summary

This view has two windows:

- "User Summary" on page 1379
- "MIMO Info" on page 1379

Example `:DISP:EVM:VIEW MIMO`

3.7.1.9 Auto Detect Summary

This view has three windows:

- "IQ Meas Time" on page 1374
- "Frame Summary" on page 1378
- "Auto Detect Summary" on page 1379

Example `:DISP:EVM:VIEW ADET`

3.7.2 Windows

The Modulation Analysis measurement can display up to 16 Windows.

Each window may have up to five properties:

Property	Description
Data	Allows you to select the trace data format
Format	Allows you to select the trace display format The Format key is hidden if the selected Data doesn't support any format
Component Carrier	Allows you to select which CC's trace data is displayed
BWP/SS Block	Some trace data should be displayed for specific SSB numerology (downlink only) or BWP. This property allows you to select the trace data of which BWP or SSB numerology to be displayed. The BWP/SS Block property is hidden for other trace data
Channel/Layer	In MIMO mode, some results are provided per-layer (DMRS port) or per-channel

Remote Configuration Commands

Command	Purpose & Example
<code>:DISPlay:EVM:WINDow [1] 2 ... 16:DATA <enum></code>	Configures the trace data For example, the following command sets the first window data to Spectrum. <code>:DISP:EVM:WIND1:DATA SPEC</code>
<code>:DISPlay:EVM:WINDow [1] 2 ... 16:FORMat <enum></code>	Configures the trace display format For example, the following command sets the first window trace display format to Log Mag . <code>:DISP:EVM:WIND1:FORM MLOG</code>
<code>:DISPlay:EVM:WINDow [1] 2 ... 16:CCARier <enum></code>	Configures the trace data of which CC to be displayed For example, the following command sets CC0 trace data to be displayed. <code>:DISP:EVM:WIND1:CCAR CC0</code>
<code>:DISPlay:EVM:WINDow[1] 2 ... 16:BWP</code>	Configures the trace data of which BWP or SSB Numerology

Command	Purpose & Example
<enum>	(downlink only) to be displayed For example, the following command sets BWP1 trace data to be displayed. <code>:DISP:EVM:WIND1:BWP BWP1</code>
<code>:DISPlay:EVM:WINDow [1] 2 ... 16:CHANnel <enum></code>	Configures the trace data of which channel to be displayed For example, the following command sets channel1 trace data to be displayed. <code>:DISP:EVM:WIND1:CHAN CHAN1</code>
<code>:DISPlay:EVM:WINDow [1] 2 ... 16:LAYer <enum></code>	Configures the trace data of which layer to be displayed For example, the following command sets layer0 trace data to be displayed. <code>:DISP:EVM:WIND1:LAY LAYER0</code>

3.7.2.1 Data

Provides a menu of trace data choices for the selected window.

Remote Command	<code>:DISPlay:EVM:WINDow[1] 2 ... 16[:TRACe]:DATA RMTIME SPECTrum MTIME RTIME EVTime EVSpectrum REVTime REVSpectrum CHFResponse DRESults FRESults BWPResults IBEMission DALLocations DINFo DSYMBOLs CCResults PVT FLATness DChannel DPVT DPVS SLResults OBWSpectrum OBWResults ACPspectrum ACPResults SEMSpectrum SEMResults TOOTrace TOOResults POW3D ERR3D CNUMBER HMATrix IQIMbalance SFSummary MIMO USER ADET CCEVm NONE</code> <code>:DISPlay:EVM:WINDow[1] 2 ... 16[:TRACe]:DATA?</code>
Example	<code>:DISP:EVM:WIND2:DATA SPEC</code> sets the second window data to Spectrum <code>:DISP:EVM:WIND2:DATA?</code>

The following trace data results are available:

#	Trace Data	SCPI Parameter	Description
1	Raw Main Time	RMTime	The envelope of the captured data record
2	Spectrum	SPECtrum	Spectrum is the FFT of the Raw Main Time waveform
3	Power vs Time	PVT	Power vs Time with either symbol or slot as X unit
4	OBW Spectrum	OBWSpectrum	OBW spectrum and indicator lines
5	ACP Spectrum	ACPSpectrum	ACP spectrum and indicator bars
6	SEM Spectrum	SEMSpectrum	SEM spectrum and mask
7	Transmit On/Off Trace	TOOTrace	Transmit On/Off trace and mask
8	IQ Meas	MTIME	IQ Meas trace is the measured IQ symbol values used to calculate the EVM data results. There is one complex value for each subcarrier for each OFDM symbol in the measurement burst
9	IQ Ref	RTIME	IQ Ref trace is the reference IQ values for computing the signal EVM values. There is one complex value for each subcarrier for each symbol in the measurement burst
10	Detected Allocations	DALlocation	Detected Allocation trace
11	RMS Demod Power vs Time	DPVT	RMS demodulated power vs time (symbol or slot)
12	RMS Demod Power vs Spectrum	DPVS	RMS demodulated power vs spectrum (sub-carrier or RB)
13	RE Power 3D	POW3D	RE Power 3D trace
14	Error Vector Time	EVTime	Error Vector Time trace shows the OFDM symbol and subcarrier Error Vector Magnitude vs. Symbol (time) and Subcarrier (frequency)
15	Error Vector Spectrum	EVSpectrum	Error Vector Spectrum trace shows the OFDM symbol and subcarrier Error Vector Magnitude (EVM) vs. subcarrier (frequency) and Symbol (time)
16	RMS Error Vector Time	REVTime	RMS EVM vs time (symbol or slot)
17	RMS Error Vector Spectrum	REVSpectrum	RMS EVM vs spectrum (sub-carrier or RB)
18	In-band Emission	IBEMission	In-band emission trace and limit

3 5G NR Mode
 3.7 Modulation Analysis Measurement

#	Trace Data	SCPI Parameter	Description
19	Error Vector 3D	ERR3D	Error Vector 3D trace
20	IQ Imbalance	IQIMbalance	IQ Imbalance per subcarrier
21	CH Freq Response	CHFResponse	Ch Frequency Response trace for Custom modulation is the channel frequency response
22	Spectrum Flatness Trace	FLATness	Spectrum Flatness trace
23	MIMO Condition Number	CNUMber	MIMO Condition Number trace
24	MIMO H/HW Matrix	HMATrix	MIMO H/HW matrix results
25	Error Summary	DREsults	Demodulation metrics results
26	Frame Summary	FREsults	Frame Summary is metrics results of each physics channel
27	BWP Summary	BWPResults	BWP is metrics results of each bandwidth part
28	Component Carrier Summary	CCResults	Key measurement results of all component carriers, and cross carrier results
29	User Summary	USER	Key PDSCH/PUSCH measurement results of all users
30	MIMO Info	MIMO	Key measurement results of all channel and DMRS ports
31	Auto Detect Summary	ADET	Auto detection mode and key detected parameters
32	Slot Summary	SLResults	Slot Summary is metrics results of each slot
33	OBW Results	OBWResults	OBW numeric results
34	ACP Results	ACPResults	ACP numeric results
35	SEM Results	SEMResults	SEM numeric results
36	Transmit On/Off Results	TOOResults	Transmit On/Off numeric results
37	Spectrum Flatness Results	SFSummary	Spectrum Flatness numeric results
38	Decoded Info	DINFo	Decode information
39	Decoded Symbols	DSYMBOLs	Decode symbols
40	Decoded Channels	DCHanne1	Decode channels
41	ccEVM Summary	CCEVm	ccEVM summary
42	No Data	NONE	Blank Trace

Pre Demod

Displays the trace data choices that show pre-demodulation results.

Raw Main Time

Raw Main Time is the envelope of the captured raw data. This data is unprocessed and includes additional points acquired for settling of the filters involved in subsequent processing, such as the demodulation filtering.

Example `:DISP:EVM:WIND2:DATA RMT`
sets the second window data to Raw Main Time

Spectrum

Spectrum shows the FFT of the Meas Interval part of Raw Main Time waveform, note when synchronization failed Meas Interval part will start from captured IQ data.

Example `:DISP:EVM:WIND3:DATA SPEC`
sets the third window data to Spectrum

Power vs Time

Power vs Time provide power of each symbol or each slot, depends on setting of "Time Unit" on page 1945.

Example `:DISP:EVM:WIND4:DATA PVT`
sets the fourth window data to Power vs Time

OBW Spectrum

OBW Spectrum shows the FFT of the active part within Meas Interval of Raw Main Time waveform, and OBW indicator lines.

Example `:DISP:EVM:WIND3:DATA OBWS`
sets the third window data to OBW Spectrum

ACP Spectrum

ACP Spectrum shows the FFT of the active part within Meas Interval of Raw Main Time waveform, and ACP indicator bars.

Example `:DISP:EVM:WIND3:DATA ACPS`
sets the third window data to ACP Spectrum

SEM Spectrum

SEM Spectrum shows the FFT of the active part within Meas Interval of Raw Main Time waveform, and SEM mask.

Example `:DISP:EVM:WIND3:DATA SEMS`
sets the third window data to SEM Spectrum

Transmit On/Off Trace

Transmit On/Off trace shows the waveform of active burst used for Transmit On/Off measurement.

Example `:DISP:EVM:WIND3:DATA TOOT`
sets the third window data to Transmit On/Off trace

Demod

Displays the general demodulation results.

IQ Meas Time

IQ Meas Time is the measured time data results for the input signal.

Example `:DISP:EVM:WIND:DATA MTIM`
sets the first window data to IQ Meas Time
`:DISP:EVM:WIND:FORM CONS`
selects Constellation as the first window data format

IQ Ref

IQ Ref Time is the reconstructed ideal time waveform to compare IQ Meas Time against.

Example `:DISP:EVM:WIND:DATA RTIM`
sets the first window data to IQ Ref Time
`:DISP:EVM:WIND:FORM CONS`
selects Constellation as the first window data format

Detected Allocation

Detected Allocation is the detected resource allocation in both frequency and time domain.

Example `:DISP:EVM:WIND:DATA DALL`
sets the first window data to Detected Allocation

RMS Demod Power vs Time

The trace contains the demodulated power at each point in time domain. Time domain unit could be switched between symbol and slot.

Example `:DISP:EVM:WIND4:DATA DPVT`
sets the fourth window data to RMS Demod Power vs Time

RMS Demod Power vs Spectrum

The trace contains the demodulated power at each point in frequency domain. Frequency domain unit could be switched between sub-carrier and RB.

Example `:DISP:EVM:WIND4:DATA DPVS`
sets the fourth window data to RMS Demod Power vs Spectrum

RE Power 3D

RE Power 3D trace shows power for each resource element

Example `:DISP:EVM:WIND3:DATA POW3D`
sets the third window data to RE Power 3D trace

Demod Error

Displays the general demodulation error results.

Error Vector Time

This trace shows the time domain error vector trace data results. The trace contains the computed error vectors between IQ Meas Time and IQ Ref Time at each point in time. The values of the error vectors are usually plotted as a magnitude.

Example : `DISP:EVM:WIND2:DATA EVT`
 sets the second window data to Error Vector Time

Error Vector Spectrum

Error Vector Spectrum is the frequency spectrum of the Error Vector Time trace data. The demodulator produces the spectrum by windowing and FFT the Error Vector Time data. On this trace, the individual error vectors are plotted vs frequency.

Example : `DISP:EVM:WIND2:DATA EVSP`
 sets the second window data to Error Vector Spectrum

RMS Error Vector Time

This trace shows the time domain error vector trace data results. The trace contains the computed error vectors between IQ Meas Time and IQ Ref Time at each point in time. The values of the error vectors are usually plotted as a magnitude.

Example : `DISP:EVM:WIND2:DATA REVT`
 sets the second window data to RMS Error Vector Time

RMS Error Vector Spectrum

This trace shows the frequency domain error vector trace data results. The trace contains the computed error vectors at each point in the frequency domain. The values of the error vectors are usually plotted as a magnitude. Frequency domain unit could be switched between sub-carrier and RB.

Example : `DISP:EVM:WIND2:DATA REVS`
 sets the second window data to RMS Error Vector Spectrum

In-band Emission

This trace shows the In-band Emission trace and limit.

Example `:DISP:EVM:WIND2:DATA IBEM`
sets the second window data to In-band Emission

Error Vector 3D

Error Vector 3D trace shows modulation error for each resource element

Example `:DISP:EVM:WIND3:DATA ERR3D`
sets the third window data to Error Vector 3D trace

IQ Imbalance

IQ imbalance per subcarrier trace with two formats: Gain Imbalance and Quad Error

Example `:DISP:EVM:WIND2:DATA IQIM`
sets the second window data to IQ Imbalance

Response

Displays the trace data choices that show equalizer response results.

CH Freq Response

The CH Frequency Response trace shows the channel frequency response for which the equalizer is correcting. It's computed as the inverse of the equalization filter's frequency response.

Example `:DISP:EVM:WIND2:DATA CHFR`
sets the second window data to CH Freq Response

Spectrum Flatness

This trace shows the Spectrum Flatness trace and limit.

Example `:DISP:EVM:WIND2:DATA FLAT`
sets the second window data to Spectrum Flatness

MIMO Condition Number

This trace shows the "condition number" of the equalizer channel frequency response matrices, it is only valid for MIMO. It is defined as the ratio of the maximum singular value to the minimum singular value of a matrix. The value is always real and always greater than or equal to one. Larger values indicate a more ill-conditioned matrix. If the condition number is larger than the SNR Signal-to-Noise Ratio of the signal, it is likely that MIMO separation of the multiple data streams will not work correctly.

Example `:DISP:EVM:WIND2:DATA CNUM`
sets the second window data to MIMO Condition Number

MIMO H/HW Matrix

This table shows the H or HW matrix results, it is only valid for MIMO. If W matrix is defined in Channel Profile, it will be removed from channel response and only H matrix will be displayed. Otherwise, this table will display combined HW matrix results.

Example `:DISP:EVM:WIND2:DATA HMAT`
sets the second window data to MIMO H/HW Matrix

Tables

Displays the trace data choices that are in tabular form, including Error Summary, Frame Summary, BWP summary and CC Summary.

Error Summary

This table shows the general measurement numeric results.

Example `:DISP:EVM:WIND4:DATA DRES`
sets the fourth window data to Error Summary

Frame Summary

This table shows the measurement numeric results for each physical channel.

Note: Freq Error per Sub-Frame results will only be available when "3GPP Pre-FFT Minimization" is On.

Example `:DISP:EVM:WIND4:DATA FRES`
sets the fourth window data to Frame Summary

BWP Summary

This table shows the measurement numeric results for each bandwidth part.

Example `:DISP:EVM:WIND4:DATA BWPR`
sets the fourth window data to BWP Summary

CC Summary

This table shows the key measurement results of all component carriers, and cross carrier results like TAE.

Example `:DISP:EVM:WIND4:DATA CCR`
sets the fourth window data to CC Summary

User Summary

This table shows the key PDSCH/PUSCH measurement results of all users.

Example `:DISP:EVM:WIND4:DATA USER`
sets the fourth window data to User Summary

MIMO Info

This table shows the key measurement results of all channel and DMRS ports.

Example `:DISP:EVM:WIND4:DATA MIMO`
sets the fourth window data to MIMO Info

Auto Detect Summary

This table shows the auto detection mode and key detected parameters

Example `:DISP:EVM:WIND4:DATA ADET`
sets the fourth window data to Auto Detect Summary

Slot Summary

This table shows Slot Summary.

Example :DISP:EVM:WIND4:DATA SLResults
sets the fourth window data to Slot Summary

OBW Results

This table shows the OBW numeric results.

Example :DISP:EVM:WIND4:DATA OBWR
sets the fourth window data to OBW Results

ACP Results

This table shows the ACP numeric results.

Example :DISP:EVM:WIND4:DATA ACPR
sets the fourth window data to ACP Results

SEM Results

This table shows the SEM numeric results.

Example :DISP:EVM:WIND4:DATA SEMR
sets the fourth window data to SEM Results

Transmit On/Off Results

This table shows the Transmit On/Off numeric results.

Example :DISP:EVM:WIND4:DATA TOOR
sets the fourth window data to Transmit On/Off Results

Spectrum Flatness Results

This table shows Flatness metric results.

Example :DISP:EVM:WIND4:DATA SFS

sets the fourth window data to Spectrum Flatness Summary

ccEVM Summary

This table shows the key measurement results when cross-correlated EVM is enabled.

Example `:DISP:EVM:WIND4:DATA CCEVM`
sets the fourth window data to ccEVM summary

Decode

Displays decoded information and bits in tabular form, including Decoded Info and Decoded Symbols.

Decoded Info

This table shows the decoded information.

Example `:DISP:EVM:WIND4:DATA DINF`
sets the fourth window data to Decoded Info

Decoded Symbols

This table shows decoded symbols.

Example `:DISP:EVM:WIND4:DATA DSYM`
sets the fourth window data to Decoded Symbols

Decoded Channels

Shows decoded channels.

Example `:DISP:EVM:WIND4:DATA DCH`
sets the fourth window data to Decoded Channels

3.7.2.2 Format

Enables you to choose the available format of the selected trace.

The valid formats depends on Data:

3 5G NR Mode

3.7 Modulation Analysis Measurement

Format name	Data	Description
Log Mag (dB)	Ch Freq Response	Data is converted to decibel units and shown on a linear Y axis
Phase	Ch Freq Response	Phase of complex data is shown on Y axis
Group Delay	Ch Freq Response	Useful for frequency response displays. Shows the derivative of phase response with respect to frequency
Gain Imbalance	IQ Imbalance	Gain Imbalance per subcarrier
Quad Error	IQ Imbalance	Quad Imbalance per subcarrier
None	Others	

Remote Command	<code>:DISPlay:EVM:WINDow[1] 2 ... 9[:TRACe]:FORMat MLOG PHASe GDELay GIMBalance QERRor</code> <code>:DISPlay:EVM:WINDow[1] 2 ... 9[:TRACe]:FORMat?</code>
Example	<code>:DISP:EVM:WIND2:FORM MLOG</code> sets the second window data format to Log Mag <code>:DISP:EVM:WIND2:FORM?</code>
Notes	Log Mag, Phase and Group Delay are available for Channel Frequency Response trace
Preset	Depends on trace
State Saved	Yes
Range	Log Mag (dB) Phase Group Delay Gain Imbalance Quad Error

3.7.2.3 Component Carrier

This control provides a menu of component carrier choices for the selected window.

Remote Command	<code>:DISPlay:EVM:WINDow[1] 2 ... 9:CCARrier CC0 ... CC15</code> <code>:DISPlay:EVM:WINDow[1] 2 ... 9:CCARrier?</code>
Example	<code>:DISP:EVM:WIND2:CCAR CC0</code> <code>:DISP:EVM:WIND2:CCAR?</code>
Couplings	Depends on window
Preset	Depends on window
State Saved	Yes
Range	<code>CC0 ... CC15</code>

3.7.2.4 BWP/SS Block

Provides a menu of BWP and SSB numerology (downlink only) choices for the selected window.

Remote Command	<code>:DISPlay:EVM:WINDow[1] 2 ... 9:BWP DBWP0 DBWP1 DBWP2 DBWP3 DBWP4 UBWP1 UBWP2 UBWP3 UBWP4 SSB1 SSB2</code> <code>:DISPlay:EVM:WINDow[1] 2 ... 9:BWP?</code>
Example	<code>:DISP:EVM:WIND2:BWP DBWP1</code> <code>:DISP:EVM:WIND2:BWP?</code>
Couplings	Depends on window
Preset	Depends on window
State Saved	Yes
Range	Initial BWP DL BWP1 DL BWP2 DL BWP3 DL BWP4 UL BWP1 UL BWP2 UL BWP3 UL BWP4 SS Block1 SS Block2

3.7.2.5 Input Channel

Provides a menu of channel choices for the selected window.

Remote Command	<code>:DISPlay:EVM:WINDow[1] 2 ... 9:CHANnel CHAN1 ... CHAN8</code> <code>:DISPlay:EVM:WINDow[1] 2 ... 9:CHANnel?</code>
Example	<code>:DISP:EVM:WIND2:CHAN CHAN1</code> <code>:DISP:EVM:WIND2:CHAN?</code>
Couplings	Depends on window
Preset	Depends on window
State Saved	Yes
Range	<code>CHAN1 ... CHAN8</code>

3.7.2.6 Layer

Provides a menu of layer choices for the selected window.

Remote Command	<code>:DISPlay:EVM:WINDow[1] 2 ... 9:LAYer LAYER0 ... LAYER7</code> <code>:DISPlay:EVM:WINDow[1] 2 ... 9:LAYer?</code>
Example	<code>:DISP:EVM:WIND2:LAY LAYER1</code> <code>:DISP:EVM:WIND2:LAY?</code>
Couplings	Depends on window
Preset	Depends on window
State Saved	Yes
Range	<code>LAYER0 ... LAYER7</code>

3.7.3 Amplitude

PP_Substitute: cmn_amptd/Amplitude.htm

3.7.3.1 Y Scale

Contains controls that pertain to the Y axis parameters of the measurement. These parameters control how data on the vertical (Y) axis is displayed and control instrument settings that affect the vertical axis.

Ref Value

Specifies the amplitude of a signal displayed on the reference graticule line. The reference line is at the top, center, or bottom of the graticule, depending on the value of the Ref Position function.

The RefValue control applies only to the selected window. If the table type window is selected, the Ref Value control is unavailable. The functionality depends on the selected window.

Remote Command	<code>:DISPlay:EVM:WINDow[1] 2 ... 9:Y[:SCALE]:RLEVel <real></code> <code>:DISPlay:EVM:WINDow[1] 2 ... 9:Y[:SCALE]:RLEVel?</code>
Example	<code>:DISP:EVM:WIND3:Y:RLEV 20</code> set the Y ref value of the third window to 20 <code>:DISP:EVM:WIND3:Y:RLEV?</code> query the Y ref value of the third window
Preset	Depends on trace data
State Saved	Saved in instrument state
Min	-9.9E+37
Max	9.9E+37
Annotation	The reference value is displayed above the graticule with the title "Ref Value"

Scale/Div

Controls the Y scale per division of the selected trace.

Remote Command	<code>:DISPlay:EVM:WINDow[1] 2 ... 9:Y[:SCALE]:PDIVision <real></code> <code>:DISPlay:EVM:WINDow[1] 2 ... 9:Y[:SCALE]:PDIVision?</code>
Example	<code>:DISP:EVM:WIND3:Y:PDIV 10</code> set the Y scale/div of the third window to 10

	<code>:DISP:EVM:WIND3:Y:PDIV?</code> query the Y scale/div of the third window
Preset	Depends on trace data
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37
Annotation	Upper left corner of trace grid, same gray as grid

Ref Position

Positions the reference level at the top, center, or bottom of the Y Scale display. Changing the reference position does not change the reference level value.

Remote Command	<code>:DISPlay:EVM:WINDow[1] 2 ... 9:Y[:SCALE]:RPOSition TOP CENTER BOTTom</code> <code>:DISPlay:EVM:WINDow[1] 2 ... 9:Y[:SCALE]:RPOSition?</code>
Example	<code>:DISP:EVM:WIND3:Y:RPOS TOP</code> set the Y ref position of the third window to TOP <code>:DISP:EVM:WIND3:Y:RPOS?</code> query the Y ref position of the third window
Preset	Depends on trace data
State Saved	Saved in instrument state
Range	Top Center Bottom

Auto Scale

Changes the Y reference value and Scale per Division so the full trace is displayed without clipping.

Remote Command	<code>:DISPlay:EVM:WINDow[1] 2 ... 9:Y[:SCALE]:AUTO:ONCE</code>
Example	<code>:DISP:EVM:WIND3:Y:AUTO:ONCE</code> do the Y auto scale for the third window

Auto Scale at Restart

Enable and disable automatic Y Auto Scale with measurement restart:

- On – will do automatic Y Auto Scale when measurement restarted, to let you see complete trace

- Off – will not do automatic Y Auto Scale when measurement restarted, to keep user setting for Y scale

Remote Command	<code>:DISPlay:EVM:Y[:SCALE]:AUTO:REStart 0 1 OFF ON</code> <code>:DISPlay:EVM:Y[:SCALE]:AUTO:REStart?</code>
Example	<code>:DISP:EVM:Y:AUTO:REST ON</code> <code>:DISP:EVM:Y:AUTO:REST?</code>
Preset	OFF
State Saved	Yes

3.7.3.2 Attenuation

Controls the attenuator functions and interactions between the attenuation system components.

There are two attenuator configurations in the X-Series. One is a Dual-Attenuator configuration consisting of a mechanical attenuator and an optional electronic attenuator. The other configuration uses a single attenuator with combined mechanical and electronic sections that controls all the attenuation functions. Different models in the X-Series come with different configurations.

- See "[Dual-Attenuator Configurations](#)" on page 1386
- See "[Single-Attenuator Configuration](#)" on page 1387

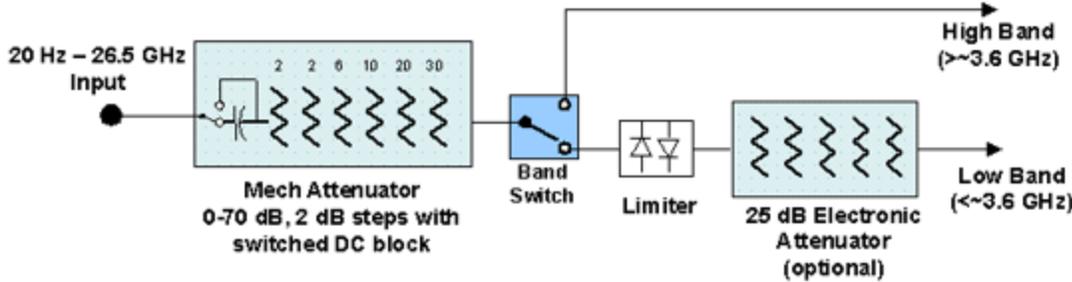

Most attenuation settings are the same for all measurements – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by Meas Preset.

This tab is only available when the hardware set includes an input attenuator, which is typically only the case for Keysight’s benchtop instruments. For example, this tab does not appear in:

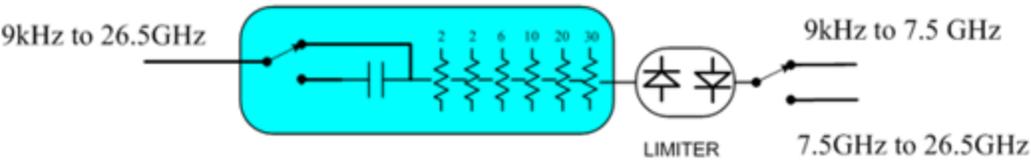

- VXT models SP900B/10A/11A

This tab also does not appear in UXM. In UXM all Attenuation and Range settings are disabled, as the expected input power level is handled by the Call Processing App that drives the DUT power control.

Dependencies	In measurements that support the I/Q inputs, this tab is unavailable when I/Q is the selected input, and is replaced by the Range tab in that case
	Dual-Attenuator Configurations
	Configuration 1: Mechanical attenuator + optional electronic attenuator

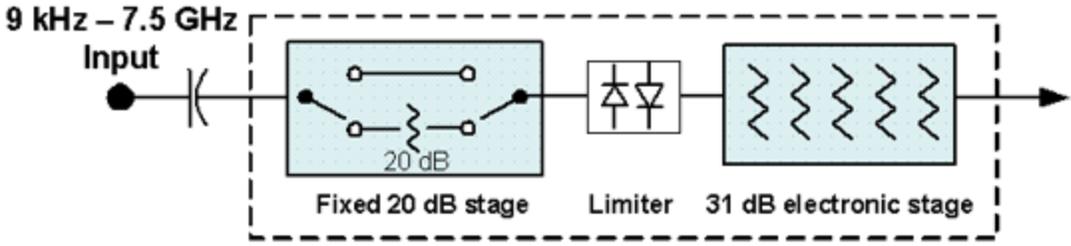

Configuration 2: Mechanical attenuator, no optional electronic attenuator

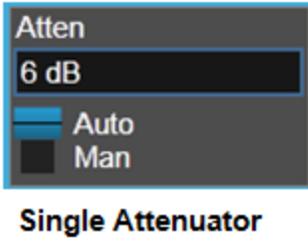

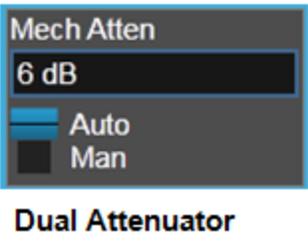

Note that Configuration 2 is not strictly speaking a dual-section attenuator, since there is no electronic section available. However, it behaves exactly like Configuration 1 without the Electronic Attenuator option EA3, therefore for the sake of this document it is grouped into the “Dual-Attenuator” configuration.

Single-Attenuator Configuration

You can tell which attenuator configuration you have by pressing the Attenuation tab, which (in most Modes) opens the Attenuation menu. If the first control in the Attenuation menu says **Mech Atten** you have the Dual-Attenuator configuration. If the first control says **Atten** you have the Single-Attenuator configuration.

(Note that depending on the measurement, there may be no Auto/Man functionality on the Mech Atten control.)

In the Single-Attenuator configuration, you control the attenuation with a single control, as the fixed stage has only two states. In the Dual-Attenuator configuration, both stages have significant range, so you are given separate control of the mechanical and electronic attenuator stages.

When you have the Dual-Attenuator configuration, you may still have only a Single-Attenuator, because unless option EA3 (the Electronic Attenuator option) is available, and you purchase it, you will have only the mechanical attenuator.

Full Range Atten

This control and **Attenuator Summary** only appear in SP900S, when the RF input is selected and the RF Input Port is set to RF Input 2, and the Full Range Attenuator is installed. The Full Range Attenuator adds a second input attenuator at the beginning of the RF Input 2, which enhances the protection and optimizes the performance of the extra internal mixers used by RF Input 2.

Remote Command	<code>[:SENSe]:POWer[:RF]:FRATten <rel_amp1></code> <code>[:SENSe]:POWer[:RF]:FRATten?</code>
Example	<code>:POW:FRAT 14</code> <code>:POW:FRAT?</code>
Notes	When you enter an amplitude value that falls between valid values, the value will be incremented to the next smallest valid value
Dependencies	Only appears if input RF is selected, and RF Input Port 2 is selected, and the Full Range Attenuator exists
Couplings	This value is never changed by any coupling, but other couplings use this value. See Reference Level and " Mech Atten " on page 2568 command descriptions
Preset	20 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Only valid values are 0, 6, 14, 20 dB
Annotation	When the Input is RF , and the Input Port is RF Input 2 , and the Full Range Attenuator is installed: On the Meas Bar, the field "Atten" displays as follows: <ul style="list-style-type: none"> - If the sweep is entirely < 50 GHz, the value shown after "Atten:" is equal to Mech Atten + Elec Atten + Full Range Atten - If the sweep is entirely > 50 GHz, the value shown after "Atten:" is equal to Full Range Atten - If the sweep straddles 50 GHz, the value shown after "Atten:" is preceded by the symbol ">=" and is equal to Full Range Atten In the Amplitude , " Y Scale " on page 2562 menu, and the Atten Meas Bar dropdown menu panel, a

summary is displayed as follows:

“Total Atten below 50 GHz” followed by the value of Full Range Atten + Mech Atten + Elec Atten

“Total Atten above 50 GHz” followed by the value of Full Range Atten

For example, if Mech Atten = 6 dB, Elec Atten = 4 dB, and Full Range Atten = 20 dB, the summary below is shown:

- Attenuator summary:
- Total Atten below 50 GHz: 30 dB
- Total Atten above 50 GHz: 20 dB

Mech Atten

This control is labeled **Mech Atten** in Dual-Attenuator models and **Atten** in Single-Attenuator models. In the Dual-Attenuator configuration, this control only affects the mechanical attenuator.

This control lets you modify the attenuation applied to the RF input signal path. This value is normally auto-coupled to the Ref Level, the Internal Preamp Gain, any External Gain that is entered, and the Max Mixer Level, as described in the table below.

See "[Attenuator Configurations and Auto/Man](#)" on page 1391

Remote Command	<pre>[:SENSe]:POWer[:RF]:ATTenuation <rel_amp1> [:SENSe]:POWer[:RF]:ATTenuation? [:SENSe]:POWer[:RF]:ATTenuation:AUTO OFF ON 0 1 [:SENSe]:POWer[:RF]:ATTenuation:AUTO?</pre>
----------------	--

Example	<pre>:POW:ATT 20</pre> <p>Dual-Attenuator configuration: sets the mechanical attenuator to 20 dB Single-Attenuator mode: sets the main attenuation to 20 dB (see below for definition of “main” attenuation) In either case, if the attenuator was in Auto, it is set to Manual <pre>:POW:ATT:AUTO ON</pre> Turn Auto Mech Atten ON</p>
---------	---

Dependencies	<p>Some measurements do not support the Auto setting of "Mech Atten" on page 1389. In these measurements, the Auto/Man selection is not available, and the Auto/Man toggle function is not available</p> <p>In Dual-Attenuator configurations, when the electronic attenuator is enabled, the mechanical attenuator has no auto setting, and the Auto/Man toggle function is not available. The state of Auto/Man is remembered and restored when the electronic attenuator is once again disabled. This is described in more detail in "Elec Atten" on page 2571</p> <p>See "Attenuator Configurations and Auto/Man" on page 1391 for more information on the Auto/Man</p>
--------------	---

3 5G NR Mode
 3.7 Modulation Analysis Measurement

	<p>functionality</p> <p>:POW:ATT:AUTO is only available in measurements that support Mech Atten Auto, such as Swept SA</p>
Couplings	<p>If the RF Input Port is the RF Input:</p> <ul style="list-style-type: none"> – If the USB Preamp is connected to USB, use 0 dB for Mech Atten – Otherwise compute the auto-selected value of Mech Atten based on Reference Level, Int Preamp, External Gain, Ref Level Offset, Max Mixer Level, μW Path Control and IF Gain settings. Limit this value to be no less than 6 dB (total attenuation below 6 dB can never be chosen by Auto) – In the SP900S, if the RF Input Port is RF Input 2, use the formula above and subtract the Full Range Atten value from the result to determine the Mech Atten. Limit the value so that it is never lower than 0 dB and so that total attenuation, including Full Range Atten, is never less than 6 dB (total attenuation, including Full Range Atten below 6 dB, can never be chosen by Auto) <p>In External Mixing and BBIQ, where the Attenuator is not in the signal path, the Attenuator setting changes as described above when "Mech Atten" on page 1389 is in Auto, but no changes are made to the actual attenuator hardware setting until the input is changed back to the RF Input</p> <p>For CXA-m with option FSA (Fine-Step Attenuator or 2 dB steps), the FSA-like behavior is only available when the frequency setting is ≤ 7.5GHz. So, when the frequency is changed from below 7.5GHz to above 7.5GHz, the attenuation setting will be changed to a multiple of 10dB which will be no smaller than the previous setting. For example, 4dB attenuation will be changed to 10dB</p>
Preset	<p>The preset for Mech Attenuation is "Auto"</p> <p>The Auto value of attenuation is 10 dB</p> <p>ON</p>
State Saved	<p>Saved in instrument state</p>
Min	<p>0 dB</p> <p>The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. Values below 6 dB must be directly entered from the keypad or via SCPI. This protects against setting a dangerously small attenuation value, which can put the instrument at risk of damage to input circuitry. If the current mechanical attenuation is below 6 dB, it can be increased with the knob and step keys, but not decreased</p>
Max	<p>CXA Option 503 or 507: 50 dB</p> <p>EXA: 60 dB</p> <p>All other models: 70 dB</p> <p>Note that in the Single-Attenuator configuration, the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB</p>
Annotation	<p>The current value for Total Atten is displayed in the Measurement Bar at the top of the display. A value appears for Electronic Attenuation only if the Electronic Attenuator is enabled. The annotation appears as</p> <p>Atten: <total> dB (e<elec>)</p> <p>The e letter is in amber in Single-Attenuator configurations</p> <p>For example:</p>

Dual-Attenuator configuration:

Atten: 24 dB (e14)

Indicating the total attenuation is at 24 dB and the electronic attenuation is at 14 dB

Single-Attenuator configuration:

A: 24 dB (e14)

Indicating the total attenuation is at 24 dB and the “soft” attenuation is at 14 dB (see below for definition of “soft” attenuation)

When in Manual, a # sign appears in front of Atten in the annotation

Attenuator Configurations and Auto/Man

As described in ["Y Scale" on page 2562](#), there are two distinct attenuator configurations available in the X-Series, the single attenuator and Dual-Attenuator configurations. In Dual-Attenuator configurations, we have the mechanical attenuation and the electronic attenuation, and the current total attenuation is the sum of the electronic + mechanical attenuation. In Single-Attenuator configurations, we refer to the attenuation set using ["Mech Atten" on page 1389](#) (or `:POW:ATT`) as the “main” attenuation; and the attenuation that is set by `:POW:EATT` as the “soft” attenuation (`:POW:EATT` is honored even in the Single-Attenuator configuration, for compatibility purposes). Then the current total attenuation is the sum of the main + soft attenuation. See ["Elec Atten" on page 2571](#) for more on “soft” attenuation.

NOTE

In some measurements, the **Mech Atten** control has an Auto/Man function. In these measurements, an Auto/Man switch is shown on the **Mech Atten** control:

Note that in configurations that include an Electronic Attenuator, this switch is only shown when the Electronic Attenuator is disabled.

In other measurements, **Mech Atten** has no Auto/Man function. In these measurements, no switch is shown on the **Mech Atten** control:

Mech Atten also appears with no switch, as above, in configurations that include an Electronic Attenuator but when the Electronic Attenuator is enabled.

Elec Atten

Controls the Electronic Attenuator in Dual-Attenuator configurations. This control does not appear in Single-Attenuator configurations, as the control of both the mechanical and electronic stages of the Single-Attenuator is integrated into the single **Atten** control.

This control includes an Enable/Disable toggle switch; it is only possible to enter a value for the Electronic Attenuator when this switch is in the “Enable” position.

For more details about the Electronic Attenuator, see ["More Information " on page 1393](#)

Remote Command	<pre>[:SENSe]:POWer[:RF]:EATTenuation <rel_amp1> [:SENSe]:POWer[:RF]:EATTenuation? [:SENSe]:POWer[:RF]:EATTenuation:STATe OFF ON 0 1 [:SENSe]:POWer[:RF]:EATTenuation:STATe?</pre>
Example	<pre>:POW:EATT 10 :POW:EATT? :POW:EATT:STAT ON :POW:EATT:STAT?</pre>
Notes	Electronic Attenuation's specification is defined only when Mechanical Attenuation is 6 dB
Dependencies	<p>This control only appears in Dual-Attenuator models with an Electronic Attenuator installed and licensed. It does not appear in models with the Single-Attenuator configuration, as in the Single-Attenuator configuration there is no “electronic attenuator” there is only a single integrated attenuator (which has both a mechanical and electronic stage). However, in the Single-Attenuator configuration, EATT SCPI commands are accepted for compatibility with other X-series instruments and set a “soft” attenuation as described in . The “soft” attenuation is treated as an addition to the “main” attenuation value set by the Atten control or <code>:POW:ATT</code> and affects the total attenuation displayed on the Atten control and the Meas Bar</p> <p>The electronic attenuator (and the “soft” attenuation function provided in Single-Attenuator configurations) is unavailable above the low band (0-3.6 GHz, 0-3.4 GHz 0-3GHz, depending on the model). If the low band ranges from 0-3.6GHz, and Stop Frequency of the instrument is > 3.6 GHz, then the Enabled/Disabled section of the Elec Atten control will be OFF and grayed-out</p> <p>If the Internal Preamp is on, meaning it is set to Low Band or Full, the electronic attenuator (and the “soft” attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the Enabled/Disabled section of the Elec Atten control will be OFF and grayed-out</p> <p>If either of the above is true, and the SCPI command is sent, an error indicating that the electronic attenuator is unavailable will be sent</p> <p>If both of the above are true, pressing the control will generate error message -221, in other words, the frequency range lockout takes precedence</p> <p>If the electronic/soft Attenuator is enabled, then the Stop Freq of the instrument is limited to 3.6 GHz and the Internal Preamp is unavailable</p>

	<p>If the LNA is on, the electronic attenuator (and the “soft” attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the Enabled/Disabled section of the Elec Atten control will be OFF and grayed-out. This coupling works in the following modes/measurements:</p> <ul style="list-style-type: none"> - Channel Power, Occupied BW, ACP, SEM, Spurious Emissions, Power Stat CCDF measurements in all Modes - Transmit On Off Power measurement in 5GNR Mode - Power vs. Time and Transmit Power measurement in GSM/EDGE Mode - Burst Power measurement in Spectrum Analyzer Mode <p>The SCPI-only “soft” electronic attenuation for the single-attenuator configuration is not available in all measurements; in particular, it is not available in the Swept SA measurement</p>
Couplings	Enabling and disabling the Electronic Attenuator affects the setting of the Mechanical Attenuator (in Dual-Attenuator configurations). This is described in more detail below and in " Mechanical Attenuator Transition Rules " on page 1393
Preset	0 dB OFF (Disabled) for Swept SA measurement ON (Enabled) for all other measurements that support the electronic attenuator
State Saved	Saved in instrument state
Min	0 dB
Max	Dual-Attenuator configuration: 24 dB Single-Attenuator configuration: the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB
Annotation	See Annotation under the Mech Atten control description

More Information

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear. These advantages primarily aid in remote operation and are negligible for front panel use. See "[Using the Electronic Attenuator: Pros and Cons](#) " on page 1394 for a detailed discussion of the pros and cons of using the electronic attenuator.

For the Single-Attenuator configuration, for SCPI backwards compatibility, the “soft” attenuation feature replaces the Dual-Attenuator configuration’s electronic attenuator. All the same couplings and limitations apply. See "[Attenuator Configurations and Auto/Man](#) " on page 2570

Mechanical Attenuator Transition Rules

When the Electronic Attenuator is enabled, the Mechanical Attenuator transitions to a state that has no Auto function. Below are the rules for transitioning the Mechanical Attenuator. Note that the information below *only* applies to the Dual-Attenuator configurations, and *only* when the Electronic Attenuator is installed:

When the Electronic Attenuation is enabled from a disabled state:

- The Mechanical Attenuator is initialized to 10 dB (this is its optimal performance setting). You can then set it as desired with SCPI, numeric keypad, step keys, or knob, and it behaves as it normally would in manual mode
- The Auto/Man state of (Mech) Atten is saved
- The Auto/Man toggle on the (Mech) Atten control disappears and the auto rules are disabled
- The Electronic Attenuator is set to 10 dB less than the previous value of the Mechanical Attenuator, within the limitation that it must stay within the range of 0 to 24 dB of attenuation

Examples in the Dual-Attenuator configuration:

- Mech Atten at 20 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 10 dB. New total attenuation equals the value before Elec Atten enabled
- Mech Atten at 0 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 0 dB. New total attenuation does not equal the value before Elec Atten enabled
- Mech Atten at 40 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 24 dB. New total attenuation does not equal the value before Elec Atten enabled

When the Electronic Attenuation is disabled from an enabled state:

- The Elec Atten control is grayed out
- The Auto/Man state of (Mech) Atten is restored
- If now in Auto, (Mech) Atten recouples
- If now in Man, (Mech) Atten is set to the value of total attenuation that existed before the Elec Atten was disabled. The resulting value is rounded up to the smallest value possible given the (Mech) Atten Step setting - (That is, 57 dB changes to 58 dB when (Mech) Atten Step is 2 dB)

Using the Electronic Attenuator: Pros and Cons

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear.

The “finer steps” advantage of the electronic attenuator is beneficial in optimizing the alignment of the instrument dynamic range to the signal power in the front panel as well as remote use. Thus, you can achieve improved relative signal measurement accuracy. Compared to a mechanical attenuator with 2 dB steps, the 1 dB resolution of the electronic attenuator only gives better resolution when the

odd-decibel steps are used. Those odd-decibel steps are less accurately calibrated than the even-decibel steps, so one tradeoff for this superior relative accuracy is reduced absolute amplitude accuracy.

Another disadvantage of the electronic attenuator is that the spectrum analyzer loses its “Auto” setting, making operation less convenient.

Also, the relationship between the dynamic range specifications (TOI, SHI, compression, and noise) and instrument performance are less well-known with the electrical attenuator. With the mechanical attenuator, TOI, SHI, and compression threshold levels increase dB-for-dB with increasing attenuation, and the noise floor does as well. With the electronic attenuator, there is an excess attenuation of about 1 to 3 dB between 0 and 3.6 GHz, making the effective TOI, SHI, and so forth, less well known. Excess attenuation is the actual attenuation relative to stated attenuation. Excess attenuation is accounted for in the instrument calibration.

Adjust Atten for Min Clipping

Sets the combination of mechanical and electronic attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an immediate action function, that is, it executes once, when the control is pressed.

The algorithms that are used for the adjustment are documented under ["Pre-Adjust for Min Clipping" on page 2575](#).

Remote Command	<code>[[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE</code>
Example	<code>:POW:RANG:OPT IMM</code>
Notes	Executing Adjust Atten for Min Clipping initiates the measurement
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements For the Waveform measurement, this control is available only in 5G NR Mode

Restart Meas on Adjust Atten

Toggles the force restart switch for the ["Adjust Atten for Min Clipping" on page 2574](#) function.

When **ON**, pressing **Adjust Atten for Min Clipping**, or sending `[[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE` restarts the measurement and then executes the function.

When **OFF**, pressing the control or sending the command neither restarts the measurement nor executes the function until you restart or continue averaging. In this case, pressing the control generates the following advisory message:

“Adjust Atten is deferred until "Restart" or "Continue Averaging" is executed”

This message is *not* generated if the command is sent.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:REStart OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:REStart?</code>
Example	<code>:POW:RANG:OPT:REST OFF</code> <code>:POW:RANG:OPT:REST?</code>
Dependencies	This parameter is available only in the measurements that support continuous averaging in 5G NR
Preset	<code>ON</code>
State Saved	Saved

Adjust Atten

Allows you to select;

- Electric attenuator only
- Combination of Electric attenuator and Mechanical attenuator

when `[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE` is executed.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE EONLY COMBined</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE?</code>
Example	<code>:POW:RANG:OPT:TYPE EONL</code> <code>:POW:RANG:OPT:TYPE?</code>
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements For the Waveform measurement, this control is available only in 5G NR Mode
Preset	<code>COMBined</code>
State Saved	Saved in instrument state

Pre-Adjust for Min Clipping

If this function is `ON`, it applies the adjustment described under "[Adjust Atten for Min Clipping](#)" on page 2574 each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

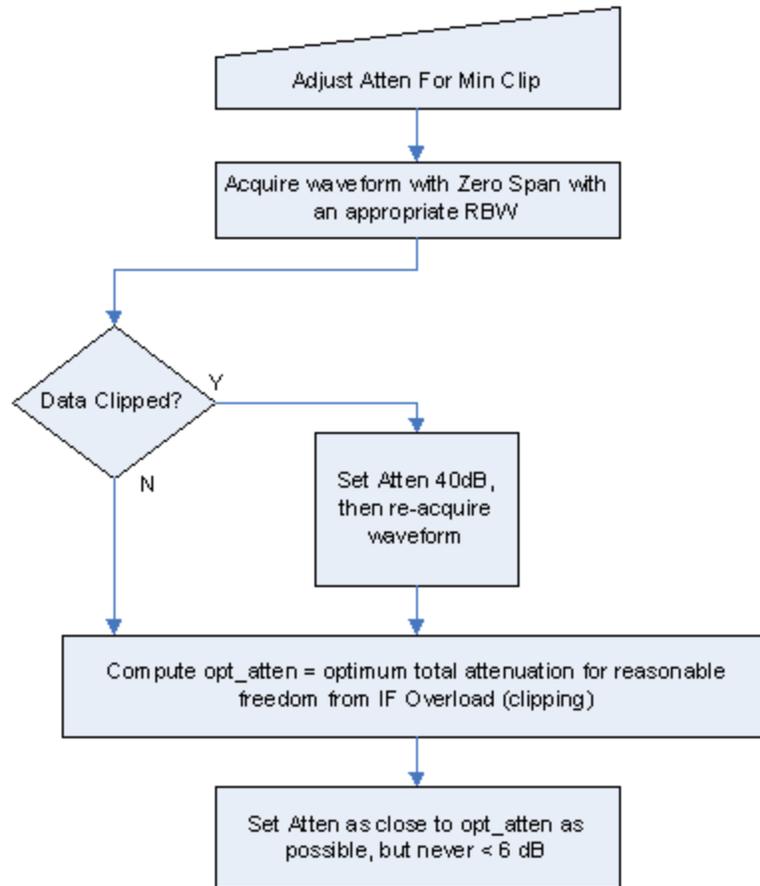

In Dual-Attenuator models, you can set `Elec+Mech Atten`, in which case both attenuators participate in the autoranging, or `Elec Atten Only`, in which case the mechanical attenuator does not participate in the autoranging. This latter case results in less wear on the mechanical attenuator and is usually faster.

See "[Adjustment Algorithm](#)" on page 1397

Selection	Example	Note
Off	<code>:POW:RANGe:OPT:ATT</code>	This is the default setting

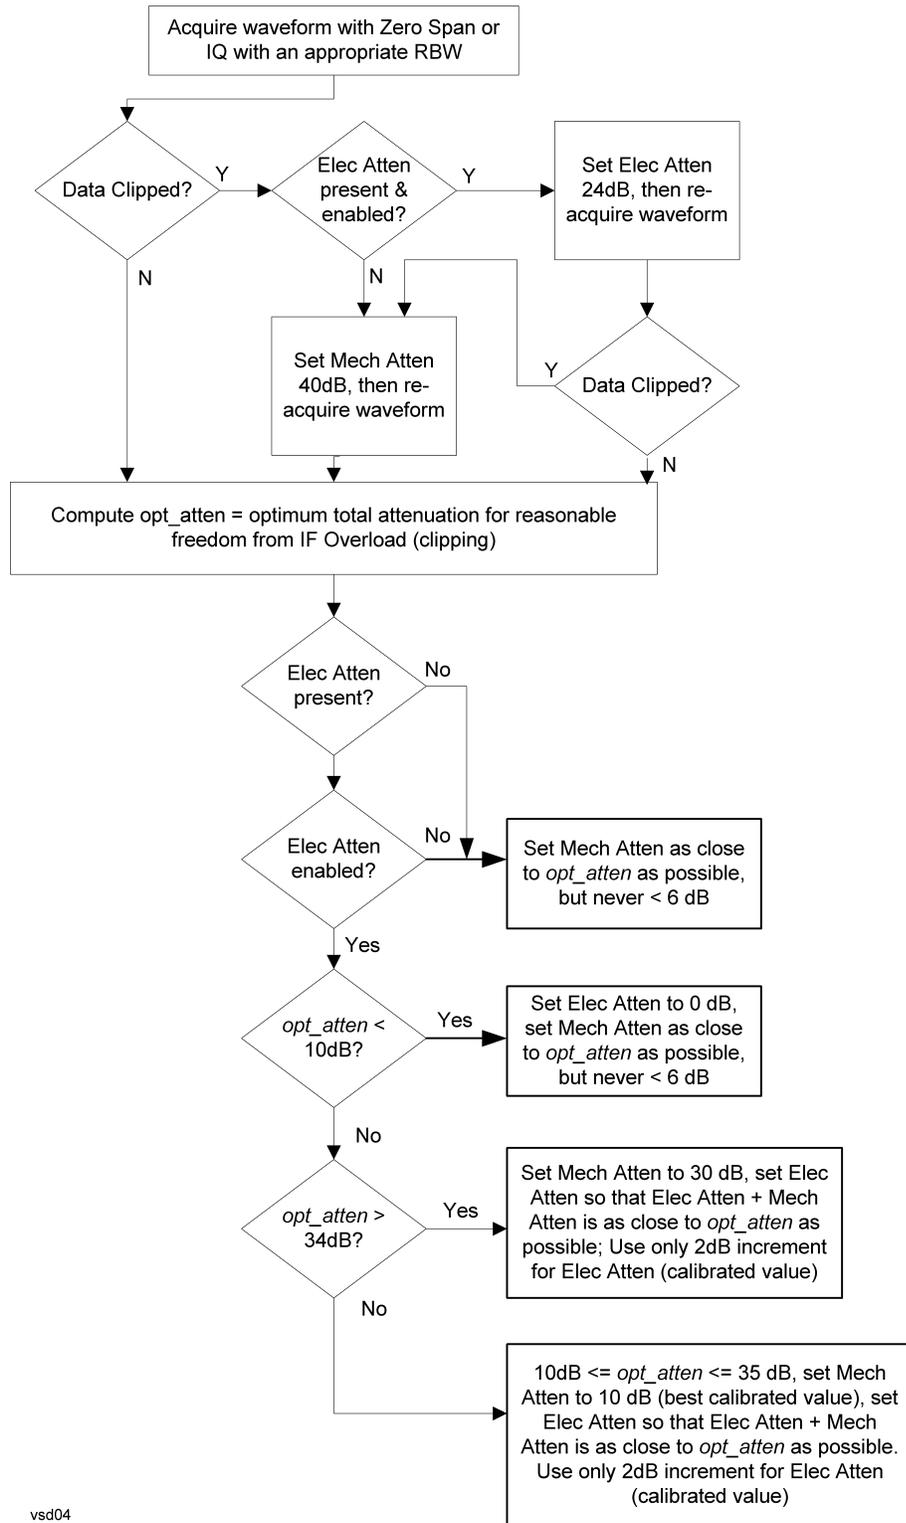

Selection	Example	Note
	OFF	
Elec Atten Only	:POW:RANG:OPT:ATT ELEC	Selects only the electric attenuator to participate in auto ranging. This offers less wear on the mechanical attenuator and is usually faster
Mech + Elec Atten	:POW:RANG:OPT:ATT COMB	In Dual-Attenuator models, this selects both attenuators to participate in the autoranging
Remote Command	[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF ON ELECtrical COMBined [:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?	
Example	:POW:RANG:OPT:ATT OFF :POW:RANG:OPT:ATT?	
Notes	<p>The parameter option ELECtrical sets this function to ON in Single-Attenuator models</p> <p>The parameter option COMBined is mapped to ELECtrical in Single-Attenuator models. If you send COMBined, it sets the function to ON and returns ELEC to a query</p> <p>For SCPI compatibility with models that do not have an input attenuator, the ON parameter is honored and mapped to COMBined</p>	
Dependencies	<p>This control only appears in Dual-Attenuator models with an Electronic Attenuator installed</p> <p>In instruments with Dual-Attenuator model, when "Elec Atten" on page 2571 is OFF or grayed-out, "Pre-Adjust for Min Clipping" on page 1396 is grayed-out</p> <p>This control does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements</p> <p>For the Waveform measurement, this control is available only in 5G NR Mode</p>	
Preset	OFF when Elec Atten is Disabled at preset, otherwise ELEC	
State Saved	Saved in instrument state	
Range	Dual-Attenuator models: Off Elec Atten Only Mech + Elec Atten Single-Attenuator models: Off On	
Notes	ON aliases to "Elec Atten Only" (:POW:RANG:OPT:ATT ELEC) OFF aliases to "Off" (:POW:RANG:OPT:ATT OFF) :POW:RANG:AUTO? returns true if :POW:RANG:OPT:ATT is not OFF	
Backwards Compatibility SCPI	[:SENSe]:POWer[:RF]:RANGe:AUTO ON OFF 1 0 [:SENSe]:POWer[:RF]:RANGe:AUTO?	
	Adjustment Algorithm The algorithms for the adjustment are documented below: Single-Attenuator Models	

3 5G NR Mode
3.7 Modulation Analysis Measurement

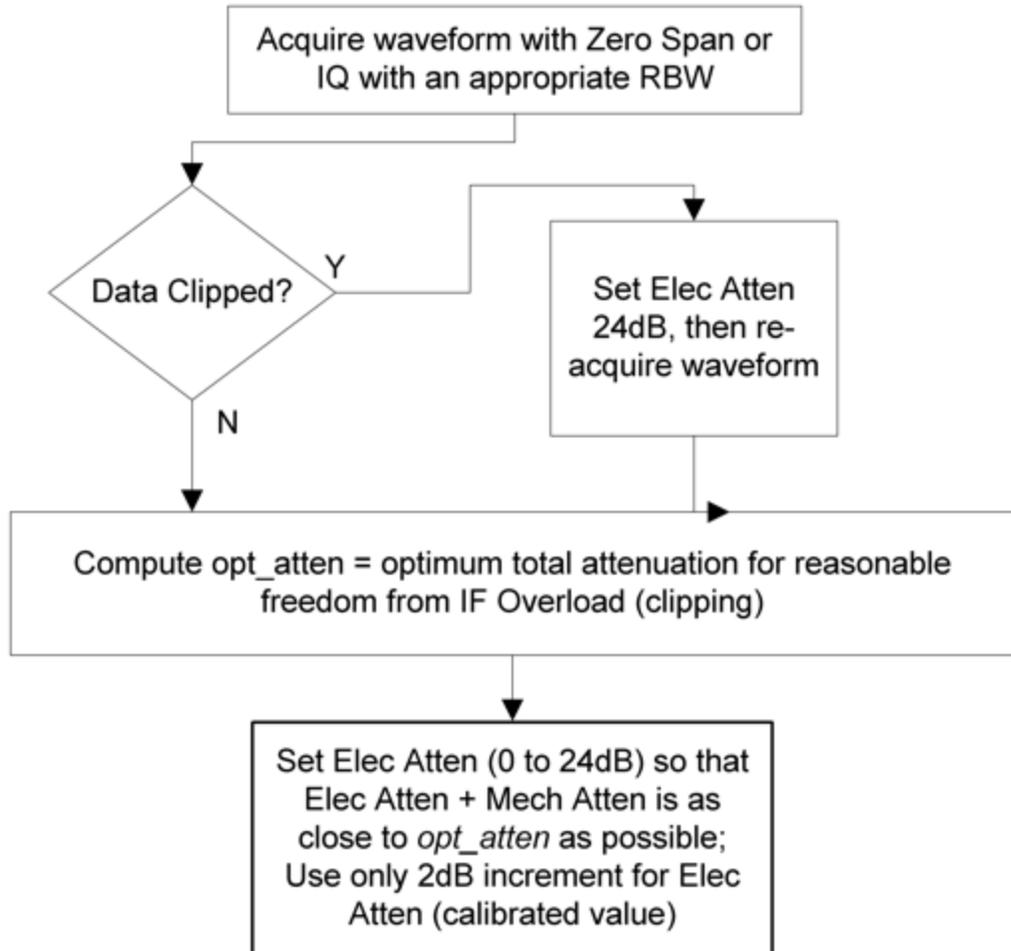

Dual-Attenuator models

"Adjust Atten for Min Clipping" on page 2574 or "Pre-Adjust for Min Clipping" on page 1396 selection is Mech + Elec Atten:

"Pre-Adjust for Min Clipping" on page 1396 selection is Elec Only.

Note that the **Mech Atten** value is not adjusted, and the value previously set is used. Therefore, there is a case that IF Overload is still observed depending on the input signal level and the Mech Atten setting.

Mech Atten Step

Controls the step size used when making adjustments to the input attenuation.

This control is labeled **Mech Atten Step** in Dual-Attenuator models and **Atten Step** in Single-Attenuator models. In the Dual-Attenuator configuration, this control only affects the step size of the mechanical attenuator.

Remote Command `[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement] 10 dB | 2 dB`
`[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement]?`

Example `:POW:ATT:STEP 2`

	<code>:POW:ATT:STEP?</code>
Notes	This feature has a toggle choice from the front panel, but it takes a specific value (in dB) when used remotely. The only valid values are 2 and 10
Dependencies	Blanked in EXA, CXA and CXA-m if option FSA (2 dB steps) is not present. If blanked, attempts to set it via SCPI yield an error
Couplings	When the attenuation step size changes, the current mechanical attenuation value is adjusted (if necessary) to be quantized to the new step size. That is, if step is set to 10 dB, mech atten is increased if necessary so it is a multiple of 10 dB
Preset	EXA, CXA and CXA-m: 10 dB (2 dB with option FSA) All other models: 2 dB
State Saved	Saved in instrument state

3.7.3.3 Range (Non-attenuator models)

This tab is only available for Keysight's modular signal analyzers and certain other Keysight products. Examples include:

- VXT

State Saved	No
-------------	----

Range

Represents the amplitude of the largest sinusoidal signal that could be present within the IF without being clipped by the ADC. For signals with high peak-to-average ratios, the range may need to exceed the rms signal power by a significant amount to avoid clipping.

This is a measurement global setting.

Remote Command	<code>[:SENSe] :POWer [:RF] :RANGe <real></code> <code>[:SENSe] :POWer [:RF] :RANGe?</code>
Example	<code>:POW:RANG 10 dBm</code> <code>:POW:RANG?</code>
Notes	The MIN and MAX values are affected by the External Gain parameters, and by the Center Frequency . The hardware compensates for frequency response and alters the Range setting
Preset	0 dBm
State Saved	Yes
Min	-100
Max	100
Annotation	Meas Bar

Adjust Range for Min Clipping

Sets the combination of attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an "immediate action" function, that is, it executes once, when the key is pressed.

This key does not appear in measurements that do not support this functionality.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE</code>
Notes	Executing Adjust Range for Min Clipping initiates the measurement
Dependencies	This control does not appear in the Swept SA and Monitor Spectrum measurements

Restart Meas on Adjust Range

This control is the same as ["Restart Meas on Adjust Atten" on page 2574](#) under ["Attenuation" on page 2565](#).

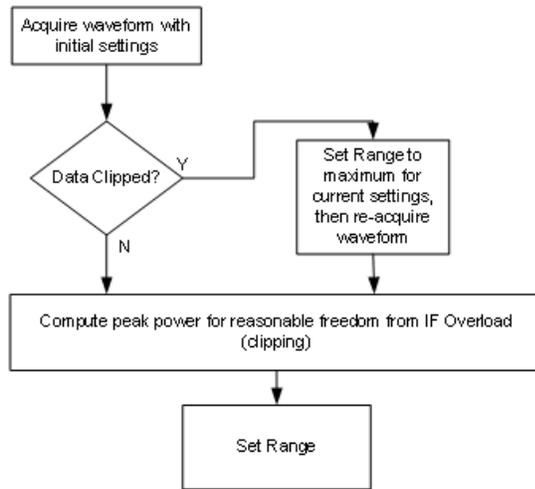

Pre-Adjust for Min Clipping

If this function is **ON**, it applies the adjustment described under Adjust Range For Min Clipping each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF ON ELECTrical COMBined</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?</code>
Notes	Because there is no attenuator control available in these models, the control displays only ON and OFF choices. However, for SCPI compatibility with other platforms, all three parameters (ELECTrical , COMBined , and ON) are honored and all are mapped to ELECTrical , so if any of these three parameters is sent, a subsequent query will return ELEC
Dependencies	This control does not appear in the Swept SA and Monitor Spectrum measurements
Preset	OFF for Swept SA measurement; ON for all other measurements that support Pre-Adjust for Min Clipping
State Saved	Saved in instrument state

Adjustment Algorithm

The algorithm for the adjustment is documented below:

Peak-to-Average Ratio

Used with "[Range \(Non-attenuator models\)](#)" on page 2586 to optimize the level control in the instrument. The value is the ratio, in dB, of the peak power to the average power of the signal to be measured. A ratio of 0 should be used for sinusoidal signals; for 802.11g OFDM signals use 9 dB.

All Applications (Modes) show the current value of Peak-to-Average ratio on the control. However, some applications do not permit changing the value. In these situations, the control is grayed-out.

Remote Command	<code>[:SENSe] :POWer [:RF] :RANGe :PARatio <real></code> <code>[:SENSe] :POWer [:RF] :RANGe :PARatio?</code>
Example	<code>:POW:RANG:PAR 12 dB</code>
Notes	In some Applications (Modes) this parameter is read-only; meaning the value will appear on the control and query via SCPI, but is not changeable. In such applications the control is grayed-out. Attempting to change the value via SCPI will be ignored but no error message will be generated
Dependencies	Does not appear in Spectrum Analyzer Mode
Preset	10 dB VXT Models SP900B/11A: 0
State Saved	0 dB Saved in instrument state
Min	0 dB
Max	20 dB VXT Models SP900B/11A: 50 dB

Mixer Lvl Offset

This is an advanced setting to adjust target Range at the input mixer, which in turn affects the signal level in the instrument's IF. This setting can be used when additional optimization is needed after setting "[Peak-to-Average Ratio](#)" on page 2588. Positive values of offset optimize noise performance over distortion, negative values optimize distortion performance over noise.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet <real></code> <code>[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet?</code>
Example	<code>:POW:RANG:MIX:OFFS -5 dB</code>
Preset	0 dB
State Saved	Saved in instrument state
Min	-35 dB VXT Models SP900B/11A: -34
Max	0 dB

3.7.3.4 Range (Baseband Input models)

This tab is only available when Option BBA is present (I/Q Baseband Inputs), the current measurement supports option BBA, and I/Q is the selected input. It replaces the Attenuation tab in that case.

Each input channel (I and Q) has four internal gain ranges. The maximum allowed voltage in each gain range is slightly more than the nominal value, so the break point between ranges is a few millivolts higher than the nominal (setting a peak voltage of 0.502 mV will still map to the 0.5 V Peak range).

Gain Setting	Volts RMS	Volts Peak	Volts Peak - Peak	dBm (50Ω)	Break Point
0 dB	0.7071	1.0	2.0	10	n/a
6 dB	0.3536	0.5	1.0	4	0.502 V Peak
12 dB	0.1768	0.25	0.5	-2	0.252 V Peak
18 dB	0.0884	0.125	0.25	-8	0.127 V Peak

Dependencies	Available only when the selected input is I/Q. If the current measurement does not support baseband inputs, an error will be displayed: "No result; Meas invalid with I/Q inputs"
State Saved	No

Range Auto/Man

The Auto setting for Range causes the range to be set based on the Y Scale settings. When Range is “Auto”, the I & Q Range are set based on the top of the Y Scale when the Y scale is in dB units (for example, power), or to the $\max(\text{abs}(\text{top}), \text{abs}(\text{bottom}))$ when the Y scale reference is not at the top of the screen.

Not all measurements support **Range Auto/Man**. If Auto is not supported in the current measurement, this control is grayed-out displaying “Man”, and **MAN** is returned to a SCPI query, but this does *not* change the Auto/Man setting for Range. When you switch to a measurement that supports Auto, it goes back to Auto if it was previously in Auto mode.

Remote Command	<code>[:SENSe] :VOLTage :IQ :RANGe :AUTO OFF ON 0 1</code> <code>[:SENSe] :VOLTage :IQ :RANGe :AUTO?</code>
Example	Put the I Range and Q Range in manual <code>:VOLT :IQ :RANG :AUTO OFF</code> <code>:VOLT :IQ :RANG :AUTO?</code>
Dependencies	If Auto is not supported, sending the SCPI command generates an error
Couplings	When in Auto, both I Range and Q Range are set to the same value, computed as follows: Maximum absolute value is computed for the Y Scale. The top and bottom of the graph are computed based on Ref Value, Scale/Div, and Ref Position. Formula: $Y_{\text{Max}} = \max(\text{abs}(\text{top}), \text{abs}(\text{bottom}))$ The I Range and Q Range are then set to Y_{Max}
Preset	ON
State Saved	Saved in instrument state
Annotation	When in Man, the Range annotation is preceded by "#" This is an alternate form of the command to match the POWer form of the I Range and Q Range SCPI.
Remote Command	<code>[:SENSe] :POWer :IQ :RANGe :AUTO OFF ON 0 1</code> <code>[:SENSe] :POWer :IQ :RANGe :AUTO?</code>
Example	Put the I Range and Q Range in manual <code>:POW :IQ :RANG :AUTO OFF</code> <code>:POW :IQ :RANG :AUTO?</code>
Notes	<code>:POW :IQ :RANG :AUTO</code> is an alternate form of <code>:VOLT :IQ :RANG :AUTO</code> , to maintain consistency with I Range and Q Range, which support both the POWer and VOLTage forms of the command
Preset	ON
Range	Auto Man

I Range

The internal gain range for the I channel when the Input Path is I Only or I and I/Q. Used for both the I and Q channels when the Input Path is I+jQ.

Remote Command	<code>[:SENSe]:VOLTage:IQ[:I]:RANGe[:UPPer] <voltage></code> <code>[:SENSe]:VOLTage:IQ[:I]:RANGe[:UPPer]?</code>
Example	Set the I Range to 0.5 V Peak <code>:VOLT:IQ:RANG 0.5 V</code> <code>:VOLT:IQ:RANG?</code>
Notes	The numeric entries are mapped to the smallest gain range whose break point is greater than or equal to the value, or 1 V Peak if the value is greater than 1 V
Couplings	When " Q Same as I " on page 2586 is On, the I Range value will be copied to " Q Range " on page 2584 Changing the value also sets Range = Man
Preset	1 V Peak
State Saved	Saved in instrument state
Range	1 V Peak (10 dBm @ 50 Ω) 0.5 V Peak (4 dBm @ 50Ω) 0.25 V Peak (-2 dBm @ 50Ω) 0.125 V Peak (-8 dBm @ 50Ω)
Min	0.125 V
Max	1 V
Annotation	The Range annotation replaces the RF Input context's "Atten" annotation "Rng: <I Range>". When Range = Man the annotation is preceded by "#" The I Range is not annotated in Input Path Q Only. When I Range and Q Range are the same, the annotation is "Rng: <Range>". When I Range and Q Range are different and the Input Path is Ind I/Q, the annotation is "Rng: <I Range>, <Q Range>" and "Peak" is removed from the text. Examples: "Rng: 1 V Peak" the I Range is 1 V Peak "Rng: 1 V, 0.5 V " the I Range is 1 V Peak and the Q Range is 0.5 V Peak This is an alternate form of the command to allow entry as a power.
Remote Command	<code>[:SENSe]:POWer:IQ[:I]:RANGe[:UPPer] <amp;lt;math>1\text{ dBm}</math></code> <code>[:SENSe]:POWer:IQ[:I]:RANGe[:UPPer]?</code>
Example	Set the I Range to 0.5 V Peak when Reference Z is 50 Ω, and to 1.0 V Peak when Reference Z is 75 Ω <code>:POW:IQ:RANG 4 dBm</code> <code>:POW:IQ:RANG?</code>
Notes	The POWER form of the command is provided for convenience. It maps to the same underlying gain range parameter as the VOLTage form The Reference Z (not the I channel Input Z) is used to convert the power to peak voltage, which is then used to set the I Range as with the VOLTage form of the command. The power values of the 4 range states (1V Peak, 0.5V Peak, 0.25V Peak, and 0.125V Peak) will vary with Reference Z. Here are some examples:

	50 Ω: 10, 4, -2, -8 75 Ω: 8.2, 2.2, -3.8, -9.8 600 Ω: -0.8, -6.8, -12.8, -18.9
Preset	10.0 dBm
Range	-20 dBm to 10 dBm
Min	-20 dBm
Max	10 dBm

Q Range

The internal gain range for the Q channel. **Q Range** only applies to Input Path Q Only and Ind I/Q. For input I+jQ "[I Range](#)" on page 2583 determines both I and Q channel range settings.

Remote Command	<code>[:SENSe]:VOLTage:IQ:Q:RANGe[:UPPer] <voltage></code> <code>[:SENSe]:VOLTage:IQ:Q:RANGe[:UPPer]?</code>
Example	Set the Q Range to 0.5 V Peak: <code>:VOLT:IQ:Q:RANG 0.5 V</code> <code>:VOLT:IQ:Q:RANG?</code>
Notes	The numeric entries are mapped to the smallest gain range whose break point is greater than or equal to the value, or 1 V Peak if the value is greater than 1 V Q Range is only used for Input Path Q Only and Ind I/Q. For input I+jQ, " I Range " on page 2583 determines both I and Q channel range settings
Couplings	When " Q Same as I " on page 2586 is On, the " I Range " on page 2583 value is copied to Q Range and the range value keys are disabled Changing the value also sets Range = Man
Preset	1 V Peak
State Saved	Saved in instrument state
Range	1 V Peak (10 dBm @ 50Ω) 0.5 V Peak (4 dBm @ 50Ω) 0.25 V Peak (-2 dBm @ 50Ω) 0.125 V Peak (-8 dBm @ 50Ω)
Min	0.125 V
Max	1 V
Annotation	The Range annotation replaces the RF Input context's "Atten" annotation "Rng: <Q Range>". When Range = Man the annotation is preceded by "#" The Q Range is not annotated in Input Path I Only or I+jQ. When I Range and Q Range are the same, the annotation is "Rng: <Range>". When I Range and Q Range are different and the Input Path is Ind I/Q, the annotation is "Rng: <I Range>, <Q Range>" and "Peak" is removed from the text. Examples: "Rng: 1 V Peak" the Q Range is 1 V Peak "Rng: 1 V, 0.5 V" the I Range is 1 V Peak and the Q Range is 0.5 V Peak This is an alternate form of the command to allow entry as a power.

3 5G NR Mode
3.7 Modulation Analysis Measurement

Remote Command	<code>[:SENSe] :POWer :IQ :Q :RANGe [:UPPer] <amp;1></code> <code>[:SENSe] :POWer :IQ :Q :RANGe [:UPPer] ?</code>
Example	Sets the Q Range to 0.5 V Peak when Reference Z is 50 Ω , and to 1.0 V Peak when Reference Z is 75 Ω : <code>:POW:IQ:Q:RANG 4 dBm</code> <code>:POW:IQ:Q:RANG?</code>
Notes	The POWer form of the command is provided for convenience. It maps to the same underlying gain range parameter as the VOLTage form of the command The Reference Z (not the Q channel Input Z) is used to convert the power to peak voltage, which is then used to set the Q Range as with the VOLTage form of the command. The power values of the 4 range states (1V Peak, 0.5V Peak, 0.25V Peak, and 0.125V Peak) will vary with Reference Z. Here are some examples: 50 Ω : 10, 4, -2, -8 75 Ω : 8.2, 2.2, -3.8, -9.8 600 Ω : -0.8, -6.8, -12.8, -18.9
Preset	10.0 dBm
Range	-20 dBm to 10 dBm
Min	-20 dBm
Max	10 dBm

Q Same as I

Many, but not all, usages require the I and Q channels to have an identical setup. To simplify channel setup, **Q Same as I** causes the Q channel range to be mirrored from the I channel. That way you only need to set up one channel (the I channel). The I channel values are copied to the Q channel, so at the time **Q Same as I** is Off, the I and Q channel setups will be identical.

Remote Command	<code>[:SENSe] :VOLTage POWer :IQ :MIRRored OFF ON 0 1</code> <code>[:SENSe] :VOLTage POWer :IQ :MIRRored ?</code>
Example	Turn off the mirroring of I Range to Q Range <code>:VOLT:IQ:MIRR OFF</code> <code>:POW:IQ:MIRR OFF</code>
Couplings	When ON , the " I Range " on page 2583 value is mirrored (copied) to the " Q Range " on page 2584
Preset	ON
State Saved	Saved in instrument state
Range	OFF ON

3.7.3.5 Signal Path

Contains controls that pertain to the routing of the signal through the frontend of the instrument.

In general, this tab only appears in instruments whose hardware supports this signal routing. For example, this tab does not appear in many of the modular instrument products, including VXT Models M9420/21A. It also does not appear in UXM.

This tab *does* appear in VXT Models SP900B/11A because the Software Preselection control is in this tab, and VXT Models SP900B/11A implement a version of Software Preselection.

Presel Center

Pressing this control adjusts the centering of the preselector filter to optimize the amplitude accuracy at the frequency of the selected marker. If the selected marker is not on when **Presel Center** is pressed, the instrument turns on the selected marker, performs a peak search, and then performs centering on the marker's center frequency. If the selected marker is already on and between the start and stop frequencies of the instrument, the instrument performs the preselector calibration on that marker's frequency. If the selected marker is already on, but outside the frequency range between Start Freq and Stop Freq, the instrument first performs a peak search, and then performs centering on the marker's center frequency.

The value displayed on **"Preselector Adjust" on page 2591** will change to reflect the new preselector tuning.

A number of considerations should be observed to ensure proper operation. See **"Proper Preselector Operation " on page 1410.**

Remote Command	<code>[:SENSe] :POWer [:RF] :PCENter</code>
Example	<code>:POW:PCEN</code>
Notes	Note that the rules outlined above under the control description apply for the remote command as well as the key. The result of the command is dependent on marker position, etc. Any message shown by the control press is also shown in response to the remote command
Dependencies	Does not appear in CXA-m Does not appear in VXT Models SP900B/11A Grayed-out if the microwave preselector is off if the selected marker's frequency is below Band 1, an advisory message is generated "Preselector not used in this frequency range" and no action is taken <ul style="list-style-type: none"> - Grayed-out if entirely in Band 0, that is, if Stop Freq is below about 3.6 GHz Grayed-out if entirely above 50 GHz, that is, if Start Freq is above 50 GHz

	<ul style="list-style-type: none">- Blank in models that do not include a preselector, such as option 503. If the remote command is sent in these instruments, it is accepted without error, and the query always returns 0- Grayed-out in the Spectrogram View
Couplings	<p>The active marker position determines where the centering will be attempted</p> <p>If the instrument is in a measurement such as averaging when centering is initiated, the act of centering the preselector restarts averaging, but the first average trace will not be taken until the centering is completed</p> <p>The offset applied to do the centering reads out on the "Preselector Adjust" on page 2591 control</p>
Status Bits/OPC dependencies	<p>When centering the preselector, *OPC does not return true until the process is complete and a subsequent measurement has completed, nor are results returned in response to :READ or :MEASure queries</p> <p>The Measuring bit remains set while this command is operating, and does not go false until the subsequent sweep/measurement has completed</p>

Proper Preselector Operation

Certain considerations should be observed to ensure proper operation:

1. If the selected marker is **Off**, the instrument turns on a marker, performs a peak search, and adjusts the preselector using the selected marker's frequency. It uses the "highest peak" peak search method unqualified by threshold or excursion, so that there is no chance of a 'no peak found' error. It continues with that peak, even if it is the peak of just noise. Therefore, for this operation to work properly, there should be a signal on-screen in a preselected range for the peak search to find
2. If the selected marker is already **On**, the instrument attempts the centering at that marker's frequency. There is no preselector for signals below about 3.6 GHz, so if the marker is on a signal below 3.6 GHz, no centering will be attempted, and an advisory message generated
3. In some models, the preselector can be bypassed. If it is bypassed, no centering will be attempted in that range and a message will be generated

Preselector Adjust

Allows you to manually adjust the preselector filter frequency to optimize its response to the signal of interest. This function is only available when **"Presel Center" on page 2589** is available.

For general purpose signal analysis, using **Presel Center** is recommended. Centering the filter minimizes the impact of long-term preselector drift. **Preselector Adjust** can be used instead to manually optimize the preselector. One application of manual optimization would be to peak the preselector response, which both optimizes the signal-to-noise ratio and minimizes amplitude variations due to small (short-term) preselector drifting.

When **Presel Center** is performed, the offset applied to do the centering becomes the new value of **Preselector Adjust**.

Remote Command	<code>[:SENSe]:POWer[:RF]:PADJust <freq></code> <code>[:SENSe]:POWer[:RF]:PADJust?</code>
Example	<code>:POW:PADJ 100KHz</code> <code>:POW:PADJ?</code>
Notes	The value on the control reads out to 0.1 MHz resolution

If the command is sent in these instruments, it is accepted without error, and the query always returns 0 - Grayed-out in the Spectrogram View
Preset	0 MHz
State Saved	The Preselector Adjust value set by " Presel Center " on page 2589, or by manually adjusting Preselector Adjust Not saved in instrument state, and does not survive a Preset or power cycle
Min	-500 MHz
Max	500 MHz
Backwards Compatibility SCPI	<code>[:SENSe]:POWer[:RF]:MW:PADJust</code> <code>[:SENSe]:POWer[:RF]:MMW:PADJust</code>
Notes	The command has no effect, and the query always returns MWAVE
Backwards Compatibility SCPI	<code>[:SENSe]:POWer[:RF]:PADJust:PRESelector MWAVE MMWave EXTernal</code> <code>[:SENSe]:POWer[:RF]:PADJust:PRESelector?</code>

Internal Preamp

Accesses a menu of controls for the internal preamps. Turning on the preamp gives a better noise figure, but a poorer inter-modulation distortion (TOI) to noise floor dynamic range. You can optimize this setting for your measurement.

The instrument takes the preamp gain into account as it sweeps. If you sweep outside of the range of the preamp, the instrument will also account for that. The displayed result always reflects the correct gain.

For some measurements, when the preamp is on and any part of the displayed frequency range is below the lowest frequency for which the preamp has specifications, a warning condition message appears in the status line. For example, for a preamp with a 9 kHz lowest specified frequency: "Preamp: Accy unspec'd below 9 kHz".

Selection	Example	Note
Off	:POW:GAIN OFF	
Low Band	:POW:GAIN ON :POW:GAIN:BAND LOW	Sets the internal preamp to use only the low band. The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Low Band selection in the dropdown
Full Range	:POW:GAIN ON :POW:GAIN:BAND FULL	Sets the internal preamp to use its full range. The low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model) is supplied by the low band preamp and the frequencies above low band are supplied by the high band preamp The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Full Range selection in the dropdown. If the high band option is not installed the Full Range selection does not appear

NOTE

The maximum **Center Frequency** for Low Band, displayed in square brackets, can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as SP900S& SP900P), IFBW values ≤ 40 MHz have a maximum Low Band frequency of 3.6 GHz, while $40 \text{ MHz} < \text{IFBW} \leq 1 \text{ GHz}$ have a maximum of 3.3 GHz, and $1 \text{ GHz} < \text{IFBW} \leq 1.5 \text{ GHz}$ have a maximum of 3.5 GHz. IFBW values $> 1.5 \text{ GHz}$ do not support a **Center Frequency** that can reach the Low Band maximum frequency. In these cases, **N/A** is displayed in the square brackets for Low Band.

Remote Command	:SENSe:POWer[:RF]:GAIN:BAND LOW FULL :SENSe:POWer[:RF]:GAIN:BAND? :SENSe:POWer[:RF]:GAIN[:STATe] OFF ON 0 1 :SENSe:POWer[:RF]:GAIN[:STATe]?
Example	:POW:GAIN:BAND LOW :POW:GAIN:BAND? :POW:GAIN OFF :POW:GAIN?
Dependencies	Not available on all hardware platforms. If the preamp is not present or is unlicensed, this control is not shown Does not appear in VXT Models SP900B/11A/15A/16A

	If <code>:POW:GAIN:BAND FULL</code> is sent when a low band preamp is available, the preamp band parameter is set to <code>LOW</code> instead of <code>FULL</code> , and an "Option not installed" message is generated Not available when the electronic/soft attenuator is enabled
Preset	<code>LOW</code> <code>OFF</code>
State Saved	Saved in instrument state
Annotation	When the USB Preamp is not connected to USB, the Preamp annotation in the Meas Bar says "Off" if the preamp is off and displays the frequency range of the low band or full range preamp depending on the setting. For example, if the Preamp is set to Low Band and the Low Band is 3.6 GHz the annotation says "3.6 GHz". If it is a 13.6 GHz preamp and it is set to Full Range the annotation says "13.6 GHz" When the USB Preamp is connected to USB, the Preamp annotation says "Preamp: USB" if the internal preamp is off or "Preamp: USB, Int" if the internal preamp is on (only for measurements that support the USB preamp)

LNA

Lets you turn the Low Noise Amplifier (**LNA**) on or off.

LNA is an additional preamplifier that provides superior DANL and frequency range compared to "[Internal Preamp](#)" on page 2592. LNA provides lower system noise figure, especially at frequencies above 100 MHz, and can be operated up to the full range of 50 GHz instruments.

For best possible sensitivity, **LNA** can be turned on *together* with "[Internal Preamp](#)" on page 2592, although if you operate both preamps together, note that the TOI (distortion) specifications are impacted. The sensitivity improvement of this combination is substantial when operating in high band (frequencies above 3.6 GHz).

For more details about annotation, see "[More Information](#)" on page 1413

Remote Command	<code>[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe] OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe]?</code>
Example	<code>:POW:GAIN:LNA ON</code>
Dependencies	Requires Option LNA, except for VXT models SP900B/16A Does not appear in VXT models SP900B/10A/11A May not appear in some measurements LNA is not available when the electronic/soft attenuator is enabled
Preset	<code>OFF</code>
State Saved	Saved in State More Information

When **LNA** is installed, the preamp annotation changes to show the state of both **LNA** and **Internal Preamp**. Below is an example:

```
Atten: 8 dB  
Pre: Int on, LNA on  
μW Path: LNP, On  
Source: Off
```

Note that when operating entirely in the low band (below about 3.6 GHz), if **LNA** is on, **Internal Preamp** is switched off (even if you have its switch set to **ON**). This is because the noise performance is actually degraded in low band if both preamps are on. In this case, the annotation reflects the actual state of the two preamps, but the **Internal Preamp** annotation displays in amber, to warn you that the actual state of **Internal Preamp** does not match its switch control display:

```
Atten: 8 dB  
Pre: Int off, LNA on  
μW Path: LNP, On  
Source: Off
```

μW Path Control

Options for this control include **μW Preselector Bypass** (Option MPB), **Low Noise Path** (Option LNP) and **Full Bypass Enable** in the High Band path circuits.

When the μW Preselector is bypassed, flatness is improved, but will be subject to spurs from out of band interfering signals. When **Low Noise Path Enable** is selected, the instrument automatically bypasses certain circuitry in the high frequency bands that can contribute to noise, when it is appropriate based on other instrument settings.

For most applications, the preset state is **Standard Path**, which provides the best remote-control throughput, minimizes acoustic noise from switching and minimizes the risk of wear in the hardware switches, particularly in remote test scenarios where both low band and high band setups will follow in rapid succession. In this path, the bypass of the low band/high band switch and microwave preamp is never activated, which can cause some noise degradation but preserves the life of the bypass switch.

For applications that utilize the wideband IF paths, the preset state is **μW Preselector Bypass**, if option MPB is present. This is because, when using a wideband IF such as the 140 MHz IF, the μW Preselector's bandwidth can be narrower than the available IF bandwidth, causing degraded amplitude flatness and phase linearity, so it is desirable to bypass the preselector in the default case.

You may choose **Low Noise Path Enable** for a lower noise floor, especially in the 21–26.5 GHz region, though without improving many measures of dynamic range, and without giving the best possible noise floor. The preamp, if purchased and used, gives better noise floor than does **Low Noise Path Enable**, but the preamp's compression threshold and third-order intercept are much poorer than that of **Low Noise Path Enable**.

A fourth choice is **Full Bypass Enable**, which combines **μW Preselector Bypass** and **Low Noise Path Enable**. Because this can bypass most of the circuitry between the input and the first mixer, care should be taken when using this setting to avoid damaging the mixer. **Full Bypass Enable** is only available if both options LNP and MPB are present, as well as option FBP.

Path	Example	Note
Standard Path	:POW:MW:PATH STD	Normal setting for most measurements. μW Preselector in circuit, Low Noise Path disabled
Low Noise Path Enable	:POW:MW:PATH LNP	See " Low Noise Path Enable " on page 1418
μW Preselector Bypass	:POW:MW:PATH MPB	See " μW Preselector Bypass " on page 1420
Full Bypass Enable	:POW:MW:PATH FULL	See " Full Bypass Enable " on page 1421

Remote Command	:SENSe:POWer[:RF]:MW:PATH STD LNPath MPBypass FULL [:SENSe]:POWer[:RF]:MW:PATH?
Example	:POW:MW:PATH LNP Enables the Low Noise path :POW:MW:PATH?
Notes	If " Presel Center " on page 2589 is performed, the instrument will momentarily switch to the Standard Path, regardless of the setting of μW Path Control The DC Block will always be switched in when the low noise path is switched in, to protect succeeding circuitry from DC. Note that this does not mean "when the low noise path is enabled" but when, based on the Low Noise Path rules, the path is actually switched in. This can happen when the selection is Low Noise Path Enable or Full Bypass Enable . In the case where the DC Block is switched in the instrument is now AC coupled. However, if you selected DC coupling, the UI would still behave as though it were DC coupled, including all annunciation, warnings, status bits, and responses to SCPI queries. This is because, based on other settings, the instrument could switch out the low noise path at any time and hence go back to being DC coupled Alignment switching ignores the settings in this menu, and restores them when finished
Dependencies	Does not appear in CXA-m, VXT Models SP900B/11A, nor in BBIQ and External Mixing <ul style="list-style-type: none">- The Low Noise Path Enable selection does not appear unless Option LNP is present and licensed- The μW Preselector Bypass selection does not appear unless Option MPB is present and licensed- The Full Bypass Enable selection does not appear unless options LNP and MPB are both present as well as option FBP In any of these cases, if the required options are not present and the SCPI command is sent, error - 241, "Hardware missing; Option not installed" is generated Low Noise Path Enable and Full Bypass Enable are grayed-out if the current measurement does not support them Low Noise Path Enable and Full Bypass Enable are not supported in Avionics and MMR Modes (non-

Couplings	See the tables above
Preset	<code>ON</code>
Range	<code>ON OFF</code>

Low Noise Path Enable

Low Noise Path Enable provides a lower noise floor under some circumstances, particularly when operating in the 21–26.5 GHz region. With the Low Noise Path enabled, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz
- The internal preamp is not installed, or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Low Noise Path Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

For measurements that use IQ acquisition, the low noise path is used when **Center Frequency** is in High Band (> 3.6 GHz) and no preamp is in use. In other words, the rules above are modified to use only the center frequency to qualify which path to switch in. This is not the case for FFTs in the Swept SA measurement; they use the same rules as swept measurements.

Note that the Low Noise Path, while giving improved DANL, has the disadvantage of decreased TOI performance and decreased gain compression performance relative to the standard path.

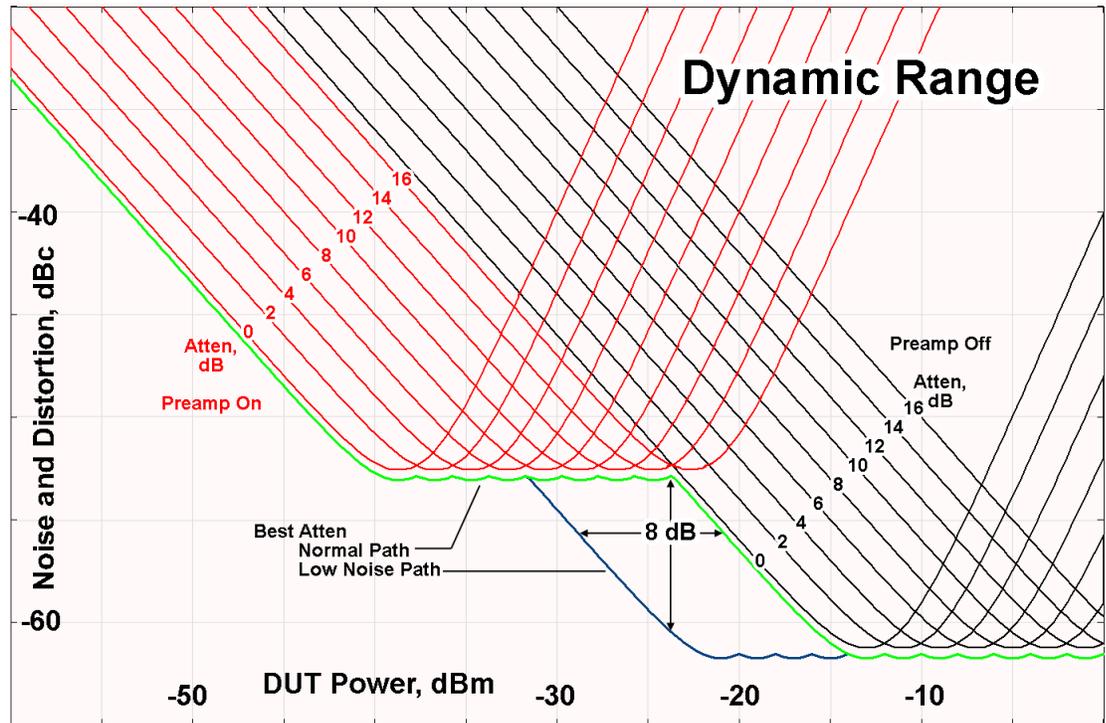

Note also that the bypass switch is a mechanical switch and has finite life, so if the **Low Noise Path Enable** is selected, it is possible to cause frequent cycling of this switch by frequently changing instrument settings such that the above conditions hold true only some of the time. A user making tests of this nature should consider opting for the **Standard Path**, which will never throw the bypass switch, at the expense of some degraded noise performance.

The low noise path is useful for situations where the signal level is so low that the instrument performance is dominated by noise even with 0 dB attenuation, but still high enough that the preamp option would have excessive third-order intermodulation or compression. The preamp, if purchased and used, gives better noise floor than does the “Low Noise Path.” However, its compression threshold and third-order intercept are much poorer than that of the non-preamp path.

There are some applications, typically for signals around –30 dBm, for which the third-order dynamic range of the standard path is good enough, but the noise floor is not low enough even with 0 dB input attenuation. When the third-order dynamic range of the preamp path is too little and the noise floor of the standard path is too high, the Low Noise Path can provide the best dynamic range

The graph below illustrates the concept. It shows, in red, the performance of an instrument at different attenuation settings, both with the preamp on and off, in a measurement that is affected by both instrument noise and instrument TOI. The green shows the best available dynamic range, offset by 0.5 dB for clarity. The blue

shows how the best available dynamic range improves for moderate signal levels with the low noise path switched in. In this illustration, the preamp improves the noise floor by 15 dB while degrading the third-order intercept by 30 dB, and the low noise path reduces loss by 8 dB. The attenuator step size is 2 dB.

There are other times where selecting the low noise path improves performance, too. Compression-limited measurements such as finding the nulls in a pulsed-RF spectrum can profit from the low noise path in a way similar to the TOI-limited measurement illustrated. Accuracy can be improved when the low noise path allows the optimum attenuation to increase from a small amount like 0, 2 or 4 dB to a larger amount, giving better return loss at the instrument input. Harmonic measurements, such as second and third harmonic levels, are much improved using the low noise path because of the superiority of that path for harmonic (though not intermodulation) distortion performance.

μW Preselector Bypass

Toggles the preselector bypass switch for band 1 and higher. When the microwave preselector is on, the signal path is preselected. When the microwave preselector is off, the signal path is not preselected. The preselected path is the normal path for the instrument.

The preselector is a tunable bandpass filter which prevents signals away from the frequency of interest from combining in the mixer to generate in-band spurious signals (images). The consequences of using a preselector filter are its limited

bandwidth, the amplitude and phase ripple in its passband, and any amplitude and phase instability due to center frequency drift.

Option MPB or pre-selector bypass provides an unpreselected input mixer path for certain X-Series signal analyzers with frequency ranges above 3.6 GHz. This signal path allows a wider bandwidth and less amplitude variability, which is an advantage when doing modulation analysis and broadband signal analysis. The disadvantage is that, without the preselector, image signals will be displayed. Another disadvantage of bypassing the preselector is increased LO emission levels at the front panel input port.

Image responses are separated from the real signal by twice the 1st IF. For IF Paths of 10 MHz and 25 MHz, the 1st IF is 322.5 MHz, so the image response and the real signal will be separated by 645 MHz. The 1st IF will be different for other IF Path settings. When viewing a real signal and its corresponding image response in internal mixing, the image response will be to the left of the real signal.

Also, the image response and the real signal typically have the same amplitude and exhibit the same shape factor.

However, if Option FS1 (Fast Sweep Capability) is enabled, the image response in the Swept SA measurement appears lower in amplitude and has a much wider shape factor compared to the real signal.

Full Bypass Enable

With **Full Bypass Enable** selected, the microwave preselector is bypassed. In addition, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz.
- the internal preamp is not installed or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Full Bypass Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

CAUTION

When **Full Bypass Enable** is selected, and "**Y Scale**" on page 2562 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq > 3.6 GHz and the Preamp is either not licensed, set to Low Band, or Off). This puts the first converter at high risk

to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:
Full Bypass Enabled, maximum safe input power reduced

Microwave Preselector Bypass Backwards Compatibility

Example	<code>:POW:MW:PRES OFF</code> Bypasses the microwave preselector
Notes	Included for Microwave Preselector Bypass backwards compatibility The ON parameter sets the STD path (<code>:POW:MW:PATH STD</code>) The OFF parameter sets path MPB (<code>:POW:MW:PATH MPB</code>)
Preset	ON
Backwards Compatibility SCPI	<code>[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe] ON OFF 0 1</code> <code>[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe]?</code>

Frequency Extender Preselection Bypass

Only applies to the high frequency path of the Frequency Extender, and only if the Frequency Extender allows it. For example, the V3050A high frequency path is 50 – 110 GHz and *does* allow control of the preselector bypass.

When the Frequency Extender's preselection is bypassed, flatness is improved, but will be subject to spurs from out-of-band interfering signals. For bandwidths greater than 2.5 [GHz], it is recommended that the signal bypass the Frequency Extender Preselector since the max bandwidth of the Preselector can be as narrow as 2.5 [GHz].

For most applications, the preset state is **OFF**, which gives the best remote-control throughput, minimizes acoustic noise from switching, minimizes out of band spurs, and minimizes the risk of wear in the hardware switches.

Preselector and Bandwidth Conflict

When the Frequency Extender Preselector is applied and the signal bandwidth is greater than 2.5 [GHz], then a settings alert message will show to warn the user that the signal may be distorted due to the limitation of the Frequency Extender Preselector bandwidth.

An example of the settings alert message is shown below.

Settings Alert message in the Status Bar at the bottom of the display.

Settings Alert message in the error queue

Type	ID	
	159	Settings Alert - DETECTED; Presel/Meas BW conflict

Allow Full Bypass in Auto

Enable or disable Full Bypass in μ W Path Auto rule. See " [\$\mu\$ W Path Control](#)" on page 2594.

When this function is **ON**, and " [\$\mu\$ W Path Control](#)" on page 2594 is in **AUTO**, it is possible for the auto rules to select the **FULL** Bypass state, wherein both the Preamp and the Microwave Preselector are bypassed. Otherwise, the auto rules never select the **FULL** Bypass state. This is convenient when making wideband measurements, but it also adds some risk of damage to the first converter.

CAUTION

When **Full Bypass Enable** is selected, and "[Y Scale](#)" on page 2562 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq > 3.6 GHz and the Preamp is either not licensed, set to **Low Band** or **Off**). This puts the first converter at high risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:

Full Bypass Enabled, maximum safe input power reduced

Software Preselection

Provided in some instruments, either to compensate for issues with provided hardware preselection or to provide the preselection function when there is no hardware preselector.

SP900S

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

In SP900S, **Software Preselection** only applies for frequencies above 50 GHz, therefore it is only used for RF Input 2. Even if turned on, it is not used for other inputs, and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that in SP900S, in Swept SA measurement, **Software Preselection** works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT sweep type.

SP900S+V3050A

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

For SP900S+V3050A, Software Preselection only applies for frequencies above 50 GHz, therefore it is only used for External RF. Even if it is turned on, it will not be used for other inputs and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that for SP900S+V3050A, in the Swept SA measurement, Software Preselection works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT Sweep Type.

VXT models SP900B/11A

Software Preselection is used to provide the preselection function, as there is no hardware preselector in these models. Two background traces are taken and compared point by point, and the point with the lowest amplitude from the two traces is used. This provides a method to reduce spurs that are internally generated

within the VXT, but you should note the following when using Software Preselection:

- There is some speed cost due to the need to take multiple captures
- Taking the point with the lowest amplitude in each trace will make the average noise level lower at all points that do not have a spur. This can reduce the accuracy of the measurement of noise and noise-like signals

Because of the difficulty in identifying spurs manually, you are recommended to leave Software Preselection **ON** at all times in VXT models SP900B/11A. If you turn it off in order to speed up your measurement or improve noise accuracy, be aware of unwanted onscreen spurs.

Remote Command	<code>[:SENSe]:POWer[:RF]:SWPrese1:STATe 0 1 ON OFF</code> <code>[:SENSe]:POWer[:RF]:SWPrese1:STAT?</code>	
Example	<code>:POW:SWPR:STAT 1</code> <code>:POW:SWPR:STAT?</code>	
Dependencies	Only appears in SP900S, SP900S+V2050A, and VXT models SP900B/11A. Does not appear in all measurements	
Couplings	Affects Sweep Time Auto Tune supports Software Preselection , so Auto Tune should be performed after setting the Software Preselection state	
Preset	SP900S	OFF
	SP900S+V3050A	ON
	SP900B/11A	ON
State Saved	Saved in instrument state	

SW Preselection Type

Specifies the algorithm used for software preselection.

Two hidden sweeps are taken in succession. The second sweep is offset in LO frequency by $2 * IF / N$. For each point in each trace, the smaller amplitude from the two traces is taken and placed in that point in the selected trace. The Peak detector is auto-selected to improve the image suppression effectiveness. Responses of each trace that lie on top of one another will remain and are valid signals. Other signals are images and are suppressed. The action of taking the smaller of the two traces will make the average noise level lower in all points that do not have an image, thus reducing the accuracy of the measurement of noise and noise-like signals.

3 5G NR Mode
 3.7 Modulation Analysis Measurement

- **NORMa1** - mathematically removes all image and multiple responses of signals present at the input
- **ADVanced** - any trace processing (such as “max hold” or trace averaging) is performed on the points of both candidate traces before the “select minimum” operation occurs. This form of processing works better for non-stationary signals, such as pulsed-RF signals

Remote Command	<code>[:SENSe]:POWer[:RF]:SWPResel NORMa1 ADVanced</code> <code>[:SENSe]:POWer[:RF]:SWPResel?</code>
Example	<code>:POW:SWPR NORM</code> <code>:POW:SWPR?</code>
Dependencies	Only appears in SP900Sand SP900S+V3050A. Only appears in measurements that use the Swept method When " Software Preselection " on page 2604 is disabled, this control is grayed-out. The grayout message is “Unavailable unless SW Presel enabled”
Preset	SP900S ADVanced SP900S+V3050A NORMa1
State Saved	Saved in instrument state

SW Preselection BW

Specifies the effective bandwidth to be used for Software Preselection.

The options are:

- **NORMa1** – when making Swept measurements, a software preselection algorithm is used which takes up to 4 background acquisitions, then post-processes the result. This algorithm can remove images from signals with an occupied bandwidth up to around 3 GHz. (Default/Preset setting). When making FFT measurements, this algorithm is not used, instead the same algorithm is used as for **NARRow** (below)
- **NARRow**– a software preselection algorithm is used which takes two background acquisitions, then post-processes the result to detect and remove images from wideband signals with occupied bandwidths up to 2 GHz. This increases the risk of images failing to be rejected, but improves the measurement speed

Remote Command	<code>[:SENSe]:POWer[:RF]:SWPResel:BW NORMa1 NARRow</code> <code>[:SENSe]:POWer[:RF]:SWPResel:BW?</code>
Example	<code>:POW:SWPR:BW NARR</code>
Dependencies	Only appears in SP900Sand SP900S+V3050A. Only appears in measurements that use the Swept

	method	
	When " Software Preselection " on page 2604 is disabled, this control is grayed-out. The grayout message is "Unavailable unless SW Presel enabled"	
	For SP900S+V3050A, the parameter is SCPI-only, and always set to NARRow when Software Preselection is enabled	
Preset	SP900S	NORMa1
	SP900S+V3050A	NARRow
State Saved	Saved in instrument state	

High Freq Prefilter

Lets you set the state of Prefilter for Center Frequencies above 1310 MHz.

In VXT Models SP900B/11A, the Receiver RF path has a bank of filters that come after the RF Attenuator in the signal path. Since this bank of filters precedes the mixer they are known as the "Prefilter" bank. Their purpose is to eliminate unwanted in-band mixing products by filtering out all but the desired frequencies before the signals get to the mixer. There are 13 prefilter bands to cover the frequencies between 9 kHz and 6000 MHz. The Prefilter provides the necessary rejection of the unwanted signal.

Remote Command	<code>[:SENSe] : <measurement> : PFILter [:STATe] ON OFF 1 0</code> <code>[:SENSe] : <measurement> : PFILter [:STATe] ?</code>
Example	For example, to enable High Freq Prefilter in IQ Analyzer Mode: For the Complex Spectrum Measurement: <code>:SPEC:PFIL ON</code> For the IQ Waveform Measurement: <code>:WAV:PFIL ON</code>
Dependencies	Only appears in VXT models SP900B/11A with center frequency above 1310 MHz
Preset	See " Prefilter Presets " on page 1427 below
State Saved	Saved in instrument state

Prefilter Presets

Meas	Mode	Preset
SPEC	BASIC	OFF
WAV	BASIC, WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA	OFF
MON	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA	OFF
RHO	WCDMA	OFF
CDP	WCDMA	OFF
PCON	WCDMA	OFF

3 5G NR Mode
 3.7 Modulation Analysis Measurement

Meas	Mode	Preset
EVMQ	WCDMA	OFF
CHP	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
OBW	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
ACP	WCDMA, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
SEM	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
PST	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
PVT	WLAN, LTEAFDD, LTEATDD, 5GNR	OFF
EVM	WLAN, LTEAFDD, LTEATDD, 5GNR	OFF
FLAT	WLAN	OFF
EVMM	WLAN	OFF
CEVM	LTEAFDD, LTEATDD	OFF
PAVT	5GNR, VMA	OFF
DDEM	VMA	OFF
OFDM	VMA	OFF
SAN	SA	ON
HARM	SA	ON

3.7.4 BW

BW is not supported in the 5G NR Modulation Analysis measurement.

3.7.5 Display

Opens the **Display** menu, which lets you configure display items for the current Mode, Measurement View or Window.

3.7.5.1 Meas Display

Display Reference BWP/SSB

Enable and disable the display of reference BWP/SSB trace on Constellation, Error Vector Time and Error Vector Spectrum result windows.

Remote Command	<code>:DISPlay:EVM:REFErence:BWP OFF ON 0 1</code> <code>:DISPlay:EVM:REFErence:BWP?</code>
Example	<code>:DISP:EVM:REF:BWP OFF</code> <code>:DISP:EVM:REF:BWP?</code>
Preset	OFF

State Saved	Yes
Range	Off On

Combine Trace w/ Same Numerology

Enable and disable combine BWP/SSB specific traces with same numerology.

Note: this feature only combine display and should not impact measurement results, so it only applies to IQ Meas Time, Detected Allocations, Error Vector Time and Error Vector Spectrum.

Remote Command	<code>:DISPlay:EVM:COMBine:BWP OFF ON 0 1</code> <code>:DISPlay:EVM:COMBine:BWP?</code>
Example	<code>:DISP:EVM:COMB:BWP OFF</code> <code>:DISP:EVM:COMB:BWP?</code>
Preset	OFF
State Saved	Yes
Range	Off On

CC for All windows

Changes all traces/tables to specific "[Component Carrier](#)" on page 1454, note some traces/tables are not CC specific so they will not be affected.

Remote Command	<code>:DISPlay:EVM:CC:SELEcted CC0 ... CC15</code>
Example	<code>:DISP:EVM:CC:SEL CC1</code>
Couplings	Activated value is based on number of component carriers
Preset	CC0
State Saved	Yes
Range	CC0 ... CC15

3D Trace Reset (GUI only)

Reset selected 3D trace.

State Saved	No
-------------	----

3D Trace X-Y Plane (GUI only)

Switch selected 3D trace to X-Y plane (EVM/Power vs symbol)

State Saved No

3D Trace Z-Y Plane (GUI only)

Switch selected 3D trace to X-Y plane (EVM/Power vs subcarrier)

State Saved No

3D Trace X-Z Plane (GUI only)

Switch selected 3D trace to X-Y plane (symbol vs subcarrier)

State Saved No

3.7.5.2 View

Contains controls for selecting the current **View**, and for editing User Views.

Views

The Modulation Analysis measurement has nine pre-defined views as follows.

View	Result
"Normal" on page 1431	"IQ Meas Time" on page 1374 "Detected Allocation" on page 1375 "Spectrum" on page 1373 "Raw Main Time" on page 1373 "Frame Summary" on page 1378 "Error Summary" on page 1378
"Normal 3x3" on page 1432	"IQ Meas Time" on page 1374 "Spectrum" on page 1373 "Raw Main Time" on page 1373 "Detected Allocation" on page 1375 "RE Power 3D" on page 1375 "Error Vector 3D" on page 1377 "Frame Summary" on page 1378 "Error Summary" on page 1378 "User Summary" on page 1379

View	Result
"In-Band Emission" on page 1432	"In-band Emission" on page 1377
"Result Summary" on page 1433	"BWP Summary" on page 1379 "Error Summary" on page 1378 "Frame Summary" on page 1378 "User Summary" on page 1379 "BWP Summary" on page 1379
"CC Summary" on page 1433	"CC Summary" on page 1379
"Decode Summary" on page 1433	"Decoded Info" on page 1381 "Decoded Channels" on page 1381 "Decoded Symbols" on page 1381
"MISO Summary" on page 1433	"Spectrum" on page 1373 "Raw Main Time" on page 1373 "MIMO Info" on page 1379
"MIMO Summary" on page 1434	"User Summary" on page 1379 "MIMO Info" on page 1379
"Auto Detect Summary" on page 1434	"IQ Meas Time" on page 1374 "Frame Summary" on page 1378 "Auto Detect Summary" on page 1379

Some of these are multiple-window Views. When in a multiple-window View, you select a window by touching it. The menu controls may sometimes change depending on which window is selected.

Whenever the View changes, the default menu is **Frequency**, unless otherwise specified in the View description.

View - Selection by Enum

Remote Command	<code>:DISPlay:EVM:VIEW[:SElect] NORMal IBEMission NREsults CCResults DECode MIMO ADEtect N3X3 MISO</code> <code>:DISPlay:EVM:VIEW[:SElect]?</code>
Example	Set Normal view: <code>:DISP:EVM:VIEW NORM</code>
Preset	<code>NORM</code>
State Saved	Saved in instrument state

Normal

This view has six windows:

3 5G NR Mode

3.7 Modulation Analysis Measurement

- "IQ Meas Time" on page 1374
- "Detected Allocation" on page 1375
- "Spectrum" on page 1373
- "Raw Main Time" on page 1373
- "Frame Summary" on page 1378
- "Error Summary" on page 1378

Example `:DISP:EVM:VIEW NORM`

Normal 3x3

This view has nine windows:

- "IQ Meas Time" on page 1374
- "Spectrum" on page 1373
- "Raw Main Time" on page 1373
- "Detected Allocation" on page 1375
- "RE Power 3D" on page 1375
- "Error Vector 3D" on page 1377
- "Frame Summary" on page 1378
- "Error Summary" on page 1378
- "User Summary" on page 1379

Example `:DISP:EVM:VIEW N3X3`

In-Band Emission

This view has two windows:

- "In-band Emission" on page 1377
- "BWP Summary" on page 1379

Example `:DISP:EVM:VIEW IBEM`

Result Summary

This view has four windows:

- "Error Summary" on page 1378
- "Frame Summary" on page 1378
- "User Summary" on page 1379
- "BWP Summary" on page 1379

Example `:DISP:EVM:VIEW NRES`

CC Summary

This view has a single window: "CC Summary" on page 1379

Example `:DISP:EVM:VIEW CCR`

Decode Summary

This view has three windows:

- "Decoded Info" on page 1381
- "Decoded Channels" on page 1381
- "Decoded Symbols" on page 1381

Example `:DISP:EVM:VIEW DEC`

MISO Summary

This view has three windows:

- "Spectrum" on page 1373
- "Raw Main Time" on page 1373
- "MIMO Info" on page 1379

Example `:DISP:EVM:VIEW MISO`

MIMO Summary

This view has two windows:

- "User Summary" on page 1379
- "MIMO Info" on page 1379

Example :DISP:EVM:VIEW MIMO

Auto Detect Summary

This view has three windows:

- "IQ Meas Time" on page 1374
- "Frame Summary" on page 1378
- "Auto Detect Summary" on page 1379

Example :DISP:EVM:VIEW ADET

User View

Lets you choose a View from the saved User Views for the current measurement. This panel only appears if a User View exists for the current measurement.

Remote Command :DISPlay:VIEW:ADVanced:SElect <alphanumeric>
 :DISPlay:VIEW:ADVanced:SElect?

Example Select Baseband as the current View
 :DISP:VIEW:ADV:SEL "Baseband"

Notes You must be in the measurement whose View you are trying to set to send the command. You can only set Views for the current measurement using this command

For predefined views, the parameter is derived from the view name that is shown in the View list in the user interface. For example, if you are trying to select the Trace Zoom view in the Swept SA measurement, you send:

 :DISP:VIEW:ADV:SEL "Trace Zoom"

because "Trace Zoom" is the name of the View as seen in the Mode/Meas dialog or in the Display, View menu

You *cannot* use the legacy View parameter (which in this case would be **TZOOM**) with

 :DISP:VIEW:ADV:SEL

<alphanumeric> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case. Thus, both of the following forms work:

	<code>:DISP:VIEW:ADV:SEL "Trace Zoom"</code>
	<code>:DISP:VIEW:ADV:SEL "TRACE ZOOM"</code>
	If the specified view is not a valid View, the query returns the error message “-224, Illegal parameter value; View with the name <alphanumeric> does not exist”
	If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message “-221, Settings conflict; View SCPI cannot be used while Display is disabled” is generated

Backwards Compatibility SCPI	The legacy node <code>:DISPlay:VIEW[:SElect]</code> is retained for backwards compatibility, but it only supports predefined views
------------------------------	--

Restore Layout to Default

Restores the Layout to the default for Basic.

Modified Views are very temporary; if you exit the current measurement they are discarded, and they are not saved in State. To retain this View for later use, and to be able to return easily to your original Basic View, you can save your edited View as a “User View”.

Save Layout as New View

Saves your new View as a User View. An alpha keyboard appears, which lets you name your new View; the default is the old View name plus a number.

Remote Command	<code>:DISPlay:VIEW:ADVanced:NAME <alphanumeric></code>
Example	<code>:DISP:VIEW:ADV:NAME "Baseband"</code> Creates a new View named Baseband from the current View, and selects it as the current View
Notes	<code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If <code><alphanumeric></code> name already exists as a View, the error message “-224, Illegal parameter value; View <alphanumeric> already exists” is generated If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message “-221, Settings conflict; User View SCPI cannot be used while Display is disabled” is generated

Re-Save User View

You can re-edit a User View; if you make changes, then an asterisk will appear next to the User View’s name. You can then tap **Re-Save User View** to save it back to its existing name, or **Save Layout as New View** to add another, new User View.

This is a front panel function only, there is no remote command available to perform this function. To do this remotely, you must first perform **Save Layout as New View**, then delete the old User View and rename the new one with the name of the View you just deleted.

Rename User View

You can rename the current View by giving it a new unique name. Only User Views can be renamed, if the current View is a Predefined View, an error occurs.

Remote Command	<code>:DISPlay:VIEW:ADVanced:REName <alphanumeric></code>
Example	<code>:DISP:VIEW:ADV:REN "Baseband"</code>
Notes	<p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case</p> <p>If the <code><alphanumeric></code> specifying the new name is already present in the list of View names, the error message "-224, Illegal parameter value; View <alphanumeric> already exists" is generated</p> <p>If the current View is a Predefined View, the error message "-224, Illegal parameter value; Cannot rename a Predefined View" is generated</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated</p>

Delete User View

You can delete the current View if it is a User View. The default view becomes the current view for the Measurement.

Remote Command	<code>:DISPlay:VIEW:ADVanced:DElete</code>
Example	<code>:DISP:VIEW:ADV:DEL</code>
Notes	<p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case</p> <p>If the <code><alphanumeric></code> is not present in the list of View names, the error message "-224, Illegal parameter value; View <alphanumeric> does not exist" is generated</p> <p>If the current View is a Predefined View, the error message "-224, Illegal parameter value; Cannot delete a Predefined View" is generated</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated</p>

Delete All User Views

Deletes all previously saved User Views. The default view becomes the current view for the Measurement if a User View was the current view when this command

was executed.

Remote Command	<code>:DISPlay:VIEW:ADVanced:DElete:ALL</code>
Example	<code>:DISP:VIEW:ADV:DEL:ALL</code>
Notes	Disabled if there are no User Views

3.7.5.3 Annotation

Contains controls for setting up the annotation for the current Mode or Measurement.

Graticule

Turns the display graticule On or Off for all windows with graticules in all measurements in the current Mode. Also turns the graticule Y-Axis annotation on and off.

Remote Command	<code>:DISPlay:GRATicule[:STATe] OFF ON 0 1</code> <code>:DISPlay:GRATicule[:STATe]?</code>
Example	<code>:DISP:GRAT OFF</code>
Notes	The graticule is the set of horizontal and vertical lines that make up the grid/divisions for the X-Axis and Y-Axis
Preset	ON
State Saved	Saved in instrument state
Backwards Compatibility SCPI	<code>:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe] OFF ON 0 1</code> <code>:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe]?</code> This command is accepted for backwards compatibility with older instruments, but the WINDow , TRACe and GRID parameters are ignored

Screen Annotation

Controls the display of the annunciation and annotation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) and the Y-Axis annotation, for all windows with screen annotation in all measurements in the current Mode.

This does *not* include marker annotation (or the N dB result). When **OFF**, the graticule expands to fill the entire graticule area, leaving only the 1.5% gap above the graticule, as described in the **Trace** section.

Remote Command	<code>:DISPlay:ANNotation:SCReen[:STATe] OFF ON 0 1</code> <code>:DISPlay:ANNotation:SCReen[:STATe]?</code>
----------------	--

Example	<code>:DISP:ANN:SCR OFF</code>
Dependencies	Grayed-out and forced to OFF when System Display Settings, Annotation is OFF
Preset	ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF
State Saved	Saved in instrument state

Trace Annotation

Turns on and off the labels on the traces, showing their detector (or their Math Mode) as described in the **Trace** section, for all windows in all measurements in the current Mode for which Trace Annotation on/off is supported.

If Trace Math is being performed on a trace, then the Trace Math annotation replaces the detector annotation.

For measurements that support limit lines, this key also turns on and off the labels on the Limit Lines. The label is the Limit number annotation and Limit Comment displayed on the graph. If the length of the comment is greater than 20 characters, the first 8 characters and the last 8 characters are displayed, joined with

Remote Command	<code>:DISPlay:ANNotation:TRACe[:STATe] ON OFF 1 0</code> <code>:DISPlay:ANNotation:TRACe[:STATe]?</code>
Example	<code>:DISP:ANN:TRAC OFF</code>
Preset	OFF
State Saved	Saved in instrument state

Control Annotation

Turns on and off the display of values on the Active Function controls for all measurements in the current Mode. This is a security feature.

Remote Command	<code>:DISPlay:ACTivefunc[:STATe] ON OFF 1 0</code> <code>:DISPlay:ACTivefunc[:STATe]?</code>
Example	<code>:DISP:ACT OFF</code>
Dependencies	Grayed out and forced to OFF when System Display Settings, Annotation is OFF
Preset	ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF
State Saved	Saved in instrument state

Meas Bar

Turns the Measurement Bar at the top of the screen on and off for all measurements in the current Mode. When **OFF**, the graticule area expands to fill the area formerly occupied by the Measurement Bar.

Remote Command	<code>:DISPlay:ANNotation:MBAR[:STATe] OFF ON 0 1</code> <code>:DISPlay:ANNotation:MBAR[:STATe]?</code>
Example	<code>:DISP:ANN:MBAR OFF</code>
Dependencies	Grayed out and forced to OFF when System Display Settings, Annotation is OFF
Preset	ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF
State Saved	Saved in instrument state

Display Enable (Remote Command Only)

Turns the display on/off, including the display drive circuitry. The backlight stays lit to confirm that the instrument is on. The display enable setting is mode global. There are three reasons for turning the display off:

1. To increase speed as much as possible by freeing the instrument from having to update the display
2. To reduce emissions from the display, drive circuitry
3. For security purposes

If you have turned off the display:

- and you are in local operation, the display can be turned back on by pressing any key or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor `:SYSTem:PRESet` enable the display)
- and you are in remote operation, the display can be turned back on by pressing the **Local** or **Esc** keys, or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor `:SYSTem:PRESet` enable the display)
- and you are using either the `:SYSTem:KLOCK` command or GPIB local lockout, then *no* front-panel key press will turn the display back on. You must turn it back on remotely.

If the display is **OFF**, many SCPI commands related to User Views and Multiscreen functionality do not work, and return the error messages “-221, Settings conflict; Screen SCPI cannot be used when Display is disabled” or “221, Settings conflict; View SCPI cannot be used while Display is disabled”. These commands include:

Name	Command
Select User View	:DISPlay:VIEW:ADVanced:SElect
Rename User View	:DISPlay:VIEW:ADVanced:REName
Delete User View	:DISPlay:VIEW:ADVanced:DELeTe
Create User View	:DISPlay:VIEW:ADVanced:NAME
Select Screen	:INSTrument:SCReen:SElect
Delete Screen	:INSTrument:SCReen:DELeTe
Delete All But This Screen	:INSTrument:SCReen:DELeTe:ALL
Add Screen	:INSTrument:SCReen:CREate
Rename Screen	:INSTrument:SCReen:REName
Sequencer On/Off	:SYSTem:SEQuencer

Remote Command	:DISPlay:ENABle OFF ON 0 1 :DISPlay:ENABle?
Example	:DISP:ENAB OFF
Couplings	:DISP:ENAB OFF turns Backlight OFF and :DISP:ENAB ON turns Backlight ON, but changing Backlight settings does <i>not</i> change the state of :DISP:ENAB
Preset	ON Set by :SYST:DEF MISC, but not affected by *RST or :SYSTem:PRESet
State Saved	Not saved in instrument state
Backwards Compatibility Notes	:SYST:PRES no longer turns on :DISPlay:ENABle as it did in legacy analyzers

3.7.6 Freq

Opens the **Frequency** menu, which contains controls that allow you to control the frequency parameters of the instrument.

Some features in this menu are the same for all measurements in the current Mode – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by Meas Preset. For example, the Center Freq setting is the same for all measurements – it does not change as you change measurements.

3.7.6.1 Settings

Contains controls that pertain to the X axis parameters of the measurement. These parameters control how data on the vertical (X) axis is displayed and control

instrument settings that affect the horizontal axis.

Carrier Reference Frequency

Sets the reference frequency of all the carriers. The center frequencies of carriers are defined as offset frequency from this value.

Remote Command	<code>[:SENSe]:CCARrier:REFerence <freq></code> <code>[:SENSe]:CCARrier:REFerence?</code>
Example	<code>:CCAR:REF 2GHz</code> <code>:CCAR:REF?</code>
Preset	1 GHz
State Saved	Saved in instrument state
Min	Depends on instrument minimum center frequency. Same as Center Frequency
Max	Depends on instrument maximum center frequency. Same as Center Frequency

3.7.7 Marker

Accesses a menu that enables you to select, set up and control the markers for the current measurement. If there are no active markers, **Marker** selects marker 1, sets it to **Normal** and places it at the center of the display. If the selected marker is Off, it is set to **Normal** and placed it at the center of the screen on the trace determined by the **Marker Window** rules.

3.7.7.1 Select Marker

Specifies the selected marker. The term “selected marker” is used throughout this document to specify which marker will be affected when you change marker settings, perform a Peak Search, etc.

This control appears above the menu panel, indicating that it applies to all controls in the Marker menu panels. Select Marker is blanked if you select a tab whose controls do *not* depend on the selected marker (e.g., Counter).

On any menu tab for which Select Marker displays, the first control is always Marker X.

Notes	The selected marker is remembered even when not in the Marker menu and is used if a Search is done or a Band Function is turned on or for Continuous Peak
Preset	Marker 1
State Saved	The number of the selected marker is saved in instrument state

3.7.7.2 Settings

The controls on this tab include the Marker active function and a radio button selection of the marker control mode (Normal, Delta, Fixed or Off) for the selected marker, as well as additional functions that help you use markers.

Marker X

Set the X Axis value of the selected marker in the current X Axis Scale unit. If the marker mode is off, the SCPI command has no affect other than to cause the marker to become selected. Note that the X value can change if the marker is moved to a trace with a different domain.

The Marker X position is absolute if the marker mode is Normal or Fixed. If the mode is Delta, then the X position is relative to the reference marker. The valid X positions are the actual data points in the trace; the marker cannot be located between points. If a SCPI command attempts to place the marker between two points, the X value snaps to the closest point.

Remote Command	<code>:CALCulate:EVM:MARKer[1] 2 ... 12:X <real></code> <code>:CALCulate:EVM:MARKer[1] 2 ... 12:X?</code>
Example	<code>:CALC:EVM:MARK:X 0.325</code> <code>:CALC:EVM:MARK:X?</code>
Notes	Marker X does not go outside the bounds of the data unless it is Fixed. If you attempt to set it to a value outside the bounds, it is clipped at the closest limit and error -222 Data Out of Range is generated If suffix is sent, it must match the X units for the trace the marker is on. Otherwise, error -138, "Suffix not allowed" is generated If you try to read or set the position of a Delta marker, remember that the position is in relative units
Couplings	Coupling of Delta and Reference Markers
Preset	None until marker is turned on
State Saved	Yes
Min	Depends on trace data
Max	Depends on trace data

Marker Z

Set the selected markers Z Axis value in the current Z Axis Scale unit for markers on traces with a 2-dimensional domain. In each case the marker that is addressed becomes the selected marker. It has no affect (other than to cause the marker to become selected) if the control mode is **Off** or if the trace has no Z domain. Note that

the Z value can change or become irrelevant if the marker is moved to a trace with a different Z domain or no Z domain.

Note that this Z value is affected if the SCPI command to set marker point position is used.

Remote Command	<code>:CALCulate:EVM:MARKer[1] 2 ... 12:Z <real></code> <code>:CALCulate:EVM:MARKer[1] 2 ... 12:Z?</code>
Example	<code>:CALC:EVM:MARK:Z 0.325</code> <code>:CALC:EVM:MARK:Z?</code>
Notes	Marker Z does not go outside the bounds of the data unless it is Fixed. If you attempt to set it to a value outside the bounds it is clipped at the closest limit, and error -222 Data Out of Range is generated If suffix is sent, it must match the Z units for the trace the marker is on. Otherwise, error -138, "Suffix not allowed" is generated
Couplings	Coupling of Delta and Reference Markers
Preset	None until marker is turned on
State Saved	Yes
Min	Depends on trace data
Max	Depends on trace data

Marker Y

Enables you to set or read back the selected marker's Y Axis value in the current Y Axis Scale unit.

Setting the Y value is enabled when the Marker Mode is Fixed.

The query form generates an error if the marker mode is Off. Note that the Y value can change if the Y-axis units change, either from a change in format of the trace the marker is on or if the marker is moved to a different trace.

If the selected marker is on a trace that is displayed with Vector or Constellation format, this function controls only the real part of the Y value (i.e., the horizontal axis value). Use "[Marker Y Imag](#)" on page 1444 to change the imaginary (vertical) value. Marker Y and Marker Y Imag always set or get the rectangular form of Y, regardless of whether the marker readout is polar or rectangular.

Remote Command	<code>:CALCulate:EVM:MARKer[1] 2 ... 12:Y[:REAL] <real></code> <code>:CALCulate:EVM:MARKer[1] 2 ... 12:Y[:REAL]?</code>
Example	<code>:CALC:EVM:MARK2:Y 0.325</code> <code>:CALC:EVM:MARK2:Y?</code>
Notes	You cannot set Y unless the marker type is fixed. If the marker becomes fixed after a marker function is turned on, it is set to whatever the Y value was when the marker became fixed If suffix is sent, it must match the Y units for the trace the marker is on. Otherwise, error -138, "Suffix

	not allowed” is generated
Couplings	Changes if marker is relative to a Delta marker that is turned on
Preset	None until marker is turned on
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

Marker Y Imag

Enables you to set or read back the selected marker’s quadrature (imaginary) Y value in the current Y Axis Scale unit.

Setting the Y value is enabled when the Marker Mode is Fixed, and the current trace format is not complex (Vector or Constellation). The query form generates an error if it is used for a marker that is not on a complex trace. Marker Y Imag is not affected by whether the marker readout is polar or rectangular.

Remote Command	<code>:CALCulate:EVM:MARKer[1] 2 ... 12:Y:IMAGinary <real></code> <code>:CALCulate:EVM:MARKer[1] 2 ... 12:Y:IMAGinary?</code>
Example	<code>:CALC:EVM:MARK1:Y:IMAG 0.435</code> <code>:CALC:EVM:MARK1:Y:IMAG?</code>
Notes	Grayed-out unless the marker is fixed and on a vector display If suffix is sent, it must match the Y units for the trace the marker is on. Otherwise, an Invalid Suffix error is generated. Otherwise, error -138, “Suffix not allowed” is generated If query is sent while the marker is on a trace whose format is not vector or constellation, NaN (9.91E+37) is returned
Preset	None until marker is turned on
State Saved	Yes
Min	Depends on trace format
Max	Depends on trace format

Marker Mode

There are four control modes for markers:

Normal (POSition) – A marker that can be moved to any point on the X Axis by specifying its X Axis value, and whose absolute Y Axis value is then the value of the trace point at that X Axis value

Delta (DELTA) – A marker that can be moved to any point on the X Axis by specifying its X Axis offset from a reference marker, and whose absolute Y Axis value is then the value of the trace point at that X Axis value

Fixed (FIXed) – A marker whose X Axis and Y Axis values may be directly or indirectly specified by you, but whose Y Axis value remains fixed, once specified, and does not follow the trace. Fixed markers are useful as reference markers for Delta markers, as operands in a Peak Search operation, and as arbitrary reference points settable by you. These markers are represented on the display by an “X” rather than a diamond

Off (OFF) – A marker that is not in use

The SCPI command in the table below selects the marker and sets the marker control mode as described under **Normal**, **Delta**, **Fixed** and **Off**, below. All interactions and dependencies detailed under the control description are enforced when the remote command is sent.

Remote Command	<code>:CALCulate:EVM:MARKer[1] 2 ... 12:MODE POSITION DELTA FIXed =OFF</code> <code>:CALCulate:EVM:MARKer[1] 2 ... 12:MODE?</code>
Example	<code>:CALC:EVM:MARK2:MODE POS</code> <code>:CALC:EVM:MARK2:MODE?</code>
Couplings	The marker addressed by this command becomes the selected marker on the front panel
Preset	OFF
State Saved	The marker control mode (Normal, Delta, Fixed, Off) and X Axis value are saved in instrument state
Range	Normal Delta Fixed Off

Delta Marker (Reset Delta)

Pressing this button is exactly the same as pressing the “Delta” selection on the Marker Mode radio button. The selected marker becomes a Delta Marker. If the selected marker is already a Delta marker, the reference marker is moved to the current position of the selected marker, thus resetting the Delta to zero.

Marker Settings Diagram

The Marker Settings Diagram lets you configure the Marker system using a visual utility.

All Markers Off

Turns off all markers.

Remote Command	<code>:CALCulate:EVM:MARKer:AOFF</code>
Example	<code>:CALC:EVM:MARK:AOFF</code>

Couple Markers

When this function is On, moving any marker causes an equal X Axis movement of every other marker that is not Fixed or Off. By “equal X Axis movement” we mean that we preserve the difference between each marker’s X Axis value (in the fundamental x-axis units of the trace that marker is on) and the X Axis value of the marker being moved (in the same fundamental x-axis units).

Note that **Fixed** markers do not couple. They stay where they were while all the other markers move. Of course, if a **Fixed** marker is being moved, all the non-fixed markers do move with it.

This may result in markers going off screen.

Remote Command	<code>:CALCulate:EVM:MARKer:COUPle[:STATe] ON OFF 1 0</code> <code>:CALCulate:EVM:MARKer:COUPle[:STATe]?</code>
Example	<code>:CALC:EVM:MARK:COUP ON</code> <code>:CALC:EVM:MARK:COUP?</code>
Notes	In general, when coupling is turned on then all Normal or Delta markers with the same (or equivalent) domain as the selected marker move in the same manner as the selected marker
Preset	OFF , presets on Mode Preset and All Markers Off
State Saved	Saved in instrument state

3.7.7.3 Peak Search

The controls on this tab allow you to move the marker to selected peaks of the signal, giving you enormous analysis capabilities, particularly when combined with the Delta Marker function.

Marker X

Set the X Axis value of the selected marker in the current X Axis Scale unit. This is the same as the Marker X control on the Settings tab.

Peak Search

Moves the selected marker to the trace point which has the maximum y-axis value for that trace.

NOTE

Pressing the **Peak Search** hardkey automatically moves you to the **Peak Search** page of the Marker menu AND performs a **Peak Search**.

Remote Command	<code>:CALCulate:EVM:MARKer[1] 2 ... 12:MAXimum</code>
Example	<code>:CALC:EVM:MARK2:MAX</code>
Notes	Sending this command selects the subopcoded marker

Next Peak (Next Lower Amp)

Moves the selected marker to the peak that is next lower in amplitude than the current marker's value. Only peaks which meet all enabled peak criteria are considered. If there is no valid peak lower than the current marker position, a "No peak found" message is generated and the marker is not moved.

In the Digital Demod measurements, if the format is complex (vector or constellation) then the marker moves to the closest point that has a lower magnitude than the marker's current position.

If the selected marker was off, then it is turned on as a normal marker and a peak search is performed.

Remote Command	<code>:CALCulate:EVM:MARKer[1] 2 ... 12:MAXimum:NEXT</code>
Example	<code>:CALC:EVM:MARK2:MAX:NEXT</code>
Notes	Sending this command selects the subopcoded marker
State Saved	Not part of saved state

Next Higher Amplitude

Moves the marker to the peak next higher in Y value than the peak it is currently on. If the format is complex (vector or constellation) then the marker moves to the closest point that has a higher magnitude than the marker's current position. If this function is invoked via SCPI on a marker that is off, the result is the same as if you sent a Peak Search command.

Remote Command	<code>:CALCulate:EVM:MARKer[1] 2 ... 12:MAXimum:PREVIOUS</code>
Example	<code>:CALC:EVM:MARK2:MAX:PREV</code>

Next Pk Right

Moves the selected marker to the nearest peak right of the current marker that meets all enabled peak criteria. If there is no valid peak to the right of the current marker position, a "No peak found" message is generated and the marker is not moved.

If the selected marker was off, then it is turned on as a normal marker and a peak search is performed.

Remote Command	<code>:CALCulate:EVM:MARKer[1] 2 ... 12:MAXimum:RIGHT</code>
Example	<code>:CALC:EVM:MARK2:MAX:RIGH</code>
Notes	Sending this command selects the subopcoded marker
State Saved	Not part of saved state

Next Pk Left

Moves the selected marker to the nearest peak left of the current marker that meets all enabled peak criteria. If there is no valid peak to the left of the current marker position, a “No peak found” message is generated and the marker is not moved.

If the selected marker was off, then it is turned on as a normal marker and a peak search is performed.

Remote Command	<code>:CALCulate:EVM:MARKer[1] 2 ... 12:MAXimum:LEFT</code>
Example	<code>:CALC:EVM:MARK2:MAX:LEFT</code>
State Saved	Not part of saved state

Minimum Peak

Moves the selected marker to the minimum y-axis value on the current trace. Minimum (negative) peak searches do not have to meet the peak search criteria. It just looks for the lowest y-axis value. If the selected marker is Off, it is turned on before the minimum search is performed.

Remote Command	<code>:CALCulate:EVM:MARKer[1] 2 ... 12:MINimum</code>
Example	<code>:CALC:EVM:MARK2:MIN</code>
Notes	Sending this command selects the subopcoded marker
State Saved	Not part of saved state

Pk-Pk Search

Finds and displays the amplitude and frequency (or time) differences between the highest and lowest y-axis value. It places the selected marker on the minimum value on its selected trace. And it places that marker’s reference marker on the peak of its selected trace.

This function turns on the reference marker and sets its mode to Fixed or Normal if it is not already on. (These markers may be on two different traces.)

The rules for finding the maximum peak are exactly the same as for **Peak Search**, including the use of the peak criteria rules. However, the minimum trace value is not required to meet any criteria other than being the minimum y-axis value in the trace.

If the selected marker is off, a delta type marker is turned on and the peak-to-peak search is done. If the selected marker is on, but it is not a delta marker, then it is changed to delta which turns on the reference marker if needed, and then it performs the peak-to-peak function.

Remote Command	:CALCulate:EVM:MARKer[1] 2 ... 12:PTPeak
Example	:CALC:EVM:MARK:PTP
Notes	Turns on the Marker D active function Sending this command selects the subopcoded marker
Couplings	The selected marker becomes a delta marker if not already in delta mode
State Saved	Not part of saved state

Marker Delta

Pressing this button is exactly the same as pressing the “Delta” selection on the Marker Mode radio button on the Settings tab. The selected marker becomes a Delta Marker. If the selected marker is already a Delta marker, the reference marker is moved to the current position of the selected marker, thus resetting the Delta to zero.

The control is duplicated here in the Peak Search Menu to allow you to conveniently perform a peak search and change the marker’s control mode to Delta without having to access two separate menus.

3.7.7.4 Properties

The controls on this tab are used to set certain properties of the selected marker.

Marker X

This is the fundamental control that you use to move a marker around on the trace. This is the same as the Marker X control on the Settings tab. See ["Marker X" on page 1442](#).

Relative To

Selects the marker to which the selected marker is relative (its reference marker).

Every marker has another marker to which it is relative. This marker is referred to as the “reference marker” for that marker. This attribute is set by the **Marker**,

Properties, Relative To key. The marker must be a **Delta** marker to make this attribute relevant. If it is a **Delta** marker, the reference marker determines how the marker is controlled and how its value is displayed. A marker cannot be relative to itself.

Remote Command	<code>:CALCulate:EVM:MARKer[1] 2 ... 12:REfERENCE <integer></code> <code>:CALCulate:EVM:MARKer[1] 2 ... 12:REfERENCE?</code>
Example	<code>:CALC:EVM:MARK2:REF 4</code> <code>:CALC:EVM:MARK2:REF?</code>
Notes	This command causes the marker specified with the subopcode to become selected Range (for SCPI command): 1 to 12. If the range is exceeded the value is clipped A marker cannot be relative to itself so that choice is not available, and if sent from SCPI generates error -221: "Settings conflict; marker cannot be relative to itself" When queried a single value is returned (the specified marker numbers relative marker)
Couplings	The act of specifying the selected marker's reference marker makes the selected marker a Delta marker If the reference marker is off it is turned on in Fixed or Normal mode at the delta marker location
Preset	The preset default "Relative To" marker (reference marker) is the next higher numbered marker (current marker +1). For example, if marker 2 is selected, then it's default reference marker is marker 3. The exception is marker 12, which has a default reference of marker 1 Set to the defaults by using Restore Mode Defaults . This is not reset by Marker Off , All Markers Off , or Preset
State Saved	Saved in instrument state. Not affected by Marker Off and hence not affected by Preset or power cycle
Min	1
Max	12

Marker Window

Assigns the specified marker to the designated trace.

Remote Command	<code>:CALCulate:EVM:MARKer[1] 2 ... 12:WINDow <int></code> <code>:CALCulate:EVM:MARKer[1] 2 ... 12:WINDow?</code>
Example	<code>:CALC:EVM:MARK:WIND 2</code> set the first marker's trace to window 2 <code>:CALC:EVM:MARK:WIND?</code> query the first marker's trace
Notes	Assigns the specified marker to the designated window
Preset	1
State Saved	Yes
Min	1
Max	6

Marker Trace

Assigns the specified marker to the designated trace (result and limit lines) when selected window is In-Band Emissions.

Remote Command	<code>:CALCulate:EVM:MARKer[1] 2 ... 12:TRACe:IBEM POver ALL GENeral IMAGE DC</code> <code>:CALCulate:EVM:MARKer[1] 2 ... 12:TRACe:IBEM?</code>
Example	<code>:CALC:EVM:MARK:TRAC:IBEM ALL</code> set the first marker's trace to IBE All limit line <code>:CALC:EVM:MARK:TRAC:IBEM?</code> query the first marker's trace in IBE window
Notes	Assigns the specified marker to the designated trace (result and limit lines)
Couplings	Only valid when the In-Band Emissions window is selected
Preset	<code>POWer</code>
State Saved	Yes
Range	RB Power All (combined) Limit General Limit IQ Image Limit Carrier Leakage Limit

Marker Settings Diagram

Lets you configure the Marker system using a visual utility. This is the same as "[Marker Settings Diagram](#)" on page 1445 on the **Settings** tab.

3.7.7.5 Marker Function

The controls on this tab allow you to control the Marker Functions of the instrument. Marker Functions perform post-processing operations on marker data.

Marker X

Sets the X Axis value of the selected marker in the current X Axis Scale unit. This is the same as the Marker X control on the Settings tab

Band Function

Sets the marker control function type to one of the following:

<code>NOISe</code>	Marker Noise
<code>BPOWer</code>	Band Power
<code>BDENsity</code>	Band Density

OFF Marker Function Off

Remote Command	:CALCulate:EVM:MARKer[1] 2 ... 12:FUNCTION NOISe BPOwer BDENsity OFF :CALCulate:EVM:MARKer[1] 2 ... 12:FUNCTION?
Example	:CALC:EVM:MARK:FUNC BPOW :CALC:EVM:MARK:FUNC?
Preset	OFF
State Saved	Yes
Range	Marker Noise Band Power Band Density Off
Annotation	Mkr # <X value> and <Marker value> upper right on graph

Band Span

Sets the width of the span for the selected marker. This function defines the span of frequencies or time. The marker position does not change when you adjust the span.

Remote Command	:CALCulate:EVM:MARKer[1] 2 ... 12:FUNCTION:BAND:SPAN <real> :CALCulate:EVM:MARKer[1] 2 ... 12:FUNCTION:BAND:SPAN?
Example	:CALC:EVM:MARK2:FUNC:BAND:SPAN 1.23E+06 :CALC:EVM:MARK2:FUNC:BAND:SPAN?
Preset	When marker turned on, 1/20 th of current span or displayed time length
State Saved	Yes
Min	100
Max	9.9E+37

Band Left

Enables you to adjust the left side of the band. In order to remain centered in the band, the marker position must also change as you change the left edge. The right edge is unaffected.

Remote Command	:CALCulate:EVM:MARKer[1] 2 ... 12:FUNCTION:BAND:LEFT <real> :CALCulate:EVM:MARKer[1] 2 ... 12:FUNCTION:BAND:LEFT?
Example	:CALC:EVM:MARK2:FUNC:BAND:LEFT 1.23E+06 :CALC:EVM:MARK2:FUNC:BAND:LEFT?
Couplings	Changes marker X to keep the marker centered in the band
Preset	When marker turned on, 1/40 th of current span or displayed time length left of the marker position

State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

Band Right

Enables you to adjust the right side of the band. In order to remain centered in the band, the marker position must also change as you change the right edge. The left edge is unaffected.

Remote Command	<code>:CALCulate:EVM:MARKer[1] 2 ... 12:FUNCTION:BAND:RIGHT <real></code> <code>:CALCulate:EVM:MARKer[1] 2 ... 12:FUNCTION:BAND:RIGHT?</code>
Example	<code>:CALC:EVM:MARK2:FUNC:BAND:RIGHT 1.23E+06</code> <code>:CALC:EVM:MARK2:FUNC:BAND:RIGHT?</code>
Couplings	Changes marker X to keep the marker centered in the band
Preset	When marker turned on, 1/40 th of current span or displayed time length right of the marker position
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

3.7.7.6 Marker To

The controls on this tab enable you to copy the current marker's value into other instrument parameters (for example, Center Freq). The currently selected marker is made the active function on entry to this menu (if the currently selected marker is not on when you press this front panel key, it will be turned on at the center of the screen as a normal type marker and then made the active function).

Marker X

Sets the X Axis value of the selected marker in the current X Axis Scale unit. This is the same as the Marker X control on the Settings tab.

Mkr -> CF

Sets the center frequency of the analyzer to the frequency of the selected marker. The marker stays at this frequency, so it moves to the center of the display. In delta marker mode, this function sets the center frequency to the x-axis value of the delta marker. When the frequency scale is in log mode, the center frequency is not at the center of the display.

If the currently selected marker is not on when this control is pressed, it will be turned on at the center of the screen as a normal type marker.

Remote Command	<code>:CALCulate:EVM:MARKer[1] 2 ... 12[:SET]:CENTer</code>
Example	<code>:CALC:EVM:MARK4:CENT</code>
Notes	Sending this command selects the subopcoded marker If specified marker is off, this command will turn it on at the center of the screen as a normal type marker
Dependencies	This function is not available (control is grayed out) when x-axis is the time domain
Couplings	All the usual couplings associated with setting Center Frequency apply

3.7.8 Meas Setup

Contains functions for setting up the measurement parameters and also contains functions for setting up parameters global to all measurements in the mode.

3.7.8.1 Settings

Enables you to set measurement parameters.

Component Carrier

Allows you to select which component carrier settings should be accessible on GUI.

You can select any CC index that is less than the Number of Component Carriers. The inactive carriers are disabled.

Remote Command	<code>[:SENSe]:EVM:SELEcted CC0 ... CC15</code> <code>[:SENSe]:EVM:SELEcted?</code>
Example	<code>:EVM:SEL CC0</code> <code>:EVM:SEL?</code>
Dependencies	Coupled to Number of Component Carriers. For example, if Number of Component Carriers is 2, then Component Carrier list includes CC0~CC1
Preset	<code>CC0</code>
State Saved	Saved in instrument state
Range	<code>CC0 ... CC15</code>

Avg|Hold Number

Specifies the number of N averages that will be used for the measurement. After the specified number (average counts) have been averaged, the averaging mode

(termination control) setting determines the averaging action.

Remote Command	<code>[:SENSe]:EVM:AVERage:COUNT <integer></code> <code>[:SENSe]:EVM:AVERage:COUNT?</code>
Example	<code>:EVM:AVER:COUN 1000</code> <code>:EVM:AVER:COUN?</code>
Preset	10
State Saved	Yes
Min	1
Max	10000

Continue Averaging

Continue Averaging is designed for acquiring the trace average through multiple sets of DUT conditions, in order to meet requirements such as those for an OTA measurement.

NOTE

You must be in **Single** sweep/measurement to use **Continue Averaging**. Go to **Single** and press **Restart** to get your first set of averages, then **Continue Averaging** will be available.

Use `FETCh: <meas>?` to retrieve the data as it waits for completion of Continue Averaging. `*OPC?` does not wait for completion and returns true immediately.

Pressing this control adds (to the already averaged trace or measurement) a number of averages equal to the Avg|Hold number. Every time you press it, the terminal count increases by the current value of the Avg|Hold number. You can change your test setup (e.g., the DUT position or antenna) after each average count reaches the terminal count.

You could also accomplish the same thing by manually increasing the Avg|Hold number, but using Continue Averaging you are guaranteed to get the same number of averages at each step in the process and you always keep the Avg|Hold number the same so you don't lose its value

Remote Command	<code>[:SENSe]:EVM:AVERage:CONTInue</code>
Example	<code>:EVM:AVER:CONT</code>
Dependencies	Becomes enabled when you change Sweep mode to Single and the Average Count reaches the Average Number. Otherwise, grayed-out

Averaging On/Off

Turns averaging on or off.

Remote Command	<code>[:SENSe]:EVM:AVERage[:STATe] OFF ON 0 1</code> <code>[:SENSe]:EVM:AVERage[:STATe]?</code>
Example	<code>:EVM:AVER OFF</code> <code>:EVM:AVER?</code>
Preset	<code>OFF</code>
State Saved	Yes
Range	<code>Off On</code>

Averaging Mode

Toggles the averaging mode between Exp (exponential) and Repeat. This selection only affects the averaging result after the number of N averages is reached. The N is set using the control “Avg|Hold Number.”

Exponential	Each successive data acquisition after the average count is reached, is exponentially weighted and then combined with the existing average
Repeat	After reaching the average count, the averaging is reset and a new average is started

Remote Command	<code>[:SENSe]:EVM:AVERage:TCONtrol EXPonential REPEAT</code> <code>[:SENSe]:EVM:AVERage:TCONtrol?</code>
Example	<code>:EVM:AVER:TCON REP</code> <code>:EVM:AVER:TCON?</code>
Notes	Selects the type of termination control used for averaging. This determines the averaging action after the specified number of frames (average count) is reached
Preset	<code>EXPonential</code>
State Saved	Yes
Range	<code>Exponential Repeat</code>

Acquisition Mode

Specifies the data acquisition mode that will be used by analyzer to capture IQ data.

When Acquisition mode is Sequential, data capture is done for each enabled CC sequentially. The acquisition center frequency is adjusted to the Carrier Ref Freq + CC Freq Offset, and acquisition IFBW is the CC BW. All the pre-demod traces will show results based on individual CC BW. For example, the Span of spectrum trace for CC0 will be based on BW setting of CC0.

When Acquisition mode is Simultaneous, data capture is done for all enabled CCs simultaneously using a bandwidth less than Max IF BW supported by HW. The acquisition center freq is the Carrier Ref Freq, and acquisition IFBW is adjusted to

the aggregated CC BW (not exceeding the HW Max IFBW). If one enabled CC frequency range is out of the acquisition frequency range, the warning "Required Bandwidth is beyond hardware capability" is prompted, and there will be no EVM results available for such CC. All the pre-demod traces will show results based on aggregated BW rather than individual CC BW.

Remote Command	<code>[:SENSe]:EVM:ACQuisition SIMultaneous SEQuential</code> <code>[:SENSe]:EVM:ACQuisition?</code>
Example	<code>:EVM:ACQ SEQ</code> <code>:EVM:ACQ?</code>
Preset	<code>SEQuential</code>
State Saved	Saved in instrument state
Range	<code>Simultaneous SeQuential</code>

Copy CC To

Copies the selected "**Component Carrier**" on page 1454 to another Component Carrier, or all Component Carriers.

This parameter copies 5GNR demodulation parameters from one Component Carrier to other Component Carrier or all Component Carriers.

For GUI operation, which parameters will be copied is specified by Copy CC Content.

For SCPI operation, which parameters will be copied is specified by optional node:

- **ALL**: All Component Carrier specific parameters under Meas Setup panel
- **TIME**: All parameters under Meas Setup - Meas Time tab
- **ADVanced**: All Component Carrier specific parameters under Meas Setup - Advanced tab
- **DECode**: All parameters under Meas Setup – Decode tab

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:COpy:ALL TIME ADVanced DECode CC0 CC1 CC2 CC3 CC4 CC5 CC6 CC7 CC8 CC9 CC10 CC11 CC12 CC13 CC14 CC15 ALL</code>
Example	<code>:EVM:CCAR0:COpy:ADV ALL</code>
Couplings	Enabled when Component Carrier number is greater than one
Preset	<code>ALL</code>
State Saved	Yes
Range	<code>All CC0 CC1 CC2 CC3 CC4 CC5 CC6 CC7 CC8 CC9 CC10 CC11 CC12 CC13 CC14 CC15</code>

Copy CC Content

Specifies the Meas Setup parameter group for ["Copy CC To" on page 1457](#):

- **All**: All Component Carrier specific parameters under Meas Setup panel
- **Meas Time**: All parameters under Meas Setup - Meas Time tab
- **Advanced**: All Component Carrier specific parameters under Meas Setup - Advanced tab
- **Decode**: All parameters under Meas Setup – Decode tab

Couplings	Enabled when "Component Carrier" on page 1454 number is greater than one
Preset	All
State Saved	Saved in instrument state
Range	All Meas Time Advanced Decode

Spur Avoidance (VXT2)

Because VXT models SP900B/11A/15A are direct-conversion (zero-IF) receivers, feedthrough leakage from the local oscillator appears as a spurious signal (spur) at the center frequency. The Spur Avoidance function is provided to eliminate this spur, at the expense of some measurement speed.

When Spur Avoidance is enabled (the default), the analyzer uses a software algorithm to remove this spur from the displayed measurement data, but the algorithm only operates under certain conditions. Specifically, it only operates when the $BW \leq \max BW / 2.5$. See [More Information](#).

You can disable this function in order to speed up your measurement. When Spur Avoidance is turned Off, a warning message will appear in the status bar as "Settings Alert; Spur Avoidance Off". This is to alert you that measurement accuracy might be impacted because you have defeated the spur avoidance algorithm.

Remote Command	<code>[:SENSe]:EVM:SAVoid[:STATe] ON OFF 0 1</code> <code>[:SENSe]:EVM:SAVoid[:STATe]?</code>
Example	<code>:EVM:SAV ON</code> <code>:EVM:SAV?</code>
Dependencies	This control only appears in VXT models SP900B/11A/15A
Preset	ON
State Saved	Saved in instrument state
Range	On Off

More Information

The Maximum Digital IF BW depends on the installed options, and selected Center Frequency.

VXT models SP900B/11A

Option limitation:

Option	Max Digital IF BW
B40	40 MHz
B3X	300 MHz
B6X	600 MHz
B12	1200 MHz

Center frequency limitation:

Center Frequency	Max Digital IF BW
330 MHz ~ 380 MHz	$(CF - 330 \text{ MHz}) * 2$
380 MHz ~ 550 MHz	100 MHz
550 MHz ~ 1310 MHz	200 MHz
1310 MHz ~ 2000 MHz (without Option EP6)	600 MHz
2000 MHz ~ 5480 MHz (without Option EP6)	1200 MHz
5480 MHz ~ 6080 MHz (without Option EP6)	$(6080 \text{ MHz} - CF) * 2$
1310 MHz ~ 1900 MHz (Option EP6)	600 MHz
1900 MHz ~ 6000 MHz (Option EP6)	1200 MHz
6000 MHz ~ 6600 MHz (Option EP6)	$(6600 \text{ MHz} - CF) * 2$

VXT model SP900B

Option limitation:

Option	Max Digital IF BW
B4X	400 MHz
B8X	800 MHz
B12	1200 MHz

Center frequency limitation:

Center Frequency	Max Digital IF BW
330 MHz ~ 380 MHz	$(CF - 330 \text{ MHz}) * 2$
380 MHz ~ 550 MHz	100 MHz
550 MHz ~ 1310 MHz	200 MHz
1310 MHz ~ 2000 MHz	600 MHz

Center Frequency	Max Digital IF BW
2000 MHz ~ 12300 MHz	1200 MHz
12300 MHz ~ 12900 MHz	(12900 MHz – CF) * 2

Optimize EVM

This is an "immediate action" function to optimize EVM for active Component Carriers. It is used to set the combination of preamp, mechanical and electronic attenuation and IF gain value based on measured signal peak level. Its purpose is to get better EVM results by improving SNR and avoid ADC over load at the same time.

After this control is pressed, Pre-Adjust or Min Clipping is changed to Off and IF Gain Auto is changed to Manual.

Note: for multiple Component Carriers in sequential mode, after optimization, separate optimized settings (attenuation, preamp, IF Gain) for each CC will be used before measurement restart. And selected component carrier's optimized setting will be displayed on panel. After measurement restart the displayed setting (optimized for selected CC) will be used for all active CC.

Remote Command	<code>[:SENSe]:EVM:OPTimize</code>
Example	<code>:EVM:OPT</code>
Dependencies	Does not appear in VXT Models SP900B/11A/15A/16A/20A/21A

EVM Optimization Method

"Optimize EVM" is an immediate action to adjust hardware settings to minimize EVM, before the action, the EVM Optimization Method should be selected.

There are 2 methods for EVM Optimization:

Normal	<code>NORMAL</code>	Captures input signal, measures its peak power, then the algorithm finds the proper setting combination for attenuation, preamp and IF Gain
Iterative	<code>ITERative</code>	Captures input signal multiple times in an iteration process, demodulates the signal and calculates EVM for each iteration, then finds the setting combination for attenuation, preamp and IF Gain with minimum EVM

For 5GNR signal, Iterative method is significantly slower than Normal method but it can always get better EVM.

Remote Command	<code>[:SENSe]:EVM:OPTMethod NORMAL ITERative</code> <code>[:SENSe]:EVM:OPTMethod?</code>
----------------	--

Example	<code>EVM:OPTM NORM</code> <code>EVM:OPTM?</code>
Dependencies	Does not appear in VXT Models SP900B/11A/15A/16A/20A/21A
Couplings	Disabled when "Component Carrier" on page 1454 number is greater than one
Preset	<code>NORMal</code>
State Saved	Saved in instrument state
Range	<code>Normal</code> <code>Iterative</code>

Iterative EVM Optimization Target

Specify the component carrier will be used as iterative EVM optimization target.

Remote Command	<code>[:SENSe]:EVM:OPTimize:ITERative:TARGet CC0 ... CC15</code> <code>[:SENSe]:EVM:OPTimize:ITERative:TARGet?</code>
Example	<code>EVM:OPT:ITER:TARG CC0</code> <code>EVM:OPT:ITER:TARG?</code>
Dependencies	This control is invalid when EVM Optimization Method is Normal
Preset	<code>CC0</code>
State Saved	Saved in instrument state
Range	<code>CC0</code> ... <code>CC15</code>

Allow Re-Calculation

In single mode, turn on/off result recalculation and update (without measurement restart) when you change specific parameters:

Remote Command	<code>:CALCulate:EVM:RECalculate OFF ON 0 1</code> <code>:CALCulate:EVM:RECalculate?</code>
Example	<code>:CALC:EVM:REC OFF</code> <code>:CALC:EVM:REC?</code>
Couplings	This control will be disabled when: <ul style="list-style-type: none"> - Measurement in continuous mode - Or Multiple CC with Sequential Acquisition mode
Preset	<code>OFF</code>
State Saved	Yes
Range	<code>Off</code> <code>On</code>

Restart Meas on Optimize EVM

Toggles the force restart switch for the immediate action of ["Optimize EVM" on page 1460](#).

When ON, pressing the control Optimize EVM or sending `[:SENSe]:EVM:OPTimize` restarts the measurement and then executes the function.

When OFF, pressing Optimize EVM or sending the SCPI command neither restarts the measurement nor executes the function. The function is executed when you restart the measurement or execute continuing averaging. In this case, pressing **Optimize EVM** generates the following advisory message:

“The immediate action is deferred until "Restart" or "Continue Averaging" is executed”

This message is not generated when the SCPI command is sent.

Remote Command	<code>[:SENSe]:EVM:IACTion:REStart OFF ON 0 1</code> <code>[:SENSe]:EVM:IACTion:REStart?</code>
Example	<code>:EVM:IACT:RESt OFF</code> <code>:EVM:IACT:RESt?</code>
Preset	ON
State Saved	Saved

Auto Couple

Immediately puts all Auto/Man functions into Auto. The **Auto Couple** action is confined to the current measurement only. It does not affect other measurements in the Mode.

In the Auto state, Auto/Man functions are said to be “coupled”, meaning their values change as you make changes to other values in the measurement. This helps ensure accurate measurements and optimum dynamic range. **Auto Couple** is an immediate action function, and when it is executed, all the Auto/Man controls for the current measurement are set to Auto, and all measurement settings coupled to the Auto/Man parameters are automatically set to their optimal values.

For further details of measurement-specific settings (if any), see ["Measurement-Specific Details" on page 1463](#) below.

Remote Command	<code>:COUPle ALL</code>
Example	<code>:COUP ALL</code>
Backwards	<code>:COUPLE ALL NONE</code>

**Compatibility
SCPI**

Backwards Compatibility Notes : **COUP:NONE** puts all Auto/Man parameters in manual mode, decoupling all the coupled instrument parameters. It is retained for backwards compatibility and is *not* recommended for making measurements or new designs

All Auto/Man parameter couplings in the measurement are set to Auto. This includes couplings that may be unavailable or grayed-out due to the current state. For example, in the Swept SA measurement, there is no Auto/Man coupling for **RBW** while in Zero Span. Nonetheless, if **Auto Couple** were executed while in Zero Span it would set **RBW** to Auto "behind the scenes" so that, on exit from Zero Span, it would be in Auto.

Any Auto/Man selection specific (local) to the other measurements in the current Mode will not be affected by **Auto Couple**. Any functions that are *not* coupled with other instrument parameters, such as ranging or leveling variables, such as "AutoRange" or "AutoScale", will not be affected.

Executing the **Auto Couple** command generates the informational message, "All Auto/Man functions have been set to Auto".

Each parameter, upon being set to Auto, selects and sets the appropriate auto-coupled value based on that parameter's coupling rules. The Dependency Resolver orchestrates the couplings for parameters that are dependent on one or more other parameters. The coupling and dependency rules for each parameter are defined in the chapter describing that parameter.

Executing the **Auto Couple** command *does not* affect markers, marker functions, trace or display attributes, or any other instrument setting other than those specifically mentioned above.

Measurement-Specific Details

TOI

Parameters affected by Auto Couple are:

- Center Frequency Step
- Resolution Bandwidth
- Span/RBW Ratio
- Sweep Time
- Video BandwidthVBW/RBW ratio
- Upper and Lower Tone (set to Sense)

3 5G NR Mode
3.7 Modulation Analysis Measurement

- Zero span measurement Resolution Bandwidth
- Zero span measurement Dwell Time
- Center Frequency Step
- Resolution Bandwidth
- Span/RBW Ratio
- Sweep Time
- Video BandwidthVBW/RBW ratio
- Upper and Lower Tone (set to Sense)
- Zero span measurement Resolution Bandwidth
- Zero span measurement Dwell Time

Harmonics

For Harmonics, these parameters are:

- Resolution Bandwidth
- Fundamental Frequency
- Dwell Time
- Range Table Resolution Bandwidths
- Range Table Dwell Times

Meas Preset

Restores all the measurement parameters to their default values.

Remote Command	:CONFigure:EVM
----------------	----------------

Example	:CONF:EVM
---------	-----------

Notes	Restore all defaults of parameters
-------	------------------------------------

3.7.8.2 Radio

The Radio tab contains controls to select link direction.

Direction

Direction specifies whether the 5G NR signal is an uplink signal or a downlink signal. This control allows you to set the Direction of the signal being measured.

Remote Command	<code>[:SENSe]:RADio:STANdard:DIRection DLINK ULINK</code> <code>[:SENSe]:RADio:STANdard:DIRection?</code>
Example	<code>:RAD:STAN:DIR DLIN</code>
Dependencies	When N9085EM0E is not installed and N9085EM4E is installed, only Uplink is available
Couplings	Changing the direction affects the gate source as follows <ul style="list-style-type: none"> - If changed to uplink: RF burst - If changed to downlink: External 1 <p>In Transmit On Off Power, changing the direction affects the trigger source as follows</p> <ul style="list-style-type: none"> - If changed to uplink: Periodic - If changed to downlink: External 1 except for models with the H1G option. With the H1G option, the trigger source changes as follows. <ul style="list-style-type: none"> - External 1, when Info BW \leq 255 MHz - External 3, when Info BW \geq 256 MHz <p>Changing the direction affects many other modulation analysis setup parameters</p>
Preset	ULINK when N9085EM0E is not installed and N9085EM4E is installed Otherwise, DLINK
State Saved	Yes
Range	Uplink only when N9085EM0E is not installed and N9085EM4E is installed Otherwise, Downlink Uplink

MIMO

Indicates input Signal is MIMO (including MISO) or SISO.

NOTE

This setting is available for EVM.

Remote Command	<code>[:SENSe]:RADio:MIMO[:STATe] ON OFF 0 1</code> <code>[:SENSe]:RADio:MIMO[:STATe]?</code>
Example	<code>:RAD:MIMO ON</code> <code>:RAD:MIMO?</code>

Preset	OFF
State Saved	Yes
Range	ON OFF

When input signal is MIMO, there are two use models depends on input data channel number.

- Input data channel number = 1

This means the MIMO signal has been combined into one channel (MISO), in this condition only part of measurements results are valid:

MIMO Info table

Spectrum trace

Raw Main Time trace

- Input data channel number > 1

Input data channels may come from:

Recall IQ data for multiple channels

Reference Input Channel

Specifies reference channel in MIMO mode.

NOTE This setting is available for EVM when "MIMO" on page 1465 is set to On.

Remote Command	<code>[:SENSe]:RADio:MIMO:CHANnel:REFerence CHANnel1 ... CHANnel8</code> <code>[:SENSe]:RADio:MIMO:CHANnel:REFerence?</code>
Example	<code>:RAD:MIMO:CHAN:REF CHAN1</code> <code>:RAD:MIMO:CHAN:REF?</code>
Couplings	This key is grayed-out when MIMO is off The available selections depend on Total input channel number
Preset	CHAN1
State Saved	Yes

Multi Channel Config

Lets you perform a detailed configuration of each input channel. This will be used for two cases:

- MIMO (EVM only): Meas Setup > Radio (SP900Sand UXM model SP900Bonly)
- ccEVM (EVM only): Meas Setup > Advanced

Multi Channel Configuration

This menu is available for the EVM measurement. It enables you to configure multiple channel receiver. Different hardware platforms have different parameters.

Input Port (UXM)

Select input port for channel configuration.

Remote Command	<code>[:SENSe]:RADio:MCHannel:PORT[1] 2 RFI01 ... RFI08</code> <code>[:SENSe]:RADio:MCHannel:PORT[1] 2?</code>
Example	<code>:RAD:MCH:PORT2 RFI02</code> <code>:RAD:MCH:PORT2?</code>
Dependencies	This control appears only in the EVM measurement in the UXM model SP900B When "Lock (UXM)" on page 1817 is On, the selections are grayed out and cannot be changed. When "Lock (UXM)" on page 1817 is OFF, the label "Channel x" changes to "Unused" Selections are the same as those of RF Input Port and either RFI01 to RFI08 or RFI01 to RFI016 depending on the hardware configuration
Preset	RFI01 RFI02
State Saved	Yes
Range	RFI01 RFI02 RFI03 RFI04 RFI05 RFI06 RFI07 RFI08 or RFI01 RFI02 RFI03 RFI04 RFI05 RFI06 RFI07 RFI08 RFI09 RFI10 RFI11 RFI12 RFI013 RFI014 RFI015 RFI016
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:MIMO:PORT[1] 2</code>

Lock (UXM)

Enables you to lock/unlock the input port. When locked, the selected input port is assigned to a channel.

Remote Command	<code>[:SENSe]:RADio:MCHannel:PORT[1] 2:LOCKed OFF ON 0 1</code> <code>[:SENSe]:RADio:MCHannel:PORT[1] 2:LOCKed?</code>
Example	<code>:RAD:MCH:PORT2:LOCK ON</code> <code>:RAD:MCH:PORT2:LOCK?</code>
Dependencies	This control appears only in the EVM measurement in the UXM model SP900B

Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:MIMO:PORT[1] 2:LOCKed</code>

Input Channel IP address

Set instrument IP address for channel configuration, “local” is used for current instrument.

Remote Command	<code>[:SENSe]:RADio:MIMO:IPADdress[1] 2 ... 4 <String></code> <code>[:SENSe]:RADio:MIMO:IPADdress[1] 2 ... 4?</code>
Example	<code>:RAD:MIMO:IPAD '192.168.1.2'</code>
Dependencies	This control appears only in the EVM measurement
Preset	local
State Saved	Yes

Input Channel TCP port (Remote Command only)

Set instrument TCP port for channel configuration.

Remote Command	<code>[:SENSe]:RADio:MIMO:IPADdress[1] 2 ... 4:PORT <int></code> <code>[:SENSe]:RADio:MIMO:IPADdress[1] 2 ... 4:PORT?</code>
Example	<code>:RAD:MIMO:IPAD:PORT 3574</code>
Dependencies	Available only for the EVM measurement
Preset	3574
State Saved	Yes

Lock

Lock instrument and assign to a channel in sequence.

Remote Command	<code>[:SENSe]:RADio:MIMO:IPADdress[1] 2 ... 4:LOCKed OFF ON 0 1</code> <code>[:SENSe]:RADio:MIMO:IPADdress[1] 2 ... 4:LOCKed?</code>
Example	<code>:RAD:MIMO:IPAD1:LOCK 1</code> <code>:RAD:MIMO:IPAD1:LOCK?</code>
Dependencies	This control appears only in the EVM measurement
State Saved	Yes

Channel Configuration Information (Remote Command only)

This SCPI query reads back channel configuration information.

Remote Command	<code>[:SENSe]:RADIO:MIMO:CHANnel:INFO?</code>
Example	<code>:RAD:MIMO:CHAN:INFO?</code>
Dependencies	Available only for the EVM measurement

Advanced Acquisition

This menu is only available for the Modulation Analysis measurement. It enables you to configure selected RF settings for each component carrier and channel.

Number of Component Carriers

This is the same as the control on the menu panel. See ["Number of Component Carriers" on page 2633](#).

Sweep/Measure

Allows you to toggle between **Continuous** and **Single** sweep or measurement operation. The single/continuous state is Meas Global, so the setting affects all measurements.

The front-panel key **Single/Cont** performs exactly the same function

See ["More Information" on page 1470](#)

Remote Command	<code>:INITiate:CONTinuous OFF ON 0 1</code> <code>:INITiate:CONTinuous?</code>
Example	Put instrument into Single measurement operation: <code>:INIT:CONT 0</code> <code>:INIT:CONT OFF</code> Put instrument into Continuous measurement operation: <code>:INIT:CONT 1</code> <code>:INIT:CONT ON</code>
Preset	ON Note that <code>:SYST:PRES</code> sets <code>:INIT:CONT</code> to ON , but <code>*RST</code> sets <code>:INIT:CONT</code> to OFF
State Saved	Saved in instrument state
Annunciation	The Single/Continuous icon in the Meas Bar changes depending on the setting:

- A line with an arrow is **Single**
- A loop with an arrow is **Continuous**

Backwards
 Compatibility
 Notes

For Spectrum Analysis Mode in ESA and PSA, there is no **Cont** hardkey, instead there is a **Sweep Single/Cont** softkey. In these instruments, switching the **Sweep Single/Cont** softkey from Single to Cont restarts averages (displayed average count reset to 1), but does not restart **Max Hold** and **Min Hold**

X-Series A-models have **Single** and **Cont** hardkeys in place of the **SweepSingleCont** softkey. In the X-Series A-models, if in single measurement, the **Cont** hardkey (and **INIT:CONT ON**) switches to continuous measurement, but never restarts a measurement and never resets a sweep

X-Series B-models have a **Cont/Single** toggle control instead of **Single** and **Cont** hardkeys, but it is still true that, if in single measurement, the **Cont/Single** toggle control never restarts a measurement and never resets a sweep

For Spectrum Analysis Mode in ESA and PSA, the **Single** hardkey and the **INITiate:IMM** switched from continuous measurement to single measurement and restarted sweeps and averages (displayed average count reset to 1), but did not restart **Max Hold** and **Min Hold**. In the X-Series, the **Restart** control and the **INITiate:IMM** command initiate a sweep/ measurement/ average sequence/hold sequence including **MaxHold** and **MinHold**

For Spectrum Analysis Mode in ESA and PSA, the **Single** hardkey restarted the sweep regardless of whether or not you were in an active sweep or sweep sequence. In the X-Series, **Restart** does this

More Information

Continuous Mode The instrument takes repetitive sweeps, averages, measurements, etc., when in continuous mode. If in average or Max/Min Hold, and the average/hold count reaches the **Average/Hold Num**, the count stops incrementing, but the instrument keeps sweeping

See the **Trace** key description under **Trace Average** for the averaging formula used both before and after the **Average/Hold Num** is reached. The trigger condition must be met prior to each sweep

The type of trace processing for multiple sweeps is set under the **Trace** key, with choices of **Trace Average**, **Max Hold**, or **Min Hold**

Single Mode The instrument takes a single sweep when in **Single** mode, or if in average or Max/Min Hold, or if there is a **Waterfall** window displayed, it takes multiple sweeps until the average/hold count reaches the **Average/Hold Num**, then the count stops incrementing, and the instrument stops sweeping

See the **Trace** key description under **Trace Average** for the averaging formula used. The trigger condition must be met prior to the sweep

The type of trace processing for multiple sweeps is set under the **Trace** key, with choices of **Trace Average**, **Max Hold**, or **Min Hold**

If the instrument is in **Single** measurement mode, pressing the **Cont/Single** toggle control does not zero the count and does not cause the sweep to be reset; the only action is to put the instrument into Continuous measurement operation.

If it is already in continuous sweep:

- `:INIT:CONT 1` has no effect
- `:INIT:CONT 0` places the instrument in Single Sweep but has no effect on the current sequence until $k = N$, at which point the current sequence will stop and the instrument will go to the idle state

See the "Restart" on page 2683 control description for details of `:INIT:IMMEDIATE`.

If the instrument is already in **Single** sweep, `:INIT:CONT OFF` has no effect.

If the instrument is already in **Single** sweep, then pressing **Cont/Single** in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing **Cont/Single** does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the instrument is waiting for a trigger). Even though pressing **Cont/Single** in the middle of a sweep does not restart the sweep, sending `:INIT:IMM` does reset it.

If the instrument is in **Single** sweep, and *not* Averaging/Holding, and you want to take one more sweep, press **Restart**.

If the instrument is in **Single** sweep, *and* Averaging/Holding, and you want to take one more sweep without resetting the Average trace or count, go to **Meas Setup** and increment the average count by 1 by pressing the **Step Up** key while **Average/Hold Num** is the active function. You can also do this by sending `:CALC:AVER:TCON UP`.

Input Channel (GUI Only)

Select the input channel to configure its settings.

State Saved	No
-------------	----

Use Advanced Acquisition Table

Specify if the settings in Advanced Acquisition Table will be applied.

Remote Command	<code>[:SENSe]:RF:ACQuistion:ATABle OFF ON 0 1</code> <code>[:SENSe]:RF:ACQuistion:ATABle?</code>
Example	<code>:RF:ACQ:ATAB 1</code> <code>:RF:ACQ:ATAB?</code>
Preset	<code>OFF</code>
State Saved	Yes
Range	<code>OFF ON</code>

Acquisition Mode

Specifies the data acquisition mode that will be used by analyzer to capture IQ data.

When Acquisition mode is Sequential, data capture is done for each enabled CC sequentially. The acquisition center frequency is adjusted to the Carrier Ref Freq + CC Freq Offset, and acquisition IFBW is the CC BW. All the pre-demod traces will show results based on individual CC BW. For example, the Span of spectrum trace for CC0 will be based on BW setting of CC0.

When Acquisition mode is Simultaneous, data capture is done for all enabled CCs simultaneously using a bandwidth less than Max IF BW supported by HW. The acquisition center freq is the Carrier Ref Freq, and acquisition IFBW is adjusted to the aggregated CC BW (not exceeding the HW Max IFBW). If one enabled CC frequency range is out of the acquisition frequency range, the warning "Required Bandwidth is beyond hardware capability" is prompted, and there will be no EVM results available for such CC. All the pre-demod traces will show results based on aggregated BW rather than individual CC BW.

Remote Command	<code>[:SENSe]:EVM:ACQuisition SIMultaneous SEQuential</code> <code>[:SENSe]:EVM:ACQuisition?</code>
Example	<code>:EVM:ACQ SEQ</code> <code>:EVM:ACQ?</code>
Preset	<code>SEQuential</code>
State Saved	Saved in instrument state
Range	<code>Simultaneous SeQuential</code>

Elec Atten

Controls the Electronic Attenuator in Dual-Attenuator configurations. This control does not appear in Single-Attenuator configurations, as the control of both the mechanical and electronic stages of the Single-Attenuator is integrated into the single **Atten** control.

This control includes an Enable/Disable toggle switch; it is only possible to enter a value for the Electronic Attenuator when this switch is in the "Enable" position.

For more details about the Electronic Attenuator, see ["More Information " on page 1474](#)

Remote Command	<code>[:SENSe]:POWer[:RF]:EATTenuation <rel_amp1></code> <code>[:SENSe]:POWer[:RF]:EATTenuation?</code> <code>[:SENSe]:POWer[:RF]:EATTenuation:STATE OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:EATTenuation:STATE?</code>
----------------	--

Example	<pre> :POW:EATT 10 :POW:EATT? :POW:EATT:STAT ON :POW:EATT:STAT? </pre>
Notes	Electronic Attenuation's specification is defined only when Mechanical Attenuation is 6 dB
Dependencies	<p>This control only appears in Dual-Attenuator models with an Electronic Attenuator installed and licensed. It does not appear in models with the Single-Attenuator configuration, as in the Single-Attenuator configuration there is no "electronic attenuator" there is only a single integrated attenuator (which has both a mechanical and electronic stage). However, in the Single-Attenuator configuration, EATT SCPI commands are accepted for compatibility with other X-series instruments and set a "soft" attenuation as described in . The "soft" attenuation is treated as an addition to the "main" attenuation value set by the Atten control or <code>:POW:ATT</code> and affects the total attenuation displayed on the Atten control and the Meas Bar</p> <p>The electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable above the low band (0-3.6 GHz, 0-3.4 GHz 0-3GHz, depending on the model). If the low band ranges from 0-3.6GHz, and Stop Frequency of the instrument is > 3.6 GHz, then the Enabled/Disabled section of the Elec Atten control will be OFF and grayed-out</p> <p>If the Internal Preamp is on, meaning it is set to Low Band or Full, the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the Enabled/Disabled section of the Elec Atten control will be OFF and grayed-out</p> <p>If either of the above is true, and the SCPI command is sent, an error indicating that the electronic attenuator is unavailable will be sent</p> <p>If both of the above are true, pressing the control will generate error message -221, in other words, the frequency range lockout takes precedence</p> <p>If the electronic/soft Attenuator is enabled, then the Stop Freq of the instrument is limited to 3.6 GHz and the Internal Preamp is unavailable</p> <p>If the LNA is on, the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the Enabled/Disabled section of the Elec Atten control will be OFF and grayed-out. This coupling works in the following modes/measurements:</p> <ul style="list-style-type: none"> - Channel Power, Occupied BW, ACP, SEM, Spurious Emissions, Power Stat CCDF measurements in all Modes - Transmit On Off Power measurement in 5GNR Mode - Power vs. Time and Transmit Power measurement in GSM/EDGE Mode - Burst Power measurement in Spectrum Analyzer Mode <p>The SCPI-only "soft" electronic attenuation for the single-attenuator configuration is not available in all measurements; in particular, it is not available in the Swept SA measurement</p>
Couplings	Enabling and disabling the Electronic Attenuator affects the setting of the Mechanical Attenuator (in Dual-Attenuator configurations). This is described in more detail below and in " Mechanical Attenuator Transition Rules " on page 1474
Preset	<p>0 dB</p> <p>OFF (Disabled) for Swept SA measurement</p>

	ON (Enabled) for all other measurements that support the electronic attenuator
State Saved	Saved in instrument state
Min	0 dB
Max	Dual-Attenuator configuration: 24 dB Single-Attenuator configuration: the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB
Annotation	See Annotation under the Mech Atten control description

More Information

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear. These advantages primarily aid in remote operation and are negligible for front panel use. See ["Using the Electronic Attenuator: Pros and Cons " on page 1475](#) for a detailed discussion of the pros and cons of using the electronic attenuator.

For the Single-Attenuator configuration, for SCPI backwards compatibility, the "soft" attenuation feature replaces the Dual-Attenuator configuration's electronic attenuator. All the same couplings and limitations apply. See ["Attenuator Configurations and Auto/Man " on page 2570](#)

Mechanical Attenuator Transition Rules

When the Electronic Attenuator is enabled, the Mechanical Attenuator transitions to a state that has no Auto function. Below are the rules for transitioning the Mechanical Attenuator. Note that the information below *only* applies to the Dual-Attenuator configurations, and *only* when the Electronic Attenuator is installed:

When the Electronic Attenuation is enabled from a disabled state:

- The Mechanical Attenuator is initialized to 10 dB (this is its optimal performance setting). You can then set it as desired with SCPI, numeric keypad, step keys, or knob, and it behaves as it normally would in manual mode
- The Auto/Man state of (Mech) Atten is saved
- The Auto/Man toggle on the (Mech) Atten control disappears and the auto rules are disabled
- The Electronic Attenuator is set to 10 dB less than the previous value of the Mechanical Attenuator, within the limitation that it must stay within the range of 0 to 24 dB of attenuation

Examples in the Dual-Attenuator configuration:

- Mech Atten at 20 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 10 dB. New total attenuation equals the value before Elec Atten

enabled

- Mech Atten at 0 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 0 dB. New total attenuation does not equal the value before Elec Atten enabled
- Mech Atten at 40 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 24 dB. New total attenuation does not equal the value before Elec Atten enabled

When the Electronic Attenuation is disabled from an enabled state:

- The Elec Atten control is grayed out
- The Auto/Man state of (Mech) Atten is restored
- If now in Auto, (Mech) Atten recouples
- If now in Man, (Mech) Atten is set to the value of total attenuation that existed before the Elec Atten was disabled. The resulting value is rounded up to the smallest value possible given the (Mech) Atten Step setting - (That is, 57 dB changes to 58 dB when (Mech) Atten Step is 2 dB)

Using the Electronic Attenuator: Pros and Cons

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear.

The “finer steps” advantage of the electronic attenuator is beneficial in optimizing the alignment of the instrument dynamic range to the signal power in the front panel as well as remote use. Thus, you can achieve improved relative signal measurement accuracy. Compared to a mechanical attenuator with 2 dB steps, the 1 dB resolution of the electronic attenuator only gives better resolution when the odd-decibel steps are used. Those odd-decibel steps are less accurately calibrated than the even-decibel steps, so one tradeoff for this superior relative accuracy is reduced absolute amplitude accuracy.

Another disadvantage of the electronic attenuator is that the spectrum analyzer loses its “Auto” setting, making operation less convenient.

Also, the relationship between the dynamic range specifications (TOI, SHI, compression, and noise) and instrument performance are less well-known with the electrical attenuator. With the mechanical attenuator, TOI, SHI, and compression threshold levels increase dB-for-dB with increasing attenuation, and the noise floor does as well. With the electronic attenuator, there is an excess attenuation of about 1 to 3 dB between 0 and 3.6 GHz, making the effective TOI, SHI, and so forth, less well known. Excess attenuation is the actual attenuation relative to stated attenuation. Excess attenuation is accounted for in the instrument calibration.

IF Path Auto

Specify if the IF path in Advanced Acquisition Table will be automatically or manually selected.

Remote Command	<code>[:SENSe]:RF:ACQuIstion:ATABle:IFPath:AUTO ON OFF 1 0</code> <code>[:SENSe]:RF:ACQuIstion:ATABle:IFPath:AUTO?</code>
Example	<code>:RF:ACQ:ATAB:IFP:AUTO 1</code> <code>:RF:ACQ:ATAB:IFP:AUTO?</code>
Preset	ON
State Saved	Yes
Range	OFF ON

Mechanical Attenuation

Set mechanical attenuation for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:ATTenuation <rel_amp1></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:ATTenuation?</code>
Example	<code>:CCAR0:RF:CHAN1:ATT 20</code>
Preset	10 dB
State Saved	Saved in instrument state
Min	0 dB The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. To get to a value below 6 dB it has to be directly entered from the keypad or via SCPI. This protects from adjusting the attenuation to a dangerously small value which can put the instrument at risk of damage to input circuitry. However, if the current mechanical attenuation is below 6 dB it can be increased with the knob and step keys, but not decreased
Max	CXA Option 503 or 507: 50 dB EXA: 60 dB All other models: 70 dB

Elec Attenuation

Set electronic attenuation for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:EATTenuation <rel_amp1></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:EATTenuation?</code>
Example	<code>:CCAR0:RF:CHAN1:EATT 20</code>

Preset	0 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Dual attenuator configuration: 24 dB Single attenuator configuration: the total of ATT and EATT cannot exceed 50 dB, so if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB

Internal Preamp

Turn on/off internal preamp for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:GAIN:PREamp OFF LOW FULL</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:GAIN:PREamp?</code>
Example	<code>:CCAR0:RF:CHAN1:GAIN:PRE LOW</code> <code>:CCAR0:RF:CHAN1:GAIN:PRE?</code>
Dependencies	Preamp is not available on all hardware platforms. If the preamp is not present or is unlicensed, the control is not shown
Preset	OFF
State Saved	Saved in instrument state

LNA

Turn on/off Low Noise Amplifier (LNA) for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:GAIN:LNA OFF ON 0 1</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:GAIN:LNA?</code>
Example	<code>:CCAR0:RF:CHAN1:GAIN:LNA ON</code>
Dependencies	Requires option LNA
Preset	OFF
State Saved	Saved in State

uW Path Control

Select uW Path for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:MW:PATH STD LNPath MPBypass FULL</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:MW:PATH?</code>
----------------	--

3 5G NR Mode
3.7 Modulation Analysis Measurement

Example	<code>CCAR0:RF:CHAN1:MW:PATH LNP</code> <code>CCAR0:RF:CHAN1:MW:PATH?</code>
Preset	MPB option present and licensed: <code>MPB</code> MPB option not present and licensed: <code>STD</code>
State Saved	Save in instrument state
Range	Standard Path Low Noise Path Enable μW Presel Bypass Full Bypass Enable

IF Gain

Set IF Gain for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:IF:GAIN:LEVel <rel_amp1></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:IF:GAIN:LEVel?</code>
Example	<code>:CCAR0:RF:CHAN1:IF:GAIN:LEV -10</code> <code>:CCAR0:RF:CHAN1:IF:GAIN:LEV?</code>
Notes	Not available for B25 IF bandwidth option
Preset	0
State Saved	Save in instrument state
Min	Depends on CC Bandwidth
Max	Depends on CC Bandwidth

IF Path

Specify IF path manually for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier0 ... 15:RF:CHANnel1 ... 8:IFPath B10M B25M B40M B85M B125M B140M B160M B255M B510M B1G B1500M B2G B4G</code> <code>[:SENSe]:CCARrier0 ... 15:RF:CHANnel1 ... 8:IFPath?</code>
Example	<code>:CCAR0:RF:CHAN1:IFP B160M</code> <code>:CCAR0:RF:CHAN1:IFP?</code>
Notes	B10M = 10 MHz B25M = 25 MHz B40M = 40 MHz B85M = 85 MHz B125M = 125 MHz B140M = 140 MHz B160M = 160 MHz B255M = 255 MHz B510M = 510 MHz

	<p>B1G = 1 GHz B1500M = 1.5 GHz B2G = 2 GHz B4G = 4 GHz</p> <p>In cases where the path is not available but is selected from SCPI, it generates an error - 241, "Hardware missing; Option not installed"</p>
Dependencies	Gray out if IF Path Auto is On
Preset	Automatically selected IF path according to measurement required IFBW and available HW bandwidth
State Saved	Saved in instrument state

Interfering Signal Present

Sets whether interference signal for the intermodulation tests exists or not. If exists, limits are not evaluated over the interference signal frequency range specified by the span and the center frequency parameters in Adjacent Channel, Spectrum Emission Mask and Spurious Emissions measurements.

NOTE

This setting is available for ACP, EVM, SEM and Spur.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference[:STATe] OFF ON 0 1</code> <code>[:SENSe]:RADio:IMODulation:INTerference[:STATe]?</code>
Example	<code>:RAD:IMOD:INT 1</code> <code>:RAD:IMOD:INT?</code>
Preset	OFF
State Saved	Saved in instrument state
Range	On Off

Freq Offset From Edge

Sets the center frequency of the interference signal for intermodulation tests. The frequency is set as offset frequency from the BS RF bandwidth edge. Interference Offset Side determines on which side of the BS RF bandwidth the interference signal exists.

NOTE

This setting is available for ACP, EVM, SEM and Spur.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference:FREQuency:OFFSet <freq></code> <code>[:SENSe]:RADio:IMODulation:INTerference:FREQuency:OFFSet?</code>
----------------	--

Example	<code>:RAD:IMOD:INT:FREQ:OFFS 5MHz</code> <code>:RAD:IMOD:INT:FREQ:OFFS?</code>
Preset	5MHz
State Saved	Saved in instrument state
Min	0 Hz
Max	400 MHz

Span

Sets the span of the interference signal for intermodulation tests.

NOTE

This setting is available for ACP, EVM, SEM and Spur.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference:SPAN <freq></code> <code>[:SENSe]:RADio:IMODulation:INTerference:SPAN?</code>
Example	<code>:RAD:IMOD:INT:SPAN 5MHz</code> <code>:RAD:IMOD:INT:SPAN?</code>
Preset	5 MHz
State Saved	Saved in instrument state
Min	200 kHz
Max	400 MHz

Offset Side

Sets which side of the BS RF bandwidth the interference signal exists on.

NOTE

This setting is available for ACP, EVM, SEM and Spur.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference:SIDE NEGative POSitive</code> <code>[:SENSe]:RADio:IMODulation:INTerference:SIDE?</code>
Example	<code>:RAD:IMOD:INT:SIDE POS</code> <code>:RAD:IMOD:INT:SIDE?</code>
Preset	POSitive
State Saved	Saved in instrument state

Non-Contiguous Interference Region

Sets the region the interfering signal exists at in the Non-Contiguous mode:

- Inner – The interfering signal exists at the inner region. This setting is only effective when Carrier Alloc is Non-Contiguous. When in Contiguous, the interference region is always outside regardless of the selection of this parameter
- Outer – The interfering signal exists at either of the outer regions

NOTE This setting is available for ACP, EVM, SEM and Spur.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference:REGion INNer OUTer</code> <code>[:SENSe]:RADio:IMODulation:INTerference:REGion?</code>
Example	<code>:RAD:IMOD:INT:REG OUT</code> <code>:RAD:IMOD:INT:REG?</code>
Preset	<code>OUTer</code>
State Saved	Saved in instrument state

Interfering Signal Exclude Range

Enables you to select the offset range to be excluded from the measurement.

- Offset Integ BW (OIBW) - Exclude an entire ACP offset range where the interfering signal is allocated
- Interfering Signal Span (ISSP) - Exclude only the span where the interfering signal is occupied

NOTE This setting is available only for the ACP and Modulation Analysis measurements.

Remote Command	<code>[:SENSe]:RADio:IMODulation:INTerference:RANGe:EXCLude[1] 2 OIBW ISSPan</code> <code>[:SENSe]:RADio:IMODulation:INTerference:RANGe:EXCLude[1] 2?</code>
Example	<code>RAD:IMOD:INT:RANG:EXCL OIBW</code> <code>RAD:IMOD:INT:RANG:EXCL?</code>
Notes	Subopcode 1 for Downlink, 2 for Uplink. Default is Downlink.
Preset	Downlink: ISSPan Uplink: OIBW
State Saved	Saved in instrument state
Range	Offset Integ BW Interfering Signal Span

3.7.8.3 Component Carriers

Contains settings that let you configure the analyzer to match the component carriers in your 5G NR signal.

Number of Component Carriers

Specifies how many component carriers are included in the 5G NR measurements. The 5G NR supports the maximum of 16 component carriers.

Remote Command	<code>[:SENSe]:CCARrier:COUNT <integer></code> <code>[:SENSe]:CCARrier:COUNT?</code>
Example	<code>:CCAR:COUN 1</code> <code>:CCAR:COUN?</code>
Preset	1
State Saved	Yes
Min	1
Max	16

Carrier Allocation

Specifies the carrier frequency allocation. There are two types of allocation, contiguous and non-contiguous. Non-Contiguous frequency allocation is defined as an allocation where two sub-blocks are separated with a sub-block gap:

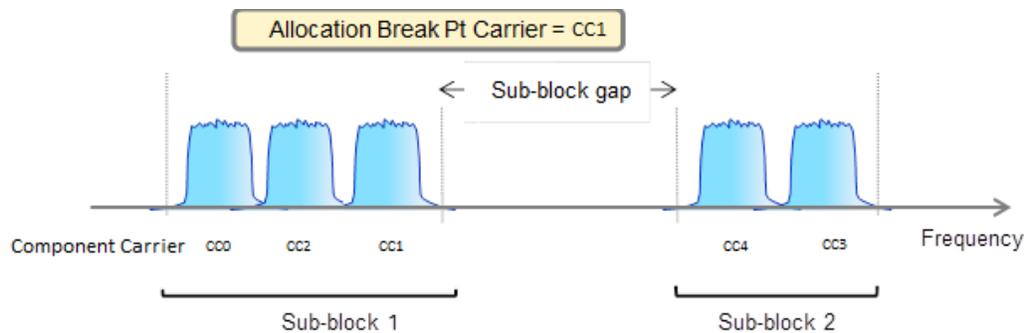

- Contiguous – All the component carriers belong to one block and no sub-block gap exists
- Non-Contiguous – Component carriers are separated into two sub-blocks. Allocation Break Pt Carrier determines how sub-blocks are configured

Remote Command	<code>[:SENSe]:CCARrier:CONFig:ALLocation CONTiguous NCONtiguous</code> <code>[:SENSe]:CCARrier:CONFig:ALLocation?</code>
Example	<code>:CCAR:CONF:ALL CONT</code> <code>:CCAR:CONF:ALL?</code>
Preset	<code>CONTiguous</code>
State Saved	Saved in instrument state
Range	Contiguous Non-Contiguous

Non-Contiguous Break at

Specifies an allocation break point in non-contiguous carrier allocation. First sub-block starts from the lowest frequency carrier and stops at the allocation break point carrier. Next sub-block starts from the next upper frequency carrier and ends at the highest frequency carrier.

one example is shown below. In the example carrier indices are not in the order of carrier frequency. In the example, Allocation Break Pt Carrier is CC1. It means that sub-block 1 ends at carrier CC1 and sub-block 2 starts at carrier CC4. Sub-block gap is located between carrier CC1 and CC4.

Remote Command	<code>[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint CC0 ... CC15</code> <code>[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint?</code>
----------------	--

Example	<code>:CCAR:CONF:ALL:NCON:ABP CC0</code> <code>:CCAR:CONF:ALL:NCON:ABP?</code>
---------	---

Dependencies	Allocation Break Point is coupled to Number of Component Carriers. For example, Allocation Break Point list will include CC0~CC1 if the number of Component Carriers is 2
--------------	---

Preset	<code>CC0</code>
--------	------------------

State Saved	Saved in instrument state
-------------	---------------------------

Range	<code>CC0 ... CC15</code>
-------	-------------------------------

Configure Comp Carriers

This dialog lets you perform a detailed configuration of your component carriers, including number of carriers, bandwidth, offset, integration bandwidth, and so on.

Configure CCs

Lets you configure bandwidth, frequency offsets, and integration bandwidth, and also lets you exclude certain carriers from the measurement.

More Information

"Measure Carrier" on page 2636	"Sidelink" on page 2637	"Bandwidth" on page 2637	"Freq Range" on page 2638

"SCS (Power Meas)" on page 2642			

Number of Component Carriers

This is the same as the control on the menu panel. See ["Number of Component Carriers" on page 2633](#).

Auto Frequency Offset

Changing this value will automatically calculate frequency offset based on a specified set of rules (For the rules, see 5.4.1.1 and 5.4.1.2 in 3GPP TS 38.104 V15.4.0).

Remote Command	<code>[:SENSe]:CCARrier:AFOffset OFF ACRA100K ACRA15K ACRA60K CARA100K CARA15K CARA60K</code> <code>[:SENSe]:CCARrier:AFOffset?</code>
Example	<code>:CCAR:AFOF ACRA100K</code> <code>:CCAR:AFOF?</code>
Notes	When you change the value to OFF , nothing happens
Dependencies	Changing Number of Component Carriers, CC's Bandwidth, or CC's Frequency Range will recalculate frequency offset unless OFF is selected When CC's Frequency Offset is manually changed, this parameter is set to OFF This feature isn't supported when Carrier Allocation is set to Non-Contiguous. When Auto Freq Offset is set to a value other than OFF with Number of Component Carriers = 1, then, CCO Freq Offset is automatically adjusted to 0 Hz
Preset	OFF
State Saved	Yes
Range	The cascading list is shown below

Channel Spacing for	Channel Raster
Adjacent NR Carriers	100 kHz
Carrier Aggregation	15 kHz
Off	60 kHz
Channel Spacing for	Channel Raster
Adjacent NR Carriers	100 kHz
Carrier Aggregation	15 kHz
Off	60 kHz
Channel Spacing for	Channel Raster
Adjacent NR Carriers	
Carrier Aggregation	
Off	

Carrier Allocation

This is the same as the control on the menu panel. See ["Carrier Allocation" on page 2633](#).

Non-Contiguous Break at

This is the same as the control on the menu panel. See ["Non-Contiguous Break at" on page 2634](#).

Measure Carrier

This column sets whether to measure this component carrier or not.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15[:STATe] OFF ON 0 1</code> <code>[:SENSe]:CCARrier[0] 1 ... 15[:STATe]?</code>
Example	<code>:CCAR0 ON</code> <code>:CCAR0?</code>
Notes	The command is used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers
Couplings	Measure Carrier of the CCs that are within "Number of Component Carriers" is set to ON when the action "Apply Preset (to All CCs)" is executed X
Preset	ON
State Saved	Saved in instrument state

Sidelink

Allows the user to select the mode of component carrier from either normal 5G NR uplink or 5G NR V2X sidelink when Direction is Uplink.

- OFF: The component carrier is 5G NR uplink carrier. The 5G NR uplink parameters per carrier are in scope.
- ON: The component carrier is 5G NR V2X sidelink carrier. The sidelink parameters per carrier are in scope.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:SLINK ON OFF 1 0</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:SLINK?</code>
Example	<code>CCAR4:RAD:SLIN ON</code> <code>CCAR4:RAD:SLIN?</code>
Dependencies	Available when the required license is installed and Direction is Uplink Unavailable when " Bandwidth " on page 2637 is 35 MHz, 45 MHz, 800 MHz, 1600 MHz, and 2000 MHz
Preset	OFF
State Saved	Saved

Bandwidth

This column enables you to set the bandwidth of each component carrier for 5G NR signal (which also determines the total number of resource blocks for Modulation Analysis measurement).

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:BANDwidth B5M B10M B15M B20M B25M B30M B35M B40M B45M B50M B60M B70M B80M B90M B100M B200M B400M B800M B1600M B2000M</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:BANDwidth?</code>
Example	<code>:CCAR4:RAD:STAN:BAND B50M</code>
Dependencies	When " Sidelink " on page 2637 is enabled, 35 MHz, 45 MHz, 800 MHz, 1600 MHz, and 2000 MHz are not available. Selecting any of those BWs turns Sidelink off and the column becomes grayed out
Couplings	This value will be preset to the Bandwidth value in the Meas Standard menu when the action "Apply Preset (to All CCs)" is executed
Preset	B100M
State Saved	Yes
Range	5 MHz 10 MHz 15 MHz 20 MHz 25 MHz 30 MHz 35 MHz 40 MHz 45 MHz 50 MHz 60 MHz 70 MHz 80 MHz 90 MHz 100 MHz 200 MHz 400 MHz 800 MHz 1600 MHz 2000 MHz

Freq Range

This column enables you to set which frequency range to which each component carrier belongs.

Frequency Range affects CC Bandwidth, Max RB Numbers, ACP Measurement Noise Bandwidth and SEM Integ BW.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:FRANge FR1 FR2</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:FRANge?</code>
Example	<code>:CCAR1:RAD:STAN:FRAN FR1</code>
Dependencies	Available selections differ depending on "Bandwidth" on page 2637 as follows: <ul style="list-style-type: none"> - 50 MHz and 100 MHz: FR1 and FR2 - 200 MHz or wider: FR2 only - Other than above: FR1 only
Couplings	This value will be preset to the Frequency Range value in the Meas Standard menu when the action "Apply Preset (to All CCs)" is executed
Preset	<code>FR1</code>
State Saved	Yes
Range	<code>FR1 FR2</code>

Freq Offset

This column sets the component carrier center frequency as offset from the Carrier Ref Frequency.

Remote Command	<code>[:SENSe]:CCARrier<n>:FREQuency:OFFSet <freq></code> <code>[:SENSe]:CCARrier<n>:FREQuency:OFFSet?</code>
Example	<code>:CCAR4:FREQ:OFFS 10MHz</code> <code>:CCAR4:FREQ:OFFS?</code>
Notes	Used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers Frequency Offset of CC0 to CC15 is recommended to be set in ascending order for the best related couplings. You can see whether sub-blocks are configured as you expect in the trace of Monitor Spectrum by turning on Sub-block Attribute under Display > Meas Display. If sub-blocks are not configured correctly, results related to sub-block gap such as ACP/SEM inner offset results are not measured correctly Also, in some cases, make sure if the "Non-Contiguous Break at" parameter is set to the intended value since it's often left unchanged after Frequency Offset of CCs are changed

Preset	0 Hz
State Saved	Saved in instrument state
Min	-50 GHz
Max	50 GHz

Cell ID Auto

Enable and disable Cell ID auto detection based on SSB.

NOTE

This setting is available for EVM measurement only.

Remote Command	<code>[[:SENSe]:EVM:CCARrier[0] 1 ... 15:CID:MODE AUTO MANua1 [:SENSe]:EVM:CCARrier[0] 1 ... 15:CID:MODE?</code>
Example	<code>:EVM:CCAR:CID:MODE MAN :EVM:CCAR:CID:MODE?</code>
Preset	MANua1
State Saved	Saved in instrument state

Cell ID Value

Specify Cell ID for the component carrier.

NOTE

This setting is available for EVM measurement only.

Remote Command	<code>[[:SENSe]:EVM:CCARrier[0] 1 ... 15:CID <integer> [:SENSe]:EVM:CCARrier[0] 1 ... 15:CID?</code>
Example	<code>:EVM:CCAR4:CID 0 :EVM:CCAR4:CID?</code>
Couplings	Invalid when Cell ID Auto is on
Preset	0
State Saved	Saved in instrument state
Min	0
Max	1007

Demod Spectrum

This column determines if the spectrum of the incoming data is mirrored or not. The actual mirroring is accomplished by conjugating the complex time data.

Note that only the Modulation Analysis measurement and Conformance EVM measurement support this feature.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:SPECTrum NORMal INVert</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:SPECTrum?</code>
Example	<code>:CCAR0:SPEC INV</code> <code>:CCAR0:SPEC?</code>
Preset	<code>NORM</code>
State Saved	Yes
Range	Normal Invert

ACP Power Integration Bandwidth

This column specifies the Measurement Noise Bandwidth used to calculate the power in the component carriers in the ACP measurement.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:ACPpower:BANDwidth[1] 2:INTEgration <freq></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:ACPpower:BANDwidth[1] 2:INTEgration?</code>
Example	<code>:CCAR0:ACP:BAND:INT 20MHz</code> <code>:CCAR0:ACP:BAND:INT?</code>
Notes	Carrier sub op code, 1 is for BTS, 2 for MS. Default is BTS

Couplings When either Bandwidth of the parameter set, Freq Range, or Direction is changed, the value of this parameter also changes as shown in the following table

When Freq Range is FR1

Bandwidth	Downlink ACP Meas Noise BW (MHz)	Uplink ACP Meas Noise BW (MHz)
5 MHz	4.500	4.515
10 MHz	9.360	9.375
15 MHz	14.220	14.235
20 MHz	19.080	19.095
25 MHz	23.940	23.955
30 MHz	28.800	28.815
35 MHz	33.840	33.855
40 MHz	38.880	38.895
45 MHz	43.560	43.575
50 MHz	48.600	48.615
60 MHz	58.320	58.350

3 5G NR Mode
3.7 Modulation Analysis Measurement

70 MHz	68.040	68.070
80 MHz	78.120	78.150
90 MHz	88.200	88.230
100 MHz	98.280	98.310
When Freq Range is FR2		
Bandwidth	Downlink ACP Meas Noise BW (MHz)	Uplink ACP Meas Noise BW (MHz)
50 MHz	47.520	47.580
100 MHz	95.040	95.160
200 MHz	190.080	190.20
400 MHz	380.160	380.280
800 MHz	714.24	715.20
1600 MHz	1428.48	1429.44
2000 MHz	1704.96	1705.92
Preset	98.280 MHz 98.310 MHz	
State Saved	Yes	
Min	100 kHz	
Max	2000 MHz	

SEM Power Integration Bandwidth

This column specifies the integration bandwidth used to calculate the power in the component carriers in SEM measurement.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:SEMAsk:BANDwidth[1] 2:INTegration <freq></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:SEMAsk:BANDwidth[1] 2:INTegration?</code>
Example	<code>:CCAR0:SEM:BAND:INT 20MHz</code> <code>:CCAR0:SEM:BAND:INT?</code>
Notes	Bandwidth sub op code, 1 is for BTS, 2 for MS. Default is BTS
Couplings	When Bandwidth of the parameter set is changed, this parameter also changes to that value
Preset	100 MHz
State Saved	Saved in instrument state
Min	100 kHz
Max	2000 MHz

N_Grid_Size (Display Only)

Display Max RB Number for each available numerology. To adjust this setting please switch to Resource Grid tab.

NOTE This setting is available for EVM measurement only.

3GPP TS38.104 or TS38.101-1 Table 5.3.2-1: Maximum transmission bandwidth configuration N_{RB} for FR1

NOTE: For the “N.A” value in above table, the value will be set to 0 and displayed as “---”.

Resource Grid

Enables you to configure resource grid for each available numerology of each component carrier.

NOTE

This tab and the following controls are only available for Modulation Analysis measurement.

Component Carrier (GUI only)

Selects the Component Carrier to configure its resource grid for each available numerology.

Bandwidth

This is the same as the Bandwidth column in the Configure CCs table. See ["Bandwidth" on page 2637](#).

Freq Range

This is the same as the Freq Range column in the Configure CCs table. See ["Freq Range" on page 2638](#)

Sidelink

Allows the user to select the mode of component carrier from either normal 5G NR uplink or 5G NR V2X sidelink when Direction is Uplink.

- OFF: The component carrier is 5G NR uplink carrier. The 5G NR uplink parameters per carrier are in scope.
- ON: The component carrier is 5G NR V2X sidelink carrier. The sidelink parameters per carrier are in scope.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:SLINK ON OFF 1 0</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:SLINK?</code>
----------------	--

Example	<code>CCAR4:RAD:SLIN ON</code> <code>CCAR4:RAD:SLIN?</code>
---------	--

Dependencies	Available when the required license is installed and Direction is Uplink Unavailable when "Bandwidth" on page 2637 is 35 MHz, 45 MHz, 800 MHz, 1600 MHz, and 2000 MHz
--------------	--

Preset	OFF
State Saved	Saved

Configuration Mode

Selects the configuration mode for resource grid table:

- Auto – always reset N_grid_start and N_grid_size when the frequency range and bandwidth of component carrier are changed. SCS enable/disable state will not be changed, unless enabled SCS is invalid for new frequency range and bandwidth. If all enabled SCS are invalid for new frequency range and bandwidth, 30K SCS will be enabled for frequency range 1 and 120K SCS will be enabled for frequency range 2
- Man – keep the value in grid table when the frequency range and bandwidth of component carrier are changed, unless a value is invalid for new frequency range and bandwidth

Remote Command	<code>[:SENSE]:EVM:CCARrier[0] 1 ... 15:RGRid:CONFig:AUTO ON OFF 1 0</code> <code>[:SENSE]:EVM:CCARrier[0] 1 ... 15:RGRid:CONFig:AUTO?</code>
Example	<code>:EVM:CCAR:RGR:CONF:AUTO 0</code> <code>:EVM:CCAR:RGR:CONF:AUTO?</code>
Preset	OFF
State Saved	Yes
Range	OFF ON 0 1

When the configuration mode is Auto, the default N_grid_start is set to 0 and N_grid_size is set according to tables below:

Table 5.3.2-1: Transmission bandwidth configuration N_{RB} for FR1

SCS	5	10	15	20	25	30	40	50	60	70	80	90	100
RB	25	52	79	106	133	160	216	272	328	384	440	496	552
5	N	N	N	N	N	N	N	N	N	N	N	N	N

SCS	50 MHz	100 MHz	200 MHz	400 MHz
	N_{RB}	N_{RB}	N_{RB}	N_{RB}
60	66	132	264	N.A
120	32	66	132	264

SCS Enabled

The Enabled column lets you enable or disable selected SCS for current component carrier.

Remote Command	<pre>[:SENSe][:EVM]:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k [:STATe] OFF ON 0 1 [:SENSe][:EVM]:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k [:STATe]?</pre>
Example	<pre>:EVM:CCAR:RGR:SCS15 ON :EVM:CCAR:RGR:SCS15?</pre>
Notes	<p>Only valid numerology for selected frequency range and bandwidth will be visible. Some SCS are disabled if they are "N.A" in Tables 5.3.2-1 and 5.3.2.2 (in 3GPP TS38.104)" in the Section 3.2.5.1.15, N_{Grid_Size} (Display Only)</p> <p>In EVM, if Configuration Mode is Auto and Freq Range is changed, the Grid Start and Grid Size will be reset according to Table 5.3.2-1 or Table 5.3.2-2</p> <p>In measurements other than EVM, when Freq Range is changed, the parameter will be reset according to Table 5.3.2-1 or Table 5.3.2-2</p>
Preset	<pre>SCS 15k : OFF SCS 30k : ON SCS 60k : OFF SCS 120k: OFF SCS240K: OFF SCS480K: OFF SCS960K: OFF</pre>
State Saved	Yes

N_{grid_start}

This column lets you set the Grid Start value for the selected numerology.

Remote Command	<pre>[:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:START <integer> [:SENSe]:EVM:CCARrier</pre>
----------------	--

	<code>[0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:STAR-t?</code>
Example	<code>:EVM:CCAR:RGRid:SCS15k:STAR 0</code> <code>:EVM:CCAR:RGRid:SCS15k:STAR?</code>
Preset	Depends on frequency range, bandwidth and numerology
State Saved	Yes
Min	0
Max	Depends on frequency range, bandwidth and numerology

N_grid_size

This column lets you set the Grid Size for the selected numerology.

Remote Command	<code>[:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:SIZE <integer></code> <code>[:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:SIZE?</code>
Example	<code>:EVM:CCAR:RGR:SCS15k:SIZE 270</code> <code>:EVM:CCAR:RGR:SCS15k:SIZE?</code>
Notes	Grid Size should not exceed the Nrb in Table 5.3.2-1 or Table 5.3.2-2 of 3GPP TS38.104 and TS38.101-1 & -2
Preset	Depends on frequency range and bandwidth
State Saved	Yes
Min	6
Max	Depends on frequency range, bandwidth and numerology
Backwards Compatibility SCPI	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:RBNumber:SCS15k SCS30k SCS60k SCS120k SCS240k</code>

k0 (Display Only)

This column displays the k0 value for the selected Numerology.

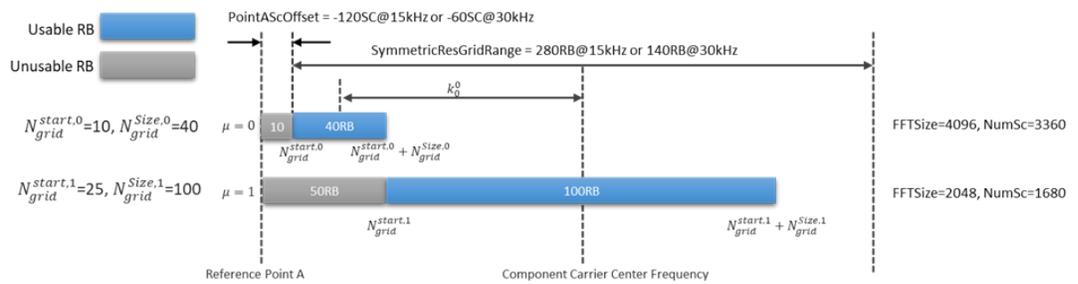

Remote Command	<code>[:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:k0?</code>
Example	<code>:EVM:CCAR:RGR:SCS15k:k0?</code>

More Information

See picture below for illustration how k0 is calculated.

3 5G NR Mode

3.7 Modulation Analysis Measurement

Point A Frequency (Display Only)

This figure displays the Point A Freq for the resource grid.

Remote Command `[:SENSe]:EVM:CCARrier[0] | 1 | ... | 15:RGRid:REFA?`

Example `:EVM:CCAR:RGR:REFA?`

LTE Coexistence

This tab and the following controls are only available for Modulation Analysis measurement, and it will only appear for DL FR1 component carriers.

Add LTE (GUI only)

Pressing this control inserts a new LTE-CRS configuration into the list, the maximum number of LTE-CRS configurations is 4.

Delete LTE

Pressing this control deletes selected LTE-CRS configuration from the list.

Remote Command `[:SENSe]:EVM:CCARrier[0] | 1 | ... | 15:DELeTe:LTE <integer>`

Example `:EVM:CCAR0:DEL:LTE 1`

Clear All (GUI only)

Pressing this control deletes all LTE-CRS configurations from the list.

Effective LTE Number (Remote Command only)

Specifies how many LTE-CRS configurations are effective. This SCPI only command is used to provide similar functions such as “Add LTE” and “Delete LTE”.

Note that all 4 LTE-CRS configurations can be modified through SCPI, but ineffective LTE-CRS configurations (index > Effective LTE Number) will not be included in the measurement no matter whether its state is “On” or “Off”.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:NUMBer:LTE <integer></code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:NUMBer:LTE?</code>
Example	<code>:EVM:CCAR:NUMB:LTE 2</code> <code>:EVM:CCAR:NUMB:LTE?</code>
Couplings	Max value is 4 If you attempt to remotely set the Count larger than 4, this will result in an error message
Preset	1
State Saved	Yes
Min	0
Max	4

State

Enable or disable the LTE coexistence.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>[:STATe] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>[:STATe]?</code>
Example	<code>:EVM:CCAR:LTE1 OFF</code> <code>:EVM:CCAR:LTE1?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message This control is available only when 15K SCS is enabled in the resource grid
Preset	<code>OFF</code>
State Saved	Yes

Bandwidth

Set the LTE bandwidth.

Remote	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:BW B1M4 B3M B5M B10M B15M</code>
--------	--

Command	B20M [:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:BW?
Example	:EVM:CCAR:LTE1:BW B20M :EVM:CCAR:LTE1:BW?
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
Preset	B5M
State Saved	Yes
Range	1.4 MHz 3 MHz 5 MHz 10 MHz 15 MHz 20 MHz

Carrier Offset to Point A

Sets the LTE carrier center subcarrier location determined by the offset from point A using 15K SCS.

Remote Command	[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<4>:COFFset <integer> [:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<4>:COFFset?
Example	:EVM:CCAR:LTE1:COFF 0 :EVM:CCAR:LTE1:COFF?
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
Preset	0
State Saved	Yes
Min	0
Max	16383

MBSFN Subframes

Sets the subframe index that can be configured as MBSFN subframes in LTE.

Remote Command	[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:MBSFn:SFRame <string> [:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:MBSFn:SFRame?
Example	:EVM:CCAR:LTE:MBSF:SFR "2:9" :EVM:CCAR:LTE:MBSF:SFR?
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
State Saved	Yes

Number of CRS Antenna Ports

Set the number of antenna ports for LTE-CRS.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:CRS:ANTenna:PORT:NUMBer N1 N2 N4</code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:CRS:ANTenna:PORT:NUMBer?</code>
Example	<code>:EVM:CCAR:LTE1:CRS:ANT:PORT:NUMB N1</code> <code>:EVM:CCAR:LTE1:CRS:ANT:PORT:NUMB?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
Preset	N1
State Saved	Yes
Range	1 2 4

v-shift

Set the v-shift value for LTE-CRS; it is given by LTE Cell ID mod 6.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:CRS:VSHift <integer></code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:CRS:VSHift?</code>
Example	<code>:EVM:CCAR:LTE1:CRS:VSH 0</code> <code>:EVM:CCAR:LTE1:CRS:VSH?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
Preset	0
State Saved	Yes
Min	0
Max	5

Advanced Acquisition

This menu is only available for the Modulation Analysis measurement. It enables you to configure selected RF settings for each component carrier and channel.

Number of Component Carriers

This is the same as the control on the menu panel. See ["Number of Component Carriers" on page 2633](#).

Sweep/Measure

Allows you to toggle between **Continuous** and **Single** sweep or measurement operation. The single/continuous state is Meas Global, so the setting affects all measurements.

The front-panel key **Single/Cont** performs exactly the same function

See ["More Information" on page 1501](#)

Remote Command	<code>:INITiate:CONTinuous OFF ON 0 1</code> <code>:INITiate:CONTinuous?</code>
Example	Put instrument into Single measurement operation: <code>:INIT:CONT 0</code> <code>:INIT:CONT OFF</code> Put instrument into Continuous measurement operation: <code>:INIT:CONT 1</code> <code>:INIT:CONT ON</code>
Preset	ON Note that <code>:SYST:PRES</code> sets <code>:INIT:CONT</code> to ON , but <code>*RST</code> sets <code>:INIT:CONT</code> to OFF
State Saved	Saved in instrument state
Annunciation	The Single/Continuous icon in the Meas Bar changes depending on the setting: – A line with an arrow is Single – A loop with an arrow is Continuous
Backwards Compatibility Notes	For Spectrum Analysis Mode in ESA and PSA, there is no Cont hardkey, instead there is a Sweep Single/Cont softkey. In these instruments, switching the Sweep Single/Cont softkey from Single to Cont restarts averages (displayed average count reset to 1), but does not restart Max Hold and Min Hold X-Series A-models have Single and Cont hardkeys in place of the SweepSingleCont softkey. In the X-Series A-models, if in single measurement, the Cont hardkey (and <code>INIT:CONT ON</code>) switches to continuous measurement, but never restarts a measurement and never resets a sweep X-Series B-models have a Cont/Single toggle control instead of Single and Cont hardkeys, but it is still true that, if in single measurement, the Cont/Single toggle control never restarts a measurement and never resets a sweep For Spectrum Analysis Mode in ESA and PSA, the Single hardkey and the <code>INITiate:IMM</code> switched from continuous measurement to single measurement and restarted sweeps and averages (displayed

average count reset to 1), but did not restart **Max Hold** and **Min Hold**. In the X-Series, the **Restart** control and the **INITiate:IMM** command initiate a sweep/ measurement/ average sequence/hold sequence including **MaxHold** and **MinHold**

For Spectrum Analysis Mode in ESA and PSA, the **Single** hardkey restarted the sweep regardless of whether or not you were in an active sweep or sweep sequence. In the X-Series, **Restart** does this

More Information

Continuous Mode	<p>The instrument takes repetitive sweeps, averages, measurements, etc., when in continuous mode. If in average or Max/Min Hold, and the average/hold count reaches the Average/Hold Num, the count stops incrementing, but the instrument keeps sweeping</p> <p>See the Trace key description under Trace Average for the averaging formula used both before and after the Average/Hold Num is reached. The trigger condition must be met prior to each sweep</p> <p>The type of trace processing for multiple sweeps is set under the Trace key, with choices of Trace Average, Max Hold, or Min Hold</p>
Single Mode	<p>The instrument takes a single sweep when in Single mode, or if in average or Max/Min Hold, or if there is a Waterfall window displayed, it takes multiple sweeps until the average/hold count reaches the Average/Hold Num, then the count stops incrementing, and the instrument stops sweeping</p> <p>See the Trace key description under Trace Average for the averaging formula used. The trigger condition must be met prior to the sweep</p> <p>The type of trace processing for multiple sweeps is set under the Trace key, with choices of Trace Average, Max Hold, or Min Hold</p>

If the instrument is in **Single** measurement mode, pressing the **Cont/Single** toggle control does not zero the count and does not cause the sweep to be reset; the only action is to put the instrument into Continuous measurement operation.

If it is already in continuous sweep:

- **:INIT:CONT 1** has no effect
- **:INIT:CONT 0** places the instrument in Single Sweep but has no effect on the current sequence until $k = N$, at which point the current sequence will stop and the instrument will go to the idle state

See the "**Restart**" on page 2683 control description for details of **:INIT:IMMEDIATE**.

If the instrument is already in **Single** sweep, **:INIT:CONT OFF** has no effect.

If the instrument is already in **Single** sweep, then pressing **Cont/Single** in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing **Cont/Single** does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the instrument is waiting for a trigger). Even though pressing **Cont/Single** in the middle of a sweep does not restart the sweep, sending **:INIT:IMM** does reset it.

If the instrument is in **Single** sweep, and *not* Averaging/Holding, and you want to take one more sweep, press **Restart**.

If the instrument is in **Single** sweep, *and* Averaging/Holding, and you want to take one more sweep without resetting the Average trace or count, go to **Meas Setup** and increment the average count by 1 by pressing the **Step Up** key while **Average/Hold Num** is the active function. You can also do this by sending **:CALC:AVER:TCON UP**.

Input Channel (GUI Only)

Select the input channel to configure its settings.

State Saved	No
-------------	----

Use Advanced Acquisition Table

Specify if the settings in Advanced Acquisition Table will be applied.

Remote Command	[:SENSe]:RF:ACQuistion:ATABle OFF ON 0 1
----------------	--

[:SENSe]:RF:ACQuistion:ATABle?

Example	:RF:ACQ:ATAB 1
---------	-----------------------

:RF:ACQ:ATAB?

Preset	OFF
--------	------------

State Saved	Yes
-------------	-----

Range	OFF ON
-------	-----------------

Acquisition Mode

Specifies the data acquisition mode that will be used by analyzer to capture IQ data.

When Acquisition mode is Sequential, data capture is done for each enabled CC sequentially. The acquisition center frequency is adjusted to the Carrier Ref Freq + CC Freq Offset, and acquisition IFBW is the CC BW. All the pre-demod traces will show results based on individual CC BW. For example, the Span of spectrum trace for CC0 will be based on BW setting of CC0.

When Acquisition mode is Simultaneous, data capture is done for all enabled CCs simultaneously using a bandwidth less than Max IF BW supported by HW. The acquisition center freq is the Carrier Ref Freq, and acquisition IFBW is adjusted to the aggregated CC BW (not exceeding the HW Max IFBW). If one enabled CC frequency range is out of the acquisition frequency range, the warning "Required Bandwidth is beyond hardware capability" is prompted, and there will be no EVM

results available for such CC. All the pre-demod traces will show results based on aggregated BW rather than individual CC BW.

Remote Command	<code>[:SENSe]:EVM:ACQuisition SIMultaneous SEQuential</code> <code>[:SENSe]:EVM:ACQuisition?</code>
Example	<code>:EVM:ACQ SEQ</code> <code>:EVM:ACQ?</code>
Preset	<code>SEQuential</code>
State Saved	Saved in instrument state
Range	<code>Simultaneous SeQuential</code>

Elec Atten

Controls the Electronic Attenuator in Dual-Attenuator configurations. This control does not appear in Single-Attenuator configurations, as the control of both the mechanical and electronic stages of the Single-Attenuator is integrated into the single **Atten** control.

This control includes an Enable/Disable toggle switch; it is only possible to enter a value for the Electronic Attenuator when this switch is in the “Enable” position.

For more details about the Electronic Attenuator, see ["More Information " on page 1504](#)

Remote Command	<code>[:SENSe]:POWer[:RF]:EATTenuation <rel_amp1></code> <code>[:SENSe]:POWer[:RF]:EATTenuation?</code> <code>[:SENSe]:POWer[:RF]:EATTenuation:STATe OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:EATTenuation:STATe?</code>
Example	<code>:POW:EATT 10</code> <code>:POW:EATT?</code> <code>:POW:EATT:STAT ON</code> <code>:POW:EATT:STAT?</code>
Notes	Electronic Attenuation's specification is defined only when Mechanical Attenuation is 6 dB
Dependencies	This control only appears in Dual-Attenuator models with an Electronic Attenuator installed and licensed. It does not appear in models with the Single-Attenuator configuration, as in the Single-Attenuator configuration there is no “electronic attenuator” there is only a single integrated attenuator (which has both a mechanical and electronic stage). However, in the Single-Attenuator configuration, EATT SCPI commands are accepted for compatibility with other X-series instruments and set a “soft” attenuation as described in . The “soft” attenuation is treated as an addition to the “main” attenuation value set by the Atten control or <code>:POW:ATT</code> and affects the total attenuation displayed on the Atten control and the Meas Bar The electronic attenuator (and the “soft” attenuation function provided in Single-Attenuator configurations) is unavailable above the low band (0-3.6 GHz, 0-3.4 GHz 0-3GHz, depending on the model).

3 5G NR Mode
 3.7 Modulation Analysis Measurement

If the low band ranges from 0-3.6GHz, and Stop Frequency of the instrument is > 3.6 GHz, then the **Enabled/Disabled** section of the **Elec Atten** control will be OFF and grayed-out

If the Internal Preamp is on, meaning it is set to Low Band or Full, the electronic attenuator (and the “soft” attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be OFF and grayed-out

If either of the above is true, and the SCPI command is sent, an error indicating that the electronic attenuator is unavailable will be sent

If both of the above are true, pressing the control will generate error message -221, in other words, the frequency range lockout takes precedence

If the electronic/soft Attenuator is enabled, then the Stop Freq of the instrument is limited to 3.6 GHz and the Internal Preamp is unavailable

If the LNA is on, the electronic attenuator (and the “soft” attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be OFF and grayed-out. This coupling works in the following modes/measurements:

- Channel Power, Occupied BW, ACP, SEM, Spurious Emissions, Power Stat CCDF measurements in all Modes
- Transmit On|Off Power measurement in 5GNR Mode
- Power vs. Time and Transmit Power measurement in GSM/EDGE Mode
- Burst Power measurement in Spectrum Analyzer Mode

The SCPI-only “soft” electronic attenuation for the single-attenuator configuration is not available in all measurements; in particular, it is not available in the Swept SA measurement

Couplings	Enabling and disabling the Electronic Attenuator affects the setting of the Mechanical Attenuator (in Dual-Attenuator configurations). This is described in more detail below and in " Mechanical Attenuator Transition Rules " on page 1505
Preset	0 dB OFF (Disabled) for Swept SA measurement ON (Enabled) for all other measurements that support the electronic attenuator
State Saved	Saved in instrument state
Min	0 dB
Max	Dual-Attenuator configuration: 24 dB Single-Attenuator configuration: the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB
Annotation	See Annotation under the Mech Atten control description

More Information

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear. These advantages primarily aid in remote operation and are negligible for front panel use. See "[Using the](#)

[Electronic Attenuator: Pros and Cons](#) " on page 1506 for a detailed discussion of the pros and cons of using the electronic attenuator.

For the Single-Attenuator configuration, for SCPI backwards compatibility, the “soft” attenuation feature replaces the Dual-Attenuator configuration’s electronic attenuator. All the same couplings and limitations apply. See "[Attenuator Configurations and Auto/Man](#) " on page 2570

Mechanical Attenuator Transition Rules

When the Electronic Attenuator is enabled, the Mechanical Attenuator transitions to a state that has no Auto function. Below are the rules for transitioning the Mechanical Attenuator. Note that the information below *only* applies to the Dual-Attenuator configurations, and *only* when the Electronic Attenuator is installed:

When the Electronic Attenuation is enabled from a disabled state:

- The Mechanical Attenuator is initialized to 10 dB (this is its optimal performance setting). You can then set it as desired with SCPI, numeric keypad, step keys, or knob, and it behaves as it normally would in manual mode
- The Auto/Man state of (Mech) Atten is saved
- The Auto/Man toggle on the (Mech) Atten control disappears and the auto rules are disabled
- The Electronic Attenuator is set to 10 dB less than the previous value of the Mechanical Attenuator, within the limitation that it must stay within the range of 0 to 24 dB of attenuation

Examples in the Dual-Attenuator configuration:

- Mech Atten at 20 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 10 dB. New total attenuation equals the value before Elec Atten enabled
- Mech Atten at 0 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 0 dB. New total attenuation does not equal the value before Elec Atten enabled
- Mech Atten at 40 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 24 dB. New total attenuation does not equal the value before Elec Atten enabled

When the Electronic Attenuation is disabled from an enabled state:

- The Elec Atten control is grayed out
- The Auto/Man state of (Mech) Atten is restored
- If now in Auto, (Mech) Atten recouples

- If now in Man, (Mech) Atten is set to the value of total attenuation that existed before the Elec Atten was disabled. The resulting value is rounded up to the smallest value possible given the (Mech) Atten Step setting - (That is, 57 dB changes to 58 dB when (Mech) Atten Step is 2 dB)

Using the Electronic Attenuator: Pros and Cons

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear.

The “finer steps” advantage of the electronic attenuator is beneficial in optimizing the alignment of the instrument dynamic range to the signal power in the front panel as well as remote use. Thus, you can achieve improved relative signal measurement accuracy. Compared to a mechanical attenuator with 2 dB steps, the 1 dB resolution of the electronic attenuator only gives better resolution when the odd-decibel steps are used. Those odd-decibel steps are less accurately calibrated than the even-decibel steps, so one tradeoff for this superior relative accuracy is reduced absolute amplitude accuracy.

Another disadvantage of the electronic attenuator is that the spectrum analyzer loses its “Auto” setting, making operation less convenient.

Also, the relationship between the dynamic range specifications (TOI, SHI, compression, and noise) and instrument performance are less well-known with the electrical attenuator. With the mechanical attenuator, TOI, SHI, and compression threshold levels increase dB-for-dB with increasing attenuation, and the noise floor does as well. With the electronic attenuator, there is an excess attenuation of about 1 to 3 dB between 0 and 3.6 GHz, making the effective TOI, SHI, and so forth, less well known. Excess attenuation is the actual attenuation relative to stated attenuation. Excess attenuation is accounted for in the instrument calibration.

IF Path Auto

Specify if the IF path in Advanced Acquisition Table will be automatically or manually selected.

Remote Command	<code>[:SENSe]:RF:ACQuistion:ATABle:IFPath:AUTO ON OFF 1 0</code> <code>[:SENSe]:RF:ACQuistion:ATABle:IFPath:AUTO?</code>
Example	<code>:RF:ACQ:ATAB:IFP:AUTO 1</code> <code>:RF:ACQ:ATAB:IFP:AUTO?</code>
Preset	ON
State Saved	Yes
Range	OFF ON

Mechanical Attenuation

Set mechanical attenuation for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:ATTenuation <rel_ampl></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:ATTenuation?</code>
Example	<code>:CCAR0:RF:CHAN1:ATT 20</code>
Preset	10 dB
State Saved	Saved in instrument state
Min	0 dB The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. To get to a value below 6 dB it has to be directly entered from the keypad or via SCPI. This protects from adjusting the attenuation to a dangerously small value which can put the instrument at risk of damage to input circuitry. However, if the current mechanical attenuation is below 6 dB it can be increased with the knob and step keys, but not decreased
Max	CXA Option 503 or 507: 50 dB EXA: 60 dB All other models: 70 dB

Elec Attenuation

Set electronic attenuation for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:EATTenuation <rel_ampl></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:EATTenuation?</code>
Example	<code>:CCAR0:RF:CHAN1:EATT 20</code>
Preset	0 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Dual attenuator configuration: 24 dB Single attenuator configuration: the total of ATT and EATT cannot exceed 50 dB, so if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB

Internal Preamp

Turn on/off internal preamp for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANnel1 ... 8:GAIN:PREamp OFF LOW FULL</code>
----------------	--

3 5G NR Mode
3.7 Modulation Analysis Measurement

	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:GAIN:PREamp?</code>
Example	<code>:CCAR0:RF:CHAN1:GAIN:PRE LOW</code> <code>:CCAR0:RF:CHAN1:GAIN:PRE?</code>
Dependencies	Preamp is not available on all hardware platforms. If the preamp is not present or is unlicensed, the control is not shown
Preset	OFF
State Saved	Saved in instrument state

LNA

Turn on/off Low Noise Amplifier (LNA) for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:GAIN:LNA OFF ON 0 1</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:GAIN:LNA?</code>
Example	<code>:CCAR0:RF:CHAN1:GAIN:LNA ON</code>
Dependencies	Requires option LNA
Preset	OFF
State Saved	Saved in State

uW Path Control

Select uW Path for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:MW:PATH STD LNPath MPBypass FULL</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:MW:PATH?</code>
Example	<code>CCAR0:RF:CHAN1:MW:PATH LNP</code> <code>CCAR0:RF:CHAN1:MW:PATH?</code>
Preset	MPB option present and licensed: MPB MPB option not present and licensed: STD
State Saved	Save in instrument state
Range	Standard Path Low Noise Path Enable uW Presel Bypass Full Bypass Enable

IF Gain

Set IF Gain for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:IF:GAIN:LEVel <rel_amp1></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RF:CHANne11 ... 8:IF:GAIN:LEVel?</code>
----------------	--

Example	<code>:CCAR0:RF:CHAN1:IF:GAIN:LEV -10</code> <code>:CCAR0:RF:CHAN1:IF:GAIN:LEV?</code>
Notes	Not available for B25 IF bandwidth option
Preset	0
State Saved	Save in instrument state
Min	Depends on CC Bandwidth
Max	Depends on CC Bandwidth

IF Path

Specify IF path manually for each component carriers.

Remote Command	<code>[:SENSe]:CCARrier0 ... 15:RF:CHANnel1 ... 8:IFPath B10M B25M B40M B85M B125M B140M B160M B255M B510M B1G B1500M B2G B4G</code> <code>[:SENSe]:CCARrier0 ... 15:RF:CHANnel1 ... 8:IFPath?</code>
Example	<code>:CCAR0:RF:CHAN1:IFP B160M</code> <code>:CCAR0:RF:CHAN1:IFP?</code>
Notes	B10M = 10 MHz B25M = 25 MHz B40M = 40 MHz B85M = 85 MHz B125M = 125 MHz B140M = 140 MHz B160M = 160 MHz B255M = 255 MHz B510M = 510 MHz B1G = 1 GHz B1500M = 1.5 GHz B2G = 2 GHz B4G = 4 GHz In cases where the path is not available but is selected from SCPI, it generates an error - 241, "Hardware missing; Option not installed"
Dependencies	Gray out if IF Path Auto is On
Preset	Automatically selected IF path according to measurement required IFBW and available HW bandwidth
State Saved	Saved in instrument state

3.7.8.4 Meas Time

Enables you to set measurement time parameters.

Search Length

Specifies the amount or length of Search Time input data that is included in the measurement pulse search.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:TIME:LENGth:SEARCh <time></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:TIME:LENGth:SEARCh?</code>
Example	<code>:EVM:CCAR0:TIME:LENG:SEAR 1ms</code> <code>:EVM:CCAR0:TIME:LENG:SEAR?</code>
Preset	22 ms
State Saved	Yes
Min	Depends on Result Length
Max	Depends on System BW

Result Length

Used to specify the amount of acquired time data (in subframe) that is available for measurement analysis.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:TIME:LENGth:RESult <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:TIME:LENGth:RESult?</code>
Example	<code>:EVM:CCAR0:TIME:LENG:RES 10</code> <code>:EVM:CCAR0:TIME:LENG:RES?</code>
Preset	10
State Saved	Yes
Min	1
Max	Depends on System BW

Meas Interval Subframe

Specifies subframe number in Meas Interval. Meas Interval Sub Frame/Slot/Symbol are used together to specify how much time data within the Result Length that is used for measurement analysis data (computing the trace and scalar results). Measurement Interval is entered as an integer number of subframe.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:TIME:INTerval[:SFRame] <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:TIME:INTerval[:SFRame]?</code>
Example	<code>:EVM:CCAR0:TIME:INT:SFR 5</code> <code>:EVM:CCAR0:TIME:INT:SFR?</code>

Preset	10
State Saved	Yes
Min	0
Max	Depends on Result Length

Meas Interval Slot

Specifies slot number in Meas Interval, note this parameter is only settable for minimum enabled numerology.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:TIME:INTerval:SLOT <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:TIME:INTerval:SLOT?</code>														
Example	<code>:EVM:CCAR0:TIME:INT:SLOT 1</code> <code>:EVM:CCAR0:TIME:INT:SLOT?</code>														
Preset	0														
State Saved	Yes														
Min	0														
Max	Depends on Result Length and minimum enabled numerology														
	<table border="1"> <thead> <tr> <th>SCS</th> <th>Max</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>9</td> </tr> <tr> <td>1</td> <td>19</td> </tr> <tr> <td>2</td> <td>39</td> </tr> <tr> <td>3</td> <td>79</td> </tr> <tr> <td>4</td> <td>159</td> </tr> <tr> <td>5</td> <td>319</td> </tr> </tbody> </table>	SCS	Max	0	9	1	19	2	39	3	79	4	159	5	319
SCS	Max														
0	9														
1	19														
2	39														
3	79														
4	159														
5	319														

Meas Interval Symbol

Specifies symbol number in Meas Interval, note this parameter is only settable for minimum enabled numerology.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:TIME:INTerval:SYMBOL <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:TIME:INTerval:SYMBOL?</code>
Example	<code>:EVM:CCAR0:TIME:INT:SYMB 1</code> <code>:EVM:CCAR0:TIME:INT:SYMB?</code>
Preset	0
State Saved	Yes

Min	0
Max	13
	NOTE: For 60 kHz with Extended CP, it is coupled with the 60kHz Normal CP Symbol with extended CP = floor(Symbol with Normal CP * 6 / 7)

Meas Offset Sub Frame

Specifies subframe number in Meas Offset. Meas Offset Sub Frame/Slot/Symbol are used together to specify the start position of the Measurement Interval with respect to first subframe within the Result Length. Measurement Interval is entered as an integer number of subframes. The sum of the Measurement Interval plus Measurement Offset must fit within the measurement Result Length.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:TIME:OFFSet[:SFRame] <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:TIME:OFFSet[:SFRame]?</code>
Example	<code>:EVM:CCAR0:TIME:OFFS:SFR 0</code> <code>:EVM:CCAR0:TIME:OFFS:SFR?</code>
Preset	0
State Saved	Yes
Min	0
Max	Depends on Result Length, Meas Interval Time

Meas Offset Slot

Specifies slot number in Meas Offset.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:TIME:OFFSet:SLOT <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:TIME:OFFSet:SLOT?</code>
Example	<code>:EVM:CCAR0:TIME:OFFS:SLOT 0</code> <code>:EVM:CCAR0:TIME:OFFS:SLOT?</code>
Preset	0
State Saved	Yes
Min	0
Max	Same as Meas Interval Slot

Meas Offset Symbol

Specifies symbol number in Meas Offset.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:TIME:OFFSet:SYMBol <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:TIME:OFFSet:SYMBol?</code>
Example	<code>:EVM:CCAR0:TIME:OFFS:SYMB 0</code> <code>:EVM:CCAR0:TIME:OFFS:SYMB?</code>
Preset	0
State Saved	Yes
Min	0
Max	13
	NOTE: For 60 kHz with Extended CP, it is coupled with the 60kHz Normal CP Symbol with extended CP = floor(Symbol with Normal CP * 6 / 7)

Analysis Start Boundary

Sets the Analysis Start Boundary. Analysis Start Boundary specifies the alignment boundary of the Result Length time data. To ensure that this alignment can be achieved, the total amount of data acquired by the analyzer is equal to the Result Length plus the length of the alignment boundary specified by Analysis Start Boundary. For example, if Analysis Start Boundary were set to subframe, the total acquisition will be equal to ResultLength + 1 subframe (and the Measurement Interval will start at a subframe boundary).

Once the Result Length is located within the time capture, Measurement Offset and Measurement Interval determine the data that is to be analyzed. This data is also displayed on the Time trace.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:TIME:ASBoundary FRAME SUB SLOT</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:TIME:ASBoundary?</code>
Example	<code>:EVM:CCAR0:TIME:ASB FRAM</code> <code>:EVM:CCAR0:TIME:ASB?</code>
Preset	FRAME
State Saved	Yes
Range	Frame Subframe Slot

Frame/Subframe/Slot Trigger

If Frame/Subframe/Slot Trigger is present and accurate (-50 usec to 50 usec), turning this parameter on may reduce required Search Length, which will help to improve measurement speed.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:FRAME:TRIGger OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:FRAME:TRIGger?</code>
----------------	--

Example	<code>:EVM:CCAR0:FRAM:TRIG 1</code> <code>:EVM:CCAR0:FRAM:TRIG?</code>
Preset	OFF
State Saved	Yes
Range	Off On

Analysis Subframe/Slot Offset

Specifies the offset of target analysis subframe/slot in whole frame.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15 :SFRame:TRIGger:OFFSet <integer></code> <code>[:SENSe] :EVM:CCARrier0 ... 15 :SFRame:TRIGger:OFFSet?</code>
Example	<code>:EVM:CCAR0:SFR:TRIG:OFFS 0</code> <code>:EVM:CCAR0:SFR:TRIG:OFFS?</code>
Couplings	Grayed-out when Analysis Start Boundary is Frame
Preset	0
State Saved	Yes
Min	0
Max	9

Capture Time Diagram

Allows you to view and configure the Meas Time parameters in the table.

For more information about the parameters, see

3.7.8.5 Meas Standard

The tab contains settings which let you configure the analyzer to match the measurement standard in your 5G NR signal.

The section entitled “Configure Preset” lets you configure the preset values for the Component Carriers. Once you have set all the controls in the “Configure Preset” section to the desired value, press the “Apply Preset (to all CCs)” control and your presets will be applied to each Component Carrier. Furthermore, any new Component Carriers will take on the same values you have applied.

NOTE

You must press **Apply Preset (to all CCs) or the values on the controls will *not* affect the Component Carriers.**

When you need to configure more parameters, select Advanced Preset Parameters to open a dialog and set advanced parameters for multiple measurements on one screen.

Bandwidth

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the **"Bandwidth" on page 2637** of each component carrier in the same way you would do so using the table in the **Configure Comp Carriers** dialog on the **Component Carriers** tab.

Set the value you want for this control and the other controls in the “**Configure Preset**” section then press **Apply Preset (to all CCs)**.

NOTE

You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

Once you have applied this preset value, any new CCs created by setting the **"Number of Component Carriers" on page 2633** will also take on this value.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:CARRier[:BANDwidth] B5M B10M B15M B20M B25M B30M B35M B40M B45M B50M B60M B70M B80M B90M B100M B200M B400M B800M B1600M B2000M</code> <code>[:SENSe]:RADio:STANdard:PRESet:CARRier[:BANDwidth]?</code>
Example	<code>:RAD:STAN:PRES:CARR B5M</code> <code>:RAD:STAN:PRES:CARR?</code>
Dependencies	Selections other than 10 MHz, 20 MHz, 30 MHz, and 40 MHz are unavailable when "Uplink Carrier Mode" on page 2648 is Sidelink - V2X If you change "Uplink Carrier Mode" on page 2648 to Sidelink – V2X when this parameter is set to a value other than 10 MHz, 20 MHz, 30 MHz, or 40 MHz, it is forcefully set to 10 MHz
Preset	When N9085EMOE is not installed and N9085EM4E is installed: B10M Otherwise: B100M
State Saved	Yes
Range	5 MHz 10 MHz 15 MHz 20 MHz 25 MHz 30 MHz 35 MHz 40 MHz 45 MHz 50 MHz 60 MHz 70 MHz 80 MHz 90 MHz 100 MHz 200 MHz 400 MHz 800 MHz 1600 MHz 2000 MHz
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:STANdard:PRESet[:BANDwidth]</code>

Frequency Range

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the **"Freq Range" on page 2638** of each component carrier in the same way you

would do so using the table in the **Configure Comp Carriers** dialog on the **Component Carriers** tab.

Set the value you want for this control and the other controls in the “**Configure Preset**” section then press **Apply Preset (to all CCs)**.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the **"Number of Component Carriers" on page 2633** will also take on this value.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:FREQuency:RANGe FR1 FR2</code> <code>[:SENSe]:RADio:STANdard:PRESet:FREQuency:RANGe?</code>
Example	<code>:RAD:STAN:PRES:FREQ:RANG FR1</code> <code>:RAD:STAN:PRES:FREQ:RANG?</code>
Dependencies	Available selections differ depending on Bandwidth as follows: <ul style="list-style-type: none"> - 50 MHz and 100 MHz: FR1 and FR2 - 200 MHz or wider: FR2 only - Other than above: FR1 only <p>When "Uplink Carrier Mode" on page 2648 is Sidelink - V2X, FR2 is unavailable</p>
Preset	<code>FR1</code>
State Saved	Yes
Range	FR1 FR2
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:STANdard:PRESet:FRANGe</code>

Duplex Mode

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the Duplex Mode of each component carrier. Set the value you want for this control and the other controls in the “Configure Preset” section then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the **"Number of Component Carriers" on page 2633** will also take on this value.

Two types of Duplex Mode (FDD and TDD) are supported.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DMODE FDD TDD</code> <code>[:SENSe]:RADio:STANdard:PRESet:DMODE?</code>
Example	<code>:RAD:STAN:PRES:DMOD TDD</code> <code>:RAD:STAN:PRES:DMOD?</code>
Dependencies	Available selections depend on Frequency Range When FR1 is selected, both TDD and FDD are available. When FR2 is selected, only TDD is available
Preset	TDD
State Saved	Yes
Range	FDD TDD

SCS

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the subcarrier spacing of each component carrier. Set the value you want for this control and the other controls in the “Configure Preset” section then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the **“Number of Component Carriers” on page 2633** will also take on this value.

In 5G, subcarrier spacing is governed by $2^n * 15$ kHz subcarrier spacings (where n is 0, 1, 2, or 3). 15, 30, and 60 kHz subcarrier spacings are used for the lower frequency bands, and 60 and 120 kHz subcarrier spacings are used for the higher frequency bands.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:SCS SCS15K SCS30K SCS60K SCS120K SCS480K SCS960K</code> <code>[:SENSe]:RADio:STANdard:PRESet:SCS?</code> <code>[:SENSe]:RADio:STANdard:PRESet:SCS:AUTO[:STATe] OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:SCS:AUTO[:STATe]?</code>
Example	<code>:RAD:STAN:PRES:SCS SCS30K</code> <code>:RAD:STAN:PRES:SCS?</code> <code>:RAD:STAN:PRES:SCS:AUTO 0</code> <code>:RAD:STAN:PRES:SCS:AUTO?</code>
Notes	SCS will not be preset to the selected one until the action “Apply Preset (to All CCs)” is executed
Dependencies	Available selections depend on a combination of Bandwidth and Frequency Range as follows <ul style="list-style-type: none"> – When “Adjust Limit Mask for Freq Range” is set to a value other than “$52.6 < f \leq 71.0$ GHz” (FR2-2):

FR	Bandwidth	SCS
FR1	5 MHz	15K*/30K
FR1	10 – 50 MHz	15K*/30K/60K
FR1	60 – 100 MHz	30K*/60K
FR2	50, 100, 200 MHz	60K*/120K
FR2	400 MHz	120K*

- When “Adjust Limit Mask for Freq Range” is set to “ $52.6 < f \leq 71.0$ GHz” (FR2-2):

FR	Bandwidth	SCS
FR2	100 MHz	120K*
FR2	400 MHz	120K*/480K/960K
FR2	800, 1600 MHz	480K*/960K
FR2	2000 MHz	960K*

(*) When AUTO is selected, the narrowest available SCS is selected.

Preset	SCS30K ON
State Saved	Yes Yes
Range	u = 0: 15 kHz u = 1: 30 kHz u = 2: 60 kHz u = 3: 120 kHz u = 5: 480 kHz u = 6: 960 kHz Auto Man

RB Alloc Preset

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the Resource Block Allocation Preset of each component carrier. Set the value you want for this control and the other controls in the “Configure Preset” section then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the “**Number of Component Carriers**” on page 2633 will also take on this value.

The RB Alloc Preset presets the Resource Block (RB) allocation mapping to a selected predefined pattern in the list:

“Fulfilled-xxx” is to fill out all maximum available RBs in each CC with one specified modulation type (Pi/2-BPSK | QPSK | 16 QAM | 64 QAM | 256 QAM | 1024 QAM), and

“DL-NR-TM x.x” is to map RBs in each CC based on the NR Test Model definition according to the section 4.9.2 in 3GPP TS38.141-1 or -2.

Remote Command	<pre>[:SENSe]:RADio:STANdard:PRESet:RBALloc FQPSK FQAM16 FQAM64 FQAM256 FQAM1024 DLTM1DOT1 DLTM1DOT2 DLTM2 DLTM2Q16 DLTM2QPS DLTM2A DLTM2B DLTM3DOT1 DLTM3DOT1Q16 DLTM3DOT1QPS DLTM3DOT1A DLTM3DOT1B DLTM3DOT2 DLTM3DOT3 FPIBPSK DLTM1DOT1P1 DLTM1DOT1L2 [:SENSe]:RADio:STANdard:PRESet:RBALloc?</pre>																	
Example	<pre>:RAD:STAN:PRES:RBAL DLTM1DOT1 :RAD:STAN:PRES:RBAL?</pre>																	
Notes	Resource Block Allocation Preset will not be preset to the selected one until the action “Apply Preset (to All CCs)” is executed																	
Dependencies	<p>Available selections vary depending on the Radio Direction and Frequency Range as follows:</p> <p>Uplink:</p> <ul style="list-style-type: none"> – Fulfilled xxxx except for Fulfilled 1024 QAM – Note that Fulfilled Pi/2-BPSK is available only when OFDM Type is DFT-s-OFDM <p>Downlink:</p> <ul style="list-style-type: none"> – FR1: All except for Fulfilled Pi/2-BPSK/TM2 (16-QAM)/TM2 (QPSK)/TM3.1 (16-QAM)/TM3.1 (QPSK) – FR2: All except for Fulfilled Pi/2-BPSK/TM1.2/TM2b/TM3.1b/TM3.2/TM3.3

Advanced Preset Parameters

Lets you access advanced preset parameters on one screen.

Uplink Carrier Mode

Allows you to select the uplink carrier mode: either Normal Uplink or Sidelink - V2X.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:CARRier NORMa1 V2X</code> <code>[:SENSe]:RADio:STANdard:PRESet:ULINK:CARRier?</code>
Example	<code>RAD:STAN:PRES:ULIN:CARR NORM</code> <code>RAD:STAN:PRES:ULIN:CARR?</code>
Dependencies	Available when the required license is installed and Direction is Uplink
Preset	When N9085EM0E is not installed and N9085EM4E is installed: V2X Otherwise: NORMa1
State Saved	Saved
Range	Normal Uplink Sidelink-V2X

DL FR1 NR-TM Reference Standard Selection

Enables you to select the 3GPP Standard for the DL FR1 TDD NR-TM lists of Resource Block Allocation Preset to be referred to; one is 3GPP TS38.141-1 and the other is 3GPP TS37.141 BC3 CS16/17, which define different TDD burst On/Off profiles.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DLINK:NRTM TS38 TS37CS1617</code> <code>[:SENSe]:RADio:STANdard:PRESet:DLINK:NRTM?</code>
Example	<code>RAD:STAN:PRES:DLIN:NRTM TS38</code> <code>RAD:STAN:PRES:DLIN:NRTM?</code>
Dependencies	Grayed out when Radio Direction is Uplink.
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed.
Preset	TS38
State Saved	Yes
Range	TS38.141-1 TS37.141 BC3 CS16/17

OFDM Type

This control is part of the “Preset for Mod Analysis” section of the Advanced Preset Parameters dialog. It lets you specify the OFDM Type to configure preset values for the Component Carriers:

- CP-OFDM
- DFT-s-OFDM

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the Number of Component Carriers will also take on this value.

This parameter is valid only for the Modulation Analysis measurement.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:OTYPe CPOFdm DFTSofdm</code> <code>[:SENSe]:RADio:STANdard:PRESet:OTYPe?</code>
Example	<code>:RAD:STAN:PRES:OTYP CPOF</code> <code>:RAD:STAN:PRES:OTYP?</code>
Dependencies	DFT-s-OFDM is grayed out when Radio Direction is Downlink DFT-s-OFDM is grayed-out when “Uplink Carrier Mode” on page 2648 is Sidelink - V2X
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	<code>CPOFdm</code>
State Saved	Yes
Range	CP-OFDM DFT-s-OFDM

Adjust Limit Mask for Freq Range

This control is part of the “Preset for ACP, SEM, Spur, Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you specify the frequency range for preset.

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

When in Auto, this value changes when f value is changed, where f is the center frequency of Component Carrier 0. Values to be preset will be preset to the values described in the Values for Meas Standard section when Apply Preset is executed.

When in Manual, values to be preset will be preset to the values described in Values or Meas Standard according to this value when Apply Preset is executed.

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command `[:SENSe]:RADio:STANdard:PRESet:ADJust:FRANge NONE | FT01 | F1T03 | F3T04P2 | F4P2T06 | F6T07 | F24P25T029P5 | F37T040 | F43T048 | F52T071`
`[:SENSe]:RADio:STANdard:PRESet:ADJust:FRANge?`
`[:SENSe]:RADio:STANdard:PRESet:ADJust:FRANge:AUTO OFF | ON | 0 | 1`
`[:SENSe]:RADio:STANdard:PRESet:ADJust:FRANge:AUTO?`

Example `:RAD:STAN:PRES:ADJ:FRAN F1T03`
`:RAD:STAN:PRES:ADJ:FRAN?`
`:RAD:STAN:PRES:ADJ:FRAN:AUTO 1`
`:RAD:STAN:PRES:ADJ:FRAN:AUTO?`

Dependencies Available selections depend on Frequency Range and Bandwidth

When Freq Range = FR1

- $f \leq 1.0$ GHz
- $< f \leq 3.0$ GHz
- $3.0 < f \leq 4.2$ GHz
- $4.2 < f \leq 6.0$ GHz
- $6.0 < f \leq 7.125$ GHz

When Freq Range = FR2 and Bandwidth = 50 or 200 MHz

	<ul style="list-style-type: none"> - 24.25 < f ≤ 29.5 GHz - 37.0 < f ≤ 43.5 GHz - 43.5 < f ≤ 48.2 GHz <p>When Freq Range = FR2 and Bandwidth = 100 or 400 MHz</p> <ul style="list-style-type: none"> - 24.25 < f ≤ 29.5 GHz - 37.0 < f ≤ 43.5 GHz - 43.5 < f ≤ 48.2 GHz - 52.6 < f ≤ 71.0 GHz <p>When Freq Range = FR2 and Bandwidth = 800 MHz or wider</p> <ul style="list-style-type: none"> - 52.6 < f ≤ 71.0 GHz
Couplings	<p>When in Auto, this value changes when f value is changed, where f is the center frequency of Component Carrier 0</p> <p>Adjust Limit Mask for freq Range will not be preset to the selected one until the action “Apply Preset (to All CCs)” is executed</p>
Preset	<p>Automatically selected</p> <p>The selection depends on which listed range the CC0 center freq is in</p> <p>ON</p>
State Saved	<p>Yes</p> <p>Yes</p>
Range	<p>None f ≤ 1.0 GHz 1.0 < f ≤ 3.0 GHz 3.0 < f ≤ 4.2 GHz 4.2 < f ≤ 6.0 GHz 6.0 < f ≤ 7.125 GHz 24.25 < f ≤ 29.5 GHz 37.0 < f ≤ 43.5 GHz 43.5 < f ≤ 48.2 GHz 52.6 < f ≤ 71.0 GHz</p>

BS Type

This control is part of the “Preset for ACP, SEM, Spur, Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you specify the BS Type for preset:

- 1-C (FR1 Conducted)
- 1-O (FR1 Radiated)
- 2-O (FR2 Radiated)

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DLINK:BS:TYPE FR1C FR10 FR20</code> <code>[:SENSe]:RADio:STANdard:PRESet:DLINK:BS:TYPE?</code>
Example	<code>:RAD:STAN:PRES:DLIN:BS:TYPE FR1C</code> <code>:RAD:STAN:PRES:DLIN:BS:TYPE?</code>
Dependencies	Grayed out when Radio Direction is Uplink
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	<code>FR1C</code>
State Saved	Yes
Range	1-C (FR1 Conducted) 1-0 (FR1 Radiated) 2-0 (FR2 Radiated)

BS Category

This control is part of the “Preset for ACP, SEM, Spur, Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you specify the BS Category for preset:

- Category A Wide Area BS
- Category B Wide Area BS
- Category A Medium Range BS
- Category B Medium Range BS
- Category A Medium Range BS (Low Power rated)
- Category B Medium Range BS (Low Power rated)
- Category A Local Area BS
- Category B Local Area BS

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DLINK:BS:CATegory AWARea BWARea </code>
----------------	--

	AMRange BMRRange AMRLow BMRLow ALARea BLARea [:SENSe]:RADio:STANdard:PRESet:DLINK:BS:CATegory?
Example	:RAD:STAN:PRES:DLIN:BS:CAT BWAR :RAD:STAN:PRES:DLIN:BS:CAT?
Dependencies	Grayed-out when Radio Direction is Uplink
Couplings	Values to be preset will not be preset to the selected one until the action "Apply Preset (to All CCs)" is executed
Preset	BWARea
State Saved	Yes
Range	Category A Wide Area BS Category B Wide Area BS Category A Medium Range BS Category B Medium Range BS Category A Medium Range BS (Low Power rated) Category B Medium Range BS (Low Power rated) Category A Local Area BS Category B Local Area BS

Assumed Adjacent Channels

This control is part of the "Preset for ACP, Mod Analysis" section of the Advanced Preset Parameters dialog. It lets you set the Assumed Adjacent Channels for carrier configuration preset. Set the value you want for this control and the other controls in the "Configure Preset" section, then press "Apply Preset (to all CCs)" to execute preset. See the Values for Meas Standard section for the parameters to be preset.

Downlink

Remote Command	[:SENSe]:RADio:STANdard:PRESet:DLINK:ACHannel[:TYPE] NR EUTRa NREutra [:SENSe]:RADio:STANdard:PRESet:DLINK:ACHannel[:TYPE]?
Example	:RAD:STAN:PRES:DLIN:ACH NR :RAD:STAN:PRES:DLIN:ACH?
Dependencies	UTRA and NR+UTRA are grayed-out when "Uplink Carrier Mode" on page 2648 is Sidelink - V2X
Preset	NR
State Saved	Yes
Range	NR (same BW) E-UTRA NR + E-UTRA

Uplink

Remote Command	[:SENSe]:RADio:STANdard:PRESet:ULINK:ACHannel[:TYPE] NR UTRa NRUTra [:SENSe]:RADio:STANdard:PRESet:ULINK:ACHannel[:TYPE]?
Example	:RAD:STAN:PRES:ULIN:ACH NR

	<code>:RAD:STAN:PRES:ULIN:ACH?</code>
Preset	NR
State Saved	Yes
Range	NR (same BW) UTRA NR + UTRA

UE Power Class

This control is part of the “Preset for ACP, Mod Analysis” section of the Advanced Preset Parameters dialog. It lets you select the UE Power Class for preset from Power Class 1 to 4.

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

This parameter is valid for the ACP and Mod Analysis measurement.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:PCLass CLASS1 ... CLASS4</code> <code>[:SENSe]:RADio:STANdard:PRESet:ULINK:PCLass?</code>
Example	<code>:RAD:STAN:PRES:ULIN:PCL CLASS3</code> <code>:RAD:STAN:PRES:ULIN:PCL?</code>
Dependencies	Grayed out when Radio Direction is Downlink Power Class 4 is grayed out when Frequency Range is FR1 Power Class 1, 2, and 4 are grayed-out when "Uplink Carrier Mode" on page 2648 is Sidelink - V2X
Preset	CLASS3
State Saved	Yes
Range	1 2 3 4

Uplink Channel Type

This control is part of the “Preset for Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you set the Uplink Channel Type to preset parameters for the Transmit On|Off Power measurement. Set the value you want for this control and the other controls in the “Configure Preset” section, then press “Apply Preset (to all CCs)” to execute preset. See the Values for Meas Standard section for the parameters to be preset.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:CTYPe NONE PUS PRA4 PRA160S15 PRA160S30 PRA12 PRA123S15 PRA123S30 SRS PRA0S60 PRA0S120</code>
----------------	---

	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:CTYPe?</code>
Example	<code>:RAD:STAN:PRES:ULIN:CTYP PUS</code> <code>:RAD:STAN:PRES:ULIN:CTYP?</code>
Dependencies	Available selections differ depending on the combination of Freq Range and Duplex Mode as follows: When Freq Range is FR1 and Duplex Mode is FDD: - PUSCH, PRACH Config Index4, PRACH Config Index160 and SRS When Freq Range is FR1 and Duplex Mode is TDD: - PUSCH, PRACH Config Index12, PRACH Config Index123 and SRS When Freq Range is FR2: - PUSCH, PRACH Config Index0, SRS
Preset	<code>PUS</code>
State Saved	Yes
Range	PUSCH PRACH Config Index 4 PRACH Config Index 160 (15 kHz SCS) PRACH Config Index 160 (30 kHz SCS) PRACH Config Index 12 PRACH Config Index 123 (15 kHz SCS) PRACH Config Index 123 (30 kHz SCS) PRACH Config Index 0 (60 kHz SCS) PRACH Config Index 0 (120 kHz SCS) SRS

More Advanced Preset Parameters

Enables you to configure more advanced Apply Preset features.

Include RB Alloc Preset for Mod Analysis

Enables you to select whether or not RB Alloc Preset is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EVM:RBALloc OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EVM:RBALloc?</code>
Example	<code>:RAD:STAN:PRES:INCL:EVM:RBAL 1</code> <code>:RAD:STAN:PRES:INCL:EVM:RBAL?</code>
Notes	When Exclude is selected, the indicator “Exclude EVM RB Alloc” appears on the Meas Setup menu panel
Preset	<code>ON</code>
State Saved	Yes

Include Gate Source

Enables you to select whether or not Gate Source is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EGATe:SOURce OFF ON 0 1</code>
----------------	---

	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EGATe:SOURce?</code>
Example	<code>:RAD:STAN:PRES:INCL:EGAT:SOUR 1</code> <code>:RAD:STAN:PRES:INCL:EGAT:SOUR?</code>
Preset	ON
State Saved	Yes

Include Periodic Timer Period

Enables you to select whether or not Periodic Timer Period is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:PERiod OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:PERiod?</code>
Example	<code>:RAD:STAN:PRES:INCL:FRAM:PER 1</code> <code>:RAD:STAN:PRES:INCL:FRAM:PER?</code>
Preset	ON
State Saved	Yes

Include Periodic Timer Sync Source

Enables you to select whether or not Periodic Timer Sync Source is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC[:SOURce] OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC[:SOURce]?</code>
Example	<code>:RAD:STAN:PRES:INCL:FRAM:SYNC 1</code> <code>:RAD:STAN:PRES:INCL:FRAM:SYNC?</code>
Preset	ON
State Saved	Yes

Include Periodic Timer Sync Holdoff

Enables you to select whether or not Periodic Timer Sync Holdoff is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC:HOLDoff OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC:HOLDoff?</code>
Example	<code>:RAD:STAN:PRES:INCL:FRAM:SYNC:HOLD 1</code>

	<code>:RAD:STAN:PRES:INCL:FRAM:SYNC:HOLD?</code>
Preset	ON
State Saved	Yes

Apply Preset (to All CCs)

This is the same as the Apply Preset (to All CCs) control on the Meas Standard menu panel tab under Meas Standard.

See ["Apply Preset \(to All CCs\)" on page 2657](#).

Apply Preset (to All CCs)

When you press this control, parameters of each component carrier are configured to the values set on the ["Bandwidth" on page 2643](#), ["Frequency Range" on page 2644](#), ["Duplex Mode" on page 2644](#), ["SCS" on page 2645](#) and ["RB Alloc Preset" on page 2646](#) controls in the "Configure Presets" section of the menu panel. These values will also be used for any subsequent Component Carriers created.

NOTE

You must press **"Apply Preset (to all CCs)"** or the values on the controls in the "Configure Presets" section of the menu panel will *not* affect the Component Carriers.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:IMMEDIATE</code>
Example	<code>:RAD:STAN:PRES:IMM</code>
Notes	Whenever any preset parameter is changed, including the following cases, the color of this control changes to amber, until "Apply Preset" is executed again <ul style="list-style-type: none"> - Start-up - Mode Preset - Recall

Values for Meas Standard

Meas Standard Setting Parameters for Apply Preset

The following parameters in Meas Setup > Meas Standard let you configure the preset values for Component Carriers.

3 5G NR Mode
3.7 Modulation Analysis Measurement

Direction	Downlink	Uplink
Bandwidth	5, 10, 15, 20, 25, 30, 35, 40, 45, 50, 60, 70, 80, 90, 100, 200, 400, 800, 1600, 2000 MHz	5, 10, 15, 20, 25, 30, 35, 40, 45, 50, 60, 70, 80, 90, 100, 200, 400, 800, 1600, 2000 MHz
Frequency Range	FR1 FR2	FR1 FR2
Duplex Mode	FDD TDD	FDD TDD
SCS	$\mu = 0$ (15 kHz), 1(30 kHz), 2 (60 kHz), 3 (120 kHz), 5 (480 kHz), 6 (960 kHz)	$\mu = 0$ (15 kHz), 1(30 kHz), 2 (60 kHz), 3 (120 kHz), 5 (480 kHz), 6 (960 kHz)
RB Alloc Preset	Fulfilled QPSK, Fulfilled 16 QAM, Fulfilled 64 QAM, Fulfilled 256 QAM, 1024 QAM NR-TM1.1 (port 0), 1.1 (port 1), 1.1 (2 layers), 1.2, 2 (64 QAM/16 QAM/QPSK), 2a, 2b, 3.1 (64 QAM/16 QAM/QPSK), 3.1a, 3.1b, 3.2, 3.3	Fulfilled Pi/2-BPSK (for DFT-s-OFDM only), Fulfilled QPSK, Fulfilled 16 QAM, Fulfilled 64 QAM, Fulfilled 256 QAM
UL Carrier Mode	n/a	Normal Uplink, Sidelink-V2X
OFDM Type (for Mod Analysis)	CP-OFDM	CP-OFDM, DFT-s-OFDM
Adjust Limit Mask for Freq Range (for ACP, SEM, PvT and Spur only)	None, $f \leq 1.0$ GHz (FR1), $1.0 < f \leq 3.0$ GHz (FR1), $3.0 < f \leq 4.2$ GHz (FR1), $4.2 < f \leq 6.0$ GHz (FR1), $6.0 < f \leq 7.125$ GHz (FR1), $24.25 < f \leq 29.5$ GHz (FR2), $37.0 < f \leq 43.5$ GHz (FR2), $43.5 < f \leq 48.2$ GHz (FR2), $52.6 < f \leq 71.0$ GHz (FR2)	None, $f \leq 1.0$ GHz (FR1), $1.0 < f \leq 3.0$ GHz (FR1), $3.0 < f \leq 4.2$ GHz (FR1), $4.2 < f \leq 6.0$ GHz (FR1), $6.0 < f \leq 7.125$ GHz (FR1), $24.25 < f \leq 29.5$ GHz (FR2), $37.0 < f \leq 43.5$ GHz (FR2), $43.5 < f \leq 48.2$ GHz (FR2), $52.6 < f \leq 71.0$ GHz (FR2)
BS Type (for ACP, SEM, PvT and Spur only)	1-C (FR1 Conducted), 1-O (FR1 Radiated), 2-O (FR2 Radiated)	n/a
BS Category (for ACP, SEM, PvT, and Spur only)	Cat A Wide Area BS, Cat B Wide Area BS, Cat A Medium Range BS, Cat B Medium Range BS, Cat A Medium Range BS (Low Pr), Cat B Medium Range BS (Low Pr), Cat A Local Area BS, Cat B Local Area BS	n/a
Assumed Adj Channels (for ACP, FR1)	NR (same BW), E-UTRA, NR + E-UTRA	NR (same BW), UTRA, NR+UTRA

<p>UE Power Class (for ACP: FR1 and Mod Analysis: FR2 UE IBE)</p>	<p>n/a</p>	<p>When Freq Range is FR1: Power Class 2, Power Class 3 When Freq Range is FR2: Power Class 1, Power Class 2, Power Class 3, Power Class 4</p>
<p>UL Channel Type (for Tx On Off Power)</p>	<p>n/a</p>	<p>When Freq Range is FR1: PUSCH, PRACH Config Index 4 (FDD), PRACH Config Index 160 (15 kHz SCS, FDD), PRACH Config Index 160 (30 kHz SCS, FDD), PRACH Config Index 12 (TDD), PRACH Config Index 123 (15 kHz SCS, TDD), PRACH Config Index 123 (30 kHz SCS, TDD), SRS When Freq Range is FR2: PUSCH, PRACH Config Index 0 (60 kHz SCS), PRACH Config Index 0 (120 kHz SCS), SRS</p>

TS38.521-2 v.17.0.0 (v.2022-09) The following PvT limit requirements are still FFS:
 Clause 6.3.3.2, Table 6.3.3.2.5-3: Test Tolerance for OFF power ... still FFS.
 Clause 6.3.3.2, Table 6.3.3.2.5-4: Test Tolerance for ON power ... still FFS.
 Clause 6.3.3.4, Table 6.3.3.4.5-1: PRACH time mask ... for On power and On power Tolerance ... still FFS.
 Clause 6.3.3.6 SRS time mask ... still all FFS.

When "[Apply Preset \(to All CCs\)](#)" on page 2657 is pressed, related measurement parameters and Gate parameters are changed to the values described in the following sections in this chapter.

Reference Standard version and ACP & SEM table indicator

The following reference 3GPP test spec doc with its version number, ACP and SEM table numbers are displayed in the **Advanced Preset Parameters** dialog menu.

Preset parameters		Reference spec doc, ACP and SEM table in the menu		
FR	Assumed Adjacent Channel (ACLR)	Test Spec	ACP (*)	SEM
FR1	NR (same BW)	TS38.521-1	Table 6.5E.2.4.1.5-2	Table 6.5E.2.2.1.5-1
		v.17.6.1 (2022-10)		

(*) ACP reference table selection represents the Relative Limit for Outer Offsets. (The table numbers for Absolute limits, Test Tolerances, and the limits for Inner Offsets/CACLR are not displayed.)

Measurement-Global parameters

The following parameters are configured as preset values.

- ["Configure Component Carriers" on page 2664](#)
- ["Trigger/Gate Parameters" on page 2664](#)

Configure Component Carriers

When Direction = Uplink:

Preset Configuration	Preset Value
UL Carrier Mode	Sidelink
Normal Uplink	Disabled (for all CCs)
Sidelink / V2X	Enabled (for all CCs)

Trigger/Gate Parameters

When executing "Apply Preset", preset the following parameters:

3 5G NR Mode
3.7 Modulation Analysis Measurement

Trigger menu	Parameter	Preset values		
		Downlink (*1) FR1	Downlink (*1) FR2	Uplink
Trigger	Select Trigger Source (*2)	(no preset)	(no preset)	(no preset)
	Period (Periodic Timer) (*3)	5.000 ms	1.250 ms	10.000 ms
	(Periodic) Sync Source (*4)	RF Burst	RF Burst	RF Burst
Gate Source	Select Gate Source	Periodic	Periodic	Periodic
	Period (Periodic Timer) (*3)	5.000 ms	1.250 ms	10.000 ms
	(Periodic) Sync Source (*4)	RF Burst	RF Burst	RF Burst
	Sync Holdoff	On, 250 us	On, 250 us	On, 250 us
Gate Settings	Gate (*5)	On	On	(no preset)
	Gate Delay	5.000 ms	1.250 ms	(no preset)
	Gate Length	3.700 ms (*6) or 2.700 ms (*6)	927.5 us	(no preset)
	Gate Holdoff	(no preset)	(no preset)	(no preset)
	Periodic Sync Src	Select Periodic Trigger Sync Source (*4)	RF Burst	RF Burst
Auto Holdoff	Absolute Trig Level	(no preset)	(no preset)	(no preset)
	Trigger Slope	(no preset)	(no preset)	Positive
	Trig Holdoff	(no preset)	(no preset)	On, 250 us (*7)
	Holdoff Type	(no preset)	(no preset)	Below (*7)

Notes:

(*1) For Downlink case, these values are preset with the Apply Preset action when "RB Alloc Preset" on page 2646 is any of NR-TM and "Duplex Mode" on page 2644 is TDD.

(*2) Trigger Source is a separate parameter in each measurement, and is not preset with the Apply Preset action. Note that in the Tx On/Off Power measurement, it is forcefully changed to Periodic when the direction is switched to Uplink or to External 1 when the direction is switched to Downlink except for models with the H1G option. With the H1G option, it is changed to either External 1 (when Info BW \leq 255 MHz) or External 3 (when Info BW \geq 256 MHz) depending on the Info BW determined by the component carrier configuration.

(*3) Periodic Trigger Period and Gate Period are the same/shared parameter, so called "Periodic Timer Period".

(*4) Periodic Trigger Sync Source and Periodic Gate Sync Source are the same/shared parameter.

(*5) Gate is preset to Off with the Apply Preset action when "Duplex Mode" on page 2644 is FDD.

(*6) Gate Length preset value for DL FR1 depends on "DL FR1 NR-TM Reference Standard Selection" on page 2357 under the Advanced Preset Parameters menu: 3.700 ms for TS38.141-1 or 2.700 ms for TS37.141 BC3 CS16/17.

(*7) These Trig Holdoff & Holdoff Type settings make the trigger holdoff wait for an OFF power period at least 250 us (in any burst configuration preset in Uplink), and then triggers at the beginning of the power raise timing (with Trigger Slope = Positive) of the Burst ON power as expected. This is to avoid an unexpected triggering with other random power up or down.

Modulation Analysis

The following parameters are configured as preset values.

- "Configure Component Carriers|Channel Profile: Resource Grid" on page 1537
- "Channel Profile: PDSCH & PUSCH Resource Allocation: RB Number values" on page 1538
- "Advanced: Advanced Demod Setup" on page 1540

Note: CC channel configuration (including CC BW, FR, SCS) and Resource Block allocation map & settings are preset by recalling each scp (Signal Studio/PWSG, prepared internally) file accordingly, based on the "RB Alloc Preset" selection.

Configure Component Carriers|Channel Profile: Resource Grid

When presetting Freq Range and Bandwidth, the resource grid is reset to its default values per SCS accordingly. Also the resource grid config mode is reset to its default value: Manual.

- Transmission bandwidth configuration N_{RB} for FR1:

SCS (kHz)	5M Hz	10M Hz	15M Hz	20M Hz	25M Hz	30M Hz	35M Hz	40M Hz	45M Hz	50M Hz	60M Hz	70M Hz	80M Hz	90M Hz	100M Hz
	N_{RB}	N	N	N	N	N	N	N	N	N	N	N	N	N	N
		RB

3 5G NR Mode
3.7 Modulation Analysis Measurement

- N_{RB} values for Downlink and Uplink FR2 (FR2-2) with “Adjust Limit Mask for Freq Range” = “ $52.6 < f \leq 71.0$ GHz”, when the OFDM Type = DFT-s-OFDM:

SCS (kHz)	100 MHz	400 MHz	800 MHz	1600 MHz	2000 MHz
	N_{RB}	N_{RB}	N_{RB}	N_{RB}	N_{RB}
120	64	256	n/a	n/a	n/a
480	n/a	66	124	248	n/a
960	n/a	33	62	124	148

TS38.521-1 v.17.7.0 (v.2022-12) Table 6.1-1: Common Uplink Configuration.

TS38.521-2 v.17.0.0 (v.2022-09) Table 6.1-1: Common Uplink Configuration for PC3.

(*) Either TS38.104 or TS38.101-2 does not define SCS 240 kHz case. The max N_{RB} values are assumed half of SCS 120 kHz cases, respectively.

Note: No definition for the N_{RB} values for the new Release 17 FR2-2 SCS (480k, 960k) & Carrier BW (800, 1600, 2000 MHz).

Advanced: Advanced Demod Setup

- Direction = Downlink

Submenu	Parameter	Preset Configuration		Preset Value
		RB Alloc	FR	
General	DC Punctured	DL NR-TMx.x	FR1,2	Off
	Report EVM in dB			Off
	Symbol Clock Error Compensation			Off
	IQ Imbalance Compensation			Off
EVM	3GPP Conformance Test (*1)			On

- Direction = Uplink

Submenu	Parameter	Preset Configuration		Preset Value
		RB Alloc	FR	

General	DC Punctured	n/a	FR1,2	Off
	Report EVM in dB			Off
	Symbol Clock Error Compensation			Off
	IQ Imbalance Compensation			Off
EVM	3GPP Conformance Test (*1)	n/a		On
UL Flatness	Test Tolerance	n/a	FR1	1.4 dB
			FR2	n/a (*2)
UL IBE	UE Power Class	n/a	FR1	Same value as in Advanced Preset menu (grayed out)
			FR2	Same value as in Advanced Preset menu
	Test Tolerance		FR1	0.8 dB
			FR2	n/a (*2)
UL IBE Limit Threshold to	IBE Limit Threshold from P_RB	n/a	FR1	-30.00 dB
			FR2	-25.00 dB

(*1) 3GPP Conformance Test = ON parameter presets the parameters under the “EVM” tab in the Advanced Demod Setup dialog menu. For details, see **3GPP Conformance Test** in the Modulation Analysis Measurement section.

Note: “IQ Offset Compensation” parameter location will be moved to the “EVM” from the “General” submenu, and it is added to the controlled list of “3GPP Conformance Test = ON”, with “Off” when Downlink, and with “On” when Uplink.

(*2) UL Spectrum Flatness & IBE “Test Tolerance” value is not preset when FR2 is selected because FR2 Test Tolerance value definition is still FFS in TS38.521-2 v.16.7.0 (v.2021-03), clauses 6.4.2.3 (IBE), 6.4.2.4 (Flatness), and 6.4.2.5 (Flatness for pi/2 BPSK).

Uplink FR1 Flatness and IBE Test Tolerance values in TS38.521-1 v.17.6.1 (v.2022-10):

- IBE: Table 6.4.2.3.5-1 Test requirements for in-band emissions
- Flatness:
 - Table 6.4.2.4.5-1 Requirements for EVM equalizer spectrum flatness (normal conditions),
 - Table 6.4.2.4.5-2 Requirements for EVM equalizer spectrum flatness (extreme conditions),

- Table 6.4.2.5.5-1 Mask for EVM equalizer coefficients for Pi/2 BPSK, normal conditions

Uplink FR2 Flatness and IBE Test Tolerance values in TS38.521-2 v.17.0.0 (v.2022-09):

- IBE: all FFS
 - Table 6.4.2.3.5-1: Test requirements for in-band emissions for power class 1,
 - Table 6.4.2.3.5-2: Test requirements for in-band emissions for power class 2,
 - Table 6.4.2.3.5-3: Requirements for in-band emissions for power class 3,
 - Table 6.4.2.3.5-4: Test requirements for in-band emissions for power class 4
- Flatness: all FFS
 - Table 6.4.2.4.5-1: Test Requirements for EVM equalizer spectrum flatness (normal conditions),
 - Table 6.4.2.5.5-1: Test requirement for EVM equalizer coefficients for Pi/2 BPSK (normal conditions)

3.7.8.6 Channel Profile

Enables you to configure parameters for user and physical channels.

SSB Auto Detect

Enables or disables channel profile SSB auto detection.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PROFile:SSB:AUTO[:DETECT] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PROFile:SSB:AUTO[:DETECT]?</code>
Example	<code>:EVM:CCAR0:PROF:SSB:AUTO OFF</code> <code>:EVM:CCAR0:PROF:SSB:AUTO?</code>
Couplings	Only valid with Downlink Grayed-out when MIMO is on
Preset	OFF
State Saved	Yes

PDCCH Auto Detect

Enables or disables channel profile PDCCH auto detection.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PROFile:PDCCh:AUTO[:DETECT] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PROFile:PDCCh:AUTO[:DETECT]?</code>
Example	<code>:EVM:CCAR0:PROF:PDCC:AUTO OFF</code> <code>:EVM:CCAR0:PROF:PDCC:AUTO?</code>
Couplings	Only valid with Downlink Grayed-out when MIMO is on
Preset	OFF
State Saved	Yes

The performance and stability of PDCCH Auto Detection will be variable depending on input signal quality and setting of key parameters.

These parameters need to be set correctly:

- Component Carrier frequency and bandwidth
- N_grid_start and N_grid_size
- N_BWP_start and N_BWP_size

These additional parameters are also needed (Auto Detection Settings parameter group):

- Numerology
- RNTI
- RNTI Type
- BWP CORESET settings
- Search Space Type
- Num of PDCCH Candidates per Aggregation Level
- Allocated Slots

PDSCH Auto Detect

Enables or disables channel profile PDSCH auto detection.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PROFile:PDSCh:AUTO[:DETECT] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PROFile:PDSCh:AUTO[:DETECT]?</code>
Example	<code>:EVM:CCAR0:PROF:PDSC:AUTO OFF</code> <code>:EVM:CCAR0:PROF:PDSC:AUTO?</code>
Couplings	Only valid with Downlink

	Grayed-out when MIMO is on
Preset	OFF
State Saved	Yes
	<p>The performance and stability of PDSCH Auto Detection will be variable depending on input signal quality and setting of key parameters.</p> <p>At least these parameters need to be set correctly:</p> <ul style="list-style-type: none"> – Component Carrier frequency and bandwidth – N_grid_start and N_grid_size – N_BWP_start and N_BWP_size <p>If these additional parameters are set correctly too, the performance and stability of PDSCH Auto Detection could be improved significantly:</p> <ul style="list-style-type: none"> – Numerology <p>Known limitations for PDSCH Auto Detection:</p> <ul style="list-style-type: none"> – Not working well for multiple numerologies – Not working well if there is no gap in time or frequency domain between PDCCH and PDSCH allocations – Not working well for RA type0

PUSCH Auto Detect

Enables or disables channel profile PUSCH auto detection.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PROFile:PUSCh:AUTO[:DETECT] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PROFile:PUSCh:AUTO[:DETECT]?</code>
Example	<code>:EVM:CCAR0:PROF:PUSC:AUTO OFF</code> <code>:EVM:CCAR0:PROF:PUSC:AUTO?</code>
Couplings	Only valid with Uplink Grayed-out when MIMO is on
Preset	OFF
State Saved	Yes
	<p>The performance and stability of PUSCH Auto Detection will be variable depending on input signal quality and setting of key parameters.</p> <p>At least these parameters need to be set correctly:</p>

- Component Carrier frequency and bandwidth
- N_grid_start and N_grid_size
- N_BWP_start and N_BWP_size

If these additional parameters are set correctly too, the performance and stability of PUSCH Auto Detection could be improved significantly:

- Numerology

Known limitations for PUSCH Auto Detection:

- Not working well for multiple numerologies
- Not working well if there is no gap in time or frequency domain between PUCCH and PUSCH allocations
- Not working well for RA type0

PRACH Occasion Auto Detect

Enables or disables PRACH occasions auto detect.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PROFile:PRACH:OCCasion:AUTO[:DETECT] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PROFile:PRACH:OCCasion:AUTO[:DETECT]?</code>
Example	<code>:EVM:CCAR0:PROF:PRAC:OCC:AUTO OFF</code> <code>:EVM:CCAR0:PROF:PRAC:OCC:AUTO?</code>
Preset	OFF
State Saved	Yes

Copy Auto -> Manual

Copies reliably auto-detected parameters into channel profile. These parameters are also displayed in “Auto Detect Summary” window.

Note those parameters detected based on power are not regarded as reliably auto-detected, so they will not be displayed or copied into channel profile.

Remote Command	<code>[:SENSe]:EVM:PROFile:COPY[:IMMEDIATE]</code>
Example	<code>:EVM:PROF:COPY</code>
Notes	Available when Detection is Auto

Control and User Channels

Configure parameters for user and physical channels.

Resource Grid

Enables you to configure resource grid for each available numerology of each component carrier.

NOTE

This tab and the following controls are only available for Modulation Analysis measurement.

Component Carrier (GUI only)

Selects the Component Carrier to configure its resource grid for each available numerology.

Bandwidth

This is the same as the Bandwidth column in the Configure CCs table. See ["Bandwidth" on page 2637](#).

Freq Range

This is the same as the Freq Range column in the Configure CCs table. See ["Freq Range" on page 2638](#)

Sidelink

Configuration Mode

Selects the configuration mode for resource grid table:

- Auto – always reset N_grid_start and N_grid_size when the frequency range and bandwidth of component carrier are changed. SCS enable/disable state will not be changed, unless enabled SCS is invalid for new frequency range and bandwidth. If all enabled SCS are invalid for new frequency range and bandwidth, 30K SCS will be enabled for frequency range 1 and 120K SCS will be enabled for frequency range 2

- Man – keep the value in grid table when the frequency range and bandwidth of component carrier are changed, unless a value is invalid for new frequency range and bandwidth

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:RGRid:CONFig:AUTO ON OFF 1 0</code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:RGRid:CONFig:AUTO?</code>
Example	<code>:EVM:CCAR:RGR:CONF:AUTO 0</code> <code>:EVM:CCAR:RGR:CONF:AUTO?</code>
Preset	OFF
State Saved	Yes
Range	OFF ON 0 1

When the configuration mode is Auto, the default N_grid_start is set to 0 and N_grid_size is set according to tables below:

Table 5.3.2-1: Transmission bandwidth configuration N_{RB} for FR1

SCS	5	10	15	20	25	30	40	50	60	70	80	90	100

60	N.A	11	18	24	31	[38]	51	65	79	[95]	106	[122]	133

Table 5.3.2-2: Transmission bandwidth configuration N_{RB} for FR2

SCS	50 MHz	100 MHz	200 MHz	400 MHz
	N _{RB}	N _{RB}	N _{RB}	N _{RB}
60	66	132	264	N.A
120	32	66	132	264

SCS Enabled

The Enabled column lets you enable or disable selected SCS for current component carrier.

Remote Command	<code>[:SENSe][:EVM]:CCARrier[0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k</code>
----------------	---

3 5G NR Mode
3.7 Modulation Analysis Measurement

	<pre>[:STATe] OFF ON 0 1 [:SENSe][:EVM]:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k [:STATe]?</pre>
Example	<pre>:EVM:CCAR:RGR:SCS15 ON :EVM:CCAR:RGR:SCS15?</pre>
Notes	<p>Only valid numerology for selected frequency range and bandwidth will be visible. Some SCS are disabled if they are “N.A” in Tables 5.3.2-1 and 5.3.2.2 (in 3GPP TS38.104)” in the Section 3.2.5.1.15, N_Grid_Size (Display Only)</p> <p>In EVM, if Configuration Mode is Auto and Freq Range is changed, the Grid Start and Grid Size will be reset according to Table 5.3.2-1 or Table 5.3.2-2</p> <p>In measurements other than EVM, when Freq Range is changed, the parameter will be reset according to Table 5.3.2-1 or Table 5.3.2-2</p>
Preset	<pre>SCS 15k : OFF SCS 30k : ON SCS 60k : OFF SCS 120k: OFF SCS240K: OFF SCS480K:OFF SCS960K:OFF</pre>
State Saved	Yes

N_grid_start

This column lets you set the Grid Start value for the selected numerology.

Remote Command	<pre>[:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:STARt <integer> [:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:STAR- t?</pre>
Example	<pre>:EVM:CCAR:RGRid:SCS15k:STAR 0 :EVM:CCAR:RGRid:SCS15k:STAR?</pre>
Preset	Depends on frequency range, bandwidth and numerology
State Saved	Yes
Min	0
Max	Depends on frequency range, bandwidth and numerology

N_grid_size

This column lets you set the Grid Size for the selected numerology.

Remote Command	<code>[:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:SIZE <integer></code>
	<code>[:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:SIZE?</code>
Example	<code>:EVM:CCAR:RGR:SCS15k:SIZE 270</code> <code>:EVM:CCAR:RGR:SCS15k:SIZE?</code>
Notes	Grid Size should not exceed the Nrb in Table 5.3.2-1 or Table 5.3.2-2 of 3GPP TS38.104 and TS38.101-1 & -2
Preset	Depends on frequency range and bandwidth
State Saved	Yes
Min	6
Max	Depends on frequency range, bandwidth and numerology
Backwards Compatibility SCPI	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:RBNumber:SCS15k SCS30k SCS60k SCS120k SCS240k</code>

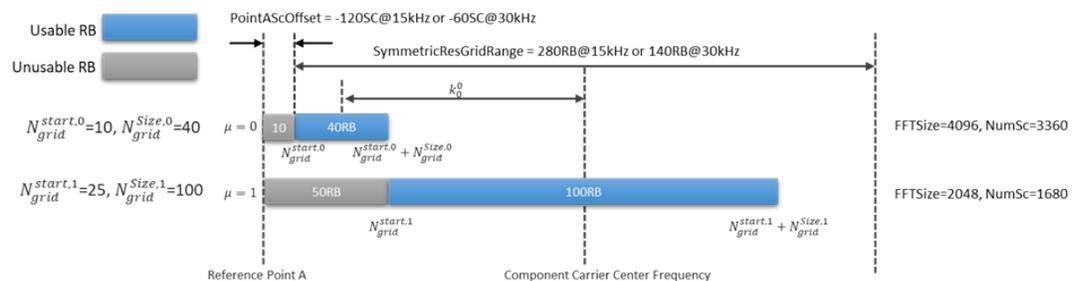

k0 (Display Only)

This column displays the k0 value for the selected Numerology.

Remote Command	<code>[:SENSe]:EVM:CCARrier [0] 1 ... 15:RGRid:SCS15k SCS30k SCS60k SCS120k SCS240k SCS480k SCS960k:k0?</code>
Example	<code>:EVM:CCAR:RGR:SCS15k:k0?</code>

More Information

See picture below for illustration how k0 is calculated.

Intra-Cell Guard Band

Enter a comma-separated string to set guard band. Consecutive numbers will be merged into one guard band. At most, 4 guard bands are allowed and the rest will

be omitted. Colon-separated numbers represent the start and stop of a guard band.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:RGRid:SCS15k SCS30k:GBANd <string></code>
Example	<code>:EVM:CCAR:RGR:SCS15k:GBAN "0:9"</code> <code>:EVM:CCAR:RGR:SCS15k:GBAN?</code>
Couplings	Only visible for Uplink and only available for 15kHz/30kHz numerology
State Saved	Yes

RB Set (Display Only)

Display the RB set according to Intra-Cell Guard Band setting.

Point A Frequency (Display Only)

This figure displays the Point A Freq for the resource grid.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:RGRid:REFA?</code>
Example	<code>:EVM:CCAR:RGR:REFA?</code>

LTE Coexistence

This tab and the following controls are only available for Modulation Analysis measurement, and it will only appear for DL FR1 component carriers.

Add LTE (GUI only)

Pressing this control inserts a new LTE-CRS configuration into the list, the maximum number of LTE-CRS configurations is 4.

Delete LTE

Pressing this control deletes selected LTE-CRS configuration from the list.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:DElete:LTE <integer></code>
Example	<code>:EVM:CCAR0:DEL:LTE 1</code>

Clear All (GUI only)

Pressing this control deletes all LTE-CRS configurations from the list.

Effective LTE Number (Remote Command only)

Specifies how many LTE-CRS configurations are effective. This SCPI only command is used to provide similar functions such as “Add LTE” and “Delete LTE”.

Note that all 4 LTE-CRS configurations can be modified through SCPI, but ineffective LTE-CRS configurations (index > Effective LTE Number) will not be included in the measurement no matter whether its state is “On” or “Off”.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:NUMBer:LTE <integer></code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:NUMBer:LTE?</code>
Example	<code>:EVM:CCAR:NUMB:LTE 2</code> <code>:EVM:CCAR:NUMB:LTE?</code>
Couplings	Max value is 4 If you attempt to remotely set the Count larger than 4, this will result in an error message
Preset	1
State Saved	Yes
Min	0
Max	4

State

Enable or disable the LTE coexistence.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>[:STATe] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>[:STATe]?</code>
Example	<code>:EVM:CCAR:LTE1 OFF</code> <code>:EVM:CCAR:LTE1?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message This control is available only when 15K SCS is enabled in the resource grid
Preset	<code>OFF</code>
State Saved	Yes

Bandwidth

Set the LTE bandwidth.

Remote	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:BW B1M4 B3M B5M B10M B15M</code>
--------	--

3 5G NR Mode
3.7 Modulation Analysis Measurement

Command	B20M [:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:BW?
Example	:EVM:CCAR:LTE1:BW B20M :EVM:CCAR:LTE1:BW?
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
Preset	B5M
State Saved	Yes
Range	1.4 MHz 3 MHz 5 MHz 10 MHz 15 MHz 20 MHz

Carrier Offset to Point A

Sets the LTE carrier center subcarrier location determined by the offset from point A using 15K SCS.

Remote Command	[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<4>:COFFset <integer> [:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<4>:COFFset?
Example	:EVM:CCAR:LTE1:COFF 0 :EVM:CCAR:LTE1:COFF?
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
Preset	0
State Saved	Yes
Min	0
Max	16383

MBSFN Subframes

Sets the subframe index that can be configured as MBSFN subframes in LTE.

Remote Command	[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:MBSFn:SFRame <string> [:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:MBSFn:SFRame?
Example	:EVM:CCAR:LTE:MBSF:SFR "2:9" :EVM:CCAR:LTE:MBSF:SFR?
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
State Saved	Yes

Number of CRS Antenna Ports

Set the number of antenna ports for LTE-CRS.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:CRS:ANTenna:PORT:NUMBer N1 N2 N4</code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:CRS:ANTenna:PORT:NUMBer?</code>
Example	<code>:EVM:CCAR:LTE1:CRS:ANT:PORT:NUMB N1</code> <code>:EVM:CCAR:LTE1:CRS:ANT:PORT:NUMB?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
Preset	N1
State Saved	Yes
Range	1 2 4

v-shift

Set the v-shift value for LTE-CRS; it is given by LTE Cell ID mod 6.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:CRS:VSHift <integer></code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:LTE<n>:CRS:VSHift?</code>
Example	<code>:EVM:CCAR:LTE1:CRS:VSH 0</code> <code>:EVM:CCAR:LTE1:CRS:VSH?</code>
Couplings	Max value for n=4 and Min value for n=1 If you attempt to remotely set or query a sub op code that is out of range, this will result in an error message
Preset	0
State Saved	Yes
Min	0
Max	5

SS Block (Downlink)

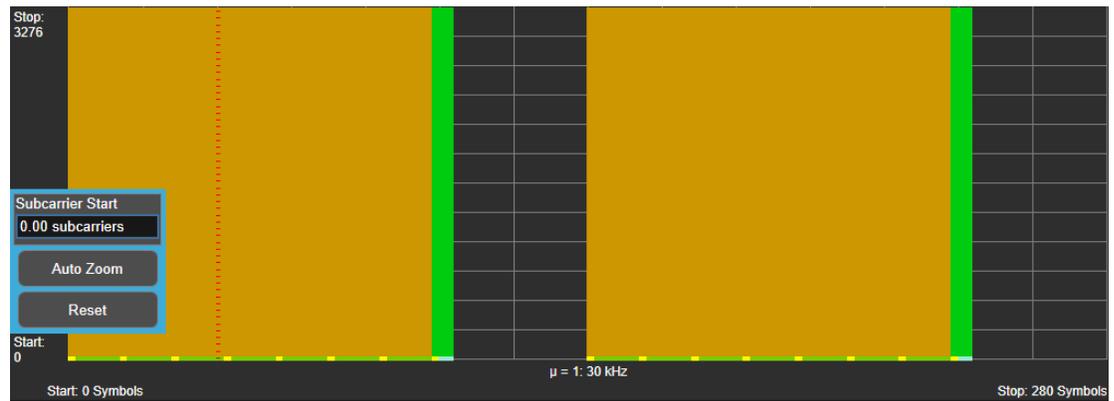

View and configure SS Block.

Resource Map Diagram

Display all physical channel allocations on Time and Frequency domain resource map.

Subcarrier Start (GUI Only)

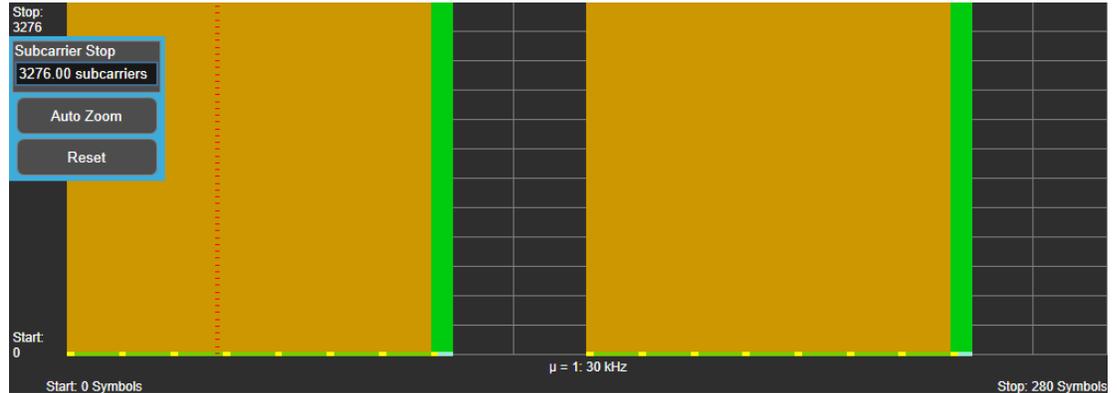

Set start subcarrier for resource map display.

Couplings	If the value entered is greater than Subcarrier Stop, Subcarrier Stop is set to the value of Subcarrier Start
Preset	0
State Saved	No
Min	0
Max	Depends on reference numerology

Subcarrier Stop (GUI Only)

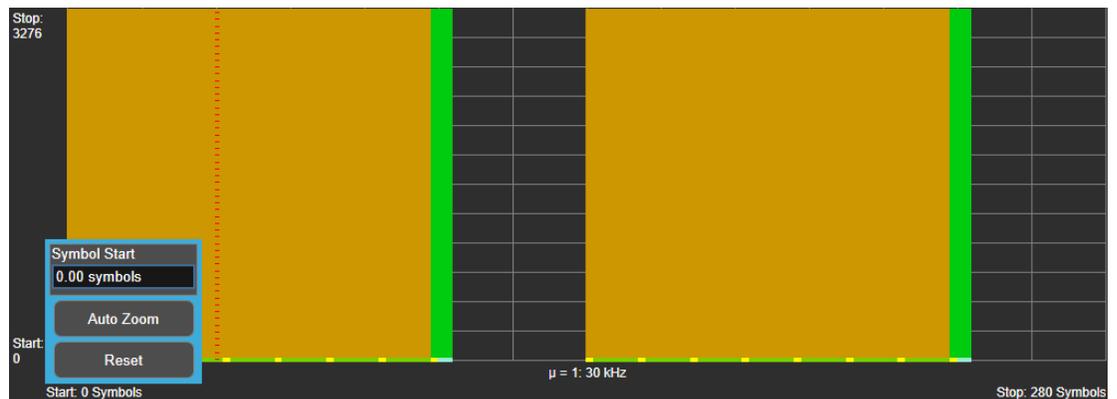

Set stop subcarrier for resource map display.

Couplings	If the value entered is lower than Subcarrier Start, Subcarrier Start is set to the value of Subcarrier Stop
Preset	Depends on reference numerology
State Saved	No
Min	0
Max	Depends on reference numerology

Symbol Start (GUI Only)

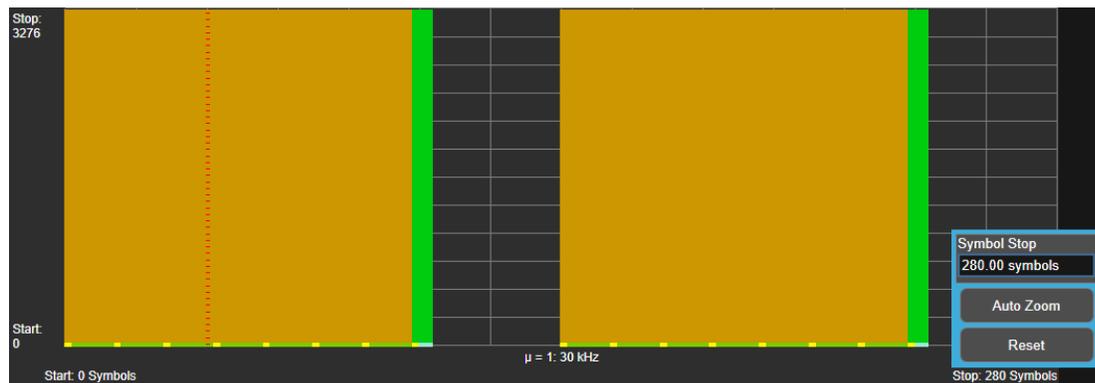

Set start symbol for resource map display.

Couplings	If the value entered is greater than Symbol Stop, Symbol Stop is set to the value of Symbol Start
Preset	0
State Saved	No
Min	0
Max	Depends on reference numerology

Symbol Stop (GUI Only)

Set stop symbol for resource map display.

Couplings	If the value entered is lower than Symbol Start, Symbol Start is set to the value of Symbol Stop
Preset	Depends on reference numerology
State Saved	No
Min	0
Max	Depends on reference numerology

Auto Zoom (GUI Only)

Auto zoom for selected BWP/physical channel allocation.

Reset (GUI Only)

Reset resource map with current reference numerology.

Add SS Block (GUI only)

Inserts a new SS Block into the list. The maximum number of SS Block lists is 2.

See "[Effective SSB Number \(Remote Command only\)](#)" on page 1557 for SCPI to provide similar function.

Delete SS Block

Deletes the selected SS Block from the list.

Remote Command `[[:SENSe]:EVM:CCARrier0|...|15:DElete:SSB <integer>`

Example `:EVM:CCAR0:DEL:SSB 1`

Clear All (GUI only)

Deletes all SS Blocks from the list.

See ["Effective SSB Number \(Remote Command only\)" on page 1557](#) for SCPI to provide similar function.

SS Block Frame Sync

Specifies SS Block Frame Sync. As some test signals may not carry a real MIB message in PBCH payload (PN bits sequence is used sometimes), we provide this parameter for clients to choose:

When it is "MIB", frame sync should be always correct for L=4/8/64. The `ssb-index-msb` and `half-frame-index` are parsed from MIB.

Otherwise, frame sync should be correct for L=4, but not always correct for L=8/64:

- for L=4, both `ssb-index` and `half-frame-index` can be detected from PBCH DMRS matching

- for L=8, assuming `half-frame-index = 0`, and `ssb-index` can be detected from PBCH DMRS matching

- for L=64, assuming `half-frame-index = 0` and `ssb-index-msb = 0`, and `ssb-index-lsb` can be detected from PBCH DMRS matching

Remote Command `[:SENSe]:EVM:CCARrier0|...|15:SYNC:SSB DMRS | MIB`
`[:SENSe]:EVM:CCARrier0|...|15:SYNC:SSB?`

Example `:EVM:CCAR:SYNC:SSB MIB`
`:EVM:CCAR:SYNC:SSB?`

Preset `MIB`

State Saved Yes

Range DMRS | MIB + DMRS

Effective SSB Number (Remote Command only)

Specifies how many SSB configurations are effective, this SCPI only command is used to provide similar function as "Add SS Block" and "Delete SS Block".

Note all 2 SSB configurations can be modified through SCPI, but ineffective SSB configurations (`index > SSB Number`) will not be included in the measurement no matter its state is "On" or "Off".

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:NUMBer:SSB <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:NUMBer:SSB?</code>
Example	<code>:EVM:CCAR0:NUMB:SSB 2</code> <code>:EVM:CCAR0:NUMB:SSB?</code>
Preset	1
State Saved	Yes
Min	0
Max	2

SS Block DL Parameter Group (Display only)

Allows you to configure the allocation and power parameters for SS Blocks.

This control is for UI display only. You can select one of the following two groups:

Allocation Parameters

"State" on page 1558	"SCS" on page 1559	"Half Frame Index" on page 1559	"Block Pattern" on page 1560	"Periodicity" on page 1561	"Lmax" on page 1561
"Active Indices" on page 1562	"RB Offset" on page 1563	"SCS Common" on page 1564	"kSSB" on page 1563		

Power Setting

"State" on page 1558	"SCS" on page 1559	"P-SS Power Boosting" on page 1564	"PBCH Power Boosting" on page 1564
----------------------	--------------------	------------------------------------	------------------------------------

State

Enable or disable selected SS Block.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SSB<n>[:STATE] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SSB<n>[:STATE]?</code>
Example	<code>:EVM:CCAR0:SSB1 OFF</code> <code>:EVM:CCAR0:SSB1?</code>
Couplings	The sub op code <n> max value 2 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	ON
State Saved	Yes

SCS

Select numerology for current SS Block.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SSB<n>:SCS SCS15K SCS30K SCS120K SCS240K</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SSB<n>:SCS?</code>
Example	<code>:EVM:CCAR0:SSB1:SCS SCS15K</code> <code>:EVM:CCAR0:SSB1:SCS?</code>
Couplings	The sub op code <n> max value 2 Attempting to remotely set or query a sub op code that is out of range generates an error message The SCS setting depends on the CC Bandwidth and Frequency Range. Also if the Max RB Num for the SCS is less than 20, the SCS is not available
Preset	<code>SCS30K</code>
State Saved	Yes
Range	<code>SCS15K SCS30K SCS120K SCS240K</code>

Half Frame Index

Set the SSB location to the first half frame or the second half frame when SSB period is not 5ms. This setting will be ignored when valid half-frame information could be obtained from MIB or PBCH DMRS.

0: SSB is in first half frame

1: SSB is in second half frame

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SSB<n>:HFIndex <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SSB<n>:HFIndex?</code>
Example	<code>:EVM:CCAR0:SSB1:HFIN 0</code> <code>:EVM:CCAR0:SSB1:HFIN?</code>
Couplings	The sub op code <n> max value 2 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0
State Saved	Yes
Min	0
Max	1

Block Pattern

Specifies the SSB Block Pattern (3GPP TS 38.213 section 4.1, <https://portal.3gpp.org/desktopmodules/Specifications/SpecificationDetails.aspx?specificationId=3215>) to choose Symbol Start sets.

Case A	15 kHz subcarrier spacing: the first symbols of the candidate SS/PBCH blocks have indexes of $\{2, 8\} + 14*n$. For carrier frequencies smaller than or equal to 3 GHz, $n = 0, 1$. For carrier frequencies larger than 3 GHz and smaller than or equal to 6 GHz, $n = 0, 1, 2, 3$
Case B	30 kHz subcarrier spacing: the first symbols of the candidate SS/PBCH blocks have indexes $\{4, 8, 16, 20\} + 28*n$. For carrier frequencies smaller than or equal to 3 GHz, $n = 0$. For carrier frequencies larger than 3 GHz and smaller than or equal to 6 GHz, $n = 0, 1$
Case C	30 kHz subcarrier spacing: the first symbols of the candidate SS/PBCH blocks have indexes $\{2, 8\} + 14*n$. For carrier frequencies smaller than or equal to 3 GHz, $n = 0, 1$. For carrier frequencies larger than 3 GHz and smaller than or equal to 6 GHz, $n = 0, 1, 2, 3$
Case D	120 kHz subcarrier spacing: the first symbols of the candidate SS/PBCH blocks have indexes $\{4, 8, 16, 20\} + 28*n$. For carrier frequencies larger than 6 GHz, $n = 0, 1, 2, 3, 5, 6, 7, 8, 10, 11, 12, 13, 15, 16, 17, 18$
Case E	240 kHz subcarrier spacing: the first symbols of the candidate SS/PBCH blocks have indexes $\{8, 12, 16, 20, 32, 36, 40, 44\} + 56*n$. For carrier frequencies larger than 6 GHz, $n = 0, 1, 2, 3, 5, 6, 7, 8$

Remote Command	<code>[:SENSe] :EVM :CCARrier0 ... 15 :SSB <n> :PATTErn A B C D E</code> <code>[:SENSe] :EVM :CCARrier0 ... 15 :SSB <n> :PATTErn ?</code>
Example	<code>:EVM :CCAR0 :SSB1 :PATT B</code> <code>:EVM :CCAR0 :SSB1 :PATT ?</code>
Couplings	The sub op code <n> max value 2 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	B
State Saved	Yes
Range	Case A Case B Case C Case D Case E

Block Pattern Symbol Start Sets (Remote Command only)

Specifies Symbol Start sets and corresponding SSB Block Pattern for 30kHz SCS (3GPP TS 38.213 section 4.1 <https://portal.3gpp.org/desktopmodules/Specifications/SpecificationDetails.aspx?specificationId=3215>).

- Set1 - Case B: the first symbols of the candidate SS/PBCH blocks have indexes $\{4, 8, 16, 20\} + 28*n$. For carrier frequencies smaller than or equal to 3 GHz, $n = 0$. For carrier frequencies larger than 3 GHz and smaller than or equal to 6 GHz, $n = 0, 1$.
- Set2 - Case C: the first symbols of the candidate SS/PBCH blocks have indexes $\{2, 8\} + 14*n$. For carrier frequencies smaller than or equal to 3 GHz, $n = 0, 1$. For carrier frequencies larger than 3 GHz and smaller than or equal to 6 GHz, $n = 0, 1, 2, 3$.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SSB<n>:SYMBol:STARt SET1 SET2</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SSB<n>:SYMBol:STARt?</code>
Example	<code>:EVM:CCAR0:SSB1:SYMB:STAR SET2</code> <code>:EVM:CCAR0:SSB1:SYMB:STAR?</code>
Couplings	The sub op code <n> max value 2 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	SET1
State Saved	Yes
Range	SET1 SET2

Periodicity

Specifies the periodicity of SS Block transmission.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SSB<n>:PERiodicity P5MS P10MS P20MS P40MS P80MS P160MS</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SSB<n>:PERiodicity?</code>
Example	<code>:EVM:CCAR0:SSB1:PER P10MS</code> <code>:EVM:CCAR0:SSB1:PER?</code>
Couplings	The sub op code <n> max value 2 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	P10MS
State Saved	Yes
Range	5 ms 10 ms 20 ms 40ms 80ms 160ms

Lmax

Specifies the maximum number of candidate SS Block in a half frame.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SSB<n>:LMAX L4 L8 L64</code>
----------------	---

	<code>[:SENSe]:EVM:CCARrier0 ... 15:SSB<n>:LMAX?</code>
Example	<code>:EVM:CCAR0:SSB1:LMAX L4</code> <code>:EVM:CCAR0:SSB1:LMAX?</code>
Couplings	The sub op code <n> max value 2 Attempting to remotely set or query a sub op code that is out of range generates an error message If the SS Block SCS is 120kHz or 240kHz, the Lmax will be set to L64; L64 is not available for SCS less than 120kHz. If Lmax will be reset to the default value if the current value is invalid
Preset	L4
State Saved	Yes
Range	4 8 64

Active Indices

Specifies the indices of active candidate SS Block in a half frame. There are 3 ways to configure:

- To configure by individual index, use ',' as the delimiter, e.g. 0,1,2,3
- To configure by a range of index, use ':' to indicate the start index and the last index, e.g. 3:10 means 3,4,5,6,7,8,9,10
- To configure by a certain step, use two ':' to indicate the start index, the step and the last index, e.g. 0:4:12 means 0, 4, 8, 12

These 3 configuration methods can be used in combination, by using ',' as the delimiter, e.g. 0,1,4:7,8:2:19 means index 0,1,4,5,6,7,8,10,12,14,16,18.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SSB<n>:ACTive:INDices <string></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SSB<n>:ACTive:INDices?</code>
Example	<code>:EVM:CCAR0:SSB1:ACT:IND "0:3"</code> <code>:EVM:CCAR0:SSB1:ACT:IND?</code>
Couplings	The sub op code <n> max value 2 Attempting to remotely set or query a sub op code that is out of range generates an error message This setting is coupled with Lmax, the max index should be less than Lmax. For example, the max index should be 7 if Lmax = L8 If the max index is out of range, it will be reset according to the Lmax: Lmax = L8 Active Indices set to "0:7" Lmax = L4 Active Indices set to "0:3"
Preset	0:3
State Saved	Yes

RB Offset

Specifies the RB Offset of SS Block.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SSB<n>:RB:OFFSet <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SSB<n>:RB:OFFSet?</code>
Example	<code>:EVM:CCAR0:SSB1:RB:OFFS 253</code> <code>:EVM:CCAR0:SSB1:RB:OFFS?</code>
Couplings	The sub op code <n> max value 2 Attempting to remotely set or query a sub op code that is out of range generates an error message The setting range depends on the MaxRbNum and SCS The band label will be changed according to SCS setting: <ul style="list-style-type: none"> - It will be "15 kHz SCS" if SCS is below 60 kHz - It will be "60 kHz SCS" if SCS is above 60 kHz
Preset	253
State Saved	Yes
Min	0
Max	Max RB in CC setup for SSB SCS – SSB RB Number

kSSB

Specifies the k0 Offset of SS Block. For FR1 this will be specified in 15 kHz SCS, for FR2 this will be specified in common SCS (RMSI-SCS).

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SSB<n>:K0 <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SSB<n>:K0?</code>
Example	<code>:EVM:CCAR0:SSB1:K0 6</code> <code>:EVM:CCAR0:SSB1:K0?</code>
Couplings	The sub op code <n> max value 2 Attempting to remotely set or query a sub op code that is out of range generates an error message The setting range is coupled with MaxRbNum and SCS The band label will be changed according to SCS setting: <ul style="list-style-type: none"> - It will be "15 kHz" for FR1 - It will be "SCS Common" for FR2
Preset	0
State Saved	Yes

Min	0
Max	12 or 24 depends on SCS

SCS Common

Specifies common SCS for FR2 and FR1.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:SSB<n>:SCS:COMMon SCS15K SCS30K SCS60K SCS120K</code> <code>[:SENSe] :EVM:CCARrier0 ... 15:SSB<n>:SCS:COMMon?</code>
Example	<code>:EVM:CCAR0:SSB1:SCS:COMM SCS60K</code> <code>:EVM:CCAR0:SSB1:SCS:COMM?</code>
Couplings	The sub op code <n> max value 2 For FR1, SCS15K and SCS30K are available For FR2, SCS60K and SCS120K are available Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	SCS15K
State Saved	Yes
Range	SCS15K SCS30K SCS60K SCS120K

P-SS Power Boosting

Specifies Power Boost value for the PSS.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:SSB<n>:PSS:POWer <rel_amp1></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:SSB<n>:PSS:POWer?</code>
Example	<code>:EVM:CCAR0:SSB1:PSS:POW 0.0</code> <code>:EVM:CCAR0:SSB1:PSS:POW?</code>
Couplings	The sub op code <n> max value 2 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0.0 dB
State Saved	Yes
Min	-100
Max	100

PBCH Power Boosting

Specifies Power Boost value for the PBCH.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SSB<n>:PBCH:POWer <rel_amp1></code>
Example	<code>:EVM:CCAR0:SSB1:PBCH:POW 0.0</code> <code>:EVM:CCAR0:SSB1:PBCH:POW?</code>
Couplings	The range of sub op code <n> values is determined by the number of SS Block configured Max value for n = 2 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0.0 dB
State Saved	Yes
Min	-100
Max	100

S-SS Block (Sidelink)

View and configure S-SS Block.

Add S-SS Block (GUI only)

Inserts a new SS Block into list, the maximum number of S-SS Block list is 2.

See "[Effective SSB Number \(Remote Command only\)](#)" on page 1557 for SCPI to provide similar function.

Delete S-SS Block

Deletes selected S-SS Block from list.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:DElete:SSSB <integer></code>
Example	<code>:EVM:CCAR0:DEL:SSSB 1</code>

Clear All (GUI only)

Deletes all S-SS Blocks from list.

See "[Effective SSB Number \(Remote Command only\)](#)" on page 1557 for SCPI to provide similar function.

Effective S-SSB Number (Remote Command only)

Specifies how many S-SSB configurations are effective, this SCPI only command is used to provide similar function as “Add S-SS Block” and “Delete S-SS Block”.

Note all 2 S-SSB configurations can be modified through SCPI, but ineffective S-SSB configurations (index > S-SSB Number) will not be included in the measurement no matter its state is “On” or “Off”.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:NUMBer:SSSB <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:NUMBer:SSSB?</code>
Example	<code>:EVM:CCAR0:NUMB:SSSB 2</code> <code>:EVM:CCAR0:NUMB:SSSB?</code>
Preset	1
State Saved	Yes
Min	0
Max	2

State

Enables or disables selected BWP.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:BWP1 ... 4[:STATe] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:BWP1 ... 4[:STATe]?</code>
Example	<code>:EVM:CCAR0:ULIN:BWP1:STAT OFF</code> <code>:EVM:CCAR0:ULIN:BWP1:STAT?</code>
Preset	ON
State Saved	Yes

SCS

Specifies the SCS of selected BWP.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:BWP1 ... 4:SCS SCS15K SCS30K SCS60K SCS120K SCS240K</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:BWP1 ... 4:SCS?</code>
Example	<code>:EVM:CCAR0:ULIN:BWP1:SCS SCS30K</code> <code>:EVM:CCAR0:ULIN:BWP1:SCS?</code>
Couplings	This setting is couple with Freq Range Freq Range = FR1, the available SCSs: SCS 15K , SCS 30K , SCS 60K

	Freq Range = FR2, the available SCSs: SCS60K, SCS120K, SCS240K
Preset	SCS30K
State Saved	Yes

Periodicity (Display only)

Display the periodicity of S-SS Block transmission

Number per Period

Specifies number of S-SS Blocks per period.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SSSB<n>:PERiod:NUMBer <integer></code>
Example	<code>:EVM:CCAR0:SSSB1:PER:NUMB 1</code> <code>:EVM:CCAR0:SSSB1:PER:NUMB?</code>
Couplings	The sub op code <n> max value 2 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	1
State Saved	Yes
Min	1
Max	16

RB Offset

Specifies the RB Offset of S-SS Block.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SSSB<n>:RB:OFFSet <integer></code>
Example	<code>:EVM:CCAR0:SSSB1:RB:OFFS 253</code> <code>:EVM:CCAR0:SSSB1:RB:OFFS?</code>
Couplings	The sub op code <n> max value 2 Attempting to remotely set or query a sub op code that is out of range generates an error message The setting range depends on the MaxRbNum and SCS
Preset	253
State Saved	Yes
Min	0
Max	Max RB in CC setup for S-SSB SCS – S-SSB RB Number

Slot Offset

Specifies the slot Offset (from the start of S-SSB period to the first S-SSB) of S-SS Block.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SSSB<n>:SLOT:OFFSet <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SSSB<n>:SLOT:OFFSet?</code>
Example	<code>:EVM:CCAR0:SSSB1:SLOT:OFFS 253</code> <code>:EVM:CCAR0:SSSB1:SLOT:OFFS?</code>
Couplings	The sub op code <n> max value 2 Attempting to remotely set or query a sub op code that is out of range generates an error message The setting range depends on the SCS
Preset	0
State Saved	Yes
Min	0
Max	Max slot number in CC setup for S-SSB SCS - 1

Slot Interval

Specifies the slot interval between neighboring S-SS Blocks.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SSSB<n>:SLOT:INTEval <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SSSB<n>:SLOT:INTEval?</code>
Example	<code>:EVM:CCAR0:SSSB1:SLOT:INT 1</code> <code>:EVM:CCAR0:SSSB1:SLOT:INT?</code>
Couplings	The sub op code <n> max value 2 Attempting to remotely set or query a sub op code that is out of range generates an error message The setting range depends on the SCS
Preset	1
State Saved	Yes
Min	1
Max	Max slot number in CC setup for S-SSB SCS - 1

S-SSB Power Boosting

Specifies Power Boost value for the S-SSB.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SSSB<n>:POWer <rel_ampl></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SSSB<n>:POWer?</code>
----------------	--

Example	<code>:EVM:CCAR0:SSSB1:POW 0.0</code> <code>:EVM:CCAR0:SSSB1:POW?</code>
Couplings	The sub op code <n> max value 2 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0.0 dB
State Saved	Yes
Min	-100
Max	100

BWP (Downlink)

View and configure the BWP parameters.

Resource Map Diagram

Display all physical channel allocations on Time and Frequency domain resource map. See ["Resource Map Diagram" on page 1554](#).

Add BWP (GUI only)

Inserts a new BWP into table, the maximum number of BWP is 5 (including Initial BWP).

See ["Effective BWP Number \(Remote Command only\)" on page 1569](#) for SCPI to provide similar function.

Delete BWP

Deletes selected BWP from table, except Initial BWP (BWP0).

Remote Command	<code>[[:SENSe]:EVM:CCARrier0 ... 15:DLINK:DELeTe:BWP <integer></code>
Example	<code>:EVM:CCAR0:DLIN:DEL:BWP 1</code>

Effective BWP Number (Remote Command only)

Specifies how many UL/DL BWP configurations are effective, this SCPI only command is used to provide similar function as "Add BWP" and "Delete BWP".

Note all 4 UL/DL BWP configurations can be modified through SCPI, but ineffective UL/DL BWP configurations (index > Effective BWP Number) will not be included in the measurement no matter its state is "On" or "Off".

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:DLINK:NUMBER:BWP <integer></code>
Example	<code>:EVM:CCAR0:DLINK:NUMB:BWP 2</code> <code>:EVM:CCAR0:DLINK:NUMB:BWP ?</code>
Couplings	Max value is 4 for both Uplink and Downlink If you attempt to remotely set the Count larger than 4, this will result in an error message
Preset	1
State Saved	Yes
Min	1
Max	4

BWP DL Parameter Group (Display only)

Allows you to configure the allocation and power parameters for BWP (DL).

This control is for UI display only. You can select one of the following two groups:

General Settings

"State" on page 1570	"CORESET Number" on page 1572	"SCS" on page 1571	"Cyclic Prefix" on page 1571
"N_BWP_start (RB Offset)" on page 1571	"N_BWP_size (RB Number)" on page 1572	"Max RB Number (Display Only)" on page 1572	

CORESET 0

"State" on page 1570	"CORESET Number" on page 1572	"CORESET ID" on page 1573	"CORESET RB Offset" on page 1573	"CORESET RB Number" on page 1574
"Allocated RBGs (6RBs)" on page 1574	"CORESET Symbol Number" on page 1575	"CORESET CCE to REG Mapping Type" on page 1575	"CORESET REG Bundle Size" on page 1575	"CORESET Interleave Size" on page 1576
"CORESET Shift Index" on page 1576				

State

Enable or disable selected BWP.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:DLINK:BWP0 ... 4[:STATe] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:DLINK:BWP0 ... 4[:STATe]?</code>
Example	<code>:EVM:CCAR0:DLIN:BWP1 OFF</code> <code>:EVM:CCAR0:DLIN:BWP1?</code>
Preset	<code>ON</code>
State Saved	Yes

SCS

Specifies the SCS of selected BWP.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:DLINK:BWP0 ... 4:SCS SCS15K SCS30K SCS60K SCS120K SCS240K [:SENSe]:EVM:CCARrier0 ... 15:DLINK:BWP0 ... 4:SCS?</code>
Example	<code>:EVM:CCAR0:DLIN:BWP1:SCS SCS30K</code> <code>:EVM:CCAR0:DLIN:BWP1:SCS?</code>
Couplings	This setting is couple with Freq Range Freq Range = FR1, the available SCSs: <code>SCS15K</code> , <code>SCS30K</code> , <code>SCS60K</code> Freq Range = FR2, the available SCSs: <code>SCS60K</code> , <code>SCS120K</code> , <code>SCS240K</code>
Preset	<code>SCS30K</code>
State Saved	Yes

Cyclic Prefix

Specifies the cyclic prefix of selected BWP.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:DLINK:BWP0 ... 4:CPLength NORMal EXTended</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:DLINK:BWP0 ... 4:CPLength?</code>
Example	<code>:EVM:CCAR0:DLIN:BWP1:CPL NORM</code> <code>:EVM:CCAR0:DLIN:BWP1:CPL?</code>
Couplings	If SCS is not 60kHz, the CP length will be fixed to Normal For Initial BWP(BWP0), only Normal CP is supported
Preset	<code>NORMal</code>
State Saved	Yes
Range	<code>Normal Extended</code>

N_BWP_start (RB Offset)

Specifies the RB Offset relative to CRB0 of selected BWP.

3 5G NR Mode
3.7 Modulation Analysis Measurement

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:DLINK:BWP0 ... 4:RB:OFFSet <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:DLINK:BWP0 ... 4:RB:OFFSet?</code>
Example	<code>:EVM:CCAR0:DLIN:BWP1:RB:OFFS 0</code> <code>:EVM:CCAR0:DLIN:BWP1:RB:OFFS?</code>
Couplings	The range is coupled with Freq Range and BWP SCS setting
Preset	0 for BWP1-4 126 for Initial BWP (BWPO)
State Saved	Yes
Min	N_grid_start
Max	Depends on frequency range, bandwidth and numerology

N_BWP_size (RB Number)

Specifies the RB Number of selected BWP.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:DLINK:BWP0 ... 4:RB:NUMBer <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:DLINK:BWP0 ... 4:RB:NUMBer?</code>
Example	<code>:EVM:CCAR0:DLIN:BWP1:RB:NUMB 126</code> <code>:EVM:CCAR0:DLIN:BWP1:RB:NUMB?</code>
Couplings	The range is coupled with Freq Range and BWP SCS setting
Preset	273 for BWP1-4 24 for Initial BWP (BWPO)
State Saved	Yes
Min	6
Max	N_grid_size

Max RB Number (Display Only)

Display the maximum RB for selected Component Carrier and Numerology.

CORESET Number

Set the number of CORESET of the BWP

Initial BWP (BWPO): Display only and always 1.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:DLINK:BWP0 ... 4:NUMBer:COReset <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:DLINK:BWP0 ... 4:NUMBer:COReset?</code>
----------------	---

Example	<code>:EVM:CCAR0:DLIN:BWP1:NUMB:COR 1</code> <code>:EVM:CCAR0:DLIN:BWP1:NUMB:COR?</code>
Preset	1
State Saved	Yes
Min	1
Max	3

CORESET ID

Specifies the ID of CORESET:

Initial BWP (BWP0): Display only and always 0

BWP1-4: Settable and could not be 0

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:DLINK:BWP0 ... 4:COReset0 1 2:ID <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:DLINK:BWP0 ... 4:COReset0 1 2:ID?</code>
Example	<code>:EVM:CCAR0:DLIN:BWP1:COR1:ID 2</code> <code>:EVM:CCAR0:DLIN:BWP1:COR1:ID?</code>
Couplings	The ID should be unique for all CORESETs in a BWP
Preset	0
State Saved	Yes
Min	0
Max	11

CORESET RB Offset

For CORESET0: Display the RB Offset of the CORESET0 relative to the start of InitialBWP.

For Other CORESET: Set the RB Offset of the first group of 6 RBs relative to the start of BWP, -1 means not configured.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:DLINK:BWP0 ... 4:COReset0 1 2:RB:OFFSet:R16 <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:DLINK:BWP0 ... 4:COReset0 1 2:RB:OFFSet:R16?</code>
Example	<code>:EVM:CCAR0:DLIN:BWP1:COR1:RB:OFFS:R16 0</code> <code>:EVM:CCAR0:DLIN:BWP1:COR1:RB:OFFS:R16?</code>
Preset	0 for CORESET0 -1 for other CORESET

State Saved	Yes
Min	-1
Max	5

CORESET RB Number

Specifies the RB Number of CORESET. Note this number should be multiple of 6.
BWP1-4: Remote Command only

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:DLINK:BWP0 ... 4:COReSet0 1 2:RB:NUMBER <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:DLINK:BWP0 ... 4:COReSet0 1 2:RB:NUMBER?</code>
Example	<code>:EVM:CCAR0:DLIN:BWP1:COR1:RB:NUMB 270</code> <code>:EVM:CCAR0:DLIN:BWP1:COR1:RB:NUMB?</code>
Couplings	For CORESET0 with initial BWP (BWPO), only 24, 48, 96 are valid
Preset	270
State Saved	Yes
Min	24 for CORESET 0 with Initial BWP (BWPO) 6 for other CORESETS
Max	96 for CORESET 0 with initial BWP (BWPO), For other CORESET $\text{Int}(\text{RB Number of selected BWP} / 6) * 6 - \text{CORESET RB Offset}$

Allocated RBGs (6RBs)

Specifies the allocated RBG of CORESET.
Initial BWP (BWPO): NA

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:DLINK:BWP0 ... 4:COReSet0 1 2:RBG:ALlocated <string></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:DLINK:BWP0 ... 4:COReSet0 1 2:RBG:ALlocated?</code>
Example	<code>:EVM:CCAR0:DLIN:BWP1:RBG:ALL "2:9"</code> <code>:EVM:CCAR0:DLIN:BWP1:RBG:ALL?</code>
Couplings	The setting is NOT applied for CORESET0 with initial BWP (BWPO)
Preset	"0:44"
State Saved	Yes

CORESET Symbol Number

Specifies the Symbol Length of CORESET.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:DLINK:BWP0 ... 4:COReSet0 1 2:SYMBol:LENGth <integer></code>
Example	<code>:EVM:CCAR0:DLIN:BWP1:COR1:SYMB:LENG 2</code> <code>:EVM:CCAR0:DLIN:BWP1:COR1:SYMB:LENG?</code>
Preset	1
State Saved	Yes
Min	1
Max	3

CORESET CCE to REG Mapping Type

Specifies the CCE to REG Mapping Type of CORESET.

Initial BWP (BWP0): Display only and always be Interleaved.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:DLINK:BWP0 ... 4:COReSet0 1 2:REG:MAPPING INTERleave NONE [:SENSe]:EVM:CCARrier0 ... 15:DLINK:BWP0 ... 4:COReSet0 1 2:REG:MAPPING?</code>
Example	<code>:EVM:CCAR0:DLIN:BWP1:COR0:REG:MAPP NONE</code> <code>:EVM:CCAR0:DLIN:BWP1:COR0:REG:MAPP?</code>
State Saved	Yes
Range	Interleaved Non-interleaved

CORESET REG Bundle Size

Specifies the REG bundle size of CORESET when the REG mapping is interleaved.

Initial BWP (BWP0): Display only and always be 6.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:DLINK:BWP0 ... 4:COReSet0 1 2:REG:BUNDLE <integer> [:SENSe]:EVM:CCARrier0 ... 15:DLINK:BWP0 ... 4:COReSet0 1 2:REG:BUNDLE?</code>
Example	<code>:EVM:CCAR0:DLIN:BWP1:COR0:REG:BUND 2</code> <code>:EVM:CCAR0:DLIN:BWP1:COR0:REG:BUND?</code>
Preset	6

State Saved	Yes
Range	If number of Symbol is 1, only 2 and 6 are allowed. Otherwise, the number of Symbol and 6 are allowed

CORESET Interleave Size

Specifies the Interleave Size of CORESET when the REG mapping is interleaved.
Initial BWP (BWP0): Display only and always be 2.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:DLINK:BWP0 ... 4:COReset0 1 2:REG:INTERleave <integer> [:SENSe]:EVM:CCARrier0 ... 15:DLINK:BWP0 ... 4:COReset0 1 2:REG:INTERleave?</code>
Example	<code>:EVM:CCAR0:DLIN:BWP1:COR0:REG:INT 3</code> <code>:EVM:CCAR0:DLIN:BWP1:COR0:REG:INT?</code>
Preset	2
State Saved	Yes
Range	Only 2,3,6 are allowed

CORESET Shift Index

Specifies the Shift Index of CORESET when the REG mapping is interleaved.
Initial BWP (BWP0): Display only and always be Cell ID.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:DLINK:BWP0 ... 4:COReset0 1 2:SHIFt <integer> [:SENSe]:EVM:CCARrier0 ... 15:DLINK:BWP0 ... 4:COReset0 1 2:SHIFt?</code>
Example	<code>:EVM:CCAR0:DLIN:BWP1:COR0:SHIF 1</code> <code>:EVM:CCAR0:DLIN:BWP1:COR0:SHIF?</code>
Preset	0
State Saved	Yes
Range	The range is 0-274
Min	0
Max	274

BWP (Uplink)

View and configure the BWP parameters.

Add BWP (GUI only)

Inserts a new BWP into table, the maximum number of BWP is 4.

See "Effective BWP Number (Remote Command only)" on page 1577 for SCPI to provide similar function.

Delete UL BWP

Deletes selected BWP from table.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:DELeTe:BWP <integer></code>
Example	<code>:EVM:CCAR0:ULIN:DEL:BWP 1</code>

Effective BWP Number (Remote Command only)

Specifies how many UL/DL BWP configurations are effective, this SCPI only command is used to provide similar function as "Add BWP" and "Delete BWP".

Note all 4 UL/DL BWP configurations can be modified through SCPI, but ineffective UL/DL BWP configurations (index > Effective BWP Number) will not be included in the measurement no matter its state is "On" or "Off".

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:NUMBer:BWP <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:NUMBer:BWP?</code>
Example	<code>:EVM:CCAR0:ULINK:NUMB:BWP 2</code> <code>:EVM:CCAR0:ULINK:NUMB:BWP?</code>
Couplings	Max value is 4 for both Uplink and Downlink If you attempt to remotely set the Count larger than 4, this will result in an error message
Preset	1
State Saved	Yes
Min	1
Max	4

State

Enables or disables selected BWP.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:BWP1 ... 4[:STATe] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:BWP1 ... 4[:STATe]?</code>
Example	<code>:EVM:CCAR0:ULIN:BWP1:STAT OFF</code> <code>:EVM:CCAR0:ULIN:BWP1:STAT?</code>
Preset	ON
State Saved	Yes

SCS

Specifies the SCS of selected BWP.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:BWP1 ... 4:SCS SCS15K SCS30K SCS60K SCS120K SCS240K</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:BWP1 ... 4:SCS?</code>
Example	<code>:EVM:CCAR0:ULIN:BWP1:SCS SCS30K</code> <code>:EVM:CCAR0:ULIN:BWP1:SCS?</code>
Couplings	This setting is couple with Freq Range Freq Range = FR1, the available SCSs: SCS15K, SCS30K, SCS60K Freq Range = FR2, the available SCSs: SCS60K, SCS120K, SCS240K
Preset	SCS30K
State Saved	Yes

Cyclic Prefix

Specifies the cyclic prefix of selected BWP.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SLINK:BWP1 ... 4:CPLength NORMAl EXTended</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SLINK:BWP1 ... 4:CPLength?</code>
Example	<code>:EVM:CCAR0:SLIN:BWP1:CPL NORM</code> <code>:EVM:CCAR0:SLIN:BWP1:CPL?</code>
Couplings	If SCS is not 60kHz, the CP length will be fixed to Normal
Preset	NORMAl
State Saved	Yes
Range	Normal Extended

N_BWP_start (RB Offset)

Specifies the RB Offset relative to CRB0 of selected BWP.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SLINK:BWP1 ... 4:RB:OFFSet <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SLINK:BWP1 ... 4:RB:OFFSet?</code>
Example	<code>:EVM:CCAR0:SLIN:BWP1:RB:OFFS 0</code> <code>:EVM:CCAR0:SLIN:BWP1:RB:OFFS?</code>
Couplings	The range is coupled with Freq Range and BWP SCS setting
Preset	0

State Saved	Yes
Min	0
Max	Depends on frequency range, bandwidth and numerology

N_BWP_size (RB Number)

Specifies the RB Number of selected BWP.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SLINK:BWP1 ... 4:RB:NUMBer <integer></code>
Example	<code>:EVM:CCAR0:SLIN:BWP1:RB:NUMB 126</code> <code>:EVM:CCAR0:SLIN:BWP1:RB:NUMB?</code>
Couplings	The range is coupled with Freq Range and BWP SCS setting
Preset	273
State Saved	Yes
Min	6
Max	N_grid_size

Max RB Number (Display Only)

Display the maximum RB for selected Component Carrier and Numerology.

BWP (Sidelink)

View and configure the BWP parameters.

Add BWP (GUI only)

Inserts a new BWP into table, the maximum number of BWP is 4.

See "[Effective BWP Number \(Remote Command only\)](#)" on page 1569 for SCPI to provide similar function.

Delete BWP

Deletes selected BWP from table.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SLINK:DELeTe:BWP <integer></code>
Example	<code>:EVM:CCAR0:SLIN:DEL:BWP 1</code>

Effective BWP Number (Remote Command only)

Specifies how many sidelink BWP configurations are effective, this SCPI only command is used to provide similar function as “Add BWP” and “Delete BWP”.

Note all 4 sidelink BWP configurations can be modified through SCPI, but ineffective sidelink BWP configurations (index > Effective BWP Number) will not be included in the measurement no matter its state is “On” or “Off”.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SLINK:NUMBER:BWP <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SLINK:NUMBER:BWP?</code>
Example	<code>:EVM:CCAR0:SLINK:NUMB:BWP 2</code> <code>:EVM:CCAR0:SLINK:NUMB:BWP?</code>
Couplings	Max value is 4 for sidelink If you attempt to remotely set the Count larger than 4, this will result in an error message
Preset	1
State Saved	Yes
Min	1
Max	4

State

Enables or disables selected BWP.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SLINK:BWP1 ... 4[:STATe] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SLINK:BWP1 ... 4[:STATe]?</code>
Example	<code>:EVM:CCAR0:SLIN:BWP1 OFF</code> <code>:EVM:CCAR0:SLIN:BWP1?</code>
Preset	ON
State Saved	Yes

SCS

Specifies the SCS of selected BWP.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SLINK:BWP1 ... 4:SCS SCS15K SCS30K SCS60K SCS120K [:SENSe]:EVM:CCARrier0 ... 15:SLINK:BWP1 ... 4:SCS?</code>
Example	<code>:EVM:CCAR0:SLIN:BWP1:SCS SCS30K</code> <code>:EVM:CCAR0:SLIN:BWP1:SCS?</code>

Couplings	All sidelink BWP have same SCS
Preset	SCS30K
State Saved	Yes

Cyclic Prefix

Specifies the cyclic prefix of selected BWP.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SLINK:BWP1 ... 4:CPLength NORMAL EXTENDED</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SLINK:BWP1 ... 4:CPLength?</code>
Example	<code>:EVM:CCAR0:SLIN:BWP1:CPL NORM</code> <code>:EVM:CCAR0:SLIN:BWP1:CPL?</code>
Couplings	If SCS is not 60kHz, the CP length will be fixed to Normal
Preset	NORMAL
State Saved	Yes
Range	Normal Extended

N_BWP_start (RB Offset)

Specifies the RB Offset relative to CRB0 of selected BWP.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SLINK:BWP1 ... 4:RB:OFFSet <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SLINK:BWP1 ... 4:RB:OFFSet?</code>
Example	<code>:EVM:CCAR0:SLIN:BWP1:RB:OFFS 0</code> <code>:EVM:CCAR0:SLIN:BWP1:RB:OFFS?</code>
Couplings	The range is coupled with Freq Range and BWP SCS setting
Preset	0
State Saved	Yes
Min	0
Max	Depends on frequency range, bandwidth and numerology

N_BWP_size (RB Number)

Specifies the RB Number of selected BWP.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SLINK:BWP1 ... 4:RB:NUMBER <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SLINK:BWP1 ... 4:RB:NUMBER?</code>
Example	<code>:EVM:CCAR0:SLIN:BWP1:RB:NUMB 126</code> <code>:EVM:CCAR0:SLIN:BWP1:RB:NUMB?</code>

Couplings	The range is coupled with Freq Range and BWP SCS setting
Preset	273
State Saved	Yes
Min	6
Max	N_grid_size

Max RB Number (Display Only)

Display the maximum RB for selected Component Carrier and Numerology.

PDCCH

View and configure the PDCCH parameters.

Add PDCCH (GUI only)

Inserts a new PDCCH configuration into list, the maximum number of PDCCH configurations is 16.

See "[Effective PDCCH Number \(Remote Command only\)](#)" on page 1582 for SCPI to provide similar function.

Delete PDCCH

Deletes selected PDCCH configuration from list.

Remote Command	<code>[[:SENSE]:EVM:CCARrier0 ... 15:DElete:PDCC <integer></code>
----------------	---

Example	<code>:EVM:CCAR0:DEL:PDCC 1</code>
---------	------------------------------------

Clear All (GUI only)

Deletes all PDCCH configuration from list.

See "[Effective PDCCH Number \(Remote Command only\)](#)" on page 1582 for SCPI to provide similar function.

Effective PDCCH Number (Remote Command only)

Specifies how many PDCCH configurations are effective, this SCPI only command is used to provide similar function as "Add PDCCH" and "Delete PDCCH".

Note all 16 PDCCH configurations can be modified through SCPI, but ineffective PDCCH configurations (index > Effective PDCCH Number) will not be included in the measurement no matter its state is "On" or "Off".

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:NUMBer:PDCCh <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:NUMBer:PDCCh?</code>
Example	<code>:EVM:CCAR0:NUMB:PDCC 2</code> <code>:EVM:CCAR0:NUMB:PDCC?</code>
Couplings	Max value is 16 If you attempt to remotely set the Count larger than 16, this will result in an error message
Preset	1
State Saved	Yes
Min	0
Max	16

PDCCH Parameter Group (Display only)

Allows you to configure the PDCCH parameters.

This control is for UI display only. You can select one of the following groups:

General Settings

"State" on page 1584	"RNTI" on page 1584	"Power Boosting" on page 1588	"Antenna Port" on page 1587	"Antenna Port Detection Threshold" on page 1588	"DMRS Power Boosting" on page 1592	"DMRS Scrambling ID" on page 1591

"Num Of Candidates (Aggregation Level 4)" on page 1593	"Num Of Candidates (Aggregation Level 8)" on page 1594	"Num Of Candidates (Aggregation Level 16)" on page 1594		

State

Enables or disables PDCCH configuration.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PDCCh<n> [:STATe] OFF ON 0 1</code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PDCCh<n> [:STATe] ?</code>
Example	<code>:EVM:CCAR0:PDCC1 OFF</code> <code>:EVM:CCAR0:PDCC1?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	OFF
State Saved	Yes

RNTI

Specifies the user RNTI of PDCCH configuration.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PDCCh<n>:RNTI <int></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PDCCh<n>:RNTI?</code>
Example	<code>:EVM:CCAR0:PDCC1:RNTI 1</code> <code>:EVM:CCAR0:PDCC1:RNTI?</code>
Couplings	Max value for n = 16 and Min value for n = 1

	When RNTI Type is P-RNTI, RNTI will be fixed to 65534; if RNTI Type is SI_RNTI, RNTI is fixed to 65535 For other RNTI types, Max value is 65533. If RNTI > 65533 for these RNTI Types, RNTI will be set to 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0
State Saved	Yes
Min	0
Max	65535

RNTI Type

Specifies the user RNTI Type of PDCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDCCh<n>:RNTI:TYPE CRNTI CSRNTI MCSRNTI PRNTI SIRNTI RARNTI TCRNTI</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDCCh<n>:RNTI:TYPE?</code>
Example	<code>:EVM:CCAR0:PDCC1:RNTI:TYPE CSRNTI</code> <code>:EVM:CCAR0:PDCC1:RNTI:TYPE?</code>
Couplings	Max value for n = 16 and Min value for n = 1 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message
Preset	<code>CRNTI</code>
State Saved	Yes

BWP

Specifies the BWP of PDCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDCCh<n>:BWP BWP0 ... BWP4</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDCCh<n>:BWP?</code>
Example	<code>:EVM:CCAR0:PDCC1:BWP BWP1</code> <code>:EVM:CCAR0:PDCC1:BWP?</code>
Couplings	Max value for n = 16 and Min value for n = 1 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message
Preset	<code>BWP1</code>
State Saved	Yes
Range	Initial BWP BWP 01 BWP 02 BWP 03 BWP 04

CORESET

Sets the CORESET in selected BWP for the PDCCH.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDCCh<n>:COREset:ID C0 C1 C2</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDCCh<n>:COREset:ID?</code>
Example	<code>:EVM:CCAR0:PDCC1:COR:ID C0</code> <code>:EVM:CCAR0:PDCC1:COR:ID?</code>
Couplings	Max value for n = 16 and Min value for n = 1 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message It is coupled with CORESET Index
Preset	<code>C0</code>
State Saved	Yes
Range	<code>CORESET 0 CORESET 1 CORESET 2</code>

CORESET Index (Remote Command only)

Sets the CORESET index in selected BWP for the PDCCH.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDCCh1 16:COREset <int></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDCCh1 16:COREset?</code>
Example	<code>:EVM:CCAR0:PDCC1:COR 0</code> <code>:EVM:CCAR0:PDCC1:COR?</code>
Couplings	Max value for n = 16 and Min value for n = 1 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Coupled with PDCCH CORESET
Preset	0
State Saved	Yes
Min	0
Max	2

Allocated Slots

Specifies the Slots allocated to PDCCH configuration.

Remote	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDCCh<n>:SLOT:ALLocated <string></code>
--------	--

Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDCCh<n>:SLOT:ALLocated?</code>
Example	<code>:EVM:CCAR0:PDCC1:SLOT:ALL "2:9"</code> <code>:EVM:CCAR0:PDCC1:SLOT:ALL?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	"2:9,12:19"
State Saved	Yes

First Symbol

Specifies the First Symbol of PDCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDCCh<n>:SYMBOL:FIRSt <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDCCh<n>:SYMBOL:FIRSt?</code>
Example	<code>:EVM:CCAR0:PDCC1:SYMB:FIRS 4</code> <code>:EVM:CCAR0:PDCC1:SYMB:FIRS?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	0
State Saved	Yes
Min	0
Max	13

Antenna Port

Specifies the Antenna Port of PDCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDCCh<n>:ANTenna:PORT <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDCCh<n>:ANTenna:PORT?</code>
Example	<code>:EVM:CCAR0:PDCC1:ANT:PORT 2000</code> <code>:EVM:CCAR0:PDCC1:ANT:PORT?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	2000
State Saved	Yes
Min	2000
Max	2011

Antenna Port Detection Threshold

Specifies threshold for Antenna Port Detection, when the power of one port is lower than the threshold comparing with reference port, it will be detected as inactive and not included in MIMO demodulation processing.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDCCh<n>:ANTenna:PORT:THReshold <rel_amp1></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDCCh<n>:ANTenna:PORT:THReshold?</code>
Example	<code>:EVM:CCAR0:PDCC1:ANT:PORT:THR 0</code> <code>:EVM:CCAR0:PDCC1:ANT:PORT:THR?</code>
Dependencies	This parameter is only available for SP900Swith the valid MIMO option
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	-36 dB
State Saved	Yes
Min	-100
Max	100

Power Boosting

Specifies Power Boost value for the PDCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDCCh<n>:POWer <rel_amp1></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDCCh<n>:POWer?</code>
Example	<code>:EVM:CCAR0:PDCC1:POW 0</code> <code>:EVM:CCAR0:PDCC1:POW?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

Search Space

Specifies the Search Space type of PDCCH configuration.

Remote	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDCCh<n>:SEARch:SPACe UESpecific COMMON</code>
--------	---

Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDCC<n>:SEARch:SPACe?</code>
Example	<code>:EVM:CCAR0:PDCC1:SEAR:SPAC COMM</code> <code>:EVM:CCAR0:PDCC1:SEAR:SPAC?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	<code>UESPecific</code>
State Saved	Yes
Range	UE Specific Common

Aggregation Level

Specifies the Aggregation Level of PDCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDCC<n>:AGGRegation L1 L2 L4 L8 L16</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDCC<n>:AGGRegation?</code>
Example	<code>:EVM:CCAR0:PDCC1:AGGR L2</code> <code>:EVM:CCAR0:PDCC1:AGGR?</code>
Couplings	Max value for n = 16 and Min value for n = 1 The Aggregation Level should NOT be greater than the CORESET RBG number. For example, if CORESET has 2 RBGs, only aggregation level 1 and aggregation level 2 are available Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	<code>L4</code>
State Saved	Yes
Range	1 2 4 8 16

Num Of Candidates

Specifies the number of PDCCH candidates.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDCC<n>:CANDidate:NUMBer <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDCC<n>:CANDidate:NUMBer?</code>
Example	<code>:EVM:CCAR0:PDCC:CAND:NUMB 3</code> <code>:EVM:CCAR0:PDCC:CAND:NUMB?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message If search space is common, and Num Of candidates will be fixed according to the Aggregation Level in "CCE Aggregation Levels and Num of Candidates" on page 1590
Preset	4

State Saved	Yes
Range	1,2,3,4,5,6,8
Min	1
Max	8

CCE Aggregation Levels and Num of Candidates

Maximum number of PDCCH candidates per CCE aggregation level for common search space sets configured by searchSpace-SIB1

CCE Aggregation Level	Number of Candidates
4	4
8	2
16	1

Candidate Index

Specifies the index of PDCCH candidate. Note when Candidate Index is -1, you can input CCE Offset manually, this is default PDCCH allocation configure mode. In this mode, Search Space and Num Of Candidates will become invalid.

When Candidate Index > -1, you can set Search Space, Number of Candidates and Candidate Index. In this mode, CCE Offset will become display only.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PDCCh<n>:CANDidate:INDex <integer></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PDCCh<n>:CANDidate:INDex?</code>
Example	<code>:EVM:CCAR0:PDCC1:CAND:IND 0</code> <code>:EVM:CCAR0:PDCC1:CAND:IND?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	-1
State Saved	Yes
Min	-1
Max	Candidates Number - 1

PDCCH CCE Offset

Specifies the CCE Offset of PDCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDCCh<n>:CCE:OFFSet <String></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDCCh<n>:CCE:OFFSet?</code>
Example	<code>:EVM:CCAR0:PDCC1:CCE:OFFSet "2"</code> <code>:EVM:CCAR0:PDCC1:CCE:OFFSet?</code>
Couplings	<p>Max value for n = 16 and Min value for n = 1 It is display only if the PDCCH Candidate Index is NOT -1:</p> <ul style="list-style-type: none"> - The CCE Offset result depends on CORESET and PDCCH parameters, see 38.211 for details <p>When PDCCH Candidate Index is -1, you can input the CCE Offset:</p> <ul style="list-style-type: none"> - If the string is not valid for numeric input, it will be reset to its default value - If some values are out of range (greater than the max CCE Offset), it will be adjusted accordingly: $\text{maxCceOffset} = ((\text{coresetRbNum} / 6) * \text{coresetSymLen} / \text{aggLevel} - 1) * \text{aggLevel};$ - If the input length is longer than allocated slots length, the values after allocated slots length will be discarded - If the input length is shorter than allocated slots length, the last value will be used for slots after input length <p>Attempting to remotely set or query a sub op code that is out of range results in an error message</p>
Preset	"0"
State Saved	Yes

DCI Size

Specifies the DCI Size of PDCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDCCh<n>:DCI:SIZE <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDCCh<n>:DCI:SIZE?</code>
Example	<code>:EVM:CCAR0:PDCC1:DCI:SIZE 10</code> <code>:EVM:CCAR0:PDCC1:DCI:SIZE?</code>
Preset	20
State Saved	Yes
Min	1
Max	CCE Number * 108 - 24

DMRS Scrambling ID

Specifies the PDCCH DMRS Scrambling ID.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PDCCCh<n>:DMRS:SCID <integer></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PDCCCh<n>:DMRS:SCID?</code>
Example	<code>:EVM:CCAR0:PDCC:DMRS:SCID 0</code> <code>:EVM:CCAR0:PDCC:DMRS:SCID?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	-1
State Saved	Yes
Min	-1
Max	65535

DMRS Power Boosting

Specifies DMRS Power Boost value for the selected PDCCH configuration.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PDCCCh<n>:DMRS:POWer <rel_amp></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PDCCCh<n>:DMRS:POWer?</code>
Example	<code>:EVM:CCAR0:PDCC1:DMRS:POW 0</code> <code>:EVM:CCAR0:PDCC1:DMRS:POW?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

Num Of Candidates (Aggregation Level 1)

Specifies the Num Of Candidates (Aggregation Level 1) of PDCCH configuration for auto detection.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PDCCCh<n>:CANDidate:ALEVe11 <int></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PDCCCh<n>:CANDidate:ALEVe11?</code>
Example	<code>:EVM:CCAR0:PDCC1:CAND:ALEV1 1</code> <code>:EVM:CCAR0:PDCC1:CAND:ALEV1?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message NOTE: 7 is an invalid value for this setting

Preset	4
State Saved	Yes
Min	0
Max	8

Num Of Candidates (Aggregation Level 2)

Specifies the Num Of Candidates (Aggregation Level 2) of PDCCH configuration for auto detection.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDCCh<n>:CANDidate:ALEVe12 <int></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDCCh<n>:CANDidate:ALEVe12?</code>
Example	<code>:EVM:CCAR0:PDCC1:CAND:ALEV2 1</code> <code>:EVM:CCAR0:PDCC1:CAND:ALEV2?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message NOTE: 7 is an invalid value for this setting
Preset	4
State Saved	Yes
Min	0
Max	8

Num Of Candidates (Aggregation Level 4)

Specifies the Num Of Candidates (Aggregation Level 4) of PDCCH configuration for auto detection.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDCCh<n>:CANDidate:ALEVe14 <int></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDCCh<n>:CANDidate:ALEVe14?</code>
Example	<code>:EVM:CCAR0:PDCC1:CAND:ALEV4 1</code> <code>:EVM:CCAR0:PDCC1:CAND:ALEV4?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message NOTE: 7 is an invalid value for this setting
Preset	4
State Saved	Yes
Min	0
Max	8

Num Of Candidates (Aggregation Level 8)

Specifies the Num Of Candidates (Aggregation Level 8) of PDCCH configuration for auto detection.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PDCCh<n>:CANDidate:ALEVe18 <int></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PDCCh<n>:CANDidate:ALEVe18?</code>
Example	<code>:EVM:CCAR0:PDCC1:CAND:ALEV8 1</code> <code>:EVM:CCAR0:PDCC1:CAND:ALEV8?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message NOTE: 7 is an invalid value for this setting
Preset	4
State Saved	Yes
Min	0
Max	8

Num Of Candidates (Aggregation Level 16)

Specifies the Num Of Candidates (Aggregation Level 16) of PDCCH configuration for auto detection.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PDCCh<n>:CANDidate:ALEVe116 <int></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PDCCh<n>:CANDidate:ALEVe116?</code>
Example	<code>:EVM:CCAR0:PDCC1:CAND:ALEV16 1</code> <code>:EVM:CCAR0:PDCC1:CAND:ALEV16?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message NOTE: 7 is an invalid value for this setting
Preset	4
State Saved	Yes
Min	0
Max	8

PDSCH

View and configure the PDSCH parameters.

Resource Map Diagram

Display all physical channel allocations on Time and Frequency domain resource map. See ["Resource Map Diagram" on page 1554](#).

Add PDSCH (GUI only)

Pressing this control inserts a new PDSCH allocation into list, the maximum number of PDSCH allocations is 250.

See ["Effective PDSCH Number \(Remote Command only\)" on page 1595](#) for SCPI to provide similar function.

Delete PDSCH

Pressing this control deletes selected PDSCH allocation from list.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:DELeTe:PDSC h <integer></code>
Example	<code>:EVM:CCAR0:DEL:PDSC 1</code>

Clear All (GUI only)

Pressing this control deletes all PDSCH from list.

See ["Effective PDSCH Number \(Remote Command only\)" on page 1595](#) for SCPI to provide similar function.

Effective PDSCH Number (Remote Command only)

Specifies how many PDSCH configurations are effective, this SCPI only command is used to provide similar function as "Add PDSCH" and "Delete PDSCH".

Note all 250 PDSCH configurations can be modified through SCPI, but ineffective PDSCH configurations (index > Effective PDSCH Number) will not be included in the measurement no matter its state is "On" or "Off".

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:NUMBer:PDSC h <integer></code>
Example	<code>:EVM:CCAR0:NUMB:PDSC 2</code> <code>:EVM:CCAR0:NUMB:PDSC ?</code>

Couplings	Max value is 250 If you attempt to remotely set the Count larger than 250, this will result in an error message
-----------	--

Preset	1
State Saved	Yes
Min	0
Max	250

PDSCH Parameter Group (Display only)

Allows you to configure the PDSCH parameters.

This control is for UI display only. You can select one of the following groups:

General Settings

"State" on page 1597
"RNTI" on page 1598
"n_ID" on page 1598
"MCS Table" on page 1599
"MCS" on page 1599
"Modulation" on page 1600

"TB Scaling Factor" on page 1606
"RV Index" on page 1605
"TB Size (Display Only)" on page 1606
"Rate Match Coreset" on page 1606
"Precoder Group Size" on page 1606
"User Define Size" on page 1607

State

Enables or disables selected PDSCH configuration.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PDSCh<n>[:STATe] OFF ON 0 1</code>
Example	<code>:EVM:CCAR0:PDSC1 OFF</code> <code>:EVM:CCAR0:PDSC1?</code>
Couplings	Max value for n = 250 and Min value for n = 1

3 5G NR Mode
3.7 Modulation Analysis Measurement

	Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	ON
State Saved	Yes

RNTI

Specifies the user RNTI of selected PDSCH configuration.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PDSCh<n>:RNTI <int></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PDSCh<n>:RNTI?</code>
Example	<code>:EVM:CCAR0:PDSC1:RNTI 1</code> <code>:EVM:CCAR0:PDSC1:RNTI?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	1
State Saved	Yes
Min	0
Max	65535

n_ID

Specifies n_ID for selected PDSCH configuration.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PDSCh<n>:NID <integer></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PDSCh<n>:NID?</code>
Example	<code>:EVM:CCAR0:PDSC1:NID 0</code> <code>:EVM:CCAR0:PDSC1:NID?</code>
Notes	-1 means using Cell ID as n_ID
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	-1
State Saved	Yes
Min	-1
Max	1023

MCS Table

Specifies which MCS table is used to configure MCS for selected PDSCH configuration. See 38.214 clause 5.1.3 for complete MCS table.

- Table 1 – Table 5.1.3.1-1 (64QAM)
- Table 2 – Table 5.1.3.1-2 (256QAM)
- Table 3 – Table 5.1.3.1-3 (64QAMLowSE)
- Table 4 – Table 5.1.3.1-4 (1024QAM)

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDsch<n>:MCS:TABLE TABLE1 ... TABLE4</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDsch<n>:MCS:TABLE?</code>
Example	<code>:EVM:CCAR0:PDSC1:MCS:TABLE TABLE2</code> <code>:EVM:CCAR0:PDSC1:MCS:TABLE?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	<code>TABLE1</code>
State Saved	Yes
Range	64QAM 256QAM 64QAMLowSE 1024QAM

MCS

Specifies the MCS index for selected PDSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDsch<n>:MCS <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDsch<n>:MCS?</code>
Example	<code>:EVM:CCAR0:PDSC1:MCS 1</code> <code>:EVM:CCAR0:PDSC1:MCS?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message When MCS is -1, you can specify Modulation manually, MCS table and TB Size will be invalid and no decoding results for this PDSCH
Preset	0
State Saved	Yes
Min	-1
Max	31

Modulation

Display the modulation for selected PDSCH configuration.

The modulation is derived from MCS Table and MCS settings 38.214 clause 5.1.3.

Modulation Order = 2, Modulation = QPSK

Modulation Order = 4, Modulation = 16QAM

Modulation Order = 6, Modulation = 64QAM

Modulation Order = 8, Modulation = 256QAM

See "[More Information](#)" on page 1600.

Only when MCS = -1, you can specify Modulation manually (including Custom IQ mode). Custom IQ mode means customized constellation definition recalled from file.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:MODulation QPSK QAM16 QAM64 QAM256 QAM1024</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:MODulation?</code>
Example	<code>:EVM:CCAR0:PDSC1:MOD QPSK</code> <code>:EVM:CCAR0:PDSC1:MOD?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message Display only when MCS is not -1
Preset	QPSK
State Saved	Yes
Range	QPSK 16QAM 64QAM 256QAM 1024QAM

RV Index

Specifies the RV index for selected PDSCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCCh<n>:RV <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCCh<n>:RV?</code>
Example	<code>:EVM:CCAR0:PDSC1:RV 1</code> <code>:EVM:CCAR0:PDSC1:RV?</code>
Notes	-1 means this parameter is changing in signal and therefore need to be auto detected for each burst
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	0
State Saved	Yes

Min	-1
Max	3

TB Scaling Factor S

Specifies the TB Scaling Factor (S) to calculate TB size.

Remote Command	<code>[[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:TB:SFACtor S1 SDOT5 SDOT25 [:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:TB:SFACtor?</code>
Example	<code>:EVM:CCAR0:PDSC1:TB:SFAC SDOT5 :EVM:CCAR0:PDSC1:TB:SFAC?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	S1
State Saved	Yes
Range	1 0.5 0.25

TB Size (Display Only)

Display TB Size for the selected PDSCH configuration.

Rate Match Coreset

Select the CORESET index of current BWP for PDSCH rate matching.

Remote Command	<code>[[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:RMATch:COReset NONE CORESET0 CORESET1 CORESET2 [:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:RMATch:COReset?</code>
Example	<code>:EVM:CCAR0:PDSC1:RMAT:COR CORESET0 :EVM:CCAR0:PDSC1:RMAT:COR?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
State Saved	Yes
Range	None CORESET0 CORESET1 CORESET2

Precoder Group Size

Select PRB group size for precoding matrix.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:PBGRoup RB2 RB4 WIDE USER</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:PBGRoup?</code>
Example	<code>:EVM:CCAR0:PDSC1:PBGR RB4</code> <code>:EVM:CCAR0:PDSC1:PBGR?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	WIDE
State Saved	Yes
Range	2 RB 4 RB Wideband User Defined

User Define Size

Set user defined value when Precoder Group Size = User Define.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:PBGRoup:USER <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:PBGRoup:USER?</code>
Example	<code>:EVM:CCAR0:PDSC1:PBGR:USER 1</code> <code>:EVM:CCAR0:PDSC1:PBGR:USER?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message This parameter is only visible when Precoder Group Size = User Define
Preset	1
State Saved	Yes
Min	1
Max	RB Number of selected BWP

BWP

Specifies the BWP of selected PDSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:BWP BWP0 ... BWP4</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:BWP?</code>
Example	<code>:EVM:CCAR0:PDSC1:BWP BWP1</code> <code>:EVM:CCAR0:PDSC1:BWP?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	BWP1

State Saved	Yes
Range	Initial BWP BWP1 BWP2 BWP3 BWP4

RA Type

Specifies RA Type for the selected PDSCH configuration, there are two methods to allocate RB resources:

Type 0: RBG Size and Allocated RBG

Type 1: RB Offset and RB Number

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:RAType TYPE0 TYPE1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:RAType?</code>
Example	<code>:EVM:CCAR0:PDSCh1:RATY TYPE0</code> <code>:EVM:CCAR0:PDSCh1:RATY?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	TYPE1
State Saved	Yes
Range	Type0 Type1

RBG Size

Specifies RBG Size for the selected PDSCH configuration, this parameter is only valid for RA Type 0.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:RBG:SIZE RB2 RB4 RB8 RB16</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:RBG:SIZE?</code>
Example	<code>:EVM:CCAR0:PDSCh1:RBG:SIZE RB16</code> <code>:EVM:CCAR0:PDSCh1:RBG:SIZE?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message Available values are determined by BWP size according to table 5.1.2.2.1-1 in TS38.214:

Bandwidth Part Size	Configuration 1	Configuration 2
1 – 36	2	4
37 – 72	4	8
73 – 144	8	16
145 – 275	16	16

Preset	RB16
State Saved	Yes
Range	2 RB 4 RB 8 RB 16 RB

Allocated RBGs

Specifies the RBGs allocated to selected PDSCH configuration, this parameter is only valid for RA Type 0.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:RBG:ALlocated <string></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:RBG:ALlocated?</code>
Example	<code>:EVM:CCAR0:PDSC1:RBG:ALL "0:15"</code> <code>:EVM:CCAR0:PDSC1:RBG:ALL?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	"0:15"
State Saved	Yes

RB Offset

Specifies the RB Offset of selected PDSCH configuration, this parameter is only valid for RA Type 1.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:RB:OFFSet <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:RB:OFFSet?</code>
Example	<code>:EVM:CCAR0:PDSC1:RB:OFFSet 0</code> <code>:EVM:CCAR0:PDSC1:RB:OFFSet?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	0
State Saved	Yes
Range	The range is coupled with BWP
Min	0
Max	RB Number of selected BWP – PDSCH RB Number

RB Number

Specifies the RB Number of selected PDSCH configuration, this parameter is only valid for RA Type 1.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PDSCh<n>:RB:NUMBER <integer></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PDSCh<n>:RB:NUMBER?</code>
Example	<code>:EVM:CCAR0:PDSC1:RB:NUMB 273</code> <code>:EVM:CCAR0:PDSC1:RB:NUMB?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	273
State Saved	Yes
Range	The range is coupled with BWP and RB Start
Min	1
Max	RB Number of selected BWP

VRB to PRB Mapping

Specifies VRB to PRB mapping type: Non-Interleaved | Interleaved

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PDSCh<n>:VPMapping INTerleave NONE</code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PDSCh<n>:VPMapping?</code>
Example	<code>:EVM:CCAR0:PDSC1:VPM INT</code> <code>:EVM:CCAR0:PDSC1:VPM?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
State Saved	Yes
Range	Interleaved Non-interleaved

VRB to PRB Mapping CORESET

Specifies the VRB to PRB Mapping CORESET of selected PDSCH configuration.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PDSCh<n>:VPMapping:COReset CORESET0 NONE</code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PDSCh<n>:VPMapping:COReset?</code>
Example	<code>:EVM:CCAR0:PDSC1:VPM:COR NONE</code> <code>:EVM:CCAR0:PDSC1:VPM:COR?</code>

Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message When the selected BWP is not initial BWP (BWPO), the CORESET0 should be unavailable When VRB to PRB Mapping is interleaved, this key should be invisible
State Saved	Yes
Range	CORESET0 None

VRB to PRB Interleaver

Specifies VRB to PRB Interleaver bundle size.

Remote Command	[:SENSE]:EVM:CCARrier0 ... 15:PDSCh<n>:VPMapping:SIZE N2 N4 [:SENSE]:EVM:CCARrier0 ... 15:PDSCh<n>:VPMapping:SIZE?
Example	:EVM:CCAR0:PDSCh1:VPM:SIZE 4 :EVM:CCAR0:PDSCh1:VPM:SIZE?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message When VRB to PRB Mapping is Non-Interleaved, this key should be invisible
Preset	2
State Saved	Yes
Range	2 4

Allocated Slots

Specifies the slots allocated to selected PDSCH configuration.

Remote Command	[:SENSE]:EVM:CCARrier0 ... 15:PDSCh<n>:SLOT:ALllocated <string> [:SENSE]:EVM:CCARrier0 ... 15:PDSCh<n>:SLOT:ALllocated?
Example	:EVM:CCAR0:PDSCh1:SLOT:ALL "2:9" :EVM:CCAR0:PDSCh1:SLOT:ALL?
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	"2:9,12:19"
State Saved	Yes

Slot Format

Specifies the Slot Format of selected PDSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDsch<n>:SLOT:FORMat SF0 SF1 ... SF55</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDsch<n>:SLOT:FORMat?</code>
Example	<code>:EVM:CCAR0:PDSC1:SLOT:FORM SF4</code> <code>:EVM:CCAR0:PDSC1:SLOT:FORM?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	<code>SF0</code>
State Saved	Yes

First Symbol

Specifies the First Symbol of selected PDSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDsch<n>:SYMBOL:FIRSt <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDsch<n>:SYMBOL:FIRSt?</code>
Example	<code>:EVM:CCAR0:PDSC1:SYMB:FIRS 4</code> <code>:EVM:CCAR0:PDSC1:SYMB:FIRS?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	1
State Saved	Yes
Min	0
Max	13

Last Symbol

Specifies the Last Symbol of selected PDSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDsch<n>:SYMBOL:LAST <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDsch<n>:SYMBOL:LAST?</code>
Example	<code>:EVM:CCAR0:PDSC1:SYMB:LAST 4</code> <code>:EVM:CCAR0:PDSC1:SYMB:LAST?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	13
State Saved	Yes
Min	First Symbol
Max	13

DMRS Configuration

Specifies DMRS Configuration for selected PDSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:DMRS:CONFigure TYPE1 TYPE2</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:DMRS:CONFigure?</code>
Example	<code>:EVM:CCAR0:PDSC1:DMRS:CONF TYPE1</code> <code>:EVM:CCAR0:PDSC1:DMRS:CONF?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	TYPE1
State Saved	Yes
Range	Type 1 Type2

PDSCH Mapping

Specifies PDSCH Mapping for selected PDSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:PDSCh:MAP TYPEA TYPEB</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:PDSCh:MAP?</code>
Example	<code>:EVM:CCAR0:PDSC1:PDSC:MAP TYPEA</code> <code>:EVM:CCAR0:PDSC1:PDSC:MAP?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	TYPEA
State Saved	Yes
Range	Type A Type B

DMRS-typeA-pos

Specifies the DMRS-typeA-pos value for selected PDSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:DMRS:TAPos <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:DMRS:TAPos?</code>
Example	<code>:EVM:CCAR0:PDSC1:DMRS:TAP 2</code> <code>:EVM:CCAR0:PDSC1:DMRS:TAP?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message

Preset	2
State Saved	Yes
Min	2
Max	3

DMRS Max Len

Specifies DMRS Max Len value for the selected PDSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:DMRS:MLEN <int></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:DMRS:MLEN?</code>
Example	<code>:EVM:CCAR0:PDSC1:DMRS:MLEN 2</code> <code>:EVM:CCAR0:PDSC1:DMRS:MLEN?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	1
State Saved	Yes
Min	1
Max	2

Front-load Symbols

Specifies DMRS Duration for selected PDSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:DMRS:DURation SINGLE DOUBle</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:DMRS:DURation?</code>
Example	<code>:EVM:CCAR0:PDSC1:DMRS:DUR DOUB</code> <code>:EVM:CCAR0:PDSC1:DMRS:DUR?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message When Antenna Port Index is -1, this parameter will be enabled and you need to ensure the settings are valid according to TS38.212, table 7.3.1.2.2-1 to table 7.3.1.2.2-4, otherwise demodulation may not work When Antenna Port Index is not -1, this parameter is display only, the value will be set automatically according to Antenna Port Index and TS38.212 table 7.3.1.2.2-1 to table 7.3.1.2.2-4
Preset	<code>SINGLE</code>
Range	1 2

DMRS-add-pos

Specifies the DMRS-add-pos value for selected PDSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:DMRS:ADDPos <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:DMRS:ADDPos?</code>
Example	<code>:EVM:CCAR0:PDSCh1:DMRS:ADDP 2</code> <code>:EVM:CCAR0:PDSCh1:DMRS:ADDP?</code>
Couplings	Max value for n = 250 and Min value for n = 1 See 3GPP TS 38.211 Table 7.4.1.1.2-3/4 for coupling rule (https://portal.3gpp.org/desktopmodules/Specifications/SpecificationDetails.aspx?specificationId=3213) Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	0
State Saved	Yes
Min	0
Max	3

n_SCID

Specifies the nSCID value for selected PDSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:SCIDn <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:SCIDn?</code>
Example	<code>:EVM:CCAR0:PDSCh1:SCID 1</code> <code>:EVM:CCAR0:PDSCh1:SCID?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	0
State Saved	Yes
Min	0
Max	1

DMRSdownlink-r16

Set whether higher-layer parameter DMRSdownlink-r16 is provided.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:DMRS:R16[:STATe] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:DMRS:R16[:STATe]?</code>
----------------	--

Example	<code>:EVM:CCAR0:PDSC1:DMRS:R16 OFF</code> <code>:EVM:CCAR0:PDSC1:DMRS:R16?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	OFF
State Saved	Yes

N_ID_0

Specifies the N_ID_0 value for selected PDSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSC<n>:DMRS:NID0 <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSC<n>:DMRS:NID0?</code>
Example	<code>:EVM:CCAR0:PDSC1:DMRS:NID0 1</code> <code>:EVM:CCAR0:PDSC1:DMRS:NID0?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message When set to -1, the N_ID_0 value equals to Cell ID
Preset	-1
State Saved	Yes
Min	-1
Max	65535

N_ID_1

Specifies the N_ID_1 value for selected PDSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSC<n>:DMRS:NID1 <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSC<n>:DMRS:NID1?</code>
Example	<code>:EVM:CCAR0:PDSC1:DMRS:NID1 1</code> <code>:EVM:CCAR0:PDSC1:DMRS:NID1?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message When set to -1, the N_ID_0 value equals to Cell ID
Preset	-1
State Saved	Yes
Min	-1
Max	65535

N_ID_nSCID (SCPI only)

Specifies the N_ID_nSCID value for selected PDSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:SCIDn:NID <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:SCIDn:NID?</code>
Example	<code>:EVM:CCAR0:PDSC1:SCID:NID 1</code> <code>:EVM:CCAR0:PDSC1:SCID:NID?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message When set to -1, the N_ID_nSCID value equals to Cell ID
Preset	-1
State Saved	Yes
Min	-1
Max	65535

DMRS Mapping Reference

Specifies the DMRS mapping reference of selected PDSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:DMRS:MREference CORESET0 CRB0</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:DMRS:MREference?</code>
Example	<code>:EVM:CCAR0:PDSC1:DMRS:MREF CRB0</code> <code>:EVM:CCAR0:PDSC1:DMRS:MREF?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message When the selected BWP is not initial BWP (BWPO), the CORESET0 should be unavailable
Preset	<code>CRB0</code>
State Saved	Yes
Range	<code>CORESET0 CRB0</code>

Antenna Port/Reference Antenna Port

Specifies the Antenna Port in SISO mode and Reference Antenna Port in MIMO/MISO modes of selected PDSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:ANTenna:PORT <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:ANTenna:PORT?</code>
----------------	---

Example	<code>:EVM:CCAR0:PDSC1:ANT:PORT 1000</code> <code>:EVM:CCAR0:PDSC1:ANT:PORT?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message It is coupled with Antenna Port Index, DMRS Config Type, DMRS Max Len and Rank See table 7.3.1.2.2-1, 7.3.1.2.2-2, 7.3.1.2.2-3, 7.3.1.2.2-4 in 3GPP TS38.212. The Antenna Port should be related with the “DMRS Port” + 1000 column in the table
Preset	1000
State Saved	Yes
Min	1000
Max	1011

Antenna Port Detection Threshold

Specifies threshold for Antenna Port Detection, when the power of one port is lower than the threshold comparing with reference port, it will be detected as inactive and not included in MIMO demodulation processing.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDsch<n>:ANTenna:PORT:THReshold <rel_amp1></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDsch<n>:ANTenna:PORT:THReshold?</code>
Example	<code>:EVM:CCAR0:PDSC1:ANT:PORT:THR 0</code> <code>:EVM:CCAR0:PDSC1:ANT:PORT:THR?</code>
Dependencies	This parameter is only available for SP900Sw with the valid MIMO option
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	-36 dB
State Saved	Yes
Min	-100
Max	100

Antenna Port Index

Specifies Antenna Port Index for the selected PDSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDsch<n>:ANTenna:PORT:INDEX <int></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDsch<n>:ANTenna:PORT:INDEX?</code>
Example	<code>:EVM:CCAR0:PDSC1:ANT:PORT:IND 1</code> <code>:EVM:CCAR0:PDSC1:ANT:PORT:IND?</code>

DMRS Port (Display Only)

Display available DMRS Ports according to Antenna Port Index for the selected PDSCH configuration.

Codewords Number

Specifies Number of Codewords for the selected PDSCH configuration.

Remote	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:CWORd:NUMBer <int></code>
Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:CWORd:NUMBer?</code>

Example	<code>:EVM:CCAR0:PDSC1:CWOR:NUMB 2</code> <code>:EVM:CCAR0:PDSC1:CWOR:NUMB?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message When DMRS Configuration is Type 1, 2 is only available when DMRS Max Len is 2 There is no limitation when DMRS Configuration is Type 2
Preset	1
State Saved	Yes
Range	1 2
Min	1
Max	2

DMRS CDM group w.o. data

Specifies DMRS CDM groups without data for the selected PDSCH configuration.

It is coupled with DMRS Config Type, DMRS Max Len . See table 7.3.1.2.2-1, 7.3.1.2.2-2, 7.3.1.2.2-3, 7.3.1.2.2-4 in 3GPP TS38.212. The column “Number of DMRS CDM group(s) without data” specifies the value for this result.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSC<n>:DMRS:CDMGroups:COUNT <int></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSC<n>:DMRS:CDMGroups:COUNT?</code>
Example	<code>:EVM:CCAR0:PDSC1:DMRS:CDMG:COUN 2</code> <code>:EVM:CCAR0:PDSC1:DMRS:CDMG:COUN?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message When Antenna Port Index is -1, this parameter become settable, you need to make sure valid setting according TS38.212 table 7.3.1.2.2-1 to table 7.3.1.2.2-4, otherwise demodulation may not work When Antenna Port Index is not -1, this parameter is display only, the value will be set automatically according to Antenna Port Index and TS38.212 table 7.3.1.2.2-1 to table 7.3.1.2.2-4
Preset	1
State Saved	Yes
Min	1
Max	2 for DMRS Config Type 1, 3 for DMRS Config Type 2

DMRS-DL-Alt

Indicates whether the 5GNR UE supports the alternative additional DMRS position for co-existence with LTE CRS

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSC<n>:DMRS:DALT OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSC<n>:DMRS:DALT?</code>
Example	<code>:EVM:CCAR0:PDSC1:DMRS:DALT OFF</code> <code>:EVM:CCAR0:PDSC1:DMRS:DALT?</code>
Couplings	Max value for n = 250 and Min value for n = 1
Preset	OFF
State Saved	Yes

PTRS Enable

Enable or disable PTRS for selected PDSCH allocation.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSC<n>:PTRS[:STATE] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSC<n>:PTRS[:STATE]?</code>
Example	<code>:EVM:CCAR0:PDSC1:PTRS OFF</code> <code>:EVM:CCAR0:PDSC1:PTRS?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	OFF
State Saved	Yes

PTRS K

Specifies PTRS frequency density (K_PTRS) for selected PDSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSC<n>:PTRS:K K2 K4</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSC<n>:PTRS:K?</code>
Example	<code>:EVM:CCAR0:PDSC1:PTRS:K K2</code> <code>:EVM:CCAR0:PDSC1:PTRS:K?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	K2
State Saved	Yes
Range	2 4

PTRS L

Specifies PTRS time density (L_PTRS) for selected PDSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDsch<n>:PTRS:L L1 L2 L4</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDsch<n>:PTRS:L?</code>
Example	<code>:EVM:CCAR0:PDSC1:PTRS:L L2</code> <code>:EVM:CCAR0:PDSC1:PTRS:L?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	L1
State Saved	Yes
Range	1 2 4

PTRS RE Offset

Specifies PTRS RE Offset for selected PDSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDsch<n>:PTRS:RE:OFFSet BIT00 BIT01 BIT10 BIT11</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDsch<n>:PTRS:RE:OFFSet?</code>
Example	<code>:EVM:CCAR0:PDSC1:PTRS:RE:OFFS BIT00</code> <code>:EVM:CCAR0:PDSC1:PTRS:RE:OFFS?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	BIT00
State Saved	Yes
Range	00 01 10 11

PDSCH Power Boosting

Specifies Power Boost value for the selected PDSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDsch<n>:POWER <rel_amp1></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDsch<n>:POWER?</code>
Example	<code>:EVM:CCAR0:PDSC1:POW 0</code> <code>:EVM:CCAR0:PDSC1:POW?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	0 dB
State Saved	Yes

Min	-100
Max	100

DMRS Power Boosting

Specifies DMRS Power Boost value for the selected PDSCH configuration.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PDSCh<n>:DMRS:POWer <rel_amp1></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PDSCh<n>:DMRS:POWer?</code>
Example	<code>:EVM:CCAR0:PDSC1:DMRS:POW 0</code> <code>:EVM:CCAR0:PDSC1:DMRS:POW?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message It is coupled with "PDSCH DMRS CDM group w.0. data" $dmrsBoostingValue = 10 * (1.0 - \text{Math.Log}(\text{DrmsCdmGroup}))$
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

PTRS Power Boosting

Specifies PTRS Power Boost value for the selected PDSCH configuration.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PDSCh<n>:PTRS:POWer <rel_amp1></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PDSCh<n>:PTRS:POWer?</code>
Example	<code>:EVM:CCAR0:PDSC1:PTRS:POW 0</code> <code>:EVM:CCAR0:PDSC1:PTRS:POW?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

Precoder Matrix (Downlink)

View and configure the Precoder Matrix parameters.

Reset Selected (GUI only)

Reset W matrix for selected precoder block.

Reset All (GUI only)

Reset W matrix for all precoder blocks.

Reset Matrix (Remote Command only)

Resets the specified precoder matrix. To reset *all* matrices, specify the value -1.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSC1 250:PMATrix:RESet<integer></code>
Example	<code>:EVM:CCAR0:PDSC1:PMAT:RES 2</code>
State Saved	Yes
Min	-1
Max	PRBG number of each PDSCH allocation

PDSCH (GUI only)

Allows you to choose the PDSCH allocation to configure its W Matrix

"W Matrix" on page 1628 "I Value (GUI only)" on page 1629 "Q Value (GUI only)" on page 1629

W Matrix

Specifies the W Matrix for selected precoder block.

Example: 1,1,0,0,0,0,1,1 represent below matrix

1+j, 0

0, 1+j

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSC<n>:PMATrix:PBGroup<m> <string></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSC<n>:PMATrix:PBGroup<m>?</code>
Example	<code>:EVM:CCAR0:PDSC1:PMAT:PBG1 "1,0,0,0,1,0,0,0"</code> <code>:EVM:CCAR0:PDSC1:PMAT:PBG1?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 275 and Min value for m = 1

	Attempting to remotely set or query a sub op code that is out of range results in an error message
State Saved	Yes

I Value (GUI only)

Specifies I value for selected W matrix cell.

Preset	0.0
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

Q Value (GUI only)

Specifies Q value for selected W matrix cell.

Preset	0.0
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

Rate Matching Pattern (Downlink)

View and configure the Rate Matching Pattern parameters.

Add Rate Matching Pattern (GUI only)

Inserts a new PDSCH Rate Matching Pattern into list. The maximum number of PDSCH Rate Matching Pattern is 8.

Delete Rate Matching Pattern

Deletes the selected PDSCH Rate Matching Pattern from list.

Remote Command	<code>[:SENSe] :EVM :CCARrier0 ... 15 :PDSCh1 250 :RMPattern :DElete <integer></code>
Example	<code>:EVM :CCAR0 :PDSC1 :RMP :DEL 1</code>

Clear All (GUI only)

Deletes *all* PDSCH Rate Matching Patterns from list.

For a remote command that provides a similar function, see ["Effective PDSCH Number \(Remote Command only\)" on page 1595](#).

Effective Rate Matching Pattern (Remote Command only)

Specifies how many PDSCH Rate Matching Patterns are effective. This remote command provides similar functionality to “Add Rate Matching Pattern” and “Delete Rate Matching Pattern”.

Note that all 8 PDSCH Rate Matching Patterns can be modified through SCPI, but ineffective PDSCH Rate Matching Pattern (index > Effective PDSCH Rate Matching Pattern Number) will not be included in the measurement, no matter whether it is “On” or “Off”.

Remote Command	<code>[:SENSe] : EVM : CCARrier0 ... 15 : PDSCh <n> : RMPattern : NUMBer <integer></code> <code>[:SENSe] : EVM : CCARrier0 ... 15 : PDSCh <n> : RMPattern : NUMBer ?</code>
Example	<code>: EVM : CCAR0 : PDSCh1 : RMP : NUMB 2</code> <code>: EVM : CCAR0 : PDSCh1 : RMP : NUMB ?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	0
State Saved	Yes
Min	0
Max	8

PDSCH (GUI only)

Allows you to choose the PDSCH allocation to configure its Rate Matching Pattern.

"State" on page 1630	"Level" on page 1631	"SCS" on page 1631	"RB Bitmap Index" on page 1632
"Symbol Bitmap Span" on page 1632	"Symbol Bitmap" on page 1633	"Periodicity" on page 1633	"Periodicity Pattern Bitmap" on page 1633

State

Enables or disables the selected PDSCH Rate Matching Pattern.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDsch<n>:RMPattern<m>[:STATe] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDsch<n>:RMPattern<m>[:STATe]?</code>
Example	<code>:EVM:CCAR0:PDSC1:RMP1 OFF</code> <code>:EVM:CCAR0:PDSC1:RMP1?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	OFF
State Saved	Yes

Level

Selects the level for PDSCH Rate Matching Pattern.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDsch<n>:RMPattern<m>:LEVe1 BWP CELL</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDsch<n>:RMPattern<m>:LEVe1?</code>
Example	<code>:EVM:CCAR0:PDSC1:RMP1:LEV CELL</code> <code>:EVM:CCAR0:PDSC1:RMP1:LEV?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	BWP
State Saved	Yes
Range	BWP Ce11

SCS

Specifies the SCS for PDSCH Rate Matching Pattern when Level = Cell Level. Only valid SCSs with the Freq Range are available.

- For Freq Range 1: SCS15K, SCS30K and SCS60K
- For Freq Range 2: SCS60K, SCS120K and SCS240K

When Level = BWP level, SCS is same as PDSCH allocation selected.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDsch<n>:RMPattern<m>:SCS SCS15K SCS30K SCS60K SCS120K SCS240K</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDsch<n>:RMPattern<m>:SCS?</code>
----------------	--

Example	<code>:EVM:CCAR0:PDSC1:RMP1:SCS SCS30K</code> <code>:EVM:CCAR0:PDSC1:RMP1:SCS?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	<code>SCS30K</code>
State Saved	Yes
Range	<code>15K 30K 60K 120K 240K</code>

RB Bitmap Index

Specifies the RB Bitmap Index to selected PDSCH Rate Matching Pattern

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSC<n>:RMPattern<m>:RB: INDeX <string></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSC<n>:RMPattern<m>:RB: INDeX?</code>
Example	<code>:EVM:CCAR0:PDSC1:RMP1:RB:IND "0:272"</code> <code>:EVM:CCAR0:PDSC1:RMP1:RB:IND?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	<code>"0:272"</code>
State Saved	Yes

Symbol Bitmap Span

Selects the Symbol Bitmap Span for PDSCH Rate Matching Pattern.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSC<n>:RMPattern<m>:SYMBol: BSpan SLOT1 SLOT2</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSC<n>:RMPattern<m>:SYMBol: BSpan?</code>
Example	<code>:EVM:CCAR0:PDSC1:RMP1:SYMB:BSpan SLOT1</code> <code>:EVM:CCAR0:PDSC1:RMP1:SYMB:BSpan?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	One Slot
State Saved	Yes
Range	One Slot Two Slots

Symbol Bitmap

Specifies the Symbol Bitmap for the selected PDSCH Rate Matching Pattern. The length should match the Symbol Bitmap Span:

- 14 bit when Symbol Bitmap Span = One Slot
- 28 bit when Symbol Bitmap Span = Two Slots

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:RMPattern<m>:SYMBOL:BITMap <string></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:RMPattern<m>:SYMBOL:BITMap?</code>
Example	<code>:EVM:CCAR0:PDSC1:RMP1:SYMB:BITM "0000"</code> <code>:EVM:CCAR0:PDSC1:RMP1:SYMB:BITM?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	"0000"
State Saved	Yes

Periodicity

Selects the Periodicity for Symbol Bitmap

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:RMPattern<m>:PERiodicity <int></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:RMPattern<m>:PERiodicity?</code>
Example	<code>:EVM:CCAR0:PDSC1:RMP1:PER 5</code> <code>:EVM:CCAR0:PDSC1:RMP1:PER?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message Note that if an invalid value is entered, it will be automatically adjusted
Preset	1
State Saved	Yes
Range	1 2 4 5 8 10 20 40

Periodicity Pattern Bitmap

Specifies the Periodicity Pattern Bitmap to selected PDSCH Rate Matching Pattern. The length should match the Periodicity.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSC<n>:RMPattern<m>:PERiodicity:BITMap <string></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSC<n>:RMPattern<m>:PERiodicity:BITMap?</code>
Example	<code>:EVM:CCAR0:PDSC1:RMP1:PER:BITM "1"</code> <code>:EVM:CCAR0:PDSC1:RMP1:PER:BITM?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	"1"
State Saved	Yes

CSI-RS

View and configure the CSI-RS parameters.

Resource Map Diagram

Display all physical channel allocations on Time and Frequency domain resource map. See ["Resource Map Diagram" on page 1554](#).

Add CSI-RS (GUI only)

Pressing this control inserts a new CSI-RS configuration into list, the maximum number of CSI-RS configurations is 8.

See ["Effective CSI-RS Number \(Remote Command only\)" on page 1635](#) for SCPI to provide similar function.

Delete CSI-RS

Pressing this control deletes selected CSI-RS configuration from list.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:DELeTe:CSIRs <integer></code>
Example	<code>:EVM:CCAR0:DEL:CSIR 1</code>

Clear All (GUI only)

Pressing this control deletes all CSI-RS configuration from list.

See ["Effective CSI-RS Number \(Remote Command only\)" on page 1635](#) for SCPI to provide similar function.

Effective CSI-RS Number (Remote Command only)

Specifies how many CSI-RS configurations are effective, this SCPI only command is used to provide similar function as “Add CSI-RS” and “Delete CSI-RS”.

Note all 8 CSI-RS configurations can be modified through SCPI, but ineffective CSI-RS configurations (index > CSI-RS Number) will not be included in the measurement no matter its state is “On” or “Off”.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:NUMBer:CSIRs <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:NUMBer:CSIRs?</code>
Example	<code>:EVM:CCAR0:NUMB:CSIR 2</code> <code>:EVM:CCAR0:NUMB:CSIR?</code>
Preset	1
State Saved	Yes
Min	0
Max	8

CSI-RS Parameter Group (Display only)

Allows you to configure the allocation and power parameters for CSI-RS.

This control is for UI display only.

General Settings

"State" on page 1636 "Zero Power" on page 1636 "n_ID" on page 1636 "Power Boosting" on page 1637

Resource Allocation

"State" on page 1636 "BWP" on page 1637 "RB Offset" on page 1637 "RB Number" on page 1638 "Allocated Slots" on page 1638

"First Symbol" on page 1639 "First Symbol 2" on page 1639 "Freq Domain Bitmap" on page 1639 "Resource Element used for PDSCH" on page 1640

Antenna Settings

"State" on page 1636 "Location Table Index" on page 1641 "Number of Antenna Ports" on page 1642 "Antenna Port" on page 1643 "CDM Type (Display Only)" on page 1643

"Density" on page 1643

State

Enable or disable CSI-RS configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:CSIRs<n>:STATe OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:CSIRs<n>:STATe?</code>
Example	<code>:EVM:CCAR0:CSIR1:STAT OFF</code> <code>:EVM:CCAR0:CSIR1:STAT?</code>
Couplings	Max value for n=8 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	OFF
State Saved	Yes

Zero Power

Enable or disable zero power mode of CSI-RS configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:CSIRs<n>:ZPOWer OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:CSIRs<n>:ZPOWer?</code>
Example	<code>:EVM:CCAR0:CSIR1:ZPOW OFF</code> <code>:EVM:CCAR0:CSIR1:ZPOW?</code>
Couplings	Max value for n=8 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	OFF
State Saved	Yes

n_ID

Specifies the user n_ID of CSI-RS configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:CSIRs<n>:NID <int></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:CSIRs<n>:NID?</code>
Example	<code>:EVM:CCAR0:CSIR1:NID 1</code> <code>:EVM:CCAR0:CSIR1:NID?</code>
Couplings	Max value for n=8 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	0

State Saved	Yes
Min	0
Max	65535

Power Boosting

Specifies Power Boost value for the CSI-RS configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:CSIRs<n>:POWer <rel_amp1></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:CSIRs<n>:POWer?</code>
Example	<code>:EVM:CCAR0:CSIR1:POW 0</code> <code>:EVM:CCAR0:CSIR1:POW?</code>
Couplings	Max value for n=8 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

BWP

Specifies the BWP of CSI-RS configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:CSIRs<n>:BWP BWP0 ... BWP4</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:CSIRs<n>:BWP?</code>
Example	<code>:EVM:CCAR0:CSIR1:BWP BWP1</code> <code>:EVM:CCAR0:CSIR1:BWP?</code>
Couplings	Max value for n=8 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	BWP1
State Saved	Yes
Range	Initial BWP BWP1 BWP2 BWP3 BWP4

RB Offset

Specifies the RB Offset of CSI-RS configuration.

Remote	<code>[:SENSe]:EVM:CCARrier0 ... 15:CSIRs<n>:RB:OFFSet <integer></code>
--------	--

Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:CSIRs<n>:RB:OFFSet?</code>
Example	<code>:EVM:CCAR0:CSIR1:RB:OFFSet 0</code> <code>:EVM:CCAR0:CSIR1:RB:OFFSet?</code>
Couplings	Max value for n=8 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	0
State Saved	Yes
Min	0
Max	RB Number of selected BWP – CSI-RS RB Number

RB Number

Specifies the RB Number of CSI-RS configuration.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:CSIRs<n>:RB:NUMBER <integer></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:CSIRs<n>:RB:NUMBER?</code>
Example	<code>:EVM:CCAR0:CSIR1:RB:NUMB 272</code> <code>:EVM:CCAR0:CSIR1:RB:NUMB?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message This value must be a multiple of 4
Preset	272
State Saved	Yes
Min	1
Max	RB Number of selected BWP (must be a multiple of 4)

Allocated Slots

Specifies the Slots allocated to CSI-RS configuration.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:CSIRs<n>:SLOT:ALLocated <string></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:CSIRs<n>:SLOT:ALLocated?</code>
Example	<code>:EVM:CCAR0:CSIR1:SLOT:ALL "2:9"</code> <code>:EVM:CCAR0:CSIR1:SLOT:ALL?</code>
Couplings	Max value for n=8 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	"2"
State Saved	Yes

First Symbol

Specifies the start symbol of the first CDM group of CSI-RS configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:CSIRs<n>:SYMBol:FIRSt[:ONE] <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:CSIRs<n>:SYMBol:FIRSt[:ONE]?</code>
Example	<code>:EVM:CCAR0:CSIR1:SYMB:FIRS 4</code> <code>:EVM:CCAR0:CSIR1:SYMB:FIRS?</code>
Couplings	Max value for n=8 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	12
State Saved	Yes
Min	0
Max	13

First Symbol 2

Specifies the start symbol of the second CDM group of CSI-RS configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:CSIRs1 8:SYMBol:FIRSt:TWO <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:CSIRs1 8:SYMBol:FIRSt:TWO?</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:CSIRs<n>:SYMBol:FIRSt:TWO <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:CSIRs<n>:SYMBol:FIRSt:TWO?</code>
Example	<code>:EVM:CCAR0:CSIR1:SYMB:FIRS:TWO 4</code> <code>:EVM:CCAR0:CSIR1:SYMB:FIRS:TWO?</code>
Couplings	Max value for n=8 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message This parameter is only visible when Row Index of CSI-RS Location Table is 13/14/16/17. Also the First symbol – First symbol 2 >= 2
Preset	10
State Saved	Yes
Min	2
Max	12

Freq Domain Bitmap

Specifies the frequency domain allocation bitmap of CSI-RS configuration.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:CSIRs<n>:FREQuency:BITMap <string></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:CSIRs<n>:FREQuency:BITMap?</code>
Example	<code>:EVM:CCAR0:CSIR1:FREQ:BITM "001"</code> <code>:EVM:CCAR0:CSIR1:FREQ:BITM?</code>
Couplings	<p>Max value for n=8 and Min value for n = 1</p> <p>Attempting to remotely set or query a sub op code that is out of range results in an error message</p> <p>The setting is coupled with Location Table Index. See Table 7.4.1.5.3-1 in TS38.211</p> <ul style="list-style-type: none"> - if the index = 1, The bitmap length = 4 - if the index = 2, The bitmap length = 12 - if the index = 4, The bitmap length = 3 - else, bitmap length = 6 <p>For the bitmap, the occurrence of '1' should meet the minimum requirements (indexed by location table index):</p> <p style="margin-left: 40px;">\{1, 1, 1, 1, 1, 4, 2, 2, 6, 3, 4, 4, 3, 3, 3, 4, 4, 4\}</p> <p>If the bitmap is invalid, the default bitmap will apply. The default bitmap is also determined by the location table index:</p> <ul style="list-style-type: none"> - Length is the bitmap length - Contains minimum '1's
Preset	"001"
State Saved	Yes

Resource Element used for PDSCH

Sets whether the resource elements assigned to CSI-RS can be used for PDSCH if CSI-RS collides with PDSCH.

- **ON** - PDSCH will be mapped to the resource element and CSI-RS will overwrite the values
- **OFF** - PDSCH will not be mapped to the resource elements

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:CSIRs<n>:REUSed:PDSC h OFF ON 0 1</code> <code>[:SENSe] :EVM:CCARrier0 ... 15:CSIRs<n>:REUSed:PDSC h?</code>
Example	<code>:EVM:CCAR0:CSIR1:REUS:PDSC OFF</code> <code>:EVM:CCAR0:CSIR1:REUS:PDSC?</code>
Couplings	Max value for n = 8 and Min value for n = 1

	Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	OFF
State Saved	Yes

Location Table Index

Specifies Location Table (Table 7.4.1.5.3-1 in TS38.211) Index for the selected CSI-RS configuration.

Remote Command	[:SENSe] :EVM:CCARrier0 ... 15:CSIRs<n>:TABLe:INDeX <int>
Example	:EVM:CCAR0:CSIR1:TABL:IND 1 :EVM:CCAR0:CSIR1:TABL:IND?
Couplings	Max value for n=8 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	4
State Saved	Yes
Min	1
Max	18

Number of Antenna Ports

Specifies number of candidate CSI-RS ports to accelerate measurement speed in MIMO mode.

Remote Command	<code>[:SENSE]:EVM:CCARrier0 ... 15:CSIRs<n>:ANTenna:PORT:NUMBER <integer></code> <code>[:SENSE]:EVM:CCARrier0 ... 15:CSIRs<n>:ANTenna:PORT:NUMBER?</code>
Example	<code>:EVM:CCAR0:CSIR:ANT:PORT:NUMB 1</code> <code>:EVM:CCAR0:CSIR:ANT:PORT:NUMB?</code>
Couplings	Max value for n=8 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message The range is coupled with Location Table Index. See Table 7.4.1.5.3-1 in TS38.211
Preset	Depends on MIMO state and Location Table Index
State Saved	Yes
Min	1
Max	Depends on MIMO state and Location Table Index

Antenna Port

Specifies the Antenna Port of CSI-RS configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:CSIRs<n>:ANTenna:PORT <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:CSIRs<n>:ANTenna:PORT?</code>
Example	<code>:EVM:CCAR0:CSIR:ANT:PORT 3000</code> <code>:EVM:CCAR0:CSIR:ANT:PORT?</code>
Couplings	Max value for n=8 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message The range is coupled with Location Table Index. See Table 7.4.1.5.3-1 in TS38.211
Preset	3000
State Saved	Yes
Min	3000
Max	3031

CDM Type (Display Only)

Displays the CDM type (according to "[Location Table Index](#)" on page 1641) for the selected CSI-RS configuration.

Density

Specifies the density of CSI-RS configuration (according to "[Location Table Index](#)" on page 1641).

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:CSIRs<n>:DENSity EHALf OHALf ONE THRee</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:CSIRs<n>:DENSity?</code>
Example	<code>:EVM:CCAR0:CSIR1:DENS ONE</code> <code>:EVM:CCAR0:CSIR1:DENS?</code>
Couplings	Max value for n=8 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message The range is coupled with Location Table Index. See Table 7.4.1.5.3-1 in TS38.211 <ul style="list-style-type: none"> - If index = 1, the value is fixed to 'THRee' - If index >= 4 && index <= 10, the value is fixed to 'ONE'
Preset	ONE
State Saved	Yes

RIM-RS

Allows you to view and configure the RIM-RS parameters.

Add RIM-RS (GUI only)

Inserts a new RIM-RS configuration into list, the maximum number of RIM-RS configurations is 8.

For details of the equivalent remote command, see ["Effective CSI-RS Number \(Remote Command only\)" on page 1635](#).

Delete RIM-RS

Deletes selected RIM-RS configuration from list.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:DELeTe:RIMRs <integer></code>
----------------	---

Example	<code>:EVM:CCAR0:DEL:RIMR 1</code>
---------	------------------------------------

Clear All (GUI only)

Deletes all RIM-RS configuration from list.

For details of the equivalent remote command, see ["Effective CSI-RS Number \(Remote Command only\)" on page 1635](#).

Effective RIM-RS Number (Remote Command only)

Specifies how many RIM-RS configurations are effective. This command is equivalent to the controls "Add RIM-RS" and "Delete RIM-RS".

Note that all 8 RIM-RS configurations can be modified through SCPI, but ineffective RIM-RS configurations (index > RIM-RS Number) will not be included in the measurement irrespective of whether its state is "On" or "Off".

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:NUMBer:RIMRs <integer></code>
----------------	---

	<code>[:SENSe]:EVM:CCARrier0 ... 15:NUMBer:RIMRs?</code>
--	--

Example	<code>:EVM:CCAR0:NUMB:RIMR 2</code>
---------	-------------------------------------

	<code>:EVM:CCAR0:NUMB:RIMR?</code>
--	------------------------------------

Preset	1
--------	---

State Saved	Yes
-------------	-----

Min	0
Max	8

RIM-RS Parameter Group (Display only)

Allows you to configure the allocation and power parameters for RIM-RS.

This control is for UI display only.

State

Enables or disables RIM-RS configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:RIMRs<n>:STATe OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:RIMRs<n>:STATe?</code>
Example	<code>:EVM:CCAR0:RIMR1:STAT OFF</code> <code>:EVM:CCAR0:RIMR1:STAT?</code>
Couplings	Max value for n = 8 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	<code>OFF</code>
State Saved	Yes

Power Boosting

Specifies Power Boost value for the RIM-RS configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:RIMRs<n>:POWer <rel_amp></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:RIMRs<n>:POWer?</code>
----------------	---

Example	<code>:EVM:CCAR0:RIMR1:POW 0</code> <code>:EVM:CCAR0:RIMR1:POW?</code>
Couplings	Max value for n = 8 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

BWP

Specifies the BWP of RIM-RS configuration.

Remote Command	<code>[[:SENSe]:EVM:CCARrier0 ... 15:RIMRs<n>:BWP BWP0 ... BWP4</code> <code>[[:SENSe]:EVM:CCARrier0 ... 15:RIMRs<n>:BWP?</code>
Example	<code>:EVM:CCAR0:RIMR1:BWP BWP1</code> <code>:EVM:CCAR0:RIMR1:BWP?</code>
Couplings	Max value for n = 8 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	BWP1
State Saved	Yes
Range	Initial BWP BWP 01 BWP 02 BWP 03 BWP 04

Allocated Slots

Specifies the Slots allocated to RIM-RS configuration.

Remote Command	<code>[[:SENSe]:EVM:CCARrier0 ... 15:RIMRs<n>:SLOT:ALLOcated <string></code> <code>[[:SENSe]:EVM:CCARrier0 ... 15:RIMRs<n>:SLOT:ALLOcated?</code>
Example	<code>:EVM:CCAR0:RIMR1:SLOT:ALL "2:9"</code> <code>:EVM:CCAR0:RIMR1:SLOT:ALL?</code>
Couplings	Max value for n = 8 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	"0"
State Saved	Yes

RB Offset

Specifies the RB Offset of RIM-RS configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:RIMRs<n>:RB:OFFSet <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:RIMRs<n>:RB:OFFSet?</code>
Example	<code>:EVM:CCAR0:RIMR1:RB:OFFSet 0</code> <code>:EVM:CCAR0:RIMR1:RB:OFFSet?</code>
Couplings	Max value for n = 8 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	0
State Saved	Yes
Min	0
Max	RB Number of selected BWP – RIM-RS RB Number

RB Number

Specifies the RB Number of RIM-RS configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:RIMRs<n>:RB:NUMBer <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:RIMRs<n>:RB:NUMBer?</code>
Example	<code>:EVM:CCAR0:RIMR1:RB:NUMB 272</code> <code>:EVM:CCAR0:RIMR1:RB:NUMB?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message This value must be a multiple of 4
Preset	273
State Saved	Yes
Min	1
Max	RB Number of selected BWP (must be a multiple of 4)

First Symbol

Specifies the start symbol of the RIM-RS configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:RIMRs<n>:SYMBol:FIRSt[:ONE] <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:RIMRs<n>:SYMBol:FIRSt[:ONE]?</code>
----------------	---

Example	<code>:EVM:CCAR0:RIMR1:SYMB:FIRS 4</code> <code>:EVM:CCAR0:RIMR1:SYMB:FIRS?</code>
Couplings	Max value for n = 8 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	0
State Saved	Yes
Min	0
Max	13

n_SCID

Specifies the user n_SCID of RIM-RS configuration.

Remote Command	<code>[[:SENSe]:EVM:CCARrier0 ... 15:RIMRs<n>:SCIDn <int></code> <code>[[:SENSe]:EVM:CCARrier0 ... 15:RIMRs<n>:SCIDn?</code>
Example	<code>:EVM:CCAR0:RIMR1:SCID 1</code> <code>:EVM:CCAR0:RIMR1:SCID?</code>
Couplings	Max value for n = 8 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	0
State Saved	Yes
Min	0
Max	1023

Sequence Generation Transmission Periods (n_t_RIM)

Specifies the sequence generation n_t_RIM number of transmission periods of RIM-RS configuration.

Remote Command	<code>[[:SENSe]:EVM:CCARrier0 ... 15:RIMRs<n>:SEQuence:TPERiod <int></code> <code>[[:SENSe]:EVM:CCARrier0 ... 15:RIMRs<n>:SEQuence:TPERiod?</code>
Example	<code>:EVM:CCAR0:RIMR1:SEQ:TPER 1</code> <code>:EVM:CCAR0:RIMR1:SEQ:TPER?</code>
Couplings	Max value for n = 8 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	0
State Saved	Yes

Min	0
Max	2e31 - 1

Sequence Generation Multiple Factor

Specifies the sequence generation multiple factor of RIM-RS configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:RIMRs<n>:SEQuence:MFACTor <int></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:RIMRs<n>:SEQuence:MFACTor?</code>
Example	<code>:EVM:CCAR0:RIMR1:SEQ:MFACT 1</code> <code>:EVM:CCAR0:RIMR1:SEQ:MFACT?</code>
Couplings	Max value for n = 8 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	0
State Saved	Yes
Min	0
Max	2e31 - 1

Sequence Generation Offset

Specifies the sequence generation offset of RIM-RS configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:RIMRs<n>:SEQuence:OFFSet <int></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:RIMRs<n>:SEQuence:OFFSet?</code>
Example	<code>:EVM:CCAR0:RIMR1:SEQ:OFFS 1</code> <code>:EVM:CCAR0:RIMR1:SEQ:OFFS?</code>
Couplings	Max value for n = 8 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	0
State Saved	Yes
Min	0
Max	2e31 - 1

PUCCH

View and configure the PUCCH parameters.

Resource Map Diagram

Display all physical channel allocations on Time and Frequency domain resource map. See ["Resource Map Diagram" on page 1554](#).

Add PUCCH (GUI only)

Pressing this control inserts a new PUCCH configuration into list, the maximum number of PUCCH configurations is 16.

See ["Effective PUCCH Number \(Remote Command only\)" on page 1650](#) for SCPI to provide similar function.

Delete PUCCH

Pressing this control deletes selected PUCCH configuration from list.

Remote Command	<code>[:SENSE]:EVM:CCARrier0 ... 15:DElete:PUCCh <integer></code>
----------------	--

Example	<code>:EVM:CCAR0:DEL:PUC 1</code>
---------	-----------------------------------

Clear All (GUI only)

Pressing this control deletes all PUCCH configuration from list.

See ["Effective PUCCH Number \(Remote Command only\)" on page 1650](#) for SCPI to provide similar function.

Effective PUCCH Number (Remote Command only)

Specifies how many PUCCH configurations are effective, this SCPI only command is used to provide similar function as "Add PUCCH" and "Delete PUCCH".

Note all 16 PUCCH configurations can be modified through SCPI, but ineffective PUCCH configurations (index > Effective PUCCH Number) will not be included in the measurement no matter its state is "On" or "Off".

Remote Command	<code>[:SENSE]:EVM:CCARrier0 ... 15:NUMBer:PUCCh <integer></code>
----------------	--

Command	<code>[:SENSE]:EVM:CCARrier0 ... 15:NUMBer:PUCCh?</code>
---------	---

Example	<code>:EVM:CCAR0:NUMB:PUC 2</code>
---------	------------------------------------

	<code>:EVM:CCAR0:NUMB:PUC?</code>
--	-----------------------------------

Couplings	Max value is 16
-----------	-----------------

If you attempt to remotely set the Count larger than 16, this will result in an error message

Preset	1
State Saved	Yes
Min	0
Max	16

PUCCH Parameter Group (Display only)

Allows you to configure the PUCCH parameters.

This control is for UI display only. You can select one of the following groups:

General Settings

"State" on page 1652	"Format" on page 1652	"Multiplex" on page 1654	"n_RN-TI" on page 1655
"Modulation" on page 1659	"Power Boosting" on page 1658	"Antenna Port" on page 1658	

Resource Allocation

"State" on page 1652	"Format" on page 1652	"BWP" on page 1652	"Interlaced Transmission" on page 1653	"RB Set Index" on page 1653	"Interlace0" on page 1653
"Interlace1" on page 1654	"RB Offset" on page 1655	"RB Number" on page 1656	"Allocated Slots" on page 1657	"First Symbol" on page 1657	"Last Symbol" on page 1657

DMRS Settings

"State" on page 1652	"Format" on page 1652	"Additional DMRS" on page 1663	"Scrambling ID" on page 1664
"DMRSuplinkTPPUCCH-r16" on page 1665	"N_ID_0" on page 1664	"DMRS Power Boosting" on page 1665	

PUCCH Settings

"State" on page 1652	"Format" on page 1652	"Group Hopping" on page 1661	"Hopping ID" on page 1661	"Intra-Slot Frequency Hopping" on page 1663
"Second hop RB Offset" on page 1656	"Initial Cyclic Shift (m0)" on page 1659	"Cyclic Shift MCS" on page 1660	"OCC Index" on page 1662	"OCC Length" on page 1662
"PUCCH UCI Size" on page 1662				

State

Enable or disable PUCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>[:STATe] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>[:STATe]?</code>
Example	<code>:EVM:CCAR0:PUCc1 OFF</code> <code>:EVM:CCAR0:PUCc1?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	<code>OFF</code>
State Saved	Yes

Format

Specifies the format of PUCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:FORMat F0 ... F4</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:FORMat?</code>
Example	<code>:EVM:CCAR0:PUCc1:FORM F0</code> <code>:EVM:CCAR0:PUCc1:FORM?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	<code>F0</code>
State Saved	Yes
Range	<code>0 1 2 3 4</code>

BWP

Specifies the BWP of PUCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:BWP BWP1 ... BWP4</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:BWP?</code>
Example	<code>:EVM:CCAR0:PUCc1:BWP BWP1</code> <code>:EVM:CCAR0:PUCc1:BWP?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message

Preset	BWP1
State Saved	Yes
Range	BWP 01 BWP 02 BWP 03 BWP 04

Interlaced Transmission

Enable or disable Interlaced Transmission for 15K/30K SCS

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:INTERlace[:STATe] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:INTERlace[:STATe]?</code>
Example	<code>:EVM:CCAR0:PUC1:INT OFF</code> <code>:EVM:CCAR0:PUC1:INT?</code>
Couplings	Max value for n = 16 and Min value for n = 1 This key is only available for 15kHz or 30kHz SCS, and with valid Intra-Cell Guard Band setting Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	OFF
State Saved	Yes
Range	OFF ON

RB Set Index

Set the RB-Set Index to be used for PUCCH transmission.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:INTERlace:RBSet <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:INTERlace:RBSet?</code>
Example	<code>:EVM:CCAR0:PUC1:INT:RBS 0</code> <code>:EVM:CCAR0:PUC1:INT:RBS?</code>
Couplings	Max value for n = 16 and Min value for n = 1 This key is only available when Interlaced Transmission is ON Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	0
State Saved	Yes
Min	0
Max	Depends on the number of RB-sets of current carrier

Interlace0

Set the Interlace0 for Interlaced transmission.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:INTERlace:ZERO <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:INTERlace:ZERO?</code>
Example	<code>:EVM:CCAR0:PUC1:INT:ZERO 0</code> <code>:EVM:CCAR0:PUC1:INT:ZERO?</code>
Couplings	Max value for n = 16 and Min value for n = 1 This key is only available when Interlaced Transmission is ON Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	0
State Saved	Yes
Min	0
Max	9 for 15kHz SCS 4 for 30kHz SCS

Interlace1

Set the Interlace1 for Interlaced transmission.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:INTERlace:ONE <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:INTERlace:ONE?</code>
Example	<code>:EVM:CCAR0:PUC1:INT:ONE 0</code> <code>:EVM:CCAR0:PUC1:INT:ONE?</code>
Couplings	Max value for n = 16 and Min value for n = 1 This key is only available when Interlaced Transmission is ON and PUCCH format is 2/3 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	-1
State Saved	Yes
Min	-1
Max	9 for 15kHz SCS 4 for 30kHz SCS

Multiplex

Specifies whether the current PUCCH allocation is multiplexed with the other PUCCH allocation.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:MULTiplex OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:MULTiplex?</code>
Example	<code>:EVM:CCAR0:PUC1:MULT OFF</code>

	<code>:EVM:CCAR0:PUC1:MULT?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	OFF
State Saved	Yes

n_RNTI

Specifies the user RNTI of PUCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:NRNTi <int></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:NRNTi?</code>
Example	<code>:EVM:CCAR0:PUC1:NRNT 1</code> <code>:EVM:CCAR0:PUC1:NRNT?</code>
Couplings	Max value for n = 16 and Min value for n = 1 It is not applied for Format 0 and Format 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	1
State Saved	Yes
Min	0
Max	65535

RB Offset

Specifies the RB Offset of PUCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:RB:OFFSet <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:RB:OFFSet?</code>
Example	<code>:EVM:CCAR0:PUC1:RB:OFFSet 0</code> <code>:EVM:CCAR0:PUC1:RB:OFFSet?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	0
State Saved	Yes
Min	0
Max	RB Number of selected BWP – PUCCH RB Number

RB Number

Specifies the RB Number of PUCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:RB:NUMBer <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:RB:NUMBer?</code>
Example	<code>:EVM:CCAR0:PUCc1:RB:NUMB 10</code> <code>:EVM:CCAR0:PUCc1:RB:NUMB?</code>
Couplings	Max value for n = 16 and Min value for n = 1 It depends on the PUCCH Format: <ul style="list-style-type: none"> - Format 0, 1, 4: fixed to 1 - Format 2: 1 to 16 - Format 3: 1,2,3,4,5,6,8,9,10,12,15,16 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	1
State Saved	Yes
Min	1
Max	Min of (16, RB Number of selected BWP)

Second hop RB Offset

Specifies the second hop RB Offset of PUCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:RB:OFFSet:HOPPIng:SECond <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:RB:OFFSet:HOPPIng:SECond?</code>
Example	<code>:EVM:CCAR0:PUCc1:RB:OFFS:HOPP:SEC 0</code> <code>:EVM:CCAR0:PUCc1:RB:OFFS:HOPP:SEC?</code>
Couplings	Max value for n = 16 and Min value for n = 1 For Format 0 and Format 2, it should be applied only when Nsym = 2. For other formats, it should be applied Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	0
State Saved	Yes
Min	0
Max	RB Number of selected BWP – PUCCH RB Number

Allocated Slots

Specifies the Slots allocated to PUCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:SLOT:ALlocated <string></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:SLOT:ALlocated?</code>
Example	<code>:EVM:CCAR0:PUC1:SLOT:ALL "2:9"</code> <code>:EVM:CCAR0:PUC1:SLOT:ALL?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	"0 "
State Saved	Yes

First Symbol

Specifies the First Symbol of PUCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:SYMBOL:FIRSt <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:SYMBOL:FIRSt?</code>
Example	<code>:EVM:CCAR0:PUC1:SYMB:FIRS 4</code> <code>:EVM:CCAR0:PUC1:SYMB:FIRS?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	13
State Saved	Yes
Min	0
Max	Last Symbol

Last Symbol

Specifies the Last Symbol of PUCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:SYMBOL:LAST <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:SYMBOL:LAST?</code>
Example	<code>:EVM:CCAR0:PUC1:SYMB:LAST 4</code> <code>:EVM:CCAR0:PUC1:SYMB:LAST?</code>
Couplings	Max value for n = 16 and Min value for n = 1 The range depends on the PUCCH format and First Symbol:

- Format 0, 2: [First Symbol, First Symbol +1]
- Format 1, 3, 4: [First Symbol + 3, 13]

Attempting to remotely set or query a sub op code that is out of range results in an error message

Preset	13
State Saved	Yes
Min	First Symbol
Max	13

Antenna Port

Specifies the Antenna Port of PUCCH configuration.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PUCCh<n>:ANTenna:PORT <integer></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PUCCh<n>:ANTenna:PORT?</code>
Example	<code>:EVM:CCAR0:PUC1:ANT:PORT 2000</code> <code>:EVM:CCAR0:PUC1:ANT:PORT?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	2000
State Saved	Yes
Min	2000
Max	2100

Power Boosting

Specifies Power Boost value for the PUCCH configuration.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PUCCh<n>:POWer <rel_amp1></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PUCCh<n>:POWer?</code>
Example	<code>:EVM:CCAR0:PUC1:POW 0</code> <code>:EVM:CCAR0:PUC1:POW?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

Modulation

Specifies the modulation type of PUCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:MODulation:TYPE PIBPSK BPSK QPSK ZC</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:MODulation:TYPE?</code>
Example	<code>:EVM:CCAR0:PUC1:MOD:TYPE BPSK</code> <code>:EVM:CCAR0:PUC1:MOD:TYPE?</code>
Couplings	Format 0: ZC (Zandoff Chu: PN sequence without modulation) Format 1: BPSK or QPSK Format 2: QPSK Format 3&4: Pi/2 BPSK or QPSK Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	Depends on Format
State Saved	Yes
Range	<code>ZC PIBPSK BPSK QPSK</code>

Initial Cyclic Shift (m0)

Specifies the initial cyclic shift of PUCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:CYCLic:SHIFt <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:CYCLic:SHIFt?</code>
Example	<code>:EVM:CCAR0:PUC1:CYCL:SHIF 0</code> <code>:EVM:CCAR0:PUC1:CYCL:SHIF?</code>
Couplings	Max value for n = 16 and Min value for n = 1 It is not applied for Format 2. For Format 3, it is fixed to 0 For Format 4, it is read-only and coupled with OCC Index <ul style="list-style-type: none"> - OCC Index 0 : 0 - OCC Index 1: 6 - OCC Index 2 :3 - OCC Index 3: 9 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	0

State Saved	Yes
Min	0
Max	Depends on PUCCH format

Cyclic Shift MCS

Specifies the cyclic shift MCS of PUCCH configuration.

Remote Command	<code>[[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:CYCLic:SHIFt:MCS M0 M3 M6 M9 M1 M4 M7 M10 [:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:CYCLic:SHIFt:MCS?</code>
Example	<code>:EVM:CCAR0:PUCC1:CYCL:SHIF:MCS M0</code> <code>:EVM:CCAR0:PUCC1:CYCL:SHIF:MCS?</code>
Couplings	Max value for n = 16 and Min value for n = 1 For format 1, format 2, format 3 and format 4, it should be fixed to 0 (M0) Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	<code>M0</code>
State Saved	Yes
Range	<code>M0 M3 M6 M9 M1 M4 M7 M10</code>

For PUCCH format 0, MCS value should be set according to tables in 3GPP TS 38.213 (<https://portal.3gpp.org/desktopmodules/Specifications/SpecificationDetails.aspx?specificationId=3215>):

Table 9.2.3-3: Mapping of values for one HARQ-ACK information bit to sequences for PUCCH format 0

HARQ-ACK Value	0	1
Sequence cyclic shift	$m_{CS}=0$	$m_{CS}=6$

Table 9.2.3-4: Mapping of values for two HARQ-ACK information bits to sequences for PUCCH format 0

HARQ-ACK Value	$\{0, 0\}$	$\{0, 1\}$	$\{1, 1\}$	$\{1, 0\}$
Sequence cyclic shift	$m_{CS}=0$	$m_{CS}=3$	$m_{CS}=6$	$m_{CS}=9$

Table 9.2.5-1: Mapping of values for one HARQ-ACK information bit and positive SR to sequences for PUCCH format 0

HARQ-ACK Value	0	1
Sequence cyclic shift	$m_{CS}=3$	$m_{CS}=9$

Table 9.2.5-2: Mapping of values for two HARQ-ACK information bits and positive SR to sequences for PUCCH format 0

HARQ-ACK Value	\{0, 0\}	\{0, 1\}	\{1, 1\}	\{1, 0\}
Sequence cyclic shift	$m_{cs}=1$	$m_{cs}=4$	$m_{cs}=7$	$m_{cs}=10$

Group Hopping

Specifies the group hopping type of PUCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:HOPPing:GROup NEITHER ENABLE DISABLE</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:HOPPing:GROup?</code>
Example	<code>:EVM:CCAR0:PUCc1:HOPP:GRO NEIT</code> <code>:EVM:CCAR0:PUCc1:HOPP:GRO?</code>
Couplings	Max value for n = 16 and Min value for n = 1 It is not applied for Format 2 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	<code>NEITher</code>
State Saved	Yes
Range	<code>NEITher ENABled DISAbled</code>

Hopping ID

Specifies the hopping ID of PUCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:HOPPing:ID <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:HOPPing:ID?</code>
Example	<code>:EVM:CCAR0:PUCc1:HOPP:ID 0</code> <code>:EVM:CCAR0:PUCc1:HOPP:ID?</code>
Couplings	Max value for n = 16 and Min value for n = 1 It is not applied for Format 2 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	0
State Saved	Yes
Min	0
Max	1023

OCC Index

Specifies the OCC Index of PUCCH configuration.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PUCCh<n>:OCC:INDeX <integer></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PUCCh<n>:OCC:INDeX?</code>
Example	<code>:EVM:CCAR0:PUCc1:OCC:IND 0</code> <code>:EVM:CCAR0:PUCc1:OCC:IND?</code>
Couplings	Max value for n = 16 and Min value for n = 1 The range depends on PUCCH Format: <ul style="list-style-type: none"> - Format 1: 0,1 - Format 4: the max value should be less than OCC Length - Others: Not applied Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	0
State Saved	Yes
Min	0
Max	Depends on PUCCH format

OCC Length

Specifies the OCC Length of PUCCH configuration.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PUCCh<n>:OCC:LENGTh L2 L4</code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PUCCh<n>:OCC:LENGTh?</code>
Example	<code>:EVM:CCAR0:PUCc1:OCC:LENG L4</code> <code>:EVM:CCAR0:PUCc1:OCC:LENG?</code>
Couplings	Max value for n = 16 and Min value for n = 1 It is only applied for PUCCH Format 4 Attempting to remotely set or query a sub op code that is out of range results in an error message
Preset	L2
State Saved	Yes

PUCCH UCI Size

Specifies the UCI Size of PUCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:UCI:SIZE <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:UCI:SIZE?</code>
Example	<code>:EVM:CCAR0:PUC1:UCI:SIZE 10</code> <code>:EVM:CCAR0:PUC1:UCI:SIZE?</code>
Couplings	Max value for n = 16 and Min value for n = 1 For Format 0 and Format 1, this parameter doesn't apply The range depends on PUCCH Format: <ul style="list-style-type: none"> - Format 2: 21 - Format 3: 61 - Format 4: 25 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	20
State Saved	Yes
Min	3
Max	Depends on PUCCH format

Intra-Slot Frequency Hopping

Enable or disable intra-slot frequency hopping of PUCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:HOPping:FREQuency:INTRa:SLOT</code> <code>[:STATe] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:HOPping:FREQuency:INTRa:SLOT</code> <code>[:STATe]?</code>
Example	<code>:EVM:CCAR0:PUC1:HOPP:FREQ:INTR:SLOT OFF</code> <code>:EVM:CCAR0:PUC1:HOPP:FREQ:INTR:SLOT?</code>
Couplings	Max value for n = 16 and Min value for n = 1 For Format 0 and Format 2, it should be applied only when Nsym = 2. For other formats, it should be applied Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	OFF
State Saved	Yes

Additional DMRS

Enable or disable additional DMRS of PUCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:DMRS:ADDITIONal OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:DMRS:ADDITIONal?</code>
Example	<code>:EVM:CCAR0:PUCc1:DMRS:ADD OFF</code> <code>:EVM:CCAR0:PUCc1:DMRS:ADD?</code>
Couplings	Max value for n = 16 and Min value for n = 1 It is only applied for format 3 and format 4 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	ON
State Saved	Yes

Scrambling ID

Specifies the scrambling ID of PUCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:SCID <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:SCID?</code>
Example	<code>:EVM:CCAR0:PUCc1:SCID 0</code> <code>:EVM:CCAR0:PUCc1:SCID?</code>
Couplings	Max value for n = 16 and Min value for n = 1 It is NOT applied for format 0 and format 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	-1
State Saved	Yes
Min	-1
Max	1023

N_ID_0

Specifies the N_ID_0 of PUCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:NID <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:NID?</code>
Example	<code>:EVM:CCAR0:PUCc1:NID 0</code> <code>:EVM:CCAR0:PUCc1:NID?</code>
Couplings	Max value for n = 16 and Min value for n = 1 It is only applied for format 2 Attempting to remotely set or query a sub op code that is out of range generates an error message This setting is available when:

	- PUCCH format is 2
	- DMRSuplinkTPPUCCH-r16 is ON and PUCCH format is 3 or 4
Preset	-1
State Saved	Yes
Min	-1
Max	65535

DMRSuplinkTPPUCCH-r16

Set whether higher-layer parameter DMRSuplinkTPPUCCH-r16 is provided.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:DMRS:TP:R16[:STATe] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:DMRS:TP:R16[:STATe]?</code>
Example	<code>:EVM:CCAR0:PUCc1:DMRS:TP:R16 OFF</code> <code>:EVM:CCAR0:PUCc1:DMRS:TP:R16?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message This setting is available when PUCCH format is 3 or 4
Preset	OFF
State Saved	Yes

DMRS Power Boosting

Specifies DMRS Power Boost value for the selected PUCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:DMRS:POWer <rel_amp></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:DMRS:POWer?</code>
Example	<code>:EVM:CCAR0:PUCc1:DMRS:POW 0</code> <code>:EVM:CCAR0:PUCc1:DMRS:POW?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

PUSCH

View and configure the PUSCH parameters.

Resource Map Diagram

Display all physical channel allocations on Time and Frequency domain resource map. See ["Resource Map Diagram" on page 1554](#).

Add PUSCH (GUI only)

Pressing this control inserts a new PUSCH configuration into list, the maximum number of PUSCH configurations is 250.

See ["Effective PUSCH Number\(Remote Command only\)" on page 1666](#) for SCPI to provide similar function.

Delete PUSCH

Pressing this control deletes selected PUSCH configuration from list.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:DELeTe:PUSCh <integer></code>
----------------	--

Example	<code>:EVM:CCAR0:DEL:PUSC 1</code>
---------	------------------------------------

Clear All (GUI only)

Pressing this control deletes all PUSCH configuration from list.

See ["Effective PUSCH Number\(Remote Command only\)" on page 1666](#) for SCPI to provide similar function.

Effective PUSCH Number(Remote Command only)

Specifies how many PUSCH configurations are effective, this SCPI only command is used to provide similar function as “Add PUSCH” and “Delete PUSCH”.

Note all 250 PUSCH configurations can be modified through SCPI, but ineffective PUSCH configurations (index > Effective PUSCH Number) will not be included in the measurement no matter its state is “On” or “Off”.

Remote	<code>[:SENSe]:EVM:CCARrier0 ... 15:NUMBer:PUSCh <integer></code>
--------	--

Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:NUMBer:PUSCh?</code>
---------	---

Example	<code>:EVM:CCAR0:NUMB:PUSC 2</code> <code>:EVM:CCAR0:NUMB:PUSC?</code>
Couplings	Max value is 250 If you attempt to remotely set the Count larger than 250, this will result in an error message
Preset	1
State Saved	Yes
Min	0
Max	250

PUSCH Parameter Group (Display only)

Allows you to configure the PUSCH parameters.

This control is for UI display only. You can select one of the following groups:

General Settings

"State" on page 1668	"RNTI" on page 1669	"n_ID" on page 1669	"n_RAPID" on page 1683	"Transform Precoding" on page 1669

State

Enable or disable selected PUSCH configuration.

Remote Command	<code>[:SENSe] :EVM :CCARrier0 [...] 15 :PUSCh <n > :STATe OFF ON 0 1</code> <code>[:SENSe] :EVM :CCARrier0 [...] 15 :PUSCh <n > [:STATe] ?</code>
Example	<code>:EVM :CCAR0 :PUSC1 OFF</code> <code>:EVM :CCAR0 :PUSC1 ?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	ON
State Saved	Yes

RNTI

Specifies the user RNTI of selected PUSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:RNTI <int></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:RNTI?</code>
Example	<code>:EVM:CCAR0:PUSC1:RNTI 1</code> <code>:EVM:CCAR0:PUSC1:RNTI?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	1
State Saved	Yes
Min	0
Max	65535

n_ID

Specifies n_ID for selected PUSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:NID <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:NID?</code>
Example	<code>:EVM:CCAR0:PUSC1:NID 0</code> <code>:EVM:CCAR0:PUSC1:NID?</code>
Notes	-1 means using Cell ID as n_ID
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	-1
State Saved	Yes
Min	-1
Max	1023

Transform Precoding

Enable or disable Transform Precoding for selected PUSCH allocation.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:TPRecoding[:STATe] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:TPRecoding[:STATe]?</code>
----------------	--

Example	<code>:EVM:CCAR0:PUSC1:TPR OFF</code> <code>:EVM:CCAR0:PUSC1:TPR?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	OFF
State Saved	Yes

MCS Table

Specifies which MCS table is used to configure MCS for selected PUSCH configuration. See 38.214 clause 5.1.3 and 6.1.4 for complete MCS table.

- Table 1 – Table 5.1.3.1-1
- Table 2 – Table 5.1.3.1-2
- Table 3 – Table 6.1.4.1-1
- Table 4 – Table 5.1.3.1-3
- Table 5 – Table 6.1.4.1-2

Remote Command	<code>[[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:MCS:TABLE TABLE1 ... TABLE5</code> <code>[[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:MCS:TABLE?</code>
Example	<code>:EVM:CCAR0:PUSC1:MCS:TABL TABL2</code> <code>:EVM:CCAR0:PUSC1:MCS:TABL?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message Table 1(Table 5.1.3.1-1) and Table 4(Table 5.1.3.1-3) are only available when Transform Precoding is OFF Table 3(Table 6.1.4.1-1) and Table 5(Table 6.1.4.1-2) are only available when Transform Precoding is ON
Preset	TABL1
State Saved	Yes
Range	Table 5.1.3.1-1 (64QAM) Table 5.1.3.1-2 (256QAM) Table 6.1.4.1-1 (64QAM TP) Table 5.1.3.1-3 (64QAMLowSE) Table 6.1.4.1-2 (64QAM TP LowSE)

MCS

Specifies the MCS index for selected PUSCH configuration.

Remote	<code>[[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:MCS <integer></code>
--------	--

Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:MCS?</code>
Example	<code>:EVM:CCAR0:PUSC1:MCS 1</code> <code>:EVM:CCAR0:PUSC1:MCS?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message When MCS is -1, you can specify Modulation manually, MCS table and TB Size will be invalid and no decoding results
Preset	0
State Saved	Yes
Min	-1
Max	31

Modulation

Display or select the modulation for selected PUSCH configuration.

The modulation is derived from MCS Table and MCS settings 38.214 clause 5.1.3 and 6.1.4.

- Modulation Oder = 1, Modulation = Pi/2 BPSK
- Modulation Oder = 2, Modulation = QPSK
- Modulation Order = 4, Modulation = 16QAM
- Modulation Order = 6, Modulation = 64QAM
- Modulation Order = 8, Modulation = 256QAM

See "[More Information](#)" on page 1600.

Only when MCS = -1, you can specify Modulation manually (including Custom IQ mode). Custom IQ mode means customized constellation definition recalled from file.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:MODulation QPSK QAM16 QAM64 QAM256 PIBPSK QAM1024</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:MODulation?</code>
Example	<code>:EVM:CCAR0:PUSC1:MOD QPSK</code> <code>:EVM:CCAR0:PUSC1:MOD?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message Display only when MCS is not -1. PIBPSK (Pi/2 BPSK) is only available when PUSCH TP is On

3 5G NR Mode
3.7 Modulation Analysis Measurement

Preset	QPSK
State Saved	Yes
Range	QPSK 16 QAM 64 QAM 256QAM Pi/2 BPSK 1024QAM

RV Index

Specifies the RV index for selected PUSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:RV <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:RV?</code>
Example	<code>:EVM:CCAR0:PUSC1:RV 1</code> <code>:EVM:CCAR0:PUSC1:RV?</code>
Notes	-1 means this parameter is changing in signal and therefore need to be auto detected for each burst
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0
State Saved	Yes
Min	-1
Max	3

TB Size (Display Only)

Display TB Size for the selected PUSCH configuration.

Precoder Group Size

Select PRB group size for precoding matrix.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:PBGRoup RB2 RB4 WIDE USER</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:PBGRoup?</code>
Example	<code>:EVM:CCAR0:PUSC1:PBGR RB4</code> <code>:EVM:CCAR0:PUSC1:PBGR?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	WIDE
State Saved	Yes
Range	2 RB 4 RB Wideband User Defined

User Define Size

Set user defined value when Precoder Group Size = User Define.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:USER:PBGRoup <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:USER:PBGRoup?</code>
Example	<code>:EVM:CCAR0:PUSC1:PBGR:USER 1</code> <code>:EVM:CCAR0:PUSC1:PBGR:USER?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message This parameter is only visible when Precoder Group Size = User Define
Preset	1
State Saved	Yes
Min	1
Max	RB Number of selected BWP

BWP

Specifies the BWP of selected PUSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:BWP BWP1 ... BWP4</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:BWP?</code>
Example	<code>:EVM:CCAR0:PUSC1:BWP BWP1</code> <code>:EVM:CCAR0:PUSC1:BWP?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	<code>BWP1</code>
State Saved	Yes
Range	BWP 01 BWP 02 BWP 03 BWP 04

RA Type

Specifies RA Type for the selected PUSCH configuration, there are two methods to allocate RB resources:

Type 0: RBG Size and Allocated RBG

Type 1: RB Offset and RB Number

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:RAType TYPE0 TYPE1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:RAType?</code>
Example	<code>:EVM:CCAR0:PUSC1:RATY TYPE0</code> <code>:EVM:CCAR0:PUSC1:RATY?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	<code>TYPE1</code>
State Saved	Yes
Range	Type 0 Type 1

RBG Size

Specifies RBG Size for the selected PUSCH configuration, this parameter is only valid for RA Type 0.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:RBG:SIZE RB2 RB4 RB8 RB16</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:RBG:SIZE?</code>															
Example	<code>:EVM:CCAR0:PUSC1:RBG:SIZE RB16</code> <code>:EVM:CCAR0:PUSC1:RBG:SIZE?</code>															
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message Available values are determined by BWP size according to table 5.1.2.2.1-1 in TS38.214:															
	<table border="1"> <thead> <tr> <th>Bandwidth Part Size</th> <th>Configuration 1</th> <th>Configuration 2</th> </tr> </thead> <tbody> <tr> <td>1 – 36</td> <td>2</td> <td>4</td> </tr> <tr> <td>37 – 72</td> <td>4</td> <td>8</td> </tr> <tr> <td>73 – 144</td> <td>8</td> <td>16</td> </tr> <tr> <td>145 – 275</td> <td>16</td> <td>16</td> </tr> </tbody> </table>	Bandwidth Part Size	Configuration 1	Configuration 2	1 – 36	2	4	37 – 72	4	8	73 – 144	8	16	145 – 275	16	16
Bandwidth Part Size	Configuration 1	Configuration 2														
1 – 36	2	4														
37 – 72	4	8														
73 – 144	8	16														
145 – 275	16	16														
Preset	<code>RB16</code>															
State Saved	Yes															
Range	2 RB 4 RB 8 RB 16 RB															

Allocated RBGs

Specifies the RBGs allocated to selected PUSCH configuration, this parameter is only valid for RA Type 0.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:RBG:ALlocated <string></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:RBG:ALlocated?</code>
----------------	--

Example	<code>:EVM:CCAR0:PUSC1:RBG:ALL "0:15"</code> <code>:EVM:CCAR0:PUSC1:RBG:ALL?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	"0:15"
State Saved	Yes

RB Offset

Specifies the RB Offset of selected PUSCH configuration, this parameter is only valid for RA Type 1.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:RB:OFFSet <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:RB:OFFSet?</code>
Example	<code>:EVM:CCAR0:PUSC1:RB:OFFSet 0</code> <code>:EVM:CCAR0:PUSC1:RB:OFFSet?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0
State Saved	Yes
Min	0
Max	RB Number of selected BWP – 1

RB Number

Specifies the RB Number of selected PUSCH configuration, this parameter is only valid for RA Type 1.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:RB:NUMBER <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:RB:NUMBER?</code>
Example	<code>:EVM:CCAR0:PUSC1:RB:NUMB 273</code> <code>:EVM:CCAR0:PUSC1:RB:NUMB?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	273
State Saved	Yes
Min	1
Max	RB Number of selected BWP – RB Offset

Allocated Slots

Specifies the Slots allocated to selected PUSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:SLOT:ALLOcated <string></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:SLOT:ALLOcated?</code>
Example	<code>:EVM:CCAR0:PUSC1:SLOT:ALL "2:9"</code> <code>:EVM:CCAR0:PUSC1:SLOT:ALL?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	"0:19"
State Saved	Yes

Slot Format

Specifies the Slot Format of selected PUSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:SLOT:FORMat SF0 SF1 ... SF55</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:SLOT:FORMat?</code>
Example	<code>:EVM:CCAR0:PUSC1:SLOT:FORM SF2</code> <code>:EVM:CCAR0:PUSC1:SLOT:FORM?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	<code>SF1</code>
State Saved	Yes
Range	0 1 ... 55

First Symbol

Specifies the First Symbol of selected PUSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:SYMBol:FIRSt <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:SYMBol:FIRSt?</code>
Example	<code>:EVM:CCAR0:PUSC1:SYMB:FIRS 4</code> <code>:EVM:CCAR0:PUSC1:SYMB:FIRS?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message

Preset	0
State Saved	Yes
Min	0
Max	13

Last Symbol

Specifies the Last Symbol of selected PUSCH configuration.

Remote Command	<code>[[:SENSE]:EVM:CCARrier0 ... 15:PUSCh<n>:SYMBOL:LAST <integer></code> <code>[[:SENSE]:EVM:CCARrier0 ... 15:PUSCh<n>:SYMBOL:LAST?</code>
Example	<code>:EVM:CCAR0:PUSC1:SYMB:LAST 4</code> <code>:EVM:CCAR0:PUSC1:SYMB:LAST?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	13
State Saved	Yes
Min	First Symbol
Max	13

DMRS Config

Specifies DMRS Configuration for selected PUSCH configuration.

Remote Command	<code>[[:SENSE]:EVM:CCARrier0 ... 15:PUSCh<n>:DMRS:CONFigure TYPE1 TYPE2</code> <code>[[:SENSE]:EVM:CCARrier0 ... 15:PUSCh<n>:DMRS:CONFigure?</code>
Example	<code>:EVM:CCAR0:PUSC1:DMRS:CONF TYPE1</code> <code>:EVM:CCAR0:PUSC1:DMRS:CONF?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message When Transform Precoding is ON, only Type 1 is available
Preset	<code>TYPE1</code>
State Saved	Yes
Range	Type 1 Type 2

PUSCH Mapping

Specifies PUSCH Mapping for selected PUSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:PUSCh:MAP TYPEA TYPEB</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:PUSCh:MAP?</code>
Example	<code>:EVM:CCAR0:PUSC1:PUSC:MAP TYPEA</code> <code>:EVM:CCAR0:PUSC1:PUSC:MAP?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	TYPEA
State Saved	Yes
Range	Type A Type B

DMRS-typeA-pos

Specifies the DMRS-typeA-pos value for selected PUSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:DMRS:TAPos <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:DMRS:TAPos?</code>
Example	<code>:EVM:CCAR0:PUSC1:DMRS:TAP 2</code> <code>:EVM:CCAR0:PUSC1:DMRS:TAP?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	2
State Saved	Yes
Min	2
Max	3

DMRS Max Len

Specifies DMRS Max Len value for the selected PUSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:DMRS:MLEN <int></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:DMRS:MLEN?</code>
Example	<code>:EVM:CCAR0:PUSC1:DMRS:MLEN 2</code> <code>:EVM:CCAR0:PUSC1:DMRS:MLEN?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	1
State Saved	Yes

Min	1
Max	2

Front-load Symbols

Specifies DMRS Duration for selected PUSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:DMRS:DURation SINGle DOUBle</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:DMRS:DURation?</code>
Example	<code>:EVM:CCAR0:PUSC1:DMRS:DUR DOUB</code> <code>:EVM:CCAR0:PUSC1:DMRS:DUR?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message When Antenna Port Index is -1, this parameter will be enabled and you need to ensure the settings are valid according to TS38.212, table 7.3.1.1.2-6 to table 7.3.1.1.2-23, otherwise demodulation may not work When Antenna Port Index is not -1, this parameter is display only, the value will be set automatically according to Antenna Port Index and TS38.212 table 7.3.1.1.2-6 to table 7.3.1.1.2-23
Preset	<code>SINGle</code>
State Saved	Yes
Range	1 2

DMRS-add-pos

Specifies the DMRS-add-pos value for selected PUSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:DMRS:ADDPos <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:DMRS:ADDPos?</code>
Example	<code>:EVM:CCAR0:PUSC1:DMRS:ADDP 2</code> <code>:EVM:CCAR0:PUSC1:DMRS:ADDP?</code>
Couplings	Max value for n = 250 and Min value for n = 1 See 3GPP TS 38.211 Table 6.4.1.1.3-3/4 for coupling rule (https://portal.3gpp.org/desktopmodules/Specifications/SpecificationDetails.aspx?specificationId=3213) Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0
State Saved	Yes
Min	0
Max	3

DMRS Sequence Hopping

Enable or disable Sequence Hopping when Transform Precoding is enabled for selected PUSCH allocation.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PUSCh<n>:DMRS:HOPPing:SEQuence[:STATe] OFF ON 0 1</code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PUSCh<n>:DMRS:HOPPing:SEQuence[:STATe] ?</code>
Example	<code>:EVM:CCAR0:PUSC1:DMRS:HOPP:SEQ OFF</code> <code>:EVM:CCAR0:PUSC1:DMRS:HOPP:SEQ?</code>
Couplings	Max value for n = 250 and Min value for n = 1 When “DMRS Sequence Hopping” is ON , “DMRS Group Hopping” cannot be set to ON Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	OFF
State Saved	Yes
Range	Off On

DMRS Group Hopping

Enable or disable Group Hopping when Transform Precoding is enabled for selected PUSCH allocation.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PUSCh<n>:DMRS:HOPPing:GRoup[:STATe] OFF ON 0 1</code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PUSCh<n>:HOPPing:GRoup[:STATe] ?</code>
Example	<code>:EVM:CCAR0:PUSC1:DMRS:HOPP:GRO OFF</code> <code>:EVM:CCAR0:PUSC1:DMRS:HOPP:GRO?</code>
Couplings	Max value for n = 250 and Min value for n = 1 When “DMRS Group Hopping” is ON , “DMRS Sequence Hopping” cannot be set to ON Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	OFF
State Saved	Yes
Range	Off On

n_ID_PUSCH

Specifies n_ID_PUSCH when Transform Precoding is enabled for selected PUSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:NID:PUSCh <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:NID:PUSCh?</code>
Example	<code>:EVM:CCAR0:PUSC1:NID:PUSC 0</code> <code>:EVM:CCAR0:PUSC1:NID:PUSC?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message This setting is only available when Transform Precoding is ON
Preset	-1
State Saved	Yes
Min	-1
Max	1007

nSCID

Specifies the nSCID value for selected PUSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:SCIDn <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:SCIDn?</code>
Example	<code>:EVM:CCAR0:PUSC1:SCID 1</code> <code>:EVM:CCAR0:PUSC1:SCID?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message This setting is only available when Transform Precoding is OFF
Preset	0
State Saved	Yes
Min	0
Max	1

N_ID_nSCID (SCPI only)

Specifies the N_ID_nSCID value for selected PUSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:SCIDn:NID <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:SCIDn:NID?</code>
Example	<code>:EVM:CCAR0:PUSC1:SCID:NID 1</code> <code>:EVM:CCAR0:PUSC1:SCID:NID?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message

3 5G NR Mode
3.7 Modulation Analysis Measurement

	When set to -1, the N_ID_nSCID value equals to Cell ID This setting is only available when Transform Precoding is OFF
Preset	-1
State Saved	Yes
Min	-1
Max	65535

DMRSuplink-r16/DMRSuplinkTP-r16

Set whether higher-layer parameter DMRSuplink-r16 or DMRSuplinkTP-r16 is provided.

Note: DMRSuplink-r16 or DMRSuplinkTP-r16 depends on Transform Precoding is off or on.

Remote Command	<code>[:SENSe] : EVM : CCARrier0 ... 15 : PUSCh <n> : DMRS : R16 [: STATE] OFF ON 0 1</code> <code>[:SENSe] : EVM : CCARrier0 ... 15 : PUSCh <n> : DMRS : R16 [: STATE] ?</code>
Example	<code>: EVM : CCAR0 : PUSC1 : DMRS : R16 OFF</code> <code>: EVM : CCAR0 : PUSC1 : DMRS : R16 ?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	OFF
State Saved	Yes

N_ID_0

Specifies the N_ID_0 value for selected PUSCH configuration.

Remote Command	<code>[:SENSe] : EVM : CCARrier0 ... 15 : PUSCh <n> : DMRS : NID0 <integer></code> <code>[:SENSe] : EVM : CCARrier0 ... 15 : PUSCh <n> : DMRS : NID0 ?</code>
Example	<code>: EVM : CCAR0 : PUSC1 : DMRS : NID0 1</code> <code>: EVM : CCAR0 : PUSC1 : DMRS : NID0 ?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message When set to -1, the N_ID_0 value equals to Cell ID This setting is available when: <ul style="list-style-type: none"> - Transform Precoding is OFF - Transform Precoding is ON and DMRSuplinkTP-r16 is ON and Modulation is Pi/2 BPSK

Preset	-1
State Saved	Yes
Min	-1
Max	65535

N_ID_1

Specifies the N_ID_1 value for selected PUSCH configuration.

Remote Command	<code>[:SENSE]:EVM:CCARrier0 ... 15:PUSCh<n>:DMRS:NID1 <integer></code> <code>[:SENSE]:EVM:CCARrier0 ... 15:PUSCh<n>:DMRS:NID1?</code>
Example	<code>:EVM:CCAR0:PUSC1:DMRS:NID1 1</code> <code>:EVM:CCAR0:PUSC1:DMRS:NID1?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message When set to -1, the N_ID_1 value equals to Cell ID This setting is available when: <ul style="list-style-type: none"> - Transform Precoding is OFF - Transform Precoding is ON and DMRSuplinkTP-r16 is ON and Modulation is Pi/2 BPSK
Preset	-1
State Saved	Yes
Min	-1
Max	65535

n_RAPID

Specifies n_RAPID for selected PUSCH configuration.

Remote Command	<code>[:SENSE]:EVM:CCARrier0 ... 15:PUSCh<n>:NRAPid <integer></code> <code>[:SENSE]:EVM:CCARrier0 ... 15:PUSCh<n>:NRAPid?</code>
Example	<code>:EVM:CCAR0:PUSC1:NRAP 0</code> <code>:EVM:CCAR0:PUSC1:NRAP?</code>
Notes	-1 means Not Configured
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	-1

State Saved	Yes
Min	-1
Max	63

Antenna Port/Reference Antenna Port

Specifies the Antenna Port in SISO mode and Reference Antenna Port in MIMO/MISO modes of selected PUSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:ANTenna:PORT <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:ANTenna:PORT?</code>
Example	<code>:EVM:CCAR0:PUSC1:ANT:PORT 0</code> <code>:EVM:CCAR0:PUSC1:ANT:PORT?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message Coupled with Antenna Port Index, DMRS Config Type, DMRS Max Len and Rank . See table 7.3.1.1.2-6 to table 7.3.1.1.2-23 in 3GPP TS38.212. The Antenna Port should be related with the “DMRS Port” column in the table
Preset	0
State Saved	Yes
Min	0
Max	11

Antenna Port Detection Threshold

Specifies threshold for Antenna Port Detection, when the power of one port is lower than the threshold comparing with reference port, it will be detected as inactive and not included in MIMO demodulation processing.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:ANTenna:PORT:THReshold <rel_amp1></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:ANTenna:PORT:THReshold?</code>
Example	<code>:EVM:CCAR0:PUSC1:ANT:PORT:THR 0</code> <code>:EVM:CCAR0:PUSC1:ANT:PORT:THR?</code>
Dependencies	This parameter is only available for SP900Sw with the valid MIMO option
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	-36 dB
State Saved	Yes

Min	-100
Max	100

PTRS Port

Specifies the PTRS Port of selected PUSCH configuration.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PUSCh<n>:PTRS:PORT <String></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PUSCh<n>:PTRS:PORT?</code>
Example	<code>:EVM:CCAR0:PUSC1:PTRS:PORT "0"</code> <code>:EVM:CCAR0:PUSC1:PTRS:PORT?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message If PUSCH Antenna Port Index is -1, it will be set to PUSCH Antenna Port Otherwise, PTRS ports should be a subset of PUSCH Antenna ports which are determined by PUSCH Antenna Port index. The max num. of configured PTRS ports is 2. It is indicated by the 'PTRS-DMRS association' field in DCI format 0_1 (See TS38.212 7.3.1.1.2) If PUSCH Antenna Port Index is changed which results in current PTRS port become invalid, it will be set to PUSCH Antenna Port
Preset	"0"
State Saved	Yes

Antenna Port Index

Specifies Antenna Port Index for the selected PUSCH configuration.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PUSCh<n>:ANTenna:PORT:INDEX <int></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PUSCh<n>:ANTenna:PORT:INDEX?</code>
Example	<code>:EVM:CCAR0:PUSC1:ANT:PORT:IND 1</code> <code>:EVM:CCAR0:PUSC1:ANT:PORT:IND?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0
State Saved	Yes
Range	Coupled with DMRS Config Type, DMRS Max Len and Rank . See table 7.3.1.1.2-6 to table 7.3.1.1.2-23 in 3GPP TS38.212. The Antenna Port Index indicates the "Value" column in the table
Min	-1
Max	27

DMRS Port (Display Only)

Display available DMRS Ports according to Antenna Port Index for the selected PUSCH configuration.

Rank

Specifies Rank for the selected PUSCH configuration.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PUSCh<n>:RANK <int></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PUSCh<n>:RANK?</code>
Example	<code>:EVM:CCAR0:PUSC1:RANK 2</code> <code>:EVM:CCAR0:PUSC1:RANK?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	1
State Saved	Yes
Range	1, 2, 3, 4
Min	1
Max	4

DMRS CDM groups w.o. data

Specifies DMRS CDM groups without data for the selected PDSCH configuration.

It is coupled with DMRS Config Type, DMRS Max Len, Rank See table 7.3.1.1.2-6 to table 7.3.1.1.2-23 in 3GPP TS38.212. The column “Number of DMRS CDM group(s) without data” specifies the value for this result.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PUSCh<n>:DMRS:CDMGroups:COUNT <int></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PUSCh<n>:DMRS:CDMGroups:COUNT?</code>
Example	<code>:EVM:CCAR0:PUSC1:DMRS:CDMG:COUN 2</code> <code>:EVM:CCAR0:PUSC1:DMRS:CDMG:COUN?</code>

Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message When Antenna Port Index is -1, this parameter become settable, you need to make sure valid setting according TS38.212 table 7.3.1.1.2-6 to table 7.3.1.1.2-23, otherwise demodulation may not work When Antenna Port Index is not -1, this parameter is display only, the value will be set automatically according to Antenna Port Index and TS38.212 table 7.3.1.1.2-6 to table 7.3.1.1.2-23
Preset	1
State Saved	Yes
Min	1
Max	2 for DMRS Config Type 1, 3 for DMRS Config Type 2

PTRS Enable

Enable or disable PTRS for selected PUSCH allocation.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:PTRS[:STATe] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:PTRS[:STATe]?</code>
Example	<code>:EVM:CCAR0:PUSC1:PTRS OFF</code> <code>:EVM:CCAR0:PUSC1:PTRS?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	OFF
State Saved	Yes

PTRS K

Specifies PTRS frequency density (K_PTRS) for selected PUSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:PTRS:K K2 K4</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:PTRS:K?</code>
Example	<code>:EVM:CCAR0:PUSC1:PTRS:K K2</code> <code>:EVM:CCAR0:PUSC1:PTRS:K?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	K2
State Saved	Yes
Range	K2 K4

PTRS L

Specifies PTRS time density (L_PTRS) for selected PUSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:PTRS:L L1 L2 L4</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:PTRS:L?</code>
Example	<code>:EVM:CCAR0:PUSC1:PTRS:L L2</code> <code>:EVM:CCAR0:PUSC1:PTRS:L?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	L1
State Saved	Yes
Range	L1 L2 L4

PTRS RE Offset

Specifies PTRS RE Offset for selected PUSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:PTRS:RE:OFFSet BIT00 BIT01 BIT10 BIT11</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:PTRS:RE:OFFSet?</code>
Example	<code>:EVM:CCAR0:PUSC1:PTRS:RE:OFFS BIT00</code> <code>:EVM:CCAR0:PUSC1:PTRS:RE:OFFS?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	BIT00
State Saved	Yes
Range	BIT00 BIT01 BIT10 BIT11

PTRS N_ID

Set the N_ID for the PTRS generation when transform precoding is enabled.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:PTRS:NID <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:PTRS:NID?</code>
Example	<code>:EVM:CCAR0:PUSC1:PTRS:NID 1</code> <code>:EVM:CCAR0:PUSC1:PTRS:NID?</code>
Couplings	Max value for n = 250 and Min value for n = 1

	Attempting to remotely set or query a sub op code that is out of range generates an error message When setting "Transform Precoding" to Off, this setting will be invisible
Preset	0
State Saved	Yes
Min	0
Max	65535

N_samp_group (Number of samples per PT-RS group)

Set the Number of samples per PT-RS group for PTRS signal generation when transform precoding is enabled.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PUSCh<n>:PTRS:GRoup:SNUMber <integer></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PUSCh<n>:PTRS:GRoup:SNUMber?</code>
Example	<code>:EVM:CCAR0:PUSC1:PTRS:GRO:SNUM 2</code> <code>:EVM:CCAR0:PUSC1:PTRS:GRO:SNUM?</code>
Couplings	Max value for n = 250 and Min value for n = 1 When setting "Transform Precoding" to Off, this setting will be invisible When N_group_PTRS is 8, N_samp_group can only be 4 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	2
State Saved	Yes
Range	2 4

N_group_PTRS (Number of PT-RS groups)

Set Number of PT-RS groups for PTRS signal generation when transform precoding is enabled.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PUSCh<n>:PTRS:GRoup:NUMBer <integer></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PUSCh<n>:PTRS:GRoup:NUMBer?</code>
Example	<code>:EVM:CCAR0:PUSC1:PTRS:GRO:NUMB 2</code> <code>:EVM:CCAR0:PUSC1:PTRS:GRO:NUMB?</code>
Couplings	Max value for n = 250 and Min value for n = 1 When setting "Transform Precoding" to Off, this setting will be invisible Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	2
State Saved	Yes
Range	2 4 8

PUSCH Power Boosting

Specifies Power Boost value for the selected PUSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:POWer <rel_amp1></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:POWer?</code>
Example	<code>:EVM:CCAR0:PUSC1:POW 0</code> <code>:EVM:CCAR0:PUSC1:POW?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

DMRS Power Boosting

Specifies DMRS Power Boost value for the selected PUSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:DMRS:POWer <rel_amp1></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:DMRS:POWer?</code>
Example	<code>:EVM:CCAR0:PUSC1:DMRS:POW 0</code> <code>:EVM:CCAR0:PUSC1:DMRS:POW?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message It is coupled with "PUSCH DMRS CDM group w.0. data": $dmrsBoostingValue = 10 * (1.0 - \text{Math.Log}(\text{DrmsCdmGroup}))$
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

PTRS Power Boosting

Specifies PTRS Power Boost value for the selected PUSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:PTRS:POWer <rel_amp1></code>
----------------	--

	<code>[:SENSe] :EVM:CCARrier0 ... 15:PUSCh<n> :PTRS:POWer?</code>
Example	<code>:EVM:CCAR0:PUSC1:PTRS:POW 0</code> <code>:EVM:CCAR0:PUSC1:PTRS:POW?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

Precoder Matrix (Uplink)

View and configure the Precoder Matrix parameters.

Reset Selected (GUI only)

Reset W matrix for selected precoder block.

Reset All (GUI only)

Reset W matrix for all precoder blocks.

Reset Matrix (Remote Command only)

Resets the specified precoder matrix. To reset *all* matrices, specify the value -1.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PUSCh1 250:PMATrix:RESet<integer></code>
Example	<code>:EVM:CCAR0:PUSC1:PMAT:RES 2</code>
State Saved	Yes
Min	-1
Max	PRBG number of each PUSCH allocation

PUSCH (GUI only)

Allows you to choose the PUSCH allocation to configure its W Matrix

"W Matrix" on page 1698 "I Value (GUI only)" on page 1698 "Q Value (GUI only)" on page 1698

W Matrix

Specifies the W Matrix for selected precoder block.

Example: 1,1,0,0,0,0,1,1 represent below matrix

$$1+j, 0$$

$$0, 1+j$$

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PUSCh<n>:PMATrix:PBGroup<m> <string></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PUSCh<n>:PMATrix:PBGroup<m>?</code>
Example	<code>:EVM:CCAR0:PUSC1:PMAT:PBG1 "1,0,0,0,1,0,0,0"</code> <code>:EVM:CCAR0:PUSC1:PMAT:PBG1?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 275 and Min value for m = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
State Saved	Yes

I Value (GUI only)

Specifies I value for selected W matrix cell.

Preset	0.0
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

Q Value (GUI only)

Specifies Q value for selected W matrix cell.

Preset	0.0
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

Rate Matching Pattern (Uplink)

View and configure the Rate Matching Pattern parameters.

Add Rate Matching Pattern (GUI only)

Inserts a new PUSCH Rate Matching Pattern into list. The maximum number of PUSCH Rate Matching Patterns is 8.

Delete Rate Matching Pattern

Deletes selected PUSCH Rate Matching Pattern from list.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh1 250:RMPattern:DElete <integer></code>
Example	<code>:EVM:CCAR0:PUSC1:RMP:DEL 1</code>

Clear All (GUI only)

Deletes all PUSCH Rate Matching Patterns from list.

For a remote command providing a similar function, see "[Effective PDSCH Number \(Remote Command only\)](#)" on page 1595.

Effective Rate Matching Pattern (Remote Command only)

Specifies how many PUSCH Rate Matching Patterns are effective, this SCPI only command is used to provide similar function as "Add Rate Matching Pattern" and "Delete Rate Matching Pattern".

Note that all 8 PUSCH Rate Matching Pattern can be modified through SCPI, but ineffective PUSCH Rate Matching Pattern (index > Effective PUSCH Rate Matching Pattern Number) will not be included in the measurement, no matter whether it is "On" or "Off".

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:RMPattern:NUMBer <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:RMPattern:NUMBer?</code>
Example	<code>:EVM:CCAR0:PUSC1:RMP:NUMB 2</code> <code>:EVM:CCAR0:PUSC1:RMP:NUMB?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0
State Saved	Yes
Min	0
Max	8

PUSCH (GUI only)

Allows you to choose the PUSCH allocation to configure its Rate Matching Pattern

"State" on page 1700 "Level" on page 1700 "SCS" on page 1701 "RB Bitmap Index" on page 1701
"Symbol Bitmap Span" on page 1701 "Symbol Bitmap" on page 1702 "Periodicity" on page 1702

State

Enables or disables the selected PUSCH Rate Matching Pattern.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PUSCh<n>:RMPattern<m>[:STATe] OFF ON 0 1</code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PUSCh<n>:RMPattern<m>[:STATe]?</code>
Example	<code>:EVM:CCAR0:PUSC1:RMP1 OFF</code> <code>:EVM:CCAR0:PUSC1:RMP1?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	OFF
State Saved	Yes
Range	OFF ON 0 1

Level

Selects the level for PUSCH Rate Matching Pattern.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PUSCh<n>:RMPattern<m>:LEVe1 BWP CELL</code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PUSCh<n>:RMPattern<m>:LEVe1?</code>
Example	<code>:EVM:CCAR0:PUSC1:RMP1:LEV CELL</code> <code>:EVM:CCAR0:PUSC1:RMP1:LEV?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	BWP
State Saved	Yes
Range	BWP Cell

SCS

Specifies the SCS for PUSCH Rate Matching Pattern when Level = Cell Level. Only valid SCSs with the Freq Range are available.

- For Freq Range 1: SCS15K, SCS30K and SCS60K
- For Freq Range 2: SCS60K, SCS120K and SCS240K

When Level = BWP level, SCS is same as PUSCH allocation selected.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:RMPattern<m>:SCS SCS15K SCS30K SCS60K SCS120K SCS240K</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:RMPattern<m>:SCS?</code>
Example	<code>:EVM:CCAR0:PUSC1:RMP1:SCS SCS30K</code> <code>:EVM:CCAR0:PUSC1:RMP1:SCS?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	<code>SCS30K</code>
State Saved	Yes
Range	<code>15K 30K 60K 120K 240K</code>

RB Bitmap Index

Specifies the RB Bitmap Index for the selected PUSCH Rate Matching Pattern

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:RMPattern<m>:RB:INDEX <string></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:RMPattern<m>:RB: INDEX?</code>
Example	<code>:EVM:CCAR0:PUSC1:RMP1:RB:INDEX "0:272"</code> <code>:EVM:CCAR0:PUSC1:RMP1:RB:INDEX?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	<code>"0:272"</code>
State Saved	Yes

Symbol Bitmap Span

Selects the Symbol Bitmap Span for PUSCH Rate Matching Pattern.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:RMPattern<m>:SYMBOL: BSpan SLOT1 SLOT2</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:RMPattern<m>:SYMBOL: BSpan?</code>
Example	<code>:EVM:CCAR0:PDSC1:RMP1:SYMB:BSpan SLOT1</code> <code>:EVM:CCAR0:PDSC1:RMP1:SYMB:BSpan?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	One Slot
State Saved	Yes
Range	One Slot Two Slots

Symbol Bitmap

Specifies the Symbol Bitmap for the selected PUSCH Rate Matching Pattern. The length should match the Symbol Bitmap Span:

- 14 bit when Symbol Bitmap Span = One Slot
- 28 bit when Symbol Bitmap Span = Two Slots

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:RMPattern<m>:SYMBOL:BITMap <string></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:RMPattern<m>:SYMBOL:BITMap?</code>
Example	<code>:EVM:CCAR0:PUSC1:RMP1:SYMB:BITM "0000"</code> <code>:EVM:CCAR0:PUSC1:RMP1:SYMB:BITM?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	"0000"
State Saved	Yes

Periodicity

Selects the Periodicity for Symbol Bitmap

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:RMPattern<m>:PERiodicity <int></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:RMPattern<m>:PERiodicity?</code>
Example	<code>:EVM:CCAR0:PUSC1:RMP1:PER 5</code> <code>:EVM:CCAR0:PUSC1:RMP1:PER?</code>

Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message Note that, if an invalid value is entered, it will be automatically adjusted
Preset	1
State Saved	Yes
Range	1 2 4 5 8 10 20 40

Periodicity Pattern Bitmap

Specifies the Periodicity Pattern Bitmap for the selected PUSCH Rate Matching Pattern. The length should match the Periodicity.

Remote Command	<code>[:SENSe] : EVM : CCARrier0 ... 15 : PUSCh <n> : RMPattern <m> : PERiodicity : BITMap <string></code>
Example	<code>: EVM : CCAR0 : PUSC1 : RMP1 : PER : BITM "1"</code> <code>: EVM : CCAR0 : PUSC1 : RMP1 : PER : BITM ?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Max value for m = 8 and Min value for m = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	"1"
State Saved	Yes

SRS

View and configure the SRS parameters.

Resource Map Diagram

Displays all physical channel allocations on the Time and Frequency domain resource map. See ["Resource Map Diagram" on page 1554](#).

Add SRS (GUI only)

Inserts a new SRS configuration into list, the maximum number of SRS configurations is 1 for current version.

Delete SRS

Deletes selected SRS configuration from list.

Remote Command `[:SENSe]:EVM:CCARrier0|...|15:DELeTe:SRS <integer>`

Example `:EVM:CCAR0:DEL:SRS 1`

SRS Parameter Group (Display only)

Allows you to configure the SRS parameters.

This control is for UI display only. You can select one of the following groups:

General Settings

"State" on page 1704	"Number of Antenna Ports" on page 1705	"Antenna Port" on page 1705	"Power" on page 1705
----------------------	--	-----------------------------	----------------------

Resource Allocation

"SRS Bandwidth Index (C _{SRS})" on page 1709		

SRS Parameters

"State" on page 1704	"Frequency Hopping Mode" on page 1711	"Frequency Hopping (b _{hop})" on page 1710	"Frequency Domain Shift (n _{shift})" on page 1710
"Frequency Domain Position (n _{RRC})" on page 1711	"Cyclic Shift Config (n _{SRS_cs})" on page 1711	"Sequence Identity (n _{ID_SRS})" on page 1712	

State

Enable or disable SRS configuration.

Remote Command `[:SENSe]:EVM:CCARrier0|...|15:SRS<n>:STATe OFF | ON | 0 | 1`

Example `[:SENSe]:EVM:CCARrier0|...|15:SRS<n>:STATe?`

Example `:EVM:CCAR0:SRS1:STAT OFF`

	<code>:EVM:CCAR0:SRS1:STAT?</code>
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	OFF
State Saved	Yes

Number of Antenna Ports

Select number of antenna ports for SRS, valid value are 1, 2, 4.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:ANTenna:PORT:NUMBer <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:ANTenna:PORT:NUMBer?</code>
Example	<code>:EVM:CCAR0:SRS1:ANT:PORT:NUMB 1</code> <code>:EVM:CCAR0:SRS1:ANT:PORT:NUMB?</code>
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	1
State Saved	Yes
Min	1
Max	4

Antenna Port

Specifies antenna port for SRS.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:ANTenna:PORT <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:ANTenna:PORT?</code>
Example	<code>:EVM:CCAR0:SRS1:ANT:PORT 1000</code> <code>:EVM:CCAR0:SRS1:ANT:PORT?</code>
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	1000
Min	1000
Max	1000 + Number of Antenna Port -1

Power

Specifies Power Boost value for the SRS.

3 5G NR Mode
3.7 Modulation Analysis Measurement

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:POWer <rel_amp1></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:POWer?</code>
Example	<code>:EVM:CCAR0:SRS1:POW 0</code> <code>:EVM:CCAR0:SRS1:POW?</code>
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

BWP

Specifies the BWP of SRS.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:BWP BWP1 ... BWP4</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:BWP?</code>
Example	<code>:EVM:CCAR0:SRS1:BWP BWP1</code> <code>:EVM:CCAR0:SRS1:BWP?</code>
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	<code>BWP1</code>
State Saved	Yes
Range	<code>BWP1 ... BWP4</code>

Allocated Slots

Specifies the Slots allocated to SRS.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:SLOT:ALLocated <string></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:SLOT:ALLocated?</code>
Example	<code>:EVM:CCAR0:SRS1:SLOT:ALL "0"</code> <code>:EVM:CCAR0:SRS1:SLOT:ALL?</code>
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	"0"
State Saved	Yes

Symbol Start (Remote Command only)

Specifies the symbol start used for SRS.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:SYMBol:OFFSet <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:SYMBol:OFFSet?</code>
Example	<code>:EVM:CCAR0:SRS1:SYMB:OFFS 8</code> <code>:EVM:CCAR0:SRS1:SYMB:OFFS?</code>
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	13
State Saved	Yes
Min	8 for normal CP 6 for extended CP
Max	13 for normal CP 11 for extended CP

Start Position

Specifies the start position for SRS.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:POSition:STARt <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:POSition:STARt?</code>
Example	<code>:EVM:CCAR0:SRS1:POS:STAR 0</code> <code>:EVM:CCAR0:SRS1:POS:STAR?</code>
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message NOTE: it is coupled with SRS Symbol Start: SRS Symbol Start + SRS Start Pos = 13 for normal CP, 11 for extended CP
Preset	0
State Saved	Yes
Min	0
Max	5

Number of Symbols

Specifies the number of symbols used for SRS, valid value are 1, 2, 4.

3 5G NR Mode
3.7 Modulation Analysis Measurement

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:SYMBol:NUMBer <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:SYMBol:NUMBer?</code>
Example	<code>:EVM:CCAR0:SRS1:SYMB:NUMB 2</code> <code>:EVM:CCAR0:SRS1:SYMB:NUMB?</code>
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message Symbol Start + Number of symbols should be in the range of the last six symbols in this slot
Preset	1
State Saved	Yes
Min	1
Max	4

Repetition Factor (R)

Specifies the repetition factor used for SRS, valid value are 1, 2, 4.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:REPetition:FACTor <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:REPetition:FACTor?</code>
Example	<code>:EVM:CCAR0:SRS1:REP:FACT 2</code> <code>:EVM:CCAR0:SRS1:REP:FACT?</code>
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message The value should be equal or less than N_symb_SRS
Preset	1
State Saved	Yes
Min	1
Max	4

Transmission Comb Number (K_TC)

Specifies the K_TC for SRS, valid value is 2, 4.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:COMB:NUMBer <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:COMB:NUMBer?</code>
Example	<code>:EVM:CCAR0:SRS1:COMB:NUMB 2</code> <code>:EVM:CCAR0:SRS1:COMB:NUMB?</code>
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message

Preset	2
State Saved	Yes
Min	2
Max	4

Transmission Comb Offset (k_TC)

Specifies k_TC for SRS.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:COMB:OFFSet <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:COMB:OFFSet?</code>
Example	<code>:EVM:CCAR0:SRS1:COMB:OFFS 0</code> <code>:EVM:CCAR0:SRS1:COMB:OFFS?</code>
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0
Min	0
Max	K_TC

SRS Bandwidth Index (B_SRS)

Specifies B_SRS for SRS.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:BW:INDEX:B <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:BW:INDEX:B?</code>
Example	<code>:EVM:CCAR0:SRS1:BW:IND:B 0</code> <code>:EVM:CCAR0:SRS1:BW:IND:B?</code>
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0
Min	0
Max	3

SRS Bandwidth Index (C_SRS)

Specifies C_SRS for SRS.

Remote	<code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:BW:INDEX:C <integer></code>
--------	---

3 5G NR Mode
3.7 Modulation Analysis Measurement

Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:BW:INDex:C?</code>
Example	<code>:EVM:CCAR0:SRS1:BW:IND:C 0</code> <code>:EVM:CCAR0:SRS1:BW:IND:C?</code>
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0
Min	0
Max	63

Frequency Hopping (b_hop)

Specifies b_hop for SRS.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:FREQuency:BHOP <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:FREQuency:BHOP?</code>
Example	<code>:EVM:CCAR0:SRS1:FREQ:BHOP 0</code> <code>:EVM:CCAR0:SRS1:FREQ:BHOP?</code>
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0
Min	0
Max	3

Frequency Domain Shift (n_shift)

Specifies n_shift for SRS.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:FDOMain:SHIFt <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:FDOMain:SHIFt?</code>
Example	<code>:EVM:CCAR0:SRS1:FDM:SHIF 0</code> <code>:EVM:CCAR0:SRS1:FDM:SHIF?</code>
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0
Min	0
Max	268

Frequency Domain Position (n_RRC)

Specifies n_RRC for SRS.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:FDOMain:POStion <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:FDOMain:POStion?</code>
Example	<code>:EVM:CCAR0:SRS1:FDOM:POS 0</code> <code>:EVM:CCAR0:SRS1:FDOM:POS?</code>
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0
Min	0
Max	67

Frequency Hopping Mode

Specifies group sequence hopping mode for SRS.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:FREQuency:HOPPIng[:MODE] NEITHer GROUp SEQuence</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:FREQuency:HOPPIng[:MODE]?</code>
Example	<code>:EVM:CCAR0:SRS1:FREQ:HOPP GROUp</code> <code>:EVM:CCAR0:SRS1:FREQ:HOPP?</code>
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	NEITHer
Range	Neither Group Sequence

Cyclic Shift Config (n_SRS_cs)

Specifies n_SRS_cs for SRS.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:CSHift:CONFig <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:CSHift:CONFig?</code>
Example	<code>:EVM:CCAR0:SRS1:CSH:CONF 0</code> <code>:EVM:CCAR0:SRS1:CSH:CONF?</code>
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message

Preset	0
Min	0
Max	7 for K_TC = 2 11 for K_TC = 4

Sequence Identity (n_ID_SRS)

Specifies n_ID_SRS for SRS.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:NID <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:NID?</code>
Example	<code>:EVM:CCAR0:SRS1:NID 0</code> <code>:EVM:CCAR0:SRS1:NID?</code>
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0
Min	0
Max	1022

PRACH

View and configure the PRACH parameters.

Note: when multiple PRACH bursts are configured, they need to be captured in same sequence as defined, so proper trigger setting is needed to get stable synchronization and de-modulation results.

Resource Map Diagram

Display all physical channel allocations on Time and Frequency domain resource map. See "[Resource Map Diagram](#)" on page 1554.

Add PRACH (GUI only)

Pressing this control inserts a new PDCCH configuration into list, the maximum number of PRACH configurations is 100.

See "[Effective PRACH Number\(Remote Command only\)](#)" on page 1713 for SCPI to provide similar function.

Delete PRACH

Pressing this control deletes selected PRACH configuration from list.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:DELeTe:PRACH <integer></code>
Example	<code>:EVM:CCAR0:DEL:PRAC 1</code>

Effective PRACH Number(Remote Command only)

Specifies how many PRACH configurations are effective, this SCPI only command is used to provide similar function as “Add PRACH” and “Delete PRACH”.

Note all PRACH configurations can be modified through SCPI, but ineffective PUSCH configurations (index > Effective PUSCH Number) will not be included in the measurement no matter its state is “On” or “Off”.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:NUMBer:PRACH <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:NUMBer:PRACH?</code>
Example	<code>:EVM:CCAR0:NUMB:PRAC 1</code> <code>:EVM:CCAR0:NUMB:PUSC?</code>
Couplings	Max value is 100 If you attempt to remotely set the Count larger than 1, this will result in an error message
Preset	1
State Saved	Yes
Min	0
Max	100

PRACH Parameter Group (Display only)

Allows you to configure the PRACH parameters.

This control is for UI display only. You can select one of the following groups:

General Settings

"State" on page 1714 "Config Index" on page 1714 "Format (Display Only)" on page 1715 "Spectrum Type" on page 1715
 "SCS" on page 1749 "Active BWP" on page 1750 "Power" on page 1751

Resource Allocation Parameters

"State" on page 1714 "Config Index" on page 1714 "Occasion Index" on page 1753
 "Frame Offset" on page 1753 "Subframe Index (Display" "n_RA_t (Display Only)" on page

3 5G NR Mode
3.7 Modulation Analysis Measurement

"n_RA_slot (Display Only)" on page 1754	Only)" on page 1754	1754
"Msg1 FDM" on page 1750	"n_RA_f (Display Only)" on page 1754	"n_RA_start" on page 1753
PRACH Parameters		
"State" on page 1714	"Cyclic Shift Index" on page 1751	"Root Sequence Index" on page 1752
"Zero Correlation Zone Config" on page 1752	"Restricted Set Config" on page 1750	"L_RA" on page 1754

State

Enable or disable PRACH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PRACH<n>:STATe OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PRACH<n>:STATe?</code>
Example	<code>:EVM:CCAR0:PRAC1:STAT OFF</code> <code>:EVM:CCAR0:PRAC1:STAT?</code>
Couplings	Max value for n = 100 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	OFF
State Saved	Yes

Config Index

Specifies PRACH configuration Index. See 3GPP TS38.211 Table 6.3.3.2-2, Table 6.3.3.2-3, and Table 6.3.3.2-4 for details.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PRACH<n>:CONFig:INDex <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PRACH<n>:CONFig:INDex?</code>
Example	<code>:EVM:CCAR0:PRAC1:CONF:IND 20</code> <code>:EVM:CCAR0:PRAC1:CONF:IND?</code>
Couplings	Max value for n = 100 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	87
Min	0
Max	262

Spectrum Type

Select spectrum type for current PRACH.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PRACH<n>:SPECTrum:TYPE PAIRed UNPaired</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PRACH<n>:SPECTrum:TYPE?</code>
Example	<code>:EVM:CCAR0:PRAC1:SPEC:TYPE PAIR</code> <code>:EVM:CCAR0:PRAC1:SPEC:TYPE?</code>
Couplings	Max value for n = 100 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message This setting depends on the Freq Range <ul style="list-style-type: none"> - FR1: both paired and unpaired are available - FR2: only unpaired is available
Preset	<code>PAIRed</code>
State Saved	Yes
Range	<code>PAIRed UNPaired</code>

Format (Display Only)

Display the format of PRACH configuration according to the PRACH Config Index and Spectrum Type. See 3GPP TS38.211 Table 6.3.3.2-2, Table 6.3.3.2-3 and Table 6.3.3.2-4 for details.

More Information

Table 6.3.3.2-2: Random access configurations for FR1 and paired spectrum/supplementary uplink.

SCS

Select subcarrier spacing for current PRACH.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PRACH<n>:SCS SCS1K25 SCS5K SCS15K SCS30K SCS60K SCS120K</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PRACH<n>:SCS?</code>
Example	<code>:EVM:CCAR0:PRAC1:SCS SCS15K</code> <code>:EVM:CCAR0:PRAC1:SCS?</code>
Couplings	Max value for n = 100 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message This setting depends on the PRACH Format and Freq Range Format = 0,1,2 SCS = 1.25 kHz Format = 3 SCS = 5 kHz Else for Freq Range 1, SCS should be 15 kHz or 30 kHz; For Freq Range 2, SCS should be 60 kHz or 120 kHz

Preset	SCS30K
State Saved	Yes
Range	1.25 kHz 5 kHz 15 kHz 30 kHz 60 kHz 120 kHz

Active BWP

Specifies current active uplink BWP.

Remote Command	<code>[[:SENSe]:EVM:CCARrier0 ... 15:PRACH<n>:ABWP BWP1 ... BWP4 [:SENSe]:EVM:CCARrier0 ... 15:PRACH<n>:ABWP?</code>
Example	<code>:EVM:CCAR0:PRAC1:ABWP BWP1 :EVM:CCAR0:PRAC1:ABWP?</code>
Couplings	Max value for n = 100 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	BWP1
State Saved	Yes
Range	BWP1 BWP2 BWP3 BWP4

Restricted Set Config

Select Restricted set config for current PRACH.

Remote Command	<code>[[:SENSe]:EVM:CCARrier0 ... 15:PRACH<n>:RSET:CONFig NONE TYPEA TYPEB [:SENSe]:EVM:CCARrier0 ... 15:PRACH<n>:RSET:CONFig?</code>
Example	<code>:EVM:CCAR0:PRAC1:RSET:CONF TYPEA :EVM:CCAR0:PRAC1:RSET:CONF?</code>
Couplings	Max value for n = 100 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message This setting depends on the Format <ul style="list-style-type: none"> - Format 0,1,2,3: all three options are available - Format A1, A2, A3, B1, B2, B3, B4, C0, C2: only Unrestricted set is available
State Saved	Yes
Range	Unrestricted set Restricted set type A Restricted set type B

Msg1 FDM

Select high-layer parameter msg1-FDM for current PRACH.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PRACH<n>:FDM FDM1 FDM2 FDM4 FDM8</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PRACH<n>:FDM?</code>
Example	<code>:EVM:CCAR0:PRAC1:FDM FDM2</code> <code>:EVM:CCAR0:PRAC1:FDM?</code>
Couplings	Max value for n = 100 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	FDM1
State Saved	Yes
Range	1 2 4 8

Power

Specifies Power Boost value for the PRACH.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PRACH<n>:POWer <rel_amp1></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PRACH<n>:POWer?</code>
Example	<code>:EVM:CCAR0:PRAC1:POW 0</code> <code>:EVM:CCAR0:PRAC1:POW?</code>
Couplings	Max value for n = 100 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

Cyclic Shift Index

Specifies Cyclic Shift Index for the PRACH.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PRACH<n>:CSHift:INDex <int></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PRACH<n>:CSHift:INDex?</code>
Example	<code>:EVM:CCAR0:PRAC1:CSH:IND 1</code> <code>:EVM:CCAR0:PRAC1:CSH:IND?</code>
Notes	-1 means this parameter is changing in signal and therefore need to be auto detected for each burst
Couplings	Max value for n = 100 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	1

State Saved	Yes
Min	-1
Max	838

Root Sequence Index

Specifies Root Sequence Index for the PRACH.

Note: When Occasion Index is -1 (auto detect), Root Sequence Index will also be auto detected and current value is used as search start point. The maximum search length would be 64 root sequence index start from current value.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PRACH<n>:RSEquence:INDex <int></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PRACH<n>:RSEquence:INDex?</code>
Example	<code>:EVM:CCAR0:PRAC1:RSEQ:IND 1</code> <code>:EVM:CCAR0:PRAC1:RSEQ:IND?</code>
Couplings	Max value for n = 100 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	1
State Saved	Yes
Min	0
Max	Format 0,1,2,3, the max is 837 Else, the max is 137

Zero Correlation Zone Config

Specifies Zero Correlation Zone Config for the PRACH.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PRACH<n>:ZCZone <int></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PRACH<n>:ZCZone?</code>
Example	<code>:EVM:CCAR0:PRAC1:ZCZ 1</code> <code>:EVM:CCAR0:PRAC1:ZCZ?</code>
Couplings	Max value for n = 100 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0
State Saved	Yes
Min	0
Max	15

n_RA_start

Specifies msg1 Frequency Start (n_RA_start) for the PRACH.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PRACH<n>:RAStart <int></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PRACH<n>:RAStart?</code>
Example	<code>:EVM:CCAR0:PRAC1:RASt 1</code> <code>:EVM:CCAR0:PRAC1:RASt?</code>
Couplings	Max value for n = 100 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0
State Saved	Yes
Min	0
Max	RB number of BWP - 1

Occasion Index

Specifies Occasion Index for the PRACH.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PRACH<n>:RA <int></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PRACH<n>:RA?</code>
Example	<code>:EVM:CCAR0:PRAC1:RA 1</code> <code>:EVM:CCAR0:PRAC1:RA?</code>
Notes	-1 means this parameter is changing in signal and therefore need to be auto detected for each burst
Couplings	Max value for n = 100 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0
State Saved	Yes
Min	-1
Max	511

Frame Offset

Set the Frame Offset determined by the configuration table and configuration index, corresponding to the 'y' in the table. When there is only one valid value, this parameter is display only.

Remote	<code>[:SENSe]:EVM:CCARrier0 ... 15:PRACH<n>:FRAMe:OFFSet <integer></code>
--------	---

Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PRACH<n>:FRAMe:OFFSet?</code>
Example	<code>:EVM:CCAR0:PRAC1:FRAM:OFFS 1</code> <code>:EVM:CCAR0:PRAC1:FRAM:OFFS?</code>
Preset	0
State Saved	Yes
Min	0
Max	2

Subframe Index (Display Only)

Display the subframe index of PRACH according to Occasion Index.

State Saved	No
-------------	----

n_RA_t (Display Only)

Display the n_RA_t of PRACH according to Occasion Index.

State Saved	No
-------------	----

n_RA_slot (Display Only)

Display the n_RA_slot of PRACH according to Occasion Index.

State Saved	No
-------------	----

n_RA_f (Display Only)

Display the n_RA_f of PRACH according to Occasion Index.

State Saved	No
-------------	----

L_RA

Set the L_RA value of PRACH.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PRACH1 100:LRA L139 L571 L839 L1151</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PRACH1 100:LRA?</code>
Example	<code>:EVM:CCAR0:PRAC:LRA L571</code>

[:EVM:CCAR0:PRAC:LRA?](#)

Couplings	Max value for n = 100 and Min value for n = 1 139 1151 for 15kHz SCS; 139 571 for 30kHz SCS; Fixed to 139 for 60kHz and 120kHz SCS; Fixed to 839 for 1.25kHz and 5kHz SCS Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	139
State Saved	Yes
Range	139 571 839 1151

PSCCH (Sidelink)

View and configure the PSCCH parameters.

Add PSCCH (GUI only)

Pressing this control inserts a new PSCCH configuration into list, the maximum number of PSCCH configurations is 16.

See "[Effective PDCCH Number \(Remote Command only\)](#)" on page 1582 for SCPI to provide similar function.

Delete PSCCH

Pressing this control deletes selected PSCCH configuration from list.

Remote Command	[:SENSe]:EVM:CCARrier0 ... 15:DElete:PSCCh <integer>
Example	:EVM:CCAR0:DEL:PSCC 1

Clear All (GUI only)

Pressing this control deletes all PSCCH configuration from list.

See "[Effective PDCCH Number \(Remote Command only\)](#)" on page 1582 for SCPI to provide similar function.

Effective PSCCH Number (Remote Command only)

Specifies how many PSCCH configurations are effective, this SCPI only command is used to provide similar function as "Add PSCCH" and "Delete PSCCH".

Note all 16 PSCCH configurations can be modified through SCPI, but ineffective PSCCH configurations (index > Effective PSCCH Number) will not be included in the measurement no matter its state is "On" or "Off".

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:NUMBer:PSCCh <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:NUMBer:PSCCh?</code>
Example	<code>:EVM:CCAR0:NUMB:PSCC 2</code> <code>:EVM:CCAR0:NUMB:PSCC?</code>
Couplings	Max value is 16 If you attempt to remotely set the Count larger than 16, this will result in an error message
Preset	1
State Saved	Yes
Min	0
Max	16

PSCCH Parameter Group (Display only)

Allows you to configure the PSCCH parameters.

This control is for UI display only. You can select one of the following groups:

General Settings

"State" on page 1756 "Payload Size" on page 1761 "PSCCH Power Boosting" on page 1759

Resource Allocation Settings

"State" on page 1756 "BWP" on page 1757 "RB Offset" on page 1758 "RB Number" on page 1759 "RB Offset" on page 1563 "Number of Symbols" on page 1758 "Allocated Slots" on page 1757

DMRS Settings

"State" on page 1756 "DMRS Scrambling ID" on page 1760 "DMRS Parameter i" on page 1760 "DMRS Power Boosting" on page 1759

State

Enable or disable PSCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PSCCh<n>[:STATe] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PSCCh<n>[:STATe]?</code>
Example	<code>:EVM:CCAR0:PSCC1 OFF</code> <code>:EVM:CCAR0:PSCC1?</code>

Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	OFF
State Saved	Yes

BWP

Specifies the BWP of PSCCH configuration.

Remote Command	[:SENSE]:EVM:CCARrier0 ... 15:PSCCh<n>:BWP BWP1 ... BWP4 [:SENSE]:EVM:CCARrier0 ... 15:PSCCh<n>:BWP?
Example	:EVM:CCAR0:PSCC1:BWP BWP1 :EVM:CCAR0:PSCC1:BWP?
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	BWP1
State Saved	Yes
Range	BWP1 ... BWP4

Allocated Slots

Specifies the Slots allocated to PSCCH configuration.

Remote Command	[:SENSE]:EVM:CCARrier0 ... 15:PSCCh<n>:SLOT:ALlOcaTed <string> [:SENSE]:EVM:CCARrier0 ... 15:PSCCh<n>:SLOT:ALlOcaTed?
Example	:EVM:CCAR0:PSCC1:SLOT:ALL "2:9" :EVM:CCAR0:PSCC1:SLOT:ALL?
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	"0"
State Saved	Yes

First Symbol

Specifies the First Symbol of PSCCH configuration.

Remote Command	[:SENSe]:EVM:CCARrier0 ... 15:PSCCh<n>:SYMBol:FIrSt <integer> [:SENSe]:EVM:CCARrier0 ... 15:PSCCh<n>:SYMBol:FIrSt?
----------------	---

Example	<code>:EVM:CCAR0:PSCC1:SYMB:FIRS 4</code> <code>:EVM:CCAR0:PSCC1:SYMB:FIRS?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	1
State Saved	Yes
Min	0
Max	13

Number of Symbols

Specifies the Symbol Number of PSCCH configuration.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PSCCh<n>:SYMBol:NUMBer <integer></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PSCCh<n>:SYMBol:NUMBer?</code>
Example	<code>:EVM:CCAR0:PSCC1:SYMB:NUMB 2</code> <code>:EVM:CCAR0:PSCC1:SYMB:NUMB?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	2
State Saved	Yes
Min	1
Max	2

RB Offset

Specifies the RB Offset of selected PSCCH configuration.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PSCCh<n>:RB:OFFSet <integer></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PSCCh<n>:RB:OFFSet?</code>
Example	<code>:EVM:CCAR0:PSCC1:RB:OFFSet 0</code> <code>:EVM:CCAR0:PSCC1:RB:OFFSet?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0
State Saved	Yes
Range	The range is coupled with BWP

Min	0
Max	RB Number of selected BWP – PSCCH RB Number

RB Number

Specifies the RB Number of selected PSCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PSCCh<n>:RB:NUMBER <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PSCCh<n>:RB:NUMBER?</code>
Example	<code>:EVM:CCAR0:PSCC1:RB:NUMB 273</code> <code>:EVM:CCAR0:PSCC1:RB:NUMB?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	10
State Saved	Yes
Range	The range is coupled with BWP and RB Start
Min	1
Max	RB Number of selected BWP

PSCCH Power Boosting

Specifies Power Boost value for the PSCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PSCCh<n>:POWER <rel_ampl></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PSCCh<n>:POWER?</code>
Example	<code>:EVM:CCAR0:PSCC1:POW 0</code> <code>:EVM:CCAR0:PSCC1:POW?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

DMRS Power Boosting

Specifies DMRS Power Boost value for the selected PSCCH configuration.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PSCCh<n>:DMRS:POWer <rel_amp1></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PSCCh<n>:DMRS:POWer?</code>
Example	<code>:EVM:CCAR0:PSCC1:DMRS:POW 0</code> <code>:EVM:CCAR0:PSCC1:DMRS:POW?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

DMRS Scrambling ID

Specifies the PSCCH DMRS Scrambling ID.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PSCCh<n>:DMRS:SCID <integer></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PSCCh<n>:DMRS:SCID?</code>
Example	<code>:EVM:CCAR0:PSCC:DMRS:SCID 0</code> <code>:EVM:CCAR0:PSCC:DMRS:SCID?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0
State Saved	Yes
Min	0
Max	65535

DMRS Parameter i

Specifies the PSCCH DMRS mapping parameter i.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PSCCh<n>:DMRS:MAPI <integer></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PSCCh<n>:DMRS:MAPI?</code>
Example	<code>:EVM:CCAR0:PSCC:DMRS:MAPI 0</code> <code>:EVM:CCAR0:PSCC:DMRS:MAPI?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0

State Saved	Yes
Min	0
Max	2

Payload Size

Specifies the Payload Size of PSCCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PSCCh<n>:LOAD:SIZE <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PSCCh<n>:LOAD:SIZE?</code>
Example	<code>:EVM:CCAR0:PSCC1:LOAD:SIZE 10</code> <code>:EVM:CCAR0:PSCC1:LOAD:SIZE?</code>
Preset	60
State Saved	Yes
Min	1
Max	408

PSSCH (Sidelink)

View and configure the PSSCH parameters.

Add PSSCH (GUI only)

Pressing this control inserts a new PSCCH configuration into list, the maximum number of PSCCH configurations is 250.

See "[Effective PDCCH Number \(Remote Command only\)](#)" on page 1582 for SCPI to provide similar function.

Delete PSCCH

Pressing this control deletes selected PSSCH configuration from list.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:DELeTe:PSSCh <integer></code>
Example	<code>:EVM:CCAR0:DEL:PSSC 1</code>

Clear All (GUI only)

Pressing this control deletes all PSSCH configuration from list.

See "Effective PDCCH Number (Remote Command only)" on page 1582 for SCPI to provide similar function.

Effective PSSCH Number (Remote Command only)

Specifies how many PSSCH configurations are effective, this SCPI only command is used to provide similar function as "Add PSSCH" and "Delete PSSCH".

Note all 250 PSSCH configurations can be modified through SCPI, but ineffective PSSCH configurations (index > Effective PSSCH Number) will not be included in the measurement no matter its state is "On" or "Off".

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:NUMBer:PSSCh <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:NUMBer:PSSCh?</code>
Example	<code>:EVM:CCAR0:NUMB:PSSC 2</code> <code>:EVM:CCAR0:NUMB:PSSC?</code>
Couplings	Max value is 250 If you attempt to remotely set the Count larger than 250, this will result in an error message
Preset	1
State Saved	Yes
Min	0
Max	250

PSSCH Parameter Group (Display only)

Allows you to configure the PSSCH parameters.

This control is for UI display only. You can select one of the following groups:

General Setting

"State" on page 1763	"n_ID" on page 1764	"PSSCH Duration" on page 1764	"DMRS Symbol Number" on page 1769	"MCS" on page 1768	"Modulation" (Display Only)" on page 1769
"SCI2 State" on page 1771	"SCI2 Scaling" on page	"SCI2 Beta Offset Index" on page 1772	"SCI2 Payload Size" on page 1772	"MCS" on page 1768	"Modulation" (Display Only)" on page 1769

1772

Resource Allocation Setting

"State" on page 1763 "BWP" on page 1764 "RB Offset" on page 1766 "RB Number" on page 1766 "Allocated Slots" on page 1766 "First Symbol" on page 1767 "Last Symbol" on page 1767

Antenna Setting

"State" on page 1763 "Antenna Port" on page 1765

PTRS Setting

"State" on page 1763 "PTRS Enable" on page 1769 "PTRS K" on page 1770 "PTRS RE Offset" on page 1771

Power Setting

"State" on page 1763 "PSSCH Power Boosting" on page 1765 "DMRS Power Boosting" on page 1769 "PTRS Power Boosting" on page 1770

State

Enable or disable selected PSSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>[:STATE] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>[:STATE]?</code>
Example	<code>:EVM:CCAR0:PSSC1 OFF</code> <code>:EVM:CCAR0:PSSC1?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	ON
State Saved	Yes
Range	DISABLE ENABLE 0 1

BWP

Specifies the BWP of selected PSSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:BWP BWP1 ... BWP4</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:BWP?</code>
Example	<code>:EVM:CCAR0:PSSC1:BWP BWP1</code> <code>:EVM:CCAR0:PSSC1:BWP?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	<code>BWP1</code>
State Saved	Yes
Range	<code>BWP1 BWP2 BWP3 BWP4</code>

PSCCH Duration

Specifies the associated PSCCH duration in symbol number.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:PSCCh <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:PSCCh?</code>
Example	<code>:EVM:CCAR0:PSSC1:PSCC 1</code> <code>:EVM:CCAR0:PSSC1:PSCC?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	1
State Saved	Yes
Min	2
Max	3

n_ID

Specifies n_ID for selected PSSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:NID <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:NID?</code>
Example	<code>:EVM:CCAR0:PSSC1:NID 0</code> <code>:EVM:CCAR0:PSSC1:NID?</code>

Notes	-1 means using Cell ID as n_ID
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0
State Saved	Yes
Min	0
Max	65535

Antenna Port

Specifies the Antenna Port of selected PSSCH configuration.

Remote Command	<code>[:SENSE] :EVM:CCARrier0 ... 15:PSSCh<n>:ANTenna:PORT <integer></code> <code>[:SENSE] :EVM:CCARrier0 ... 15:PSSCh<n>:ANTenna:PORT?</code>
Example	<code>:EVM:CCAR0:PSSC1:ANT:PORT 1000</code> <code>:EVM:CCAR0:PSSC1:ANT:PORT?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	1000
State Saved	Yes
Min	1000
Max	1001

PSSCH Power Boosting

Specifies Power Boost value for the selected PSSCH configuration.

Remote Command	<code>[:SENSE] :EVM:CCARrier0 ... 15:PSSCh<n>:POWer <rel_amp1></code> <code>[:SENSE] :EVM:CCARrier0 ... 15:PSSCh<n>:POWer?</code>
Example	<code>:EVM:CCAR0:PSSC1:POW 0</code> <code>:EVM:CCAR0:PSSC1:POW?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

RB Offset

Specifies the RB Offset of selected PSSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:RB:OFFSet <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:RB:OFFSet?</code>
Example	<code>:EVM:CCAR0:PSSC1:RB:OFFSet 0</code> <code>:EVM:CCAR0:PSSC1:RB:OFFSet?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0
State Saved	Yes
Range	The range is coupled with BWP
Min	0
Max	RB Number of selected BWP – PSSCH RB Number

RB Number

Specifies the RB Number of selected PSSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:RB:NUMBER <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:RB:NUMBER?</code>
Example	<code>:EVM:CCAR0:PSSC1:RB:NUMB 273</code> <code>:EVM:CCAR0:PSSC1:RB:NUMB?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	273
State Saved	Yes
Range	The range is coupled with BWP and RB Start
Min	1
Max	RB Number of selected BWP

Allocated Slots

Specifies the slots allocated to selected PSSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:SLOT:ALLocated <string></code>
----------------	--

Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:SLOT:ALLocated?</code>
Example	<code>:EVM:CCAR0:PSSC1:SLOT:ALL "2:9"</code> <code>:EVM:CCAR0:PSSC1:SLOT:ALL?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	"0:19"
State Saved	Yes

First Symbol

Specifies the First Symbol of selected PSSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:SYMBOL:FIRSt <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:SYMBOL:FIRSt?</code>
Example	<code>:EVM:CCAR0:PSSC1:SYMB:FIRS 4</code> <code>:EVM:CCAR0:PSSC1:SYMB:FIRS?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	1
State Saved	Yes
Min	1
Max	8

Last Symbol

Specifies the Last Symbol of selected PSSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:SYMBOL:LAST <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:SYMBOL:LAST?</code>
Example	<code>:EVM:CCAR0:PSSC1:SYMB:LAST 4</code> <code>:EVM:CCAR0:PSSC1:SYMB:LAST?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	12
State Saved	Yes
Min	5
Max	12

MCS Table

Specifies which MCS table is used to configure MCS for selected PSSCH configuration. Please refer to 38.214 clause 5.1.3 for complete MCS table.

- Table 1 – Table 5.1.3.1-1 (64QAM)
- Table 2 – Table 5.1.3.1-2 (256QAM)
- Table 3 – Table 5.1.3.1-3 (64QAMLowSE)

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PSSCh<n>:MCS:TABLE TABLE1 TABLE2 TABLE3</code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PSSCh<n>:MCS:TABLE?</code>
Example	<code>:EVM:CCAR0:PSSC1:MCS:TABLE TABLE2</code> <code>:EVM:CCAR0:PSSC1:MCS:TABLE?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	<code>TABLE1</code>
State Saved	Yes
Range	<code>64QAM 256QAM 64QAMLowSE</code>

MCS

Specifies the MCS index for selected PSSCH configuration.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15:PSSCh<n>:MCS <integer></code> <code>[:SENSe] :EVM:CCARrier0 ... 15:PSSCh<n>:MCS?</code>
Example	<code>:EVM:CCAR0:PSSC1:MCS 1</code> <code>:EVM:CCAR0:PSSC1:MCS?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0
State Saved	Yes
Min	0
Max	31

Modulation (Display Only)

Display modulation according to MCS table and MCS setting for the selected PSSCH configuration.

DMRS Symbol Number

Specifies DMRS symbol number for the selected PSSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:DMRS:SYMBol:NUMBer <int></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:DMRS:SYMBol:NUMBer?</code>
Example	<code>:EVM:CCAR0:PSSC1:DMRS:SYMB:NUMB 2</code> <code>:EVM:CCAR0:PSSC1:DMRS:SYMB:NUMB?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	2
State Saved	Yes
Min	2
Max	4

DMRS Power Boosting

Specifies DMRS Power Boost value for the selected PSSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:DMRS:POWer <rel_amp1></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:DMRS:POWer?</code>
Example	<code>:EVM:CCAR0:PSSC1:DMRS:POW 0</code> <code>:EVM:CCAR0:PSSC1:DMRS:POW?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

PTRS Enable

Enable or disable PTRS for selected PSSCH allocation.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:PTRS[:STATe] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:PTRS[:STATe]?</code>
Example	<code>:EVM:CCAR0:PSSC1:PTRS OFF</code> <code>:EVM:CCAR0:PSSC1:PTRS?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	OFF
State Saved	Yes
Range	DISABLE ENABLE 0 1

PTRS Power Boosting

Specifies PTRS Power Boost value for the selected PSSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:PTRS:POWer <rel_amp1></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:PTRS:POWer?</code>
Example	<code>:EVM:CCAR0:PSSC1:PTRS:POW 0</code> <code>:EVM:CCAR0:PSSC1:PTRS:POW?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	0 dB
State Saved	Yes
Min	-100
Max	100

PTRS K

Specifies PTRS frequency density (K_PTRS) for selected PSSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:PTRS:K K2 K4</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:PTRS:K?</code>
Example	<code>:EVM:CCAR0:PSSC1:PTRS:K K2</code> <code>:EVM:CCAR0:PSSC1:PTRS:K?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	K2
State Saved	Yes
Range	2 4

PTRS L

Specifies PTRS time density (L_PTRS) for selected PSSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:PTRS:L L1 L2 L4</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:PTRS:L?</code>
Example	<code>:EVM:CCAR0:PSSC1:PTRS:L L2</code> <code>:EVM:CCAR0:PSSC1:PTRS:L?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	L1
State Saved	Yes
Range	1 2 4

PTRS RE Offset

Specifies PTRS RE Offset for selected PSSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:PTRS:RE:OFFSet BIT00 BIT01 BIT10 BIT11</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:PTRS:RE:OFFSet?</code>
Example	<code>:EVM:CCAR0:PSSC1:PTRS:RE:OFFS BIT00</code> <code>:EVM:CCAR0:PSSC1:PTRS:RE:OFFS?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	BIT00
State Saved	Yes
Range	00 01 10 11

SCI2 State

Enable or disable SCI2 payload for selected PSSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:SCI2[:STATE] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:SCI2[:STATE]?</code>
Example	<code>:EVM:CCAR0:PSSC1:SCI2 OFF</code> <code>:EVM:CCAR0:PSSC1:SCI2?</code>
Couplings	Max value for n = 250 and Min value for n = 1

	Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	ON
State Saved	Yes
Range	DISABLE ENABLE 0 1

SCI2 Scaling

Specifies the SCI2 Scaling of selected PSSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:SCI2:SCALing <float></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:SCI2:SCALing?</code>
Example	<code>:EVM:CCAR0:PSSC1:SCI2:SCAL 0.8</code> <code>:EVM:CCAR0:PSSC1:SCI2:SCAL?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	1.0
State Saved	Yes
Min	0.5
Max	1.0

SCI2 Beta Offset Index

Specifies the SCI2 Beta Offset index of selected PSSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:SCI2:OFFSet <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:SCI2:OFFSet?</code>
Example	<code>:EVM:CCAR0:PSSC1:SCI2:OFFS 1</code> <code>:EVM:CCAR0:PSSC1:SCI2:OFFS?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	6
State Saved	Yes
Min	0
Max	15

SCI2 Payload Size

Specifies the SCI2 Payload Size of selected PSSCH configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:SCI2:LOAD:SIZE <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:SCI2:LOAD:SIZE?</code>
Example	<code>:EVM:CCAR0:PSSC1:SCI2:LOAD:SIZE 100</code> <code>:EVM:CCAR0:PSSC1:SCI2:LOAD:SIZE?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	35
State Saved	Yes
Min	1
Max	140

Summary (Downlink)

View and configure the parameters in a summary table.

Include All (GUI only)

Includes all possible parameters in the summary table, except State.

Exclude All (GUI only)

Excludes all possible parameters in the summary table, except State.

Include PSS

Includes or excludes PSS in selected SS Block.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SSB<n>:PSS:INCLude OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SSB<n>:PSS:INCLude?</code>
Example	<code>:EVM:CCAR0:SSB1:PSS:INCL OFF</code> <code>:EVM:CCAR0:SSB1:PSS:INCL?</code>
Couplings	The sub op code <n> max value 2 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	ON
State Saved	Yes

Include SSS

Includes or excludes SSS in selected SS Block.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SSB<n>:SSS:INCLude OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SSB<n>:SSS:INCLude?</code>
Example	<code>:EVM:CCAR0:SSB1:SSS:INCL OFF</code> <code>:EVM:CCAR0:SSB1:SSS:INCL ?</code>
Couplings	The sub op code <n> max value 2 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PBCH

Includes or excludes PBCH in selected SS Block.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SSB<n>:PBCH:INCLude OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SSB<n>:PBCH:INCLude?</code>
Example	<code>:EVM:CCAR0:SSB1:PBCH:INCL OFF</code> <code>:EVM:CCAR0:SSB1:PBCH:INCL ?</code>
Couplings	The sub op code <n> max value 2 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PBCH DMRS

Includes or excludes PBCH DMRS in selected SS Block.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SSB<n>:PBCH:DMRS:INCLude OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SSB<n>:PBCH:DMRS:INCLude?</code>
Example	<code>:EVM:CCAR0:SSB1:PBCH:DMRS:INCL OFF</code> <code>:EVM:CCAR0:SSB1:PBCH:DMRS:INCL ?</code>
Couplings	The sub op code <n> max value 2 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PDCCH

Includes or excludes PDCCH in selected PDCCH allocation.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDCCh<n>:INCLude OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDCCh<n>:INCLude?</code>
Example	<code>:EVM:CCAR0:PDCC1:INCL OFF</code> <code>:EVM:CCAR0:PDCC1:INCL ?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PDCCH DMRS

Includes or excludes PDCCH DMRS in selected PDCCH allocation.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDCCh<n>:DMRS:INCLude OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDCCh<n>:DMRS:INCLude?</code>
Example	<code>:EVM:CCAR0:PDCC1:DMRS:INCL OFF</code> <code>:EVM:CCAR0:PDCC1:DMRS:INCL ?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PDSCH

Includes or excludes PDSCH in selected PDSCH allocation.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:INCLude OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDSCh<n>:INCLude?</code>
Example	<code>:EVM:CCAR0:PDSC1:INCL OFF</code> <code>:EVM:CCAR0:PDSC1:INCL ?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PDSCH DMRS

Includes or excludes PDSCH DMRS in selected PDSCH allocation.

3 5G NR Mode
3.7 Modulation Analysis Measurement

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDsch<n>:DMRS:INCLude OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDsch<n>:DMRS:INCLude?</code>
Example	<code>:EVM:CCAR0:PDSC1:DMRS:INCL OFF</code> <code>:EVM:CCAR0:PDSC1:DMRS:INCL?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PDSCH PTRS

Includes or excludes PDSCH PTRS in selected PDSCH allocation.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PDsch<n>:PTRS:INCLude OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PDsch<n>:PTRS:INCLude?</code>
Example	<code>:EVM:CCAR0:PDSC1:PTRS:INCL OFF</code> <code>:EVM:CCAR0:PDSC1:PTRS:INCL?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	ON
State Saved	Yes

Include CSI-RS

Enable or disable CSI-RS configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:CSIRs<n>:INCLude OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:CSIRs<n>:INCLude?</code>
Example	<code>:EVM:CCAR0:CSIR1:INCL OFF</code> <code>:EVM:CCAR0:CSIR1:INCL?</code>
Couplings	Max value for n=8 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	ON
State Saved	Yes

Include RIM-RS

Specifies whether to include or exclude RIM-RS configuration.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:RIMRs<n>:INCLude OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:RIMRs<n>:INCLude?</code>
Example	<code>:EVM:CCAR0:RIMR1:INCL OFF</code> <code>:EVM:CCAR0:RIMR1:INCL ?</code>
Couplings	Max value for n = 8 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	ON
State Saved	Yes

Edit Colors (GUI only)

This table display color for each physical channel allocations, you may customize them.

Reset (GUI Only)

Pressing this control will reset color for each physical channel allocations.

Summary (Uplink)

View and configure the parameters in a summary table.

Include All (GUI only)

Includes all possible parameters in the summary table, except State.

Exclude All (GUI only)

Excludes all possible parameters in the summary table, except State.

Include PUCCH

Includes or excludes PUCCH in selected PUCCH allocation.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:INCLude OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:INCLude?</code>
Example	<code>:EVM:CCAR0:PUC1:INCL OFF</code> <code>:EVM:CCAR0:PUC1:INCL ?</code>
Couplings	Max value for n = 16 and Min value for n = 1

	Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PUCCH DMRS

Includes or excludes PUCCH DMRS in selected PUCCH allocation.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:DMRS:INCLude OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUCCh<n>:DMRS:INCLude?</code>
Example	<code>:EVM:CCAR0:PUC1:DMRS:INCL OFF</code> <code>:EVM:CCAR0:PUC1:DMRS:INCL?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PUSCH

Includes or excludes PUSCH in selected PUSCH allocation.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:INCLude OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:INCLude?</code>
Example	<code>:EVM:CCAR0:PUS1:INCL OFF</code> <code>:EVM:CCAR0:PUS1:INCL?</code>
Couplings	Max value for n = 250 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PUSCH DMRS

Includes or excludes PUSCH DMRS in selected PUSCH allocation.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:DMRS:INCLude OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PUSCh<n>:DMRS:INCLude?</code>
Example	<code>:EVM:CCAR0:PUS1:DMRS:INCL OFF</code> <code>:EVM:CCAR0:PUS1:DMRS:INCL?</code>
Couplings	Max value for n = 250 and Min value for n = 1

	Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	ON
State Saved	Yes

Include SRS

Includes or excludes SRS.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:INCLude OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SRS<n>:INCLude?</code>
Example	<code>:EVM:CCAR0:SRS:INCL OFF</code> <code>:EVM:CCAR0:SRS:INCL?</code>
Couplings	Max value for n = 1 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	ON
State Saved	Yes

Summary (Sidelink)

View and configure the parameters in a summary table.

Include All (GUI only)

Includes all possible parameters in the summary table, except State.

Exclude All (GUI only)

Excludes all possible parameters in the summary table, except State.

Include S-PSS

Includes or excludes PSS in selected S-SS Block.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SSSB<n>:SPSS:INCLude OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SSSB<n>:SPSS:INCLude?</code>
Example	<code>:EVM:CCAR0:SSSB1:SPSS:INCL OFF</code> <code>:EVM:CCAR0:SSSB1:SPSS:INCL?</code>
Couplings	The sub op code <n> max value 2 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	ON
State Saved	Yes

Include S-SSS

Includes or excludes SSS in selected S-SS Block.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SSSB<n>:SSSS:INCLude OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SSSB<n>:SSSS:INCLude?</code>
Example	<code>:EVM:CCAR0:SSSB1:SSSS:INCL OFF</code> <code>:EVM:CCAR0:SSSB1:SSSS:INCL?</code>
Couplings	The sub op code <n> max value 2 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PSBCH

Includes or excludes PSBCH in selected S-SS Block.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SSSB<n>:PSBCh:INCLude OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SSSB<n>:PSBCh:INCLude?</code>
Example	<code>:EVM:CCAR0:SSSB1:PSBC:INCL OFF</code> <code>:EVM:CCAR0:SSSB1:PSBC:INCL?</code>
Couplings	The sub op code <n> max value 2 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PSBCH DMRS

Includes or excludes PSBCH DMRS in selected S-SS Block.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SSSB<n>:PSBCh:DMRS:INCLude OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SSSB<n>:PSBCh:DMRS:INCLude?</code>
Example	<code>:EVM:CCAR0:SSSB1:PSBC:DMRS:INCL OFF</code> <code>:EVM:CCAR0:SSSB1:PSBC:DMRS:INCL?</code>
Couplings	The sub op code <n> max value 2 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PSCCH

Includes or excludes selected PSCCH allocation.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PSCCh<n>:INCLude OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PSCCh<n>:INCLude?</code>
Example	<code>:EVM:CCAR0:PSCC1:INCL OFF</code> <code>:EVM:CCAR0:PSCC1:INCL?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PSCCH DMRS

Includes or excludes PSCCH DMRS in selected PSCCH allocation.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PSCCh<n>:DMRS:INCLude OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PSCCh<n>:DMRS:INCLude?</code>
Example	<code>:EVM:CCAR0:PSCC1:DMRS:INCL OFF</code> <code>:EVM:CCAR0:PSCC1:DMRS:INCL?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PSSCH

Includes or excludes selected PSSCH allocation.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:INCLude OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:INCLude?</code>
Example	<code>:EVM:CCAR0:PSSC1:INCL OFF</code> <code>:EVM:CCAR0:PSSC1:INCL?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PSSCH DMRS

Includes or excludes PSSCH DMRS in selected PSSCH allocation.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:DMRS:INCLude OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:DMRS:INCLude?</code>
Example	<code>:EVM:CCAR0:PSSC1:DMRS:INCL OFF</code> <code>:EVM:CCAR0:PSSC1:DMRS:INCL?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	ON
State Saved	Yes

Include PSSCH PTRS

Includes or excludes PSSCH PTRS in selected PSSCH allocation.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:PTRS:INCLude OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PSSCh<n>:PTRS:INCLude?</code>
Example	<code>:EVM:CCAR0:PSSC1:PTRS:INCL OFF</code> <code>:EVM:CCAR0:PSSC1:PTRS:INCL?</code>
Couplings	Max value for n = 16 and Min value for n = 1 Attempting to remotely set or query a sub op code that is out of range generates an error message
Preset	ON
State Saved	Yes

See ["Edit Colors \(GUI only\)" on page 1777](#)

Reset (GUI only)

See ["Reset \(GUI Only\)" on page 1777](#)

3.7.8.7 Advanced

Enables you to configure advanced parameters for de-modulation algorithm.

IF Gain

In order to take full advantage of the RF dynamic range of the analyzer, we offer a switched IF amplifier with approximately 10 dB of gain. When it can be turned on without an overload, the dynamic range is always better with it on than off. The control "IF Gain" can be used to set the IF Gain function to Auto, or to On (the extra 10 dB) or Off. These settings affect sensitivity and IF overloads.

This only applies to the RF input. It does not apply to baseband I/Q input.

This control is not available in VXT, EXM, and UXM.

IF Gain Auto

Activates the auto rules for IF Gain

Remote Command	<code>[:SENSe]:EVM:IF:GAIN:AUTO[:STATE] ON OFF 1 0</code> <code>[:SENSe]:EVM:IF:GAIN:AUTO[:STATE]?</code>
Example	<code>:EVM:IF:GAIN:AUTO OFF</code> <code>:EVM:IF:GAIN:AUTO?</code>
Couplings	When either the auto attenuation works (for example, with electrical attenuator), or the optimized mechanical attenuator range is requested, the IF Gain setting is changed as following rule Auto sets IF Gain to On under any of the following conditions: the input attenuator is set to 0 dB. For other settings, Auto sets IF Gain to Off
Preset	OFF
State Saved	Yes
Range	Auto Man

IF Gain Select

Selects the range of IF gain.

- High gain: set 10dB IF gain for better noise level measurements
- Low gain: set 0dB IF gain for large signals
- Other: allow to set arbitrary IF gain value within -12dB to 12dB. This selection is not available for B25 If bandwidth option

When this parameter is changed, IF Gain Auto will become Man.

Remote Command	<code>[:SENSe]:EVM:IF:GAIN:SElect LOW HIGH OTher</code> <code>[:SENSe]:EVM:IF:GAIN:SElect?</code>
Example	<code>:EVM:IF:GAIN:SEL LOW</code> <code>:EVM:IF:GAIN:SEL?</code>
Preset	LOW
State Saved	Yes
Range	LOW HIGH OTher

Other IF Gain

This specifies the IF gain value. When IF gain is set to Other, this value will be used.

Remote Command	<code>[:SENSe]:EVM:IF:GAIN:LEVel <rel_amp1></code> <code>[:SENSe]:EVM:IF:GAIN:LEVel?</code>
Example	<code>:EVM:IF:GAIN:LEV -10</code> <code>:EVM:IF:GAIN:LEV?</code>
Notes	Not available for B25 IF bandwidth option
Preset	0
State Saved	Saved in instrument state
Min/Max	Depends on CC Bandwidth

LO Dither

When LO Dither is turned on, the local oscillator frequency is rapidly changed by small, random amounts. This helps spread the power of spurious signals within the passband, which lowers their level, thus increasing dynamic range.

This is only required in very wide passbands, so this feature only appears with option H1G.

Remote Command	<code>[:SENSe]:EVM:LO:DITHer[:STATe] ON OFF 1 0</code> <code>[:SENSe]:EVM:LO:DITHer[:STATe]?</code>
Example	<code>:EVM:LO:DITH 1</code> <code>:EVM:LO:DITH?</code>
Dependencies	<p>Only available when the instrument has the Option H1G installed. If you try to turn ON LO Dither in any other case, an error message is generated, -241, "Hardware missing; Option H1G required"</p> <p>Only appears in some Modes (e.g., 5GNR, VMA and IQ Analyzer)</p> <p>The LO Dither function is turned Off and grayed out when the IF Path is set to a path other than 1 GHz. If you press the grayed out control, a warning message "LO Dither only available with IF Path 1 GHz" is shown. If you try to set LO Dither to ON remotely while it is grayed out, a message "-221, Settings conflict; LO Dither only available with IF Path 1 GHz" is returned</p> <p>When LO Dither is turned on, the Phase Noise Optimization control is grayed out. If you try to change the PNO value via front panel or SCPI in that case, an error is generated, "LO Dither must be turned off to change this value".</p>
Couplings	<p>As with most parameters with an AUTO state, AUTO COUPLE sets it to Auto, which then picks AUTOrange, and setting any specific value (AUTOrange, LOW or HIGH) will set the AUTO state to false</p> <p>When LO Dither is turned ON, Phase Noise Optimization is set to "Best Close-In". If the Phase Noise Optimization value changes due to turning on LO Dither, a warning message "Phase Noise Optimization changed due to LO Dither activation" is shown</p>
Preset	OFF

Phase Noise Optimization

Allows you to select the LO (local oscillator) phase noise behavior for various operating conditions.

For full details, see "[Parameter Options, Installed Options & Auto Rules](#)" on page 1786 and "[Ranges](#)" on page 1790 below.

Remote Command	<code>[:SENSe]:EVM:FREQuency:SYNTHeSis[:STATe] 1 ... 5</code> <p>For the meaning of each numeric option value, see "Parameter Options, Installed Options & Auto Rules" on page 1786 below</p> <code>[:SENSe]:EVM:FREQuency:SYNTHeSis[:STATe]?</code>
Example	<code>:EVM:FREQ:SYNT 1</code> <code>:EVM:FREQ:SYNT?</code>
Dependencies	This control is not available in VXT or UXM
Preset	2

State Saved	Saved in instrument state
Range	See "Ranges" on page 1790 below

Parameter Options, Installed Options & Auto Rules

The Phase Noise Optimization control lets you optimize the setup and behavior of the Local Oscillator (LO) depending on your specific measurement conditions. You may wish to trade off noise and speed, for example, to make a measurement faster without regard to noise or with optimum noise characteristics without regard to speed.

Parameter Values Summary

Option	#	Description
"Balanced" on page 1787	1	<ul style="list-style-type: none"> - In instruments with EPO, balances close-in phase noise with spur avoidance - In instruments without EPO optimizes phase noise for small frequency offsets from the carrier
"Best Wide-offset" on page 1787	2	Optimizes phase noise for wide frequency offsets from the carrier
"Fast Tuning" on page 1788	3	Optimizes LO for tuning speed
"Best Close-in" on page 1786	4 or 1*	<ul style="list-style-type: none"> - In instruments with EPO, emphasizes close-in phase noise performance without regard to spur avoidance - In instruments without EPO, this setting is accepted but no action is taken
"Best Spurs" on page 1787	5	<ul style="list-style-type: none"> - In instruments with EPO, emphasizes spur avoidance over close-in phase noise performance - In instruments without EPO, this setting is accepted but no action taken
Auto	-	Automatically selects LO (local oscillator) phase noise behavior to optimize dynamic range and speed for various instrument operating conditions

*Dependent on Option EPO installation. See ["Best Close-in" on page 1786](#) below.

The actual behavior varies somewhat depending on model number and option; for example, you always get Fast Tuning by choosing Option #3, but in some models, ["Fast Tuning" on page 1788](#) is identical in effect to ["Best Close-in" on page 1786](#).

Best Close-in

Without option EPO

:FREQ:SYNT 1

The LO phase noise is optimized for smaller offsets from the carrier, at the expense of phase noise farther out.

The actual frequency offset within which noise is optimized is shown with in square brackets, as this can vary depending on the hardware set in use. For example, in some instruments this annotation appears as [offset <20 kHz]

With option EPO

:FREQ:SYNT 4

In instruments with Option EPO, the LO is configured for the best possible close-in phase noise (offsets up to 600 kHz from the carrier), regardless of spurious products that occur with some center frequencies. Because this is generally less desirable for close-in measurements than the ["Balanced" on page 1787](#) setting, parameter 1 selects ["Balanced" on page 1787](#) in EPO instruments, in the interests of optimizing code compatibility across the family. Parameter 4 selects ["Best Close-in" on page 1786](#), which is usually not as good a choice as ["Balanced" on page 1787](#).

Balanced

:FREQ:SYNT 1

In instruments with EPO, the LO is configured for the best possible phase noise at offsets up to 600 kHz from the carrier whenever there are no significant spurs within the span observed with an on-screen carrier. When there will be such a spur, the LO is reconfigured in a way that allows the phase noise to increase by 7 dB mostly within ± 1 octave around 400 kHz offset. The spurs will always be below -70 dBc.

Best Spurs

:FREQ:SYNT 5

In instruments with EPO, the LO is configured for better phase noise than the ["Best Wide-offset" on page 1787](#) case close to the carrier, but the configuration has 11 dB worse phase noise than the ["Best Close-in" on page 1786](#) case mostly within ± 1 octave around 300 kHz offset. Spurs are even lower than in the ["Balanced" on page 1787](#) case at better than -90 dBc, whether or not the carrier is on-screen.

This setting is never selected when Phase Noise Optimization is in Auto, you must select it manually.

Best Wide-offset

:FREQ:SYNT 2

The LO phase noise is optimized for wider offsets from the carrier. Optimization is especially improved for offsets from 70 kHz to 300 kHz. Closer offsets are

compromised and the throughput of measurements (especially remote measurements where the center frequency is changing rapidly), is reduced.

The actual frequency offset beyond which noise is optimized is shown with in square brackets, as this can vary depending on the hardware set in use. For example, in some instruments this annotation appears as [offset >30 kHz]

In instruments with Option EP0, the LO is configured for the best possible phase noise at offsets up to 600 kHz from the carrier whenever there are no significant spurs within the span observed with an on-screen carrier. When there will be such a spur, the LO is reconfigured in a way that allows the phase noise to increase by 7 dB mostly within ± 1 octave around 400 kHz offset. The spurs will always be below -70 dBc.

Fast Tuning

`:FREQ:SYNT 3`

In this mode, the LO behavior compromises phase noise at many offsets from the carrier in order to allow rapid measurement throughput when changing the center frequency or span. The term "[Fast Tuning](#)" on page 1788 refers to the time it takes to move the local oscillator to the start frequency and begin a sweep; this setting does not impact the actual sweep time in any way.

In instruments with EP1, the LO behavior compromises phase noise at offsets below 4 MHz in order to improve measurement throughput. The throughput is especially affected when moving the LO more than 2.5 MHz and up to 10 MHz from the stop frequency to the next start frequency.

In instruments with Option EP0, this is the same configuration as "[Best Spurs](#)" on page 1787. It is available with the "[Fast Tuning](#)" on page 1788 label for convenience, and to make the user interface more consistent with other X-Series instrument family members.

(In models whose hardware does not provide for a "[Fast Tuning](#)" on page 1788 option, the settings for "[Best Close-in](#)" on page 1786 are used if "[Fast Tuning](#)" on page 1788 is selected. This gives the fastest possible tuning for that hardware set.)

Auto

`:FREQ:SYNT:AUTO ON`

Selects the LO (local oscillator) phase noise behavior to optimize dynamic range and speed for various instrument operating conditions. The selection rules are as follows.

Auto Optimization Rules

X-Series instruments have several grades of LO, offering different configurations when in the Auto Mode. The rules for Auto selection are as follows:

Models with Option	Conditions	Selection
EPO Models with option EPO have a two stage local oscillator, which switches to a single loop for fast tuning (available in UXA)	Center frequency is < 699.9 kHz Span > 114.1 MHz, <i>or</i> RBW > 800 kHz RBW > 290 kHz, <i>or</i> Span > 4.2 MHz Other conditions	"Balanced" on page 1787 "Fast Tuning" on page 1788 "Best Wide-offset" on page 1787 "Balanced" on page 1787
EP1 Models with option EP1 have a two-loop local oscillator, which switches to a single loop for fast tuning (available in PXA)	Span > 44.44 MHz, <i>or</i> RBW > 1.9 MHz, <i>or</i> Source Mode is set to "Tracking" Center frequency is < 195 kHz, <i>or</i> CF >= 1 MHz <i>and</i> Span <= 1.3 MHz <i>and</i> RBW <= 75 kHz All other conditions	"Fast Tuning" on page 1788 "Best Close-in" on page 1786 "Best Wide-offset" on page 1787
EP2 Models with option EP2 use a different loop bandwidth for the fast-tuning choice, which is a compromise between tuning speed and phase noise, giving good tuning speed at all offsets. Although not as good as for "Best Close-in" on page 1786; this is useful when you have to look across a wide range of spans (available, for example, in MXA for excellent phase noise)	CF < 130 kHz, <i>or</i> CF > 12 MHz <i>and</i> Span < 495 kHz <i>and</i> RBW < 40 kHz Span > 22 MHz, <i>or</i> RBW > 400 kHz, <i>or</i> CF ≤ 12 MHz <i>and</i> Span < 495 kHz <i>and</i> RBW < 23 kHz All other conditions	"Best Close-in" on page 1786 "Fast Tuning" on page 1788 "Best Wide-offset" on page 1787
EP4 (available in CXA for improved phase noise)	Span > 101 MHz <i>or</i> RBW > 1.15 MHz <i>or</i> Source Mode is set to "Tracking" CF is < 109 kHz <i>or</i> CF >= 4.95 MHz <i>and</i> Span <= 666 kHz <i>and</i> RBW < 28 kHz	"Fast Tuning" on page 1788 "Best Close-in" on page 1786

3 5G NR Mode
 3.7 Modulation Analysis Measurement

Models with Option	Conditions	Selection
	All other conditions	"Best Wide-offset" on page 1787
All Other Models Note that in these models, the hardware does not actually provide for an extra-fast tuning option, so the settings for "Fast Tuning" on page 1788 are actually the same as "Best Close-in" on page 1786, but the rules are implemented this way so that the user who doesn't care about phase noise but does care about tuning speed doesn't have to remember which of the other two settings gives faster tuning	Span > 12.34 MHz, <i>or</i> RBW > 250 kHz, <i>or</i> Source Mode is set to "Tracking"	"Fast Tuning" on page 1788
	Center frequency is < 25 kHz, <i>or</i> CF >= 1 MHz <i>and</i> Span <= 141.4 kHz <i>and</i> RBW <= 5 kHz	"Best Close-in" on page 1786
	All other conditions	"Best Wide-offset" on page 1787

In all the above cases:

- The RBW to be used in the calculations is the equivalent -3 dB bandwidth of the current RBW filter
- The rules apply whether in swept spans, zero span, or FFT spans

Ranges

Option	Option #	Phase Noise Option	Range
No EPx Option	1	Best Close-in	[offset < 20 kHz]
	2	Best Wide-offset	[offset > 30 kHz]
	3	Fast Tuning	[same as Best Close-In]
EPO	4	Best Close-in	[offset < 600 kHz]
	1	Balanced	[offset < 600 kHz]
	5	Best Spurs	[offset < 600 kHz]
	2	Best Wide-offset	[offset > 800 kHz]
	3	Fast Tuning	[same as Best Close-In]
EP1	1	Best Close-in	[offset < 140 kHz]
	2	Best Wide-offset	[offset > 160 kHz]
	3	Fast Tuning	[single loop]

Option	Option #	Phase Noise Option	Range
EP2, EP3, EP5	1	Best Close-in	[offset < 70 kHz]
	2	Best Wide-offset	[offset > 100 kHz]
	3	Fast Tuning	[medium loop bw]
EP4	1	Best Close-in	[offset < 90 kHz]
	2	Best Wide-offset	[offset > 130 kHz]
	3	Fast Tuning	[same as Best Close-In]

Mixing Mode

Changing LO mixing from high-side to low-side vice versa.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:LO:MIXMode NORMa1 ALTeRnate</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:LO:MIXMode?</code>
Example	<code>:EVM:CCAR0:LO:MIXM NORM</code> <code>:EVM:CCAR1:LO:MIXM?</code>
Dependencies	The Mixing Mode key is grayed-out when the RF Input is set to something other than "RF" (such as External Mixer). If you press the grayed-out key, then a warning message "Feature only available with Signal Input RF" is shown If you try to set Mixing Mode via SCPI when disabled, a message -221,"Settings conflict; Feature only available with signal input RF" is returned Not available in VXT or UXM
Preset	<code>NORMa1</code>
State Saved	Yes
Range	<code>NORMa1 ALTeRnate</code>

Mixing Mode Auto

Activates the auto rules for Mixing Mode

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:LO:MIXMode:AUTO ON OFF 1 0</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:LO:MIXMode:AUTO?</code>
Example	<code>:EVM:CCAR0:LO:MIXM:AUTO OFF</code> <code>:EVM:CCAR1:LO:MIXM:AUTO?</code>
Preset	<code>ON</code>
State Saved	Yes
Range	<code>Auto Man</code>

Spur Avoidance (UXA H1G)

UXA H1G has spur at -50MHz offset of CF, this Spur Avoidance function is provided to eliminate this spur.

- Auto: move the spur completely out of analysis bandwidth, the tradeoff is available analysis bandwidth will be reduced to 400MHz. And EVM could be worse as the edge of passband is used for analysis
- Manual: move the spur by specified value, or turn off this feature by setting the value to 0

Remote Command	<pre>[:SENSe]:EVM:CCARrier0 ... 15:SAVoid:FREQuency <freq > [:SENSe]:EVM:CCARrier0 ... 15:SAVoid:FREQuency? [:SENSe]:EVM:CCARrier0 ... 15:SAVoid:AUTO ON OFF 1 0 [:SENSe]:EVM:CCARrier0 ... 15:SAVoid:AUTO?</pre>
Example	<pre>:EVM:CCAR0:SAV:FREQ 50MHz :EVM:CCAR0:SAV:FREQ? :EVM:CCAR0:SAV:AUTO ON :EVM:CCAR0:SAV:AUTO?</pre>
Couplings	<p>Grayed-out when Mixer Mode is Alternate</p> <p>When Acquisition mode is changed from Sequential to Simultaneous, this key will be reset (manual, 0 Hz) for all component carrier</p>
Preset	<p>0 Hz</p> <p>OFF</p>
State Saved	<p>Saved in instrument state</p> <p>Yes</p>
Range	Auto Manual
Min	$-(1\text{GHz} - \text{BW})/2$
Max	$(1\text{GHz} - \text{BW})/2$

Spectrum Stitching

When Spectrum Stitching is turned on, multiple acquisitions overlapped in frequency domain will be performed and then combined to get wide band IQ data. This enables the instrument to capture and analyze wider signal, it may slow down the measurement speed and it requires the signal to occupy the major part of the analysis bandwidth.

Note: accurate trigger is needed to align multiple acquisitions in time domain, and input signal need to be repeated and aligned with trigger precisely.

Remote Command	<code>[:SENSe]:EVM:STITching:SPECtrum[:STATe] ON OFF 1 0</code> <code>[:SENSe]:EVM:STITching:SPECtrum[:STATe]?</code>
Example	<code>:EVM:STIT:SPEC 1</code> <code>:EVM:STIT:SPEC?</code>
Dependencies	Available only in SP900Pand SP900S, and only when Trigger Source is External or Periodic
Preset	OFF
State Saved	Saved in instrument state

Advanced Demod Setup

Enables you to configure advanced parameters for de-modulation algorithm.

General

Allows you to configure general advanced parameters for de-modulation algorithm.

Component Carrier (Display Only)

This control is for UI display only. You can select any CC index that is less than the Number of Component Carriers. The inactive carriers are disabled.

See "[Component Carrier](#)" on page 1454.

Sync Mode

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SYNC:MODE CAC TCC</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SYNC:MODE?</code>
Example	<code>:EVM:CCAR0:SYNC:MODE CAC</code> <code>:EVM:CCAR0:SYNC:MODE?</code>
Preset	CAC
State Saved	Yes
Range	CP Auto Correlation Time Cross Correlation

Sync Source

Specifies the signal used for synchronization.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SYNC:SOURce AUTO SSB PDSCH PUSCH PUCCH PRACH PDCCH SRS SLSSB PSCCH PSSCH</code>
----------------	--

	<code>[:SENSe]:EVM:CCARrier0 ... 15:SYNC:SOUR?</code>
Example	<code>:EVM:CCAR0:SYNC:SOUR SSB</code> <code>:EVM:CCAR0:SYNC:SOUR?</code>
Preset	AUTO
State Saved	Yes
Range	Auto SSB PDSCH DMRS PUSCH DMRS PUCCH DMRS PRACH PDCCH DMRS SRS SL SSB PSCCH DMRS PSSCH DMRS

Sync Source Index

Specifies the allocation index of signal used for synchronization. -1 is default setting which means best allocation will be selected automatically according to signal.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SYNC:SOURce:INDEX <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SYNC:SOURce:INDEX?</code>
Example	<code>:EVM:CCAR0:SYNC:SOUR:IND 1</code> <code>:EVM:CCAR0:SYNC:SOUR:IND?</code>
Preset	-1
State Saved	Yes
Min	-1
Max	249

Multi-Carrier Filter

Specifies whether or not to apply a filter to the received "Component Carrier" on [page 1454](#) to filter out adjacent carriers.

When other carriers are expected to be adjacent to the component carrier of interest, this multi-carrier filter can be used to filter out the unwanted carrier and minimize leakage into the component carrier of interest.

When Auto is checked, Multi-Carrier Filter will be turned off for single CC and will be turned on for multiple CC.

For intra-band contiguous carrier aggregation case, turn off Multiple-Carrier Filter may help to improve EVM when SNR is high (close or higher than 50dB).

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:MCFilter[:STATe] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:MCFilter[:STATe]?</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:MCFilter:AUTO ON OFF 1 0</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:MCFilter:AUTO?</code>
Example	<code>:EVM:CCAR0:MCF OFF</code>

	<code>:EVM:CCAR0:MCF?</code>
	<code>:EVM:CCAR0:MCF:AUTO ON</code>
	<code>:EVM:CCAR0:MCF:AUTO?</code>
Preset	<code>OFF</code> <code>ON</code>
State Saved	Yes Yes
Range	<code>OFF ON</code>

Extended Frequency Lock Range

Specifies range in term of subcarrier (SCS is decided by Sync Source) number for extended frequency lock.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:EFlock:RANGe:VALue <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:EFlock:RANGe:VALue?</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:EFlock:RANGe OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:EFlock:RANGe?</code>
Example	<code>EVM:CCAR0:EFL:RANG:VAL 10</code> <code>EVM:CCAR0:EFL:RANG:VAL?</code> <code>:EVM:CCAR0:EFL:RANG 1</code> <code>:EVM:CCAR0:EFL:RANG?</code>
Preset	3 <code>OFF</code>
State Saved	Yes Yes
Range	<code>OFF ON</code>
Min	1
Max	100

DC Punctured

Specifies if DC will be exclude from demodulation results.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:DC:PUNcture OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:DC:PUNcture?</code>
Example	<code>:EVM:CCAR0:DC:PUNC 1</code> <code>:EVM:CCAR0:DC:PUNC?</code>

Preset	OFF
State Saved	Yes
Range	OFF ON

DC offset from CC center

Specifies the offset from DC location to CC center frequency (DC offset = DC frequency – CC center frequency).

- Auto checked: DC Frequency = Carrier Reference Frequency
- Auto unchecked: DC frequency = CC center frequency + DC offset from CC center

Remote Command	<pre>[:SENSe]:EVM:CCARrier0 ... 15:DC:OFFSet <freq> [:SENSe]:EVM:CCARrier0 ... 15:DC:OFFSet? [:SENSe]:EVM:CCARrier0 ... 15:DC:OFFSet:AUTO ON OFF 1 0 [:SENSe]:EVM:CCARrier0 ... 15:DC:OFFSet:AUTO?</pre>
Example	<pre>:EVM:CCAR0:DC:OFFS 100MHz :EVM:CCAR0:DC:OFFS? :EVM:CCAR0:DC:OFFS:AUTO ON :EVM:CCAR0:DC:OFFS:AUTO?</pre>
Preset	0 OFF
State Saved	Saved in instrument state Yes
Range	Auto Manual
Min	-100 GHz
Max	100 GHz

RF for Phase Compensation

Specifies the radio frequency used for baseband phase compensation before upconversion.

- Auto checked: use the CF of current component carrier
- Auto unchecked: use the value of RF for Phase Compensation. Note if the value is set to zero, it is equivalent to disable baseband phase compensation before upconversion

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PHASe:COMPensation:FREQUency <freq></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PHASe:COMPensation:FREQUency?</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PHASe:COMPensation:AUTO ON OFF 1 0</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PHASe:COMPensation:AUTO?</code>
Example	<code>:EVM:CCAR0:PHAS:COMP:FREQ 1GHz</code> <code>:EVM:CCAR0:PHAS:COMP:FREQ?</code> <code>:EVM:CCAR0:PHAS:COMP:AUTO ON</code> <code>:EVM:CCAR0:PHAS:COMP:AUTO?</code>
Preset	1 GHz ON
State Saved	Saved in instrument state Yes
Range	Auto Manual
Min	0
Max	100 GHz

Channel Power Threshold

Set threshold for Channel Power (active) calculation, it is relative to peak symbol power.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:CPOWer:THReshold <rel_amp1></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:CPOWer:THReshold?</code>
Example	<code>:EVM:CCAR0:CPOW:THR -30</code> <code>:EVM:CCAR0:CPOW:THR?</code>
Preset	-30 dB
State Saved	Saved in instrument state
Min	-100 dB
Max	0 dB

Report EVM in DB

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:REPort:DB OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:REPort:DB?</code>
Example	<code>:EVM:CCAR0:REP:DB 1</code> <code>:EVM:CCAR0:REP:DB?</code>
Preset	OFF

State Saved	Yes
Range	OFF ON

Time Scale Factor

Set the Time Scale Factor of the sample rate and acquisition time.

Remote Command	<code>[:SENSe] :EVM :TIME :SCALE :FACTor <integer></code> <code>[:SENSe] :EVM :TIME :SCALE :FACTor ?</code>
Example	<code>:EVM :TIME :SCALE :FACT 10</code> <code>:EVM :TIME :SCALE :FACT ?</code>
Preset	1
State Saved	Yes
Min	0.01
Max	1000

PDSCH Reference Data

Specifies PDSCH Reference Data generation mode for EVM and Error Vector calculation.

- AUTO Detect – Recover PDSCH Reference Data from input signal
- NR-TM **PN23** DL – Generate PDSCH Reference Data for 3GPP defined Test Model, this mode will map PN23 sequence to DL symbols only. When input signal is distorted or SNR is low, this mode can help to avoid biased EVM caused by reference data recovery error in Auto Detect mode. But this mode will only work when input signal is standard Test Model
- NR-TM **PN23** ALL – Generate PDSCH Reference Data for 3GPP defined Test Model, this mode will map PN23 sequence to all symbols (DL and UL). When input signal is distorted or SNR is low, this mode can help to avoid biased EVM caused by reference data recovery error in Auto Detect mode. But this mode will only work when input signal is standard Test Model
- All 0's – Generate PDSCH Reference Data with all 0 as payload

Remote Command	<code>[:SENSe] :EVM :CCARrier0 ... 15 :REFerence :DATA :PDSCh AUTO PN23 PN23ALL ZERO</code> <code>[:SENSe] :EVM :CCARrier0 ... 15 :REFerence :DATA :PDSCh ?</code>
Example	<code>EVM :CCAR0 :REF :DATA :PDSCh PN23</code> <code>EVM :CCAR0 :REF :DATA :PDSCh ?</code>
Couplings	This control only work when Direction is downlink

Preset	Normal
State Saved	Saved in instrument state
Range	Auto Detect NR-TM PN23 DL NR-TM PN23 All All 0s

Signal Repeat Pattern

Specifies input signal repeat pattern to improve synchronization stability when input signal is one repeated slot (FR2).

Remote Command	<code>[[:SENSe]:EVM:CCARrier0 ... 15:SIGNal:PATtern NORMa1 SLOt</code> <code>[[:SENSe]:EVM:CCARrier0 ... 15:SIGNal:PATtern?</code>
Example	<code>EVM:CCAR0:SIGN:PATT SLOt</code> <code>EVM:CCAR0:SIGN:PATT?</code>
Preset	<code>NORMa1</code>
State Saved	Saved in instrument state
Range	<code>Normal Slot</code>

TAE Calculation Mode

Switch TAE calculation mode:

All Allocations – using all PDSCH/PUSCH allocations

Max RE allocation – using the PDSCH/PUSCH allocation with maximum RE number

Remote Command	<code>[[:SENSe]:EVM:CCARrier0 ... 15:TAE:MODE MRE ALL</code> <code>[[:SENSe]:EVM:CCARrier0 ... 15:TAE:MODE?</code>
Example	<code>:EVM:CCAR0:TAE:MODE ALL</code> <code>:EVM:CCAR0:TAE:MODE?</code>
Preset	<code>Max-RE Alloc</code>
State Saved	Yes
Range	Max-RE Alloc All Alloc

Magnitude & Phase Error Calculation

Specifies whether to estimate Mag Error and Phase Error.

Remote Command	<code>[[:SENSe]:EVM:CCARrier0 ... 15:MPERror[:STATe] OFF ON 0 1</code> <code>[[:SENSe]:EVM:CCARrier0 ... 15:MPERror[:STATe]?</code>
Example	<code>:EVM:CCAR0:MPER 1</code>

	<code>:EVM:CCAR0:MPER?</code>
Preset	ON
State Saved	Yes
Range	OFF ON

IQ Imbalance Calculation

Specifies whether to estimate IQ imbalance. Note this calculation will only be valid when RF carrier is at the center of current component carrier, and allocated REs are on the both side of RF carrier.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:IQIMbalance[:STATe] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:IQIMbalance[:STATe]?</code>
Example	<code>:EVM:CCAR0:IQIM 1</code> <code>:EVM:CCAR0:IQIM?</code>
Preset	OFF
State Saved	Yes
Range	OFF ON

IQ Imbalance Mode Calculation

Specifies IQ imbalance estimation mode.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:IQIMbalance:MODE COMMon PSUBcarrier</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:IQIMbalance:MODE?</code>
Example	<code>:EVM:CCAR0:IQIM:MODE PSUB</code> <code>:EVM:CCAR0:IQIM:MODE?</code>
Preset	COMMon
State Saved	Yes
Range	Common Per-Subcarrier

Symbol Clock Error Compensation

Specifies whether to compensate detected symbol clock error.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SCERror:COMPensation[:STATe] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SCERror:COMPensation[:STATe]?</code>
Example	<code>:EVM:CCAR0:SCER:COMP OFF</code>

	<code>:EVM:CCAR0:SCER:COMP?</code>
Preset	OFF
State Saved	Yes
Range	OFF ON

IQ Imbalance Compensation

Specifies whether to compensate IQ imbalance. Note IQ Imbalance calculation (and therefor IQ Imbalance Compensation) will only be valid when RF carrier is at the center of current component carrier, and allocated REs are on the both side of RF carrier.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:IQIMbalance:COMPensation[:STATe] OFF ON 0 1</code>
Example	<code>:EVM:CCAR0:IQIM:COMP 1</code> <code>:EVM:CCAR0:IQIM:COMP?</code>
Preset	OFF
State Saved	Yes
Range	OFF ON

EVM

This tab allows you to configure advanced parameters for EVM.

Component Carrier (Display Only)

This control is for UI display only. You can select any CC index that is less than the Number of Component Carriers. The inactive carriers are disabled.

See "[Component Carrier](#)" on page 1454.

3GPP Conformance Test

When 3GPP Conformance Test is turned on, related settings (in below table) will be reset according to 3GPP specifications automatically. When these parameters are changed manually, 3GPP Conformance Test will be turned off.

	DL FR1	DL FR2	UL FR1	UL FR2
Pre FFT Minimization	On	On	On	On
Tracking Mode	3GPP	3GPP	*3GPP	*3GPP

3 5G NR Mode
3.7 Modulation Analysis Measurement

Tracking Amplitude	Off	Off	*Off	*Off
Tracking Phase	Off	On	*Off	*On
Tracking Timing	Off	Off	*Off	*Off
Equalizer Trainings	RS	RS	RS + Data	RS + Data
EQ Time Basis	Frame	Frame	Slot	Slot
EQ Freq Moving Avg Filter	On, 19 RS	On, 19 RS	Off, 0 RS	Off, 0 RS
EVM Window	3GPP	3GPP	3GPP	3GPP
Symbol Time Adjust	3GPP	3GPP	3GPP	3GPP
IQ Offset Compensation	Off	Off	On	On

* No clear definition in 38.521 so follow 38.104 for now.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:CONFormance OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:CONFormance?</code>
Example	<code>:EVM:CCAR0:CONF 1</code> <code>:EVM:CCAR0:CONF?</code>
Couplings	This control will be grayed out when MIMO is on
Preset	ON
State Saved	Yes
Range	OFF ON

3GPP Pre FFT Minimization

Enable or disable pre FFT minimization.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:PFft:MINimization OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:PFft:MINimization?</code>
Example	<code>:EVM:CCAR0:PFft:MIN 1</code> <code>:EVM:CCAR0:PFft:MIN?</code>
Couplings	This control will be grayed out when MIMO is on
Preset	ON
State Saved	Yes
Range	OFF ON

Tracking Mode

Specifies tracking mode for de-modulation algorithm.

Remote	<code>[:SENSe]:EVM:CCARrier0 ... 15:TRACk:MODE OFF RS RSD GPP</code>
--------	---

Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:TRACk:MODE?</code>
Example	<code>:EVM:CCAR0:TRAC:MODE OFF</code> <code>:EVM:CCAR0:TRAC:MODE?</code>
Preset	<code>GPP</code>
State Saved	Yes
Range	OFF RS RS+Data 3GPP

Track Amplitude

When Track Amplitude is turned on, the measurement applies pilot subcarrier amplitude error correction to the pilot and data subcarriers (default is true).

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:TRACk:AMPLitude OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:TRACk:AMPLitude?</code>
Example	<code>:EVM:CCAR0:TRAC:AMPL 1</code> <code>:EVM:CCAR0:TRAC:AMPL?</code>
Couplings	This control will be OFF and grayed out when Tracking Mode is 3GPP
Preset	<code>OFF</code>
State Saved	Yes
Range	<code>OFF ON</code>

Track Phase

When Track Phase is turned on, the measurement applies pilot subcarrier phase error correction to the pilot and data subcarriers (default is true).

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:TRACk:PHASe OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:TRACk:PHASe?</code>
Example	<code>:EVM:CCAR0:TRAC:PHAS 1</code> <code>:EVM:CCAR0:TRAC:PHAS?</code>
Couplings	Grayed-out when Tracking Mode is 3GPP Depends on Frequency Range: <ul style="list-style-type: none"> - FR1: Off - FR2: On (using PTRS as tracking source only)
Preset	<code>OFF</code>
State Saved	Yes
Range	<code>OFF ON</code>

Track Timing

When Track Timing is turned on, the measurement applies pilot subcarrier timing error correction (frequency offset correction) to the pilot and data subcarriers (default is true).

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:TRACk:TIMing OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:TRACk:TIMing?</code>
Example	<code>:EVM:CCAR0:TRAC:TIM 1</code> <code>:EVM:CCAR0:TRAC:TIM?</code>
Couplings	This control will be OFF and grayed out when Tracking Mode is 3GPP
Preset	OFF
State Saved	Yes
Range	OFF ON

Equalizer Trainings

Specifies Equalizer Training mode.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:EQUalizer:TRaining OFF RS RSD</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:EQUalizer:TRaining?</code>
Example	<code>:EVM:CCAR0:EQU:TRA OFF</code> <code>:EVM:CCAR0:EQU:TRA?</code>
Preset	RS
State Saved	Yes
Range	OFF RS RS+Data

EQ Time Basis

Specifies Equalizer Training averaging length in time domain.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:EQUalizer:TRaining:TBASis SLOT SUBFrame FRAME MINTerval</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:EQUalizer:TRaining:TBASis?</code>
Example	<code>:EVM:CCAR0:EQU:TRA:TBAS SLOT</code> <code>:EVM:CCAR0:EQU:TRA:TBAS?</code>
Preset	FRAME
State Saved	Yes
Range	Slot sub-Frame Frame Meas Interval

EQ Freq Moving Avg Filter

Specifies the state and length (in RS subcarrier) of Equalizer Training moving average filter.

Remote Command	<pre>[:SENSE]:EVM:CCARrier0 ... 15:EQUalizer:TRAIning:MAFilter:LENGth <integer> [:SENSE]:EVM:CCARrier0 ... 15:EQUalizer:TRAIning:MAFilter:LENGth? [:SENSe]:EVM:CCARrier0 ... 15:EQUalizer:TRAIning:MAFilter[:STATe] ON OFF 1 0 [:SENSe]:EVM:CCARrier0 ... 15:EQUalizer:TRAIning:MAFilter[:STATe]?</pre>
Example	<pre>:EVM:CCAR0:EQU:TRA:MAF:LENG 19 :EVM:CCAR0:EQU:TRA:MAF:LENG? :EVM:CCAR0:EQU:TRA:MAF ON :EVM:CCAR0:EQU:TRA:MAF?</pre>
Preset	19 ON
State Saved	Saved in instrument state Yes
Range	ON OFF
Min	1
Max	Depends on signal configuration

EVM Window

Specifies EVM window mode is 3GPP or custom. When 3GPP mode is selected, EVM window is configured according to:

	Downlink	Uplink
FR1	Table 6.5.3.5-2/3/4 in TS 38.141-1 V15.0.0	Table 6.5.3.5-2/3/4 in TS 38.141-1 V15.0.0
FR2	Table 6.6.3.5.1-2/3/4 in TS 38.141-2 V15.0.0	Table 6.6.3.5.1-2/3/4 in TS 38.141-2 V15.0.0
	Table 6.6.3.5.2-1/2/3 in TS 38.141-2 V15.0.0	Table 6.6.3.5.2-1/2/3 in TS 38.141-2 V15.0.0

For the 3GPP TS 38.141-1 standard, see <https://portal.3gpp.org/desktopmodules/Specifications/SpecificationDetails.aspx?specificationId=3367>

Remote Command	<pre>[:SENSe]:EVM:CCARrier0 ... 15:EVMWindow:MODE GPP CUSTom [:SENSe]:EVM:CCARrier0 ... 15:EVMWindow:MODE?</pre>
----------------	--

3 5G NR Mode
3.7 Modulation Analysis Measurement

Example	<code>:EVM:CCAR0:EVMW:MODE GPP</code> <code>:EVM:CCAR0:EVMW:MODE?</code>
Preset	GPP
State Saved	Yes
Range	3GPP Custom

EVM Window Length (Custom)

Specifies EVM window length for custom mode.

Remote Command	<code>[:SENSe] :EVM:CCARrier0 ... 15 :EVMWindow:LENGth:CUSTom <integer></code> <code>[:SENSe] :EVM:CCARrier0 ... 15 :EVMWindow:LENGth:CUSTom?</code>
Example	<code>:EVM:CCAR0:EVMW:LENG:CUST 144</code> <code>:EVM:CCAR0:EVMW:LENG:CUST?</code>
Couplings	This control is grayed-out when EVM Window is not custom
Preset	32
State Saved	Yes
Min	1
Max	Depends on Signal Configuration

Symbol Time Adjust

Specifies symbol time adjustment mode:

Max of EVM Window Start/End	Two additional FFT processing windows starting at the start/end of 3GPP/Custom EVM window. The final EVM is the max EVM calculated at 2 FFT processing windows using RMS averaging method
Min of EVM Window Start/End	Two additional FFT processing windows starting at the start/end of 3GPP/Custom EVM window. The final EVM is the min EVM calculated at 2 FFT processing windows using RMS averaging method
EVM Window Start	The symbol FFT used for EVM calculations are taken starting from the Start of the EVM Window
EVM Window End	The symbol FFT used for EVM calculations are taken starting from the End of the EVM Window
EVM Window Center	The symbol FFT used for EVM calculations are taken starting from the Center of the EVM Window
% FFT Size	The symbol FFT used for EVM results begin at the location specified by '% FFT Size'
3GPP	Two additional FFT processing windows starting at the start/end of 3GPP/Custom EVM window. The final EVM is calculated using 3GPP defined method based on 2 FFT processing windows

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SYMBol:TIMing:ADJust:MODE MAX MIN START END CENTer FFTSize GPP</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SYMBol:TIMing:ADJust:MODE?</code>
Example	<code>:EVM:CCAR0:SYMB:TIM:ADJ:MODE MAX</code> <code>:EVM:CCAR0:SYMB:TIM:ADJ:MODE?</code>
Preset	GPP
State Saved	Yes
Range	Max of EVM Window Start/End Min of EVM Window Start/End EVM Window Start EVM Window End EVM Window Center % FFT Size 3GPP

% FFT Size

Specifies Symbol Timing Adjustment in % of FFT size for Custom Symbol Time Adjustment Mode.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:SYMBol:TIMing:ADJust <percent></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:SYMBol:TIMing:ADJust?</code>
Example	<code>:EVM:CCAR0:SYMB:TIM:ADJ -3.125</code> <code>:EVM:CCAR0:SYMB:TIM:ADJ?</code>
Preset	-3.125
State Saved	Yes
Min	-25%
Max	0

IQ Offset Compensation

Specifies whether to compensate IQ Offset.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:IQOffset:COMPensation[:STATe] OFF ON 0 1</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:IQOffset:COMPensation[:STATe]?</code>
Example	<code>:EVM:CCAR0:IQOF:COMP 1</code> <code>:EVM:CCAR0:IQOF:COMP?</code>
Preset	OFF
State Saved	Yes
Range	OFF ON

Transient Capability

Set Transient Capability for EVM calculation.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:TRANSient:CAPability OFF US2 US4 US7</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:TRANSient:CAPability?</code>
Example	<code>EVM:CCAR0:TRAN:CAP US2</code> <code>EVM:CCAR0:TRAN:CAP?</code>
Couplings	This control is visible only when Direction is Uplink
Preset	Normal
State Saved	Saved in instrument state
Range	OFF 2 us 4 us 7 us

Transient Period Power Change Threshold

Specifies transient period power change threshold level in dB. If a mean slot power is changed by more than this value from one slot to another, this slot boundary is handled as transient period. Note also that RB mapping or modulation format is changed from one slot to another, this slot boundary is handled as transient period as well even though a mean power is not changed.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:TRANSient:PPChange:THReshold <rel_amp1></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:TRANSient:PPChange:THReshold?</code>
Example	<code>:EVM:CCAR0:TRAN:PPCH:THR 30</code> <code>:EVM:CCAR0:TRAN:PPCH:THR?</code>
Couplings	This control is visible only when Direction is Uplink
Preset	10 dB
State Saved	Saved in instrument state
Min	0 dB
Max	100 dB

UL Flatness & IBE

Enables you to configure advanced parameters for UL Spectrum Flatness and In-Band Emission measurement.

Component Carrier (Display Only)

This control is for UI display only. You can select any CC index that is less than the Number of Component Carriers. The inactive carriers are disabled.

See "[Component Carrier](#)" on page 1454.

Channel Condition

Specifies under what condition the Spectrum Flatness test is performed. This parameter determines the minimum requirements for EVM equalizer spectrum flatness test.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:FLATness:CHANnel:CONDition NORMal EXTReMe</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:FLATness:CHANnel:CONDition NORMal EXTReMe?</code>
Example	<code>:EVM:CCAR0:ULIN:FLAT:CHAN:COND NORM</code> <code>:EVM:CCAR0:ULIN:FLAT:CHAN:COND?</code>
Preset	<code>NORMal</code>
State Saved	Yes
Range	<code>NORMal EXTReMe</code>

F_UL_Low

Specifies the lower frequency of the E-UTRA operating band.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:FREQuency:LOW <freq></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:FREQuency:LOW?</code>
Example	<code>:EVM:CCAR0:ULIN:FREQ:LOW 1.92 GHz</code> <code>:EVM:CCAR0:ULIN:FREQ:LOW?</code>
Couplings	If the value entered is greater than F_UL_High, F_UL_High is set to the value of F_UL_Low
Preset	1.92GHz
State Saved	Saved in instrument state
Min/Max	0Hz/Depends on F_UL_High

F_UL_High

Specifies the upper frequency of the E-UTRA operating band.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:FREQuency:HIGH <freq></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:FREQuency:HIGH?</code>
Example	<code>:EVM:CCAR0:ULIN:FREQ:HIGH 1.98 GHz</code> <code>:EVM:CCAR0:ULIN:FREQ:HIGH?</code>
Couplings	The value entered is lower than F_UL_Low, F_UL_Low is set to the value of F_UL_High
Preset	1.98GHz

State Saved	Saved in instrument state
Min/Max	Depends on F_UL_Low/5GHz

Spectrum Flatness Test Tolerance

Specifies the test tolerance for spectrum flatness.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:FLATness:TTOLerance <rel_amp1></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:FLATness:TTOLerance?</code>
Example	<code>:EVM:CCAR0:ULIN:FLAT:TTOL 2</code> <code>:EVM:CCAR0:ULIN:FLAT:TTOL ?</code>
Preset	0 dB
State Saved	Saved in instrument state
Min	0 dB
Max	100 dB

UE Power Class

Specifies UE power class for In-Band Emission in FR2.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:IBEMission:PCLass CLASS1 ... CLASS4</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:IBEMission:PCLass?</code>
Example	<code>:EVM:CCAR0:ULIN:IBEM:PCL CLASS2</code> <code>:EVM:CCAR0:ULIN:IBEM:PCL ?</code>
Couplings	This control is only valid for FR2
Preset	<code>CLASS3</code>
State Saved	Yes
Range	<code>CLASS 1 CLASS 2 CLASS 3 CLASS 4</code>

UE Output Power

Specifies the UE output power to generate limit in In-Band Emission.

- Auto checked: use the measured power of input signal
- Auto unchecked: use the value to generate limit in In-Band Emission

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:IBEMission:OPower <amp1 ></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:IBEMission:OPower?</code>
----------------	---

	<code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:IBEMission:OPower:AUTO ON OFF 1 0</code>
	<code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:IBEMission:OPower:AUTO?</code>
Example	<code>:EVM:CCAR0:ULIN:IBEM:OPOW 10</code> <code>:EVM:CCAR0:ULIN:IBEM:OPOW?</code> <code>:EVM:CCAR0:ULIN:IBEM:OPOW:AUTO ON</code> <code>:EVM:CCAR0:ULIN:IBEM:OPOW:AUTO?</code>
Preset	ON
State Saved	Saved in instrument state Yes
Range	Auto Manual
Min	-99
Max	100

In-Band Emission Test Tolerance

Specifies the test tolerance for In-Band Emission.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:IBEMission:TTOLerance <rel_amp1></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:IBEMission:TTOLerance?</code>
Example	<code>:EVM:CCAR0:ULIN:IBEM:TTOL 2</code> <code>:EVM:CCAR0:ULIN:IBEM:TTOL?</code>
Preset	0 dB
State Saved	Saved in instrument state
Min	0 dB
Max	100 dB

IQ Image RBs & Carrier Leakage RBs

Specifies if IQ Image RBs & Carrier Leakage RBs should be included in General Limit.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:IBEMission:GENeral:MODE INCLude EXCLude</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:IBEMission:GENeral:MODE?</code>
Example	<code>:EVM:CCAR0:ULIN:IBEM:GEN:MODE INCL</code> <code>:EVM:CCAR0:ULIN:IBEM:GEN:MODE?</code>
Couplings	Radio Direction is Uplink
Preset	EXCLude

State Saved	Yes
Range	Include to General Lim Exclude from General Lim

IBE Limit Threshold from P_{RB}

Adjust “the higher of $P_{RB} - 30$ dB” IBE limit threshold (TS 38.521, <https://portal.3gpp.org/desktopmodules/Specifications/SpecificationDetails.aspx?specificationId=3381>).

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:IBEMission:PRB:THReshold <rel_amp1></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:IBEMission:PRB:THReshold?</code>
Example	<code>:EVM:CCAR0:ULIN:IBEM:PRB:THR -30</code> <code>:EVM:CCAR0:ULIN:IBEM:PRB:THR?</code>
Couplings	Radio Direction is Uplink
Preset	-30 dB
State Saved	Saved in instrument state
Min	-100 dB
Max	0 dB

Apply threshold from P_{RB} to All Limit

Apply “the higher of $P_{RB} - 30$ dB” IBE limit threshold (TS 38.521, <https://portal.3gpp.org/desktopmodules/Specifications/SpecificationDetails.aspx?specificationId=3381>) to All (combined) Limit.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:IBEMission:PRB:THReshold:ALL 0 1 </code> <code>OFF ON</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:IBEMission:PRB:THReshold:ALL?</code>
Example	<code>:EVM:CCAR0:ULIN:IBEM:PRB:THR:ALL ON</code> <code>:EVM:CCAR0:ULIN:IBEM:PRB:THR:ALL?</code>
Couplings	Radio Direction is Uplink
Preset	ON
State Saved	Yes
Range	On Off

Apply threshold from P_{RB} to General Limit

Apply “the higher of $P_{RB} - 30$ dB” IBE limit threshold (TS 38.521, <https://portal.3gpp.org/desktopmodules/Specifications/SpecificationDetails.aspx?specificationId=3381>) to General Limit.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:IBEMission:PRB:THReshold:GENeral 0 1 OFF ON</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:IBEMission:PRB:THReshold:GENeral?</code>
Example	<code>:EVM:CCAR0:ULIN:IBEM:PRB:THR:GEN ON</code> <code>:EVM:CCAR0:ULIN:IBEM:PRB:THR:GEN?</code>
Couplings	Radio Direction is Uplink
Preset	Off
State Saved	Yes
Range	On Off

Apply threshold from P_{RB} to IQ Image Limit

Apply “the higher of $P_{RB} - 30$ dB” IBE limit threshold (TS 38.521, <https://portal.3gpp.org/desktopmodules/Specifications/SpecificationDetails.aspx?specificationId=3381>) to IQ Image Limit.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:IBEMission:PRB:THReshold:IMAGe 0 1 OFF ON</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:IBEMission:PRB:THReshold:IMAGe?</code>
Example	<code>:EVM:CCAR0:ULIN:IBEM:PRB:THR:IMAG ON</code> <code>:EVM:CCAR0:ULIN:IBEM:PRB:THR:IMAG?</code>
Couplings	Radio Direction is Uplink
Preset	OFF
State Saved	Yes
Range	OFF ON

Apply threshold from P_{RB} to Carrier Leakage Limit

Apply “the higher of $P_{RB} - 30$ dB” IBE limit threshold (TS 38.521, <https://portal.3gpp.org/desktopmodules/Specifications/SpecificationDetails.aspx?specificationId=3381>) to Carrier Leakage Limit.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:ULINK:IBEMission:PRB:THReshold:DC 0 1 OFF ON</code>
----------------	--

	<code>[:SENSe] :EVM:CCARrier0 ... 15 :ULINK:IBEMission:PRB:THRshold:DC?</code>
Example	<code>:EVM:CCAR0:ULIN:IBEM:PRB:THR:DC ON</code> <code>:EVM:CCAR0:ULIN:IBEM:PRB:THR:DC?</code>
Couplings	Radio Direction is Uplink
Preset	Off
State Saved	Yes
Range	On Off

Cross Carrier

Enables you to configure advanced parameters for cross carrier measurement.

TAE Reference CC

Specifies reference component carrier to calculate cross carrier TAE.

Remote Command	<code>[:SENSe] :EVM:CCRoss:TAE:REFerence CC0 ... CC15</code> <code>[:SENSe] :EVM:CCRoss:TAE:REFerence?</code>
Example	<code>:EVM:CCR:TAE:REF CC1</code> <code>:EVM:CCR:TAE:REF?</code>
Preset	<code>CC0</code>
State Saved	Yes
Range	<code>CC0 ... CC15</code>

Power Reference CC

Specifies reference component carrier to calculate cross carrier relative power.

Remote Command	<code>[:SENSe] :EVM:CCRoss:POWer:REFerence CC0 ... CC15</code> <code>[:SENSe] :EVM:CCRoss:POWer:REFerence?</code>
Example	<code>:EVM:CCR:POW:REF CC1</code> <code>:EVM:CCR:POW:REF?</code>
Preset	<code>CC0</code>
State Saved	Yes
Range	<code>CC0 ... CC15</code>

MIMO

This tab allows you to configure advanced parameters for MIMO.

Condition Number Calculation

Enable condition number calculation and specify frequency granularity setting.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:CONDition:NUMBer OFF SUBC USER WIDE</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:CONDition:NUMBer?</code>
Example	<code>:EVM:CCAR0:COND:NUMB WIDE</code> <code>:EVM:CCAR0:COND:NUMB?</code>
Preset	OFF
State Saved	Yes
Range	OFF Subcarrier User Defined Wideband

RB Granularity

Specifies frequency granularity in RB when Condition Number Calculation = User Defined.

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:CONDition:NUMBer:RB <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:CONDition:NUMBer:RB?</code>
Example	<code>:EVM:CCAR0:COND:NUMB:RB 1</code> <code>:EVM:CCAR0:COND:NUMB:RB?</code>
Couplings	Only valid when Condition Number Calculation = User Defined
Preset	1
State Saved	Yes
Min	1
Max	RB Number of selected allocation

Cross-Correlated EVM

Cross-Correlated EVM (ccEVM) is a technique applied for RMS EVM to suppress analyzer noise, resulting in lower EVM floor.

A 2-channel analyzer, or two analyzers, demodulate the same signal independently, and perform cross-correlation on the error vectors to cancel out uncorrelated noise added by the analyzer. Results (based on channel1 and channel2 input signal) will be provided by ccEVM Summary, but other results are not affected (only based on channel1 input signal).

Remote Command	<code>[:SENSe]:EVM:CCEVm[:ENABle] ON OFF 1 0</code> <code>[:SENSe]:EVM:CCEVm[:ENABle]?</code>
----------------	--

Example	<code>:EVM:CCEV 1</code> <code>:EVM:CCEV?</code>
Couplings	This function is disabled when MIMO or Power Meas (OWB/ACP/SEM/Transmit On Off Power) are enabled
Preset	OFF
State Saved	Saved in instrument state

Multi Channel Config

Lets you perform a detailed configuration of each input channel. This will be used for two cases:

- MIMO (EVM only): Meas Setup > Radio (SP900Sand UXM model SP900Bonly)
- ccEVM (EVM only): Meas Setup > Advanced

Multi Channel Configuration

This menu is available for the EVM measurement. It enables you to configure multiple channel receiver. Different hardware platforms have different parameters.

Input Port (UXM)

Select input port for channel configuration.

Remote Command	<code>[:SENSe]:RADio:MCHannel:PORT[1] 2 RFI01 ... RFI08</code> <code>[:SENSe]:RADio:MCHannel:PORT[1] 2?</code>
Example	<code>:RAD:MCH:PORT2 RFI02</code> <code>:RAD:MCH:PORT2?</code>
Dependencies	This control appears only in the EVM measurement in the UXM model SP900B When "Lock (UXM)" on page 1817 is On, the selections are grayed out and cannot be changed. When "Lock (UXM)" on page 1817 is OFF, the label "Channel x" changes to "Unused" Selections are the same as those of RF Input Port and either RFI01 to RFI08 or RFI01 to RFI016 depending on the hardware configuration
Preset	RFIO1 RFIO2
State Saved	Yes
Range	RFIO 1 RFIO 2 RFIO 3 RFIO 4 RFIO 5 RFIO 6 RFIO 7 RFIO 8 or RFIO 1 RFIO 2 RFIO 3 RFIO 4 RFIO 5 RFIO 6 RFIO 7 RFIO 8 RFIO 9 RFIO 10 RFIO 11 RFIO 12 RFIO 13 RFIO 14 RFIO 15 RFIO 16
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:MIMO:PORT[1] 2</code>

Lock (UXM)

Enables you to lock/unlock the input port. When locked, the selected input port is assigned to a channel.

Remote Command	<code>[:SENSe]:RADio:MCHannel:PORT[1] 2:LOCKed OFF ON 0 1</code> <code>[:SENSe]:RADio:MCHannel:PORT[1] 2:LOCKed?</code>
Example	<code>:RAD:MCH:PORT2:LOCK ON</code> <code>:RAD:MCH:PORT2:LOCK?</code>
Dependencies	This control appears only in the EVM measurement in the UXM model SP900B
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:MIMO:PORT[1] 2:LOCKed</code>

Input Channel IP address

Set instrument IP address for channel configuration, “local” is used for current instrument.

Remote Command	<code>[:SENSe]:RADio:MIMO:IPAddress[1] 2 ... 4 <String></code> <code>[:SENSe]:RADio:MIMO:IPAddress[1] 2 ... 4?</code>
Example	<code>:RAD:MIMO:IPAD '192.168.1.2'</code>
Dependencies	This control appears only in the EVM measurement
Preset	local
State Saved	Yes

Input Channel TCP port (Remote Command only)

Set instrument TCP port for channel configuration.

Remote Command	<code>[:SENSe]:RADio:MIMO:IPAddress[1] 2 ... 4:PORT <int></code> <code>[:SENSe]:RADio:MIMO:IPAddress[1] 2 ... 4:PORT?</code>
Example	<code>:RAD:MIMO:IPAD:PORT 3574</code>
Dependencies	Available only for the EVM measurement
Preset	3574
State Saved	Yes

Lock

Lock instrument and assign to a channel in sequence.

Remote Command	<code>[:SENSe]:RADIo:MIMO:IPADdress[1] 2 ... 4:LOCKed OFF ON 0 1</code> <code>[:SENSe]:RADIo:MIMO:IPADdress[1] 2 ... 4:LOCKed?</code>
Example	<code>:RAD:MIMO:IPAD1:LOCK 1</code> <code>:RAD:MIMO:IPAD1:LOCK?</code>
Dependencies	This control appears only in the EVM measurement
State Saved	Yes

Channel Configuration Information (Remote Command only)

This SCPI query reads back channel configuration information.

Remote Command	<code>[:SENSe]:RADIO:MIMO:CHANnel:INFO?</code>
Example	<code>:RAD:MIMO:CHAN:INFO?</code>
Dependencies	Available only for the EVM measurement

Advanced Acquisition

This is the same as ["Advanced Acquisition" on page 1499](#) in the Configure Comp Carriers dialog. See ["Advanced Acquisition" on page 1499](#).

3.7.8.8 Decode

Enables you to set decoding parameters.

The following is a list of the available decoding types and the result bits for PBCH/PDCCH/PDSCH/PUCCH/PUSCH:

- None - No decoded results
- Descrambled - Descrambled (rate-matched) mode is used for decoding
- DeRateMatched - Deratematched (channel coded) mode is used for decoding
- Decoded CB - Decoded Codeblock mode is used for decoding
- Decoded TB - Decoded Transport Block mode is used for decoding
- Raw Bits - Scrambled bits

PBCH Bits

Selects the decoding type of the PBCH. It specifies how much coding to undo before showing the bits from PBCH on the Decoded Symbol Table.

The following is a list of the available decoding types and the result bits for PBCH/PDCCH/PDSCH/PUCCH/PUSCH:

- None- No decoded results
- Descrambled - Descrambled (rate-matched) mode is used for decoding
- DeRateMatched - Deratematched (channel coded) mode is used for decoding
- Decoded CB - Decoded Codeblock mode is used for decoding
- Decoded TB - Decoded Transport Block mode is used for decoding
- Raw Bits - Scrambled bits

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:DECode:PBCH NONE DESCrambled DRMatched DCBBlock DTBBlock RBITs</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:DECode:PBCH?</code>
Example	<code>:EVM:CCAR0:DEC:PBCH NONE</code> <code>:EVM:CCAR0:DEC:PBCH?</code>
Notes	Only visible when Radio Direction is downlink
State Saved	Yes
Range	None Descrambled DeRateMatched Decoded CB Decoded TB Raw Bits

PDCCH Bits

Selects the decoding type of the PDCCH. It specifies how much coding to undo before showing the bits from PDCCH on the Decoded Symbol Table.

The following is a list of the available decoding types and the result bits for PBCH/PDCCH/PDSCH/PUCCH/PUSCH:

- None- No decoded results
- Descrambled - Descrambled (rate-matched) mode is used for decoding
- DeRateMatched - Deratematched (channel coded) mode is used for decoding
- Decoded CB - Decoded Codeblock mode is used for decoding

3 5G NR Mode
 3.7 Modulation Analysis Measurement

- Decoded TB - Decoded Transport Block mode is used for decoding
- Raw Bits - Scrambled bits

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:DECode:PDCC NONE DESCrambled DRMatched DCBLock DTBLock RBITS</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:DECode:PDCC?</code>
Example	<code>:EVM:CCAR0:DEC:PDCC NONE</code> <code>:EVM:CCAR0:DEC:PDCC?</code>
Notes	Only visible when Radio Direction is downlink
State Saved	Yes
Range	None Descrambled DeRateMatched Decoded CB Decoded TB Raw Bits

PDSCH Bits

Selects the decoding type of the PDSCH. It specifies how much coding to undo before showing the bits from PDSCH on the Decoded Symbol Table.

The following is a list of the available decoding types and the result bits for PBCH/PDCCH/PDSCH/PUCCH/PUSCH:

- None - No decoded results
- Descrambled - Descrambled (rate-matched) mode is used for decoding
- DeRateMatched - Deratematched (channel coded) mode is used for decoding
- Decoded CB - Decoded Codeblock mode is used for decoding
- Decoded TB - Decoded Transport Block mode is used for decoding
- Raw Bits - Scrambled bits

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:DECode:PDSC NONE DESCrambled DRMatched DCBLock DTBLock RBITS</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:DECode:PDSC?</code>
Example	<code>:EVM:CCAR0:DEC:PDSC NONE</code> <code>:EVM:CCAR0:DEC:PDSC?</code>
Notes	Only visible when Radio Direction is downlink
State Saved	Yes
Range	None Descrambled DeRateMatched Decoded CB Decoded TB Raw Bits

PUCCH Bits

Selects the decoding type of the PUCCH. It specifies how much coding to undo before showing the bits from PUCCH on the Decoded Symbol Table.

The following is a list of the available decoding types and the result bits for PBCH/PDCCH/PDSCH/PUCCH/PUSCH:

- None- No decoded results
- Descrambled - Descrambled (rate-matched) mode is used for decoding
- DeRateMatched - Deratematched (channel coded) mode is used for decoding
- Decoded CB - Decoded Codeblock mode is used for decoding
- Decoded TB - Decoded Transport Block mode is used for decoding
- Raw Bits - Scrambled bits

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:DECode:PUCCh NONE DESCrambled DRMatched DCBLock DTBLock RBITs</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:DECode:PUCCh?</code>
Example	<code>:EVM:CCAR0:DEC:PUC NONE</code> <code>:EVM:CCAR0:DEC:PUC?</code>
Notes	Only visible when Radio Direction is uplink
State Saved	Yes
Range	None Descrambled DeRateMatched Decoded CB Decoded TB Raw Bits

PUSCH Bits

Selects the decoding type of the PUSCH. It specifies how much coding to undo before showing the bits from PUSCH on the Decoded Symbol Table.

The following is a list of the available decoding types and the result bits for PBCH/PDCCH/PDSCH/PUCCH/PUSCH:

- None- No decoded results
- Descrambled - Descrambled (rate-matched) mode is used for decoding
- DeRateMatched - Deratematched (channel coded) mode is used for decoding
- Decoded CB - Decoded Codeblock mode is used for decoding

3 5G NR Mode
 3.7 Modulation Analysis Measurement

- Decoded TB - Decoded Transport Block mode is used for decoding
- Raw Bits - Scrambled bits

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:DECode:PUSCh NONE DESCrambled DRMatched DCBLock DTBLock RBITS</code> <code>[:SENSe]:EVM:CCARrier0 ... 15:DECode:PUSCh?</code>
Example	<code>:EVM:CCAR0:DEC:PUSC NONE</code> <code>:EVM:CCAR0:DEC:PUSC?</code>
Notes	Only visible when Radio Direction is uplink
State Saved	Yes
Range	None Descrambled DeRateMatched Decoded CB Decoded TB Raw Bits

Decode Iteration

Specifies maximum iteration number of LDPC decoder

Remote Command	<code>[:SENSe]:EVM:CCARrier0 ... 15:DECode:ITERation <integer></code> <code>[:SENSe]:EVM:CCARrier0 ... 15:DECode:ITERation?</code>
Example	<code>:EVM:CCAR0:DEC:ITER 2</code> <code>:EVM:CCAR0:DEC:ITER?</code>
Preset	8
State Saved	Yes
Min	1
Max	16

3.7.8.9 Power Meas

This tab enables you to configure power measurements like OBW/ACP/SEM.

OBW State

Enable or disable the Occupied BW measurement.

Remote Command	<code>[:SENSe]:EVM:OBW OFF ON 0 1</code> <code>[:SENSe]:EVM:OBW?</code>
Example	<code>:EVM:OBW OFF</code> <code>:EVM:OBW?</code>
Preset	OFF
State Saved	Yes

ACP State

Enable or disable the ACP measurement.

Remote Command	<code>[:SENSe]:EVM:ACP OFF ON 0 1</code> <code>[:SENSe]:EVM:ACP?</code>
Example	<code>:EVM:ACP OFF</code> <code>:EVM:ACP?</code>
Preset	<code>OFF</code>
State Saved	Yes

SEM State

Enable or disable the SEM measurement.

Remote Command	<code>[:SENSe]:EVM:SEM OFF ON 0 1</code> <code>[:SENSe]:EVM:SEM?</code>
Example	<code>:EVM:SEM OFF</code> <code>:EVM:SEM?</code>
Preset	<code>OFF</code>
State Saved	Yes

Transmit On|Off Power State

Enable or disable Transmit On|Off Power measurement.

Remote Command	<code>[:SENSe]:EVM:PVTime OFF ON 0 1</code> <code>[:SENSe]:EVM:PVTime?</code>
Example	<code>:EVM:PVT OFF</code> <code>:EVM:PVT?</code>
Preset	<code>OFF</code>
State Saved	Yes

MIMO Calculation Mode

Specifies OBW/ACP/SEM/Transmit On/Off result calculation mode for MIMO signal:

3 5G NR Mode
 3.7 Modulation Analysis Measurement

- Per Channel – provide separate results for each input channel
- Averaged – provide averaged results for all input channels
- Summation – provide combined results for all input channels

Remote Command	<code>[:SENSe] :EVM:POWer:MIMO:MODE PERChannel AVERaged SUMMation</code> <code>[:SENSe] :EVM:POWer:MIMO:MODE?</code>
Example	<code>:EVM:POWer:MIMO:MODE PERC</code> <code>:EVM:POWer:MIMO:MODE?</code>
Preset	<code>PERChannel</code>
State Saved	Yes
Range	Per Channel Averaged Summation

OBW Setup

Enables you to configure advanced parameters for the OBW measurement in the EVM measurement based on the same capture.

OBW State

Enable or disable the Occupied BW measurement.

Remote Command	<code>[:SENSe] :EVM:OBW OFF ON 0 1</code> <code>[:SENSe] :EVM:OBW?</code>
Example	<code>:EVM:OBW OFF</code> <code>:EVM:OBW?</code>
Preset	<code>OFF</code>
State Saved	Yes

Points

Sets the number of points taken per sweep, and displayed in the traces. Using more points provides greater resolution. Using fewer points compacts the data and decreases the time required to access a trace over the remote interface.

When Auto Points is on, the analyzer determines the number of points using the following calculation formula:

$$\# \text{ points} = \text{ceil}(\text{Span} / (\text{Rbw} * 1\text{e}3)) * 1000 + 1$$

Where $\text{ceil}(x)$ returns the smallest possible integer value that is greater than or equal to x .

Remote Command	<code>[:SENSe]:EVM:OBW:POINts <integer></code> <code>[:SENSe]:EVM:OBW:POINts?</code> <code>[:SENSe]:EVM:OBW:POINts:AUTO ON OFF 1 0</code> <code>[:SENSe]:EVM:OBW:POINts:AUTO?</code>
Example	<code>:EVM:OBW:POIN 1001</code> <code>:EVM:OBW:POIN?</code> <code>:EVM:OBW:POIN:AUTO ON</code> <code>:EVM:OBW:POIN:AUTO?</code>
Preset	7001 ON
State Saved	Saved in instrument state Yes
Min	101
Max	100,001

% of OBW Power

Assigns the percentage of the total power that is measured within the Occupied Bandwidth for the current measurement. The resulting Occupied Bandwidth limits are displayed by markers placed on the frequencies of the specified percentage.

Remote Command	<code>[:SENSe]:OBWidth:PERCent <real></code> <code>[:SENSe]:OBWidth:PERCent?</code>
Example	<code>:OBW:PERC 75</code> <code>:OBW:PERC?</code>
Preset	99.00
State Saved	Yes
Min/Max	10/99.99

Power Integration Method

Selects the power integration method:

Normal	NORMa1	By integrating the linear power bucket values from the lower edge of the trace, and interpolating to find the point where the integrated power equals $(1 - [\text{Occ BW \% Pwr}]) / 2$ (0.5% if, for example, the 99% occupied bandwidth is to be found) of the total power, frequency f1 is obtained. This procedure is repeated from the upper trace edge to find frequency f2. This calculation uses linear interpolation to find the lower and upper carrier boundary
--------	---------------	---

3 5G NR Mode
3.7 Modulation Analysis Measurement

point within the width of a sweep point (the span divided by the number of sweep points), f1 and f2

From Center **ICENTER** Measures the power spectrum distribution within two times or more frequency range over the requirement for Occupied Bandwidth specification centering on the current carrier frequency

Remote Command	<code>[:SENSe]:OBWidth:INTEgration[:MEtHod] NORMal ICENter</code> <code>[:SENSe]:OBWidth:INTEgration[:MEtHod]?</code>
Example	<code>:OBW:INT NORM</code> <code>:OBW:INT?</code>
Preset	For 5GNR Mode, Uplink: ICENter All other Modes NORMal
State Saved	Yes
Range	NORMal ICENter

Limit Test

Toggles the limit test.

Remote Command	<code>:CALCulate:OBWidth:LIMit[:TEST] ON OFF 1 0</code> <code>:CALCulate:OBWidth:LIMit[:TEST]?</code>
Example	<code>:CALC:OBW:LIM 0</code> <code>:CALC:OBW:LIM?</code>
Dependencies	Only appears in LTEAFDD/LTEATDD and 5GNR Modes
Preset	LTEAFDD, LTEATDD, 5GNR: ON
State Saved	Saved in instrument state
Range	ON OFF

ACP Setup

Enables you to configure advanced parameters for the ACP measurement in the EVM measurement based on the same capture.

General

Enables you to configure general parameters for the ACP measurement in the EVM measurement based on the same capture.

ACP State

Enable or disable the ACP measurement.

Remote Command	<code>[:SENSe]:EVM:ACP OFF ON 0 1</code> <code>[:SENSe]:EVM:ACP?</code>
Example	<code>:EVM:ACP OFF</code> <code>:EVM:ACP?</code>
Preset	<code>OFF</code>
State Saved	Yes

Reference Carrier (Carrier Index)

Sets the reference carrier. Relative power measurements are made from the reference carrier.

If set to Auto, the measurement selects the carrier with the highest power as the reference carrier and the Ref Carrier parameter is updated. If a value is entered when Ref Carrier Mode is set to Auto, the mode changes to Man.

If set to Man, the value that you enter for the Ref Carrier is used as the reference carrier.

In MSR, LTEAFDD, LTEATDD and 5G NR Modes, this control is called **Carrier Index** and has a different SCPI command. In these modes, it sets the carrier index of the reference power. The power of the carrier selected by this index becomes reference power when "[Power Ref](#)" on page 1829 is Carrier Index. Any value up to the MAX can be set though the measurement only deals with number of carriers specified by Carrier. If the index is larger than Carrier, reference power in this measurement becomes NaN and therefore all relative power results are NaN.

For more information, see "[Carrier Index \(Modes: MSR, LTEAFDD, LTEATDD, and 5GNR\)](#)" on page 1828.

Remote Command	<code>[:SENSe]:ACPower:CARRier[1] 2:RCARrier <integer></code> <code>[:SENSe]:ACPower:CARRier[1] 2:RCARrier?</code> <code>[:SENSe]:ACPower:CARRier[1] 2:RCARrier:AUTO OFF ON 0 1</code> <code>[:SENSe]:ACPower:CARRier[1] 2:RCARrier:AUTO?</code>
Example	<code>:ACP:CARR:RCAR 1</code> <code>:ACP:CARR:RCAR?</code> <code>:ACP:CARR:RCAR:AUTO OFF</code> <code>:ACP:CARR:RCAR:AUTO?</code>
Notes	Carrier subopcode: 1 for BTS (Downlink), 2 for MS (Uplink). Default is BTS

3 5G NR Mode
3.7 Modulation Analysis Measurement

	Note that Carrier subopcode 2 is not supported in some Modes. In those cases, Carrier subopcode 1 is used for both BTS and MS and commands with subopcode 2 are accepted without error but ignored For LTEAFDD and LTEATDD modes, this control is not shown. In order to maintain backwards compatibility with the legacy LTE FDD/TDD modes, the SCPI command is supported in the LTE & LTE-A converged application
Dependencies	Grayed-out if there is only one carrier Does not appear in MSR, LTEAFDD, LTEATDD and 5G NR Modes
Couplings	If you enter a carrier value that is currently configured as having no power present, that carrier will be changed to having power present If you enter a ref carrier this parameter will be set to manual
Preset	Auto determined 1
State Saved	Saved in instrument state Yes
Range	Auto Man
Min/Max	1/Number of available carriers
Backwards Compatibility SCPI	<code>[:SENSe]:MCPower:RCARrier[1] 2</code> <code>[:SENSe]:MCPower:RCARrier[1] 2:AUTO</code> (Power Suite)

Carrier Index (Modes: MSR, LTEAFDD, LTEATDD, and 5G NR)

Remote Command	<code>[:SENSe]:ACPpower:CARRier[1] 2:INDEX <integer></code> <code>[:SENSe]:ACPpower:CARRier[1] 2:INDEX?</code>
Example	<code>:ACP:CARR:IND 1</code> <code>:ACP:CARR:IND?</code>
Notes	Carrier subopcode: 1 for BTS (Downlink), 2 for MS (Uplink). Default is BTS Note that Carrier subopcode 2 is not supported in some Modes. In those cases, Carrier subopcode 1 is used for both BTS and MS and commands with subopcode 2 are accepted without error but ignored
Dependencies	Only appears in MSR, LTEAFDD, LTEATDD and 5G NR Modes
Preset	1
State Saved	Saved in instrument state
Min/Max	LTEAFDD, LTEATDD: 1/Dependent on Num Component Carriers 5G NR: 1/Dependent on Num Component Carriers MSR: 1/100
Remote Command	<code>[:SENSe]:ACPpower:CARRier[1] 2:RCARrier:ZBAsE <integer></code> <code>[:SENSe]:ACPpower:CARRier[1] 2:RCARrier:ZBAsE?</code>

Example	<code>:ACP:CARR:RCAR:ZBAS 1</code> <code>:ACP:CARR:RCAR:ZBAS?</code>
Notes	Carrier subopcode: 1 for BTS (Downlink), 2 for MS (Uplink). Default is BTS Note that Carrier subopcode 2 is not supported in some Modes. In those cases, Carrier subopcode 1 is used for both BTS and MS and commands with subopcode 2 are accepted without error but ignored
Dependencies	Not available in multicarrier application (MSR, 5G NR, LTE)
Couplings	Coupled with: <code>[:SENSe]:ACPower:CARRier[1] 2:RCARRier <integer></code>
Preset	0
State Saved	Saved in instrument state
Min	0
Max	9

Measurement Type

Changes the reference used for the measurement. This allows you to make absolute and relative power measurements of either total power or the power normalized to the measurement bandwidth.

- Total Pwr Ref (**TPRef**) sets the reference to the total carrier power
- PSD Ref (**PSDRef**) sets the reference to the power spectral density of the carrier

Remote Command	<code>[:SENSe]:ACPower:TYPE TPRef PSDRef</code> <code>[:SENSe]:ACPower:TYPE?</code>
Example	<code>:ACP:TYPE PSDR</code> <code>:ACP:TYPE?</code>
Preset	TPRef
State Saved	Saved in instrument state
Range	Total Power Ref PSD Ref

Power Ref

Selects the power reference type. This control has two different forms, depending on the currently-selected Mode:

- "Power Ref (Modes: SA, WCDMA, VMA, SRComms)" on page 1830
- "Power Ref (Modes: LTEAFDD, LTEATDD, 5G NR, MSR)" on page 1830

Power Ref (Modes: SA, WCDMA, VMA, SRComms)

Type	Option	Description
Ref Carrier	RCARrier	Power of the specified carrier is the reference of measurement. Use the Reference Carrier control to select Carrier Index
Manual Power	MANual	Power or PSD specified by the user is the reference of measurement
Total Multicarriers	TMCarrriers	Total Power of multi carriers is the power reference of measurement. Each carrier power is calculated with its own carrier configuration settings
Remote Command	<code>[:SENSe]:ACPpower:CARRier[1] 2:PREFERENCE:TYPE RCARrier MANual TMCarrriers</code> <code>[:SENSe]:ACPpower:CARRier[1] 2:PREFERENCE:TYPE?</code>	
Example	<code>:ACP:CARR:PREF:TYPE RCARrier</code> <code>:ACP:CARR:PREF:TYPE?</code>	
Notes	Available only in SA, WCDMA, VMA and Short Range Comms Modes Carrier subopcode: 1 for BTS (Downlink), 2 for MS (Uplink). Default is BTS Note that Carrier subopcode 2 is not supported in some Modes. In those cases, Carrier subopcode 1 is used for both BTS and MS and commands with subopcode 2 are accepted without error but ignored	
Preset	RCARrier	
State Saved	Saved in instrument state	
Range	Reference Carrier Manual Power Total Multicarriers	

Power Ref (Modes: LTEAFDD, LTEATDD, 5G NR, MSR)

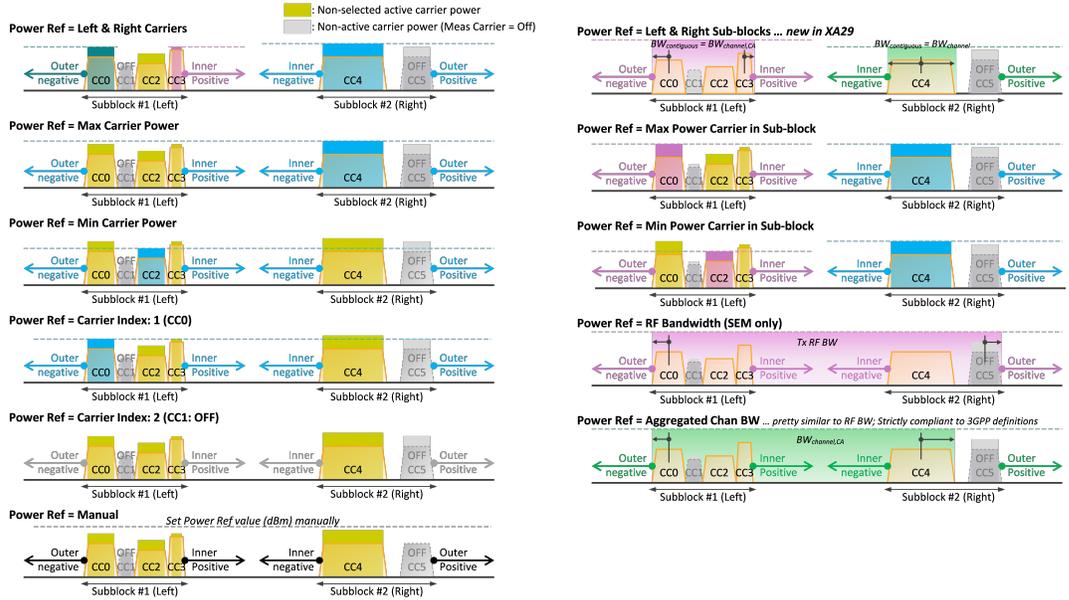

Selects the power reference type:

Type	Option	Description
Left & Right Carriers	LRCarrriers	Powers of leftmost and rightmost carriers with Measure Carrier On in a sub-block are the references of left and right sides respectively. Left and right carriers are determined based on the carrier center frequencies. If Measure Carriers of all the carriers in a sub-block are off, the reference power in a sub-block and all the relative power results are NaN. Relative limits are not evaluated
Max Power Carrier	MPCARRIER	Maximum carrier power among the carriers of Measure Carrier On is the reference of measurement. If Measure Carriers of all the carriers are off, the reference power and all the relative power results are NAN . Relative limits are not evaluated
Min Power Carrier 5G NR only	MINPcarrier	Minimum carrier power among the carriers of Measure Carrier On is the reference of measurement. If Measure Carriers of all the carriers are off, the reference power and all the relative power results are NAN . Relative limits are not evaluated

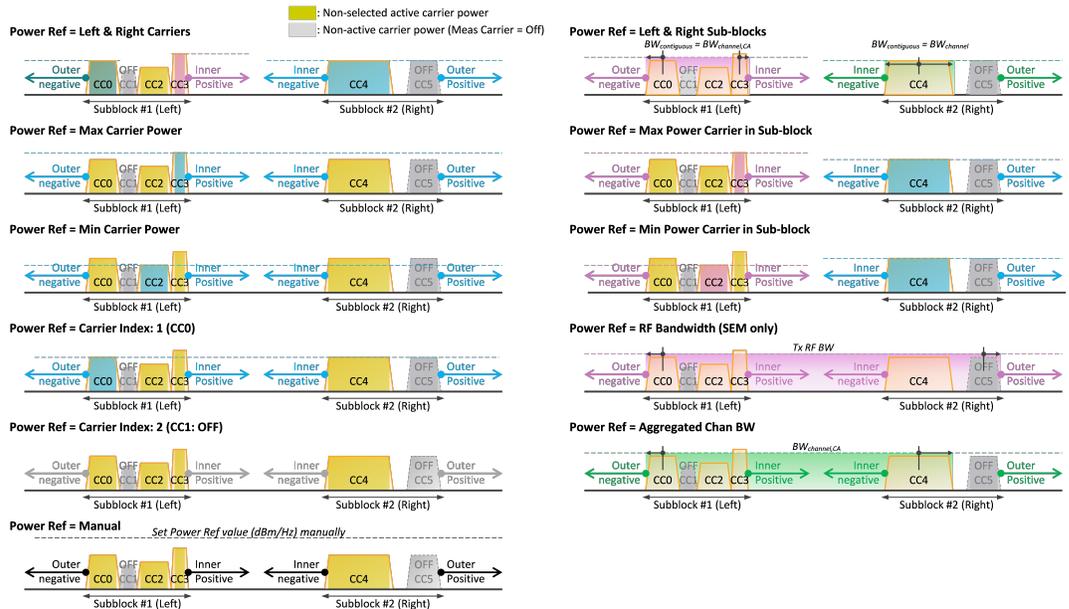

Type	Option	Description
Carrier Index	CINdex	Power of the specified carrier is the reference of measurement. If Measure Carriers of this carrier index is off, the reference power and all the relative power results are NAN . Relative limits are not evaluated
Manual	MANual	Power or PSD specified by the user is the reference of measurement
Aggregated Chan BW LTEAFDD, LTEATDD, 5G NR only	ACBandwidth	The assigned aggregated channel bandwidth power which is measured with a rectangular filter with measurement bandwidth specified as aggregated channel bandwidth based on the definition of each 3GPP standard. Calculated from the carrier configuration including SCS (Power Meas), the smallest SCS among the enabled SCSs of the selected component carrier. If Measure Carriers of all the carriers are off, the reference power and all the relative power results are NAN . Relative limits are not evaluated
Max Power Carrier in Sub-block	MPCSubblock	Maximum carrier power among the sub-block carriers of Measure Carrier On is the reference of measurement. If Measure Carriers of all the carriers in a sub-block are off, the reference power of the sub-block and all the relative power results referring to this sub-block are NAN , and these relative limits are not evaluated
Total Multicarriers MSR only	TMCarrriers	Total power of multi carriers is the power reference of measurement. Each carrier power is calculated with its own carrier configuration settings
Min Power Carrier in Sub-block 5G NR only	MINSubbloc	Minimum carrier power among the sub-block carriers of Measure Carrier On is the reference of measurement. If Measure Carriers of all the carriers in a sub-block are off, the reference power of the sub-block and all the relative power results referring to this sub-block are NAN , and these relative limits are not evaluated
Left & Right Sub-blocks 5G NR only	LRSubblocks	The reference depends on the number of Component Carriers (CC) and Carrier Allocation as follows: <ul style="list-style-type: none"> – Num of CC is 1: the carrier power is the reference – Num of CC is 2 or more & Carrier Allocation is Contiguous: Aggregated Channel power is the reference – Num of CC is 2 or more & Carrier Allocation is Non-Contiguous: Aggregated powers of left and right sub-blocks are the references. Left and right sub-blocks are determined by component carrier configuration

The powers of carriers are not included in the reference power when their Measure Carriers are Off. When Measure Carriers of all the carriers in a sub-block are Off, the reference power and all the relative power results are **Nan**. Therefore, relative limits are not evaluated.

Measurement Type = Total Power Ref

Measurement Type = PSD Ref

Remote

[:SENSe] :ACPower:CARRier[1] | 2:PREference:TYPE LRCarriers | MPCarrier |

Command	<code>CINdEx MANuAl MPCSubblock ACBandwidth TMCarrriers MINPcarrier MINSubblock LRSubblocks</code> <code>[:SENSe] :ACPoweR :CARRier [1] 2 :PREFeRence :TYPE ?</code>
Example	<code>:ACP:CARR:PREF:TYPE CIND</code> <code>:ACP:CARR:PREF:TYPE?</code>
Notes	Available only in MSR, LTEAFDD, LTEATDD and 5G NR Modes <code>ACBandwidth</code> is available only in LTEAFDD, LTEATDD and 5G NR <code>TMCarrriers</code> is available only in MSR <code>MINPcarrier</code> , <code>MINSubblock</code> , and <code>LRSubblocks</code> are available only in 5G NR Carrier subopcode: 1 for BTS (Downlink), 2 for MS (Uplink). Default is BTS Note that Carrier subopcode 2 is not supported in some Modes. In those cases, Carrier subopcode 1 is used for both BTS and MS and commands with subopcode 2 are accepted without error but ignored
Preset	<code>MPCarrier</code>
State Saved	Saved in instrument state

Power Ref State (Remote Command Only)

Remote Command	<code>[:SENSe] :ACPoweR :CARRier [1] 2 :AUTO [:STATe] OFF ON 0 1</code> <code>[:SENSe] :ACPoweR :CARRier [1] 2 :AUTO [:STATe] ?</code>
Example	<code>:ACP:CARR:AUTO OFF</code> <code>:ACP:CARR:AUTO?</code>
Preset	<code>ON</code>
State Saved	Saved in instrument state
Range	Auto Man
Backwards Compatibility SCPI	<code>[:SENSe] :MCPoweR :CARRier [1] 2 :AUTO [:STATe]</code>

Total Power Ref

Sets manual total power reference.

This control has two different forms, depending on the currently-selected Mode:

- "Total Power Ref (Modes: SA, WCDMA, VMA, SRComms)" on page 1834
- "Total Power Ref (Modes: LTEAFDD, LTEATDD, 5G NR, MSR)" on page 1834

Total Power Ref (Modes: SA, WCDMA, VMA, SRComms)

This is used when Power Ref is Manual and "Measurement Type" on page 1829 is Total Power.

Remote Command	<code>[:SENSe]:ACPower:CARRier[1] 2[:POWer] <real></code> <code>[:SENSe]:ACPower:CARRier[1] 2[:POWer]?</code>
Example	<code>:ACP:CARR 10</code> <code>:ACP:CARR?</code>
Notes	Although the default value is defined, the value is recalculated by the measurement result just after measurement Carrier subopcode: 1 for BTS (Downlink), 2 for MS (Uplink). Default is BTS Note that Carrier subopcode 2 is not supported in some Modes. In those cases, Carrier subopcode 1 is used for both BTS and MS and commands with subopcode 2 are accepted without error but ignored The Unit Terminators differ depending on whether or not the mode supports Y Axis Unit and also which Y Axis Unit is selected
Dependencies	Available only when Measurement Type is TPRef , otherwise this is grayed-out
Preset	0.0
State Saved	Saved in instrument state
Min/Max	-200 dBm/200 dBm
Backwards Compatibility SCPI	<code>[:SENSe]:MCPower:CARRier[1] 2[:POWer]</code>

Total Power Ref (Modes: LTEAFDD, LTEATDD, 5G NR, MSR)

Sets the multi-carrier power reference. This is used when Power Ref is Manual and "Measurement Type" on page 1829 is Total Power.

When set to Auto, the carrier power result reflects the measured power value in the selected reference carrier.

When set to Man, the result is referenced to the last measured value, or you may specify the reference for the multi-carrier power measurement. Relative values are displayed, referenced to the "Power Reference" value.

Remote Command	<code>[:SENSe]:ACPower:CARRier[1] 2[:POWer] <real></code> <code>[:SENSe]:ACPower:CARRier[1] 2[:POWer]?</code>
Example	<code>:ACP:CARR 10</code> <code>:ACP:CARR?</code>
Notes	Although the default value is defined, the value is recalculated by the measurement result just after measurement

	Carrier subopcode: 1 for BTS (Downlink), 2 for MS (Uplink). Default is BTS Note that Carrier subopcode 2 is not supported in some Modes. In those cases, Carrier subopcode 1 is used for both BTS and MS and commands with subopcode 2 are accepted without error but ignored The Unit Terminators differ depending on whether or not the mode supports Y Axis Unit and also which Y Axis Unit is selected
Dependencies	Enabled when "Measurement Type" on page 1829 is Total Power and "Power Ref" on page 1829 is Manual
Preset	0.0
State Saved	Saved in instrument state
Min/Max	-200 dBm/200 dBm
Backwards Compatibility SCPI	<code>[:SENSe] :MCPower :CARRier [1] 2 [:POWer]</code>

PSD Ref

Sets manual PSD reference.

This control has two different forms, depending on the currently-selected Mode:

- "PSD Ref (Modes: SA, WCDMA, VMA, SRComms)" on page 1835
- "PSD Ref (Modes: LTEAFDD, LTEATDD, 5GNR, MSR)" on page 1836

PSD Ref (Modes: SA, WCDMA, VMA, SRComms)

This is used when "Power Ref" on page 1829 is Manual and "Measurement Type" on page 1829 is PSD.

Sets the power spectral density in the carrier (main channel) that is used to compute the relative power spectral density values for the offsets when **Measurement Type** is PSD Ref.

Remote Command	<code>[:SENSe] :ACPPower :CARRier [1] 2 :CPSD <real></code> <code>[:SENSe] :ACPPower :CARRier [1] 2 :CPSD?</code>
Example	<code>:ACP:CARR:CPSD 25</code> <code>:ACP:CARR:CPSD?</code>
Notes	Although the default value is defined, the value is recalculated by the measurement result just after measurement Carrier subopcode: 1 for BTS (Downlink), 2 for MS (Uplink). Default is BTS Note that Carrier subopcode 2 is not supported in some Modes. In those cases, Carrier subopcode 1 is used for both BTS and MS and commands with subopcode 2 are accepted without error but ignored
Dependencies	Available only when Measurement Type is PSDRef , otherwise grayed-out

Couplings	The value of PSD Ref is automatically converted when PSD Unit is changed
Preset	0.0
State Saved	Saved in instrument state

Power Ref State (Backwards Compatibility SCPI)

Sets the Power Reference State to auto or manual.

Example	<pre>:ACP:CARR:AUTO OFF :ACP:CARR:AUTO? :MCP:CARR:AUTO ON :MCP:CARR:AUTO?</pre>
Notes	<p>For backwards compatibility with legacy SA and WCDMA, this command is supported</p> <p>When ON, corresponds to the Ref Carrier of the "Power Ref" on page 1829 selection</p> <p>When OFF, corresponds to the Manual of the Power Ref selection</p>
Preset	ON
State Saved	Saved in instrument state
Range	Auto Man
Backwards Compatibility SCPI	<pre>[:SENSe]:ACPower:CARRier[1] 2:AUTO[:STATE] OFF ON 0 1 [:SENSe]:ACPower:CARRier[1] 2:AUTO[:STATE]? [:SENSe]:MCPower:CARRier[1] 2:AUTO[:STATE] OFF ON 0 1 [:SENSe]:MCPower:CARRier[1] 2:AUTO[:STATE]?</pre>

PSD Ref (Modes: LTEAFDD, LTEATDD, 5GNR, MSR)

Sets manual PSD reference. This is used when "Power Ref" on page 1829 is **Manual** and "Measurement Type" on page 1829 is **PSD**.

Sets the power spectral density in the carrier (main channel) that is used to compute the relative power spectral density values for the offsets when **Measurement Type** is set to **PSD Ref**. When the **PSD Ref** state is set to **Auto**, this will be set to the measured carrier power spectral density.

Remote Command	<pre>[:SENSe]:ACPower:CARRier[1] 2:CPSD <real> [:SENSe]:ACPower:CARRier[1] 2:CPSD?</pre>
Example	<pre>:ACP:CARR:CPSD 25 :ACP:CARR:CPSD?</pre>
Notes	Although the default value is defined, the value is recalculated by the measurement result just after

	measurement Carrier subopcode: 1 for BTS (Downlink), 2 for MS (Uplink). Default is BTS Note that Carrier subopcode 2 is not supported in some Modes. In those cases, Carrier subopcode 1 is used for both BTS and MS and commands with subopcode 2 are accepted without error but ignored
Dependencies	Enabled when " Measurement Type " on page 1829 is PSD Reference and Power Ref is Manual
Couplings	The value of PSD is automatically converted when PSD Unit is changed
Preset	0.0
State Saved	Saved in instrument state
Min/Max	-999/999

PSD Unit

Sets the unit bandwidth for Power Spectral Density. The available units are dBm/Hz and dBm/MHz.

Remote Command	<code>:UNIT:ACPower:POWer:PSD DBMHZ DBMMHZ</code> <code>:UNIT:ACPower:POWer:PSD?</code>
Example	<code>:UNIT:ACP:POW:PSD DBMMHZ</code> <code>:UNIT:ACP:POW:PSD?</code>
Dependencies	Enabled when " Measurement Type " on page 1829 is PSD Reference
Couplings	When the PSD unit is changed, the PSD reference result of <code>:MEAS READ FETCH:ACP[n]?</code> is also changed by the PSD unit basis (in either dBm/Hz or dBm/MHz)
Preset	<code>DBMHZ</code>
State Saved	Saved in instrument state
Range	dBm/Hz dBm/MHz

Power Results

Enables you to select Power Result Type:

- **OUTer** – Results of outer offsets and carrier powers are shown in this view. Inner offset results are not shown even when Carrier Allocation is Non-Contiguous
- Outer & Inner (**OINNeR**) – Results of both inner and outer offsets are shown in this view

Remote Command	<code>:DISPlay:ACPower:VIEW:RTYPE OUTer OINNeR</code> <code>:DISPlay:ACPower:VIEW:RTYPE?</code>
Example	<code>:DISP:ACP:VIEW:RTYP OUT</code> <code>:DISP:ACP:VIEW:RTYP?</code>

Dependencies	Only available in MSR, LTEAFDD, LTEATDD and 5G NR Modes
Preset	OUTer
State Saved	Saved in instrument state
Range	Outer Outer & Inner

Points

Sets the number of points taken per sweep, and displayed in the traces. Using more points provides greater resolution. Using fewer points compacts the data and decreases the time required to access a trace over the remote interface.

When Auto Points is on, the analyzer determines the number of points using the following calculation formula.

$$\# \text{ points} = \text{ceil}(\text{Span} / (\text{Rbw} * 1\text{e}3)) * 1000 + 1$$

Where $\text{ceil}(x)$ returns the smallest possible integer value that is greater than or equal to x .

Remote Command	<code>[:SENSe]:EVM:ACP:POINts <integer></code> <code>[:SENSe]:EVM:ACP:POINts?</code> <code>[:SENSe]:EVM:ACP:POINts:AUTO ON OFF 1 0</code> <code>[:SENSe]:EVM:ACP:POINts:AUTO?</code>
Example	<code>:EVM:ACP:POIN 1001</code> <code>:EVM:ACP:POIN?</code> <code>:EVM:ACP:POIN:AUTO ON</code> <code>:EVM:ACP:POIN:AUTO?</code>
Preset	1001 ON
State Saved	Saved in instrument state Yes
Min	101
Max	100,001

Noise Correction

Sets the measurement noise floor correction function to On or Off. On enables measurement noise correction when the measured power in the reference channel or any offset is close to the noise floor of the instrument. Off turns these corrections off.

In instruments with the noise floor extensions option (option NFE) enabled, there are two ways to compensate for the analyzer noise floor: through the NFE and through this noise corrections control. The techniques are results are similar but not identical. NFE uses a model of the analyzer noise floor, adapted to the current conditions such as center frequency, RBW and ambient temperature. The parameters of this model are measured in the factory or field calibration in a highly averaged measurement. So they are consistent. However, because the model is imperfect, the corrections are imperfect. Using NFE is very convenient; the user need not wait for the ACP noise corrections calibration to occur. The ACP NC calibration, though, has advantages of being measured very recently, at the current ambient, and the exact center frequency, with no requirement that the model be perfect. So it will often (but not always) have slightly better dynamic range. If both ACP NC is turned on and NFE is turned on, the instrument uses only the ACP NC. When ACP NC is turned off but NFE is on, NFE is used and performance should still be excellent.

When **Meas Method** is Fast Power, HW supported noise correction works when either or both of Noise Correction and NFE is on.

Remote Command	<code>[:SENSe]:ACPower:CORRection:NOISe[:AUTO] OFF ON 0 1</code> <code>[:SENSe]:ACPower:CORRection:NOISe[:AUTO]?</code>
Example	<code>:ACP:CORR:NOIS OFF</code> <code>:ACP:CORR:NOIS?</code>
Dependencies	Unavailable when Meas Method is set to RBW or Fast
Preset	0
State Saved	Saved in instrument state
Range	<code>OFF ON</code>

Offset

Enables you to configure offset parameters for the ACP measurement in the EVM measurement based on the same capture.

Offset Frequency Define

Enables you to select offset frequency definition. Each standard defines each offset frequency from Carrier.

For example, 3GPP2 requires the “From Carrier Center to Integ BW Closer Edge” definition. LTE conformance test requires “From Carrier Edge to Integ BW Center” and/or “From Carrier Edge to Integ BW Closer Edge” definition.

CTOCenter From the lowermost carrier center frequency (for lower offset), the uppermost carrier center frequency (for upper offset) to the center frequency of each Offset Integ BW

3 5G NR Mode
3.7 Modulation Analysis Measurement

CTOEdge	From the lowermost carrier center frequency (for lower offset), the uppermost carrier center frequency (for upper offset) to the closest edge frequency of each Offset Integ BW
ETOCenter	From the lowermost carrier center frequency - spacing of this carrier /2 (for lower offset), the uppermost carrier center frequency + spacing of this carrier /2 (for upper offset) to the center frequency of each Offset Integ BW
ETOEdge	From the lowermost carrier center frequency - spacing of this carrier /2 (for lower offset), the uppermost carrier center frequency + spacing of this carrier /2 (for upper offset) to the closest edge of each Offset Integ BW
RTOCenter 5G NR only	From either the lower or upper RF BW** edge frequency to the center frequency of each Offset Integ BW
RTOEdge 5G NR only	From either the lower or upper RF BW** edge frequency to the closest edge frequency of each Offset Integ BW
RCTOCenter 5G NR only	From the center frequency of RF BW** to the center frequency of each Offset Integ BW
SCTOCenter 5G NR only	From the center frequency of sub-block** to the center frequency of each Offset Integ BW

** RF BW = $BW_{channel,CA}$ which is defined in each 3GPP standard, regardless of “Measure Carrier” for the uppermost and the lowermost carriers being Enabled or Disabled. When the Number of Component Carrier = 1, RF BW = $BW_{channel} = 2 \times F_{offset,RAT}$

** sub-block (bandwidth) = $BW_{channel,block}$ which is defined in each 3GPP standard, regardless of “Measure Carrier” for the uppermost and the lowermost carriers being Enabled or Disabled. When the Number of Component Carrier within each sub-block = 1, sub-block (bandwidth) = $BW_{channel} = 2 \times F_{offset,RAT}$.

See "Diagrams for Offset Freq Define" on page 1841.

Modes other than MSR, LTEAFDD, LTEATDD, 5G NR

Diagrams for Offset Freq Define

Details depend on the selected mode.

Diagram for Modes other than MSR, LTEAFDD, LTEATDD, 5G NR

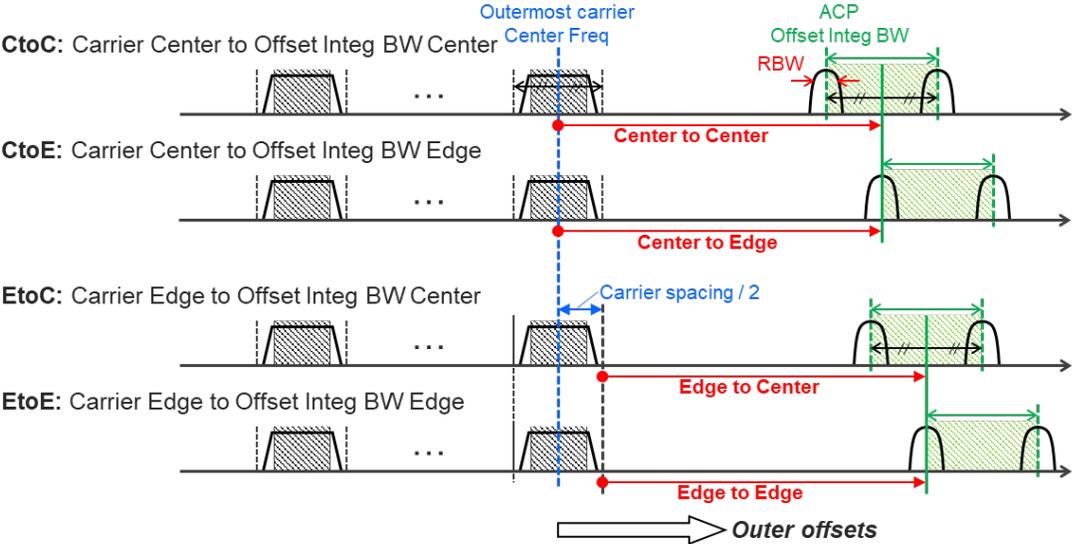

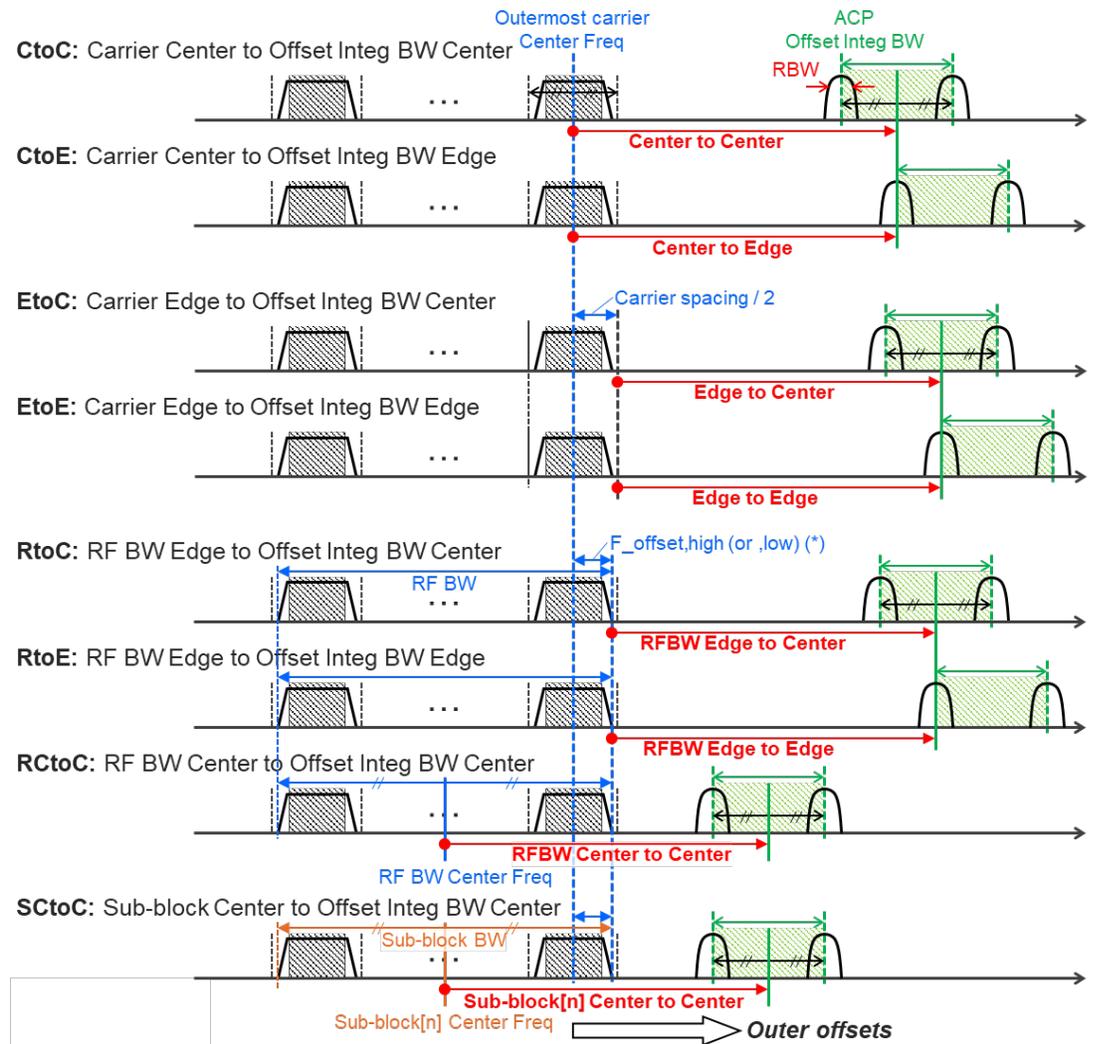

Diagram for MSR, LTEAFDD, LTEATDD, 5G NR

Note:

RF BW Edge and Outermost Carrier Edge are not always the same.
e.g.) 5G NR (3GPP) defines BW_channel, CA which calculates $F_{offset,high}$ and $F_{offset,low}$ asymmetrically with SCS shift.

(*) For MSR, $F_{offset,high} (or ,low) = F_{offset,RAT,high} (or ,low)$

Offset Freq

This parameter determines the frequency difference between the center of the main channel and the center of the carrier. Each **Offset Freq** state value is entered individually by selecting the desired carrier.

3 5G NR Mode
3.7 Modulation Analysis Measurement

The list contains up to six (6) entries, depending on the mode selected, for offset frequencies. Each offset frequency in the list corresponds to a reference bandwidth in the bandwidth list.

An offset frequency of zero turns the display of the measurement for that offset off, but the measurement is still made and reported. You can turn off (not use) specific offsets with the `[:SENSe]:ACP:OFFSet:LIST:STATe` command.

Turning the offset off has the same effect as setting the frequency of the offset to 0 Hz and will cause it to be removed from the results screen.

Remote Command	<pre>[:SENSe]:ACP:OFFSet[1] 2[:OUTer]:LIST[:FREQuency] <freq>,... [:SENSe]:ACP:OFFSet[1] 2[:OUTer]:LIST[:FREQuency]? [:SENSe]:ACP:OFFSet[1] 2[:OUTer]:LIST:STATe OFF ON 0 1,... [:SENSe]:ACP:OFFSet[1] 2[:OUTer]:LIST:STATe?</pre>
Example	<pre>:ACP:OFFS1:LIST 0,0,0,0,0,0 :ACP:OFFS1:LIST? :ACP:OFFS2:LIST:STAT 1,1,0,0,0,0 :ACP:OFFS2:LIST:STAT?</pre>
Notes	<p>Offset subopcode. 1 for BTS (Downlink), 2 for MS (Uplink). Default is BTS</p> <p>Some modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored</p> <p>When setting these values remotely, the position in the list sent corresponds to the offset. Missing values are not permitted, unless the number of values sent is greater than the number of carriers, then subsequent values will be ignored</p>
Couplings	Changing Offset Frequency might affect the Span. See the Span control section for details
Preset	When "Max Num of Offsets" on page 689 is set to 12, the preset value of Offset G ~ L is the same as the Offset F value

Backwards Compatibility SCPI	[:SENSe] :MCPower :OFFSet [1] 2 :LIST [:FREQUENCY]

Integ BW

Sets the Integration Bandwidth for the offsets. Each resolution bandwidth in the list corresponds to an offset frequency in the list defined by [:SENSe] :ACP:OFFSet [n] [:OUTer] :LIST [:FREQUENCY].

Enter each value individually by selecting the desired offset, then enter the Offset Integration Bandwidth.

You can turn off (not use) specific offsets with the [:SENSe] :ACP:OFFSet [n] [:OUTer] :LIST:STATe command.

Remote Command	[:SENSe] :ACP:OFFSet [1] 2 [:OUTer] :LIST: BANDwidth [:INTEgration] <freq>, ... [:SENSe] :ACP:OFFSet [1] 2 [:OUTer] :LIST: BANDwidth [:INTEgration] ?
Example	:ACP:OFFS2:LIST:BAND 2MHz,2MHz,2MHz,2MHz,2MHz,2MHz :ACP:OFFS2:LIST:BAND?
Notes	Offset subopcode: 1 for BTS (Downlink), 2 for MS (Uplink). Default is BTS Some modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored When setting these values remotely, the position in the list sent corresponds to the offset. Missing values are not permitted that is if you want to change the second value, you must send all values up to it. Subsequent values will remain unchanged, unless the number of values sent is greater than the number of carriers, then subsequent values will be ignored

Couplings	Changing Integ BW might affect the Span. See Span section for details

Offset Side

Specifies which offset side to measure.

Enables you to turn off (not use) specific offsets with `[:SENSe]:ACPower:OFFSet[1]|2[:OUTer]:LIST:SIDE`.

NEGative	Negative (lower) sideband only
BOTH	Both of the negative (lower) and positive (upper) sidebands
POSitive	Positive (upper) sideband only

The figure below shows the relation between the negative/positive offset side setups and the upper/lower results in the MSR, LTEAFDD and LTEATDD Mode.

Remote Command	<code>[:SENSE]:ACPower:OFFSet[1] 2[:OUTer]:LIST:SIDE NEGative BOTH POSitive, ...</code> <code>[:SENSE]:ACPower:OFFSet[1] 2[:OUTer]:LIST:SIDE?</code>
Example	<code>:ACP:OFFS:LIST:SIDE BOTH</code> <code>:ACP:OFFS:LIST:SIDE?</code>
Notes	OFFSet1 is for BTS, 2 for MS. Default is BTS Some modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored If you set POS or NEG in an offset, result of the inactive side returns -999
Preset	When " Max Num of Offsets " on page 689 is set to 12, the preset value of Offset G ~ L is BOTH BOTH, BOTH, BOTH, BOTH, BOTH, BOTH BOTH, BOTH, BOTH, BOTH, BOTH, BOTH
State Saved	Saved in instrument state
Range	NEGative BOTH POSitive

Method

Allows you to turn RRC filtering of each offset on or off. The value (roll off) for the filter will be set to the value of the **Filter Alpha** parameter.

Remote Command	<code>[:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST:FILTer[:RRC][:STATe] ON OFF 1 0,...</code> <code>[:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST:FILTer[:RRC][:STATe]?</code>
Example	<code>:ACP:OFFS:LIST:FILT 1,0,0</code> <code>:ACP:OFFS:LIST:FILT?</code>
Notes	1 ON = RRC Weighted, 0 OFF = Integ BW Some modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored
Preset	When " Max Num of Offsets " on page 689 is set to 12, the preset value of Offset G ~ L is the same as the Offset F value

	Mode	Values
	SA	0, 0, 0, 0, 0, 0 0, 0, 0, 0, 0, 0
	WCDMA	1, 1, 1, 1, 1, 1 1, 1, 1, 1, 1, 1
	LTEAFDD, LTEATDD, 5G NR, MSR	0, 0, 0, 0, 0, 0 0, 0, 0, 0, 0, 0
	Radio Test	0, 0, 0, 0, 0, 0
State Saved	Saved in instrument state	
Range	Integ BW RRC Weighted	

Filter Alpha

Sets the alpha value for the RRC Filter for each offset.

Remote Command	<code>[:SENSe] :ACPpower:OFFSet [1] 2 [:OUTer] :LIST:FILTer:ALPHa <real>, ...</code> <code>[:SENSe] :ACPpower:OFFSet [1] 2 [:OUTer] :LIST:FILTer:ALPHa?</code>	
Example	<code>:ACP:OFFS:LIST:FILT:ALPH 0.5,0.5,0.5,0.5,0.5,0.5</code> <code>:ACP:OFFS:LIST:FILT:ALPH?</code>	
Notes	Some modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored	
Preset	When " Max Num of Offsets " on page 689 is set to 12, the preset value of Offset G ~ L is the same as the Offset F value	
	SA	0.22,0.22,0.22,0.22,0.22,0.22 0.22,0.22,0.22,0.22,0.22,0.22

	LTEAFDD, LTEATDD, 5G NR, MSR	0.22,0.22,0.22,0.22,0.22,0.22 0.22,0.22,0.22,0.22,0.22,0.22
State Saved	Saved in instrument state	
Min/Max	0.01/1.00	

Limits

Enables you to configure limits parameters for the ACP measurement in the EVM measurement based on the same capture.

Limit Test

Turns limit checking for each offset On or Off. The limits may be specified within the Offset menu, for each offset, both sides of the carrier. For results that fail the limit, a red F is appended. In the Combined view, the bar turns red.

Remote Command	<code>:CALCulate:ACPower:LIMit:STATe OFF ON 0 1</code> <code>:CALCulate:ACPower:LIMit:STATe?</code>
Example	<code>:CALC:ACP:LIM:STAT OFF</code> <code>:CALC:ACP:LIM:STAT?</code>
Preset	SA OFF WCDMA, LTEAFDD, LTEATDD, 5G NR, MSR ON
State Saved	Saved in instrument state
Range	ON OFF
Backwards Compatibility SCPI	<code>[:SENSe]:MCPower:LIMit[:STATe]</code> <code>[:SENSe]:ACPower:LIMit[:STATe]</code>

Offset Freq

This parameter determines the frequency difference between the center of the main channel and the center of the carrier. Each **Offset Freq** state value is entered individually by selecting the desired carrier.

The list contains up to six (6) entries, depending on the mode selected, for offset frequencies. Each offset frequency in the list corresponds to a reference bandwidth in the bandwidth list.

An offset frequency of zero turns the display of the measurement for that offset off, but the measurement is still made and reported. You can turn off (not use) specific offsets with the `[:SENSe]:ACP:OFFSet:LIST:STATe` command.

Turning the offset off has the same effect as setting the frequency of the offset to 0 Hz and will cause it to be removed from the results screen.

Remote Command	<code>[:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST[:FREQuency] <freq>,...</code> <code>[:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST[:FREQuency]?</code> <code>[:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST:STATe OFF ON 0 1,...</code> <code>[:SENSe]:ACPower:OFFSet[1] 2[:OUTer]:LIST:STATe?</code>
Example	<code>:ACP:OFFS1:LIST 0,0,0,0,0,0</code> <code>:ACP:OFFS1:LIST?</code> <code>:ACP:OFFS2:LIST:STAT 1,1,0,0,0,0</code> <code>:ACP:OFFS2:LIST:STAT?</code>
Notes	Offset subopcode. 1 for BTS (Downlink), 2 for MS (Uplink). Default is BTS Some modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored When setting these values remotely, the position in the list sent corresponds to the offset. Missing

3 5G NR Mode

Abs Limit

Enters an absolute limit value, which sets the absolute amplitude levels to test against for each of the custom offsets. The list must contain six (6) entries. If there is more than one offset, the offset closest to the carrier channel is the first one in the

list. `[:SENSe]:ACP:OFFSet[n][:OUTer]:LIST:TEST` selects the type of testing to be done at each offset.

You can turn off (not use) specific offsets with the `[:SENSe]:ACP:OFFSet[n][:OUTer]:LIST:STATE` command.

The query returns the six (6) sets of real numbers that are the current absolute amplitude test limits.

Remote Command	<code>[:SENSe]:ACP:OFFSet[1] 2[:OUTer]:LIST:ABSolute < real>,...</code> <code>[:SENSe]:ACP:OFFSet[1] 2[:OUTer]:LIST:ABSolute?</code>										
Example	<code>:ACP:OFFS2:LIST:ABS -10,-10,-10,-10,-10,-10</code> <code>:ACP:OFFS2:LIST:ABS?</code>										
Notes	Offset subopcode. 1 for BTS (Downlink), 2 for MS (Uplink). Default is BTS Some modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored										
Preset	When "Max Num of Offsets" on page 689 is set to 12, the preset value of Offset G ~ L is the same as the Offset F value										
	<table border="1"> <thead> <tr> <th>Modes</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>SA</td> <td>0dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm 0dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm</td> </tr> <tr> <td>WCDMA</td> <td>50 dBm, 50 dBm, 50 dBm, 50 dBm, 50 dBm, 50 dBm 50 dBm, 50 dBm, 50 dBm, 50 dBm, 50 dBm, 50 dBm</td> </tr> <tr> <td>LTEAFDD, LTEATDD, MSR</td> <td>-8.45, -8.45, -8.45, -8.45, -8.45, -8.45 -50.0, -50.0, -50.0, -50.0, -50.0, -50.0</td> </tr> <tr> <td>5G NR</td> <td>4.92, 4.92, 4.92, 4.92, 4.92, 4.92 -50.0, -50.0, -50.0, -50.0, -50.0, -50.0</td> </tr> </tbody> </table>	Modes	Values	SA	0dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm 0dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm, 0 dBm	WCDMA	50 dBm, 50 dBm, 50 dBm, 50 dBm, 50 dBm, 50 dBm 50 dBm, 50 dBm, 50 dBm, 50 dBm, 50 dBm, 50 dBm	LTEAFDD, LTEATDD, MSR	-8.45, -8.45, -8.45, -8.45, -8.45, -8.45 -50.0, -50.0, -50.0, -50.0, -50.0, -50.0	5G NR	4.92, 4.92, 4.92, 4.92, 4.92, 4.92 -50.0, -50.0, -50.0, -50.0, -50.0, -50.0

Rel Limit (Car)

Enters a relative limit value for the carrier level. This sets the amplitude levels to test against for the specified offsets.

The amplitude level is relative to the carrier amplitude. If multiple offsets are available, the list contains six (6) entries. The offset closest to the carrier channel is the first one in the list.

`[:SENSe]:ACP:OFFSet[n][:OUTer]:LIST:TEST` selects the type of testing to be done at each offset.

You can turn off (not use) specific offsets with the `[:SENSe]:ACP:OFFSet[n][:OUTer]:LIST:STATE` command.

The query returns the six (6) sets of real numbers that are the current amplitude test limits, relative to the carrier, for each offset.

Offset[n] n = 1 is base station and n = 2 is mobiles. The default is base station (1).

Remote Command	<code>[:SENSe]:ACP:OFFSet[1] 2[:OUTer]:LIST:RCARrier <real>,...</code> <code>[:SENSe]:ACP:OFFSet[1] 2[:OUTer]:LIST:RCARrier?</code>												
Example	<code>:ACP:OFFS2:LIST:RCAR 0,0,0,0,0,0</code> <code>:ACP:OFFS2:LIST:RCAR?</code>												
Notes	Offset subopcode. 1 for BTS (Downlink), 2 for MS (Uplink). Default is BTS Some modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored

Rel Limit (PSD)

Enters a relative limit value for the level of the power spectral density. This sets the amplitude levels to test against for any custom offsets. The amplitude level is relative to the power spectral density. If multiple offsets are available, the list contains six (6) entries. The offset closest to the carrier channel is the first one in the list.

`[:SENSe]:ACP:OFFSet[n][:OUTer]:LIST:TEST` selects the type of testing to be done at each offset.

You can turn off (not use) specific offsets with the `[:SENSe]:ACP:OFFSet[n][:OUTer]:LIST:STATE` command.

The query returns the six (6) sets of real numbers that are the current amplitude test limits, relative to the power spectral density, for each offset.

Offset[n] n = 1 is base station and n = 2 is mobiles. The default is base station (1).

Remote Command	<code>[:SENSe]:ACP:OFFSet[1] 2[:OUTer]:LIST:RPSDensity <rel_amp>,...</code> <code>[:SENSe]:ACP:OFFSet[1] 2[:OUTer]:LIST:RPSDensity?</code>										
Example	<code>:ACP:OFFS2:LIST:RPSD 10,10,10,10,10,10</code> <code>:ACP:OFFS2:LIST:RPSD?</code>										
Notes	Offset subopcode. 1 for BTS (Downlink), 2 for MS (Uplink). Default is BTS Some modes do not support Offset subopcode 2. In those cases, commands with subopcode 2 are accepted without error but ignored										
Preset	When " Max Num of Offsets " on page 689 is set to 12, the preset value of Offset G ~ L is the same as the Offset F value

Fail Mask

Accesses a menu that enables you to select one of the logics for the fail conditions between the measurement results and the test limits. The setting defines the type of testing to be done at any custom offset frequencies. The measured powers are tested against the absolute values defined with `[:SENSe]:ACP:OFFSet[n][:OUTer]:LIST:ABSolute`, or the relative values defined with `[:SENSe]:ACP:OFFSet[n][:OUTer]:LIST:RPSDensity` and `[:SENSe]:ACP:OFFSet[n][:OUTer]:LIST:RCARrier`.

You can turn off (not use) specific offsets with the `[:SENSe]:ACP:OFFSet[n][:OUTer]:LIST:STATE` command.

Absolute	ABSolute	Fail is shown if one of the absolute ACP measurement results is larger than the limit for Abs Limit
Relative	RELative	Fail is shown if one of the relative ACP measurement results is larger than the limit for Rel Lim (Car) or Rel Lim (PSD)
Abs AND Rel	AND	Fail is shown if one of the absolute ACP measurement results is larger than the limit for Abs Limit and one of the relative ACP measurement results is larger than the limit for Rel Lim (Car) or Rel Lim (PSD)
Abs OR Rel	OR	Fail is shown if one of the absolute ACP measurement results is larger than the limit for Abs Limit or one of the relative ACP measurement results is larger than the limit for Rel Lim (Car) or Rel Lim (PSD)

Remote Command	<code>[:SENSe]:ACP:Power:OFFSet[1] 2[:OUTer]:LIST:TEST ABSolute AND OR RELative,...</code> <code>[:SENSe]:ACP:Power:OFFSet[1] 2[:OUTer]:LIST:TEST?</code>

Inner Offset

Enables you to configure inner offset parameters for the ACP measurement in the EVM measurement based on the same capture.

Offset Frequency Define

Allows you to select "Offset" definition:

CTOCenter	From the lowermost carrier center frequency (for lower offset), the uppermost carrier center frequency (for upper offset) to the center frequency of each Offset Integ BW
CTOEdge	From the lowermost carrier center frequency (for lower offset), the uppermost carrier center frequency (for upper offset) to the closest edge frequency of each Offset Integ BW
ETOCenter	From the lowermost carrier center frequency - spacing of this carrier /2 (for lower offset), the uppermost carrier center frequency + spacing of this carrier /2 (for upper offset) to the center frequency of each Offset Integ BW
ETOEdge	From the lowermost carrier center frequency - spacing of this carrier /2 (for lower offset), the uppermost carrier center frequency + spacing of this carrier /2 (for upper offset) to the closest edge frequency of each Offset Integ BW
STOCenter	From either the lower or upper sub-block edge frequency to the center frequency of each Offset Integ BW
STOEdge	From either the lower or upper sub-block edge frequency to the closest edge frequency of each Offset Integ BW
SCTOCenter	From the center frequency of sub-block** to the center frequency of each Offset Integ BW

5G NR only

** sub-block (bandwidth) = $BW_{channel,block}$ which is defined in each 3GPP standard, regardless of "Measure Carrier" for the uppermost and the lowermost carriers being Enabled or Disabled. When the Number of Component Carrier within each sub-block = 1, sub-block (bandwidth) = $BW_{channel} = 2 \times F_{offset,RAT}$.

See "Diagram for Offset Freq Define" on page 1856

Diagram for Offset Freq Define

Note:

RF BW Edge and Outermost Carrier Edge are not always same.
 e.g.) 5G NR (3GPP) defines BW_channel,CA which calculates $F_{\text{offset,high}}$ and $F_{\text{offset,low}}$ asymmetrically with SCS shift.

(*) For MSR, $F_{\text{offset,high}} \text{ (or ,low)} = F_{\text{offset,RAT,high}} \text{ (or ,low)}$

Offset Freq

This parameter determines the frequency difference between the center of the main channel and the center of the carrier. When set to Offset to Edge, this parameter determines the frequency difference between the center of the main channel and the near edge of the offset.

Each **Offset Freq** state value is entered individually by selecting the desired carrier. Use the Enabled checkbox to turn the Offset Freq State on and off.

The list contains up to six (6) entries, depending on the mode selected, for offset frequencies. Each offset frequency in the list corresponds to a reference bandwidth in the bandwidth list.

An offset frequency of zero turns the display of the measurement for that offset off, but the measurement is still made and reported. You can turn off (not use) specific offsets with `[:SENSe] :ACP:OFFSet [n] :INNeR:LIST:STATe`.

Turning the offset off has the same effect as setting the frequency of the offset to 0 Hz and will cause it to be removed from the results screen.

Remote Command	<pre>[:SENSe] :ACP:OFFSet [1] 2 :INNeR:LIST [:FREQUency] <freq>, ... [:SENSe] :ACP:OFFSet [1] 2 :INNeR:LIST [:FREQUency] ? [:SENSe] :ACP:OFFSet [1] 2 :INNeR:LIST:STATe OFF ON 0 1, ... [:SENSe] :ACP:OFFSet [1] 2 :INNeR:LIST:STATe ?</pre>
Example	<pre>:ACP:OFFS1:INN:LIST 0,0,0,0,0,0 :ACP:OFFS1:INN:LIST? :ACP:OFFS2:INN:LIST:STAT 1,1,0,0,0,0 :ACP:OFFS2:INN:LIST:STAT?</pre>
Notes	<p>When setting these values remotely, the position in the list sent corresponds to the offset. Missing values are not permitted, unless the number of values sent is greater than the number of carriers, then subsequent values will be ignored</p> <p>Offset subopcode: 1 for BTS (Downlink), 2 for MS (Uplink). Default is BTS</p>
Couplings	Changing Offset Frequency might affect the Span. See the Span control section for details
Preset	When " Max Num of Offsets " on page 689 is set to 12, the preset value of Offset G ~ L is the same as the Offset F value

Modes	Values
5G NR	10 MHz, 30 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz 100 MHz, 200 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz
All Others	2.5MHz,7.5MHz,0,0,0,0 2.5MHz,7.5MHz,0,0,0,0

When "**Max Num of Offsets**" on page 689 is set to 12, the preset value of Offset G ~ L is the same as the Offset F value

`ON, ON, OFF, OFF, OFF, OFF | ON, OFF, OFF, OFF, OFF, OFF`

State Saved	Saved in instrument state Yes
Min/Max	0 Hz/Depends on instrument maximum frequency. Same as the Max Span of Swept SA Measurement

Integ BW

Sets the Integration Bandwidth for the offsets. Each resolution bandwidth in the list corresponds to an offset frequency in the list defined by `[:SENSe] :ACP:OFFSet [n] :INNeR:LIST [:FREQuency]`.

Enter each value individually by selecting the desired offset on the **Offset** menu key using the up down arrows, the knob, or the numeric keypad, then enter the Offset Integration Bandwidth using the **Offset Integration Bandwidth** menu key.

You can turn off (not use) specific offsets with the `[:SENSe] :ACP:OFFSet [n] :INNeR:LIST:STATe` command.

Remote Command	<code>[:SENSe] :ACP:OFFSet [1] 2 :INNeR:LIST:BA NDwidth [:INTEgration] <freq> , ...</code> <code>[:SENSe] :ACP:OFFSet [1] 2 :INNeR:LIST:BA NDwidth [:INTEgration] ?</code>
Example	<code>:ACP:OFFS2:INN:LIST:BA ND 2MHz,2MHz,2MHz,2MHz,2MHz,2MHz</code> <code>:ACP:OFFS2:INN:LIST:BA ND?</code>
Notes	When setting these values remotely, the position in the list sent corresponds to the offset. Missing values are not permitted that is if you want to change the second value you must send all values up to it. Subsequent values will remain unchanged Offset subopcode. 1 for BTS (Downlink), 2 for MS (Uplink). Default is BTS
Couplings	Changing Integ BW might affect the Span. See Span section for details
Preset	When " Max Num of Offsets " on page 689 is set to 12, the preset value of Offset G ~ L is the same as the Offset F value

Modes	Values
LTEAFDD	3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz, 3.84MHz
MSR, LTEATDD	4.515MHz, 4.515MHz, 4.515MHz, 4.515MHz, 4.515MHz, 4.515MHz 4.5MHz, 4.5MHz, 4.5MHz, 4.5MHz, 4.5MHz
5G NR	19.08 MHz, 19.08 MHz, 19.08 MHz, 19.08 MHz, 19.08 MHz, 19.08 MHz 98.31 MHz, 98.31 MHz, 98.31 MHz, 98.31 MHz, 98.31 MHz

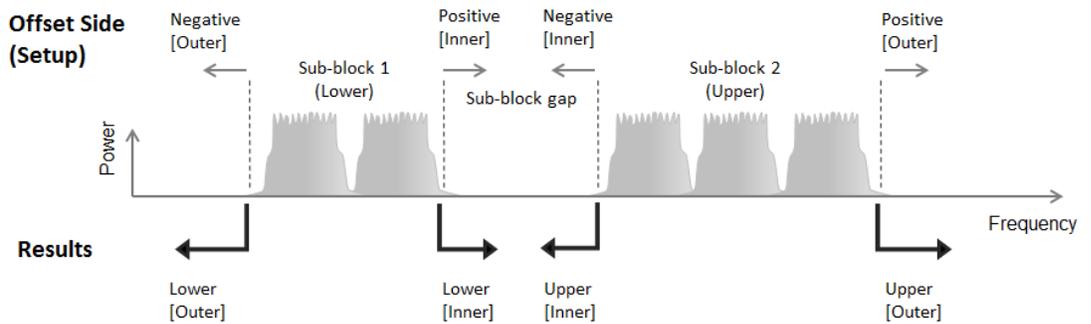

State Saved	Saved in instrument state
Min/Max	10 Hz/Depends on instrument maximum frequency. Same as the Max Span on Swept SA Measurement

Offset Side

Enables you to turn off (not use) specific offsets with `[:SENSe]:ACPower:OFFSet [1]|2:INNeR:LIST:SIDE`.

- **NEGative** - The upper side in the sub-block gap only (that is, negative sideband of the upper sub-block) is enabled
- **BOTH** - Both sides in the sub-block gap are enabled
- **POSitive** - The lower side in the sub-block gap only (that is, positive sideband of the lower sub-block) is enabled

The figure below shows the relation between the negative/positive offset side setups and the upper/lower results in the MSR, LTEAFDD and LTEATDD Mode.

Remote Command	<code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:SIDE NEGative BOTH POSitive, ...</code> <code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:SIDE?</code>
Example	<code>:ACP:OFFS:INN:LIST:SIDE BOTH</code> <code>:ACP:OFFS:INN:LIST:SIDE?</code>
Notes	OFFSet1 is for BTS, 2 for MS. Default is BTS If you set POS or NEG in an offset, result of the inactive side returns -999
Preset	When " Max Num of Offsets " on page 689 is set to 12, the preset value of Offset G ~ L is BOTH BOTH, BOTH, BOTH, BOTH, BOTH, BOTH BOTH, BOTH, BOTH, BOTH, BOTH, BOTH
State Saved	Saved in instrument state
Range	NEGative BOTH POSitive

Method

Enables you to turn RRC filtering of each offset on or off. The value (roll off) for the filter will be set to the value of the Filter Alpha parameter.

Remote Command	<code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:FILTer[:RRC][:STATe] ON OFF 1 0,...</code> <code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:FILTer[:RRC][:STATe]?</code>						
Example	<code>:ACP:OFFS:INN:LIST:FILT 1,0,0</code> <code>:ACP:OFFS:INN:LIST:FILT?</code>						
Notes	1 ON = RRC Weighted, 0 OFF = Integ BW						
Preset	When "Max Num of Offsets" on page 689 is set to 12, the preset value of Offset G ~ L is the same as the Offset F value						
	<table border="1"> <thead> <tr> <th>Modes</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>LTEAFDD</td> <td>1,1,1,1,1,1 1,1,1,1,1,1</td> </tr> <tr> <td>MSR, LTEATDD, 5G NR</td> <td>0,0,0,0,0,0 0,0,0,0,0,0</td> </tr> </tbody> </table>	Modes	Values	LTEAFDD	1,1,1,1,1,1 1,1,1,1,1,1	MSR, LTEATDD, 5G NR	0,0,0,0,0,0 0,0,0,0,0,0
Modes	Values						
LTEAFDD	1,1,1,1,1,1 1,1,1,1,1,1						
MSR, LTEATDD, 5G NR	0,0,0,0,0,0 0,0,0,0,0,0						
State Saved	Saved in instrument state						
Range	Integ BW RRC Weighted						

Filter Alpha

Sets the alpha value for the RRC Filter for each offset.

Remote Command	<code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:FILTer:ALPHa <real>,...</code> <code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:FILTer:ALPHa?</code>
Example	<code>:ACP:OFFS:INN:LIST:FILT:ALPH 0.5,0.5,0.5,0.5,0.5,0.5</code> <code>:ACP:OFFS:INN:LIST:FILT:ALPH?</code>
Preset	When "Max Num of Offsets" on page 689 is set to 12, the preset value of Offset G ~ L is 0.22 0.22,0.22,0.22,0.22,0.22,0.22 0.22,0.22,0.22,0.22,0.22,0.22
State Saved	Saved in instrument state
Min/Max	0.01/1.00

Power Ref Type

Enables you to set reference types of inner offsets.

CUMulative Cumulated power of the upper and lower sub-block carriers is the reference level. This selection is effective only when one of the following "Power Ref" on page 1829 values is selected:

Left & Right Carriers	<code>LRCarriers</code>
Max Power Carrier in Sub-block	<code>MPCSubblock</code>
Min Power Carrier in Sub-block	<code>MINSubblock</code>
Left & Right Sub-blocks	<code>LRSubblocks</code>
Manual	<code>MANual</code>

When one of the other **Power Ref** values is selected, carrier powers are not cumulated and the reference level is equivalent to Normal

NORMal

Power of specified carrier or the manual reference level is the reference level

Remote Command	<code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:PREFeRence CUMulative NORMal, ... [:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:PREFeRence?</code>
Example	<code>:ACP:OFFS:INN:LIST:PREF CUM,CUM,NORM,NORM,NORM,NORM :ACP:OFFS:INN:LIST:PREF?</code>
Preset	When "Max Num of Offsets" on page 689 is set to 12, the preset value of Offset G ~ L is NORMal NORMal, NORMal, NORMal, NORMal, NORMal, NORMal
State Saved	Saved in instrument state
Range	CUMulative NORMal
Remote Command	<code>[:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:PREFeRence:AUTO OFF ON 0 1, ... [:SENSe]:ACPower:OFFSet[1] 2:INNeR:LIST:PREFeRence:AUTO?</code>
Example	<code>:ACP:OFFS:INN:LIST:PREF:AUTO OFF,OFF,OFF,OFF,OFF,OFF :ACP:OFFS:INN:LIST:PREF:AUTO?</code>

Dependencies Available only in LTEAFDD, LTEATDD and 5G NR Modes

Couplings When in the LTEAFDD, LTEATDD Mode, the inner power ref type is set automatically when the power ref type state is auto according to the scopes of the sub-block gap in the following table

Sub-block Gap	Inner ACP offset	Power Ref Type
Wgap <5MHz	1st (2.5MHz)	Normal
	2nd (7.5MHz)	Normal
5MHz ≤ Wgap <10MHz	1st (2.5MHz)	Cumulative
	2nd (7.5MHz)	Normal
10MHz ≤ Wgap <15MHz	1st (2.5MHz)	Cumulative
	2nd (7.5MHz)	Cumulative
15MHz ≤ Wgap <20MHz	1st (2.5MHz)	Normal
	2nd (7.5MHz)	Cumulative
20MHz ≤ Wgap	1st (2.5MHz)	Normal
	2nd (7.5MHz)	Normal

When in 5G NR Mode, Power Ref Type "Auto" sets the power reference type of inner-ACLR offset automatically

Downlink: "Cumulative" or "Normal" is selected accordingly when the inner-offsets are configured to meet the test requirements as follows:

FR1, 3GPP TS 38.141-1 v16.5.0 (2020-09) Section 6.6.3.5.3 BS type 1-C:

- Table 6.6.3.5.2-3: Base Station ACLR limit in non-contiguous spectrum or multiple bands

- Table 6.6.3.5.2-4: Base station CACLR limit
- FR2, 3GPP TS 38.141-2 v16.5.0 (2020-09) Section 6.7.3.5.3 BS type 2-O:
- Table 6.7.3.5.2-3: BS type 2-O ACLR limit in non-contiguous spectrum
 - Table 6.7.3.5.2-4: BS type 2-O CACLR limit in non-contiguous spectrum
- Uplink: "Normal" is always selected

Preset	When " Max Num of Offsets " on page 689 is set to 12, the preset value of Offset G ~ L is the same as the Offset F value ON, ON, ON, ON, ON, ON OFF, OFF, OFF, OFF, OFF, OFF
State Saved	Saved in instrument state
Range	Auto Man

Inner Limits

Enables you to configure inner limits parameters for the ACP measurement in the EVM measurement based on the same capture.

Limit Test

Turns limit checking for each offset On or Off. The limits may be specified within the Offset menu, for each offset, both sides of the carrier. For results that fail the limit, a red F is appended. In the Combined view, the bar turns red.

Remote Command	:CALCulate:ACPower:LIMit:STATe OFF ON 0 1 :CALCulate:ACPower:LIMit:STATe?
Example	:CALC:ACP:LIM:STAT OFF :CALC:ACP:LIM:STAT?
Preset	SA OFF WCDMA, LTEAFDD, LTEATDD, 5G NR, MSR ON
State Saved	Saved in instrument state
Range	ON OFF
Backwards Compatibility SCPI	[:SENSe]:MCPower:LIMit[:STATe] [:SENSe]:ACPower:LIMit[:STATe]

Offset Freq

This parameter determines the frequency difference between the center of the main channel and the center of the carrier. When set to Offset to Edge, this parameter determines the frequency difference between the center of the main channel and the near edge of the offset.

Each **Offset Freq** state value is entered individually by selecting the desired carrier. Use the Enabled checkbox to turn the Offset Freq State on and off.

The list contains up to six (6) entries, depending on the mode selected, for offset frequencies. Each offset frequency in the list corresponds to a reference bandwidth in the bandwidth list.

An offset frequency of zero turns the display of the measurement for that offset off, but the measurement is still made and reported. You can turn off (not use) specific offsets with `[:SENSe] :ACP:OFFSet[n] :INNeR:LIST:STATe`.

Turning the offset off has the same effect as setting the frequency of the offset to 0 Hz and will cause it to be removed from the results screen.

Remote Command	<pre>[:SENSe] :ACP:OFFSet[1] 2:INNeR:LIST[:FREQUENCY] <freq>, ... [:SENSe] :ACP:OFFSet[1] 2:INNeR:LIST[:FREQUENCY]? [:SENSe] :ACP:OFFSet[1] 2:INNeR:LIST:STATe OFF ON 0 1, ... [:SENSe] :ACP:OFFSet[1] 2:INNeR:LIST:STATe?</pre>						
Example	<pre>:ACP:OFFS1:INN:LIST 0,0,0,0,0,0 :ACP:OFFS1:INN:LIST? :ACP:OFFS2:INN:LIST:STAT 1,1,0,0,0,0 :ACP:OFFS2:INN:LIST:STAT?</pre>						
Notes	<p>When setting these values remotely, the position in the list sent corresponds to the offset. Missing values are not permitted, unless the number of values sent is greater than the number of carriers, then subsequent values will be ignored</p> <p>Offset subopcode: 1 for BTS (Downlink), 2 for MS (Uplink). Default is BTS</p>						
Couplings	Changing Offset Frequency might affect the Span. See the Span control section for details						
Preset	<p>When "Max Num of Offsets" on page 689 is set to 12, the preset value of Offset G ~ L is the same as the Offset F value</p> <table border="1"> <thead> <tr> <th>Modes</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>5G NR</td> <td>10 MHz, 30 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz 100 MHz, 200 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz</td> </tr> <tr> <td>All Others</td> <td>2.5MHz,7.5MHz,0,0,0,0 2.5MHz,7.5MHz,0,0,0,0</td> </tr> </tbody> </table> <p>When "Max Num of Offsets" on page 689 is set to 12, the preset value of Offset G ~ L is the same as the Offset F value</p> <pre>ON, ON, OFF, OFF, OFF, OFF ON, OFF, OFF, OFF, OFF, OFF</pre>	Modes	Values	5G NR	10 MHz, 30 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz 100 MHz, 200 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz	All Others	2.5MHz,7.5MHz,0,0,0,0 2.5MHz,7.5MHz,0,0,0,0
Modes	Values						
5G NR	10 MHz, 30 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz 100 MHz, 200 MHz, 0 Hz, 0 Hz, 0 Hz, 0 Hz						
All Others	2.5MHz,7.5MHz,0,0,0,0 2.5MHz,7.5MHz,0,0,0,0						

State Saved	Saved in instrument state Yes
Min/Max	0 Hz/Depends on instrument maximum frequency. Same as the Max Span of Swept SA Measurement

Abs Limit

Enters an absolute limit value, which sets the absolute amplitude levels to test against for each of the custom offsets. The list must contain six (6) entries. If there is more than one offset, the offset closest to the carrier channel is the first one in the list. `[:SENSe]:ACP:OFFSet[n]:INNER:LIST:TEST` selects the type of testing to be done at each offset.

You can turn off (not use) specific offsets with the `[:SENSe]:ACP:OFFSet[n]:INNER:LIST:STATe` command.

The query returns the six (6) sets of real numbers that are the current absolute amplitude test limits.

Remote Command	<code>[:SENSe]:ACP:OFFSet[1] 2:INNER:LIST:ABSolute < real>,...</code> <code>[:SENSe]:ACP:OFFSet[1] 2:INNER:LIST:ABSolute?</code>						
Example	<code>:ACP:OFFS2:INN:LIST:ABS -10,-10,-10,-10,-10,-10</code> <code>:ACP:OFFS2:INN:LIST:ABS?</code>						
Notes	Offset subopcode. 1 for BTS (Downlink), 2 for MS (Uplink). Default is BTS						
Preset	When " Max Num of Offsets " on page 689 is set to 12, the preset value of Offset G ~ L is the same as the Offset F value						
	<table border="1"> <thead> <tr> <th>Modes</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>5G NR</td> <td>-2.2, -2.2, -2.2, -2.2, -2.2, -2.2 -50.0,-50.0,-50.0,-50.0,-50.0,-50.0</td> </tr> <tr> <td>All Others</td> <td>-8.45,-8.45,-8.45,-8.45,-8.45,-8.45 -50.0,-50.0,-50.0,-50.0,-50.0,-50.0</td> </tr> </tbody> </table>	Modes	Values	5G NR	-2.2, -2.2, -2.2, -2.2, -2.2, -2.2 -50.0,-50.0,-50.0,-50.0,-50.0,-50.0	All Others	-8.45,-8.45,-8.45,-8.45,-8.45,-8.45 -50.0,-50.0,-50.0,-50.0,-50.0,-50.0
Modes	Values						
5G NR	-2.2, -2.2, -2.2, -2.2, -2.2, -2.2 -50.0,-50.0,-50.0,-50.0,-50.0,-50.0						
All Others	-8.45,-8.45,-8.45,-8.45,-8.45,-8.45 -50.0,-50.0,-50.0,-50.0,-50.0,-50.0						
State Saved	Saved in instrument state						
Min/Max	-200.0 dBm/50.0 dBm						

Rel Limit (Car)

Enters a relative limit value for the carrier level. This sets the amplitude levels to test against for the specified offsets.

The amplitude level is relative to the carrier amplitude. If multiple offsets are available, the list contains six (6) entries. The offset closest to the carrier channel is the first one in the list. `[:SENSe]:ACP:OFFSet[n]:INNER:LIST:TEST` selects the type of testing to be done at each offset.

You can turn off (not use) specific offsets with the `[:SENSe]:ACP:OFFSet [n]:INNER:LIST:STATE` command.

The query returns the six (6) sets of real numbers that are the current amplitude test limits, relative to the carrier, for each offset.

Offset[n] n = 1 is base station and n = 2 is mobiles. The default is base station (1).

Remote Command	<code>[:SENSe]:ACP:OFFSet[1] 2:INNER:LIST:RCARrier <real>,...</code> <code>[:SENSe]:ACP:OFFSet[1] 2:INNER:LIST:RCARrier?</code>						
Example	<code>:ACP:OFFS2:INN:LIST:RCAR 0,0,0,0,0,0</code> <code>:ACP:OFFS2:INN:LIST:RCAR?</code>						
Notes	Offset subopcode. 1 for BTS (Downlink), 2 for MS (Uplink). Default is BTS						
Preset	When " Max Num of Offsets " on page 689 is set to 12, the preset value of Offset G ~ L is the same as the Offset F value						
	<table border="1"> <thead> <tr> <th>Modes</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>5G NR</td> <td>-43.8, -43.8, 43.8, -43.8, -43.8, -43.8 -29.2, -29.2, -29.2, -29.2, -29.2, -29.2</td> </tr> <tr> <td>All Others</td> <td>-44.2, -44.2, -44.2, -44.2, -44.2, -44.2 -29.2, -29.2, -29.2, -29.2, -29.2, -29.2</td> </tr> </tbody> </table>	Modes	Values	5G NR	-43.8, -43.8, 43.8, -43.8, -43.8, -43.8 -29.2, -29.2, -29.2, -29.2, -29.2, -29.2	All Others	-44.2, -44.2, -44.2, -44.2, -44.2, -44.2 -29.2, -29.2, -29.2, -29.2, -29.2, -29.2
Modes	Values						
5G NR	-43.8, -43.8, 43.8, -43.8, -43.8, -43.8 -29.2, -29.2, -29.2, -29.2, -29.2, -29.2						
All Others	-44.2, -44.2, -44.2, -44.2, -44.2, -44.2 -29.2, -29.2, -29.2, -29.2, -29.2, -29.2						
State Saved	Saved in instrument state						
Min/Max	-150/50.0						

Rel Limit (PSD)

Enters a relative limit value for the level of the power spectral density. This sets the amplitude levels to test against for any custom offsets. The amplitude level is relative to the power spectral density. If multiple offsets are available, the list contains six (6) entries. The offset closest to the carrier channel is the first one in the list.

`[:SENSe]:ACP:OFFSet [n]:INNER:LIST:TEST` selects the type of testing to be done at each offset.

You can turn off (not use) specific offsets with the `[:SENSe]:ACP:OFFSet [n]:INNER:LIST:STATE` command.

The query returns the six (6) sets of real numbers that are the current amplitude test limits, relative to the power spectral density, for each offset.

Offset[n] n = 1 is base station and n = 2 is mobiles. The default is base station (1).

Remote Command	<code>[:SENSe]:ACP:OFFSet[1] 2:INNER:LIST:RPSDensity <rel_amp>,...</code> <code>[:SENSe]:ACP:OFFSet[1] 2:INNER:LIST:RPSDensity?</code>
Example	<code>:ACP:OFFS2:INN:LIST:RPSD 10,10,10,10,10,10</code> <code>:ACP:OFFS2:INN:LIST:RPSD?</code>
Notes	Offset subopcode: 1 for BTS (Downlink), 2 for MS (Uplink). Default is BTS

Preset	When "Max Num of Offsets" on page 689 is set to 12, the preset value of Offset G ~ L is 0 0, 0, 0, 0, 0, 0 0, 0, 0, 0, 0, 0
State Saved	Saved in instrument state
Min/Max	-150.0 dB/50.0 dB

Fail Mask

Accesses a menu that enables you to select one of the logics for the fail conditions between the measurement results and the test limits. The setting defines the type of testing to be done at any custom offset frequencies. The measured powers are tested against the absolute values defined with `[:SENSe]:ACP:OFFSet [n]:INNeR:LIST:ABSolute`, or the relative values defined with `[:SENSe]:ACP:OFFSet [n]:INNeR:LIST:RPSDeNsity` and `[:SENSe]:ACP:OFFSet [n]:INNeR:LIST:RCARrier`.

You can turn off (not use) specific offsets with the `[:SENSe]:ACP:OFFSet [n]:INNeR:LIST:STAtE` command.

- Absolute – Fail is shown if one of the absolute ACP measurement results is larger than the limit for Abs Limit
- Relative – Fail is shown if one of the relative ACP measurement results is larger than the limit for Rel Lim (Car) or Rel Lim (PSD)
- Abs AND Rel – Fail is shown if one of the absolute ACP measurement results is larger than the limit for Abs Limit *and* one of the relative ACP measurement results is larger than the limit for Rel Lim (Car) or Rel Lim (PSD)
- Abs OR Rel – Fail is shown if one of the absolute ACP measurement results is larger than the limit for Abs Limit *or* one of the relative ACP measurement results is larger than the limit for Rel Lim (Car) or Rel Lim (PSD)

Remote Command	<code>[:SENSe]:ACP:Power:OFFSet [1] 2:INNeR:LIST:TEST ABSolute AND OR RELative,...</code> <code>[:SENSe]:ACP:Power:OFFSet [1] 2:INNeR:LIST:TEST?</code>
Example	<code>:ACP:OFFS2:INN:LIST:TEST ABS,ABS,ABS,ABS,ABS,ABS</code> <code>:ACP:OFFS2:INN:LIST:TEST?</code>
Notes	Offset subopcode: 1 for BTS (Downlink), 2 for MS (Uplink). Default is BTS
Preset	When "Max Num of Offsets" on page 689 is set to 12, the preset value of Offset G ~ L is AND AND, AND, AND, AND, AND, AND AND, AND, AND, AND, AND, AND
State Saved	Saved in instrument state
Range	Absolute Relative Abs AND Rel (fail if both fail) Abs OR Rel (fail if either fails)

SEM Setup

Enables you to configure advanced parameters for the SEM measurement in the EVM measurement based on the same capture.

General

Enables you to configure general parameters for the SEM measurement in the EVM measurement based on the same capture.

SEM State

Enable or disable the SEM measurement.

Remote Command	<code>[:SENSe]:EVM:SEM OFF ON 0 1</code> <code>[:SENSe]:EVM:SEM?</code>
Example	<code>:EVM:SEM OFF</code> <code>:EVM:SEM?</code>
Preset	OFF
State Saved	Yes

Measurement Type

Accesses a menu that enables you to select one of the following measurement reference types:

Total Pwr Ref	TPRef	Sets the reference to the total carrier power and the measured data is shown in dBc and dBm
PSD Ref	PSDRef	Sets the reference to the mean power spectral density of the carrier and the measured data is shown in dB and dBm/Hz
Spectrum Peak Ref	SPRef	Sets the reference to the spectrum peak power of the carrier and the measured data is shown in dB and dBm

Remote Command	<code>[:SENSe]:SEMAsk:TYPE PSDRef TPRef SPRef</code> <code>[:SENSe]:SEMAsk:TYPE?</code>
Example	<code>:SEM:TYPE PSDR</code> <code>:SEM:TYPE?</code>
Preset	WLAN Mode: SPRef All other Modes: TPRef
State Saved	Saved in instrument state
Range	Total Pwr Reference PSD Reference Spectrum Peak Reference

Power Ref

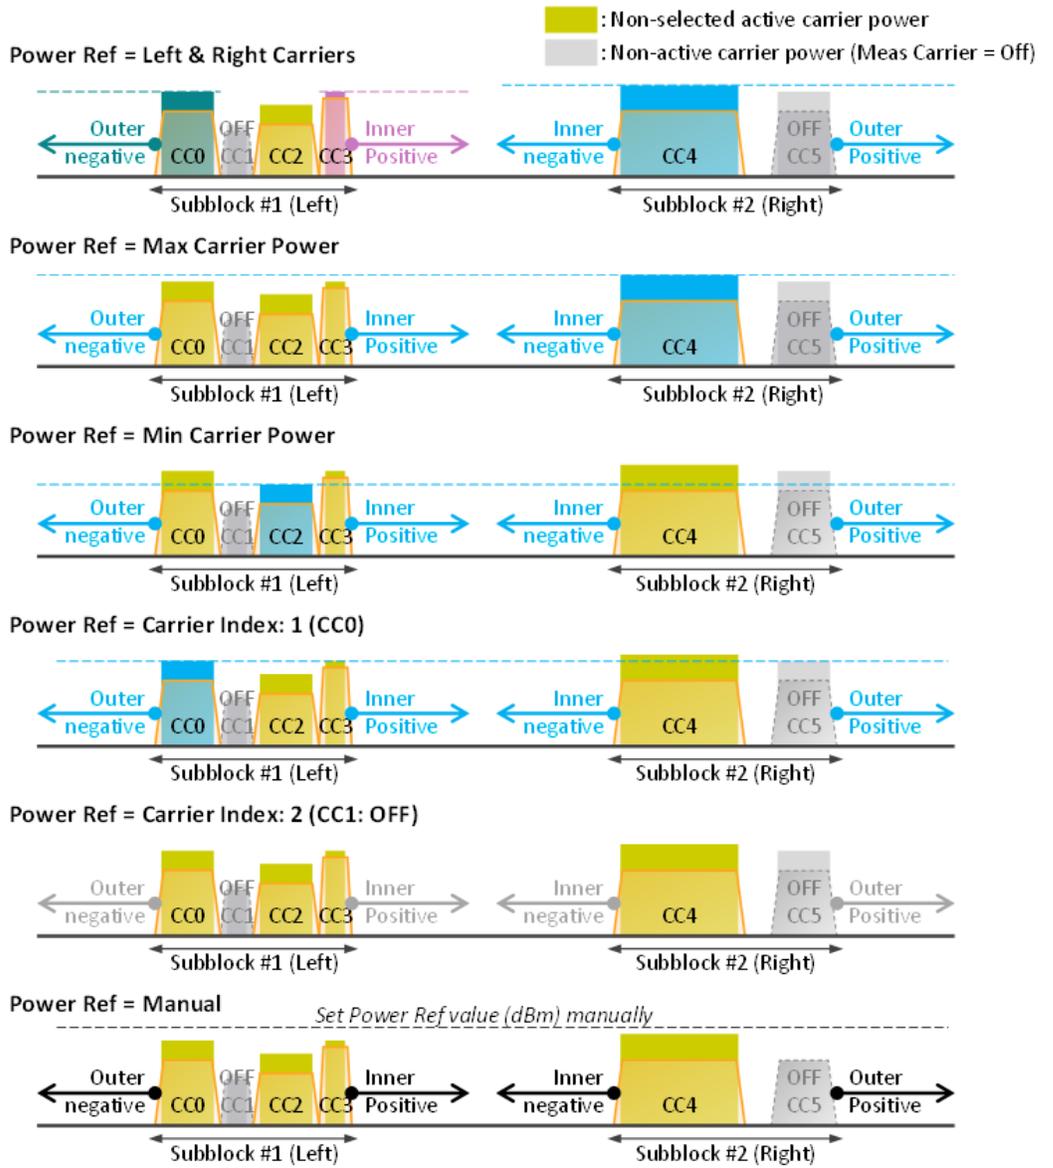

Selects the power reference type:

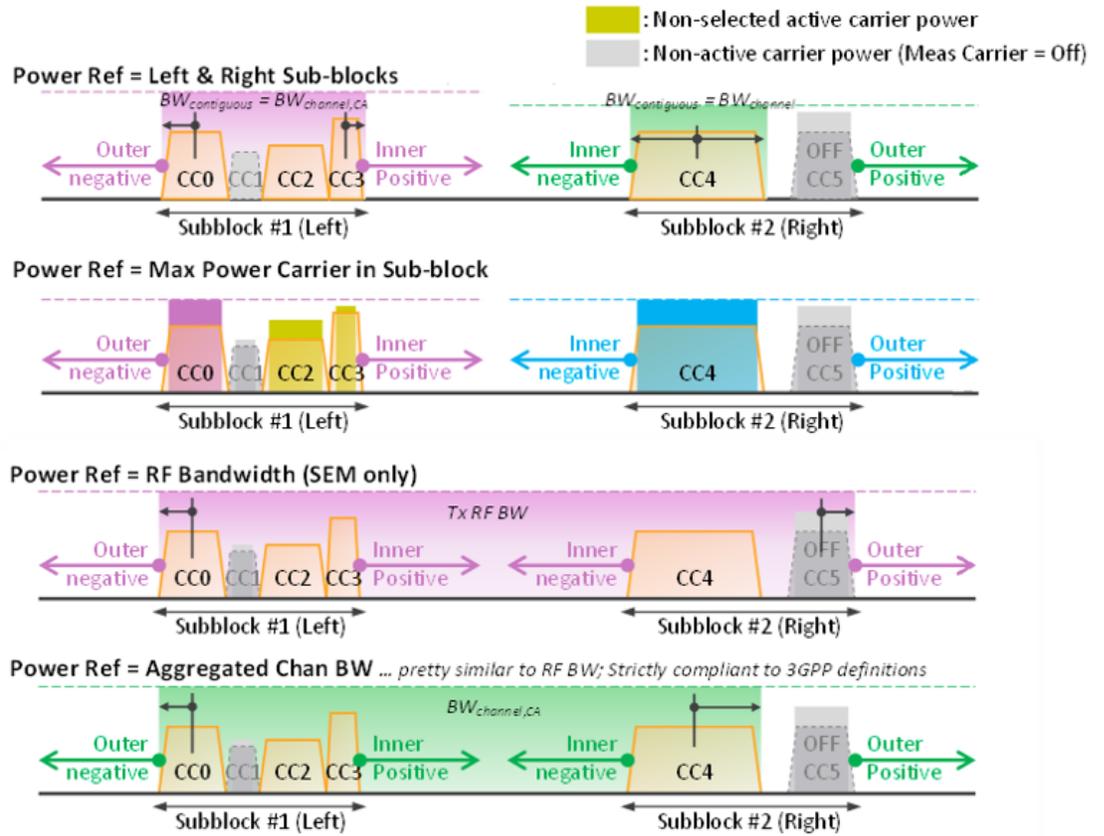

Option	SCPI	Description
Left & Right Carriers	LRCarriers	<p>Powers of leftmost and rightmost carriers with Measure Carrier On in a sub-block are the references of left and right sides respectively. Only the frequency ranges of leftmost and rightmost carriers are swept and measured. Other frequency ranges in the RFBW are not measured. Left and right carriers are determined based on the carrier center frequencies</p> <p>If Measure Carriers of all the carriers in a sub-block are off, the reference power in a sub-block and all the relative power results are NaN. Relative limits are not evaluated</p>
Max Power Carrier	MPCarrier	<p>Maximum carrier power is the reference of measurement. All the configured carriers are measured</p> <p>If Measure Carriers of all the carriers are off, the reference power and all the relative power results are NaN. Relative limits are not evaluated</p>
Carrier Index	CINdex	<p>Power of the specified carrier is the reference of measurement. Only the frequency range of the specified carrier is swept and measured, and other frequency ranges in the RFBW are not measured</p> <p>If Measure Carriers of this carrier index is off, the reference power and all the relative power results are NaN. Relative limits are not evaluated</p>
Manual	MANual	<p>Power or PSD specified by the user is the reference of measurement. No carriers are measured and the manually specified value is used as reference</p>
Max Power Carrier in Sub-block	MPCSubblock	<p>Maximum carrier power among the sub-block carriers with Measure Carrier On is the reference of measurement. All the configured carriers are measured</p> <p>If Measure Carriers of all the carriers in a sub-block are off, the reference power of the sub-block and all the relative power results referring to this sub-block are NaN, and these relative limits are not evaluated</p>
RF Bandwidth	RFBandwidth	<p>Power or PSD of total of the RF bandwidth is the reference of measurement. Power not only in the carrier bands but also carrier gaps is integrated into the reference power. Measure Carrier On/Off does not affect the reference power frequency range because RF bandwidth is determined by the carrier configuration</p>
Aggregated Chan BW LTE-A and 5G NR Modes only	ACBandwidth	<p>The assigned aggregated channel bandwidth power which is measured with a rectangular filter with measurement bandwidth specified as aggregated channel bandwidth based on the definition of each 3GPP standard. Calculated from the carrier configuration including SCS (Power Meas), the smallest SCS among the enabled SCSs of the selected component carrier. Measure Carrier On/Off affects the reference power frequency range</p> <p>If Measure Carriers of all the carriers are off, the reference power and all the relative power results are NaN and Relative limits are not evaluated</p>
Left & Right Sub-blocks	LRSubblocks	<p>The reference depends on the Number of Component Carriers (CC) and Carrier Allocation as follows:</p>

Option	SCPI	Description
5G NR Mode only		Number of CCs Reference
		1 The carrier power is the reference
		2 or more, <i>and</i> Aggregated Channel power is the reference
	Carrier Allocation is Contiguous	
	2 or more, <i>and</i> Aggregated powers of left and right sub-blocks are the references. Left and right sub-blocks are determined by component carrier configuration	
	Carrier Allocation is Non-Contiguous	

The powers of carriers are not included in the reference power when their Measure Carriers are **Off**. When Measure Carriers of all the carriers in a sub-block are **Off**, the reference power and all the relative power results are **NaN**. Therefore, relative limits are not evaluated.

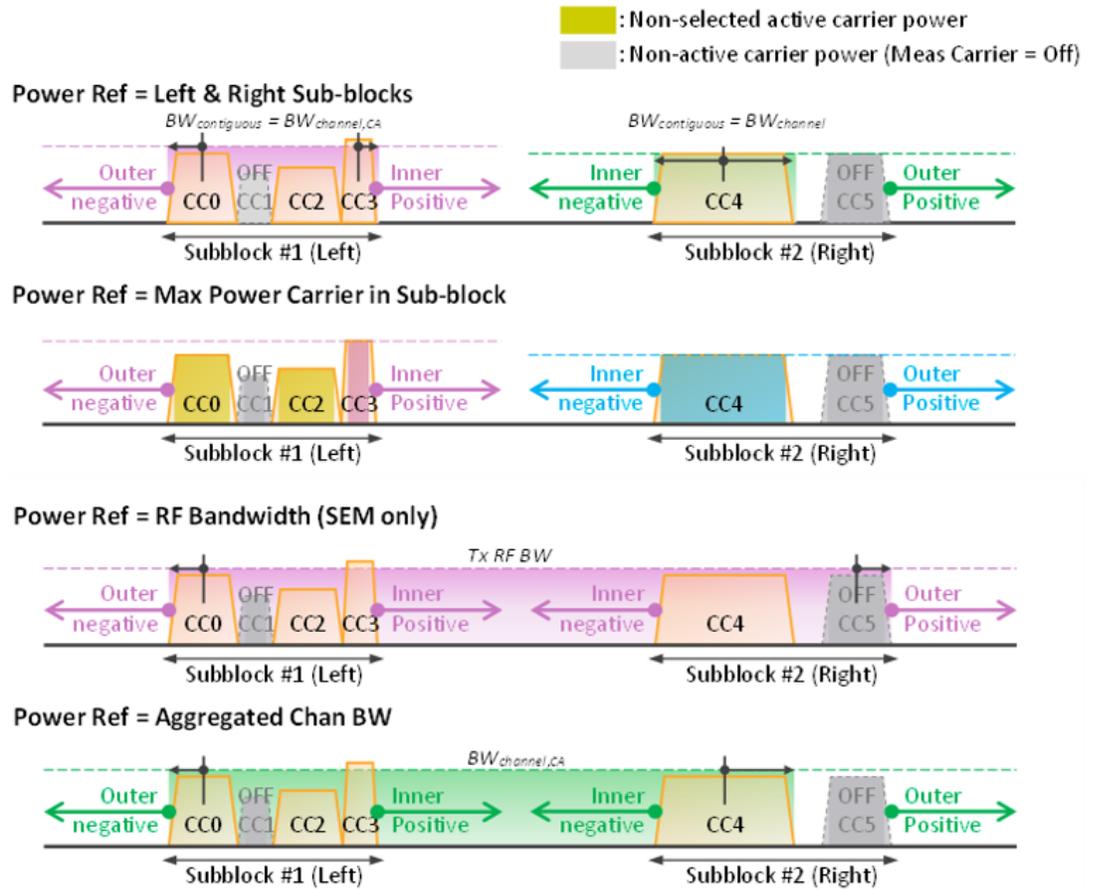

Meas Type = Total Power Ref

Meas Type = PSD Ref

Remote Command	<code>[:SENSe] :SEMAsk :CARRier :PREFerence :TYPE LRCarriers MPCarrier CINDEX MANual MPCSubblock RFBandwidth ACBandwidth LRSubblocks</code> For option details, see above <code>[:SENSe] :SEMAsk :CARRier :PREFerence :TYPE ?</code>
Example	<code>:SEM :CARR :PREF :TYPE CIND</code> <code>:SEM :CARR :PREF :TYPE ?</code>
Notes	<code>LRSubblocks</code> is available only in 5G NR Mode <code>ACBandwidth</code> is available only in LTE-A and 5G NR Modes
Dependencies	Only available in MSR, LTE-A and 5G NR Modes
Preset	<code>MPCarrier</code>
State Saved	Saved in instrument state
Range	Left & Right Carriers Max Power Carriers Carrier Index Manual Max Power Carrier in Sub-block RF Bandwidth Aggregated Chan BW Left & Right Sub-blocks
Remote Command	<code>[:SENSe] :SEMAsk :CARRier :AUTO [:STATe] OFF ON 1 0</code> <code>[:SENSe] :SEMAsk :CARRier :AUTO [:STATe] ?</code>

Example	<code>:SEM:CARR:AUTO OFF</code> <code>:SEM:CARR:AUTO?</code>
Preset	ON
State Saved	Saved in instrument state
Range	Auto Man

Carrier Index

Sets carrier index of the reference power. The power of the carrier selected by this index becomes reference power when "[Power Ref](#)" on page 1868 is Carrier Index.

Remote Command	<code>[:SENSe]:SEMAsk:CARRier:INDex <integer></code> <code>[:SENSe]:SEMAsk:CARRier:INDex?</code>
Example	<code>:SEM:CARR:IND 1</code> <code>:SEM:CARR:IND?</code>
Dependencies	Available only in MSR, LTE-A and 5G NR Modes
Preset	1
State Saved	Saved in instrument state
Min/Max	MSR Mode: 1/100 LTEAFDD,LTEATDD Mode:1/5 5G NR Mode: 16

Total Power Ref

Sets the power in the carrier (ref channel) that is used to compute the relative power values for the offsets.

When "[Power Ref](#)" on page 1868 is set to anything other than **Manual**, this value is set to the measured carrier reference power. When set to **Manual**, the result takes on the last measured value, or can be manually entered.

For WLAN 802.11ac (80 MHz + 80 MHz), the higher of the power readouts of the two carriers is used for computing the relative power values for the offset.

Remote Command	<code>[:SENSe]:SEMAsk:CARRier[:POWer] <real></code> <code>[:SENSe]:SEMAsk:CARRier[:POWer]?</code>
Example	<code>:SEM:CARR 100dBm</code> <code>:SEM:CARR?</code>
Notes	The min and max values given are for " Measurement Type " on page 1867 = Total Pwr Ref
Couplings	Coupled with Measurement Type . Active when Measurement Type is set to Total Power Ref . Otherwise, grayed-out

	In MSR, LTE-A and 5G NR Modes, the control is active when Measurement Type is set to Total Power and Power Ref is set to Manual
Preset	Measured carrier reference power
State Saved	Saved in instrument state
Min/Max	-200 dBm/200 dBm
Annotation	Value is displayed on the left top of the Results window with the Channel Integ BW

PSD Ref

Sets the power spectral density in the carrier that is used to compute the relative power spectral density values for the offsets when "**Measurement Type**" on page 1867 is set to PSD Ref. When the state is set to **Auto**, this will be set to the measured carrier power spectral density.

For WLAN 802.11ac (80 MHz + 80 MHz), the higher of the power density readouts of the two carriers is used for computing the relative PSD values for the offset.

Remote Command	<code>[:SENSe]:SEMask:CARRier:CPSD <real></code> <code>[:SENSe]:SEMask:CARRier:CPSD?</code>
Example	<code>:SEM:CARR:CPSD -80</code> <code>:SEM:CARR:CPSD?</code>
Notes	Although the default value is defined, the value is recalculated by the measurement result just after completing the measurement Carrier sub op code. 1 for BTS, 2 for MS. Default is BTS
Couplings	Coupled with " Measurement Type " on page 1867. Active if Measurement Type is PSD. Otherwise, grayed-out In MSR, LTE-A and 5G NR Modes, active when Measurement Type is PSD and Power Ref is Manual
Preset	Measured carrier PSD reference power
State Saved	Saved in instrument state
Min/Max	-200/200
Annotation	Value is displayed on the right top of the Results window. If Meas Type selection is PSD Ref, the string is "PSD Ref" with BOLD font, otherwise, hide annotation

Spectrum Pk Ref

Sets the spectrum peak power in the carrier that is used to compute the relative power spectral density values for the offsets when "**Measurement Type**" on page 1867 is Spectrum Peak. When the state is set to **Auto**, this is set to the measured carrier spectrum peak power. When set to **Manual**, the result takes on the last measured value, or can be manually entered

3 5G NR Mode

3.7 Modulation Analysis Measurement

Remote Command	<code>[:SENSe]:SEMAsk:CARRier:PEAK[:POWer] <real></code> <code>[:SENSe]:SEMAsk:CARRier:PEAK[:POWer]?</code>
Example	<code>:SEM:CARR:PEAK -80</code> <code>:SEM:CARR:PEAK:POWER?</code>
Notes	Although the default value is defined, the value is recalculated by the measurement result just after completing the measurement Carrier sub op code. 1 for BTS, 2 for MS. Default is BTS
Couplings	Coupled with " Measurement Type " on page 1867. Active when Measurement Type is "Spectrum Peak Ref". Otherwise, grayed-out In MSR, LTE-A and 5G NR Modes, active when Measurement Type is Spectrum Peak Ref and Power Ref is Manual
Preset	Measured carrier Spectrum Peak reference power
State Saved	Saved in instrument state
Min/Max	-200/200
Annotation	Value is displayed on the right top of the Results window. If Meas Type selection is Spectrum Peak Ref, the string is "Spectrum Peak Ref" with BOLD font, otherwise, hide annotation

Points

Sets the number of points displayed in the traces. The current value of points is displayed in the bottom-right corner of the display.

Remote Command	<code>[:SENSe]:SEMAsk:SWEEp:POINts <integer></code> <code>[:SENSe]:SEMAsk:SWEEp:POINts?</code>
Example	<code>:SEM:SWE:POIN 4001</code> <code>:SEM:SWE:POIN?</code>
Preset	2001
State Saved	Saved in instrument state
Min	201
Max	10001
Annotation	On second line of annotations in bottom right corner

Non-Contiguous Meas Region

Selects the region to measure for the non-contiguous frequency allocation from either inner or outer.

Remote Command	<code>[:SENSe]:SEMAsk:NCONtiguous:REGion INNER OUTER</code> <code>[:SENSe]:SEMAsk:NCONtiguous:REGion?</code>
----------------	---

Example	<code>:SEM:NCON:REG INN</code> <code>:SEM:NCON:REG?</code>
Dependencies	Only available in MSR, 5G NR and LTE-Advanced FDD/TDD Modes
Preset	<code>INNER</code>
State Saved	Yes
Range	<code>INNER OUTer</code>

Meas Method

Sets the measurement method:

Method	Option	Description
Integration BW	<code>0 OFF</code>	Enables you to set the channel integration bandwidth
RRC Weighted	<code>1 ON</code>	Selects Root Raised Cosine (RRC) filtering of the carriers. The a value (rolloff) for the filter is set to the value of the Filter Alpha parameter

Remote Command	<code>[:SENSe]:SEMAsk:FILTer[:RRC][:STATe] OFF ON 0 1</code> <code>[:SENSe]:SEMAsk:FILTer[:RRC][:STATe]?</code>
Example	<code>:SEM:FILT ON</code> <code>:SEM:FILT?</code>
Dependencies	WLAN: RRC Weight is not supported when the radio standard is WLAN 802.11ac (80+80MHz)
Preset	SA, LTEAFDD, LTEATDD, 5G NR, WLAN, MSR Modes <code>OFF</code> WCDMA Mode <code>ON</code>
State Saved	Saved in instrument state
Range	Integration BW RRC Weighted

RRC Filter Alpha

Sets the alpha value for the RRC Filter.

Remote Command	<code>[:SENSe]:SEMAsk:FILTer[:RRC]:ALPHa <real></code> <code>[:SENSe]:SEMAsk:FILTer[:RRC]:ALPHa?</code>
Example	<code>:SEM:FILT:ALPH 0.3</code> <code>:SEM:FILT:ALPH?</code>
Preset	0.22
State Saved	Saved in instrument state
Min/Max	0.01/1.0

Offset

Enables you to configure offset parameters for the SEM measurement in the EVM measurement based on the same capture.

Offset Freq Define

Enables you to select offset frequency definition. Each standard defines each offset frequency from Carrier.

For example, 3GPP2 requires the “Carrier Center to Meas BW Edge” definition. LTE conformance test requires “Carrier Edge to Meas BW Center” and/or “Carrier Edge to Meas BW Edge” definition. The MSR standard requires “RF BW Edge to Meas BW Center” and/or “RF BW Edge to Meas Edge” definition.

“Meas BW Edge” means the edge frequency of resolution bandwidth closer to the carrier that is represented by Meas BW and Res BW settings. Actual center frequency of Meas BW and the limit line have $\frac{1}{2}$ Meas BW offset when the Meas BW Edge is selected.

Note that the outermost (lowermost, uppermost) carrier at each side is determined by which carrier edge frequency is located outermost within the RF BW or each sub-block bandwidth, instead of which carrier center frequency is located outermost.

See also "[Diagrams for Offset Freq Define](#)" on page 1880.

Modes other than MSR, LTE-A, 5G NR

Options:

CTOCenter	From carrier center to the center of offset measuring filter*
CTOEdge	From carrier center to the nominal -3 dB point of the offset measuring filter* closer to the carrier
ETOCenter	From Center Frequency $-$ Span of Ref Channel / 2 (for lower offset), Center Frequency $+$ Span of Ref Channel / 2 (for upper offset) of the carrier closest to each offset to the center of offset measuring filter *
ETOEdge	From Center Frequency $-$ Span of Ref Channel / 2 (for lower offset), Center Frequency $+$ Span of Ref Channel / 2 (for upper offset) of the carrier closest to each offset to the nominal -3 dB point of the offset measuring filter * closer to the carrier

*Measuring filter = Meas BW (N) x Res BW

** RF BW = $BW_{\text{channel,CA}}$ which is defined in each 3GPP standard, regardless of “Measure Carrier” for the uppermost and the lowermost carriers being Enabled or

Disabled. When **Number of Component Carriers** = 1, $RF\ BW = BW_{channel} = 2 \times F_{offset,RAT}$

Remote Command	<code>[:SENSe]:SEMAsk:OFFSet[1] 2:TYPE CTOCenter CTOEdge ETOCenter ETOEdge</code> <code>[:SENSe]:SEMAsk:OFFSet[1] 2:TYPE?</code>
Example	<code>:SEM:OFFS:TYPE ETOC</code> <code>:SEM:OFFS:TYPE?</code>
Notes	OFFSet1 is for BTS, 2 for MS. Default is BTS Note that Offset sub op code 2 is supported only in non-SA Modes. In SA Mode, Offset sub op code 1 is used for both BTS and MS
Preset	CTOCenter
State Saved	Saved in instrument state
Range	Carrier Center to Meas BW Center Carrier Center to Meas BW Edge Carrier Edge to Meas BW Center Carrier Edge to Meas BW Edge

Mode: MSR, LTEAFDD, LTEATDD

Options:

CTOCenter	From the lowermost carrier center frequency (for lower offset), the uppermost carrier center frequency (for upper offset) to the center of offset measuring filter*
CTOEdge	From the lowermost carrier center frequency (for lower offset), the uppermost carrier center frequency (for upper offset) to the nominal -3 dB point of the offset measuring filter* closer to the carrier
ETOCenter	From the lowermost carrier center frequency - spacing of this carrier /2 (for lower offset), the uppermost carrier center frequency + spacing of this carrier /2 (for upper offset) to the center frequency of offset measuring filter*
ETOEdge	From the lowermost carrier center frequency - spacing of this carrier /2 (for lower offset), the uppermost carrier center frequency + spacing of this carrier /2 (for upper offset) to the nominal -3 dB point of the offset measuring filter* closer to the carrier
RTOCenter	From either the lower or upper RF BW** edge frequency to the center frequency of offset measuring filter*
RTOEdge	From either the lower or upper RF BW** edge frequency to the nominal -3 dB point of the offset measuring filter* closer to the carrier
RCTOCenter 5G NR Mode only	From the center frequency of RF BW to the center frequency of offset measuring filter*

*Measuring filter = Meas BW (N) x Res BW

** RF BW = $BW_{channel,CA}$ which is defined in each 3GPP standard, regardless of "Measure Carrier" for the uppermost and the lowermost carriers being Enabled or

3 5G NR Mode
 3.7 Modulation Analysis Measurement

Disabled. When **Number of Component Carriers** = 1, RF BW = $BW_{\text{channel}} = 2 \times F_{\text{offset,RAT}}$

Remote Command	<code>[[:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:TYPE CTOCenter CTOEdge ETOCenter ETOEdge RTOCenter RTOEdge [:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:TYPE?</code>

Diagrams for Offset Freq Define

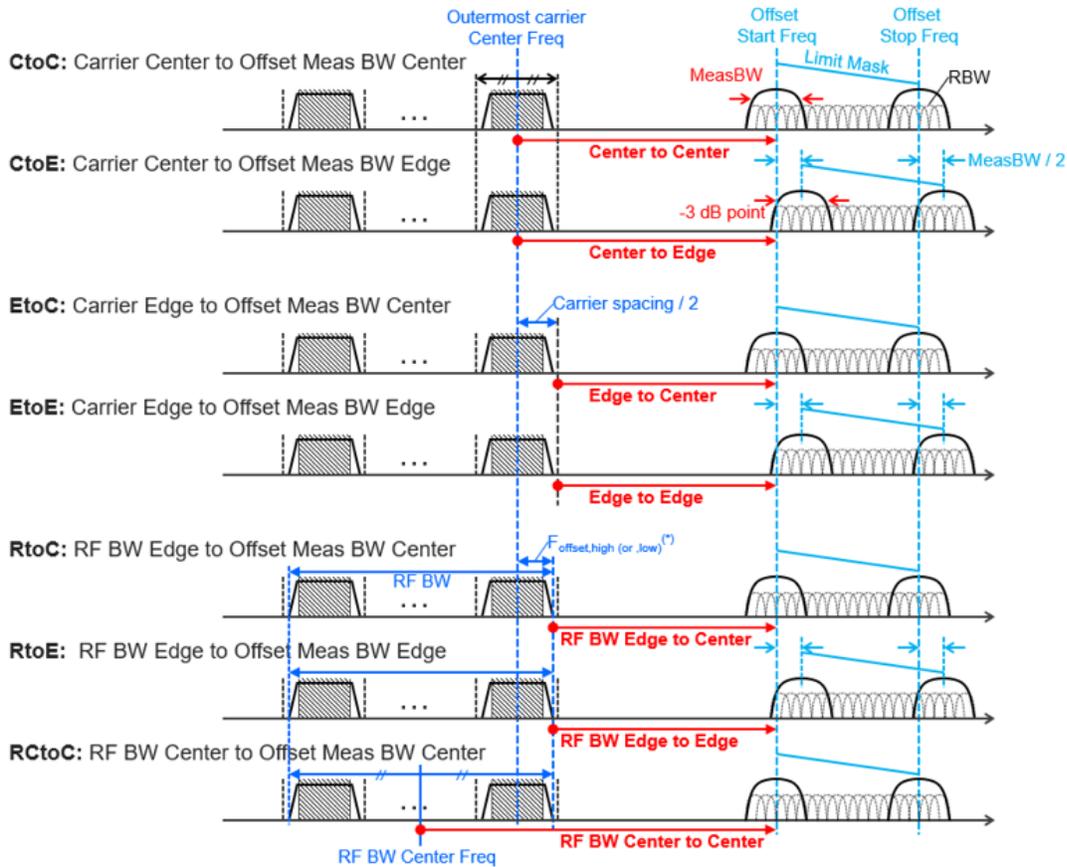

Details depend on the selected mode.

Diagrams for Modes other than MSR, LTEAFDD/LTEATDD, 5G NR

Note:
 • $MeasBW = N \times RBW$

Diagrams for MSR, LTEAFDD/LTEATDD, 5G NR

Notes:

- $MeasBW = N \times RBW$
- RF BW Edge and Outmost Carrier Edge are not always same. e.g.) 5G NR (3GPP) defines $BW_channel, CA$ which calculates $F_offset,high$ and F_offset,low asymmetrically with SCS shift. (*) For MSR, $F_offset,high (or ,low) = F_offset,RAT,high (or ,low)$

Start Freq

Specifies the start frequency for the currently selected offset. Also enables you to toggle that offset between On and Off.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values will remain unchanged. The query for this parameter returns 14 values for WLAN mode, 12 values for other modes.

Remote Command	<pre>[:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:FREQuency:STARt <freq>, ... [:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:FREQuency:STARt? [:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:STATe ON OFF 1 0, ... [:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:STATe?</pre>														
Example	<pre>:SEM:OFFS2:LIST:FREQ:STAR 2.515 MHz, 2.715 MHz, 3.515 MHz, 4.00 MHz, 8.00 MHz, 12.50 MHz :SEM:OFFS2:LIST:FREQ:STAR? :SEM:OFFS:LIST:STAT ON, ON, ON, OFF, OFF, OFF :SEM:OFFS:LIST:STAT?</pre>

802.ah (1MHz/ 2MHz/ 4MHz/ 8MHz/ 16MHz)	ON, ON, ON, ON, OFF, OFF
802.11af (6 MHz/ 7 MHz/ 8 MHz)	ON, ON, ON, ON, OFF, OFF

For E6630A, E6640A, and M90XA:

Radio Std	Presets
802.11a/g(OFDM/DSSS-OFDM)	ON, ON, ON, OFF, OFF
802.11n(20MHz/40MHz)	
802.11ac/ax/be (20 MHz/ 40 MHz/ 80 MHz/ 160 MHz)	ON, ON, ON, OFF, OFF
802.11be (320 MHz)	ON, ON, ON, OFF, OFF
802.11ac/ax (80 MHz + 80 MHz)	ON, ON, ON, OFF, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF
802.11af (6 MHz/ 7 MHz/ 8 MHz)	ON, ON, ON, ON, OFF, OFF

Stop Freq

Specifies the stop frequency for the currently selected offset.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values will remain unchanged. The query for this parameter returns 14 values for WLAN mode, 12 values for other modes.

Remote Command	<code>[:SENSe] :SEMAsk:OFFSet [1] 2 [:OUTer] :LIST:FREQuency:STOP <freq>, ...</code> <code>[:SENSe] :SEMAsk:OFFSet [1] 2 [:OUTer] :LIST:FREQuency:STOP?</code>
Example	<code>:SEM:OFFS:LIST:FREQ:STOP 2.715 MHz, 3.515 MHz, 4.00 MHz, 8.00 MHz, 12.50</code>

	<p>MHz, 15.0 MHz</p> <p>:SEM:OFFS:LIST:FREQ:STOP?</p>														
Notes	<p>Comma separated list of values</p> <p>OFFSet1 is for BTS, 2 for MS. Default is BTS</p> <p>Note that Offset sub op code 2 is supported only in non-SA Modes. In SA Mode, Offset sub op code 1 is used for both BTS and MS</p> <p>If the offset is outside of the frequency range, the result spectrum will be invalid</p>														
Couplings	Coupled to Start Freq. When Stop Freq goes below Start Freq, Start Freq is automatically adjusted to Stop Freq minus 100 Hz														
Preset	<p>When the max number of offsets is 6:</p> <table border="1"> <thead> <tr> <th>Mode</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>SA</td> <td>2.715 MHz, 3.515 MHz, 4.00 MHz, 8.00 MHz, 12.50 MHz, 15.0 MHz</td> </tr> <tr> <td>WCDMA</td> <td>2.715 MHz, 3.515 MHz, 4.000 MHz, 8.000 MHz, 12.50 MHz, 15.0 MHz 3.485 MHz, 7.500 MHz, 8.500 MHz, 12.00 MHz, 15.00 MHz, 18.0 MHz</td> </tr> </tbody> </table> <p>When the max number of offsets is 12 in these modes, the preset value of Offset G ~ L is the same as the Offset F value</p> <table border="1"> <thead> <tr> <th>Mode</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>MSR</td> <td>215 kHz, 1.015 MHz, 1.5 MHz, 10.5 MHz, 50 MHz 215 kHz, 1.015 MHz, 1.5 MHz, 10.5 MHz, 50 MHz</td> </tr> <tr> <td>LTEAFDD, LTEATDD</td> <td>5.05 MHz, 10.05 MHz, 15 MHz, 30 MHz, 40 MHz, 50 MHz 985.0 kHz, 4.50 MHz, 5.5001 MHz, 9.50 MHz, 20 MHz, 40 MHz</td> </tr> <tr> <td>5G NR</td> <td>5.05 MHz, 10.05 MHz, 40 MHz, 100 MHz, 500 MHz 985.0 kHz, 4.50 MHz, 99.500 MHz, 104.5 MHz, 500 MHz</td> </tr> </tbody> </table> <p>When the max number of offsets is 14 in these modes, the preset value of Offset G ~ N is the same as the Offset F value</p> <p>WLAN Mode: See table of "WLAN Mode Presets" on page 1887 below</p>	Mode	Values	SA	2.715 MHz, 3.515 MHz, 4.00 MHz, 8.00 MHz, 12.50 MHz, 15.0 MHz	WCDMA	2.715 MHz, 3.515 MHz, 4.000 MHz, 8.000 MHz, 12.50 MHz, 15.0 MHz 3.485 MHz, 7.500 MHz, 8.500 MHz, 12.00 MHz, 15.00 MHz, 18.0 MHz	Mode	Values	MSR	215 kHz, 1.015 MHz, 1.5 MHz, 10.5 MHz, 50 MHz 215 kHz, 1.015 MHz, 1.5 MHz, 10.5 MHz, 50 MHz	LTEAFDD, LTEATDD	5.05 MHz, 10.05 MHz, 15 MHz, 30 MHz, 40 MHz, 50 MHz 985.0 kHz, 4.50 MHz, 5.5001 MHz, 9.50 MHz, 20 MHz, 40 MHz	5G NR	5.05 MHz, 10.05 MHz, 40 MHz, 100 MHz, 500 MHz 985.0 kHz, 4.50 MHz, 99.500 MHz, 104.5 MHz, 500 MHz

802.11ax/be (80MHz)	40.5 MHz, 80 MHz, 120 MHz, 125 MHz, 200 MHz
802.11ax/be (160MHz)	80.5 MHz, 160 MHz, 240 MHz, 250 MHz, 400 MHz
802.11ax (80 MHz +	100Hz, 40 MHz, 79 MHz, 81 MHz, 161 MHz, 200 MHz, 240 MHz, 250 MHz,

Radio Std	Presets
80MHz)	250 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz, 250 MHz
802.11af (6MHz)	3.15MHz, 6 MHz, 9 MHz, 15MHz, 15 MHz, 15 MHz
802.11af (7MHz)	3.675 MHz, 7 MHz, 10.5 MHz, 17.5MHz, 17.5 MHz, 17.5 MHz
802.11af (8MHz)	4.2 MHz, 8 MHz, 12 MHz, 20 MHz
802.11be (320MHz)	160.5 MHz, 320 MHz, 480 MHz, 490 MHz, 800 MHz

Res BW

Specifies which Resolution BW filter to use when measuring the currently selected offset.

Offset Res BW Mode allows the instrument to determine the optimum Resolution BW filter to use when measuring the currently selected offset.. When changing the Meas BW parameter, if the Res BW needs to be changed to adhere to the rule:

$$(N \times \text{Res BW}) \leq (\text{Stop freq of the offset} - \text{Start freq of the offset}),$$

where N is the multiplier, this setting will automatically be changed to manual.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values will remain unchanged. The query for this parameter returns 14 values for WLAN mode, 12 values for other modes.

Remote Command	<pre>[:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:BANDwidth[:RESolution] <bandwidth>, ... [:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:BANDwidth[:RESolution]? [:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:BANDwidth[:RESolution]:AUTO OFF ON 1 0, ... [:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:BANDwidth[:RESolution]:AUTO?</pre>
Example	<pre>:SEM:OFFS2:LIST:BAND 30.0 kHz, 30.0 kHz, 30.0 kHz, 1.00 MHz,1.00 MHz, 1.00 MHz :SEM:OFFS2:LIST:BAND? :SEM:OFFS:LIST:BAND:AUTO 1,1,1,1,1,1 :SEM:OFFS:LIST:BAND:AUTO?</pre>

Notes	<p>Comma separated list of values</p> <p>OFFSet1 is for BTS, 2 for MS. Default is BTS</p> <p>Note that Offset sub op code 2 is supported only in non-SA modes. In the SA mode, Offset sub op code 1 is used for both BTS and MS</p>
-------	--

3 5G NR Mode
3.7 Modulation Analysis Measurement

Couplings	<p>Coupled to Start and Stop offset and Meas BW multiplier. This parameter must adhere to the rule $(N \times \text{Res BW}) \leq (\text{Stop freq of the offset} - \text{Start freq of the offset})$, where N is the multiplier. If the multiplier is changed, the Res BW will change to ensure this. When set manually, Res BW Coupling is set to manual</p> <p>The resolution bandwidth is coupled to the offset width determined by the start frequency and stop frequency</p>

Backwards Compatibility SCPI	<code>[:SENSe]:SEMAsk:OFFSet[1] 2:LIST:BWIDth[:RESolution]</code> <code>[:SENSe]:SEMAsk:OFFSet[1] 2:LIST:BWIDth[:RESolution]:AUTO</code>
------------------------------	---

Meas BW

Allows you to specify a multiplier of Res BW for the measurement integration bandwidth.

Meas BW is multiplier integer number. It shows a ratio between Integration BW and Resolution BW of the measurement result.

$$\text{Integ BW} = \text{Meas BW} * \text{Resolution BW}$$

Integration BW is desired resolution bandwidth and Resolution BW is actual bandwidth for sweep. Measurement sweeps with Resolution BW and Meas BW compensates sweep resolution bandwidth to Integration BW.

If you set this value greater than 1, you can set Resolution BW narrower to avoid carrier power leakage effect to the offset power integration.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values will remain unchanged. The query for this parameter returns 14 values for WLAN mode, 12 values for other modes.

Remote Command	<code>[:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:BAWIDth:IMULti <integer>, ...</code> <code>[:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:BAWIDth:IMULti?</code>
----------------	--

Example	<code>:SEM:OFFS2:LIST:BAND:IMUL 1,1,1,1,1,1</code> <code>:SEM:OFFS2:LIST:BAND:IMUL?</code>
---------	---

Notes	Comma separated list of values OFFSet1 is for BTS, 2 for MS. Default is BTS Note that Offset sub op code 2 is supported only in non-SA modes. In the SA mode, Offset sub op code 1 is used for both BTS and MS
-------	---

Preset When the max number of offsets is 6:

Mode	Values
SA	1, 1, 1, 1, 1, 1
WCDMA	1, 1, 1, 10, 1, 1 1, 1, 1, 1, 1, 1

When the max number of offsets is 12 in these modes, the preset value of Offset G ~ L is the same as the Offset F value

Mode	Values
MSR	1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1
LTEAFDD, LTEATDD, 5G NR	2, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1 2, 2, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1

When the max number of offsets is 14 in these modes, the preset value of Offset G ~ N is the same as the Offset F value

Mode	Values
WLAN	1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1

State Saved	Yes
Min/Max	1/1000
Backwards Compatibility SCPI	<code>[:SENSE] :SEMAsk:OFFSet [1] 2 :LIST:BWIDth:IMULti</code>

Offset Side

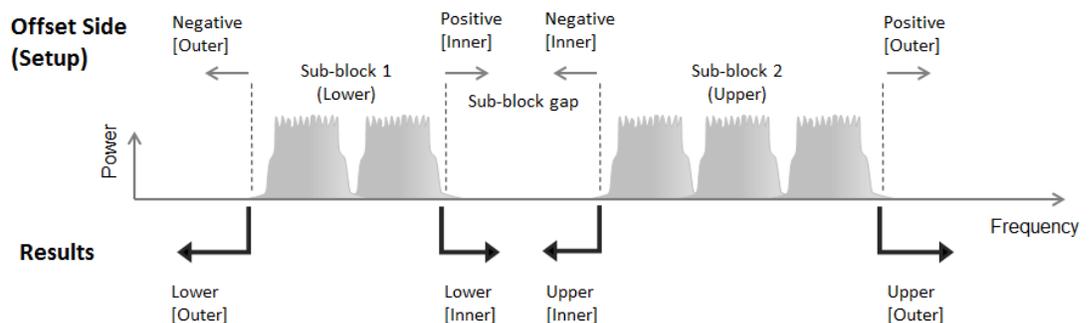

Specifies which offset side to measure.

You can turn off (not use) specific offsets with `[:SENSE] :SEMAsk:OFFSet [n] [:OUTer] :LIST:STATE`.

- BOTH** Both of the negative (lower) and positive (upper) sidebands
- NEGative** Negative (lower) sideband only
- POSitive** Positive (upper) sideband only

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query returns 14 values for WLAN Mode, and 12 values for other Modes.

The figure below shows the relation between the negative/positive offset side setups and the upper/lower results in the MSR, LTE-Advanced FDD/TDD and 5G NR Modes.

Remote Command	<code>[:SENSE] :SEMAsk:OFFSet [1] 2 :OUTer] :LIST:SIDE BOTH NEGative POSitive, ...</code> <code>[:SENSE] :SEMAsk:OFFSet [1] 2 [:OUTer] :LIST:SIDE?</code>
----------------	---

Example	<code>:SEM:OFFS:LIST:SIDE BOTH, NEG, NEG, POS, POS, POS</code> <code>:SEM:OFFS:LIST:SIDE?</code>
Notes	Comma-separated list of values OFFSet1 is for BTS, 2 for MS. Default is BTS Note that Offset sub op code 2 is supported only in Modes other than SA. In SA Mode, Offset sub op code 1 is used for both BTS and MS
Preset	Modes LTEAFDD,LTEATDD, 5G NR, MSR: <code>BOTH, BOTH, BOTH BOTH, BOTH</code> When the max number of offsets is 14: Mode WLAN: <code>BOTH, BOTH, BOTH</code> All Other Modes: When the max number of offsets is 6: <code>BOTH, BOTH, BOTH, BOTH, BOTH, BOTH</code> When the max number of offsets is 12: <code>BOTH, BOTH, BOTH</code>
State Saved	Saved in instrument state
Range	<code>BOTH NEGative POSitive</code>

Limits

Enables you to configure limits parameters for the SEM measurement in the EVM measurement based on the same capture.

Start Freq

Specifies the start frequency for the currently selected offset. Also enables you to toggle that offset between On and Off.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values will remain unchanged. The query for this parameter returns 14 values for WLAN mode, 12 values for other modes.

Remote Command	<code>[[:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:FREQuency:STARt <freq>, ...</code> <code>[[:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:FREQuency:STARt?</code> <code>[[:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:STATe ON OFF 1 0, ...</code> <code>[[:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:STATe?</code>
Example	<code>:SEM:OFFS2:LIST:FREQ:STAR 2.515 MHz, 2.715 MHz, 3.515 MHz, 4.00 MHz,</code>

3 5G NR Mode
3.7 Modulation Analysis Measurement

8.00 MHz, 12.50 MHz
:SEM:OFFS2:LIST:FREQ:STAR?
:SEM:OFFS:LIST:STAT ON, ON, ON, OFF, OFF, OFF
:SEM:OFFS:LIST:STAT?

Notes Comma-separated list of values
OFFSet1 is for BTS, 2 for MS. Default is BTS
Note that Offset sub op code 2 is supported only in non-SA Modes. In SA Mode, Offset sub op code 1 is used for both BTS and MS
If the offset is outside of the frequency range, the result spectrum will be invalid

Couplings Coupled to Stop Freq. When the start freq goes above the stop freq, the stop freq is automatically adjusted to the start freq plus 100 Hz

Preset When the max number of offsets is 6:

Mode	Values
SA	2.515 MHz, 2.715 MHz, 3.515 MHz, 4.00 MHz, 8.00 MHz, 12.50 MHz
WCDMA	2.515 MHz, 2.715 MHz, 3.515 MHz, 4.000 MHz, 8.000 MHz, 12.50 MHz 2.515MHz, 4.000 MHz, 7.500 MHz, 8.500 MHz, 12.5 MHz, 15 MHz

When the max number of offsets is 12 in these modes, the preset value of Offset G ~ L is the same as the Offset F value

Mode	Values
MSR	15 kHz, 215kHz, 1.015MHz, 1.5MHz, 10.5MHz, 15.00MHz, 30MHz, 30MHz, 30MHz, 30MHz 15kHz, 215kHz, 1.015MHz, 1.5MHz, 10.5MHz, 15.00MHz, 30MHz, 30MHz, 30MHz, 30MHz, 30MHz, 30MHz, 30MHz, 30MHz
LTEAFDD, LTEATDD	50 kHz, 5.05 MHz, 10.5 MHz, 15.00 MHz, 30 MHz, 40 MHz, 40 MHz, 40 MHz, 40 MHz 15.00 kHz, 1.5 MHz, 5.5 MHz, 6.5 MHz, 10 MHz, 20MHz, 20MHz, 20MHz, 20MHz, 20MHz, 20MHz, 20MHz
5G NR	50 kHz, 5.05 MHz, 10.5 MHz, 40.00 MHz, 100 MHz, 100 MHz, 100 MHz, 100 MHz 15.00 kHz, 1.5 MHz, 5.5 MHz, 100.50 MHz, 105.00 MHz, 100 MHz

When the max number of offsets is 14 in these modes, the preset value of Offset G ~ N is the same as the Offset F value

WLAN Mode: See the table of "**WLAN Mode Presets**" on page 1895 below

When the max number of offsets is 6:

Mode	Values
SA	ON, ON, ON, ON, ON, OFF
WCDMA	ON, ON, ON, ON, ON, OFF ON, ON, ON, ON, OFF, OFF

When the max number of offsets is 12 in these modes, the preset value of Offset G ~ L is the same as the Offset F value

MSR	ON, ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF ON, ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF
LTEAFDD, LTEATDD	ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF

802.11af (6 MHz/ 7 MHz/ 8 MHz)	ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF

For E6630A, E6640A, and M90XA:

Radio Std	Presets
802.11a/g(OFDM/DSSS-OFDM) 802.11n(20MHz/40MHz)	ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF
802.11ac/ax/be (20 MHz/ 40 MHz/ 80 MHz/ 160 MHz)	ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF
802.11be (320 MHz)	ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF
802.11ac/ax (80 MHz + 80 MHz)	ON, ON, ON, OFF, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF
802.11af (6 MHz/ 7 MHz/ 8 MHz)	ON, ON, ON, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF, OFF

Stop Freq

Specifies the stop frequency for the currently selected offset.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values will remain unchanged. The query for this parameter returns 14 values for WLAN mode, 12 values for other modes.

Remote Command	<code>[:SENSe]:SEMask:OFFSet[1] 2[:OUTer]:LIST:FREQuency:STOP <freq>, ...</code> <code>[:SENSe]:SEMask:OFFSet[1] 2[:OUTer]:LIST:FREQuency:STOP?</code>
Example	<code>:SEM:OFFS:LIST:FREQ:STOP 2.715 MHz, 3.515 MHz, 4.00 MHz, 8.00 MHz, 12.50 MHz, 15.0 MHz</code> <code>:SEM:OFFS:LIST:FREQ:STOP?</code>
Notes	Comma separated list of values <code>OFFSet1</code> is for BTS, 2 for MS. Default is BTS

3 5G NR Mode
3.7 Modulation Analysis Measurement

	Note that Offset sub op code 2 is supported only in non-SA Modes. In SA Mode, Offset sub op code 1 is used for both BTS and MS If the offset is outside of the frequency range, the result spectrum will be invalid														
Couplings	Coupled to Start Freq. When Stop Freq goes below Start Freq, Start Freq is automatically adjusted to Stop Freq minus 100 Hz														
Preset	When the max number of offsets is 6: <table border="1"> <thead> <tr> <th>Mode</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>SA</td> <td>2.715 MHz, 3.515 MHz, 4.00 MHz, 8.00 MHz, 12.50 MHz, 15.0 MHz</td> </tr> <tr> <td>WCDMA</td> <td>2.715 MHz, 3.515 MHz, 4.000 MHz, 8.000 MHz, 12.50 MHz, 15.0 MHz 3.485 MHz, 7.500 MHz, 8.500 MHz, 12.00 MHz, 15.00 MHz, 18.0 MHz</td> </tr> </tbody> </table> <p>When the max number of offsets is 12 in these modes, the preset value of Offset G ~ L is the same as the Offset F value</p> <table border="1"> <thead> <tr> <th>Mode</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>MSR</td> <td>215 kHz, 1.015 MHz, 1.5 MHz, 10.5 MHz, 50 MHz 215 kHz, 1.015 MHz, 1.5 MHz, 10.5 MHz, 50 MHz</td> </tr> <tr> <td>LTEAFDD, LTEATDD</td> <td>5.05 MHz, 10.05 MHz, 15 MHz, 30 MHz, 40 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz 985.0 kHz, 4.50 MHz, 5.5001 MHz, 9.50 MHz, 20 MHz, 40 MHz</td> </tr> <tr> <td>5G NR</td> <td>5.05 MHz, 10.05 MHz, 40 MHz, 100 MHz, 500 MHz 985.0 kHz, 4.50 MHz, 99.500 MHz, 104.5 MHz, 500 MHz</td> </tr> </tbody> </table> <p>When the max number of offsets is 14 in these modes, the preset value of Offset G ~ N is the same as the Offset F value</p> <p>WLAN Mode: See table of "WLAN Mode Presets" on page 1898 below</p>	Mode	Values	SA	2.715 MHz, 3.515 MHz, 4.00 MHz, 8.00 MHz, 12.50 MHz, 15.0 MHz	WCDMA	2.715 MHz, 3.515 MHz, 4.000 MHz, 8.000 MHz, 12.50 MHz, 15.0 MHz 3.485 MHz, 7.500 MHz, 8.500 MHz, 12.00 MHz, 15.00 MHz, 18.0 MHz	Mode	Values	MSR	215 kHz, 1.015 MHz, 1.5 MHz, 10.5 MHz, 50 MHz 215 kHz, 1.015 MHz, 1.5 MHz, 10.5 MHz, 50 MHz	LTEAFDD, LTEATDD	5.05 MHz, 10.05 MHz, 15 MHz, 30 MHz, 40 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz 985.0 kHz, 4.50 MHz, 5.5001 MHz, 9.50 MHz, 20 MHz, 40 MHz	5G NR	5.05 MHz, 10.05 MHz, 40 MHz, 100 MHz, 500 MHz 985.0 kHz, 4.50 MHz, 99.500 MHz, 104.5 MHz, 500 MHz
Mode	Values

802.11be (320MHz)	160.5 MHz, 320 MHz, 480 MHz, 490 MHz, 800 MHz

Abs Start

Sets the absolute power level limit at the start frequency for the selected offset. The absolute power level limit ranges from -200 to +50 dBm.

The fail condition for each offset channel is set remotely by `[:SENSe]:SEMAsk:OFFSet[n][:OUTer]:LIST:TEST`.

You can turn off (not use) specific offset channels remotely with `[:SENSe]:SEMAsk:OFFSet[n][:OUTer]:LIST:STATe`.

The query returns values currently set to the absolute power test limits.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query returns 14 values for WLAN Mode, or 12 values for other Modes.

Remote Command	<code>[:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:START:ABSolute <real>, ...</code> <code>[:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:START:ABSolute?</code>								
Example	<code>:SEM:OFFS2:LIST:STAR:ABS -12.50 dBm, -12.50 dBm, -24.50 dBm, -11.50 dBm, -11.50 dBm, -11.50 dBm</code> <code>:SEM:OFFS2:LIST:STAR:ABS?</code>								
Notes	Comma-separated list of values <code>OFFSet1</code> is for BTS, 2 for MS. Default is BTS Note that Offset sub op code 2 is supported only in non-SA modes. In SA Mode, Offset sub op code 1 is used for both BTS and MS								
Preset	When the max number of offsets is 6: <table border="1"> <thead> <tr> <th>Mode</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>SA</td> <td>-14.00 dBm , -14.00 dBm , -26.00 dBm , -13.00 dBm , -13.00 dBm, -13.00 dBm</td> </tr> <tr> <td>WCDMA</td> <td>-12.50 dBm, -12.50 dBm, -24.50 dBm, -11.50 dBm, -11.50 dBm, -11.50 dBm -69.6 dBm, -54.3 dBm, -54.3 dBm, -54.3 dBm, -54.3 dBm, -54.3 dBm</td> </tr> <tr> <td>LTE, LTETDD</td> <td>-5.5 dBm, -12.5 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm -13.5 dBm, -8.5 dBm, -11.5 dBm, -23.5 dBm, -23.5 dBm, -23.5 dBm</td> </tr> </tbody> </table> <p>When the max number of offsets is 12 in these modes, the preset value of Offset G ~ L is the same as the Offset F value</p>	Mode	Values	SA	-14.00 dBm , -14.00 dBm , -26.00 dBm , -13.00 dBm , -13.00 dBm, -13.00 dBm	WCDMA	-12.50 dBm, -12.50 dBm, -24.50 dBm, -11.50 dBm, -11.50 dBm, -11.50 dBm -69.6 dBm, -54.3 dBm, -54.3 dBm, -54.3 dBm, -54.3 dBm, -54.3 dBm	LTE, LTETDD	-5.5 dBm, -12.5 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm -13.5 dBm, -8.5 dBm, -11.5 dBm, -23.5 dBm, -23.5 dBm, -23.5 dBm
Mode	Values

802.11af (7MHz)	16.00 dBm, -4.00 dBm, -12.00 dBm, -66.00 dBm
802.11af (8MHz)	16.00 dBm, -4.00 dBm, -12.00 dBm, -66.00 dBm
802.11be (320MHz)	16.00 dBm, -4.00 dBm, -12.00 dBm, -69.00 dBm

Abs Stop

Sets the absolute power level limit at the stop frequency for the selected offset. The absolute power level limit ranges from -200 to +50 dBm. You can also toggle this function between **Couple** (**COUPl**e = **ON**) and **Manual** (**COUPl**e = **OFF**). If set to **Couple**, the **Abs Stop** power level limit is coupled to **Abs Start** to result in a flat limit line. If set to **Man**, **Abs Start** and **Abs Stop** take different values, resulting in a sloped limit line.

The query returns values currently set to the offset stop absolute power limits.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query returns 14 values for WLAN Mode, or 12 values for other Modes.

Remote Command	<pre>[:SENSe]:SEMask:OFFSet[1] 2[:OUTer]:LIST:STOP:ABSolute <real>, ... [:SENSe]:SEMask:OFFSet[1] 2[:OUTer]:LIST:STOP:ABSolute? [:SENSe]:SEMask:OFFSet[1] 2[:OUTer]:LIST:STOP:ABSolute:COUple ON OFF 1 0, ... [:SENSe]:SEMask:OFFSet[1] 2[:OUTer]:LIST:STOP:ABSolute:COUple?</pre>
Example	<pre>:SEM:OFFS:LIST:STOP:ABS -12.50 dBm, -24.50 dBm, -24.50 dBm, -11.50 dBm, -11.50 dBm, -11.50 dBm :SEM:OFFS1:LIST:STOP:ABS? :SEM:OFFS:LIST:STOP:ABS:COUP ON, OFF, ON, ON, ON, ON :SEM:OFFS:LIST:STOP:ABS:COUP?</pre>
Notes	<p>Comma-separated list of values</p> <p>OFFSet 1 is for BTS, 2 for MS. Default is BTS</p> <p>Note that Offset sub op code 2 is supported only in Modes other than SA. In SA Mode, Offset sub op code 1 is used for both BTS and MS</p>
Couplings	Coupled to Abs Start if Auto is selected, that is, the Stop value is equal to the Start value
Preset	When the max number of offsets is 6:

Mode	Values
SA	-14.00 dBm, -26.00 dBm, -26.00 dBm, -13.00 dBm, -13.00 dBm, -13.00 dBm
WCDMA	-12.50 dBm, -24.50 dBm, -24.50 dBm, -11.50 dBm, -11.50 dBm, -11.50 dBm -69.6 dBm, -54.3 dBm, -54.3 dBm, -54.3 dBm, -54.3 dBm, -54.3 dBm
LTE, LTETDD	-12.5 dBm, -12.5 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm -13.5 dBm, -8.5 dBm, -11.5 dBm, -23.5 dBm, -23.5 dBm, -23.5 dBm, -23.5 dBm

When the max number of offsets is 12 in these modes, the preset value of Offset G ~ L is the same as the Offset F value

Mode	Values
LTEAFDD, LTEATDD	-12.5 dBm, -12.5 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm -13.5 dBm, -8.5 dBm, -11.5 dBm, -23.5 dBm
5G NR	-12.5 dBm, -12.5 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm -22.5 dBm, -8.5 dBm, -11.5 dBm, -23.5 dBm
MSR	-12.5 dBm, -24.5 dBm, -11.5 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm -12.5 dBm, -24.5 dBm, -11.5 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm

When the max number of offsets is 14 in these modes, the preset value of Offset G ~ N is the same as the Offset F value

WLAN Mode: See the table of "WLAN Mode Presets" on page 1904 below

When the max number of offsets is 6:

Mode	Values
SA	ON, OFF, ON, ON, ON, ON
WCDMA	ON, OFF, ON, ON, ON, ON ON, ON, ON, ON, ON, ON
LTE, LTETDD	OFF, ON, ON, ON, ON, ON ON, ON, ON, ON, ON, ON

When the max number of offsets is 12 in these modes, the preset value of Offset G ~ L is the same as the Offset F value

Mode	Values
LTEAFDD, LTEATDD, 5G NR	OFF, ON, ON ON, ON, ON, ON, ON, ON, ON, ON, ON, ON, ON, ON
MSR	ON, OFF, OFF, OFF, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF ON, OFF, OFF, OFF, ON, OFF, OFF, OFF, OFF, OFF, OFF, OFF

When the max number of offsets is 14 in these modes, the preset value of Offset G ~ N is the same as the Offset F value

WLAN Mode: See the table of "WLAN Mode Auto Function Presets" on page 1905 below

Rel Start

Sets a relative power level limit at the start frequency for the selected offset. The relative power level limit ranges from -200 to +50 dBc.

The fail condition is set remotely by `[:SENSe]:SEMAsk:OFFSet[n] [:OUTer]:LIST:TEST` for each offset channel test.

You can turn off (not use) specific offset channels remotely with `[:SENSe]:SEMAsk:OFFSet[n][:OUTer]:LIST:STATe`.

The query returns values currently set to the relative power test limits.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query returns 14 values for WLAN Mode, or 12 values for other Modes.

Remote Command	<code>[:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:START:RCARrier <rel_ampl>, ... [:SENSe]:SEMAsk:OFFSet[1] 2[:OUTer]:LIST:START:RCARrier?</code>

Fail Mask

Selects one of the logics for fail conditions between the measurement results and the test limits:

- **ABSolute** and **RELative** both check the results against the respective limit
- **OR** checks against both limits, failing if either of the limits is broken
- **AND** only displays a fail if both of the limits are broken

The absolute or relative power limit value for each offset channel can be set remotely with `[:SENSE]:SEMAsk:OFFSet[n][:OUTer]:LIST:ABSolute` or `[:SENSE]:SEMAsk:OFFSet[n][:OUTer]:LIST:RCARrier`.

You can turn off (not use) specific offset channels remotely with `[:SENSE]:SEMAsk:OFFSet[n][:OUTer]:LIST:STATe`.

Inner Offset

Enables you to configure inner offset parameters for the SEM measurement in the EVM measurement based on the same capture.

Offset Freq Define

Enables you to select offset frequency definition. Each standard defines each offset frequency from Carrier.

For example, 3GPP2 requires the “Carrier Center to Meas BW Edge” definition, and LTE conformance test requires “Carrier Edge to Meas BW Center” and/or “Carrier Edge to Meas BW Edge” definition. MSR standard requires “RF BW Edge to Meas BW Center” and/or “RF BW Edge to Meas Edge” definition.

“Meas BW Edge” means the edge frequency of resolution bandwidth closer to the carrier that is represented by Meas BW and Res BW settings. Actual center frequency of Meas BW and the limit line have ½ Meas BW offset when the Meas BW Edge is selected.

Option	SCPI	Definition
Carrier Center to Meas BW Center	CTOCenter	From the lowermost carrier center frequency (for lower offset), the uppermost carrier center frequency (for upper offset) to the center of offset measuring filter*
Carrier Center to Meas BW Edge	CTOEdge	From the lowermost carrier center frequency (for lower offset), the uppermost carrier center frequency (for upper offset) to the nominal -3 dB point of the offset measuring filter* closer to the carrier
Carrier Edge to Meas BW Center	ETOCenter	From the lowermost carrier center frequency - spacing of this carrier /2 (for lower offset), the uppermost carrier center frequency + spacing of this carrier /2 (for upper offset) to the center frequency of offset measuring filter*
Carrier	ETOEdge	From the lowermost carrier center frequency - spacing of this

Option	SCPI	Definition
Edge to Meas BW Edge		carrier /2 (for lower offset), the uppermost carrier center frequency + spacing of this carrier /2 (for upper offset) to the nominal -3 dB point of the offset measuring filter* closer to the carrier
Sub-block Edge to Meas BW Center	STOCenter	From either the lower or upper sub-block edge frequency to the center frequency of offset measuring filter*
Sub-block Edge to Meas BW Edge	STOEdge	From either the lower or upper sub-block edge frequency to the nominal -3 dB point of the offset measuring filter* closer to the carrier
Sub-block Center to Meas BW Center	SCTOCenter	From the center frequency of sub-block to the center frequency of offset measuring filter*

*Measuring filter = Meas BW (N) x Res BW

** sub-block (bandwidth) = $BW_{channel,block}$ which is defined in each 3GPP standard, regardless of "Measure Carrier" for the uppermost and the lowermost carriers being Enabled or Disabled. When the **Number of Component Carriers** within each sub-block = 1, sub-block (bandwidth) = $BW_{channel} = 2 \times F_{offset,RAT}$.

See "Diagrams for Offset Freq Define" on page 1915.

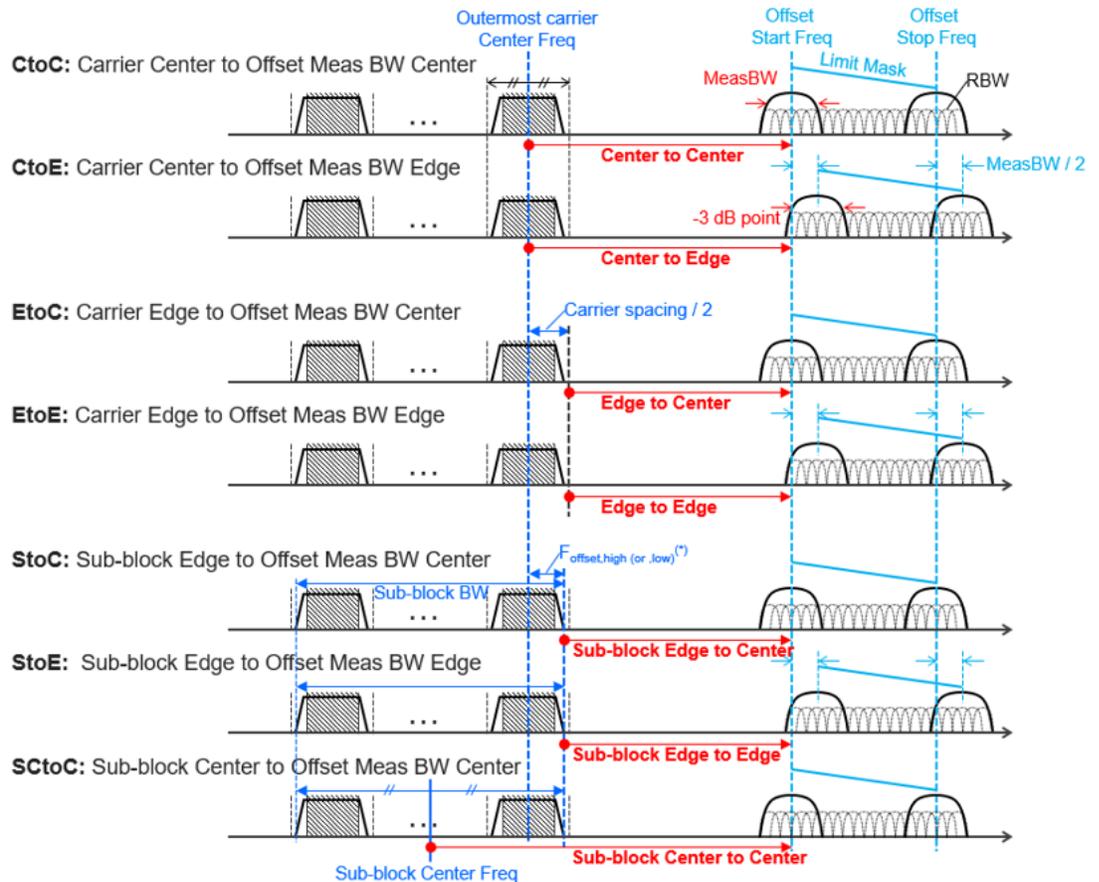

Mode: MSR, LTEAFDD, LTEATDD

Remote Command	<code>[:SENSe] :SEMAsk :OFFSet [1] 2 :INNer :TYPE CTOCenter CTOEdge ETOCenter ETOEdge STOCenter STOEdge</code>
	<code>[:SENSe] :SEMAsk :OFFSet [1] 2 :INNer :TYPE ?</code>

Diagrams for Offset Freq Define

Notes:

- $MeasBW = N \times RBW$
- Sub-block Edge and Outermost Carrier Edge in the Sub-block are not always same. e.g.) 5G NR (3GPP) defines $BW_{channel,block}$ which calculates $F_{offset,high}$ and $F_{offset,low}$ asymmetrically with SCS shift.
(* For MSR, $F_{offset,high (or ,low)} = F_{offset,RAT,high (or ,low)}$)

Cumulate Mask

Selects whether inner offset limit masks are cumulated or not.

Remote Command	<code>[:SENSe] :SEMAsk:OFFSet[1] 2 :INNeR:CMASK[:STATe] ON OFF 0 1</code>
Example	<code>:SEM:OFFS:INN:CMAS 0</code> <code>:SEM:OFFS:INN:CMAS?</code>

Notes	OFFSet 1 is for BTS, 2 for MS. Default is BTS
Preset	1 0
State Saved	Yes
Range	ON OFF

Cumulate Mask Stop Frequency

Specifies stop frequency of summing limit masks. For outside of the stop frequency, the limit masks are not cumulated.

Remote Command	<code>[:SENSe] :SEMAsk :OFFSet [1] 2 :INNer :CMASk :FREQuency :STOP <freq></code> <code>[:SENSe] :SEMAsk :OFFSet [1] 2 :INNer :CMASk :FREQuency :STOP?</code>
Example	<code>:SEM :OFFS :INN :CMAS :FREQ :STOP 500E6</code> <code>:SEM :OFFS :INN :CMAS :FREQ :STOP?</code>
Notes	OFFSet 1 is for BTS, 2 for MS. Default is BTS
Dependencies	Valid only when "Cumulate Mask " on page 1915 is ON
Preset	10.5 MHz
State Saved	Yes
Min/Max	0 Hz/10 GHz

Start Freq

Specifies the start frequency for the currently selected offset. Also, enables you to toggle that offset between On and Off. When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

Remote Command	<code>[:SENSe] :SEMAsk :OFFSet [1] 2 :INNer :LIST :FREQuency :STARt <freq>, ...</code> <code>[:SENSe] :SEMAsk :OFFSet [1] 2 :INNer :LIST :FREQuency :STARt?</code> <code>[:SENSe] :SEMAsk :OFFSet [1] 2 :INNer :LIST :STATe ON OFF 1 0, ...</code> <code>[:SENSe] :SEMAsk :OFFSet [1] 2 :INNer :LIST :STATe?</code>
Example	<code>:SEM :OFFS2 :INN :LIST :FREQ :STAR 2.515 MHz, 2.715 MHz, 3.515 MHz, 4.00 MHz, 8.00 MHz, 12.50 MHz</code> <code>:SEM :OFFS2 :INN :LIST :FREQ :STAR?</code> <code>:SEM :OFFS :INN :LIST :STAT ON, ON, ON, OFF, OFF, OFF</code> <code>:SEM :OFFS :INN :LIST :STAT?</code>
Notes	Comma-separated list of values OFFSet 1 is for BTS, 2 for MS. Default is BTS

	If the offset is outside the frequency range, the result spectrum will be invalid																		
Couplings	Coupled to "Stop Freq" on page 1923. If Start Freq exceeds Stop Freq, Stop Freq is automatically adjusted to (Start Freq + 100 Hz)

State Saved	Saved in instrument state								
Min/Max	100 Hz/Depends on instrument maximum frequency. Same as the Max Span on Swept SA Measurement								

Res BW

Specifies which Resolution BW filter to use when measuring the currently selected offset.

Offset Res BW Mode allows the instrument to determine the optimum Resolution BW filter to use when measuring the currently selected offset. using front panel and all the offsets using SCPI. When changing the Meas BW parameter, if the Res BW needs to be changed to adhere to the rule:

$$(N \times \text{Res BW}) \leq (\text{Stop freq of the offset} - \text{Start freq of the offset}),$$

where N is the multiplier, this setting will automatically be changed to manual.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

Remote Command	<pre>[:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:LIST:BA NDwidth[:RESolution] <bandwidth>, ... [:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:LIST:BA NDwidth[:RESolution]? Meas BW

Allows you to specify a multiplier of Res BW for the measurement integration bandwidth.

Meas BW is multiplier integer, which defines a ratio between Integration BW and **Res BW** of the measurement result:

Integration BW = Meas BW * "**Res BW**" on page 1918

Integration BW is the desired resolution bandwidth, and **Res BW** is the actual bandwidth for sweep. Measurement sweeps with **Res BW**, and **Meas BW** compensates sweep resolution bandwidth to Integration BW.

If you set this parameter greater than 1, you can set **Res BW** narrower to avoid carrier power leakage effect to the offset power integration.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

Remote Command	<code>[:SENSe] :SEMask :OFFSet [1] 2 :INNeR :LIST :BANDwidth :IMULti <integer>, ...</code> <code>[:SENSe] :SEMask :OFFSet [1] 2 :INNeR :LIST :BANDwidth :IMULti ?</code>						
Example	<code>:SEM :OFFS2 :INN :LIST :BAND :IMUL 1,1,1,1,1,1</code> <code>:SEM :OFFS2 :INN :LIST :BAND :IMUL ?</code>						
Notes	Comma-separated list of values OFFSet 1 is for BTS, 2 for MS. Default is BTS						
Couplings	This parameter must adhere to the rule: (N x Res BW) <= (Stop freq of the offset - Start freq of the offset), where N is the multiplier If Res BW is changed, the multiplier changes to conform to the rule						
Preset	<table border="1"> <thead> <tr> <th>Mode</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>MSR</td> <td>1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1</td> </tr> <tr> <td>LTEAFDD, LTEATDD, 5G NR</td> <td>2, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1 2, 2, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1</td> </tr> </tbody> </table>	Mode	Values	MSR	1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1	LTEAFDD, LTEATDD, 5G NR	2, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1 2, 2, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1

State Saved	Yes						
Min/Max	1/1000						

Offset Side

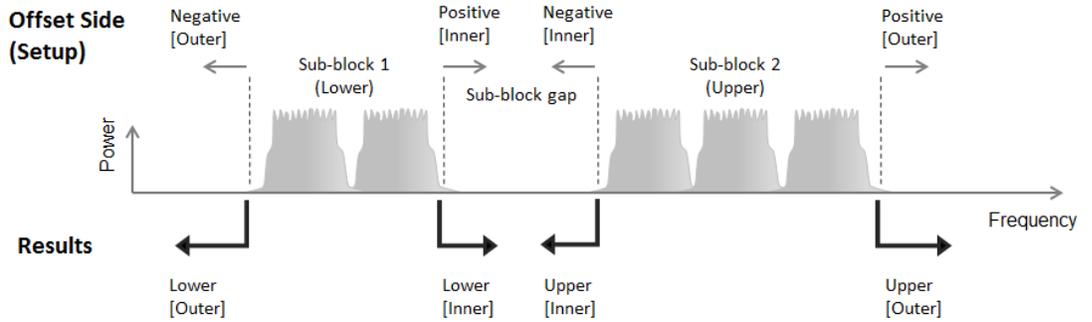

Specifies which offset side to measure.

You can turn off (not use) specific offsets with `[:SENSe] :SEMask :OFFSet [n] :INNeR :LIST :STATe`.

BOTH	Both sides in the sub-block gap are enabled.
NEGative	The upper side in the sub-block gap only (i.e., negative sideband of the upper sub-block) is enabled
POSitive	The lower side in the sub-block gap only (i.e., positive sideband of the lower sub-block) is enabled.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

The figure below shows the relation between the negative/positive offset side setups and the upper/lower results in the MSR and LTE-Advanced FDD/TDD Modes.

Remote Command	<code>[:SENSe]:SEMask:OFFSet[1] 2:INNeR:LIST:SIDE BOTH NEGative POSitive, ...</code> <code>[:SENSe]:SEMask:OFFSet[1] 2:INNeR:LIST:SIDE?</code>						
Example	<code>:SEM:OFFS:INN:LIST:SIDE BOTH, NEG, NEG, POS, POS, POS</code> <code>:SEM:OFFS:INN:LIST:SIDE?</code>						
Notes	Comma-separated list of values OFFSet1 is for BTS, 2 for MS. Default is BTS						
Preset	<table border="1"> <thead> <tr> <th>Mode</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>MSR</td> <td>BOTH, BOTH, BOTH</td> </tr> <tr> <td>LTEAFDD, LTEATDD, 5G NR</td> <td>BOTH, BOTH, BOTH BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH</td> </tr> </tbody> </table>	Mode	Values	MSR	BOTH, BOTH	LTEAFDD, LTEATDD, 5G NR	BOTH, BOTH BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH
Mode	Values						
MSR	BOTH, BOTH						
LTEAFDD, LTEATDD, 5G NR	BOTH, BOTH BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH, BOTH						
State Saved	Saved in instrument state						
Range	<code>BOTH NEGative POSitive</code>						

Inner Limits

Enables you to configure inner limits parameters for the SEM measurement in the EVM measurement based on the same capture.

Start Freq

Specifies the start frequency for the currently selected offset. Also, enables you to toggle that offset between On and Off. When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you

3 5G NR Mode
 3.7 Modulation Analysis Measurement

must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

Remote Command	<pre>[:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:LIST:FREQuency:STARt <freq>, ... [:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:LIST:FREQuency:STARt? [:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:LIST:STATe ON OFF 1 0, ... [:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:LIST:STATe?</pre>																
Example	<pre>:SEM:OFFS2:INN:LIST:FREQ:STAR 2.515 MHz, 2.715 MHz, 3.515 MHz, 4.00 MHz, 8.00 MHz, 12.50 MHz :SEM:OFFS2:INN:LIST:FREQ:STAR? :SEM:OFFS:INN:LIST:STAT ON, ON, ON, OFF, OFF, OFF :SEM:OFFS:INN:LIST:STAT?</pre>																
Notes	<p>Comma-separated list of values OFFSet 1 is for BTS, 2 for MS. Default is BTS If the offset is outside the frequency range, the result spectrum will be invalid</p>

State Saved	<p>Saved in instrument state Saved in instrument state</p>																
Range	ON OFF																
Min/Max	0 Hz/Depends on instrument maximum frequency. It's always Offset Stop Freq -100 Hz																

Stop Freq

Specifies the stop frequency for the currently selected offset.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6 you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

Remote Command	<code>[:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:LIST:FREQuency:STOP <freq>, ...</code> <code>[:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:LIST:FREQuency:STOP?</code>								
Example	<code>:SEM:OFFS:INN:LIST:FREQ:STOP 2.715 MHz, 3.515 MHz, 4.00 MHz, 8.00 MHz, 12.50 MHz, 15.0 MHz</code> <code>:SEM:OFFS:INN:LIST:FREQ:STOP?</code>								
Notes	Comma-separated list of values OFFSet 1 is for BTS, 2 for MS. Default is BTS If the offset is outside the frequency range, the result spectrum will be invalid								
Couplings	Coupled to "Start Freq" on page 1921. If Stop Freq is lower than Start Freq , Start Freq is automatically adjusted to (Stop Freq - 100 Hz)								
Preset	<table border="1"> <thead> <tr> <th>Mode</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>MSR</td> <td>215 kHz, 1.015 MHz, 1.5 MHz, 10.5 MHz, 50 MHz</td> </tr> <tr> <td>5G NR</td> <td>5.05 MHz, 10.05 MHz, 40 MHz, 100 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz 985.0 kHz, 4.50 MHz, 99.500 MHz, 104.5 MHz, 500 MHz</td> </tr> <tr> <td>LTEAFDD, LTEATDD</td> <td>5.05 MHz, 10.05 MHz, 15 MHz, 30 MHz, 40 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz 985.0 kHz, 4.50 MHz, 5.5001 MHz, 9.50 MHz, 20 MHz, 40 MHz</td> </tr> </tbody> </table>	Mode	Values	MSR	215 kHz, 1.015 MHz, 1.5 MHz, 10.5 MHz, 50 MHz	5G NR	5.05 MHz, 10.05 MHz, 40 MHz, 100 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz, 500 MHz 985.0 kHz, 4.50 MHz, 99.500 MHz, 104.5 MHz, 500 MHz	LTEAFDD, LTEATDD	5.05 MHz, 10.05 MHz, 15 MHz, 30 MHz, 40 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz, 50 MHz 985.0 kHz, 4.50 MHz, 5.5001 MHz, 9.50 MHz, 20 MHz, 40 MHz

State Saved	Saved in instrument state								
Min/Max	100 Hz/Depends on instrument maximum frequency. Same as the Max Span on Swept SA Measurement								

Abs Start

Sets the absolute power level limit at the start frequency for the selected inner offset, ranging from -200 to +50 dBm.

The fail condition for each inner offset channel is set remotely by `[:SENSe]:SEMAsk:OFFSet[n]:INNeR:LIST:TEST`.

You can turn off (not use) specific inner offset channels remotely with
`[:SENSe]:SEMAsk:OFFSet[n]:INNER:LIST:STATe.`

The query returns values currently set to the absolute power test limits.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

Remote Command	<code>[:SENSe]:SEMAsk:OFFSet[1] 2:INNER:LIST:START:ABSolute <real>, ...</code> <code>[:SENSe]:SEMAsk:OFFSet[1] 2:INNER:LIST:START:ABSolute?</code>								
Example	<code>:SEM:OFFS2:INN:LIST:STAR:ABS -12.50 dBm, -12.50 dBm, -24.50 dBm, -11.50 dBm, -11.50 dBm, -11.50 dBm</code> <code>:SEM:OFFS2:INN:LIST:STAR:ABS?</code>								
Notes	Comma-separated list of values OFFSet 1 is for BTS, 2 for MS. Default is BTS								
Preset	<table border="1"> <thead> <tr> <th>Mode</th> <th>Values</th> </tr> </thead> <tbody> <tr> <td>MSR</td> <td>-12.5 dBm, -12.5 dBm, -24.5 dBm, -11.5 dBm, -15.0 dBm, -12.5 dBm, -12.5 dBm, -24.5 dBm, -11.5 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm</td> </tr> <tr> <td>5G NR</td> <td>-5.5 dBm, -12.5 dBm, -15.0 dBm, -22.5 dBm, -8.5 dBm, -11.5 dBm, -23.5 dBm</td> </tr> <tr> <td>LTEAFDD, LTEATDD</td> <td>-5.5 dBm, -12.5 dBm, -15.0 dBm, -13.5 dBm, -8.5 dBm, -11.5 dBm, -23.5 dBm</td> </tr> </tbody> </table>	Mode	Values	MSR	-12.5 dBm, -12.5 dBm, -24.5 dBm, -11.5 dBm, -15.0 dBm, -12.5 dBm, -12.5 dBm, -24.5 dBm, -11.5 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm, -15.0 dBm	5G NR	-5.5 dBm, -12.5 dBm, -15.0 dBm, -22.5 dBm, -8.5 dBm, -11.5 dBm, -23.5 dBm	LTEAFDD, LTEATDD	-5.5 dBm, -12.5 dBm, -15.0 dBm, -13.5 dBm, -8.5 dBm, -11.5 dBm, -23.5 dBm

LTEAFDD, LTEATDD	-5.5 dBm, -12.5 dBm, -15.0 dBm, -13.5 dBm, -8.5 dBm, -11.5 dBm, -23.5 dBm								
State Saved	Saved in instrument state								
Min/Max	-200 dBm/50 dBm								

Abs Stop

Sets the absolute power level limit at the stop frequency for the selected inner offset, ranging from -200 to +50 dBm. You can also toggle this function between **Couple** (`COUPle = ON`) and **Manual** (`COUPle = OFF`). If set to **Couple**, the Abs Stop power level limit is coupled to Abs Start to result in a flat limit line. If set to **Man**, Abs Start and Abs Stop take different values to result in a sloped limit line.

The query returns values currently set to the inner offset stop absolute power limits.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

Remote Command	<pre>[:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:LIST:STOP:ABSolute <real>, ... [:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:LIST:STOP:ABSolute? [:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:LIST:STOP:ABSolute:COUPle ON OFF 1 0, ... [:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:LIST:STOP:ABSolute:COUPle?</pre>														
Example	<pre>:SEM:OFFS:INN:LIST:STOP:ABS -12.50 dBm, -24.50 dBm, -24.50 dBm, -11.50 dBm, -11.50 dBm, -11.50 dBm :SEM:OFFS1:INN:LIST:STOP:ABS? :SEM:OFFS:INN:LIST:STOP:ABS:COUP ON, OFF, ON, ON, ON, ON :SEM:OFFS:INN:LIST:STOP:ABS:COUP?</pre>														
Notes	<p>Comma-separated list of values OFFSet 1 is for BTS, 2 for MS. Default is BTS</p>

State Saved	<p>Saved in instrument state Saved in instrument state</p>														
Range	Auto Man														
Min/Max	-200 dBm/50 dBm														

Rel Start

Sets a relative power level limit at the start frequency for the selected inner offset, ranging from –200 to +50 dBc.

The fail condition is set remotely by `[:SENSe]:SEMAsk:OFFSet [n]:INNeR:LIST:TEST` for each inner offset channel test.

You can turn off (not use) specific inner offset channels remotely with `[:SENSe]:SEMAsk:OFFSet [n]:INNeR:LIST:STATe`.

The query returns values currently set to the relative power test limits.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

Remote Command	<code>[:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:LIST:START:RCARrier <rel_amp1>, ...</code> <code>[:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:LIST:START:RCARrier?</code>
Example	<code>:SEM:OFFS:INN:LIST:STAR:RCAR -30, -30, -30, -30, -30, -30</code> <code>:SEM:OFFS:INN:LIST:STAR:RCAR?</code>
Notes	Comma-separated list of values OFFSet 1 is for BTS, 2 for MS. Default is BTS
Preset	0 dB, 0 dB 0 dB, 0 dB
State Saved	Saved in instrument state
Min/Max	-200 dB/50 dB

Rel Stop

Sets a relative power level limit at the stop frequency for the selected inner offset, ranging from –200 to +50 dBc.

The fail condition is set remotely by `[:SENSe]:SEMAsk:OFFSet [n]:INNeR:LIST:TEST` for each inner offset channel.

You can turn off (not use) specific inner offset channels remotely with `[:SENSe]:SEMAsk:OFFSet [n]:INNeR:LIST:STATe`.

The query returns values currently set to the inner offset stop relative power limits.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

Remote	<code>[:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:LIST:STOP:RCARrier <rel_amp1>, ...</code>
--------	---

Command	<code>[:SENSE]:SEMAsk:OFFSet[1] 2:INNER:LIST:STOP:RCARrier?</code> <code>[:SENSE]:SEMAsk:OFFSet[1] 2:INNER:LIST:STOP:RCARrier:COUPle ON OFF 1 0, ...</code> <code>[:SENSE]:SEMAsk:OFFSet[1] 2:INNER:LIST:STOP:RCARrier:COUPle?</code>
Example	<code>:SEM:OFFS:INN:LIST:STOP:RCAR -30, -30, -30, -30, -30, -30</code> <code>:SEM:OFFS:INN:LIST:STOP:RCAR?</code> <code>:SEM:OFFS:INN:LIST:STOP:RCAR:COUP ON, ON, ON, ON, ON, ON</code> <code>:SEM:OFFS:INN:LIST:STOP:RCAR:COUP?</code>
Notes	Comma-separated list of values OFFSet 1 is for BTS, 2 for MS. Default is BTS
Couplings	Coupled to Rel Start if "Auto" is selected, that is, Start is made the same as Stop
Preset	0 dB, 0 dB 0 dB, 0 dB <code>ON, ON, ON ON, ON</code>
State Saved	Saved in instrument state Saved in instrument state
Range	Auto Man
Min/Max	-200 dB/50 dB

Fail Mask

Selects one of the logics for fail conditions between the measurement results and the test limits:

- **ABSolute** and **RELative** both check the results against the respective limit
- **OR** checks against both limits, failing if either of the limits is broken
- **AND** only displays a fail if both of the limits are broken

The absolute or relative power limit value for each inner offset channel can be set remotely with `[:SENSE]:SEMAsk:OFFSet[n]:INNER:LIST:ABSolute` or `[:SENSE]:SEMAsk:OFFSet[n]:INNER:LIST:RCARrier`.

You can turn off (not use) specific inner offset channels remotely with `[:SENSE]:SEMAsk:OFFSet[n]:INNER:LIST:STATe`.

When sending the remote command, missing values are not permitted; that is, if you want to change values 2 and 6, you must send all values up to 6. Subsequent values remain unchanged. The query for this parameter always returns 12 values.

Remote Command	<code>[:SENSE]:SEMAsk:OFFSet[1] 2:INNER:LIST:TEST ABSolute AND OR RELative, ...</code>
----------------	---

	<code>[:SENSe]:SEMAsk:OFFSet[1] 2:INNeR:LIST:TEST?</code>
Example	<code>:SEM:OFFS:INN:LIST:TEST ABS, ABS, ABS, ABS, ABS, ABS, ABS</code> <code>:SEM:OFFS:INN:LIST:TEST?</code>
Notes	Comma-separated list of values
Preset	<code>ABS, ABS, ABS</code>
State Saved	Saved in instrument state
Range	Absolute Relative Abs AND Rel Abs OR Rel

Transmit On|Off Power Setup

Enables you to configure advanced parameters for the Transmit On|Off Power measurement in the EVM measurement.

Transmit On|Off Power State

Enable or disable Transmit On|Off Power measurement.

Remote Command	<code>[:SENSe]:EVM:PVTime OFF ON 0 1</code> <code>[:SENSe]:EVM:PVTime?</code>
Example	<code>:EVM:PVT OFF</code> <code>:EVM:PVT?</code>
Preset	<code>OFF</code>
State Saved	Yes

Burst Repetition Period

Determines the burst repetition period. For correct measurement, the value must be set to the repetition period of the burst and less than or equal to Meas Interval time.

Remote Command	<code>[:SENSe]:PVTime:BURSt:RPERiod <time></code> <code>[:SENSe]:PVTime:BURSt:RPERiod?</code>
Example	<code>:PVT:BURS:RPER 7ms</code> <code>:PVT:BURS:RPER?</code>
Notes	This value will be preset when the action "Apply Preset (to All CCs)" is executed. For the preset value, see Transmit On Off Power in Values for Meas Standard
Couplings	This parameter cannot be smaller than Burst Time When entering the value smaller than Burst Time, coupled to the value of Burst Time
Preset	5 ms

State Saved	Yes
Min	100 us
Max	10 ms

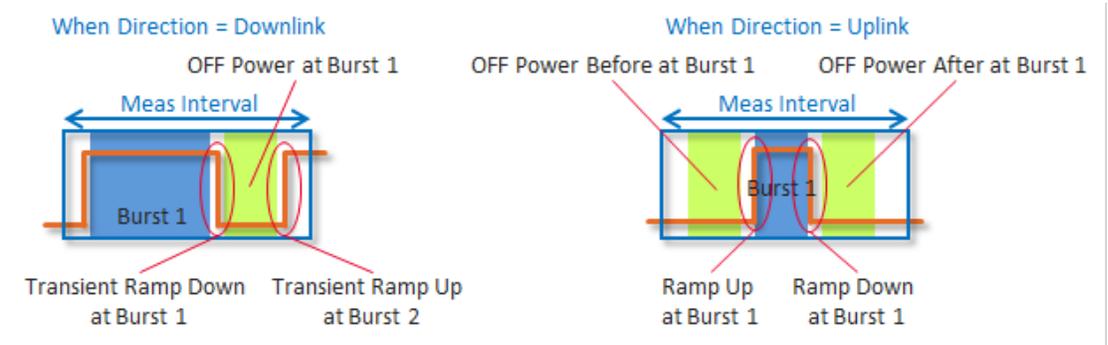

Meas Range

Enables you to select the measurement range from all bursts or specific burst within the Meas Interval. If there are multiple bursts within the Meas Interval, the burst number in the Metrics window are determined as follows and returned values of :MEAS|READ|FETCH:PVT1 are the values at that burst number. The burst number in the Metrics window can be obtained by :MEAS|READ|FETCH:PVT13.

- All Bursts: the burst number determined with the following criteria is displayed in the Metrics window.
 - On Power and Burst Width:
 - Downlink: The same burst number as Off Power.
 - Uplink with UL On Pwr Limit Test = On: The burst number that contains the maximum deviation from the UL On Pwr Reference value among all detected bursts
 - Uplink with UL On Pwr Limit Test = Off: The burst number right before or after the Off Power period that contains the maximum RMS Off Power value among all detected Off Power Before/After periods
 - Off Power (Downlink): The burst number right before the Off Power period that contains the maximum Off Power peak value among all detected Off Power periods
 - Off Power After (Uplink): The burst number right before the Off Power After period whose measured RMS Off Power value is the maximum among all detected Off Power After periods
 - Off Power Before (Uplink only): The burst number right after the Off Power Before period whose measured RMS Off Power value is the maximum among all detected Off Power Before periods
 - Ramp Up / Transient Ramp Up: The burst number whose measured ramp up period is the worst one among all detected bursts
 - Ramp Down / Transient Ramp Down: The burst number whose measured ramp down period is the worst one among all detected bursts
- Specific Burst: the burst number specified by the Specific Burst Number is displayed in the Metrics window.

3 5G NR Mode
3.7 Modulation Analysis Measurement

Note that when in downlink, the results of Ramp Down / Transient Ramp Down of Specific Burst Number and Ramp Up / Transient Ramp Up of Specific Burst Number + 1 are displayed. When in uplink, the results of Specific Burst Number itself are displayed.

Remote Command	<code>CALCulate:PVTime:MRANge ALL SPECific</code> <code>CALCulate:PVTime:MRANge?</code>
Example	<code>CALC:PVT:MRAN ALL</code> <code>CALC:PVT:MRAN?</code>
Preset	SPECific
State Saved	Yes
Range	All Bursts Specific Burst

Specific Burst Number

Specifies the burst to be analyzed.

Remote Command	<code>:CALCulate:PVTime:SBNumber <integer></code> <code>:CALCulate:PVTime:SBNumber?</code>
Example	<code>:CALC:PVT:SBN 8</code> <code>:CALC:PVT:SBN?</code>
Dependencies	This control is grayed out when Meas Range is All Bursts
Preset	1
State Saved	Yes
Min	1
Max	10

Measure CC

Selects the component carrier to be measured in the uplink time mask measurement.

NOTE The parameter is only available for the Transmit On|Off Power measurement.

Remote Command	<code>[:SENSe]:PVTime:ULINK:CCARrier CC0 ... CC15</code> <code>[:SENSe]:PVTime:ULINK:CCARrier?</code>
Example	<code>:PVT:ULINK:CCAR CC0</code> <code>:PVT:ULINK:CCAR?</code>
Dependencies	Available only when Radio Direction is Uplink
Preset	<code>CC0</code>
State Saved	Yes
Range	CC0 CC1 CC2 CC3 CC4 CC5 CC6 CC7 CC8 CC9 CC10 CC11 CC12 CC13 CC14 CC15

UL Off Power Length

It is used as uplink off power measurement period.

Remote Command	<code>[:SENSe]:PVTime:ULINK:POFF:WIDTh <real></code> <code>[:SENSe]:PVTime:ULINK:POFF:WIDTh?</code>
Example	<code>:PVT:ULIN:POFF:WIDT 5 ms</code> <code>:PVT:ULIN:POFF:WIDT?</code>
Dependencies	This control appears only when Radio Direction is Uplink
Couplings	This value will be preset when the action “Apply Preset (to All CCs)” is executed. For the preset value, see Transmit On Off Power in Values for Meas Standard.
Preset	1.0 ms
State Saved	Yes
Min	1 us
Max	0.01 s
Backwards Compatibility SCPI	<code>[:SENSe]:PVTime:ULINK:OFFPower:WIDTh</code>

Max Ramp Down Time

It is used as threshold which can judge whether the real measured ramp down time can be passed or not. If real measured ramp down time exceeds Max Ramp Down Time, then ramp down time measurement fails, otherwise, it passes. This is used to determine the start position of the Transmitter OFF period when Auto Timing Adjust is On.

Remote Command	<code>[:SENSe]:PVTime:LIMit:RAMP:DRTIME <time></code> <code>[:SENSe]:PVTime:LIMit:RAMP:DRTIME?</code>
----------------	--

Example	<code>:PVT:LIM:RAMP:DRT 10.0e-6</code> <code>:PVT:LIM:RAMP:DRT?</code>
Dependencies	This control is available when Direction is Downlink and Auto Timing Adjust is On or when Direction is Uplink
Couplings	This value will be preset when the action “Apply Preset (to All CCs)” is executed. See Transmit On Off Power in Values for Meas Standard.
Preset	10.0 us
State Saved	Yes
Min/Max	1.0 us/100.0 us

Max Ramp Up Time

It is used as threshold which can judge whether the real measured ramp up time can be passed or not. If real measured ramp up time exceeds Max Ramp Up Time, then ramp up time measurement fails, otherwise, it passes. This is used to determine the end position of the Transmitter OFF period when Auto Timing Adjust is On.

Remote Command	<code>[:SENSe]:PVTime:LIMit:RAMP:URTime <time></code> <code>[:SENSe]:PVTime:LIMit:RAMP:URTime?</code>
Example	<code>:PVT:LIM:RAMP:URT 10.0e-6</code> <code>:PVT:LIM:RAMP:URT?</code>
Dependencies	This control is available when Direction is Downlink and Auto Timing Adjust is On or when Direction is Uplink
Couplings	This value will be preset when the action “Apply Preset (to All CCs)” is executed. See Transmit On Off Power in Values for Meas Standard.
Preset	10.0 us
State Saved	Yes
Min/Max	1.0 us/100.0 us

Downlink Transient Period

This parameter sets the threshold for downlink transient period which is calculated from expected burst boundary to the point of the specified OFF power limit. The Transmitter OFF period is determined by this parameter when Auto Timing Adjust is Off.

If the measured ramp up or ramp down transient period of downlink signal exceeds the threshold, the ramp up or ramp down transient period measurements fail.

Remote Command	<code>[:SENSe]:PVTime:LIMit:TRANSient:DLINK <time></code>
----------------	---

	<code>[:SENSe]:PVTime:LIMit:TRANsient:DLINK?</code>
Example	<code>:PVT:LIM:TRAN:DLIN 10.0e-6</code> <code>:PVT:LIM:TRAN:DLIN?</code>
Dependencies	This control appears only when the Radio Direction is Downlink and available when Auto Timing Adjust is Off
Preset	10.0 us
State Saved	Yes
Min/Max	1.0 us/100.0 us

Downlink Off Power

It is used as threshold in downlink which can judge whether the real measured off power can be passed or not. If real measured off power exceeds Downlink Off Power, then off power measurement fails, otherwise, it passes. Note that the unit of this parameter is dBm/MHz.

Remote Command	<code>[:SENSe]:PVTime:LIMit:POFF:DLINK <real></code> <code>[:SENSe]:PVTime:LIMit:POFF:DLINK?</code>
Example	<code>:PVT:LIM:POFF:DLIN -83.0</code> <code>:PVT:LIM:POFF:DLIN?</code>
Dependencies	This control appears only when the Radio Direction is Downlink
Couplings	This value will be preset when the action “Apply Preset (to All CCs)” is executed. See Transmit On Off Power in Values for Meas Standard.
Preset	-83.00
State Saved	Yes
Min/Max	-150.00/0.00

Uplink Off Power

It is used as threshold in uplink which can judge whether the real measured off power can be passed or not. If real measured off power exceeds Uplink Off Power, then off power measurement fails, otherwise, it passes. Note that the unit of this parameter is dBm.

Remote Command	<code>[:SENSe]:PVTime:LIMit:POFF:ULINK <real></code> <code>[:SENSe]:PVTime:LIMit:POFF:ULINK?</code>
Example	<code>:PVT:LIM:POFF:ULIN -50.0</code> <code>:PVT:LIM:POFF:ULIN?</code>
Dependencies	This control appears only when the Radio Direction is Uplink
Couplings	This value will be preset when the action “Apply Preset (to All CCs)” is executed. See Transmit On Off Power in Values for Meas Standard.

Preset	-48.3
State Saved	Yes
Min/Max	-150.00 dBm/0.00 dBm

Uplink On Power Reference

This is used as an Expected Transmission ON Measured power reference in uplink, which judges whether the real measured on power is passed or not when "Uplink On Power Limit Test" on page 2091 is set to on. If the real measured on power is within the Uplink On Power Reference +/- Uplink On Power Tolerance, then the on power measurement passes, otherwise, it fails.

Remote Command	<code>[:SENSe]:PVTime:LIMit:PON:ULINK:REference <real></code> <code>[:SENSe]:PVTime:LIMit:PON:ULINK:REference?</code>
Example	<code>:PVT:LIM:PON:ULIN:REF 9.8</code> <code>:PVT:LIM:PON:ULIN:REF?</code>
Dependencies	This control appears only when the Radio Direction is Uplink
Couplings	This value will be preset when the action "Apply Preset (to All CCs)" is executed. See Transmit On Off Power in Values for Meas Standard.
Preset	9.8
State Saved	Yes
Min	-150 dBm
Max	150 dBm

Uplink On Power Tolerance

This is used as the pass/fail margin from the UL On Power Reference value for the UL On Power measurement limit test when "Uplink On Power Limit Test" on page 2091 is set to on.

Remote Command	<code>[:SENSe]:PVTime:LIMit:PON:ULINK:TOLerance <real></code> <code>[:SENSe]:PVTime:LIMit:PON:ULINK:TOLerance?</code>
Example	<code>:PVT:LIM:PON:ULIN:TOL 10.7</code> <code>:PVT:LIM:PON:ULIN:TOL?</code>
Dependencies	This control appears only when the Radio Direction is Uplink
Couplings	This value will be preset when the action "Apply Preset (to All CCs)" is executed. See Transmit On Off Power in Values for Meas Standard.
Preset	10.70 dB !when FR1 100MHz with SCS 30 kHz
State Saved	Yes

Min	0 dB
Max	100 dB

Uplink On Power Limit Test

When it is set to on, the measurement judges whether the real measured on power is passed or not. If the real measured on power is within Uplink On Power Reference +/- Uplink On Power Tolerance, the on power measurement passes, otherwise, it fails.

Remote Command	<code>[:SENSe]:PVTime:LIMit:PON:ULINK:STATe OFF ON 0 1</code> <code>[:SENSe]:PVTime:LIMit:PON:ULINK:STATe?</code>
Example	<code>:PVT:LIM:PON:ULIN:STAT 1</code> <code>:PVT:LIM:PON:ULIN:STAT?</code>
Dependencies	This control appears only when the Radio Direction is Uplink
Preset	OFF
State Saved	Yes

Burst Line

Turns the Burst Line On or Off. This line indicates the location of the Transmitter ON period determined by the Burst Width.

Remote Command	<code>:DISPlay:PVTime:BLINes[:STATe] ON OFF 1 0</code> <code>:DISPlay:PVTime:BLINes[:STATe]?</code>
Example	<code>:DISP:PVT:BLIN ON</code> <code>:DISP:PVT:BLIN?</code>
Preset	OFF
State Saved	Yes
Range	On Off
Backwards Compatibility SCPI	<code>:DISPlay:PVTime:VIEW[1]:WINDow:BLINes[:STATe]</code>

Burst Timing Indicator Line

Turns the Burst Timing Indicator Line On or Off. The line shown on screen is just to indicate which part of signal is active burst and which part is inactive burst and nothing to do with the Pass/Fail (shown at the upper-left corner of screen) criteria. Regarding the Pass/Fail criteria, please refer to ["Limits" on page 2087](#).

Remote Command	<code>:DISPlay:PVTime:LIMit:MASK OFF ON 0 1</code> <code>:DISPlay:PVTime:LIMit:MASK?</code>
Example	<code>:DISP:PVT:LIM:MASK 1</code> <code>:DISP:PVT:LIM:MASK?</code>
Notes	This parameter only hides or shows the Burst Timing Indicator Line on the display
Preset	ON
State Saved	Yes
Range	On Off
Backwards Compatibility SCPI	<code>:DISPlay:PVTime:VIEW[1]:WINDow:LIMit:MASK</code>

Ramp Line

Turns the Ramp Line On or Off. This line indicates the Ramp Up/Down time.

Remote Command	<code>:DISPlay:PVTime:RAMP[:STATe] OFF ON 0 1</code> <code>:DISPlay:PVTime:RAMP[:STATe]?</code>
Example	<code>:DISP:PVT:RAMP ON</code> <code>:DISP:PVT:RAMP?</code>
Preset	OFF
State Saved	Yes
Range	On Off

Bar Graph

Turns the Bar Graph On and Off. The Bar Graph represents the Transmitter ON/OFF period and power. The Transmitter OFF period is coloured in green when DL Off Power limit passes and in red when limit fails.

Remote Command	<code>:DISPlay:PVTime:BGRaph OFF ON 0 1</code> <code>:DISPlay:PVTime:BGRaph?</code>
Example	<code>:DISP:PVT:BGR OFF</code> <code>:DISP:PVT:BGR?</code>
Preset	ON
State Saved	Saved in instrument state
Range	On Off

Noise Correction

Sets the noise floor correction function to On or Off. On enables measurement noise correction when the measured power in the reference channel or any offset is close to the noise floor of the analyzer. Off turns these corrections off.

Remote Command	<code>[:SENSe]:PVTIme:CORRection:NOISe[:AUTO] OFF ON 0 1</code> <code>[:SENSe]:PVTIme:CORRection:NOISe[:AUTO]?</code>
Example	<code>:PVT:CORR:NOIS OFF</code> <code>:PVT:CORR:NOIS?</code>
Preset	0
State Saved	Yes
Range	On Off

MIMO Calculation Mode

Specifies OBW/ACP/SEM/Transmit On/Off result calculation mode for MIMO signal:

- Per Channel – provide separate results for each input channel
- Averaged – provide averaged results for all input channels
- Summation – provide combined results for all input channels

Remote Command	<code>[:SENSe]:EVM:POWer:MIMO:MODE PERChannel AVERaged SUMMation</code> <code>[:SENSe]:EVM:POWer:MIMO:MODE?</code>
Example	<code>:EVM:POWer:MIMO:MODE PERC</code> <code>:EVM:POWer:MIMO:MODE?</code>
Preset	<code>PERChannel</code>
State Saved	Yes
Range	Per Channel Averaged Summation

3.7.9 Sweep

Accesses controls to configure and control the acquisition of data, and the X-axis parameters of the instrument.

Depending on the selected mode and measurement, these controls might include: **Sweep Time, Continuous/Single, Pause/Resume, X Scale and Number of Points.**

3.7.9.1 Sweep/Control

Accesses controls that enable you to operate the sweep and control functions of the instrument, such as **Sweep Time** and **Continuous/Single**.

Sweep/Measure

Allows you to toggle between **Continuous** and **Single** sweep or measurement operation. The single/continuous state is Meas Global, so the setting affects all measurements.

The front-panel key **Single/Cont** performs exactly the same function

See ["More Information" on page 1939](#)

Remote Command	<code>:INITiate:CONTinuous OFF ON 0 1</code> <code>:INITiate:CONTinuous?</code>
Example	Put instrument into Single measurement operation: <code>:INIT:CONT 0</code> <code>:INIT:CONT OFF</code> Put instrument into Continuous measurement operation: <code>:INIT:CONT 1</code> <code>:INIT:CONT ON</code>
Preset	ON Note that <code>:SYST:PRES</code> sets <code>:INIT:CONT</code> to ON , but <code>*RST</code> sets <code>:INIT:CONT</code> to OFF
State Saved	Saved in instrument state
Annunciation	The Single/Continuous icon in the Meas Bar changes depending on the setting: – A line with an arrow is Single – A loop with an arrow is Continuous
Backwards Compatibility Notes	For Spectrum Analysis Mode in ESA and PSA, there is no Cont hardkey, instead there is a Sweep Single/Cont softkey. In these instruments, switching the Sweep Single/Cont softkey from Single to Cont restarts averages (displayed average count reset to 1), but does not restart Max Hold and Min Hold X-Series A-models have Single and Cont hardkeys in place of the SweepSingleCont softkey. In the X-Series A-models, if in single measurement, the Cont hardkey (and <code>INIT:CONT ON</code>) switches to continuous measurement, but never restarts a measurement and never resets a sweep X-Series B-models have a Cont/Single toggle control instead of Single and Cont hardkeys, but it is still true that, if in single measurement, the Cont/Single toggle control never restarts a measurement and never resets a sweep For Spectrum Analysis Mode in ESA and PSA, the Single hardkey and the <code>INITiate:IMM</code> switched from continuous measurement to single measurement and restarted sweeps and averages (displayed

average count reset to 1), but did not restart **Max Hold** and **Min Hold**. In the X-Series, the **Restart** control and the **INITiate:IMM** command initiate a sweep/ measurement/ average sequence/hold sequence including **MaxHold** and **MinHold**

For Spectrum Analysis Mode in ESA and PSA, the **Single** hardkey restarted the sweep regardless of whether or not you were in an active sweep or sweep sequence. In the X-Series, **Restart** does this

More Information

Continuous Mode	<p>The instrument takes repetitive sweeps, averages, measurements, etc., when in continuous mode. If in average or Max/Min Hold, and the average/hold count reaches the Average/Hold Num, the count stops incrementing, but the instrument keeps sweeping</p> <p>See the Trace key description under Trace Average for the averaging formula used both before and after the Average/Hold Num is reached. The trigger condition must be met prior to each sweep</p> <p>The type of trace processing for multiple sweeps is set under the Trace key, with choices of Trace Average, Max Hold, or Min Hold</p>
Single Mode	<p>The instrument takes a single sweep when in Single mode, or if in average or Max/Min Hold, or if there is a Waterfall window displayed, it takes multiple sweeps until the average/hold count reaches the Average/Hold Num, then the count stops incrementing, and the instrument stops sweeping</p> <p>See the Trace key description under Trace Average for the averaging formula used. The trigger condition must be met prior to the sweep</p> <p>The type of trace processing for multiple sweeps is set under the Trace key, with choices of Trace Average, Max Hold, or Min Hold</p>

If the instrument is in **Single** measurement mode, pressing the **Cont/Single** toggle control does not zero the count and does not cause the sweep to be reset; the only action is to put the instrument into Continuous measurement operation.

If it is already in continuous sweep:

- **:INIT:CONT 1** has no effect
- **:INIT:CONT 0** places the instrument in Single Sweep but has no effect on the current sequence until $k = N$, at which point the current sequence will stop and the instrument will go to the idle state

See the "**Restart**" on page 2683 control description for details of **:INIT:IMMEDIATE**.

If the instrument is already in **Single** sweep, **:INIT:CONT OFF** has no effect.

If the instrument is already in **Single** sweep, then pressing **Cont/Single** in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing **Cont/Single** does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the instrument is waiting for a trigger). Even though pressing **Cont/Single** in the middle of a sweep does not restart the sweep, sending **:INIT:IMM** does reset it.

If the instrument is in **Single** sweep, and *not* Averaging/Holding, and you want to take one more sweep, press **Restart**.

If the instrument is in **Single** sweep, *and* Averaging/Holding, and you want to take one more sweep without resetting the Average trace or count, go to **Meas Setup** and increment the average count by 1 by pressing the **Step Up** key while **Average/Hold Num** is the active function. You can also do this by sending **:CALC:AVER:TCON UP**.

Restart

Restarts the current sweep, or measurement, or set of averaged/held sweeps or measurements. If you are Paused, pressing **Restart** performs a Resume.

The front-panel key **Restart** performs exactly the same function.

The **Restart** function is accessed in several ways:

- Pressing the **Restart** key
- Sending **:INIT:IMM**
- Sending **:INIT:REST**

See "[More Information](#)" on page 1941

Remote Command	:INITiate[:IMMEDIATE] :INITiate:REStart
Example	:INIT:IMM :INIT:REST
Notes	:INIT:REST and :INIT:IMM perform exactly the same function
Couplings	Resets average/hold count k. For the first sweep overwrites all active (update = on) traces with new current data. For application modes, it resets other parameters as required by the measurement
Status Bits/OPC dependencies	This is an Overlapped command The STATus:OPERation register bits 0 through 8 are cleared , <i>except</i> bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous The STATus:QUESTionable register bit 9 (INTEgrity sum) is cleared The SWEEPING bit is set The MEASURING bit is set
Backwards Compatibility Notes	For Spectrum Analysis Mode in ESA and PSA, the Restart hardkey and the :INIT:REST command restart trace averages (displayed average count reset to 1) for a trace in Clear Write , but did not restart Max Hold and Min Hold In X-Series, the Restart hardkey and the :INIT:REST command restart not only Trace Average , but MaxHold and MinHold traces as well

For wireless comms modes in ESA and PSA, the **Restart** hardkey and the `:INIT:REST` command restart every measurement, which includes all traces and numeric results. There is no change to this operation

More Information

The **Restart** function first aborts the current sweep or measurement as quickly as possible. It then resets the sweep and trigger systems, sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is in the process of aligning when a **Restart** is executed, the alignment finishes before the restart function is performed.

Even when set for **Single** operation, multiple sweeps may be taken when **Restart** is pressed (for example, when averaging/holding is on). Thus when we say that **Restart** "restarts a measurement", depending on the current settings, we may mean that it:

- Restarts the current sweep
- Restarts the current measurement
- Restarts the current set of sweeps if any trace is in Trace Average, Max Hold or Min Hold
- Restarts the current set of measurements if Averaging, or Max Hold, or Min Hold is on for the measurement

If there is no Average or Max/Min Hold function (no trace in Trace Average or Hold, or **Average/Hold Num** set to 1), and no **Waterfall** window is being displayed, a single sweep is equivalent to a single measurement. A single sweep is taken after the trigger condition is met; and the instrument stops sweeping once that sweep has completed. However, with **Average/Hold Num** >1, and at least one trace set to Trace Average, Max Hold, or Min Hold, or a **Waterfall** window being displayed, multiple sweeps/data acquisitions are taken for a single measurement. The trigger condition must be met prior to each sweep. The sweep is stopped when the average count k equals the number N set for **Average/Hold Num**.

Once the full set of sweeps has been taken, the instrument goes to the idle state. To take one more sweep without resetting the average count, increment the average count by 1, by pressing the **Step Up** key while **Average/Hold Number** is the active function, or by sending the remote command `:CALC:AVER:TCON UP`.

Trace Update

The numeric results are not blanked at any time during the restart cycle.

For slow sweeps (see **Trace Update** section in **Trace/Detector**), the traces are updated real-time during the sweep. There may be a special circumstance in application mode measurements where an exception is made and the traces and/or results need to be blanked before displaying the new results.

To summarize, the following list shows what happens to the trace data on various events:

Event	Trace Effect
Clear/Write pressed (even if already in Clear/Write)	Set to mintracevalue
Max Hold pressed (even if already in Max Hold)	Set to mintracevalue
Min Hold pressed (even if already in Min Hold)	Set to maxtracevalue
Trace Average pressed (even if already in Trace Average)	Trace data unaffected but start new sweep/avg/hold
Restart pressed	Trace data unaffected but start new sweep/avg/hold
Parameter requiring restart changed (e.g., RBW)	Trace data unaffected but start new sweep/avg/hold

Sweep and Trigger Reset

Resetting the sweep system resets the average/hold count k to 0. It also resets the set point counter to 0. Resetting the trigger system resets the internal auto trig timer to the value set by the **Auto Trig** control.

Averaging

The weighting factor used for averaging is k . This k is also the average/hold count for how many valid sweeps (data acquisitions) have been done. This k is used for comparisons with N , as those comparisons always needs to be based on valid completed sweeps.

The displayed average/hold, K , shows the count for the sweep (data acquisition) in progress. $K = k + 1$, with a limit of N . The displayed value K changes from its previous value to 1 as soon as the trigger condition for the first data acquisition (sweep) is met.

Pause/Resume

Pauses a measurement after the current data acquisition is complete.

When paused, the label on the control changes to **Resume**. Pressing **Resume** unpauses the measurement. When paused, pressing **Restart** performs a Resume.

Remote Command	<code>:INITiate:PAUSE</code> <code>:INITiate:RESume</code>
Example	<code>:INIT:PAUS</code> <code>:INIT:RES</code>
Dependencies	Not displayed in Modes that do not support Pausing
Annotation	Only on control

Abort (Remote Command Only)

Stops the current measurement. Aborts the current measurement as quickly as possible, resets the sweep and trigger systems, and puts the measurement into an "idle" state. If the instrument is in the process of aligning when `:ABORT` is sent, the alignment finishes *before* the abort function is performed, so `:ABORT` does not abort an alignment.

If the instrument is set for **Continuous** measurement, it sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is set for **Single** measurement, it remains in the "idle" state until an `:INIT:IMM` command is received.

Remote Command	<code>:ABORT</code>
Example	<code>:ABOR</code>
Notes	If <code>:INIT:CONT</code> is ON , then a new continuous measurement will start immediately, with sweep (data acquisition) occurring once the trigger condition has been met If <code>:INIT:CONT</code> is OFF , then <code>:INIT:IMM</code> is used to start a single measurement, with sweep (data acquisition) occurring once the trigger condition has been met
Dependencies	For continuous measurement, <code>:ABORT</code> is equivalent to the Restart key Not all measurements support this command
Status Bits/OPC dependencies	The <code>STATUS:OPERation</code> register bits 0 through 8 are cleared , <i>except</i> bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous The <code>STATUS:QUESTionable</code> register bit 9 (INTEgrity sum) is cleared Since all the bits that feed into OPC are cleared by <code>:ABORT</code> , the Abort command will cause the <code>*OPC</code> query to return true

3.7.9.2 X Scale

This tab accesses controls that enable you to set the horizontal scale parameters.

Width

Sets the width of the X axis that is displayed for the selected trace. The X width can be set less than the span for frequency-domain traces, enabling you to zoom in on just a portion of the measured values. Likewise, it can be less than time span covered by time-domain data. This, plus the X Reference Value and X Reference Position, control the range of X values that can be displayed on a trace.

Remote Command	<code>:DISPlay:EVM:WINDow[1] 2 ... 9:X[:SCALe]:WIDTh <real></code> <code>:DISPlay:EVM:WINDow[1] 2 ... 9:X[:SCALe]:WIDTh?</code>
Example	<code>:DISP:EVM:WIND3:X:WIDT 10e6</code> set the X width of the third window to 10 MHz <code>:DISP:EVM:WIND3:X:WIDT?</code> query the X width of the third window
Couplings	If Auto Scaling is ON , the X Width is determined by the trace data
Preset	Depends on trace data
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

Ref Value

Controls the X value of the selected trace at the chosen X Reference Position.

Remote Command	<code>:DISPlay:EVM:WINDow[1] 2 ... 9:X[:SCALe]:RLEVel <real></code> <code>:DISPlay:EVM:WINDow[1] 2 ... 9:X[:SCALe]:RLEVel?</code>
Example	<code>:DISP:EVM:WIND3:X:RLEV 10</code> set the X ref value of the third window to 10 <code>:DISP:EVM:WIND3:X:RLEV?</code> query the X ref value of the third window
Couplings	If Auto Scaling is set to On, the X Reference Value is determined by the trace data
Preset	Depends on trace data
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

Ref Position

Determines the position from which the X scaling is calculated for the selected trace. It can be set to the left side, center, or right side of the grid.

Remote Command	<code>:DISPlay:EVM:WINDow[1] 2 ... 9:X[:SCALE]:RPOsition LEFT CENTer RIGHT</code> <code>:DISPlay:EVM:WINDow[1] 2 ... 9:X[:SCALE]:RPOsition?</code>
Example	<code>:DISP:EVM:WIND3:X:RPOS CENT</code> set the X ref position of the third window to CENT <code>:DISP:EVM:WIND3:X:RPOS?</code> query the X ref position of the third window
Preset	Depend on trace data
State Saved	Yes
Range	Left Center Right

Auto Scaling

Toggles Auto Scaling On or Off.

Remote Command	<code>:DISPlay:EVM:WINDow[1] 2 ... 9:X[:SCALE]:COUPle 0 1 OFF ON</code> <code>:DISPlay:EVM:WINDow[1] 2 ... 9:X[:SCALE]:COUPle?</code>
Example	<code>:DISP:EVM:WIND3:X:COUP ON</code> do the X auto scale for the third window <code>:DISP:EVM:WIND3:X:COUP?</code> query the X auto scale state of the third window
Couplings	When this parameter is set to On, pressing the front-panel Restart key activates the scale coupling function, that automatically determines scale per division and reference values based on the measurement results. When you set a value to either X Width or Ref Value manually, Auto Scaling is automatically set to Off
Preset	ON
State Saved	Yes
Range	On Off

Time Unit

Enables you to select the time units that are applied to x-axis annotations and marker readouts for the displayed trace in selected window. The available measurement units are symbol or slot. This setting applies to these measurement traces only:

- Power vs Time
- RMS Error Vector Time
- RMS Demod Power vs Time

Remote Command	<code>:DISPlay:EVM:WINDow[1] 2 ... 9:X[:SCALe]:UNIT:TIME SYMBol SLOT</code> <code>:DISPlay:EVM:WINDow[1] 2 ... 9:X[:SCALe]:UNIT:TIME?</code>
Example	<code>:DISP:EVM:WIND3:X:UNIT:TIME SYMB</code> set the X scale unit of the third window to symbol <code>:DISP:EVM:WIND3:X:UNIT:TIME?</code> query the X scale unit of the third window
Preset	Depends on trace data
State Saved	Yes
Range	symbols slots

Time Unit (Remote Command only)

Enables you to select the time units that are applied to x-axis annotations and marker readouts for the selected trace. The available measurement units are symbol or slot.

The following table is used for measurement trace – Power vs Time – only.

Remote Command	<code>:DISPlay:EVM:CCARrier0 ... 15:PVTime:X:UNIT SYMBol SLOT</code> <code>:DISPlay:EVM:CCARrier0 ... 15:PVTime:X:UNIT?</code>
Example	<code>:DISP:EVM:CCAR0:PVT:X:UNIT SYMB</code> set the X scale unit of Power vs Time trace (CC0) to symbol <code>:DISP:EVM:CCAR0:PVT:X:UNIT?</code> query the X scale unit of Power vs Time trace (CC0)
Preset	Depends on trace data
State Saved	Yes
Range	<code>SYMBol SLOT</code>

The following table is used for the following measurement traces only:

- RMS Error Vector Time
- RMS Demod Power vs Time

Remote Command	<code>:DISPlay:EVM:CCARrier0 ... 15:REVTime DPVTime:ALL SSB1 SSB2 DBWP0 DBWP1 DBWP2 DBWP3 DBWP4 UBWP1 UBWP2 UBWP3 UBWP4:X:UNIT SYMBol SLOT</code>
----------------	---

	<code>:DISPlay:EVM:CCARri-er0 ... 15:REVTime DPVTime:ALL SSB1 SSB2 DBWP0 DBWP1 DBWP2 DBWP3 DBWP4 UBWP1 UBWP-2 UBWP3 UBWP4:X:UNIT?</code>
Example	<p><code>:DISP:EVM:CCAR0:DPVT:DBWP1:X:UNIT SYMB</code> set the X scale unit of the RMS Demod Power vs Time trace (CC0, DL BWP1) to symbol</p> <p><code>:DISP:EVM:CCAR0:DPVT:DBWP1:X:UNIT?</code> query the X scale unit of the RMS Demod Power vs Time trace (CC0, DL BWP1)</p>
Preset	Depends on trace data
State Saved	Yes
Range	<code>SYMBOL</code> <code>SLOT</code>

Frequency Unit

Enables you to select the time units that are applied to x-axis annotations and marker readouts for the displayed trace in selected window. The available measurement units are subcarrier or RB. This setting applies to these measurement traces only:

- RMS Error Vector Spectrum
- RMS Demod Power vs Spectrum

Remote Command	<code>:DISPlay:EVM:WINDow[1] 2 ... 9:X[:SCALE]:UNIT:FREQuency SUBCarrier RB</code> <code>:DISPlay:EVM:WINDow[1] 2 ... 9:X[:SCALE]:UNIT:FREQuency?</code>
Example	<p><code>:DISP:EVM:WIND3:X:UNIT:FREQ RB</code> set the X scale unit of the third window to RB</p> <p><code>:DISP:EVM:WIND3:X:UNIT:FREQ?</code> query the X scale unit of the third window</p>
Preset	Depends on trace data
State Saved	Yes
Range	symbols seconds

Frequency Unit (Remote Command only)

Enables you to select the time units that are applied to x-axis annotations and marker readouts for the selected trace. The available measurement units are subcarrier or RB. This setting apply these measurement traces only:

- RMS Error Vector Spectrum
- RMS Demod Power vs Spectrum

3 5G NR Mode
3.7 Modulation Analysis Measurement

Remote Command	<pre>:DISPlay:EVM:CCARri-er0 ... 15:REVSPEC-trum DPVSpec-trum:ALL SSB1 SSB2 DBWP0 DBWP1 DBWP2 DBWP3 DBWP4 UBWP1 UBWP2 UBWP3 UBWP4:X:UNITSUBCarrier RB :DISPlay:EVM:CCARri-er0 ... 15:REVSPEC-trum DPVSpec-trum:ALL SSB1 SSB2 DBWP0 DBWP1 DBWP2 DBWP3 DBWP4 UBWP1 UBWP2 UBWP3 UBWP4:X:UNIT?</pre>
Example	<pre>:DISP:EVM:CCAR0:DPVS:DBWP1:X:UNIT RB</pre> <p>set the X scale unit of the RMS Demod Power vs Spectrum trace (CC0, DL BWP1) to RB</p> <pre>:DISP:EVM:CCAR0:DPVS:DBWP1:X:UNIT?</pre> <p>query the X scale unit of the RMS Demod Power vs Spectrum trace (CC0, DL BWP1)</p>
Preset	Depends on trace data
State Saved	Yes
Range	SUBCarrier RB

Ref Numerology

Enables you to select the Resource Grid reference applied to the selected trace. This setting apply this measurement trace only:

- Power vs Time

Remote Command	<pre>:DISPlay:EVM:WINDow[1] 2 ... 9:X[:SCALE]:RSCS SCS15K SCS30K SCS60KNCP SCS60KECP SCS120K SCS240K :DISPlay:EVM:WINDow[1] 2 ... 9:X[:SCALE]:RSCS?</pre>
Example	<pre>:DISP:EVM:WIND3:X:RSCS SCS30K</pre> <p>set the Resource Grid reference of the third window to symbol</p> <pre>:DISP:EVM:WIND3:X:RSCS?</pre> <p>query the Resource Grid reference of the third window</p>
Preset	Depends on trace data
State Saved	Yes
Range	SCS15K SCS30K SCS60KNCP SCS60KECP SCS120K SCS240K

3.7.9.3 Z Scale

Accesses controls that enable you to set the horizontal scale parameters.

Width

Set the width of the Z axis which is displayed for the selected trace. The Z width can be set less than the span for frequency-domain traces, enabling you to zoom in on just a portion of the measured values. This plus the Z Reference Value and Z Reference Position control the range of Z values that can be displayed on a trace.

Remote Command	<code>:DISP: EVM: WINDow[1] 2 ... 9: Z[:SCALE]: WIDTh <real></code> <code>:DISP: EVM: WINDow[1] 2 ... 9: Z[:SCALE]: WIDTh?</code>
Example	<code>:DISP: EVM: WIND3: Z: WIDT 10e6</code> set the Z width of the third window to 10 MHz <code>:DISP: EVM: WIND3: Z: WIDT?</code> query the Z width of the third window
Couplings	If Auto Scaling is set to On, the Z Width is determined by the trace data
Preset	Depends on trace data
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

Ref Value

Controls the Z value of the selected trace at the chosen Z Reference Position.

Remote Command	<code>:DISP: EVM: WINDow[1] 2 ... 9: Z[:SCALE]: RLEVel <real></code> <code>:DISP: EVM: WINDow[1] 2 ... 9: Z[:SCALE]: RLEVel?</code>
Example	<code>:DISP: EVM: WIND3: Z: RLEV 10</code> set the Z ref value of the third window to 10 <code>:DISP: EVM: WIND3: Z: RLEV?</code> query the Z ref value of the third window
Couplings	If Auto Scaling is ON , the Z Reference Value is determined by the trace data
Preset	Depends on trace data
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

Ref Position

Determines the position from which the Z scaling is calculated for the selected trace. It can be set to the left side, center, or right side of the grid.

Remote Command	<code>:DISPlay:EVM:WINDow[1] 2 ... 9:Z[:SCALe]:RPOSition LEFT CENTer RIGHT</code> <code>:DISPlay:EVM:WINDow[1] 2 ... 9:Z[:SCALe]:RPOSition?</code>
Example	<code>:DISP:EVM:WIND3:Z:RPOS CENT</code> set the X ref position of the third window to CENT <code>:DISP:EVM:WIND3:Z:RPOS?</code> query the Z ref position of the third window
Preset	Depend on trace data
State Saved	Yes
Range	Left Center Right

Auto Scaling

Toggles the Auto Scaling function between On and Off.

Remote Command	<code>:DISPlay:EVM:WINDow[1] 2 ... 9:Z[:SCALe]:COUPle 0 1 OFF ON</code> <code>:DISPlay:EVM:WINDow[1] 2 ... 9:Z[:SCALe]:COUPle?</code>
Example	<code>:DISP:EVM:WIND3:Z:COUP ON</code> do the Z auto scale for the third window <code>:DISP:EVM:WIND3:Z:COUP?</code> query the Z auto scale state of the third window
Couplings	When this parameter is set to On, pressing the front-panel Restart key activates the scale coupling function, that automatically determines scale per division and reference values based on the measurement results. When you set a value to either Z Width or Ref Value manually, Auto Scaling is automatically set to Off
Preset	ON
State Saved	Yes
Range	OFF ON

Frequency Unit

Enables you to select the time units that are applied to Z-axis annotations and marker readouts for the selected trace. The available measurement units are subcarrier or RB.

Remote Command	<code>:DISPlay:EVM:WINDow[1] 2 ... 9:Z[:SCALE]:UNIT:FREQuency SUBCarrier RB</code> <code>:DISPlay:EVM:WINDow[1] 2 ... 9:Z[:SCALE]:UNIT:FREQuency?</code>
Example	<code>:DISP:EVM:WIND3:Z:UNIT:FREQ RB</code> set the Z scale unit of the third window to RB <code>:DISP:EVM:WIND3:Z:UNIT:FREQ?</code> query the Z scale unit of the third window
Preset	Depend on trace data
State Saved	Yes
Range	Sub-carrier RB

3.7.9.4 Recording

Displays the parameters for recording a signal data file.

The Recording and Playback of signal data files is a multi-step process that involves controls in several menus.

The menus that are involved in Record/Playback are:

- **Save, Recording** (under the **Save** hardkey or the **Save** icon in the **File** panel)
- **Recall, Recording** (under the **Recall** hardkey or the **Recall** icon in the **File** panel)
- **Sweep, Recording** tab (this tab)
- **Sweep, "Playback" on page 1952** tab
- **Input/Output, Data Source** tab

NOTE

A complete tutorial for the Record/Playback functionality, including how to load and save Recording files, can be found in the documentation for the Data Source tab in the Input/Output menu.

Recording+State Mode

There could be multiple sequential IQ data captures during one measurement cycle, for example when measure multiple component carriers are in sequential mode. This control specifies how measurement should handle these sequential IQ data for Recording + State saving:

Last Capture	LCAPture	Only keeps last captured IQ data in memory. For above example, only last CC's IQ data will be saved in rssf file and when it is recalled this CC's IQ data will be provided to other CC as well
--------------	-----------------	---

3 5G NR Mode
 3.7 Modulation Analysis Measurement

Meas Cycle **MCYClE** Keeps all IQ data of current measurement cycle in memory (measurement will consume more memory in this mode). For above example, all CC's IQ data will be saved and recalled separately

Remote Command	:MMEMory:EVM:RState:MODE LCAPture MCYClE :MMEMory:EVM:RState:MODE?
Example	:MMEM:EVM:RST:MODE MCYC :MMEM:EVM:RST:MODE?
Preset	LCAPture
State Saved	Saved in instrument state
Range	Last Capture Meas Cycle

Sample Rate (Display Only)

Displays the sample rate of the saved IQ data file. If you have not saved an IQ data file, the value will be 0.

Sample Points (Display Only)

Displays the total number of sample points in the saved IQ data file. If you have not saved an IQ data file, the value will be 0.

Sample Time (Display Only)

Displays the total sample time of the saved IQ data file. If you have not saved an IQ data file, the value will be 0.

Saved Channels (Display Only)

Displays the channel index/number of the saved IQ data file. If you have not saved an IQ data file, no value will be displayed.

This control is designed for multi-channel I/Q data recording and playback, and is ONLY available in 5G NR in the Modulation Analysis and MIMO Modulation Analysis measurements.

3.7.9.5 Playback

This tab contains the parameters for Playback of saved recording files recalled to the instrument.

The Recording and Playback of signal data files is a multi-step process that involves controls in several menus.

The menus that are involved in Record/Playback are:

- **Save, Recording** (under the **Save** hardkey or the **Save** icon in the **File** panel)
- **Recall, Recording** (under the **Recall** hardkey or the **Recall** icon in the **File** panel)
- **Sweep, "Recording" on page 1951** tab
- **Sweep, Playback** tab (this tab)
- **Input/Output, Data Source** tab

NOTE

A complete tutorial for the Record/Playback functionality, including how to load and save Recording files, can be found in the documentation for the Data Source tab in the Input/Output menu.

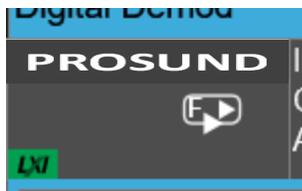

Playback Start

Once you have loaded an IQ data file using **Recall, Recording**, this control enables you to specify the start position of the IQ data playback range to be analyzed. When its value < 0 , an additional zero will be inserted at the beginning of the IQ data.

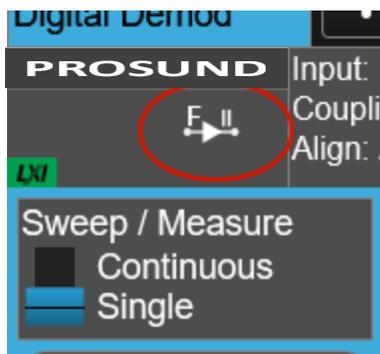

To go to a specific spot in the recalled I/Q data, enter the desired Playback Start point.

You can use this control to examine the data you recalled from the Recording file. How you proceed depends on whether you are in **Continuous Playback** mode or **Single Pause** mode. To determine which mode you are in, look at the first panel on the left in the Meas Bar above the data display.

If the panel looks like this, you are in **Continuous Playback** mode:

If the panel looks like this, you are in **Single Pause** mode:

The F indicates that the analyzer is using data from a file (if you wish to return to looking at data at the analyzer input, change the **Data Source** control in the **Input/Output, Data Source** menu from **File** back to **Input**.)

To examine the data you loaded:

Continuous Playback mode

In this mode, turn the knob or use the Up/Down keys on the front panel to move through records in the recording. You will see the Playback Start control change from 0 to successively higher values as you move deeper and deeper into the data.

Single Pause mode

In this mode, you can only look at one record. Set the Playback Start time to the desired offset from zero and press Restart. A single record will be displayed. Note that until you press Restart, the “invalid data” indicator (yellow asterisk) will be displayed in each window. Once you press Restart, the invalid data indicator will disappear.

Remote Command	<code>:CALCulate:EVM:PLAY:STARt <time></code> <code>:CALCulate:EVM:PLAY:STARt?</code>
Example	<code>:CALC:EVM:PLAY:STAR 0.01 s</code> <code>:CALC:EVM:PLAY:STAR?</code>
Preset	0
State Saved	Saved in instrument state
Min	- Sample Points in IQ file x Sample Rate
Max	Sample Points in IQ file x Sample Rate

Sample Rate

Displays the sample rate of the recalled IQ data file if the recalled file format contains sampling rate information (`.csv`, `.sdf`, `.txt`). The control will be grayed-out when this is the case.

BIN and **BINX** files do not include sampling rate information inside the file, so after recalling one of these files you will need to set the Sample Rate. When you save a file in these formats, you will need to note the Sample Rate displayed on the **Sweep, Recording** menu panel.

Remote Command	<code>:CALCulate:EVM:PLAY:SRATe <freq></code> <code>:CALCulate:EVM:PLAY:SRATe?</code>
Example	<code>:CALC:EVM:PLAY:SRAT 122.88MHz</code> <code>:CALC:EVM:PLAY:SRAT?</code>
Couplings	Display only after .csv, .sdf, .txt file recalling Settleable after .bin or .binx file recalling
Preset	0
State Saved	No

Sample Points (Display Only)

Displays the total number of sample points in the recalled IQ data file. If you have not recalled an IQ data file, the value will be 0.

Sample Time (Display Only)

Displays the total sample time of the recalled IQ data file. If you have not recalled an IQ data file, the value will be 0.

Input Channels (Display Only)

Displays the input channel number of the recalled IQ data file. If you have not recalled an IQ data file, the default value of 1 will be displayed.

This control is designed for multi-channel I/Q data recording and playback, and is **ONLY** available in 5GNR in the Modulation Analysis and MIMO Modulation Analysis measurements.

3.7.10 Trace

Lets you control the display of the In-Band Emissions limit lines.

3.7.10.1 Trace Control

Allows you to configure trace.

All (combined) Limit

Toggles the All (combined) Limit display On or Off.

Remote Command	<code>:DISPlay:EVM:TRACe:ULINK:IBEM:LLINe:ALL 0 1 OFF ON</code> <code>:DISPlay:EVM:TRACe:ULINK:IBEM:LLINe:ALL?</code>
Example	<code>:DISP:EVM:TRAC:ULIN:IBEM:LLIN:ALL ON</code> <code>:DISP:EVM:TRAC:ULIN:IBEM:LLIN:ALL?</code>
Couplings	Trace Data is UL In-Band Emissions
Preset	ON
State Saved	Yes
Range	OFF ON

General Limit

Toggles the General Limit display On or Off.

Remote Command	<code>:DISPlay:EVM:TRACe:ULINK:IBEM:LLINe:GENeral 0 1 OFF ON</code> <code>:DISPlay:EVM:TRACe:ULINK:IBEM:LLINe:GENeral?</code>
Example	<code>:DISP:EVM:TRAC:ULIN:IBEM:LLIN:GEN ON</code> <code>:DISP:EVM:TRAC:ULIN:IBEM:LLIN:GEN?</code>
Couplings	Trace Data is UL In-Band Emissions
Preset	OFF
State Saved	Yes
Range	OFF ON

IQ Image Limit

Toggles the IQ Image Limit display On or Off.

Remote Command	<code>:DISPlay:EVM:TRACe:ULINK:IBEM:LLINe:IMAGe 0 1 OFF ON</code> <code>:DISPlay:EVM:TRACe:ULINK:IBEM:LLINe:IMAGe?</code>
Example	<code>:DISP:EVM:TRAC:ULIN:IBEM:LLIN:IMAG ON</code> <code>:DISP:EVM:TRAC:ULIN:IBEM:LLIN:IMAG?</code>
Couplings	Trace Data is UL In-Band Emissions
Preset	OFF
State Saved	Yes
Range	OFF ON

Carrier Leakage Limit

Toggles the Carrier Leakage Limit display On or Off.

Remote Command	<code>:DISPlay:EVM:TRACe:ULINK:IBEM:LLINe:DC 0 1 OFF ON</code> <code>:DISPlay:EVM:TRACe:ULINK:IBEM:LLINe:DC?</code>
Example	<code>:DISP:EVM:TRAC:ULIN:IBEM:LLIN:DC ON</code> <code>:DISP:EVM:TRAC:ULIN:IBEM:LLIN:DC?</code>
Couplings	Trace Data is UL In-Band Emissions
Preset	OFF
State Saved	Yes
Range	OFF ON

3.8 Transmit On|Off Power

This measurement is designed for testing Transmit On|Off power for the 5G NR BS and UE.

Measurement Overview

The test requirements for BS and UE are different, by setting the Direction under Mode Setup menu, the measurement can know which type of DUT it is going to test. Apply Preset will provide appropriate parameter settings for 3GPP conformance testing. See Apply Preset and Values for Meas Standard – Transmit On|Off Power section for details.

When Direction is Downlink, "Auto Timing Adjustment " on page 2035 should be set to Off and the user needs to provide external trigger which is regarded as the timing reference at the expected frame boundary to comply with the 3GPP conformance test requirements, defined in the clause 6.4.2 in TS38.141-1 and 6.5.2 in TS38.141-2.

Two key results will be provided, one is transmitter off power and the other is transmitter transient period. The definition for the two results are as below:

- Transmitter Off power (Off Power in Metrics result) is defined as the maximum power measured over $70/N$ ms filtered with a square filter of bandwidth equal to the transmission bandwidth configuration of the BS (BW_{Config} or $BW_{channel_CA}$) centered on the assigned channel frequency during the transmitter off period. $N = SCS/15$, where SCS is Sub Carrier Spacing in kHz. "70/N us RMS Trace " on page 2014 (dBm/MHz) is the measured trace.
- The transmitter transient period (Transient Ramp Up/Down in Metrics result) is the time period from the expected burst boundary to the cross point of "70/N us RMS Trace " on page 2014 (dBm/MHz) and "Downlink Off Power" on page 2089 limit level. The expected burst boundary is determined by the external trigger. The transmitter transient period is illustrated in figure below.

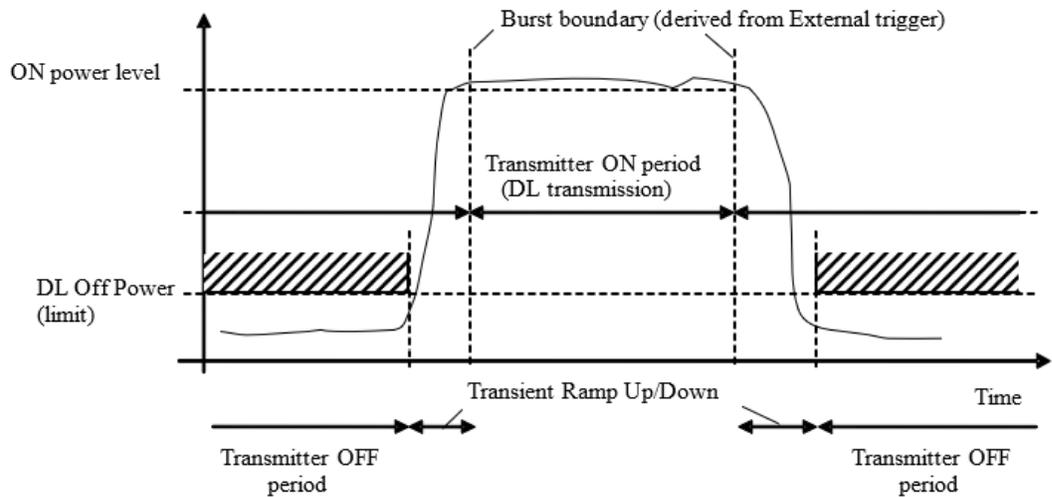

Figure: Illustration of the relations of transmitter ON period, transmitter OFF period and transmitter transient period

When Direction is Uplink, two key results will be provided to ensure that the UE's transmitter complies with the On/Off time mask defined in the clause 6.3.3 in TS38.521-1 and TS38.521-2.

- Transmitter Off power (Off Power Before/After in Metrics result) is defined as the mean power in the duration of "[UL Off Power Length](#)" on page 2083 excluding any transient periods. The bandwidth of the signal being measured for Transmitter Off power is the bandwidth of Measure CC.
- Transmitter On power is defined as the mean power in the duration of Burst Time.

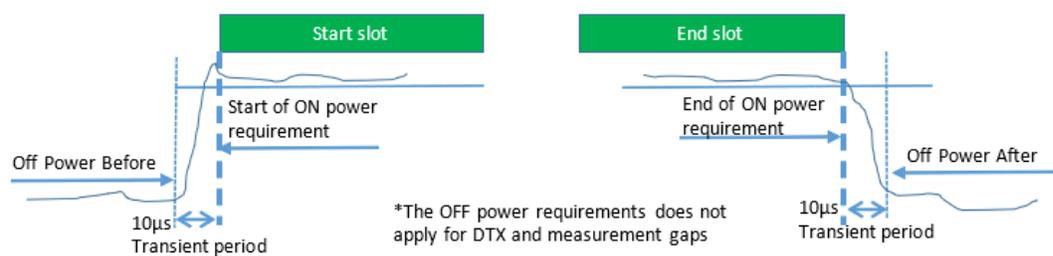

Figure: General ON/OFF time mask for NR UL transmission in FR1 with SCS of 30kHz and 60 kHz

When "[Auto Timing Adjustment](#)" on page 2035 is On, Ramp Up/Down results are calculated based on the "[Threshold](#)" on page 2091 setting.

Dynamic Range Optimization

In order to approach the best dynamic range, a special measurement algorithm is employed, two time records will be captured and merged for results calculation.

The first time capture will be made employing instrument settings which ensure accurate measurement of the bursts transmission on power level. The attenuation is set in the Attenuation setting. Internal Preamp setting is not effective for this capture and always off.

The second time record capture will be made employing instrument settings which minimize the instrument internal noise floor, with the minimal attenuation. Internal Preamp setting is effective for this capture.

The data from the two captures will be combined to one trace. This combined trace is the one that will be displayed as the trace determined by "Measure Trace" on page 2121 and "70/N us RMS Trace " on page 2014 (dBm/MHz) and which will be used to calculate results.

Multiburst Measurement

If there are multiple bursts within a measurement interval determined by DL Meas Interval or UL Meas Interval, this measurement analyzes every burst up to 10 bursts in a frame.

Measurement results of all bursts are displayed in the Multiburst Results window. Measurement results in the Metrics window are selected by Meas Range criteria. See "Meas Range" on page 2086 for more details.

Note: It is assumed that widths of all bursts are the same and that the repetition period of the bursts is constant. For correct measurement, Burst Time, Burst Repetition Period, and DL/UL Meas Interval must be set appropriately.

Pass/Fail Results

Downlink: Fail

- If Off Power result exceeds "Downlink Off Power" on page 2089 limit
- When "Auto Timing Adjustment " on page 2035 is Off, if Transient Ramp Up/Down result exceeds "Downlink Transient Period" on page 2089
- When "Auto Timing Adjustment " on page 2035 is On, if Ramp Up/Down result exceeds "Max Ramp Up Time" on page 2088 and "Max Ramp Down Time" on page 2088, respectively.

Uplink: Fail

- When UL On Pwr Limit Test is On, if On Power result is not within "Uplink On Power Reference" on page 2090 (dBm) ± "Uplink On Power Tolerance" on page 2091 (dB)
- If Off Power Before/After result exceeds "Uplink Off Power" on page 2090 limit
- If Ramp Up/Down result exceeds "Max Ramp Up Time" on page 2088 and "Max Ramp Down Time" on page 2088, respectively.

Individual Pass/Fail results can be queried.

Remote Commands for Transmit On|Off Power Measurement

The following commands are used to retrieve the measurement results:

```
:CONFigure:PVTime
:CONFigure:PVTime:NDEFault
:INITiate:PVTime
:FETCh:PVTime[n]?
:READ:PVTime[n]?
:MEASure:PVTime[n]?
```

Measurement Results for Transmit On|Off Power Measurement

For each result, the following heading is used to represent its format and precision.

#. Result Name (type of number) [unit] <explanation>

Type of number includes double, float and integer.

Index n	Results Returned
0	Returns unprocessed I/Q trace data as a series of comma-separated trace point values, in volts. The I values are listed first in each pair, using 0 through the even-indexed values. The Q values are odd-indexed values
n=1 (or not specified)	Returns the following comma-separated scalar results: <ol style="list-style-type: none"> 1. Sample time is a floating point number representing the time between samples of displayed trace which you can get by using the trace queries (n=2, 3, ...) 2. Number of samples is the number of data points in the displayed trace. This number is useful when performing a query on the signal (i.e. when n=2, 3 ...) 3. On Power/ Mean Power is the mean power of the Transmitter ON period (dBm). The Transmitter ON period is determined by the Burst Time. The Burst Line indicates the Transmitter ON period 4. Burst Width is the width of the first identified burst (sec) 5. Trigger Diff is the time difference between the position of the trigger line and the

3 5G NR Mode
 3.8 Transmit On|Off Power

Index n	Results Returned
	start point (sec)
	<p>6. Ramp up time is the time difference between P1 and P2 (sec) where P1 is the position at which On Power (dBm) minus Ramp Up End Level (dB) intersects the Trace and P2 is the position at which On Power (dBm) minus Ramp Up Start Level (dB) intersects the Trace when Auto Timing Adjust is On</p> <p>When Auto Timing Adjust is Off, the Transient Ramp Up time is $ABS(P1 - P2) - (70/N/2 \text{ usec})$ where P1 is the start position of the Transmitter ON period and P2 is the position where the 70/N us RMS Trace intersects the DL Off Power limit. If it is smaller than 70/N/2 usec, the result is 0 sec</p>
	<p>7. Ramp down time is the time difference between P1 and P2 (sec) where P1 is the position at which On Power (dBm) minus Ramp Down End Level (dB) intersects the Trace and P2 is the position at which On Power (dBm) minus Ramp Down Start Level (dB) intersects the Trace when Auto Timing Adjust is On</p> <p>When Auto Timing Adjust is Off, the Transient Ramp Down time is $ABS(P1 - P2) - (70/N/2 \text{ usec})$ where P1 is the end position of the Transmitter ON period and P2 is the position where the 70/N us RMS Trace intersects the DL Off Power limit. If it is smaller than 70/N/2 usec, the result is 0 sec</p>
	<p>8. Off power/Off power before: When in Downlink, Off Power is the maximum power of 70/N us RMS Trace over the Transmitter OFF period (dBm/MHz). The Transmitter OFF period is On/Off Transient position of Burst Timing Indicator Line +/- (70/N / 2) usec (e.g. When SCS $\mu=1:30$ kHz, N = 2, $70/N/2 = 70/2/2 = 17.5$ usec. When DL Transient Period is 10 usec, 27.5 usec far from Burst Line)</p> <p>When in Uplink, Off power before is the average power (dBm) during the UL Off Power Length (sec) prior to the Transmitter ON period, excluding a transient period of the Max Ramp Up Time (sec) prior to the Transmitter ON period</p>
	9. Maximum power is the maximum peak level in the range (dBm)
	10. Minimum power is the minimum peak level in the range (dBm)
	11. Actual sample time is the floating point number (sec) representing the time between samples of uncompressed I/Q trace data, which can be get by trace query (n=0)
	12. Actual number of samples is the number of data points in the uncompressed I/Q trace data, which can be get by trace query(n=0)
	13. Off power after is the average power during the UL Off Power Length (sec) following the Transmitter ON period, excluding a transient period of the Max Ramp Down Time (sec) following the Transmitter ON period
	This result is for Uplink only. When Direction is Downlink, the value will be NaN (9.91 E 37)
	14. N/A
	15. Off Power At is the worst off power position (sec). This result is for Downlink only. When Direction is Uplink, the value will be NaN (9.91 E 37)
2	<p>Measured Trace data for Trace 1</p> <p>This returns comma-separated floating point numbers representing the Measured Trace data for Trace 1 (dBm)</p>

Index n	Results Returned
3	Measured Max Hold Trace data This returns comma-separated floating point numbers representing the Measured Max Hold Trace data (dBm)
4	Measured Min Hold Trace data This returns comma-separated floating point numbers representing the Measured Min Hold Trace data (dBm)
5	N/A
6	N/A
7	N/A
8	N/A
9	Measured 70/N us RMS Trace (dBm/MHz) data This returns comma-separated floating point numbers representing the Measured 70/N us RMS Trace (dBm/MHz) data (dBm/MHz)
10 Direction = Downlink	Returns scalar values of the pass/fail (0 = passed, or 1 = failed) determined by testing Off Power result and Ramp Up/Down results <ol style="list-style-type: none"> DL Off Power DL Ramp Up (When Auto Timing Adjust is On) / DL Transient Ramp Up (When Auto Timing Adjust is Off) DL Ramp Down (When Auto Timing Adjust is On) / DL Transient Ramp Down (When Auto Timing Adjust is Off) -999.0 -999.0 -999.0 -999.0 -999.0 -999.0 -999.0 <p>The last seven results always return -999.0 The number of values returned is subject to change in future releases</p>
10 Direction = Uplink	Returns scalar values of the pass/fail (0 = passed, or 1 = failed) determined by testing Off Power results, Ramp Up/Down results and On Power result <ol style="list-style-type: none"> UL Off Power Before UL Off Power After UL Ramp Up UL Ramp Down UL On Power -999.0 -999.0 -999.0 -999.0

Index n	Results Returned
	10. -999.0 The last five results always return -999.0 The number of values returned is subject to change in future releases
11	Measured Trace data for Trace 2 This returns comma-separated floating point numbers representing the Measured Trace data for Trace 2 (dBm)
12	Measured Trace data for Trace 3 This returns comma-separated floating point numbers representing the Measured Trace data for Trace 3 (dBm)
13	Returns the analyzed burst number for each result returned by READ:PVT? 1. On Power burst number for n=1 3 rd 2. Off Power (DL) burst number for n=1 8 th / Off Power After (UL) burst number for n=1 13 th 3. Ramp Up / Transient Ramp Up burst number for n=1 6 th 4. Ramp Down / Transient Ramp Down burst number for n=1 7 th 5. Off Power Before burst number for n=1 8 th . (Uplink only. When in downlink, the value is 9.91E37) 6. Burst Width burst number for n=1 4 th
14	Returns the multiburst results: Number of return values = 7 x number of bursts analyzed 1. On Power (dBm) 2. Burst Width (sec) 3. Off Power Before (dBm, Uplink only. When in downlink, the value is 9.91E37) 4. Off Power After (Downlink: dBm/MHz, Uplink: dBm) 5. Off Power at (sec, Downlink only. When in uplink, the value is 9.91E37) 6. Ramp Up / Transient Ramp Up (sec) 7. Ramp Down / Transient Ramp Down (sec)
15	Returns the pass/fail (0 = passed, or 1 = failed) results of multiburst results Number of return values = 5 x number of bursts analyzed 1. On Power (Uplink only. When in downlink, the value is 0) 2. Off Power Before (Uplink only. When in downlink, the value is 0) 3. Off Power After 4. Ramp Up 5. Ramp Down

3.8.1 Views

The Transmit On|Off Power measurement has two views.

These Views are multiple-window views and you can select a window by touching it. The menu controls may sometimes change depending on which window is selected.

Whenever the View changes, the default menu is Frequency, unless otherwise specified in the View description.

Remote Command	<code>:DISPlay:PVTime:VIEW[:SElect] ALL BOTH</code> <code>:DISPlay:PVTime:VIEW[:SElect]?</code>
Example	<code>:DISP:PVTime:VIEW ALL</code> sets the burst view <code>:DISP:PVTime:VIEW BOTH</code> sets the rise and fall view
Preset	ALL
State Saved	Yes

3.8.1.1 Burst

Windows: "RF Envelope" on page 1965, "Metrics" on page 1966

View Burst envelope.

Example	<code>:DISPlay:PVTime:VIEW[:SElect] ALL</code>
---------	--

3.8.1.2 Rise & Fall

Windows: "Rise" on page 1966, "Fall" on page 1966, "Metrics" on page 1966

Zooms in on the rising and falling portions of the burst being tested.

Example	<code>:DISPlay:PVTime:VIEW[:SElect] BOTH</code>
---------	---

3.8.2 Windows

The following windows are available in the Transmit On|Off measurement.

3.8.2.1 RF Envelope

The RF Envelope window (#1) appears in Burst Views, as follows:

View	Size	Position
Burst	Half height, full width	Top

3.8.2.2 Rise

The Rise window (#2) is an important component to see the detail of power ramp up profile, it appears in Rise & Fall view.

View	Size	Position
Rise & Fall	Half height, half width	Top Left

3.8.2.3 Fall

The Fall window (#3) is an important component to see the detail of power ramp down profile, it appears in Rise & Fall view.

View	Size	Position
Rise & Fall	Half height, half width	Top Right

3.8.2.4 Metrics

The Metrics window (#4) is an important component to see the specific metric reported by the measurement.

View	Size	Position
Burst	Half height, full width	Bottom
Rise & Fall	Half height, full width	Bottom

This table illustrates the details of metrics window when Direction is Downlink:

4 Metrics			Measure Trace	Trace 1
On Power	-19.81 dBm	at Burst 2	Center Frequency	1.000000000 GHz
Burst Width	3.715 ms	at Burst 2	Trigger Difference	-80.0 ns
Off Power	-83.66 dBm/MHz	at Burst 2	Max Power	-9.04 dBm
Off Power At	9.888 ms		Min Power	-123.38 dBm
Transient Ramp Up	660.0 ns	at Burst 3		
Transient Ramp Down	740.0 ns	at Burst 2		

Name	Corresponding Results

Max Power	n=1 9 th
Min Power	n=1 10 th

Center Frequency

Center Frequency is not a part of measured results and it comes from one of the acquisition conditions and parameters on measured results. Thus, before acquisition is not complete, it is shown as three dashes.

Center Frequency	---
------------------	-----

When Direction is Downlink, Center Frequency is the center of the entire frequency range that contains all the active CCs. For example, when Carrier Ref Freq is 1 GHz and two 100 MHz bandwidth component carriers' frequency offsets are 0 Hz and 100 MHz respectively, Center Frequency is 1.049985 GHz.

When Direction is Uplink, Measure CC is shown as below. Center Frequency is equal to Measure CC's center frequency. In the above case, if Measure CC is CC0, Center Frequency is 1 GHz. If Measure CC is CC1, Center Frequency is 1.1 GHz.

Measure CC	CC0
Center Frequency	1.000000000 GHz

3.8.2.5 Multiburst Results

The Multiburst Results window (#5) displays results of all bursts.

Burst	On Power (Average) dBm	Burst Width period	Off Power After Burst		Transient Ramp Up period	Transient Ramp Down period
			dBm/MHz	at		
1	-19.81	3.715 ms	-83.53	4.327 ms	660.0 ns	1.140 μ s
2	-19.81	3.715 ms	-83.66	9.888 ms	580.0 ns	740.0 ns
3	---	---	---	---	660.0 ns	---

Name	Corresponding Results
Burst Number	
On Power	n=14 1 st
On Power Pass/Fail (UL only)	n=15 1 st
Burst Width	n=14 2 nd
Off Power Before Burst (UL only)	n=14 3 rd
Off Power Before Burst Pass/Fail (UL only)	n=15 2 nd
Off Power After Burst	n=14 4 th
Off Power After Burst Pass/Fail	n=15 3 rd
Off Power After Burst at (DL only)	n=14 5 th
Transient Ramp Up*	n=14 6 th
Transient Ramp Up Pass/Fail	n=15 4 th
Transient Ramp Down*	n=14 7 th
Transient Ramp Down Pass/Fail	n=15 5 th

*When in uplink or when in downlink and Auto Timing Adjust is On, the column label changes to Ramp Up and Ramp Down, respectively.

3.8.3 Amplitude

The Amplitude front-panel key activates the Amplitude menu and selects Reference Value as the active function.

3.8.3.1 Y Scale

The Y Scale Tab contains controls that pertain to the Y axis parameters of the measurement. These parameters control how data on the vertical (Y) axis is displayed and control instrument settings that affect the vertical axis.

Ref Value

Sets the value for the absolute power reference. The reference line is at the top, center, or bottom of the graticule, depending on the value of the Ref Position

function.

Remote Command	<pre>:DISPlay:PVTIme:WINDow[1] 2 3:TRACe:Y[:SCALe]:RLEVel <real> :DISPlay:PVTIme:WINDow[1] 2 3:TRACe:Y[:SCALe]:RLEVel?</pre> <p>Window numbers are as follows: Burst: 1 Rise: 2 Fall: 3</p>
Example	<pre>:DISP:PVT:WIND:TRAC:Y:SCAL:RLEV 5dBm</pre> <p>1-Burst for Transmit On Off Power :DISP:PVT:WIND:TRAC:Y:SCAL:RLEV?</p> <p>1-Burst for Transmit On Off Power :DISP:PVT:WIND2:TRAC:Y:SCAL:RLEV 5</p> <p>2-Rise for Transmit On Off Power :DISP:PVT:WIND3:TRAC:Y:SCAL:RLEV 5</p> <p>2-Fall for Transmit On Off Power</p>
Couplings	<p>When Auto Scaling is On (default), this value is automatically determined by the measurement result. When you set a value manually, Auto Scaling changes to Off Attenuation is not coupled to Ref Value</p>
Preset	Automatically calculated
State Saved	Yes
Min	-250 dBm
Max	250 dBm
Annotation	Ref <value> top left of graph

Scale/Div

Scale/Div sets the height of one division of the graticule in the current Y-Axis unit.

Scale/Div also determines the displayed amplitude range in the log plot graph. Since there are usually 10 vertical graticule division on the display, the total amplitude range of the graph is typically 10x this amount. For example, if Scale/Div is 10 dB, then the total range of the graph is 100 dB.

Remote Command	<pre>:DISPlay:PVTIme:WINDow[1] 2 3:TRACe:Y[:SCALe]:PDIVision <rel_ampl> :DISPlay:PVTIme:WINDow[1] 2 3:TRACe:Y[:SCALe]:PDIVision?</pre> <p>Window numbers are as follows: Burst: 1 Rise: 2 Fall: 3</p>
----------------	---

Example	<pre>:DISP:PVT:WIND:TRAC:Y:PDIV 5</pre> <p>1-Burst for Transmit On Off Power</p> <pre>:DISP:PVT:WIND:TRAC:Y:PDIV?</pre> <p>1-Burst for Transmit On Off Power</p> <pre>:DISP:PVT:WIND2:TRAC:Y:PDIV 10</pre> <p>2-Rise for Transmit On Off Power</p> <pre>:DISP:PVT:WIND3:TRAC:Y:PDIV 10</pre> <p>3-Fall for Transmit On Off Power</p>
Couplings	When the Auto Scaling is On, this value is automatically determined by the measurement result. When you set a value manually, Auto Scaling automatically changes to Off
Preset	Automatically calculated
State Saved	Yes
Min/Max	0.10 dB/20dB
Annotation	<value> dB/ left upper of graph ! all measurements unless noted

Ref Position

Positions the reference level at the top, center, or bottom of the Y Scale display. Changing the reference position does not change the reference level value.

Remote Command	<pre>:DISPlay:PVTIme:WINDow[1] 2 3:TRACe:Y[:SCALE]:RPOSition TOP CENTER BOTTom</pre> <pre>:DISPlay:PVTIme:WINDow[1] 2 3:TRACe:Y[:SCALE]:RPOSition?</pre> <p>Window numbers are as follows:</p> <ul style="list-style-type: none"> Burst: 1 Rise: 2 Fall: 3
Example	<pre>:DISP:PVT:WIND:TRAC:Y:RPOS CENT</pre> <p>1-Burst for Transmit On Off Power</p> <pre>:DISP:PVT:WIND:TRAC:Y:RPOS?</pre> <p>1-Burst for Transmit On Off Power</p> <pre>:DISP:PVT:WIND2:TRAC:Y:RPOS CENT</pre> <p>2-Rise for Transmit On Off Power</p> <pre>:DISP:PVT:WIND3:TRAC:Y:RPOS CENT</pre> <p>3-Fall for Transmit On Off Power</p>
Preset	TOP
State Saved	Saved in instrument state
Range	Top Center Bottom

Auto Scaling

Toggles the Auto Scaling function between On and Off. When Auto Scaling is On, pressing the Restart front-panel key results in automatically determining scale per division and reference values based on the measurement results.

Remote Command	<pre>:DISPlay:PVTime:WINDow[1] 2 3:TRACe:Y[:SCALe]:COUPle 0 1 OFF ON</pre> <pre>:DISPlay:PVTime:WINDow[1] 2 3:TRACe:Y[:SCALe]:COUPle?</pre> <p>Window numbers are as follows: Burst: 1 Rise: 2 Fall: 3</p>
Example	<pre>:DISP:PVT:WIND:TRAC:Y:COUP ON</pre> <p>1-Burst for Transmit On Off Power <pre>:DISP:PVT:WIND:TRAC:Y:COUP?</pre></p> <p>1-Burst for Transmit On Off Power <pre>:DISP:PVT:WIND2:TRAC:Y:COUP ON</pre></p> <p>2-Rise for Transmit On Off Power <pre>:DISP:PVT:WIND3:TRAC:Y:COUP?</pre></p> <p>2-Fall for Transmit On Off Power</p>
Couplings	<p>When Auto Scaling is On, and the Restart front-panel key is pressed, this function automatically sets the scale per division to 10 dB and determines the reference values based on the measurement results</p> <p>When you set a value to either Scale/Div or Ref Value manually, Auto Scaling automatically changes to Off</p>

Range	On Off

3.8.3.2 Attenuation

Controls the attenuator functions and interactions between the attenuation system components.

There are two attenuator configurations in the X-Series. One is a Dual-Attenuator configuration consisting of a mechanical attenuator and an optional electronic attenuator. The other configuration uses a single attenuator with combined mechanical and electronic sections that controls all the attenuation functions. Different models in the X-Series come with different configurations.

- See "Dual-Attenuator Configurations " on page 1973
- See "Single-Attenuator Configuration " on page 1973

Most attenuation settings are the same for all measurements – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by Meas Preset.

This tab is only available when the hardware set includes an input attenuator, which is typically only the case for Keysight’s benchtop instruments. For example, this tab does not appear in:

- VXT models SP900B/10A/11A

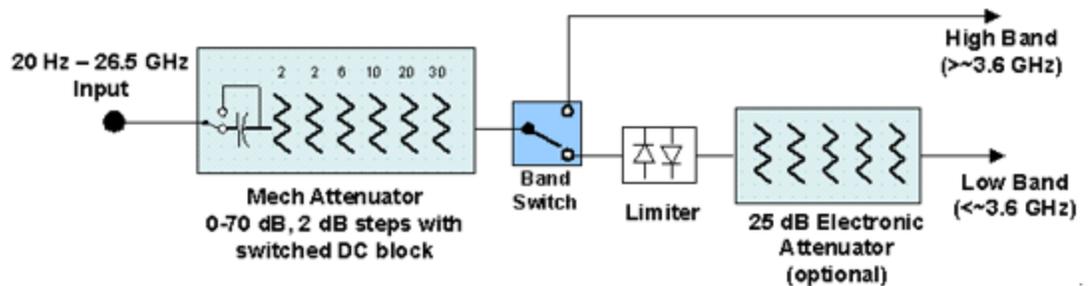

This tab also does not appear in UXM. In UXM all Attenuation and Range settings are disabled, as the expected input power level is handled by the Call Processing App that drives the DUT power control.

Dependencies

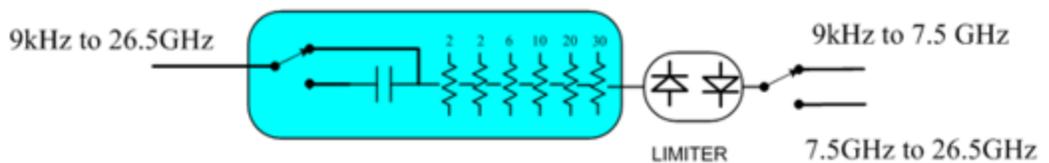

In measurements that support the I/Q inputs, this tab is unavailable when I/Q is the selected input, and is replaced by the **Range** tab in that case

Dual-Attenuator Configurations

Configuration 1: Mechanical attenuator + optional electronic attenuator

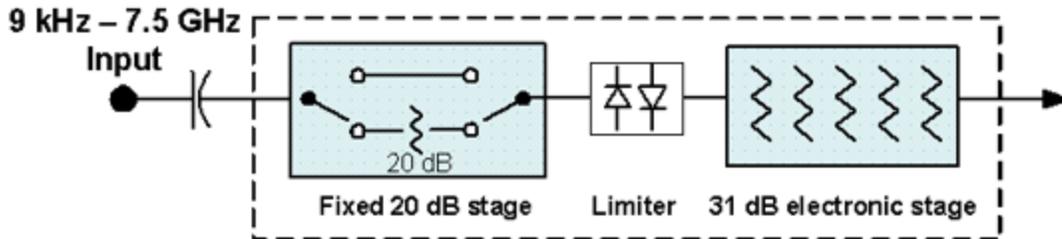

Configuration 2: Mechanical attenuator, no optional electronic attenuator

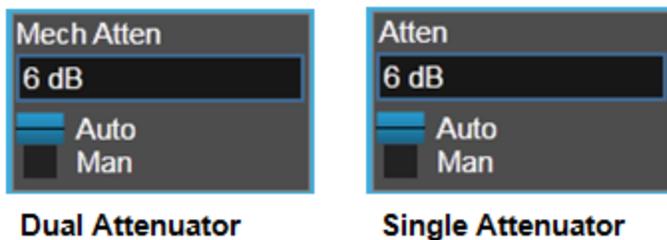

Note that Configuration 2 is not strictly speaking a dual-section attenuator, since there is no electronic section available. However, it behaves exactly like Configuration 1 without the Electronic Attenuator option EA3, therefore for the sake of this document it is grouped into the “Dual-Attenuator” configuration.

Single-Attenuator Configuration

You can tell which attenuator configuration you have by pressing the Attenuation tab, which (in most Modes) opens the Attenuation menu. If the first control in the Attenuation menu says **Mech Atten** you have the Dual-Attenuator configuration. If the first control says **Atten** you have the Single-Attenuator configuration.

(Note that depending on the measurement, there may be no Auto/Man functionality on the Mech Atten control.)

In the Single-Attenuator configuration, you control the attenuation with a single control, as the fixed stage has only two states. In the Dual-Attenuator configuration, both stages have significant range, so you are given separate control of the mechanical and electronic attenuator stages.

When you have the Dual-Attenuator configuration, you may still have only a Single-Attenuator, because unless option EA3 (the Electronic Attenuator option) is available, and you purchase it, you will have only the mechanical attenuator.

Full Range Atten

This control and **Attenuator Summary** only appear in SP900S, when the RF input is selected and the RF Input Port is set to RF Input 2, and the Full Range Attenuator is installed. The Full Range Attenuator adds a second input attenuator at the beginning of the RF Input 2, which enhances the protection and optimizes the performance of the extra internal mixers used by RF Input 2.

Remote Command	<code>[:SENSe]:POWer[:RF]:FRATten <rel_amp1></code> <code>[:SENSe]:POWer[:RF]:FRATten?</code>
Example	<code>:POW:FRAT 14</code> <code>:POW:FRAT?</code>
Notes	When you enter an amplitude value that falls between valid values, the value will be incremented to

	the next smallest valid value
Dependencies	Only appears if input RF is selected, and RF Input Port 2 is selected, and the Full Range Attenuator exists
Couplings	This value is never changed by any coupling, but other couplings use this value. See Reference Level and " Mech Atten " on page 2568 command descriptions
Preset	20 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Only valid values are 0, 6, 14, 20 dB
Annotation	<p>When the Input is RF, and the Input Port is RF Input 2, and the Full Range Attenuator is installed: On the Meas Bar, the field "Atten" displays as follows:</p> <ul style="list-style-type: none"> - If the sweep is entirely < 50 GHz, the value shown after "Atten:" is equal to Mech Atten + Elec Atten + Full Range Atten - If the sweep is entirely > 50 GHz, the value shown after "Atten:" is equal to Full Range Atten - If the sweep straddles 50 GHz, the value shown after "Atten:" is preceded by the symbol ">=" and is equal to Full Range Atten <p>In the Amplitude, "Y Scale" on page 2562 menu, and the Atten Meas Bar dropdown menu panel, a summary is displayed as follows:</p> <p>"Total Atten below 50 GHz" followed by the value of Full Range Atten + Mech Atten + Elec Atten "Total Atten above 50 GHz" followed by the value of Full Range Atten</p> <p>For example, if Mech Atten = 6 dB, Elec Atten = 4 dB, and Full Range Atten = 20 dB, the summary below is shown:</p> <ul style="list-style-type: none"> - Attenuator summary: - Total Atten below 50 GHz: 30 dB - Total Atten above 50 GHz: 20 dB

Mech Atten

This control is labeled **Mech Atten** in Dual-Attenuator models and **Atten** in Single-Attenuator models. In the Dual-Attenuator configuration, this control only affects the mechanical attenuator.

This control lets you modify the attenuation applied to the RF input signal path. This value is normally auto-coupled to the Ref Level, the Internal Preamp Gain, any External Gain that is entered, and the Max Mixer Level, as described in the table below.

See "**Attenuator Configurations and Auto/Man**" on page 1977

3 5G NR Mode
3.8 Transmit On|Off Power

Remote Command	<pre>[:SENSe]:POWer[:RF]:ATTenuation <rel_amp1> [:SENSe]:POWer[:RF]:ATTenuation? [:SENSe]:POWer[:RF]:ATTenuation:AUTO OFF ON 0 1 [:SENSe]:POWer[:RF]:ATTenuation:AUTO?</pre>
Example	<pre>:POW:ATT 20</pre> <p>Dual-Attenuator configuration: sets the mechanical attenuator to 20 dB Single-Attenuator mode: sets the main attenuation to 20 dB (see below for definition of “main” attenuation) In either case, if the attenuator was in Auto, it is set to Manual <pre>:POW:ATT:AUTO ON</pre> Turn Auto Mech Atten ON</p>
Dependencies	<p>Some measurements do not support the Auto setting of "Mech Atten" on page 1975. In these measurements, the Auto/Man selection is not available, and the Auto/Man toggle function is not available</p> <p>In Dual-Attenuator configurations, when the electronic attenuator is enabled, the mechanical attenuator has no auto setting, and the Auto/Man toggle function is not available. The state of Auto/Man is remembered and restored when the electronic attenuator is once again disabled. This is described in more detail in "Elec Atten" on page 2571</p> <p>See "Attenuator Configurations and Auto/Man " on page 1977 for more information on the Auto/Man functionality</p> <p><pre>:POW:ATT:AUTO</pre> is only available in measurements that support Mech Atten Auto, such as Swept SA</p>
Couplings	<p>If the RF Input Port is the RF Input:</p> <ul style="list-style-type: none"> – If the USB Preamp is connected to USB, use 0 dB for Mech Atten – Otherwise compute the auto-selected value of Mech Atten based on Reference Level, Int Preamp, External Gain, Ref Level Offset, Max Mixer Level, μW Path Control and IF Gain settings. Limit this value to be no less than 6 dB (total attenuation below 6 dB can never be chosen by Auto) – In the SP900S, if the RF Input Port is RF Input 2, use the formula above and subtract the Full Range Atten value from the result to determine the Mech Atten. Limit the value so that it is never lower than 0 dB and so that total attenuation, including Full Range Atten, is never less than 6 dB (total attenuation, including Full Range Atten below 6 dB, can never be chosen by Auto) <p>In External Mixing and BBIQ, where the Attenuator is not in the signal path, the Attenuator setting changes as described above when "Mech Atten" on page 1975 is in Auto, but no changes are made to the actual attenuator hardware setting until the input is changed back to the RF Input</p> <p>For CXA-m with option FSA (Fine-Step Attenuator or 2 dB steps), the FSA-like behavior is only available when the frequency setting is ≤ 7.5GHz. So, when the frequency is changed from below 7.5GHz to above 7.5GHz, the attenuation setting will be changed to a multiple of 10dB which will be no smaller than the previous setting. For example, 4dB attenuation will be changed to 10dB</p>
Preset	<p>The preset for Mech Attenuation is “Auto”</p> <p>The Auto value of attenuation is 10 dB</p> <p>ON</p>

State Saved	Saved in instrument state
Min	0 dB The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. Values below 6 dB must be directly entered from the keypad or via SCPI. This protects against setting a dangerously small attenuation value, which can put the instrument at risk of damage to input circuitry. If the current mechanical attenuation is below 6 dB, it can be increased with the knob and step keys, but not decreased
Max	CXA Option 503 or 507: 50 dB EXA: 60 dB All other models: 70 dB Note that in the Single-Attenuator configuration, the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB
Annotation	The current value for Total Atten is displayed in the Measurement Bar at the top of the display. A value appears for Electronic Attenuation only if the Electronic Attenuator is enabled. The annotation appears as Atten: <total> dB (e<elec>) The e letter is in amber in Single-Attenuator configurations For example: Dual-Attenuator configuration: Atten: 24 dB (e14) Indicating the total attenuation is at 24 dB and the electronic attenuation is at 14 dB Single-Attenuator configuration: A: 24 dB (e14) Indicating the total attenuation is at 24 dB and the "soft" attenuation is at 14 dB (see below for definition of "soft" attenuation) When in Manual, a # sign appears in front of Atten in the annotation

Attenuator Configurations and Auto/Man

As described in ["Y Scale" on page 2562](#), there are two distinct attenuator configurations available in the X-Series, the single attenuator and Dual-Attenuator configurations. In Dual-Attenuator configurations, we have the mechanical attenuation and the electronic attenuation, and the current total attenuation is the sum of the electronic + mechanical attenuation. In Single-Attenuator configurations, we refer to the attenuation set using ["Mech Atten" on page 1975](#) (or `:POW:ATT`) as the "main" attenuation; and the attenuation that is set by `:POW:EATT` as the "soft" attenuation (`:POW:EATT` is honored even in the Single-Attenuator configuration, for compatibility purposes). Then the current total attenuation is the sum of the main + soft attenuation. See ["Elec Atten" on page 2571](#) for more on "soft" attenuation.

NOTE

In some measurements, the **Mech Atten** control has an Auto/Man function. In these measurements, an Auto/Man switch is shown on the **Mech Atten** control:

Note that in configurations that include an Electronic Attenuator, this switch is only shown when the Electronic Attenuator is disabled.

In other measurements, **Mech Atten** has no Auto/Man function. In these measurements, no switch is shown on the **Mech Atten** control:

Mech Atten also appears with no switch, as above, in configurations that include an Electronic Attenuator but when the Electronic Attenuator is enabled.

Elec Atten

Controls the Electronic Attenuator in Dual-Attenuator configurations. This control does not appear in Single-Attenuator configurations, as the control of both the mechanical and electronic stages of the Single-Attenuator is integrated into the single **Atten** control.

This control includes an Enable/Disable toggle switch; it is only possible to enter a value for the Electronic Attenuator when this switch is in the "Enable" position.

For more details about the Electronic Attenuator, see ["More Information" on page 1980](#)

Remote Command `[:SENSe]:POWer[:RF]:EATTenuation <rel_amp1>`
`[:SENSe]:POWer[:RF]:EATTenuation?`
`[:SENSe]:POWer[:RF]:EATTenuation:STATe OFF | ON | 0 | 1`
`[:SENSe]:POWer[:RF]:EATTenuation:STATe?`

Example `:POW:EATT 10`
`:POW:EATT?`
`:POW:EATT:STAT ON`
`:POW:EATT:STAT?`

Notes	Electronic Attenuation's specification is defined only when Mechanical Attenuation is 6 dB
Dependencies	<p>This control only appears in Dual-Attenuator models with an Electronic Attenuator installed and licensed. It does not appear in models with the Single-Attenuator configuration, as in the Single-Attenuator configuration there is no "electronic attenuator" there is only a single integrated attenuator (which has both a mechanical and electronic stage). However, in the Single-Attenuator configuration, EATT SCPI commands are accepted for compatibility with other X-series instruments and set a "soft" attenuation as described in . The "soft" attenuation is treated as an addition to the "main" attenuation value set by the Atten control or :POW:ATT and affects the total attenuation displayed on the Atten control and the Meas Bar</p> <p>The electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable above the low band (0-3.6 GHz, 0-3.4 GHz 0-3GHz, depending on the model). If the low band ranges from 0-3.6GHz, and Stop Frequency of the instrument is > 3.6 GHz, then the Enabled/Disabled section of the Elec Atten control will be OFF and grayed-out</p> <p>If the Internal Preamp is on, meaning it is set to Low Band or Full, the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the Enabled/Disabled section of the Elec Atten control will be OFF and grayed-out</p> <p>If either of the above is true, and the SCPI command is sent, an error indicating that the electronic attenuator is unavailable will be sent</p> <p>If both of the above are true, pressing the control will generate error message -221, in other words, the frequency range lockout takes precedence</p> <p>If the electronic/soft Attenuator is enabled, then the Stop Freq of the instrument is limited to 3.6 GHz and the Internal Preamp is unavailable</p> <p>If the LNA is on, the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the Enabled/Disabled section of the Elec Atten control will be OFF and grayed-out. This coupling works in the following modes/measurements:</p> <ul style="list-style-type: none"> - Channel Power, Occupied BW, ACP, SEM, Spurious Emissions, Power Stat CCDF measurements in all Modes - Transmit On Off Power measurement in 5G NR Mode - Power vs. Time and Transmit Power measurement in GSM/EDGE Mode - Burst Power measurement in Spectrum Analyzer Mode <p>The SCPI-only "soft" electronic attenuation for the single-attenuator configuration is not available in all measurements; in particular, it is not available in the Swept SA measurement</p>
Couplings	Enabling and disabling the Electronic Attenuator affects the setting of the Mechanical Attenuator (in Dual-Attenuator configurations). This is described in more detail below and in " Mechanical Attenuator Transition Rules " on page 1980
Preset	<p>0 dB</p> <p>OFF (Disabled) for Swept SA measurement</p> <p>ON (Enabled) for all other measurements that support the electronic attenuator</p>
State Saved	Saved in instrument state
Min	0 dB
Max	Dual-Attenuator configuration: 24 dB

Single-Attenuator configuration: the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB

Annotation

See Annotation under the **Mech Atten** control description

More Information

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear. These advantages primarily aid in remote operation and are negligible for front panel use. See "[Using the Electronic Attenuator: Pros and Cons](#) " on page 1981 for a detailed discussion of the pros and cons of using the electronic attenuator.

For the Single-Attenuator configuration, for SCPI backwards compatibility, the "soft" attenuation feature replaces the Dual-Attenuator configuration's electronic attenuator. All the same couplings and limitations apply. See "[Attenuator Configurations and Auto/Man](#) " on page 2570

Mechanical Attenuator Transition Rules

When the Electronic Attenuator is enabled, the Mechanical Attenuator transitions to a state that has no Auto function. Below are the rules for transitioning the Mechanical Attenuator. Note that the information below *only* applies to the Dual-Attenuator configurations, and *only* when the Electronic Attenuator is installed:

When the Electronic Attenuation is enabled from a disabled state:

- The Mechanical Attenuator is initialized to 10 dB (this is its optimal performance setting). You can then set it as desired with SCPI, numeric keypad, step keys, or knob, and it behaves as it normally would in manual mode
- The Auto/Man state of (Mech) Atten is saved
- The Auto/Man toggle on the (Mech) Atten control disappears and the auto rules are disabled
- The Electronic Attenuator is set to 10 dB less than the previous value of the Mechanical Attenuator, within the limitation that it must stay within the range of 0 to 24 dB of attenuation

Examples in the Dual-Attenuator configuration:

- Mech Atten at 20 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 10 dB. New total attenuation equals the value before Elec Atten enabled
- Mech Atten at 0 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 0 dB. New total attenuation does not equal the value before Elec Atten enabled

- Mech Atten at 40 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 24 dB. New total attenuation does not equal the value before Elec Atten enabled

When the Electronic Attenuation is disabled from an enabled state:

- The Elec Atten control is grayed out
- The Auto/Man state of (Mech) Atten is restored
- If now in Auto, (Mech) Atten recouples
- If now in Man, (Mech) Atten is set to the value of total attenuation that existed before the Elec Atten was disabled. The resulting value is rounded up to the smallest value possible given the (Mech) Atten Step setting - (That is, 57 dB changes to 58 dB when (Mech) Atten Step is 2 dB)

Using the Electronic Attenuator: Pros and Cons

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear.

The “finer steps” advantage of the electronic attenuator is beneficial in optimizing the alignment of the instrument dynamic range to the signal power in the front panel as well as remote use. Thus, you can achieve improved relative signal measurement accuracy. Compared to a mechanical attenuator with 2 dB steps, the 1 dB resolution of the electronic attenuator only gives better resolution when the odd-decibel steps are used. Those odd-decibel steps are less accurately calibrated than the even-decibel steps, so one tradeoff for this superior relative accuracy is reduced absolute amplitude accuracy.

Another disadvantage of the electronic attenuator is that the spectrum analyzer loses its “Auto” setting, making operation less convenient.

Also, the relationship between the dynamic range specifications (TOI, SHI, compression, and noise) and instrument performance are less well-known with the electrical attenuator. With the mechanical attenuator, TOI, SHI, and compression threshold levels increase dB-for-dB with increasing attenuation, and the noise floor does as well. With the electronic attenuator, there is an excess attenuation of about 1 to 3 dB between 0 and 3.6 GHz, making the effective TOI, SHI, and so forth, less well known. Excess attenuation is the actual attenuation relative to stated attenuation. Excess attenuation is accounted for in the instrument calibration.

Adjust Atten for Min Clipping

Sets the combination of mechanical and electronic attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an immediate action function, that is, it executes once, when the control is pressed.

The algorithms that are used for the adjustment are documented under "[Pre-Adjust for Min Clipping](#)" on page 2575.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE</code>
Example	<code>:POW:RANG:OPT IMM</code>
Notes	Executing Adjust Atten for Min Clipping initiates the measurement
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements For the Waveform measurement, this control is available only in 5G NR Mode

Restart Meas on Adjust Atten

Toggles the force restart switch for the "[Adjust Atten for Min Clipping](#)" on page 2574 function.

When **ON**, pressing **Adjust Atten for Min Clipping**, or sending `[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE` restarts the measurement and then executes the function.

When **OFF**, pressing the control or sending the command neither restarts the measurement nor executes the function until you restart or continue averaging. In this case, pressing the control generates the following advisory message:

"Adjust Atten is deferred until "Restart" or "Continue Averaging" is executed"

This message is *not* generated if the command is sent.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:REStart OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:REStart?</code>
Example	<code>:POW:RANG:OPT:RESt OFF</code> <code>:POW:RANG:OPT:RESt?</code>
Dependencies	This parameter is available only in the measurements that support continuous averaging in 5G NR
Preset	ON
State Saved	Saved

Adjust Atten

Allows you to select;

- Electric attenuator only
- Combination of Electric attenuator and Mechanical attenuator

when `[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE` is executed.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE EONLY COMBined</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE?</code>
Example	<code>:POW:RANG:OPT:TYPE EONL</code> <code>:POW:RANG:OPT:TYPE?</code>
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements For the Waveform measurement, this control is available only in 5G NR Mode
Preset	<code>COMBined</code>
State Saved	Saved in instrument state

Pre-Adjust for Min Clipping

If this function is **ON**, it applies the adjustment described under "[Adjust Atten for Min Clipping](#)" on page 2574 each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

In Dual-Attenuator models, you can set **Elec+Mech Atten**, in which case both attenuators participate in the autoranging, or **Elec Atten Only**, in which case the mechanical attenuator does not participate in the autoranging. This latter case results in less wear on the mechanical attenuator and is usually faster.

See "[Adjustment Algorithm](#)" on page 1984

Selection	Example	Note
Off	<code>:POW:RANGe:OPT:ATT OFF</code>	This is the default setting
Elec Atten Only	<code>:POW:RANGe:OPT:ATT ELEC</code>	Selects only the electric attenuator to participate in auto ranging. This offers less wear on the mechanical attenuator and is usually faster
Mech + Elec Atten	<code>:POW:RANGe:OPT:ATT COMB</code>	In Dual-Attenuator models, this selects both attenuators to participate in the autoranging

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF ON ELECtrical COMBined</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?</code>
Example	<code>:POW:RANG:OPT:ATT OFF</code> <code>:POW:RANG:OPT:ATT?</code>
Notes	The parameter option <code>ELECtrical</code> sets this function to ON in Single-Attenuator models The parameter option <code>COMBined</code> is mapped to <code>ELECtrical</code> in Single-Attenuator models. If you send <code>COMBined</code> , it sets the function to ON and returns <code>ELEC</code> to a query For SCPI compatibility with models that do not have an input attenuator, the ON parameter is honored and mapped to <code>COMBined</code>
Dependencies	This control only appears in Dual-Attenuator models with an Electronic Attenuator installed

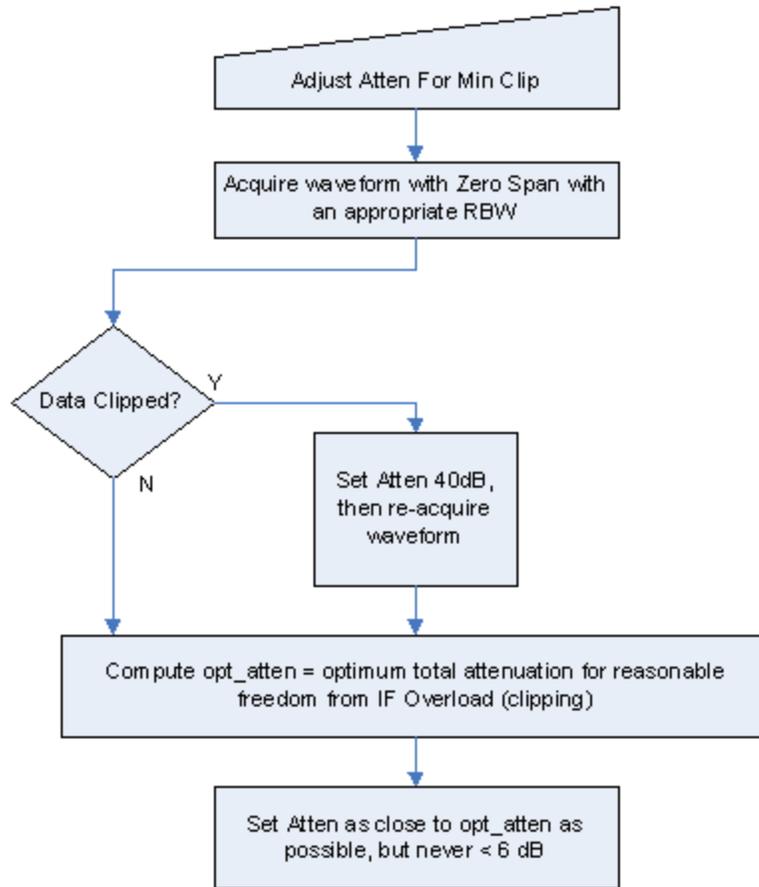

3 5G NR Mode
 3.8 Transmit On|Off Power

	<p>In instruments with Dual-Attenuator model, when "Elec Atten" on page 2571 is OFF or grayed-out, "Pre-Adjust for Min Clipping" on page 1983 is grayed-out</p> <p>This control does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements</p> <p>For the Waveform measurement, this control is available only in 5G NR Mode</p>

Adjustment Algorithm

The algorithms for the adjustment are documented below:

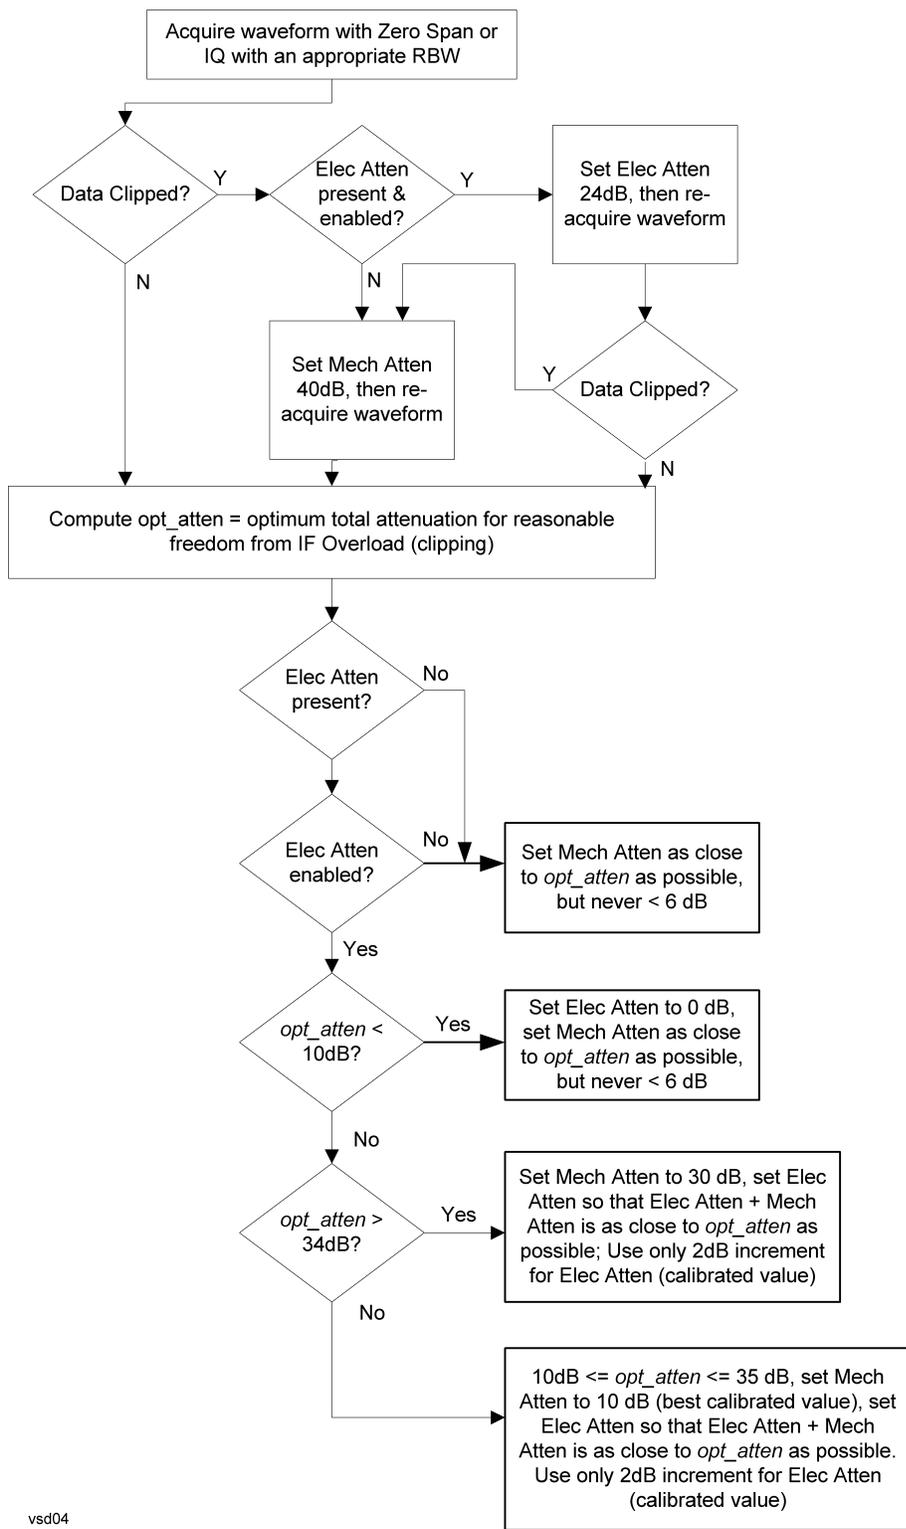

Single-Attenuator Models

Dual-Attenuator models

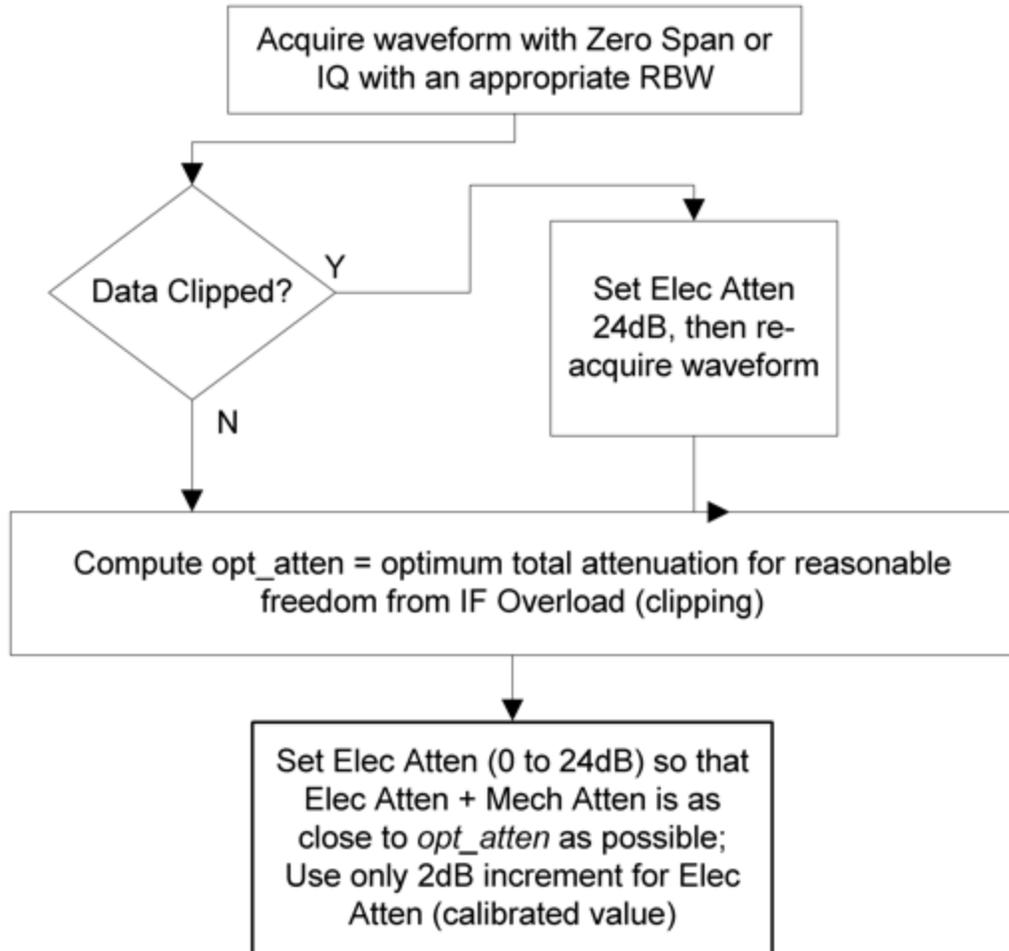

"Adjust Attenuation for Min Clipping" on page 2574 or "Pre-Adjust for Min Clipping" on page 1983 selection is Mech + Elec Atten:

3 5G NR Mode
 3.8 Transmit On|Off Power

"Pre-Adjust for Min Clipping" on page 1983 selection is Elec Only.

Note that the **Mech Atten** value is not adjusted, and the value previously set is used. Therefore, there is a case that IF Overload is still observed depending on the input signal level and the Mech Atten setting.

Mech Atten Step

Controls the step size used when making adjustments to the input attenuation.

This control is labeled **Mech Atten Step** in Dual-Attenuator models and **Atten Step** in Single-Attenuator models. In the Dual-Attenuator configuration, this control only affects the step size of the mechanical attenuator.

Remote Command `[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement] 10 dB | 2 dB`
`[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement]?`

Example `:POW:ATT:STEP 2`

:POW:ATT:STEP?	
Notes	This feature has a toggle choice from the front panel, but it takes a specific value (in dB) when used remotely. The only valid values are 2 and 10
Dependencies	Blanked in EXA, CXA and CXA-m if option FSA (2 dB steps) is not present. If blanked, attempts to set it via SCPI yield an error
Couplings	When the attenuation step size changes, the current mechanical attenuation value is adjusted (if necessary) to be quantized to the new step size. That is, if step is set to 10 dB, mech atten is increased if necessary so it is a multiple of 10 dB
Preset	EXA, CXA and CXA-m: 10 dB (2 dB with option FSA) All other models: 2 dB
State Saved	Saved in instrument state

3.8.3.3 Range (Non-attenuator models)

This tab is only available for Keysight's modular signal analyzers and certain other Keysight products. Examples include:

- VXT

State Saved	No
-------------	----

Range

Represents the amplitude of the largest sinusoidal signal that could be present within the IF without being clipped by the ADC. For signals with high peak-to-average ratios, the range may need to exceed the rms signal power by a significant amount to avoid clipping.

This is a measurement global setting.

Remote Command	<code>[:SENSe] :POWer [:RF] :RANGe <real></code> <code>[:SENSe] :POWer [:RF] :RANGe?</code>
Example	<code>:POW:RANG 10 dBm</code> <code>:POW:RANG?</code>
Notes	The MIN and MAX values are affected by the External Gain parameters, and by the Center Frequency . The hardware compensates for frequency response and alters the Range setting
Preset	0 dBm
State Saved	Yes
Min	-100
Max	100
Annotation	Meas Bar

Adjust Range for Min Clipping

Sets the combination of attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an "immediate action" function, that is, it executes once, when the key is pressed.

This key does not appear in measurements that do not support this functionality.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE</code>
Notes	Executing Adjust Range for Min Clipping initiates the measurement
Dependencies	This control does not appear in the Swept SA and Monitor Spectrum measurements

Restart Meas on Adjust Range

This control is the same as ["Restart Meas on Adjust Atten" on page 2574](#) under ["Attenuation" on page 2565](#).

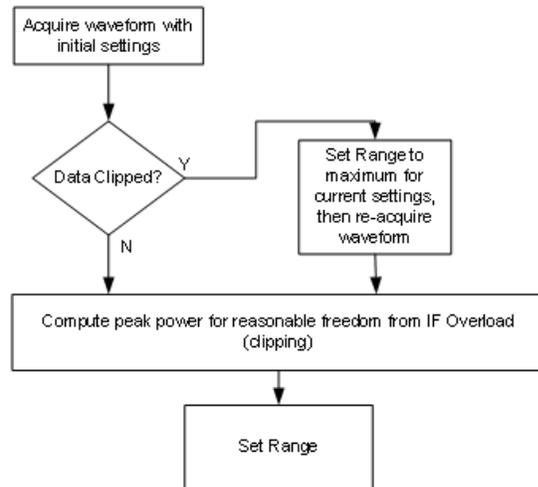

Pre-Adjust for Min Clipping

If this function is **ON**, it applies the adjustment described under Adjust Range For Min Clipping each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF ON ELECTrical COMBined</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?</code>
Notes	Because there is no attenuator control available in these models, the control displays only ON and OFF choices. However, for SCPI compatibility with other platforms, all three parameters (ELECTrical , COMBined , and ON) are honored and all are mapped to ELECTrical , so if any of these three parameters is sent, a subsequent query will return ELEC
Dependencies	This control does not appear in the Swept SA and Monitor Spectrum measurements
Preset	OFF for Swept SA measurement; ON for all other measurements that support Pre-Adjust for Min Clipping
State Saved	Saved in instrument state

Adjustment Algorithm

The algorithm for the adjustment is documented below:

Peak-to-Average Ratio

Used with "[Range \(Non-attenuator models\)](#)" on page 2586 to optimize the level control in the instrument. The value is the ratio, in dB, of the peak power to the average power of the signal to be measured. A ratio of 0 should be used for sinusoidal signals; for 802.11g OFDM signals use 9 dB.

All Applications (Modes) show the current value of Peak-to-Average ratio on the control. However, some applications do not permit changing the value. In these situations, the control is grayed-out.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:PARatio <real></code> <code>[:SENSe]:POWer[:RF]:RANGe:PARatio?</code>
Example	<code>:POW:RANG:PAR 12 dB</code>
Notes	In some Applications (Modes) this parameter is read-only; meaning the value will appear on the control and query via SCPI, but is not changeable. In such applications the control is grayed-out. Attempting to change the value via SCPI will be ignored but no error message will be generated
Dependencies	Does not appear in Spectrum Analyzer Mode
Preset	10 dB VXT Models SP900B/11A: 0
State Saved	0 dB Saved in instrument state
Min	0 dB
Max	20 dB VXT Models SP900B/11A: 50 dB

Mixer Lvl Offset

This is an advanced setting to adjust target Range at the input mixer, which in turn affects the signal level in the instrument's IF. This setting can be used when additional optimization is needed after setting "[Peak-to-Average Ratio](#)" on page 2588. Positive values of offset optimize noise performance over distortion, negative values optimize distortion performance over noise.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet <real></code> <code>[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet?</code>
Example	<code>:POW:RANG:MIX:OFFS -5 dB</code>
Preset	0 dB
State Saved	Saved in instrument state
Min	-35 dB VXT Models SP900B/11A: -34
Max	0 dB

3.8.3.4 Signal Path

Contains controls that pertain to the routing of the signal through the frontend of the instrument.

In general, this tab only appears in instruments whose hardware supports this signal routing. For example, this tab does not appear in many of the modular instrument products, including VXT Models M9420/21A. It also does not appear in UXM.

This tab *does* appear in VXT Models SP900B/11A because the Software Preselection control is in this tab, and VXT Models SP900B/11A implement a version of Software Preselection.

Presel Center

Pressing this control adjusts the centering of the preselector filter to optimize the amplitude accuracy at the frequency of the selected marker. If the selected marker is not on when **Presel Center** is pressed, the instrument turns on the selected marker, performs a peak search, and then performs centering on the marker's center frequency. If the selected marker is already on and between the start and stop frequencies of the instrument, the instrument performs the preselector calibration on that marker's frequency. If the selected marker is already on, but outside the frequency range between Start Freq and Stop Freq, the instrument first performs a peak search, and then performs centering on the marker's center frequency.

The value displayed on **"Preselector Adjust" on page 2591** will change to reflect the new preselector tuning.

A number of considerations should be observed to ensure proper operation. See **"Proper Preselector Operation " on page 1992.**

Remote Command	<code>[:SENSe] :POWer [:RF] :PCENter</code>
Example	<code>:POW:PCEN</code>
Notes	Note that the rules outlined above under the control description apply for the remote command as well as the key. The result of the command is dependent on marker position, etc. Any message shown by the control press is also shown in response to the remote command
Dependencies	Does not appear in CXA-m Does not appear in VXT Models SP900B/11A Grayed-out if the microwave preselector is off if the selected marker's frequency is below Band 1, an advisory message is generated "Preselector not used in this frequency range" and no action is taken <ul style="list-style-type: none"> - Grayed-out if entirely in Band 0, that is, if Stop Freq is below about 3.6 GHz Grayed-out if entirely above 50 GHz, that is, if Start Freq is above 50 GHz - Blank in models that do not include a preselector, such as option 503. If the remote command is sent in these instruments, it is accepted without error, and the query always returns 0 - Grayed-out in the Spectrogram View
Couplings	The active marker position determines where the centering will be attempted If the instrument is in a measurement such as averaging when centering is initiated, the act of centering the preselector restarts averaging, but the first average trace will not be taken until the centering is completed The offset applied to do the centering reads out on the "Preselector Adjust" on page 2591 control
Status Bits/OPC dependencies	When centering the preselector, *OPC does not return true until the process is complete and a subsequent measurement has completed, nor are results returned in response to <code>:READ</code> or <code>:MEASure</code> queries The Measuring bit remains set while this command is operating, and does not go false until the subsequent sweep/measurement has completed

Proper Preselector Operation

Certain considerations should be observed to ensure proper operation:

1. If the selected marker is **Off**, the instrument turns on a marker, performs a peak search, and adjusts the preselector using the selected marker's frequency. It uses the "highest peak" peak search method unqualified by threshold or excursion, so that there is no chance of a 'no peak found' error. It continues with that peak, even if it is the peak of just noise. Therefore, for this operation to work properly, there should be a signal on-screen in a preselected range for the peak search to find
2. If the selected marker is already **On**, the instrument attempts the centering at that marker's frequency. There is no preselector for signals below about

3.6 GHz, so if the marker is on a signal below 3.6 GHz, no centering will be attempted, and an advisory message generated

3. In some models, the preselector can be bypassed. If it is bypassed, no centering will be attempted in that range and a message will be generated

Preselector Adjust

Allows you to manually adjust the preselector filter frequency to optimize its response to the signal of interest. This function is only available when "**Presel Center**" on page 2589 is available.

For general purpose signal analysis, using **Presel Center** is recommended. Centering the filter minimizes the impact of long-term preselector drift. **Preselector Adjust** can be used instead to manually optimize the preselector. One application of manual optimization would be to peak the preselector response, which both optimizes the signal-to-noise ratio and minimizes amplitude variations due to small (short-term) preselector drifting.

When **Presel Center** is performed, the offset applied to do the centering becomes the new value of **Preselector Adjust**.

Remote Command	<code>[:SENSe]:POWer[:RF]:PADJust <freq></code> <code>[:SENSe]:POWer[:RF]:PADJust?</code>
Example	<code>:POW:PADJ 100KHz</code> <code>:POW:PADJ?</code>
Notes	The value on the control reads out to 0.1 MHz resolution
Dependencies	<ul style="list-style-type: none"> - Does not appear in CXA-m - Does not appear in VXT Models SP900B/11A - Grayed-out if microwave preselector is off - Grayed-out if entirely in Band 0, that is, if Stop Freq is lower than about 3.6 GHz - Grayed-out if entirely above 50 GHz, that is, if Start Freq is higher than 50 GHz - Blank in models that do not include a preselector, such as Option 503. If the command is sent in these instruments, it is accepted without error, and the query always returns 0 - Grayed-out in the Spectrogram View
Preset	0 MHz
State Saved	The Preselector Adjust value set by " Presel Center " on page 2589, or by manually adjusting Preselector Adjust Not saved in instrument state, and does not survive a Preset or power cycle
Min	-500 MHz

Max	500 MHz
Backwards Compatibility SCPI	<code>[:SENSe]:POWer[:RF]:MW:PADJust</code> <code>[:SENSe]:POWer[:RF]:MMW:PADJust</code>
Notes	The command has no effect, and the query always returns <code>MWAVe</code>
Backwards Compatibility SCPI	<code>[:SENSe]:POWer[:RF]:PADJust:PRESelector</code> <code>MWAVe</code> <code>MMWave</code> <code>EXternal</code> <code>[:SENSe]:POWer[:RF]:PADJust:PRESelector?</code>

Internal Preamp

Accesses a menu of controls for the internal preamps. Turning on the preamp gives a better noise figure, but a poorer inter-modulation distortion (TOI) to noise floor dynamic range. You can optimize this setting for your measurement.

The instrument takes the preamp gain into account as it sweeps. If you sweep outside of the range of the preamp, the instrument will also account for that. The displayed result always reflects the correct gain.

For some measurements, when the preamp is on and any part of the displayed frequency range is below the lowest frequency for which the preamp has specifications, a warning condition message appears in the status line. For example, for a preamp with a 9 kHz lowest specified frequency: "Preamp: Accy unspec'd below 9 kHz".

Selection	Example	Note
Off	<code>:POW:GAIN OFF</code>	
Low Band	<code>:POW:GAIN ON</code> <code>:POW:GAIN:BAND LOW</code>	Sets the internal preamp to use only the low band. The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Low Band selection in the dropdown
Full Range	<code>:POW:GAIN ON</code> <code>:POW:GAIN:BAND FULL</code>	Sets the internal preamp to use its full range. The low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model) is supplied by the low band preamp and the frequencies above low band are supplied by the high band preamp The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Full Range selection in the dropdown. If the high band option is not installed the Full Range selection does not appear

NOTE

The maximum **Center Frequency** for Low Band, displayed in square brackets, can change based on the selected IFBW for measurements that support IFBW (for

example, Waveform measurement across all Modes that support it). In certain models (such as SP900S & SP900P), IFBW values ≤ 40 MHz have a maximum Low Band frequency of 3.6 GHz, while $40 \text{ MHz} < \text{IFBW} < 1 \text{ GHz}$ have a maximum of 3.3 GHz, and $1 \text{ GHz} < \text{IFBW} \leq 1.5 \text{ GHz}$ have a maximum of 3.5 GHz. IFBW values $> 1.5 \text{ GHz}$ do not support a **Center Frequency** that can reach the Low Band maximum frequency. In these cases, **N/A** is displayed in the square brackets for Low Band.

Remote Command	<pre>[:SENSe]:POWer[:RF]:GAIN:BAND LOW FULL [:SENSe]:POWer[:RF]:GAIN:BAND? [:SENSe]:POWer[:RF]:GAIN[:STATe] OFF ON 0 1 [:SENSe]:POWer[:RF]:GAIN[:STATe]?</pre>
Example	<pre>:POW:GAIN:BAND LOW :POW:GAIN:BAND? :POW:GAIN OFF :POW:GAIN?</pre>
Dependencies	<p>Not available on all hardware platforms. If the preamp is not present or is unlicensed, this control is not shown</p> <p>Does not appear in VXT Models SP900B/11A/15A/16A</p> <p>If <code>:POW:GAIN:BAND FULL</code> is sent when a low band preamp is available, the preamp band parameter is set to <code>LOW</code> instead of <code>FULL</code>, and an "Option not installed" message is generated</p> <p>Not available when the electronic/soft attenuator is enabled</p>
Preset	<pre>LOW OFF</pre>
State Saved	Saved in instrument state
Annotation	<p>When the USB Preamp is not connected to USB, the Preamp annotation in the Meas Bar says "Off" if the preamp is off and displays the frequency range of the low band or full range preamp depending on the setting. For example, if the Preamp is set to Low Band and the Low Band is 3.6 GHz the annotation says "3.6 GHz". If it is a 13.6 GHz preamp and it is set to Full Range the annotation says "13.6 GHz"</p> <p>When the USB Preamp is connected to USB, the Preamp annotation says "Preamp: USB" if the internal preamp is off or "Preamp: USB, Int" if the internal preamp is on (only for measurements that support the USB preamp)</p>

LNA

Lets you turn the Low Noise Amplifier (**LNA**) on or off.

LNA is an additional preamplifier that provides superior DANL and frequency range compared to **"Internal Preamp" on page 2592**. LNA provides lower system noise

figure, especially at frequencies above 100 MHz, and can be operated up to the full range of 50 GHz instruments.

For best possible sensitivity, **LNA** can be turned on *together* with "**Internal Preamp**" on page 2592, although if you operate both preamps together, note that the TOI (distortion) specifications are impacted. The sensitivity improvement of this combination is substantial when operating in high band (frequencies above 3.6 GHz).

For more details about annotation, see "**More Information**" on page 1996

Remote Command	<code>[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe] OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe]?</code>
Example	<code>:POW:GAIN:LNA ON</code>
Dependencies	Requires Option LNA, except for VXT models SP900B/16A Does not appear in VXT models SP900B/10A/11A May not appear in some measurements LNA is not available when the electronic/soft attenuator is enabled
Preset	OFF
State Saved	Saved in State

More Information

When **LNA** is installed, the preamp annotation changes to show the state of both **LNA** and **Internal Preamp**. Below is an example:

```
Atten: 8 dB
Pre: Int on, LNA on
μW Path: LNP, On
Source: Off
```

Note that when operating entirely in the low band (below about 3.6 GHz), if **LNA** is on, **Internal Preamp** is switched off (even if you have its switch set to **ON**). This is because the noise performance is actually degraded in low band if both preamps are on. In this case, the annotation reflects the actual state of the two preamps, but the **Internal Preamp** annotation displays in amber, to warn you that the actual state of **Internal Preamp** does not match its switch control display:

```
Atten: 8 dB
Pre: Int off, LNA on
μW Path: LNP, On
Source: Off
```

μW Path Control

Options for this control include **μW Preselector Bypass** (Option MPB), **Low Noise Path** (Option LNP) and **Full Bypass Enable** in the High Band path circuits.

When the μ W Preselector is bypassed, flatness is improved, but will be subject to spurs from out of band interfering signals. When **Low Noise Path Enable** is selected, the instrument automatically bypasses certain circuitry in the high frequency bands that can contribute to noise, when it is appropriate based on other instrument settings.

For most applications, the preset state is **Standard Path**, which provides the best remote-control throughput, minimizes acoustic noise from switching and minimizes the risk of wear in the hardware switches, particularly in remote test scenarios where both low band and high band setups will follow in rapid succession. In this path, the bypass of the low band/high band switch and microwave preamp is never activated, which can cause some noise degradation but preserves the life of the bypass switch.

For applications that utilize the wideband IF paths, the preset state is **μ W Preselector Bypass**, if option MPB is present. This is because, when using a wideband IF such as the 140 MHz IF, the μ W Preselector's bandwidth can be narrower than the available IF bandwidth, causing degraded amplitude flatness and phase linearity, so it is desirable to bypass the preselector in the default case.

You may choose **Low Noise Path Enable** for a lower noise floor, especially in the 21–26.5 GHz region, though without improving many measures of dynamic range, and without giving the best possible noise floor. The preamp, if purchased and used, gives better noise floor than does **Low Noise Path Enable**, but the preamp's compression threshold and third-order intercept are much poorer than that of **Low Noise Path Enable**.

A fourth choice is **Full Bypass Enable**, which combines **μ W Preselector Bypass** and **Low Noise Path Enable**. Because this can bypass most of the circuitry between the input and the first mixer, care should be taken when using this setting to avoid damaging the mixer. **Full Bypass Enable** is only available if both options LNP and MPB are present, as well as option FBP.

Path	Example	Note
Standard Path	:POW:MW:PATH STD	Normal setting for most measurements. μ W Preselector in circuit, Low Noise Path disabled
Low Noise Path Enable	:POW:MW:PATH LNP	See " Low Noise Path Enable " on page 2001
μ W Preselector Bypass	:POW:MW:PATH MPB	See " μW Preselector Bypass " on page 2003
Full Bypass Enable	:POW:MW:PATH FULL	See " Full Bypass Enable " on page 2004

Remote Command [:SENSe]:POWer[:RF]:MW:PATH STD | LNPath | MPBypass | FULL
[:SENSe]:POWer[:RF]:MW:PATH?

Example :POW:MW:PATH LNP
Enables the Low Noise path

: POW : MW : PATH ?

Notes If "**Presel Center**" on page 2589 is performed, the instrument will momentarily switch to the Standard Path, regardless of the setting of **μW Path Control**

The DC Block will always be switched in when the low noise path is switched in, to protect succeeding circuitry from DC. Note that this does not mean "when the low noise path is enabled" but when, based on the Low Noise Path rules, the path is actually switched in. This can happen when the selection is **Low Noise Path Enable** or **Full Bypass Enable**. In the case where the DC Block is switched in the instrument is now AC coupled. However, if you selected DC coupling, the UI would still behave as though it were DC coupled, including all annunciation, warnings, status bits, and responses to SCPI queries. This is because, based on other settings, the instrument could switch out the low noise path at any time and hence go back to being DC coupled

Alignment switching ignores the settings in this menu, and restores them when finished

Dependencies Does not appear in CXA-m, VXT Models SP900B/11A, nor in BBIQ and External Mixing

- The **Low Noise Path Enable** selection does not appear unless Option LNP is present and licensed
- The **μW Preselector Bypass** selection does not appear unless Option MPB is present and licensed
- The **Full Bypass Enable** selection does not appear unless options LNP and MPB are both present as well as option FBP

In any of these cases, if the required options are not present and the SCPI command is sent, error - 241, "Hardware missing; Option not installed" is generated

Low Noise Path Enable and **Full Bypass Enable** are grayed-out if the current measurement does not support them

Low Noise Path Enable and **Full Bypass Enable** are not supported in Avionics and MMR Modes (non-modulation measurements). In any of these cases (that is, the feature is not supported in either measurement or Mode), if the SCPI command is sent, the following error is generated: -221, "Setting Conflict; Feature not supported for this measurement"

Preset	Mode	Value
	IQ Analyzer	MPB option present and licensed: MPB
	Pulse	MPB option not present and licensed: STD
	Avionics	
	All other Modes	STD
	-	

State Saved Save in instrument state

Range Standard Path | Low Noise Path Enable | μW Presel Bypass | Full Bypass Enable

Annotation In the Meas Bar, if the Standard path is chosen, it says:
μW Path: Standard
If Low Noise Path is enabled but the LNP switch is not thrown, it shows:
μW Path: LNP,Off
If the Low Noise Path is enabled and the LNP switch IS thrown, it shows:
μW Path: LNP,On

If the preselector is bypassed, it says:

μ W Path: Bypass

If Full Bypass Enable is selected but the LNP switch is not thrown, it shows:

μ W Path: FByp,Off

If Full Bypass Enable is selected and the LNP switch IS thrown, it shows:

μ W Path: FByp,On

μ W Path Control Auto [Mode: VMA, WLAN, NR5G, CQM]

In VMA, WLAN, 5G NR, CQM Modes, an **Auto/Man** switch is added to **μ W Path Control**:

This allows the function to automatically switch based on certain Auto Rules as shown below:

VMA Mode

Measurement	When μ W Path Control is in Auto
Digital Demod	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Monitor Spectrum	Always Presel Bypass
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Custom OFDM	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Channel Power	Always Presel Bypass
Occupied BW	Always Presel Bypass
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
ACP	Always Presel Bypass
SEM	Always Presel Bypass
Spurious Emissions	Always Standard Path

WLAN Mode

3 5G NR Mode
3.8 Transmit On|Off Power

Measurement	When μ W Path Control is in Auto
Modulation Analysis	Always Presel Bypass

Dependencies	Only appears in VMA, WLAN, 5G NR and CQM Modes
Couplings	See the tables above
Preset	<code>ON</code>
Range	<code>ON OFF</code>

Low Noise Path Enable

Low Noise Path Enable provides a lower noise floor under some circumstances, particularly when operating in the 21–26.5 GHz region. With the Low Noise Path enabled, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz
- The internal preamp is not installed, or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Low Noise Path Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

For measurements that use IQ acquisition, the low noise path is used when **Center Frequency** is in High Band (> 3.6 GHz) and no preamp is in use. In other words, the rules above are modified to use only the center frequency to qualify which path to switch in. This is not the case for FFTs in the Swept SA measurement; they use the same rules as swept measurements.

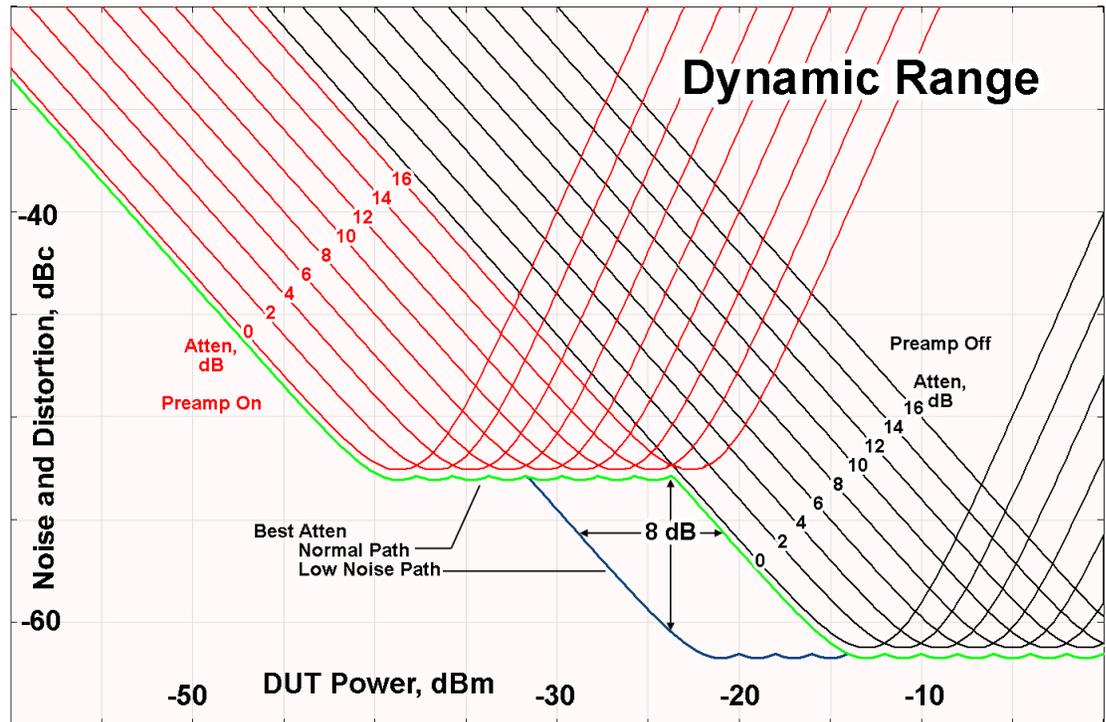

Note that the Low Noise Path, while giving improved DANL, has the disadvantage of decreased TOI performance and decreased gain compression performance relative to the standard path.

Note also that the bypass switch is a mechanical switch and has finite life, so if the **Low Noise Path Enable** is selected, it is possible to cause frequent cycling of this switch by frequently changing instrument settings such that the above conditions hold true only some of the time. A user making tests of this nature should consider opting for the **Standard Path**, which will never throw the bypass switch, at the expense of some degraded noise performance.

The low noise path is useful for situations where the signal level is so low that the instrument performance is dominated by noise even with 0 dB attenuation, but still high enough that the preamp option would have excessive third-order intermodulation or compression. The preamp, if purchased and used, gives better noise floor than does the “Low Noise Path.” However, its compression threshold and third-order intercept are much poorer than that of the non-preamp path.

There are some applications, typically for signals around -30 dBm, for which the third-order dynamic range of the standard path is good enough, but the noise floor is not low enough even with 0 dB input attenuation. When the third-order dynamic range of the preamp path is too little and the noise floor of the standard path is too high, the Low Noise Path can provide the best dynamic range

The graph below illustrates the concept. It shows, in red, the performance of an instrument at different attenuation settings, both with the preamp on and off, in a measurement that is affected by both instrument noise and instrument TOI. The green shows the best available dynamic range, offset by 0.5 dB for clarity. The blue shows how the best available dynamic range improves for moderate signal levels with the low noise path switched in. In this illustration, the preamp improves the noise floor by 15 dB while degrading the third-order intercept by 30 dB, and the low noise path reduces loss by 8 dB. The attenuator step size is 2 dB.

There are other times where selecting the low noise path improves performance, too. Compression-limited measurements such as finding the nulls in a pulsed-RF spectrum can profit from the low noise path in a way similar to the TOI-limited measurement illustrated. Accuracy can be improved when the low noise path allows the optimum attenuation to increase from a small amount like 0, 2 or 4 dB to a larger amount, giving better return loss at the instrument input. Harmonic measurements, such as second and third harmonic levels, are much improved using the low noise path because of the superiority of that path for harmonic (though not intermodulation) distortion performance.

µW Preselector Bypass

Toggles the preselector bypass switch for band 1 and higher. When the microwave preselector is on, the signal path is preselected. When the microwave preselector is off, the signal path is not preselected. The preselected path is the normal path for the instrument.

The preselector is a tunable bandpass filter which prevents signals away from the frequency of interest from combining in the mixer to generate in-band spurious signals (images). The consequences of using a preselector filter are its limited bandwidth, the amplitude and phase ripple in its passband, and any amplitude and phase instability due to center frequency drift.

Option MPB or pre-selector bypass provides an unpreselected input mixer path for certain X-Series signal analyzers with frequency ranges above 3.6 GHz. This signal path allows a wider bandwidth and less amplitude variability, which is an advantage

when doing modulation analysis and broadband signal analysis. The disadvantage is that, without the preselector, image signals will be displayed. Another disadvantage of bypassing the preselector is increased LO emission levels at the front panel input port.

Image responses are separated from the real signal by twice the 1st IF. For IF Paths of 10 MHz and 25 MHz, the 1st IF is 322.5 MHz, so the image response and the real signal will be separated by 645 MHz. The 1st IF will be different for other IF Path settings. When viewing a real signal and its corresponding image response in internal mixing, the image response will be to the left of the real signal.

Also, the image response and the real signal typically have the same amplitude and exhibit the same shape factor.

However, if Option FS1 (Fast Sweep Capability) is enabled, the image response in the Swept SA measurement appears lower in amplitude and has a much wider shape factor compared to the real signal.

Full Bypass Enable

With **Full Bypass Enable** selected, the microwave preselector is bypassed. In addition, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
 - the start frequency is above 3.5 GHz and
 - the stop frequency is above 3.6 GHz.
- the internal preamp is not installed or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Full Bypass Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

CAUTION

When **Full Bypass Enable** is selected, and "**Y Scale**" on page 2562 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq >3.6 GHz and the Preamp is either not licensed, set to Low Band, or Off). This puts the first converter at high risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:

Full Bypass Enabled, maximum safe input power reduced

Microwave Preselector Bypass Backwards Compatibility

Example	<code>:POW:MW:PRES OFF</code> Bypasses the microwave preselector
Notes	Included for Microwave Preselector Bypass backwards compatibility The ON parameter sets the STD path (<code>:POW:MW:PATH STD</code>) The OFF parameter sets path MPB (<code>:POW:MW:PATH MPB</code>)
Preset	ON
Backwards Compatibility SCPI	<code>[:SENSE] :POWer [:RF] :MW:PRESelector [:STATe] ON OFF 0 1</code> <code>[:SENSE] :POWer [:RF] :MW:PRESelector [:STATe] ?</code>

Frequency Extender Preselection Bypass

Only applies to the high frequency path of the Frequency Extender, and only if the Frequency Extender allows it. For example, the V3050A high frequency path is 50 – 110 GHz and *does* allow control of the preselector bypass.

When the Frequency Extender’s preselection is bypassed, flatness is improved, but will be subject to spurs from out-of-band interfering signals. For bandwidths greater than 2.5 [GHz], it is recommended that the signal bypass the Frequency Extender Preselector since the max bandwidth of the Preselector can be as narrow as 2.5 [GHz].

For most applications, the preset state is **OFF**, which gives the best remote-control throughput, minimizes acoustic noise from switching, minimizes out of band spurs, and minimizes the risk of wear in the hardware switches.

Preselector and Bandwidth Conflict

When the Frequency Extender Preselector is applied and the signal bandwidth is greater than 2.5 [GHz], then a settings alert message will show to warn the user that the signal may be distorted due to the limitation of the Frequency Extender Preselector bandwidth.

An example of the settings alert message is shown below.

Settings Alert message in the Status Bar at the bottom of the display.

Settings Alert message in the error queue

Type	ID	
	159	Settings Alert - DETECTED; Presel/Meas BW conflict

Allow Full Bypass in Auto

Enable or disable Full Bypass in μ W Path Auto rule. See " [\$\mu\$ W Path Control](#)" on page 2594.

When this function is **ON**, and " [\$\mu\$ W Path Control](#)" on page 2594 is in **AUTO**, it is possible for the auto rules to select the **FULL** Bypass state, wherein both the Preamp and the Microwave Preselector are bypassed. Otherwise, the auto rules never select the **FULL** Bypass state. This is convenient when making wideband measurements, but it also adds some risk of damage to the first converter.

CAUTION

When **Full Bypass Enable** is selected, and "[Y Scale](#)" on page 2562 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq > 3.6 GHz and the Preamp is either not licensed, set to **Low Band** or **Off**). This puts the first converter at high risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:

Full Bypass Enabled, maximum safe input power reduced

Remote Command	<code>[:SENSe]:POWer[:RF]:MW:PATH:AUTO:FULL ON OFF 1 0</code> <code>[:SENSe]:POWer[:RF]:MW:PATH:AUTO:FULL?</code>
Example	<code>:POW:MW:PATH:AUTO:FULL ON</code> <code>:POW:MW:PATH:AUTO:FULL?</code>
Dependencies	Only appears if Option FBP is installed, and in the following measurements <ul style="list-style-type: none"> - 5GNR Modulation Analysis and IQ Waveform - WLAN IQ Waveform - Channel Quality Group Delay
Preset	OFF
State Saved	Saved in instrument state

Software Preselection

Provided in some instruments, either to compensate for issues with provided hardware preselection or to provide the preselection function when there is no hardware preselector.

SP900S

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The

specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

In SP900S, **Software Preselection** only applies for frequencies above 50 GHz, therefore it is only used for RF Input 2. Even if turned on, it is not used for other inputs, and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that in SP900S, in Swept SA measurement, **Software Preselection** works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT sweep type.

SP900S+V3050A

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

For SP900S+V3050A, Software Preselection only applies for frequencies above 50 GHz, therefore it is only used for External RF. Even if it is turned on, it will not be used for other inputs and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that for SP900S+V3050A, in the Swept SA measurement, Software Preselection works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT Sweep Type.

VXT models SP900B/11A

Software Preselection is used to provide the preselection function, as there is no hardware preselector in these models. Two background traces are taken and compared point by point, and the point with the lowest amplitude from the two traces is used. This provides a method to reduce spurs that are internally generated within the VXT, but you should note the following when using Software Preselection:

- There is some speed cost due to the need to take multiple captures
- Taking the point with the lowest amplitude in each trace will make the average noise level lower at all points that do not have a spur. This can reduce the accuracy of the measurement of noise and noise-like signals

Because of the difficulty in identifying spurs manually, you are recommended to leave Software Preselection **ON** at all times in VXT models SP900B/11A. If you turn it off in order to speed up your measurement or improve noise accuracy, be aware of unwanted onscreen spurs.

Remote Command	<code>[:SENSe]:POWer[:RF]:SWPResel:STATE 0 1 ON OFF</code> <code>[:SENSe]:POWer[:RF]:SWPResel:STAT?</code>						
Example	<code>:POW:SWPR:STAT 1</code> <code>:POW:SWPR:STAT?</code>						
Dependencies	Only appears in SP900S, SP900S+V2050A, and VXT models SP900B/11A. Does not appear in all measurements						
Couplings	Affects Sweep Time Auto Tune supports Software Preselection , so Auto Tune should be performed after setting the Software Preselection state						
Preset	<table border="1"> <tr> <td>SP900S</td> <td>OFF</td> </tr> <tr> <td>SP900S+V3050A</td> <td>ON</td> </tr> <tr> <td>SP900B/11A</td> <td>ON</td> </tr> </table>	SP900S	OFF	SP900S+V3050A	ON	SP900B/11A	ON
SP900S	OFF						
SP900S+V3050A	ON						
SP900B/11A	ON						
State Saved	Saved in instrument state						

SW Preselection Type

Specifies the algorithm used for software preselection.

Two hidden sweeps are taken in succession. The second sweep is offset in LO frequency by $2 * IF / N$. For each point in each trace, the smaller amplitude from the two traces is taken and placed in that point in the selected trace. The Peak detector is auto-selected to improve the image suppression effectiveness. Responses of each trace that lie on top of one another will remain and are valid signals. Other signals are images and are suppressed. The action of taking the smaller of the two traces will make the average noise level lower in all points that do not have an image, thus reducing the accuracy of the measurement of noise and noise-like signals.

- **NORMa1** - mathematically removes all image and multiple responses of signals present at the input
- **ADVanced** - any trace processing (such as “max hold” or trace averaging) is performed on the points of both candidate traces before the “select minimum” operation occurs. This form of processing works better for non-stationary signals, such as pulsed-RF signals

Remote Command	<code>[:SENSe]:POWer[:RF]:SWPResel NORMa1 ADVanced</code> <code>[:SENSe]:POWer[:RF]:SWPResel?</code>
Example	<code>:POW:SWPR NORM</code> <code>:POW:SWPR?</code>
Dependencies	Only appears in SP900Sand SP900S+V3050A. Only appears in measurements that use the Swept

	method	
	When " Software Preselection " on page 2604 is disabled, this control is grayed-out. The grayout message is "Unavailable unless SW Presel enabled"	
Preset	SP900S	ADVanced
	SP900S+V3050A	NORMa1
State Saved	Saved in instrument state	

SW Preselection BW

Specifies the effective bandwidth to be used for Software Preselection.

The options are:

- **NORMa1** – when making Swept measurements, a software preselection algorithm is used which takes up to 4 background acquisitions, then post-processes the result. This algorithm can remove images from signals with an occupied bandwidth up to around 3 GHz. (Default/Preset setting). When making FFT measurements, this algorithm is not used, instead the same algorithm is used as for **NARRow** (below)
- **NARRow** – a software preselection algorithm is used which takes two background acquisitions, then post-processes the result to detect and remove images from wideband signals with occupied bandwidths up to 2 GHz. This increases the risk of images failing to be rejected, but improves the measurement speed

Remote Command	<code>[:SENSe] :POWer [:RF] :SWPResel :BW NORMa1 NARRow</code> <code>[:SENSe] :POWer [:RF] :SWPResel :BW?</code>	
Example	<code>:POW :SWPR :BW NARR</code>	
Dependencies	Only appears in SP900S and SP900S+V3050A. Only appears in measurements that use the Swept method When " Software Preselection " on page 2604 is disabled, this control is grayed-out. The grayout message is "Unavailable unless SW Presel enabled" For SP900S+V3050A, the parameter is SCPI-only, and always set to NARRow when Software Preselection is enabled	
Preset	SP900S	NORMa1
	SP900S+V3050A	NARRow
State Saved	Saved in instrument state	

High Freq Prefilter

Lets you set the state of Prefilter for Center Frequencies above 1310 MHz.

In VXT Models SP900B/11A, the Receiver RF path has a bank of filters that come after the RF Attenuator in the signal path. Since this bank of filters precedes the mixer they are known as the “Prefilter” bank. Their purpose is to eliminate unwanted in-band mixing products by filtering out all but the desired frequencies before the signals get to the mixer. There are 13 prefilter bands to cover the frequencies between 9 kHz and 6000 MHz. The Prefilter provides the necessary rejection of the unwanted signal.

Remote Command	<code>[:SENSe]:<measurement>:PFILter[:STATe] ON OFF 1 0</code> <code>[:SENSe]:<measurement>:PFILter[:STATe]?</code>
Example	For example, to enable High Freq Prefilter in IQ Analyzer Mode: For the Complex Spectrum Measurement: <code>:SPEC:PFIL ON</code> For the IQ Waveform Measurement: <code>:WAV:PFIL ON</code>
Dependencies	Only appears in VXT models SP900B/11A with center frequency above 1310 MHz
Preset	See " Prefilter Presets " on page 2010 below
State Saved	Saved in instrument state

3.8.4 BW

Activates the BW menu.

3.8.4.1 Settings

The Settings Tab contains controls that pertain to the bandwidth of the measurement.

Info BW

Allows you to enter a frequency value to set the channel bandwidth that will be used for data acquisition.

Remote Command	<pre>[:SENSe]:PVTime:BANDwidth <freq> [:SENSe]:PVTime:BANDwidth? [:SENSe]:PVTime:BANDwidth:AUTO OFF ON 0 1 [:SENSe]:PVTime:BANDwidth:AUTO?</pre>
Example	<pre>:PVT:BAND 200.0 MHz :PVT:BAND? :PVT:BAND:AUTO ON :PVT:BAND:AUTO?</pre>
Couplings	<p>When it is set to AUTO and either Bandwidth or Direction is changed, this value changes to Channel Bandwidth when in the single carrier configuration. When Direction is Downlink and in the multicarrier configuration, this value is set appropriately according to the carrier configuration</p> <p>When in AUTO and Direction is Uplink, this value changes to Channel Bandwidth of the selected Measure CC</p>
Preset	<p>Automatically calculated</p> <p>ON</p>
State Saved	<p>Yes</p> <p>Yes</p>
Range	Auto Man

Min 10 Hz

Analyzer Max Info BW

The analyzer's max info bandwidth is option dependent

3.8.5 Display

The Display key opens the Display Menu, which lets you configure display items for the current Mode, Measurement View or Window.

3.8.5.1 Meas Display

The Settings Tab contains controls that pertain to the bandwidth of the measurement.

Trigger Line

Turns the Trigger Line On or Off. This line indicates the trigger position.

Remote Command	<code>:DISPlay:PVTime:TRIGger[:STATe] ON OFF 1 0</code> <code>:DISPlay:PVTime:TRIGger[:STATe]?</code>
Example	<code>:DISP:PVT:TRIG ON</code> <code>:DISP:PVT:TRIG?</code>
Preset	OFF
State Saved	Yes
Range	On Off
Backwards Compatibility SCPI	<code>:DISPlay:PVTime:VIEW[1]:WINDow:TRIGger[:STATe]</code>

Burst Line

Turns the Burst Line On or Off. This line indicates the location of the Transmitter ON period determined by the Burst Width.

Remote Command	<code>:DISPlay:PVTime:BLINes[:STATe] ON OFF 1 0</code> <code>:DISPlay:PVTime:BLINes[:STATe]?</code>
Example	<code>:DISP:PVT:BLIN ON</code> <code>:DISP:PVT:BLIN?</code>
Preset	OFF

State Saved	Yes
Range	On Off
Backwards Compatibility SCPI	:DISPlay:PVTime:VIEW[1]:WINDow:BLINes[:STATe]

Burst Timing Indicator Line

Turns the Burst Timing Indicator Line On or Off. The line shown on screen is just to indicate which part of signal is active burst and which part is inactive burst and nothing to do with the Pass/Fail (shown at the upper-left corner of screen) criteria. Regarding the Pass/Fail criteria, please refer to "[Limits](#)" on page 2087.

Remote Command	:DISPlay:PVTime:LIMit:MASK OFF ON 0 1 :DISPlay:PVTime:LIMit:MASK?
Example	:DISP:PVT:LIM:MASK 1 :DISP:PVT:LIM:MASK?
Notes	This parameter only hides or shows the Burst Timing Indicator Line on the display
Preset	ON
State Saved	Yes
Range	On Off
Backwards Compatibility SCPI	:DISPlay:PVTime:VIEW[1]:WINDow:LIMit:MASK

Ramp Line

Turns the Ramp Line On or Off. This line indicates the Ramp Up/Down time.

Remote Command	:DISPlay:PVTime:RAMP[:STATe] OFF ON 0 1 :DISPlay:PVTime:RAMP[:STATe]?
Example	:DISP:PVT:RAMP ON :DISP:PVT:RAMP?
Preset	OFF
State Saved	Yes
Range	On Off

Bar Graph

Turns the Bar Graph On and Off. The Bar Graph represents the Transmitter ON/OFF period and power. The Transmitter OFF period is coloured in green when DL Off

Power limit passes and in red when limit fails.

Remote Command	<code>:DISPlay:PVTime:BGRaph OFF ON 0 1</code> <code>:DISPlay:PVTime:BGRaph?</code>
Example	<code>:DISP:PVT:BGR OFF</code> <code>:DISP:PVT:BGR?</code>
Preset	ON
State Saved	Saved in instrument state
Range	On Off

70/N us RMS Trace

Controls the display of 70/N us averaged off power (dBm/MHz) trace over the entire OFF period when the direction is downlink. The parameter also controls to display the off power limit line. The OFF power period is from burst down edge boundary plus max transient period to burst up edge boundary minus max transient period.

Remote Command	<code>:DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:POFF[:STATe] ON OFF 1 0</code> <code>:DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:POFF [:STATe]?</code>
Example	<code>:DISP:PVT:VIEW:WIND:TRAC:POFF ON</code> <code>:DISP:PVT:VIEW:WIND:TRAC:POFF?</code>
Notes	Except for 70/N us RMS off power trace on the trace window, the off power limit line (dBm/MHz) is also shown up when the state is on
Dependencies	When the direction is uplink, the control is always grayed out. There is no 70/N us RMS off power trace for uplink signal
Preset	OFF
State Saved	Yes
Range	On Off

3.8.5.2 View

Contains controls for selecting the current **View**, and for editing User Views.

Views

The Transmit On|Off Power measurement has two views.

These Views are multiple-window views and you can select a window by touching it. The menu controls may sometimes change depending on which window is selected.

Whenever the View changes, the default menu is Frequency, unless otherwise specified in the View description.

Remote Command	<code>:DISPlay:PVTime:VIEW[:SElect] ALL BOTH</code> <code>:DISPlay:PVTime:VIEW[:SElect]?</code>
Example	<code>:DISP:PVTime:VIEW ALL</code> sets the burst view <code>:DISP:PVTime:VIEW BOTH</code> sets the rise and fall view
Preset	ALL
State Saved	Yes

Burst

Windows: "RF Envelope" on page 1965, "Metrics" on page 1966

View Burst envelope.

Example	<code>:DISPlay:PVTime:VIEW[:SElect] ALL</code>
---------	--

Rise & Fall

Windows: "Rise" on page 1966, "Fall" on page 1966, "Metrics" on page 1966

Zooms in on the rising and falling portions of the burst being tested.

Example	<code>:DISPlay:PVTime:VIEW[:SElect] BOTH</code>
---------	---

User View

Lets you choose a View from the saved User Views for the current measurement. This panel only appears if a User View exists for the current measurement.

Remote Command	<code>:DISPlay:VIEW:ADVanced:SElect <alphanumeric></code> <code>:DISPlay:VIEW:ADVanced:SElect?</code>
----------------	--

Example	Select Baseband as the current View <code>:DISP:VIEW:ADV:SEL "Baseband"</code>
---------	---

Notes	You must be in the measurement whose View you are trying to set to send the command. You can only set Views for the current measurement using this command For predefined views, the parameter is derived from the view name that is shown in the View list in the user interface. For example, if you are trying to select the Trace Zoom view in the Swept SA measurement, you send: <code>:DISP:VIEW:ADV:SEL "Trace Zoom"</code> because "Trace Zoom" is the name of the View as seen in the Mode/Meas dialog or in the Display, View menu
-------	--

You *cannot* use the legacy View parameter (which in this case would be **TZOOM**) with **:DISP:VIEW:ADV:SEL**

<alphanumeric> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case. Thus, both of the following forms work:

:DISP:VIEW:ADV:SEL "Trace Zoom"

:DISP:VIEW:ADV:SEL "TRACE ZOOM"

If the specified view is not a valid View, the query returns the error message “-224, Illegal parameter value; View with the name **<alphanumeric>** does not exist”

If the display is disabled (via **:DISP:ENAB OFF**) then the error message “-221, Settings conflict; View SCPI cannot be used while Display is disabled” is generated

Backwards Compatibility SCPI	The legacy node :DISPlay:VIEW[:SElect] is retained for backwards compatibility, but it only supports predefined views
------------------------------	--

Restore Layout to Default

Restores the Layout to the default for Basic.

Modified Views are very temporary; if you exit the current measurement they are discarded, and they are not saved in State. To retain this View for later use, and to be able to return easily to your original Basic View, you can save your edited View as a “User View”.

Save Layout as New View

Saves your new View as a User View. An alpha keyboard appears, which lets you name your new View; the default is the old View name plus a number.

Remote Command	:DISPlay:VIEW:ADVanced:NAME <alphanumeric>
----------------	---

Example	:DISP:VIEW:ADV:NAME "Baseband"
---------	---------------------------------------

Creates a new View named **Baseband** from the current View, and selects it as the current View

Notes	<p><alphanumeric> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case</p> <p>If <alphanumeric> name already exists as a View, the error message “-224, Illegal parameter value; View <alphanumeric> already exists” is generated</p> <p>If the display is disabled (via :DISP:ENAB OFF) then the error message “-221, Settings conflict; User View SCPI cannot be used while Display is disabled” is generated</p>
-------	---

Re-Save User View

You can re-edit a User View; if you make changes, then an asterisk will appear next to the User View's name. You can then tap **Re-Save User View** to save it back to its existing name, or **Save Layout as New View** to add another, new User View.

This is a front panel function only, there is no remote command available to perform this function. To do this remotely, you must first perform **Save Layout as New View**, then delete the old User View and rename the new one with the name of the View you just deleted.

Rename User View

You can rename the current View by giving it a new unique name. Only User Views can be renamed, if the current View is a Predefined View, an error occurs.

Remote Command	<code>:DISPlay:VIEW:ADVanced:REName <alphanumeric></code>
Example	<code>:DISP:VIEW:ADV:REN "Baseband"</code>
Notes	<p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case</p> <p>If the <code><alphanumeric></code> specifying the new name is already present in the list of View names, the error message "-224, Illegal parameter value; View <alphanumeric> already exists" is generated</p> <p>If the current View is a Predefined View, the error message "-224, Illegal parameter value; Cannot rename a Predefined View" is generated</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated</p>

Delete User View

You can delete the current View if it is a User View. The default view becomes the current view for the Measurement.

Remote Command	<code>:DISPlay:VIEW:ADVanced:DElete</code>
Example	<code>:DISP:VIEW:ADV:DEL</code>
Notes	<p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case</p> <p>If the <code><alphanumeric></code> is not present in the list of View names, the error message "-224, Illegal parameter value; View <alphanumeric> does not exist" is generated</p> <p>If the current View is a Predefined View, the error message "-224, Illegal parameter value; Cannot delete a Predefined View" is generated</p>

If the display is disabled (via `:DISP:ENAB OFF`) then the error message “-221, Settings conflict; View SCPI cannot be used while Display is disabled” is generated

Delete All User Views

Deletes all previously saved User Views. The default view becomes the current view for the Measurement if a User View was the current view when this command was executed.

Remote Command `:DISPlay:VIEW:ADVanced:DELeTe:ALL`

Example `:DISP:VIEW:ADV:DEL:ALL`

Notes Disabled if there are no User Views

3.8.5.3 Annotation

Contains controls for setting up the annotation for the current Mode or Measurement.

Graticule

Turns the display graticule On or Off for all windows with graticules in all measurements in the current Mode. Also turns the graticule Y-Axis annotation on and off.

Remote Command `:DISPlay:GRATicule[:STATe] OFF | ON | 0 | 1`

Command `:DISPlay:GRATicule[:STATe]?`

Example `:DISP:GRAT OFF`

Notes The graticule is the set of horizontal and vertical lines that make up the grid/divisions for the X-Axis and Y-Axis

Preset `ON`

State Saved Saved in instrument state

Backwards Compatibility SCPI `:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe] OFF | ON | 0 | 1`

Command `:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe]?`

This command is accepted for backwards compatibility with older instruments, but the `WINDow`, `TRACe` and `GRID` parameters are ignored

Screen Annotation

Controls the display of the annunciation and annotation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.)

and the Y-Axis annotation, for all windows with screen annotation in all measurements in the current Mode.

This does *not* include marker annotation (or the N dB result). When **OFF**, the graticule expands to fill the entire graticule area, leaving only the 1.5% gap above the graticule, as described in the **Trace** section.

Remote Command	<code>:DISPlay:ANNotation:SCReen[:STATe] OFF ON 0 1</code> <code>:DISPlay:ANNotation:SCReen[:STATe]?</code>
Example	<code>:DISP:ANN:SCR OFF</code>
Dependencies	Grayed-out and forced to OFF when System Display Settings, Annotation is OFF
Preset	ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF
State Saved	Saved in instrument state

Trace Annotation

Turns on and off the labels on the traces, showing their detector (or their Math Mode) as described in the **Trace** section, for all windows in all measurements in the current Mode for which Trace Annotation on/off is supported.

If Trace Math is being performed on a trace, then the Trace Math annotation replaces the detector annotation.

For measurements that support limit lines, this key also turns on and off the labels on the Limit Lines. The label is the Limit number annotation and Limit Comment displayed on the graph. If the length of the comment is greater than 20 characters, the first 8 characters and the last 8 characters are displayed, joined with

Remote Command	<code>:DISPlay:ANNotation:TRACe[:STATe] ON OFF 1 0</code> <code>:DISPlay:ANNotation:TRACe[:STATe]?</code>
Example	<code>:DISP:ANN:TRAC OFF</code>
Preset	OFF
State Saved	Saved in instrument state

Control Annotation

Turns on and off the display of values on the Active Function controls for all measurements in the current Mode. This is a security feature.

Remote Command	<code>:DISPlay:ACTivefunc[:STATe] ON OFF 1 0</code> <code>:DISPlay:ACTivefunc[:STATe]?</code>
Example	<code>:DISP:ACT OFF</code>

Dependencies	Grayed out and forced to OFF when System Display Settings, Annotation is OFF
Preset	ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF
State Saved	Saved in instrument state

Meas Bar

Turns the Measurement Bar at the top of the screen on and off for all measurements in the current Mode. When **OFF**, the graticule area expands to fill the area formerly occupied by the Measurement Bar.

Remote Command	<code>:DISPlay:ANNotation:MBAR[:STATe] OFF ON 0 1</code> <code>:DISPlay:ANNotation:MBAR[:STATe]?</code>
Example	<code>:DISP:ANN:MBAR OFF</code>
Dependencies	Grayed out and forced to OFF when System Display Settings, Annotation is OFF
Preset	ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF
State Saved	Saved in instrument state

Display Enable (Remote Command Only)

Turns the display on/off, including the display drive circuitry. The backlight stays lit to confirm that the instrument is on. The display enable setting is mode global. There are three reasons for turning the display off:

1. To increase speed as much as possible by freeing the instrument from having to update the display
2. To reduce emissions from the display, drive circuitry
3. For security purposes

If you have turned off the display:

- and you are in local operation, the display can be turned back on by pressing any key or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor `:SYSTem:PRESet` enable the display)
- and you are in remote operation, the display can be turned back on by pressing the **Local** or **Esc** keys, or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor `:SYSTem:PRESet` enable the display)
- and you are using either the `:SYSTem:KLOCK` command or GPIB local lockout,

then *no* front-panel key press will turn the display back on. You must turn it back on remotely.

If the display is **OFF**, many SCPI commands related to User Views and Multiscreen functionality do not work, and return the error messages “-221, Settings conflict; Screen SCPI cannot be used when Display is disabled” or “221, Settings conflict; View SCPI cannot be used while Display is disabled”. These commands include:

Name	Command
Select User View	<code>:DISPlay:VIEW:ADVanced:SElect</code>
Rename User View	<code>:DISPlay:VIEW:ADVanced:REName</code>
Delete User View	<code>:DISPlay:VIEW:ADVanced:DELeTe</code>
Create User View	<code>:DISPlay:VIEW:ADVanced:NAME</code>
Select Screen	<code>:INSTrument:SCReen:SElect</code>
Delete Screen	<code>:INSTrument:SCReen:DELeTe</code>
Delete All But This Screen	<code>:INSTrument:SCReen:DELeTe:ALL</code>
Add Screen	<code>:INSTrument:SCReen:CREate</code>
Rename Screen	<code>:INSTrument:SCReen:REName</code>
Sequencer On/Off	<code>:SYSTem:SEQuencer</code>

Remote Command	<code>:DISPlay:ENABle OFF ON 0 1</code> <code>:DISPlay:ENABle?</code>
Example	<code>:DISP:ENAB OFF</code>
Couplings	<code>:DISP:ENAB OFF</code> turns Backlight OFF and <code>:DISP:ENAB ON</code> turns Backlight ON , but changing Backlight settings does <i>not</i> change the state of <code>:DISP:ENAB</code>
Preset	ON Set by <code>:SYST:DEF MISC</code> , but not affected by <code>*RST</code> or <code>:SYSTem:PRESet</code>
State Saved	Not saved in instrument state
Backwards Compatibility Notes	<code>:SYST:PRES</code> no longer turns on <code>:DISPlay:ENABle</code> as it did in legacy analyzers

3.8.6 Frequency

The **FREQ** key opens the Frequency menu, which contains controls that allow you to control the Frequency and Channel parameters of the instrument.

Some features in the Frequency menu are the same for all measurements in the current Mode – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by Meas Preset. For example,

the Center Freq setting is the same for all measurements - it does not change as you change measurements.

3.8.6.1 Settings

The Settings Tab contains controls that pertain to the X axis parameters of the measurement. These parameters control how data on the vertical (X) axis is displayed and control instrument settings that affect the horizontal axis.

Carrier Reference Frequency

Sets carrier reference frequency. The center frequencies of carriers are defined as offset frequencies from this value.

Because 5G NR mode measurements often deal with multiple carriers with distinct bandwidths, in 5G NR mode measurements are done based on carrier center frequencies and its bandwidths, both of which are specified by the user. Because of this, the simple Center Frequency parameter used in most measurements does not apply here. Instead, the Carrier Reference Frequency is the key parameter. This must be distinct from the Center Frequency parameter used in other measurements, as Center Frequency can be a global parameter, and it would not make sense for Carrier Reference Frequency to take on this global value.

If the following conditions are satisfied at the same time:

- the Number of Component Carrier equals to 1
- the Center Freq Offset equals to 0 Hz
- the mode of the Center Frequency is Auto

the Center Frequency value is equivalent to Carrier Reference Frequency value.

Remote Command	<code>[:SENSe]:CCARrier:REference <freq></code> <code>[:SENSe]:CCARrier:REference?</code>
Example	<code>:CCAR:REF 2GHz</code> <code>:CCAR:REF?</code>
Preset	1 GHz
State Saved	Yes
Min/Max	Depends on instrument minimum/maximum center frequency. Same as Center Frequency

3.8.7 Marker

Accesses a menu that enables you to select, set up and control the markers for the current measurement. If there are no active markers, **Marker** selects marker 1, sets

it to Normal and places it at the center of the display. If the selected marker is Off, it is set to Normal and placed it at the center of the screen on the trace determined by the Marker Trace rules.

For more detailed information on the types of Markers and the interaction between Markers, see the Marker section of the Swept SA measurement.

3.8.7.1 Select Marker

Specifies the selected marker. The term “selected marker” is used throughout this document to specify which marker will be affected when you change marker settings, perform a Peak Search, etc.

The Select Marker control appears above the menu panel, indicating that it applies to all controls in the Marker menu panels. Select Marker is blanked if you select a tab whose controls do NOT depend on the selected marker (e.g., Counter).

On any menu tab for which Select Marker displays, the first control is always Marker Time.

Notes	The selected marker is remembered even when not in the Marker menu and is used if a Search is done or a Band Function is turned on or for Signal Track or Continuous Peak
Preset	Marker 1
State Saved	Yes
Annunciation	Appears in the marker results block label for Normal and Delta markers

3.8.7.2 Settings

The controls on the Settings tab include the Marker active function and a radio button selection of the marker control mode (Normal, Delta, or Off) for the selected marker, as well as additional functions that help you use markers.

Marker Time

Set the X Axis value of the selected marker in the current X Axis Scale unit. If the marker mode is off, the SCPI command has no affect other than to cause the marker to become selected.

NOTE

The X label and value can change if the marker is moved to a trace with a different domain.

If the marker mode is Normal, the Marker X position is absolute.

If the mode is Delta, then the X position is relative to the reference marker.

The valid X positions are the actual data points in the trace; the marker cannot be located between points. If a SCPI command attempts to place the marker between two points, the X value snaps to the closest point.

Note that for Vector or Constellation format, the X axis is perpendicular to the screen (because the screen axes are used to show the real and imaginary parts of the Y value), so adjusting the X value in this case only causes the marker to move horizontally if the real Y value changes.

Remote Command	<code>:CALCulate:PVTTime:MARKer[1] 2 ... 12:X <real></code> <code>:CALCulate:PVTTime:MARKer[1] 2 ... 12:X?</code>
Example	<code>:CALC:PVT:MARK:X 0.325</code> <code>:CALC:PVT:MARK:X?</code>
Notes	Marker X does not go outside the bounds of the data. If you attempt to set it to a value outside the bounds, it is clipped at the closest limit and error -222 Data Out of Range is generated If suffix is sent, it must match the X units for the trace the marker is on. Otherwise, error -138, "Suffix not allowed" is generated If you try to read or set the position of a Delta marker, remember that the position is in relative units
Couplings	See "Coupling of Delta and Reference markers" on page 2025
Preset	None until marker is turned on
State Saved	Yes
Min/Max	Depends on trace data / Depends on trace data

SCPI only X position commands

Via SCPI, the marker position can also be set or queried in trace points. In this case, the position setting or reading is absolute regardless of control mode.

NOTE The entered value in Trace Points is immediately translated into the current domain units for setting the value of the marker. The marker's value in domain units, NOT trace points, is preserved if a change is made to the X Axis scale settings. Thus, if you use this command to place a marker on point 500, which happens at that time to correspond to 13 GHz, and then you change the Start Frequency so that point 500 is no longer 13 GHz, the marker stays at 13 GHz, NOT at point 500.

If the trace the marker is on a 2-dimensional domain, then the points are numbered in the following way:

Starting at the minimum X and Z position, this point is numbered 0. Each time you increment the point number, increment the X value to the next available value. When X reaches the maximum X position, then reset X to the minimum and increment the Z value. Then continue incrementing the X position in the same manner as before.

Note that for symbol tables, which have no axes, incrementing the X position in points moves the marker consecutively through all table entries.

Remote Command	<code>:CALCulate:PVTime:MARKer[1] 2 ... 12[:X]:POSition <real></code> <code>:CALCulate:PVTime:MARKer[1] 2 ... 12[:X]:POSition?</code>
Example	<code>:CALC:PVT:MARK:POS 25</code> <code>:CALC:PVT:MARK:POS?</code>
Notes	When a marker mode is changed from off to any other mode, the X position is set to mid-screen
Preset	None until marker is turned on
State Saved	Yes
Min/Max	Depends on trace data / Depends on trace data

Coupling of Delta and Reference markers

The following coupling rules apply from the front panel and also if the equivalent SCPI commands are sent.

Pressing the Delta key causes the selected marker to become a delta marker if it is not already. Also, the selected marker's reference is affected as follows:

If the reference marker was off, it is turned on as a fixed marker.

The reference marker is moved to the trace of the selected marker and set to the same position as the selected marker.

If the delta marker has a marker function turned on, the reference marker takes on the same function (with the same band limits).

Exception: Pressing Delta when the selected marker's mode is not yet Delta does not move or change a reference marker that is already turned on (Normal, or Delta) and on the same trace as the selected marker. It merely changes the selected marker's mode to Delta and shows the current offset between it and the reference. If you press Delta again (when the selected marker is already in Delta mode) then the reference is moved and modified as described above.

When a delta marker is changed to any other control mode, if its reference marker is fixed then the reference marker is also turned off.

If you move a delta marker to a different trace, it is forced to Normal mode and if its reference is fixed, the reference is turned off.

A delta marker is forced to Normal mode if you turn its reference off or if you move its reference to another trace. (In the latter case the reference is not turned off even if it is fixed.)

If you change the selected marker's reference (using the Marker, Properties, Relative To), the selected marker is forced to Delta mode. This change of the

selected marker to Delta mode causes its new reference's control mode and position to change as described above.

Marker Mode

Sets the marker control mode to **Normal**, **Delta**, or **Off**.

All interactions and dependencies detailed under the control description are enforced when the remote command is sent. If the selected marker is Off, pressing Marker sets it to Normal and places it at the center of the screen on the trace determined by the **Marker Trace** rules.

The default active function is the active function for the currently selected marker control mode. If the current control mode is Off, there is no active function and the active function is turned off.

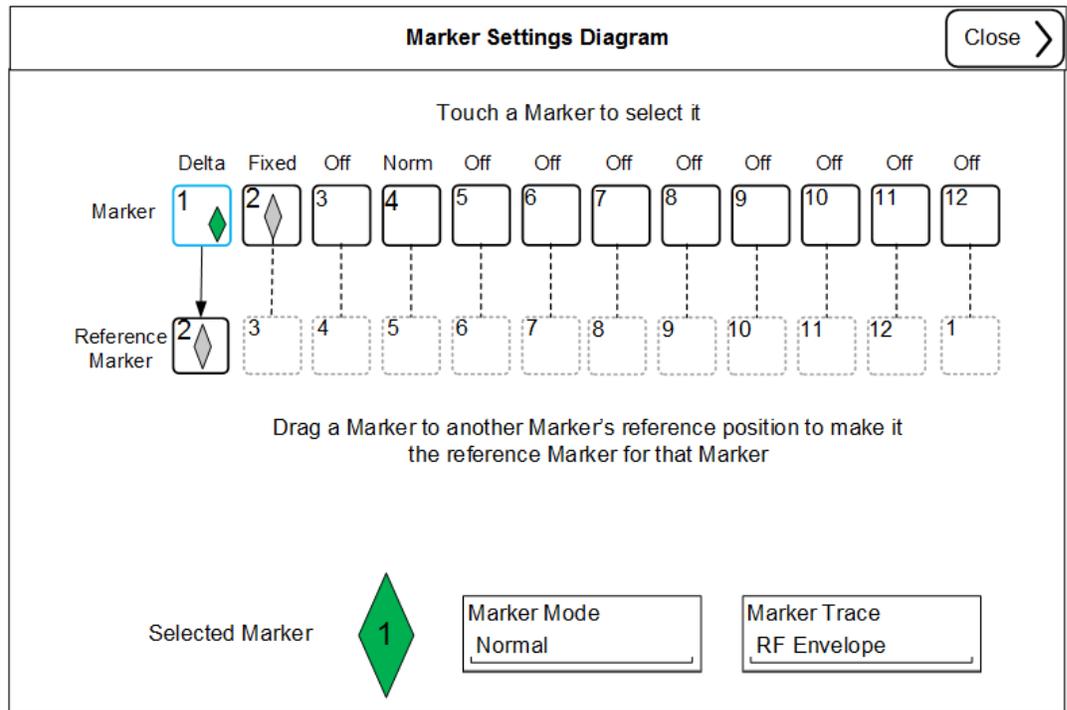

Remote Command	<code>:CALCulate:PVTime:MARKer[1] 2 ... 12:MODE POSition DELTa OFF</code> <code>:CALCulate:PVTime:MARKer[1] 2 ... 12:MODE?</code>
Example	<code>:CALC:PVTime:MARK3:MODE POS</code> <code>:CALC:PVTime:MARK3:MODE?</code>
Preset	OFF
State Saved	Saved in instrument state
Range	Normal DELTa (D) Off

Delta Marker (Reset Delta)

Pressing this button is exactly the same as pressing the “Delta” selection on the Marker Mode radio button. The selected marker becomes a Delta Marker. If the selected marker is already a Delta marker, the reference marker is moved to the current position of the selected marker, thus resetting the Delta to zero.

Marker Settings Diagram

The Marker Settings Diagram lets you configure the Marker system using a visual utility.

All Markers Off

Turns off all markers.

Remote Command :CALCulate:PVTime:MARKer:AOff

Example :CALC:PVTime:MARK:AOff

Couple Markers

When this function is On, moving any marker causes an equal X Axis movement of every other marker which is not Off. "equal X Axis movement" means to preserve the difference between each marker's X Axis value (in the fundamental x-axis units of the trace that marker is on) and the X Axis value of the marker being moved (in the same fundamental x-axis units).

Remote Command :CALCulate:PVTime:MARKer:COUple[:STATe] ON | OFF | 1 | 0

:CALCulate:PVTime:MARKer:COUple[:STATe]?

Example :CALC:PVT:MARK:COUP ON

:CALC:PVT:MARK:COUP?

Notes In general, when coupling is turned on then all Normal or Delta markers with the same (or equivalent) domain as the selected marker move in the same manner as the selected marker. See ["More"](#)

Information^a on page 2028

Preset	OFF (presets on Mode Preset and All Markers Off)
State Saved	Yes

More Information

Coupling is relative between markers on the same trace (so that their relative positions in the domain are maintained). Coupling can be absolute between markers on different traces that have equivalent domains. That is, they have the same position in the domain, if possible. (As an example of equivalent domains, demodulated symbol positions can be derived from time by using the current symbol rate). When you move the selected marker, then others on related traces track it. This enables you to correlate different measurement results. For example, you can place a marker at a particular symbol time on an error vector magnitude display, have tracking markers on the symbol table and pre-demod time trace showing you the symbol value, and the actual time-varying signal value at the same point in time.

Absolute coupling is performed only for the lowest numbered Normal or Delta marker on each trace. All other markers on a trace couple relatively. When you turn on marker coupling, the subset of markers that have the same domain as the selected marker track it and all other markers remain at their current location. The absolutely coupled markers within this subset is moved at this time to match the domain setting of the selected marker, with the relatively coupled markers following accordingly to maintain offsets within their respective traces. Those markers with different domains remain at their current location. When you select a marker with a different domain than the previously selected marker, the subset of markers with that domain go through the same procedure.

Any marker that coupling would move outside its range of X values, remains at the closest limiting value. If the coupled markers are on data that do not have the same domain resolution, then they are positioned as close to each other as possible.

If markers change mode or trace, or trace data is changed below them, the coupling rules are immediately applied to the new set.

3.8.7.3 Peak Search

The controls on the Peak Search tab allow you to move the marker to selected peaks of the signal, giving you enormous analysis capabilities, particularly when combined with the Delta Marker function.

NOTE

Pressing the Peak Search hardkey automatically moves you to the Peak Search page of the Marker menu AND performs a Peak Search.

NOTE

Pressing the Peak Search tab once you are already IN the Marker menu does NOT perform a Peak Search.

Marker Time

The Marker Time control is the fundamental control that you use to move a marker around on the trace. This is the same as the "Marker Time" on page 2023 control on the Settings tab.

Peak Search

Pressing the Peak Search control moves the selected marker to the trace point which has the maximum y-axis value for that marker's trace.

NOTE

Pressing the Peak Search hardkey automatically moves you to the Peak Search page of the Marker menu AND performs a Peak Search.

Remote Command :CALCulate:PVTime:MARKer[1] | 2 | ... | 12:MAXimum

Example :CALC:PVT:MARK2:MAX

The command SYST:ERR? can be used to query the errors to determine if a peak is found. The message "No peak found" will be returned after an unsuccessful search

Marker Delta

Pressing this button is exactly the same as pressing the "Delta" selection on the Marker Mode radio button on the Settings tab. The selected marker becomes a Delta Marker. If the selected marker is already a Delta marker, the reference marker is moved to the current position of the selected marker, thus resetting the Delta to zero.

The control is duplicated here in the Peak Search Menu to allow you to conveniently perform a peak search and change the marker's control mode to Delta without having to access two separate menus.

3.8.7.4 Properties

The controls on the Properties tab are used to set certain properties of the selected marker.

Marker Time

The Marker Time control is the fundamental control that you use to move a marker around on the trace. This is the same as the "Marker Time" on page 2023 control on the Settings tab.

Relative To

Selects the marker to which the selected marker is relative (its reference marker).

Every marker has another marker to which it is relative. This marker is referred to as the "reference marker" for that marker. This attribute is set by the **Marker, Properties, Relative To** key. The marker must be a **Delta** marker to make this attribute relevant. If it is a **Delta** marker, the reference marker determines how the marker is controlled and how its value is displayed. A marker cannot be relative to itself.

Remote Command	<code>:CALCulate:PVTime:MARKer[1] 2 ... 12:REference <integer></code> <code>:CALCulate:PVTime:MARKer[1] 2 ... 12:REference?</code>
Example	<code>:CALC:PVT:MARK:REF 5</code> <code>:CALC:PVT:MARK:REF?</code>
Notes	This command causes the marker specified with the subopcode to become selected Range (for SCPI command): 1 to 12. If the range is exceeded the value is clipped A marker cannot be relative to itself so that choice is not available, and if sent from SCPI generates error -221: "Settings conflict; marker cannot be relative to itself." When queried a single value is returned (the specified marker numbers relative marker)
Couplings	The act of specifying the selected marker's reference marker makes the selected marker a Delta marker If the reference marker is off it is turned on in Normal mode at the delta marker location.
Preset	The preset default "Relative To" marker (reference marker) is the next higher numbered marker (current marker +1). For example, if marker 2 is selected, then it's default reference marker is marker 3. The exception is marker 12, which has a default reference of marker 1 Set to the defaults by using Restore Mode Defaults . This is not reset by Marker Off, All Markers Off, or Preset
State Saved	Yes. Not affected by Marker Off and hence not affected by Preset or power cycle
Min	1

Max	12
Annunciation	Appears in the marker label of a Delta marker

Marker Trace

Assigns the specified marker to the designated trace.

Remote Command	<code>:CALCulate:PVTime:MARKer[1] 2 ... 12:TRACe TRACe1 TRACe2 TRACe3 RMS70:CALCulate:PVTime:MARKer[1] 2 ... 12:TRACe?</code>
Example	<code>:CALC:PVTime:MARK:TRAC TRACe2</code> <code>:CALC:PVTime:MARK:TRAC?</code>
Notes	SCPI enums, RFENvelope, MAXHold, and MINHold are supported for backwards compatibility RFEN=TRACe1, MAXH=TRACe2, MINH=TRACe3
Preset	TRACe1
State Saved	Yes
Range	Trace 1 Trace 2 Trace 3 70/N us RMS Trace

Marker Settings Diagram

The Marker Settings Diagram lets you configure the Marker system using a visual utility. This is the same as the "[Marker Settings Diagram](#)" on page 2026 control on the Settings tab.

3.8.8 Meas Setup

The Meas Setup menu panel contains functions for setting up the measurement parameters and also contains functions for setting up parameters global to all measurements in the mode.

3.8.8.1 Settings

The Settings tab contains frequently used Meas Setup functions to which you will want the fastest access.

Average|Hold Number

Sets the number of data acquisitions that are averaged. After the specified number of average counts is reached, the averaging mode (termination control) setting determines the averaging action. Also lets you turn Averaging on and off.

Remote Command	<code>[:SENSe]:PVTime:AVERage:COUNT <integer></code> <code>[:SENSe]:PVTime:AVERage:COUNT?</code> <code>[:SENSe]:PVTime:AVERage[:STATe] OFF ON 0 1</code> <code>[:SENSe]:PVTime:AVERage[:STATe]?</code>
Example	<code>:PVT:AVER:COUN 100</code> <code>:PVT:AVER:COUN?</code> <code>:PVT:AVER OFF</code> <code>:PVT:AVER?</code>
Preset	10 OFF
State Saved	Yes Yes
Range	On Off
Min/Max	1/10000

Continue Averaging

Continue Averaging is designed for acquiring the trace averaging multiple sets of DUT conditions, in order to meet requirements such as OTA measurement.

NOTE

You must be in Single sweep/measurement to use Continue Averaging. Go to Single and press Restart to get your first set of averages, then Continue Averaging will be available.

Use FETCh:<meas>? query to retrieve the data as it waits for completion of Continue Averaging. *OPC? doesn't wait for completion and returns true immediately.

Pressing this control adds a number of Averages that matches the Avg|Hold number to the already averaged trace or measurement. Every time you press it, the terminal count increases to 2N, 3N and so on. You can change the DUT position or antenna when each set of average count is reached to the terminal count and the measurement is complete.

Since the measurement results are valid for each completed average conditions, the user doesn't have to pre-determine the number of set of DUT conditions.

Remote Command	<code>[:SENSe]:PVTime:AVERage:CONTinue</code>
Example	<code>:PVT:AVER:CONT</code>
Dependencies	This control becomes enabled when the user changes the Sweep mode to Single and the Average Count reaches to the Average Number. Otherwise, grayed out

Terminal Count (Remote Command Only)

Query only command.

This returns the terminal count that shows the target average number after Continue Averaging is pressed. Every time you press Continue Averaging, the terminal count increases to 2N, 3N and so on. The value is the same as the Avg|Hold Number unless Continue Averaging is pressed and it is reset to match the Avg|Hold Number when Restart is pressed.

Remote Command `[:SENSe]:PVTIme:AVERage:COUNT:TERMinal?`

Example `:PVT:AVER:COUN:TERM?`

Averaging Mode

Selects the type of termination control used for the averaging function. This determines the averaging action after the specified number of data acquisitions (average count) is reached. You can select between the **Exp** (exponential) and **Repeat** averaging modes. This selection only affects the averaging result after the number of N averages is reached. You can use the **Avg|Hold Number** to set N.

Control	SCPI	Description
Exponential averaging	EXPonential	When Measure is set at Cont, data acquisitions continue indefinitely. After N averages, exponential averaging is used with a weighting factor of N (the displayed average count stops at N). Exponential averaging weights new data more than old data, which allows tracking of slow-changing signals
Repeat averaging	REPeat	When Measure is set at Cont, data acquisitions continue indefinitely. After N averages is reached, all previous result data is cleared and the average count is set back to 1. This is equivalent to being in Measure Single and pressing the Restart control when the Single measurement finishes

Remote Command `[:SENSe]:PVTIme:AVERage:TCONtrol EXPonential | REPeat`

`[:SENSe]:PVTIme:AVERage:TCONtrol?`

Example `:PVT:AVER:TCON EXP`

`:PVT:AVER:TCON?`

Preset REPeat

State Saved Yes

Range Exponential|Repeat

Average Type

Specifies the type of trace and result averaging to use.

CONTROL: Power (RMS) True power averaging that is equivalent to taking the RMS value of the voltage. It is the most accurate type of averaging

SCPI:
 RMS|PoweR

CONTROL: Log-Power Simulates the traditional spectrum analyzer type of averaging by averaging the log of the power

SCPI:
 LOG|LPOweR

Remote Command	<code>[:SENSe]:PVTime:AVERage:TYPE LOG LPOweR RMS POWeR</code> <code>[:SENSe]:PVTime:AVERage:TYPE?</code>
Example	<code>:SENS:PVT:AVER:TYPE RMS</code> <code>:SENS:PVT:AVER:TYPE?</code>
Preset	RMS
State Saved	Yes
Range	Power (RMS) Log-Power

Subcarrier Spacing (SCS)

Sets Sub Carrier Spacing. This value is used as follows:

- Determines Slot Duration.
- Determines the value of N, where $70/N$ us is used as length of measurement period to calculate mean power spectral density in 3GPP standard (TS 38.141-1 6.4.2.4.2|TS 38.141-2 6.5.2.4.2). $N = \text{SCS}/15$, where SCS is Sub Carrier Spacing in kHz. When Sub Carrier Spacing is SCS60K, $N = 60/15 = 4$.
- Determines Info BW when Info BW is Auto.

When in Auto:

Downlink: Coupled to the smallest SCS (Power Meas) among the SCS (Power Meas) of each component carrier.

Uplink: Coupled to the SCS (Power Meas) of the component carrier specified in Measure CC.

Remote Command	<code>[:SENSe]:PVTime[:DLINK]:SCS SCS15K SCS30K SCS60K SCS120K SCS240K</code> <code>[:SENSe]:PVTime[:DLINK]:SCS?</code> <code>[:SENSe]:PVTime:SCS:AUTO OFF ON 0 1</code>
----------------	--

	<code>[:SENSe]:PVTime:SCS:AUTO?</code>
Example	<code>:PVT:SCS SCS30K</code> <code>:PVT:SCS?</code> <code>:PVT:SCS:AUTO OFF</code> <code>:PVT:SCS:AUTO?</code>
Couplings	This value will be preset to the SCS value in the Meas Standard tab when the action "Apply Preset (to All CCs)" is executed
Preset	SCS30K ON
State Saved	Yes
Range	u = 0: 15 kHz u = 1: 30 kHz u = 2: 60 kHz u = 3: 120 kHz u = 4: 240 kHz

Auto Timing Adjustment

In order to check transmit off power is below the 3GPP defined limit, timing reference must be provided in the measurement. This setting specifies how the timing reference is derived in the measurement.

When it is ON, the burst boundary timing is always appropriately adjusted based on the measured ramp up and ramp down edge timings. When it is OFF, the timing reference will be provided by external trigger, expected burst boundaries will be derived from external trigger and frame configuration parameters.

Remote Command	<code>[:SENSe]:PVTime:TIMing:REference:AUTO ON OFF 1 0</code> <code>[:SENSe]:PVTime:TIMing:REference:AUTO?</code>
Example	<code>:PVT:TIM:REF:AUTO ON</code> <code>:PVT:TIM:REF:AUTO?</code>
Dependencies	When Auto Timing adjustment is OFF and Trigger type is free run, an advisory message is generated
Preset	ON
State Saved	Yes
Range	On Off

Spur Avoidance

Because the VXT models SP900B/11A/15A are direct-conversion (zero-IF) receivers, feedthrough leakage from the local oscillator appears as a spurious signal (spur) at the center frequency. The Spur Avoidance function is provided to eliminate this spur, at the expense of some measurement speed.

When Spur Avoidance is enabled (the default), the analyzer uses a software algorithm to remove this spur from the displayed measurement data, but the

algorithm only operates under certain conditions. Specifically, it only operates when the $BW \leq \text{maxBW}/2.5$.

You can disable this function in order to speed up your measurement. When Spur Avoidance is turned Off, a warning message will appear in the status bar as “Settings Alert;Spur Avoidance Off”. This is to alert you that measurement accuracy might be impacted because you have defeated the spur avoidance algorithm.

Remote Command	<code>[:SENSe]:PVTime:SAVoid[:STATe] ON OFF 0 1</code> <code>[:SENSe]:PVTime:SAVoid[:STATe]?</code>
Example	<code>:PVT:SAV ON</code> <code>:PVT:SAV?</code>
Dependencies	This control only appears in VXT models SP900B/11A/15A
Preset	<code>ON</code>
State Saved	Saved in instrument state
Range	<code>ON OFF</code>

Meas Setup Summary Table

The Meas Setup Summary Table lets you view and access many of the parameters in the Meas Setup menus on one screen.

Meas Preset

Restores all the measurement parameters to their default values.

Remote Command	<code>:CONFigure:PVTime</code>
Example	<code>:CONF:PVT</code>
Couplings	Selecting Meas Preset restores all measurement parameters to these default values

Ignore Burst Found (Remote Command Only)

In the Pvt measurement, by default, it checks whether a burst signal is found and decides what to do next. When average state is ON and no burst signal is found, the measurement will continuously run and you cannot get test results by SCPI `meas/read/fetch` command under continuous measurement status. To avoid this, it is recommended to implement timeout process in test scripts.

This SCPI only parameter is defined to stop continuous running, as an alternate option. For backwards compatibility, the behavior of “waiting for burst found” is kept intact when this parameter is OFF.

Remote Command	<code>[:SENSe]:PVTIme:IGNore:BURSt:FOUNd OFF ON 0 1</code> <code>[:SENSe]:PVTIme:IGNore:BURSt:FOUNd?</code>
Example	<code>:PVT:IGN:BURS:FOUN ON</code> <code>:PVT:IGN:BURS:FOUN?</code>
Preset	OFF
State Saved	Yes

3.8.8.2 Radio

The Radio tab contains controls to select link direction.

Direction

Direction specifies whether the 5G NR signal is an uplink signal or a downlink signal.

This control allows you to set the Direction of the signal being measured.

Remote Command	<code>[:SENSe]:RADio:STANdard:DIRectioN DLINK ULINK</code> <code>[:SENSe]:RADio:STANdard:DIRectioN?</code>
Example	<code>:RAD:STAN:DIR DLIN</code>
Dependencies	When N9085EM0E is not installed and N9085EM4E is installed, only Uplink is available
Couplings	Changing the direction affects the gate source as follows <ul style="list-style-type: none"> - If changed to uplink: RF burst - If changed to downlink: External 1 <p>In Transmit On Off Power, changing the direction affects the trigger source as follows</p> <ul style="list-style-type: none"> - If changed to uplink: Periodic - If changed to downlink: External 1 except for models with the H1G option. With the H1G option, the trigger source changes as follows. <ul style="list-style-type: none"> - External 1, when Info BW \leq 255 MHz - External 3, when Info BW \geq 256 MHz <p>Changing the direction affects many other modulation analysis setup parameters</p>
Preset	ULINK when N9085EM0E is not installed and N9085EM4E is installed Otherwise, DLINK
State Saved	Yes
Range	Uplink only when N9085EM0E is not installed and N9085EM4E is installed Otherwise, Downlink Uplink

3.8.8.3 Component Carriers

Contains settings that let you configure the analyzer to match the component carriers in your 5G NR signal.

Number of Component Carriers

Specifies how many component carriers are included in the 5G NR measurements. The 5G NR supports the maximum of 16 component carriers.

Remote Command	<code>[:SENSe]:CCARrier:COUNT <integer></code> <code>[:SENSe]:CCARrier:COUNT?</code>
Example	<code>:CCAR:COUN 1</code> <code>:CCAR:COUN?</code>
Preset	1
State Saved	Yes
Min	1
Max	16

Carrier Allocation

Specifies the carrier frequency allocation. There are two types of allocation, contiguous and non-contiguous. Non-Contiguous frequency allocation is defined as an allocation where two sub-blocks are separated with a sub-block gap:

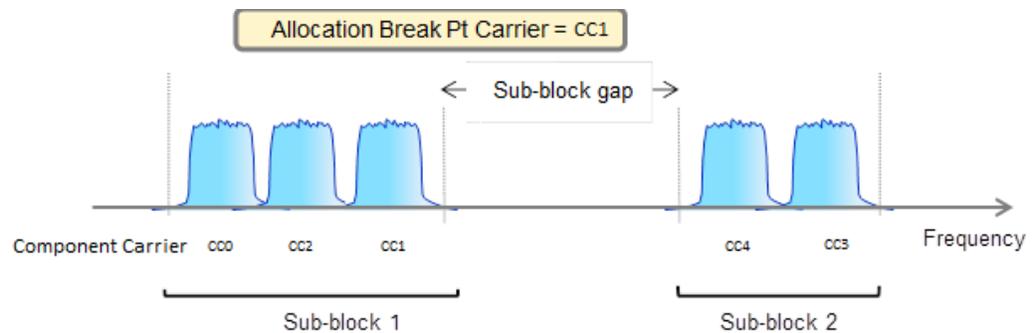

- Contiguous – All the component carriers belong to one block and no sub-block gap exists
- Non-Contiguous – Component carriers are separated into two sub-blocks. Allocation Break Pt Carrier determines how sub-blocks are configured

Remote Command	<code>[:SENSe]:CCARrier:CONFig:ALLocation CONTiguous NCONtiguous</code> <code>[:SENSe]:CCARrier:CONFig:ALLocation?</code>
Example	<code>:CCAR:CONF:ALL CONT</code> <code>:CCAR:CONF:ALL?</code>
Preset	<code>CONTiguous</code>
State Saved	Saved in instrument state
Range	Contiguous Non-Contiguous

Non-Contiguous Break at

Specifies an allocation break point in non-contiguous carrier allocation. First sub-block starts from the lowest frequency carrier and stops at the allocation break point carrier. Next sub-block starts from the next upper frequency carrier and ends at the highest frequency carrier.

one example is shown below. In the example carrier indices are not in the order of carrier frequency. In the example, Allocation Break Pt Carrier is CC1. It means that sub-block 1 ends at carrier CC1 and sub-block 2 starts at carrier CC4. Sub-block gap is located between carrier CC1 and CC4.

Remote Command	<code>[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint CC0 ... CC15</code> <code>[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint?</code>
----------------	--

Example	<code>:CCAR:CONF:ALL:NCON:ABP CC0</code> <code>:CCAR:CONF:ALL:NCON:ABP?</code>
---------	---

Dependencies	Allocation Break Point is coupled to Number of Component Carriers. For example, Allocation Break Point list will include CC0~CC1 if the number of Component Carriers is 2
--------------	---

Preset	<code>CC0</code>
--------	------------------

State Saved	Saved in instrument state
-------------	---------------------------

Range	<code>CC0 ... CC15</code>
-------	-------------------------------

Configure Comp Carriers

This dialog lets you perform a detailed configuration of your component carriers, including number of carriers, bandwidth, offset, integration bandwidth, and so on.

Configure CCs

Lets you configure bandwidth, frequency offsets, and integration bandwidth, and also lets you exclude certain carriers from the measurement.

More Information

"Measure Carrier" on page 2636	"Sidelink" on page 2637	"Bandwidth" on page 2637	"Freq Range" on page 2638
"Freq Offset" on page 2638	"Cell ID Auto" on page 2639	"Cell ID Value" on page 2639	"Demod Spectrum" on page 2639
"CHP Power Integration Bandwidth" on page 2640	"ACP Power Integration Bandwidth" on page 2640	"SEM Power Integration Bandwidth" on page 2642	"N_Grid_Size (Display Only)" on page 1491
"SCS (Power Meas)" on page 2642			

Number of Component Carriers

This is the same as the control on the menu panel. See ["Number of Component Carriers" on page 2633](#).

Auto Frequency Offset

Changing this value will automatically calculate frequency offset based on a specified set of rules (For the rules, see 5.4.1.1 and 5.4.1.2 in 3GPP TS 38.104 V15.4.0).

Remote Command	<code>[:SENSe]:CCARrier:AFOffset OFF ACRA100K ACRA15K ACRA60K CARA100K CARA15K CARA60K</code> <code>[:SENSe]:CCARrier:AFOffset?</code>
Example	<code>:CCAR:AFOF ACRA100K</code> <code>:CCAR:AFOF?</code>
Notes	When you change the value to OFF , nothing happens
Dependencies	Changing Number of Component Carriers, CC's Bandwidth, or CC's Frequency Range will recalculate frequency offset unless OFF is selected When CC's Frequency Offset is manually changed, this parameter is set to OFF This feature isn't supported when Carrier Allocation is set to Non-Contiguous. When Auto Freq Offset is set to a value other than OFF with Number of Component Carriers = 1, then, CCO Freq Offset is automatically adjusted to 0 Hz
Preset	OFF
State Saved	Yes
Range	The cascading list is shown below

Channel Spacing for	Channel Raster
Adjacent NR Carriers	100 kHz
Carrier Aggregation	15 kHz
Off	60 kHz
Channel Spacing for	Channel Raster
Adjacent NR Carriers	100 kHz
Carrier Aggregation	15 kHz
Off	60 kHz
Channel Spacing for	Channel Raster
Adjacent NR Carriers	
Carrier Aggregation	
Off	

Carrier Allocation

This is the same as the control on the menu panel. See ["Carrier Allocation" on page 2633](#).

Non-Contiguous Break at

This is the same as the control on the menu panel. See ["Non-Contiguous Break at" on page 2634](#).

Measure Carrier

This column sets whether to measure this component carrier or not.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15[:STATe] OFF ON 0 1</code> <code>[:SENSe]:CCARrier[0] 1 ... 15[:STATe]?</code>
Example	<code>:CCAR0 ON</code> <code>:CCAR0?</code>
Notes	The command is used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers
Couplings	Measure Carrier of the CCs that are within "Number of Component Carriers" is set to ON when the action "Apply Preset (to All CCs)" is executed X
Preset	ON
State Saved	Saved in instrument state

Sidelink

Allows the user to select the mode of component carrier from either normal 5G NR uplink or 5G NR V2X sidelink when Direction is Uplink.

- OFF: The component carrier is 5G NR uplink carrier. The 5G NR uplink parameters per carrier are in scope.
- ON: The component carrier is 5G NR V2X sidelink carrier. The sidelink parameters per carrier are in scope.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:SLINK ON OFF 1 0</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:SLINK?</code>
Example	<code>CCAR4:RAD:SLIN ON</code> <code>CCAR4:RAD:SLIN?</code>
Dependencies	Available when the required license is installed and Direction is Uplink Unavailable when " Bandwidth " on page 2637 is 35 MHz, 45 MHz, 800 MHz, 1600 MHz, and 2000 MHz
Preset	OFF
State Saved	Saved

Bandwidth

This column enables you to set the bandwidth of each component carrier for 5G NR signal (which also determines the total number of resource blocks for Modulation Analysis measurement).

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:BANDwidth B5M B10M B15M B20M B25M B30M B35M B40M B45M B50M B60M B70M B80M B90M B100M B200M B400M B800M B1600M B2000M</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:BANDwidth?</code>
Example	<code>:CCAR4:RAD:STAN:BAND B50M</code>
Dependencies	When " Sidelink " on page 2637 is enabled, 35 MHz, 45 MHz, 800 MHz, 1600 MHz, and 2000 MHz are not available. Selecting any of those BWs turns Sidelink off and the column becomes grayed out
Couplings	This value will be preset to the Bandwidth value in the Meas Standard menu when the action "Apply Preset (to All CCs)" is executed
Preset	B100M
State Saved	Yes
Range	5 MHz 10 MHz 15 MHz 20 MHz 25 MHz 30 MHz 35 MHz 40 MHz 45 MHz 50 MHz 60 MHz 70 MHz 80 MHz 90 MHz 100 MHz 200 MHz 400 MHz 800 MHz 1600 MHz 2000 MHz

Freq Range

This column enables you to set which frequency range to which each component carrier belongs.

Frequency Range affects CC Bandwidth, Max RB Numbers, ACP Measurement Noise Bandwidth and SEM Integ BW.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:FRANge FR1 FR2</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:FRANge?</code>
Example	<code>:CCAR1:RAD:STAN:FRAN FR1</code>
Dependencies	Available selections differ depending on "Bandwidth" on page 2637 as follows: <ul style="list-style-type: none"> - 50 MHz and 100 MHz: FR1 and FR2 - 200 MHz or wider: FR2 only - Other than above: FR1 only
Couplings	This value will be preset to the Frequency Range value in the Meas Standard menu when the action "Apply Preset (to All CCs)" is executed
Preset	<code>FR1</code>
State Saved	Yes
Range	<code>FR1 FR2</code>

Freq Offset

This column sets the component carrier center frequency as offset from the Carrier Ref Frequency.

Remote Command	<code>[:SENSe]:CCARrier<n>:FREQuency:OFFSet <freq></code> <code>[:SENSe]:CCARrier<n>:FREQuency:OFFSet?</code>
Example	<code>:CCAR4:FREQ:OFFS 10MHz</code> <code>:CCAR4:FREQ:OFFS?</code>
Notes	Used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers Frequency Offset of CC0 to CC15 is recommended to be set in ascending order for the best related couplings. You can see whether sub-blocks are configured as you expect in the trace of Monitor Spectrum by turning on Sub-block Attribute under Display > Meas Display. If sub-blocks are not configured correctly, results related to sub-block gap such as ACP/SEM inner offset results are not measured correctly Also, in some cases, make sure if the "Non-Contiguous Break at" parameter is set to the intended value since it's often left unchanged after Frequency Offset of CCs are changed

Preset	0 Hz
State Saved	Saved in instrument state
Min	-50 GHz
Max	50 GHz

Cell ID Auto

Enable and disable Cell ID auto detection based on SSB.

NOTE This setting is available for EVM measurement only.

Remote Command	<code>[[:SENSe]:EVM:CCARrier[0] 1 ... 15:CID:MODE AUTO MANua1 [:SENSe]:EVM:CCARrier[0] 1 ... 15:CID:MODE?</code>
Example	<code>:EVM:CCAR:CID:MODE MAN :EVM:CCAR:CID:MODE?</code>
Preset	MANua1
State Saved	Saved in instrument state

Cell ID Value

Specify Cell ID for the component carrier.

NOTE This setting is available for EVM measurement only.

Remote Command	<code>[[:SENSe]:EVM:CCARrier[0] 1 ... 15:CID <integer> [:SENSe]:EVM:CCARrier[0] 1 ... 15:CID?</code>
Example	<code>:EVM:CCAR4:CID 0 :EVM:CCAR4:CID?</code>
Couplings	Invalid when Cell ID Auto is on
Preset	0
State Saved	Saved in instrument state
Min	0
Max	1007

Demod Spectrum

This column determines if the spectrum of the incoming data is mirrored or not. The actual mirroring is accomplished by conjugating the complex time data.

Note that only the Modulation Analysis measurement and Conformance EVM measurement support this feature.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:SPECTrum NORMal INVert</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:SPECTrum?</code>
Example	<code>:CCAR0:SPEC INV</code> <code>:CCAR0:SPEC?</code>
Preset	<code>NORM</code>
State Saved	Yes
Range	Normal Invert

CHP Power Integration Bandwidth

This column specifies the range of integration used in calculating the power in the component carriers in the CHP measurement.

NOTE This setting is *not* available for EVM.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:CHPower:BANDwidth:INTEgration <freq></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:CHPower:BANDwidth:INTEgration?</code>
Example	<code>:CCAR0:CHP:BAND:INT 20MHz</code> <code>:CCAR0:CHP:BAND:INT?</code>
Couplings	When Bandwidth of the parameter set is changed, this parameter also changes to that value
Preset	100 MHz
State Saved	Saved in instrument state
Min	100 kHz
Max	2000 MHz

ACP Power Integration Bandwidth

This column specifies the Measurement Noise Bandwidth used to calculate the power in the component carriers in the ACP measurement.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:ACPpower:BANDwidth[1] 2:INTEgration <freq></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:ACPpower:BANDwidth[1] 2:INTEgration?</code>
Example	<code>:CCAR0:ACP:BAND:INT 20MHz</code> <code>:CCAR0:ACP:BAND:INT?</code>
Notes	Carrier sub op code, 1 is for BTS, 2 for MS. Default is BTS
Couplings	When either Bandwidth of the parameter set, Freq Range, or Direction is changed, the value of this parameter also changes as shown in the following table

3 5G NR Mode
3.8 Transmit On|Off Power

When Freq Range is FR1

Bandwidth	Downlink ACP Meas Noise BW (MHz)	Uplink ACP Meas Noise BW (MHz)
5 MHz	4.500	4.515
10 MHz	9.360	9.375
15 MHz	14.220	14.235
20 MHz	19.080	19.095
25 MHz	23.940	23.955
30 MHz	28.800	28.815
35 MHz	33.840	33.855
40 MHz	38.880	38.895
45 MHz	43.560	43.575
50 MHz	48.600	48.615
60 MHz	58.320	58.350
70 MHz	68.040	68.070
80 MHz	78.120	78.150
90 MHz	88.200	88.230
100 MHz	98.280	98.310

When Freq Range is FR2

Bandwidth	Downlink ACP Meas Noise BW (MHz)	Uplink ACP Meas Noise BW (MHz)
50 MHz	47.520	47.580
100 MHz	95.040	95.160
200 MHz	190.080	190.20
400 MHz	380.160	380.280
800 MHz	714.24	715.20
1600 MHz	1428.48	1429.44
2000 MHz	1704.96	1705.92

Preset	98.280 MHz 98.310 MHz
State Saved	Yes
Min	100 kHz
Max	2000 MHz

SEM Power Integration Bandwidth

This column specifies the integration bandwidth used to calculate the power in the component carriers in SEM measurement.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:SEMAsk:BANDwidth[1] 2:INTEgration <freq></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:SEMAsk:BANDwidth[1] 2:INTEgration?</code>
Example	<code>:CCAR0:SEM:BAND:INT 20MHz</code> <code>:CCAR0:SEM:BAND:INT?</code>
Notes	Bandwidth sub op code, 1 is for BTS, 2 for MS. Default is BTS
Couplings	When Bandwidth of the parameter set is changed, this parameter also changes to that value
Preset	100 MHz
State Saved	Saved in instrument state
Min	100 kHz
Max	2000 MHz

SCS (Power Meas)

Queries the SCS (Power Meas), the smallest SCS among the enabled SCSs of the selected component carrier set with ["SCS Enabled" on page 1547](#).

It is used to calculate the aggregated channel bandwidth when Power Reference is set to Aggregated Chan BW.

Power Integration Bandwidth values are not affected even if SCS (Power Meas) is changed.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RGRid:PMSCs?</code>
Example	<code>:CCAR3:RGR:PMSC?</code>
Notes	Query-only Returns one of the following values: NONE, SCS15K, SCS30K, SCS60K, SCS120K, SCS240K, SCS480K, SCS960K

Measure CC

Selects the component carrier to be measured in the uplink time mask measurement.

NOTE The parameter is only available for the Transmit On|Off Power measurement.

Remote Command	<code>[:SENSe]:PVTime:ULINK:CCARrier CC0 ... CC15</code> <code>[:SENSe]:PVTime:ULINK:CCARrier?</code>
Example	<code>:PVT:ULINK:CCAR CC0</code> <code>:PVT:ULINK:CCAR?</code>
Dependencies	Available only when Radio Direction is Uplink
Preset	<code>CC0</code>
State Saved	Yes
Range	CC0 CC1 CC2 CC3 CC4 CC5 CC6 CC7 CC8 CC9 CC10 CC11 CC12 CC13 CC14 CC15

3.8.8.4 Meas Standard

The tab contains settings which let you configure the analyzer to match the measurement standard in your 5G NR signal.

The section entitled “Configure Preset” lets you configure the preset values for the Component Carriers. Once you have set all the controls in the “Configure Preset” section to the desired value, press the “Apply Preset (to all CCs)” control and your presets will be applied to each Component Carrier. Furthermore, any new Component Carriers will take on the same values you have applied.

NOTE

You must press **Apply Preset (to all CCs)** or the values on the controls will *not* affect the Component Carriers.

When you need to configure more parameters, select Advanced Preset Parameters to open a dialog and set advanced parameters for multiple measurements on one screen.

Bandwidth

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the **"Bandwidth" on page 2637** of each component carrier in the same way you would do so using the table in the **Configure Comp Carriers** dialog on the **Component Carriers** tab.

Set the value you want for this control and the other controls in the “Configure Preset” section then press **Apply Preset (to all CCs)**.

NOTE

You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

Once you have applied this preset value, any new CCs created by setting the **"Number of Component Carriers" on page 2633** will also take on this value.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:CARRier[:BANDwidth] B5M B10M B15M B20M B25M B30M B35M B40M B45M B50M B60M B70M B80M B90M B100M B200M B400M B800M B1600M B2000M</code> <code>[:SENSe]:RADio:STANdard:PRESet:CARRier[:BANDwidth]?</code>
Example	<code>:RAD:STAN:PRES:CARR B5M</code> <code>:RAD:STAN:PRES:CARR?</code>
Dependencies	Selections other than 10 MHz, 20 MHz, 30 MHz, and 40 MHz are unavailable when "Uplink Carrier Mode" on page 2648 is Sidelink - V2X If you change "Uplink Carrier Mode" on page 2648 to Sidelink – V2X when this parameter is set to a value other than 10 MHz, 20 MHz, 30 MHz, or 40 MHz, it is forcefully set to 10 MHz
Preset	When N9085EM0E is not installed and N9085EM4E is installed: B10M Otherwise: B100M
State Saved	Yes
Range	5 MHz 10 MHz 15 MHz 20 MHz 25 MHz 30 MHz 35 MHz 40 MHz 45 MHz 50 MHz 60 MHz 70 MHz 80 MHz 90 MHz 100 MHz 200 MHz 400 MHz 800 MHz 1600 MHz 2000 MHz
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:STANdard:PRESet[:BANDwidth]</code>

Frequency Range

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the "Freq Range" on page 2638 of each component carrier in the same way you would do so using the table in the **Configure Comp Carriers** dialog on the **Component Carriers** tab.

Set the value you want for this control and the other controls in the “Configure Preset” section then press **Apply Preset (to all CCs)**.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the "Number of Component Carriers" on page 2633 will also take on this value.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:FREQuency:RANGe FR1 FR2</code> <code>[:SENSe]:RADio:STANdard:PRESet:FREQuency:RANGe?</code>
Example	<code>:RAD:STAN:PRES:FREQ:RANG FR1</code> <code>:RAD:STAN:PRES:FREQ:RANG?</code>
Dependencies	Available selections differ depending on Bandwidth as follows: <ul style="list-style-type: none"> – 50 MHz and 100 MHz: FR1 and FR2 – 200 MHz or wider: FR2 only

– Other than above: FR1 only

When "Uplink Carrier Mode" on page 2648 is Sidelink - V2X, FR2 is unavailable

Preset	FR1
State Saved	Yes
Range	FR1 FR2
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:STANdard:PRESet:FRANge</code>

Duplex Mode

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the Duplex Mode of each component carrier. Set the value you want for this control and the other controls in the “Configure Preset” section then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the "Number of Component Carriers" on page 2633 will also take on this value.

Two types of Duplex Mode (FDD and TDD) are supported.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DMODE FDD TDD</code> <code>[:SENSe]:RADio:STANdard:PRESet:DMODE?</code>
Example	<code>:RAD:STAN:PRESet:DMOD TDD</code> <code>:RAD:STAN:PRESet:DMOD?</code>
Dependencies	Available selections depend on Frequency Range When FR1 is selected, both TDD and FDD are available. When FR2 is selected, only TDD is available
Preset	TDD
State Saved	Yes
Range	FDD TDD

SCS

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the subcarrier spacing of each component carrier. Set the value you want for this control and the other controls in the “Configure Preset” section then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

Once you have applied this preset value, any new CCs created by setting the "Number of Component Carriers" on page 2633 will also take on this value.

In 5G, subcarrier spacing is governed by $2^n * 15$ kHz subcarrier spacings (where n is 0, 1, 2, or 3). 15, 30, and 60 kHz subcarrier spacings are used for the lower frequency bands, and 60 and 120 kHz subcarrier spacings are used for the higher frequency bands.

Remote Command `[:SENSe]:RADio:STANdard:PRESet:SCS SCS15K | SCS30K | SCS60K | SCS120K | SCS480K | SCS960K`
`[:SENSe]:RADio:STANdard:PRESet:SCS?`
`[:SENSe]:RADio:STANdard:PRESet:SCS:AUTO[:STATe] OFF | ON | 0 | 1`
`[:SENSe]:RADio:STANdard:PRESet:SCS:AUTO[:STATe]?`

Example `:RAD:STAN:PRE:SCS SCS30K`
`:RAD:STAN:PRE:SCS?`
`:RAD:STAN:PRE:SCS:AUTO 0`
`:RAD:STAN:PRE:SCS:AUTO?`

Notes SCS will not be preset to the selected one until the action "Apply Preset (to All CCs)" is executed

Dependencies Available selections depend on a combination of Bandwidth and Frequency Range as follows

- When "Adjust Limit Mask for Freq Range" is set to a value other than "52.6 < f ≤ 71.0 GH" (FR2-2):

FR	Bandwidth	SCS
FR1	5 MHz	15K*/30K
FR1	10 – 50 MHz	15K*/30K/60K
FR1	60 – 100 MHz	30K*/60K
FR2	50, 100, 200 MHz	60K*/120K
FR2	400 MHz	120K*

- When "Adjust Limit Mask for Freq Range" is set to "52.6 < f ≤ 71.0 GH" (FR2-2):

FR	Bandwidth	SCS
FR2	100 MHz	120K*
FR2	400 MHz	120K*/480K/960K
FR2	800, 1600 MHz	480K*/960K
FR2	2000 MHz	960K*

(*) When AUTO is selected, the narrowest available SCS is selected.

Preset `SCS30K`

	ON
State Saved	Yes
	Yes
Range	u = 0: 15 kHz u = 1: 30 kHz u = 2: 60 kHz u = 3: 120 kHz u = 5: 480 kHz u = 6: 960 kHz Auto Man

RB Alloc Preset

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the Resource Block Allocation Preset of each component carrier. Set the value you want for this control and the other controls in the “Configure Preset” section then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the **“Number of Component Carriers” on page 2633** will also take on this value.

The RB Alloc Preset presets the Resource Block (RB) allocation mapping to a selected predefined pattern in the list:

“Fulfilled-xxx” is to fill out all maximum available RBs in each CC with one specified modulation type (Pi/2-BPSK | QPSK | 16 QAM | 64 QAM | 256 QAM | 1024 QAM), and “DL-NR-TM x.x” is to map RBs in each CC based on the NR Test Model definition according to the section 4.9.2 in 3GPP TS38.141-1 or -2.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:RBAlloc FQPSK FQAM16 FQAM64 FQAM256 FQAM1024 DLTM1DOT1 DLTM1DOT2 DLTM2 DLTM2Q16 DLTM2QPS DLTM2A DLTM2B DLTM3DOT1 DLTM3DOT1Q16 DLTM3DOT1QPS DLTM3DOT1A DLTM3DOT1B DLTM3DOT2 DLTM3DOT3 FPIBPSK DLTM1DOT1P1 DLTM1DOT1L2</code>
----------------	---

`[:SENSe]:RADio:STANdard:PRESet:RBAlloc?`

Example	<code>:RAD:STAN:PRE:RBAL DLTM1DOT1</code>
---------	---

`:RAD:STAN:PRE:RBAL?`

Notes	Resource Block Allocation Preset will not be preset to the selected one until the action “Apply Preset (to All CCs)” is executed
-------	--

Dependencies	Available selections vary depending on the Radio Direction and Frequency Range as follows:
--------------	--

Uplink:

- Fulfilled xxxx except for Fulfilled 1024 QAM
- Note that Fulfilled Pi/2-BPSK is available only when OFDM Type is DFT-s-OFDM

Downlink:

	<ul style="list-style-type: none"> - FR1: All except for Fulfilled Pi/2-BPSK/TM2 (16-QAM)/TM2 (QPSK)/TM3.1 (16-QAM)/TM3.1 (QPSK) - FR2: All except for Fulfilled Pi/2-BPSK/TM1.2/TM2b/TM3.1b/TM3.2/TM3.3

Advanced Preset Parameters

Lets you access advanced preset parameters on one screen.

Uplink Carrier Mode

Allows you to select the uplink carrier mode: either Normal Uplink or Sidelink - V2X.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:CARRier NORMa1 V2X</code> <code>[:SENSe]:RADio:STANdard:PRESet:ULINK:CARRier?</code>
Example	<code>RAD:STAN:PRES:ULIN:CARR NORM</code> <code>RAD:STAN:PRES:ULIN:CARR?</code>
Dependencies	Available when the required license is installed and Direction is Uplink
Preset	When N9085EM0E is not installed and N9085EM4E is installed: V2X Otherwise: NORMa1
State Saved	Saved
Range	Normal Uplink Sidelink-V2X

DL FR1 NR-TM Reference Standard Selection

Enables you to select the 3GPP Standard for the DL FR1 TDD NR-TM lists of Resource Block Allocation Preset to be referred to; one is 3GPP TS38.141-1 and the other is 3GPP TS37.141 BC3 CS16/17, which define different TDD burst On/Off profiles.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DLINK:NRTM TS38 TS37CS1617</code> <code>[:SENSe]:RADio:STANdard:PRESet:DLINK:NRTM?</code>
Example	<code>RAD:STAN:PRES:DLIN:NRTM TS38</code> <code>RAD:STAN:PRES:DLIN:NRTM?</code>
Dependencies	Grayed out when Radio Direction is Uplink.
Couplings	Values to be preset will not be preset until the action "Apply Preset (to All CCs)" is executed.
Preset	TS38
State Saved	Yes
Range	TS38.141-1 TS37.141 BC3 CS16/17

OFDM Type

This control is part of the "Preset for Mod Analysis" section of the Advanced Preset Parameters dialog. It lets you specify the OFDM Type to configure preset values for the Component Carriers:

- CP-OFDM
- DFT-s-OFDM

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.

Once you have applied this preset value, any new CCs created by setting the Number of Component Carriers will also take on this value.

This parameter is valid only for the Modulation Analysis measurement.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:OTYPe CPOFdm DFTSoFdm</code> <code>[:SENSe]:RADio:STANdard:PRESet:OTYPe?</code>
Example	<code>:RAD:STAN:PRE:OTYP CPOF</code> <code>:RAD:STAN:PRE:OTYP?</code>
Dependencies	DFT-s-OFDM is grayed out when Radio Direction is Downlink DFT-s-OFDM is grayed-out when "Uplink Carrier Mode" on page 2648 is Sidelink - V2X
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	<code>CPOFdm</code>
State Saved	Yes
Range	CP-OFDM DFT-s-OFDM

Adjust Limit Mask for Freq Range

This control is part of the “Preset for ACP, SEM, Spur, Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you specify the frequency range for preset.

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.

When in Auto, this value changes when f value is changed, where f is the center frequency of Component Carrier 0. Values to be preset will be preset to the values described in the Values for Meas Standard section when Apply Preset is executed.

When in Manual, values to be preset will be preset to the values described in Values or Meas Standard according to this value when Apply Preset is executed.

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

3 5G NR Mode
 3.8 Transmit On|Off Power

Range	None $f \leq 1.0$ GHz $1.0 < f \leq 3.0$ GHz $3.0 < f \leq 4.2$ GHz $4.2 < f \leq 6.0$ GHz $6.0 < f \leq 7.125$ GHz $24.25 < f \leq 29.5$ GHz $37.0 < f \leq 43.5$ GHz $43.5 < f \leq 48.2$ GHz $52.6 < f \leq 71.0$ GHz

BS Type

This control is part of the “Preset for ACP, SEM, Spur, Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you specify the BS Type for preset:

- 1-C (FR1 Conducted)
- 1-O (FR1 Radiated)
- 2-O (FR2 Radiated)

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DLINK:BS:TYPE FR1C FR1O FR2O</code> <code>[:SENSe]:RADio:STANdard:PRESet:DLINK:BS:TYPE?</code>
Example	<code>:RAD:STAN:PRES:DLIN:BS:TYPE FR1C</code> <code>:RAD:STAN:PRES:DLIN:BS:TYPE?</code>
Dependencies	Grayed out when Radio Direction is Uplink
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	FR1C
State Saved	Yes
Range	1-C (FR1 Conducted) 1-O (FR1 Radiated) 2-O (FR2 Radiated)

BS Category

This control is part of the “Preset for ACP, SEM, Spur, Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you specify the BS Category for preset:

- Category A Wide Area BS
- Category B Wide Area BS
- Category A Medium Range BS
- Category B Medium Range BS
- Category A Medium Range BS (Low Power rated)
- Category B Medium Range BS (Low Power rated)
- Category A Local Area BS
- Category B Local Area BS

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press *Apply Preset (to all CCs)* or the value on this controls will *not* affect the Component Carriers.

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DLINK:BS:CATegory AWARea BWARea AMRRange BMRRange AMRLow BMRLow ALARea BLARea</code> <code>[:SENSe]:RADio:STANdard:PRESet:DLINK:BS:CATegory?</code>
Example	<code>:RAD:STAN:PRES:DLIN:BS:CAT BWAR</code> <code>:RAD:STAN:PRES:DLIN:BS:CAT?</code>
Dependencies	Grayed-out when Radio Direction is Uplink
Couplings	Values to be preset will not be preset to the selected one until the action “Apply Preset (to All CCs)” is executed
Preset	BWARea
State Saved	Yes
Range	Category A Wide Area BS Category B Wide Area BS Category A Medium Range BS Category B Medium Range BS Category A Medium Range BS (Low Power rated) Category B Medium Range BS (Low Power rated) Category A Local Area BS Category B Local Area BS

Assumed Adjacent Channels

This control is part of the “Preset for ACP, Mod Analysis” section of the Advanced Preset Parameters dialog. It lets you set the Assumed Adjacent Channels for carrier configuration preset. Set the value you want for this control and the other controls

in the “Configure Preset” section, then press “Apply Preset (to all CCs)” to execute preset. See the Values for Meas Standard section for the parameters to be preset.

Downlink

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DLINK:ACHannel[:TYPE] NR EUTra NREutra</code> <code>[:SENSe]:RADio:STANdard:PRESet:DLINK:ACHannel[:TYPE]?</code>
Example	<code>:RAD:STAN:PRES:DLIN:ACH NR</code> <code>:RAD:STAN:PRES:DLIN:ACH?</code>
Dependencies	UTRA and NR+UTRA are grayed-out when "Uplink Carrier Mode" on page 2648 is Sidelink - V2X
Preset	NR
State Saved	Yes
Range	NR (same BW) E-UTRA NR + E-UTRA

Uplink

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:ACHannel[:TYPE] NR UTRa NRUTra</code> <code>[:SENSe]:RADio:STANdard:PRESet:ULINK:ACHannel[:TYPE]?</code>
Example	<code>:RAD:STAN:PRES:ULIN:ACH NR</code> <code>:RAD:STAN:PRES:ULIN:ACH?</code>
Preset	NR
State Saved	Yes
Range	NR (same BW) UTRA NR + UTRA

UE Power Class

This control is part of the “Preset for ACP, Mod Analysis” section of the Advanced Preset Parameters dialog. It lets you select the UE Power Class for preset from Power Class 1 to 4.

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.

This parameter is valid for the ACP and Mod Analysis measurement.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:PClass CLASS1 ... CLASS4</code>
----------------	--

	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:PCLass?</code>
Example	<code>:RAD:STAN:PRES:ULIN:PCL CLASS3</code> <code>:RAD:STAN:PRES:ULIN:PCL?</code>
Dependencies	Grayed out when Radio Direction is Downlink Power Class 4 is grayed out when Frequency Range is FR1 Power Class 1, 2, and 4 are grayed-out when "Uplink Carrier Mode" on page 2648 is Sidelink - V2X
Preset	<code>CLASS3</code>
State Saved	Yes
Range	1 2 3 4

Uplink Channel Type

This control is part of the "Preset for Tx On|Off Power" section of the Advanced Preset Parameters dialog. It lets you set the Uplink Channel Type to preset parameters for the Transmit On|Off Power measurement. Set the value you want for this control and the other controls in the "Configure Preset" section, then press "Apply Preset (to all CCs)" to execute preset. See the Values for Meas Standard section for the parameters to be preset.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:CTYPe NONE PUS PRA4 PRA160S15 PRA160S30 PRA12 PRA123S15 PRA123S30 SRS PRA0S60 PRA0S120</code> <code>[:SENSe]:RADio:STANdard:PRESet:ULINK:CTYPe?</code>
Example	<code>:RAD:STAN:PRES:ULIN:CTYP PUS</code> <code>:RAD:STAN:PRES:ULIN:CTYP?</code>
Dependencies	Available selections differ depending on the combination of Freq Range and Duplex Mode as follows: When Freq Range is FR1 and Duplex Mode is FDD: - PUSCH, PRACH Config Index4, PRACH Config Index160 and SRS When Freq Range is FR1 and Duplex Mode is TDD: - PUSCH, PRACH Config Index12, PRACH Config Index123 and SRS When Freq Range is FR2: - PUSCH, PRACH Config Index0, SRS
Preset	<code>PUS</code>
State Saved	Yes
Range	PUSCH PRACH Config Index 4 PRACH Config Index 160 (15 kHz SCS) PRACH Config Index 160 (30 kHz SCS) PRACH Config Index 12 PRACH Config Index 123 (15 kHz SCS) PRACH Config Index 123 (30 kHz SCS) PRACH Config Index 0 (60 kHz SCS) PRACH Config Index 0 (120 kHz SCS) SRS

More Advanced Preset Parameters

Enables you to configure more advanced Apply Preset features.

Include RB Alloc Preset for Mod Analysis

Enables you to select whether or not RB Alloc Preset is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EVM:RBALloc OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EVM:RBALloc?</code>
Example	<code>:RAD:STAN:PRES:INCL:EVM:RBAL 1</code> <code>:RAD:STAN:PRES:INCL:EVM:RBAL?</code>
Notes	When Exclude is selected, the indicator “Exclude EVM RB Alloc” appears on the Meas Setup menu panel
Preset	ON
State Saved	Yes

Include Gate Source

Enables you to select whether or not Gate Source is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EGATe:SOURce OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EGATe:SOURce?</code>
Example	<code>:RAD:STAN:PRES:INCL:EGAT:SOUR 1</code> <code>:RAD:STAN:PRES:INCL:EGAT:SOUR?</code>
Preset	ON
State Saved	Yes

Include Periodic Timer Period

Enables you to select whether or not Periodic Timer Period is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:PERiod OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:PERiod?</code>
Example	<code>:RAD:STAN:PRES:INCL:FRAM:PER 1</code> <code>:RAD:STAN:PRES:INCL:FRAM:PER?</code>
Preset	ON
State Saved	Yes

Include Periodic Timer Sync Source

Enables you to select whether or not Periodic Timer Sync Source is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC[:SOURce] OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC[:SOURce]?</code>
Example	<code>:RAD:STAN:PRES:INCL:FRAM:SYNC 1</code> <code>:RAD:STAN:PRES:INCL:FRAM:SYNC?</code>
Preset	ON
State Saved	Yes

Include Periodic Timer Sync Holdoff

Enables you to select whether or not Periodic Timer Sync Holdoff is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC:HOLDoff OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC:HOLDoff?</code>
Example	<code>:RAD:STAN:PRES:INCL:FRAM:SYNC:HOLD 1</code> <code>:RAD:STAN:PRES:INCL:FRAM:SYNC:HOLD?</code>
Preset	ON
State Saved	Yes

Apply Preset (to All CCs)

This is the same as the Apply Preset (to All CCs) control on the Meas Standard menu panel tab under Meas Standard.

See ["Apply Preset \(to All CCs\)" on page 2657](#).

Apply Preset (to All CCs)

When you press this control, parameters of each component carrier are configured to the values set on the ["Bandwidth" on page 2643](#), ["Frequency Range" on page 2644](#), ["Duplex Mode" on page 2644](#), ["SCS" on page 2645](#) and ["RB Alloc Preset" on page 2646](#) controls in the "Configure Presets" section of the menu panel. These values will also be used for any subsequent Component Carriers created.

NOTE

You must press “**Apply Preset (to all CCs)**” or the values on the controls in the “**Configure Presets**” section of the menu panel will *not* affect the Component Carriers.

Remote Command `[:SENSe] :RADio :STANdard :PRESet :IMMediate`

Example `:RAD :STAN :PRES :IMM`

Notes Whenever any preset parameter is changed, including the following cases, the color of this control changes to amber, until “Apply Preset” is executed again

- Start-up
- Mode Preset
- Recall

Values for Meas Standard

Meas Standard Setting Parameters for Apply Preset

The following parameters in Meas Setup > Meas Standard let you configure the preset values for Component Carriers.

Direction	Downlink	Uplink
Bandwidth	5, 10, 15, 20, 25, 30, 35, 40, 45, 50, 60, 70, 80, 90, 100, 200, 400, 800, 1600, 2000 MHz	5, 10, 15, 20, 25, 30, 35, 40, 45, 50, 60, 70, 80, 90, 100, 200, 400, 800, 1600, 2000 MHz
Frequency Range	FR1 FR2	FR1 FR2
Duplex Mode	FDD TDD	FDD TDD
SCS	$\mu = 0$ (15 kHz), 1(30 kHz), 2 (60 kHz), 3 (120 kHz), 5 (480 kHz), 6 (960 kHz)	$\mu = 0$ (15 kHz), 1(30 kHz), 2 (60 kHz), 3 (120 kHz), 5 (480 kHz), 6 (960 kHz)
RB Alloc Preset	Fulfilled QPSK, Fulfilled 16 QAM, Fulfilled 64 QAM, Fulfilled 256 QAM, 1024 QAM NR-TM1.1 (port 0), 1.1 (port 1), 1.1 (2 layers), 1.2, 2 (64 QAM/16 QAM/QPSK), 2a, 2b, 3.1 (64 QAM/16 QAM/QPSK), 3.1a, 3.1b, 3.2, 3.3	Fulfilled Pi/2-BPSK (for DFT-s-OFDM only), Fulfilled QPSK, Fulfilled 16 QAM, Fulfilled 64 QAM, Fulfilled 256 QAM
UL Carrier Mode	n/a	Normal Uplink, Sidelink-V2X
OFDM Type (for Mod Analysis)	CP-OFDM	CP-OFDM, DFT-s-OFDM
Adjust Limit Mask for Freq Range (for ACP, SEM, PVT)	None, $f \leq 1.0$ GHz (FR1), $1.0 < f \leq 3.0$ GHz (FR1),	None, $f \leq 1.0$ GHz (FR1), $1.0 < f \leq 3.0$ GHz (FR1),

3 5G NR Mode
3.8 Transmit On|Off Power

and Spur only)	3.0 < f ≤ 4.2 GHz (FR1), 4.2 < f ≤ 6.0 GHz (FR1), 6.0 < f ≤ 7.125 GHz (FR1), 24.25 < f ≤ 29.5 GHz (FR2), 37.0 < f ≤ 43.5 GHz (FR2), 43.5 < f ≤ 48.2 GHz (FR2), 52.6 < f ≤ 71.0 GHz (FR2)	3.0 < f ≤ 4.2 GHz (FR1), 4.2 < f ≤ 6.0 GHz (FR1), 6.0 < f ≤ 7.125 GHz (FR1), 24.25 < f ≤ 29.5 GHz (FR2), 37.0 < f ≤ 43.5 GHz (FR2), 43.5 < f ≤ 48.2 GHz (FR2), 52.6 < f ≤ 71.0 GHz (FR2)
BS Type (for ACP, SEM, PvT and Spur only)	1-C (FR1 Conducted), 1-O (FR1 Radiated), 2-O (FR2 Radiated)	n/a
BS Category (for ACP, SEM, PvT, and Spur only)	Cat A Wide Area BS, Cat B Wide Area BS, Cat A Medium Range BS, Cat B Medium Range BS, Cat A Medium Range BS (Low Pr), Cat B Medium Range BS (Low Pr), Cat A Local Area BS, Cat B Local Area BS	n/a
Assumed Adj Channels (for ACP, FR1)	NR (same BW), E-UTRA, NR + E-UTRA	NR (same BW), UTRA, NR+UTRA
UE Power Class (for ACP: FR1 and Mod Analysis: FR2 UE IBE)	n/a	When Freq Range is FR1: Power Class 2, Power Class 3 When Freq Range is FR2: Power Class 1, Power Class 2, Power Class 3, Power Class 4
UL Channel Type (for Tx On Off Power)	n/a	When Freq Range is FR1: PUSCH, PRACH Config Index 4 (FDD), PRACH Config Index 160 (15 kHz SCS, FDD), PRACH Config Index 160 (30 kHz SCS, FDD), PRACH Config Index 12 (TDD), PRACH Config Index 123 (15 kHz SCS, TDD), PRACH Config Index 123 (30 kHz SCS, TDD), SRS When Freq Range is FR2:

PUSCH,
PRACH Config Index 0 (60 kHz SCS),
PRACH Config Index 0 (120 kHz SCS),

TS38.521-2 v.17.0.0 (v.2022-09) The following PvT limit requirements are still FFS:

Clause 6.3.3.2, Table 6.3.3.2.5-3: Test Tolerance for OFF power ... still FFS.

Clause 6.3.3.2, Table 6.3.3.2.5-4: Test Tolerance for ON power ... still FFS.

Clause 6.3.3.4, Table 6.3.3.4.5-1: PRACH time mask ... for On power and On power Tolerance ... still FFS.

Clause 6.3.3.6 SRS time mask ... still all FFS.

When "[Apply Preset \(to All CCs\)](#)" on page 2657 is pressed, related measurement parameters and Gate parameters are changed to the values described in the following sections in this chapter.

Reference Standard version and ACP & SEM table indicator

The following reference 3GPP test spec doc with its version number, ACP and SEM table numbers are displayed in the **Advanced Preset Parameters** dialog menu.

e.g.)

3GPP TS38.141-1 v.17.7.0 (2022-09)

ACP: Table 6.6.3.5.2-1

ACP reference table selection represents the Relative Limit for Outer Offsets. (The table numbers for Absolute limits, Test Tolerances, and the limits for Inner Offsets/CACLR are not displayed.)

Direction = Uplink

When UL Carrier Mode = Normal Uplink:

Preset parameters		Reference spec doc, ACP and SEM table in the menu		
FR	Assumed Adjacent Channel (ACLR)	Test Spec	ACP (*)	SEM
FR1	NR (same BW)	TS38.521-1	Table 6.5.2.4.1.5-2	Table 6.5.2.2.5-1
	UTRA, NR + UTRA	v.17.6.1 (2022-10)	Table 6.5.2.4.2.5-2	
FR2		TS38.521-2 v.17.0.0 (2022-09)	Table 6.5.2.3.5-1	Table 6.5.2.1.5-1

When UL Carrier Mode = Sidelink / V2X:

Preset parameters		Reference spec doc, ACP and SEM table in the menu		
FR	Assumed Adjacent Channel (ACLR)	Test Spec	ACP (*)	SEM
FR1	NR (same BW)	TS38.521-1 v.17.6.1 (2022-10)	Table 6.5E.2.4.1.5-2	Table 6.5E.2.2.1.5-1

(*) ACP reference table selection represents the Relative Limit for Outer Offsets. (The table numbers for Absolute limits, Test Tolerances, and the limits for Inner Offsets/CACLR are not displayed.)

Measurement-Global parameters

The following parameters are configured as preset values.

- "Configure Component Carriers" on page 2664
- "Trigger/Gate Parameters" on page 2664

Configure Component Carriers

When Direction = Uplink:

Preset Configuration	Preset Value
UL Carrier Mode	Sidelink
Normal Uplink	Disabled (for all CCs)
Sidelink / V2X	Enabled (for all CCs)

Trigger/Gate Parameters

When executing "Apply Preset", preset the following parameters:

Trigger menu	Parameter	Preset values		
		Downlink (*1) FR1	Downlink (*1) FR2	Uplink
Trigger	Select Trigger Source (*2)	(no preset)	(no preset)	(no preset)
	Period (Periodic Timer) (*3)	5.000 ms	1.250 ms	10.000 ms
	(Periodic) Sync Source (*4)	RF Burst	RF Burst	RF Burst
Gate Source	Select Gate Source	Periodic	Periodic	Periodic
	Period (Periodic Timer) (*3)	5.000 ms	1.250 ms	10.000 ms
	(Periodic) Sync Source (*4)	RF Burst	RF Burst	RF Burst
	Sync Holdoff	On, 250 us	On, 250 us	On, 250 us
Gate Settings	Gate (*5)	On	On	(no preset)
	Gate Delay	5.000 ms	1.250 ms	(no preset)
	Gate Length	3.700 ms (*6) or 2.700 ms (*6)	927.5 us	(no preset)
	Gate Holdoff	(no preset)	(no preset)	(no preset)
Periodic Sync Src	Select Periodic Trigger Sync Source (*4)	RF Burst	RF Burst	RF Burst

	Absolute Trig Level	(no preset)	(no preset)	(no preset)
	Trigger Slope	(no preset)	(no preset)	Positive
Auto Holdoff	Trig Holdoff	(no preset)	(no preset)	On, 250 us (*7)
	Holdoff Type	(no preset)	(no preset)	Below (*7)

Notes:

(*1) For Downlink case, these values are preset with the Apply Preset action when "[RB Alloc Preset](#)" on page 2646 is any of NR-TM and "[Duplex Mode](#)" on page 2644 is TDD.

(*2) Trigger Source is a separate parameter in each measurement, and is not preset with the Apply Preset action. Note that in the Tx On/Off Power measurement, it is forcefully changed to Periodic when the direction is switched to Uplink or to External 1 when the direction is switched to Downlink except for models with the H1G option. With the H1G option, it is changed to either External 1 (when Info BW \leq 255 MHz) or External 3 (when Info BW \geq 256 MHz) depending on the Info BW determined by the component carrier configuration.

(*3) Periodic Trigger Period and Gate Period are the same/shared parameter, so called "Periodic Timer Period".

(*4) Periodic Trigger Sync Source and Periodic Gate Sync Source are the same/shared parameter.

(*5) Gate is preset to Off with the Apply Preset action when "[Duplex Mode](#)" on page 2644 is FDD.

(*6) Gate Length preset value for DL FR1 depends on "[DL FR1 NR-TM Reference Standard Selection](#)" on page 2357 under the Advanced Preset Parameters menu: 3.700 ms for TS38.141-1 or 2.700 ms for TS37.141 BC3 CS16/17.

(*7) These Trig Holdoff & Holdoff Type settings make the trigger holdoff wait for an OFF power period at least 250 us (in any burst configuration preset in Uplink), and then triggers at the beginning of the power raise timing (with Trigger Slope = Positive) of the Burst ON power as expected. This is to avoid an unexpected triggering with other random power up or down.

Transmit On|Off Power

The following parameters are configured as preset values.

- "[Meas Setup: Meas Time parameters for Downlink](#)" on page 2072
- "[Meas Setup: Meas Time parameters for Uplink](#)" on page 2072
- "[Meas Setup: Other Setting parameters](#)" on page 2075

- "Meas Setup: Limit Parameters" on page 2076
- "Other parameters" on page 2082

Meas Setup: Meas Time parameters for Downlink

Preset Configuration				Preset Value	
RB Alloc	FR	Duplex	DL FR1 TDD NR-TM Ref Standard	Meas Offset	Meas Interval
NR-TMx.x	FR1	TDD	TS38.141-1	0 subframe	5 subframes
			TS37.141 BC3 CS16/17	4 subframes	5 subframes
	FR2	TDD	n/a	0 subframe	2 subframes

Preset Configuration				Preset Value		
RB Alloc	FR	Duplex	DL FR1 TDD NR-TM Ref Standard	Burst Time [ms]	Burst RepetitionPeriod [ms] (*)	UL Off Power Length [ms]
NR-TMx.x	FR1	TDD	TS38.141-1	3.7143	5.000	n/a
			TS37.141 BC3 CS16/17	2.7143	5.000	n/a
	FR2	TDD	n/a	0.9286	1.250	n/a

(*) Burst Repetition Period for Downlink comes from NR-TM DL-UL-Periodicity: 5 ms for FR1 and 1.25 ms for FR2.

Meas Setup: Meas Time parameters for Uplink

Preset Configuration					Preset Value

Preset Configuration			Preset Value			
RB Alloc	FR	Duplex	UL Channel Type	Burst Time [ms]	Burst Repetition Period [ms] (*6)	UL Off Power Length [ms]
Fulfilled-xx	FR1	FDD, TDD	PUSCH	2 ^{-u}	10.0 (15 kHz SCS), 5.0 (30, 60 k SCS)	2 ^{-u}
			SRS	0.0714	10.0	2 ^{-u}
		FDD	PRACH Config Index	0.9031	10.0	0.9031

3 5G NR Mode
3.8 Transmit On|Off Power

		4				
		PRACH Config Index 160 (15k SCS)	0.4281	10.0	0.4281	(*2)
		PRACH Config Index 160 (30k SCS)	0.2141	10.0	0.2141	(*3)
	TDD	PRACH Config Index 12	0.9031	10.0	0.9031	(*1)
		PRACH Config Index 123 (15k SCS)	0.4281	10.0	0.4281	(*2)
		PRACH Config Index 123 (30k SCS)	0.2141	10.0	0.2141	(*3)
FR2	TDD	PUSCH	$2^{-\mu}$	10.0	$2^{-\mu}$	
		PRACH Config Index 0 (60 k SCS)	0.0357	10.0	0.0357	(*4)
		PRACH Config Index 0 (120 k SCS)	0.0178	10.0	0.0178	(*5)
		SRS	$2^{-\mu}$ (TBD)	10.0	$2^{-\mu}$	

Notes:

UL Meas Offset preset for PRACH = $\left\lceil \frac{\text{PRACH_ON_period}}{2^{-\mu}} \right\rceil$ slots,

UL Meas Interval preset for PRACH = $\left\lceil \frac{\text{PRACH_ON_period}}{2^{-\mu}} \right\rceil + \left\lceil \frac{2 \times \text{PRACH_ON_period}}{2^{-\mu}} \right\rceil$ slots,

where:

$2^{-\mu}$ [ms]: UL slot length with $\mu = 0, 1, 2,$ or 3 for SCS (PUSCH) 15 kHz, 30 kHz, 60 kHz, or 120 kHz, respectively,

PRACH_ON_period [ms], which values are:

(*1) 0.903125 ms for FR1 PRACH Config Index 4 for FDD and 12 for TDD which Preamble Format is 0,

(*2) 0.428125 ms for FR1 PRACH Config Index 160 for FDD and 123 for TDD (both 15 kHz SCS) which Preamble Format is A3 (15 kHz SCS),

(*3) 0.2140625 ms for FR1 PRACH Config Index 160 for FDD and 123 for TDD (both 30 kHz SCS) which Preamble Format is A3 (30 kHz SCS),

(*4) 0.035677 ms for FR2 PRACH Config Index 0 (60 kHz SCS) which Preamble Format is A1 (60 kHz SCS), and

(*5) 0.017839 ms for FR2 PRACH Config Index 0 (120 kHz SCS) which Preamble Format is A1 (120 kHz SCS).

(*6) Burst Repetition Period for Uplink:

- FR1 PUSCH: “dl-UL-TransmissionPeriodicity” in Table 6.3.3.2.4.3-3 TDD-UL-DL-Config in TS38.521-1.
- FR1 PRACH: Not clear but “ssb-PeriodicityServingCell” = ms20 (20 ms)? in Table 6.3.3.4.4.3-3 ServingCellConfigCommonSIB in TS38.521-1, safer to set the maximum value 10 ms.
- FR1 SRS: Not clear but “repetitionFactor” = n1? in Table 6.3.3.6.4.3-1 SRS-Config: SRS time mask measurement in TS38.521-1, safer to set the maximum value 10ms.
- FR2 PUSCH: Not clear, safer to set the maximum value 10 ms.
- FR2 PRACH: Not clear, safer to set the maximum value 10 ms.
- FR2 SRS: FFS, safer to set the maximum value 10 ms.

Meas Setup: Other Setting parameters

Direction	Parameter	Preset Configuration	Preset Value
Downlink	Auto Timing Adjust	(any)	Off
	SCS(*)	SCS $\mu = 0, 1, 2, \text{ or } 3$	Same SCS
Uplink	Auto Timing Adjust	(any)	On
	SCS(*)	SCS $\mu = 0, 1, 2, \text{ or } 3$	Same SCS

(*) Sub Carrier Spacing (SCS) setting determines the following internal parameters:

- Downlink: “N” factor for $70/N \mu\text{s}$ RMS averaging window for making the OFF power. $N = \text{SCS}/15$, where SCS is in kHz.
- Uplink: Slot length = $2^{-\mu}$ msec, where $\mu = 0, 1, 2, \text{ or } 3$ for SCS 15 kHz, 30 kHz, 60 kHz, or 120 kHz, respectively.

Meas Setup: Limit Parameters

– Direction = Downlink:

Parameter	Preset Configuration		Adjust Range (GHz)	Preset Value

Note:

(*) FR2 PUSCH ON Power Ref & Tolerance limit values were defined in Table 6.3.3.2.5-2, TS38.521-2 v.16.2.0 (2019-12); Meanwhile, TT value for the Power Ref has not been defined yet (FFS) in Table 6.3.3.2.5-4, TS38.521-2 v.16.6.0 (2020-12).

Other parameters

- BW > Settings tab > Info BW: Auto

3.8.8.5 Meas Time

Access to the menu for setting up the parameters related to the measurement time.

Burst Time

Sets Burst Time to measure. This parameter is effective when Downlink and Auto Timing Adjust is set to Off.

Remote Command	<code>[:SENSe]:PVTime:BURSt:WIDTh <real></code> <code>[:SENSe]:PVTime:BURSt:WIDTh?</code>
Example	<code>:PVT:BURS:WIDT 10ms</code> <code>:PVT:BURS:WIDT?</code>
Couplings	This value will be preset when the action “Apply Preset (to All CCs)” is executed. For the preset value, see Transmit On Off Power in Values for Meas Standard.
Preset	500 us
State Saved	Yes
Min/Max	1 us/10.0 ms

Burst Repetition Period

Determines the burst repetition period. For correct measurement, the value must be set to the repetition period of the burst and less than or equal to Meas Interval time.

Remote Command	<code>[:SENSe]:PVTIme:BURSt:RPERiod <time></code> <code>[:SENSe]:PVTIme:BURSt:RPERiod?</code>
Example	<code>:PVT:BURS:RPER 7ms</code> <code>:PVT:BURS:RPER?</code>
Notes	This value will be preset when the action “Apply Preset (to All CCs)” is executed. For the preset value, see Transmit On Off Power in Values for Meas Standard
Couplings	This parameter cannot be smaller than Burst Time When entering the value smaller than Burst Time, coupled to the value of Burst Time
Preset	5 ms
State Saved	Yes
Min	100 us
Max	10 ms

UL Off Power Length

It is used as uplink off power measurement period.

Remote Command	<code>[:SENSe]:PVTIme:ULINK:POFF:WIDTh <real></code> <code>[:SENSe]:PVTIme:ULINK:POFF:WIDTh?</code>
Example	<code>:PVT:ULIN:POFF:WIDT 5 ms</code> <code>:PVT:ULIN:POFF:WIDT?</code>
Dependencies	This control appears only when Radio Direction is Uplink
Couplings	This value will be preset when the action “Apply Preset (to All CCs)” is executed. For the preset value, see Transmit On Off Power in Values for Meas Standard.
Preset	1.0 ms
State Saved	Yes
Min	1 us
Max	0.01 s
Backwards Compatibility SCPI	<code>[:SENSe]:PVTIme:ULINK:OFFPower:WIDTh</code>

DL Meas Offset

This control is part of the “Predefined Params” section of **Meas Standard**. It lets you set the Downlink Meas Offset to be used for **Transmit On/Off Power** measurements.

NOTE

This control only appears in the **Transmit On/Off Power** measurement.

Remote Command	<code>[:SENSe]:PVTime:DLINK:MOFFset <integer></code> <code>[:SENSe]:PVTime:DLINK:MOFFset?</code>
Example	<code>:PVT:DLIN:MOFF 1</code> <code>:PVT:DLIN:MOFF?</code>
Dependencies	This control appears only when Radio Direction is Downlink
Couplings	This value will be preset when the action “Apply Preset (to All CCs)” is executed. For the preset value, see Transmit On Off Power in Values for Meas Standard.
Preset	0
State Saved	Yes
Min	-9
Max	9

UL Meas Offset

It lets you set the Uplink Meas Offset to be used for Transmit On/Off Power measurements.

Remote Command	<code>[:SENSe]:PVTime:ULINK:MOFFset <integer></code> <code>[:SENSe]:PVTime:ULINK:MOFFset?</code>
Example	<code>:PVT:ULINK:MOFF 1</code> <code>:PVT:ULINK:MOFF?</code>
Dependencies	This control appears only when Radio Direction is Uplink
Couplings	This value will be preset when the action “Apply Preset (to All CCs)” is executed. For the preset value, see Transmit On Off Power in Values for Meas Standard.
Preset	-2
State Saved	Yes
Min	Depends on the combination of values of Frequency Range and SCS after executing Apply Preset (to All CCs).
Max	Depends on the combination of values of Frequency Range and SCS after executing Apply Preset (to All CCs).

DL Meas Interval

This control is part of the “Predefined Params” section of **Meas Standard**. It lets you set the desired subframe count for downlink analysis in **Transmit On/Off Power** measurements.

NOTE This control only appears in the **Transmit On/Off Power** measurement.

Remote Command	<code>[:SENSe]:PVTime:DLINK:MINTerval <integer></code> <code>[:SENSe]:PVTime:DLINK:MINTerval?</code>
Example	<code>:PVT:DLIN:MINT 5</code> <code>:PVT:DLIN:MINT?</code>
Dependencies	This control appears only when Radio Direction is Downlink
Couplings	This value will be preset when the action “Apply Preset (to All CCs)” is executed. For the preset value, see Transmit On Off Power in Values for Meas Standard.
Preset	5
State Saved	Yes
Min	1
Max	10

UL Meas Interval

This control is part of the “Predefined Params” section of **Meas Standard**. It lets you set the desired slot count for uplink analysis in **Transmit On/Off Power** measurements.

NOTE This control only appears in the **Transmit On/Off Power** measurement.

Remote Command	<code>[:SENSe]:PVTime:ULINK:MINTerval <integer></code> <code>[:SENSe]:PVTime:ULINK:MINTerval?</code>
Example	<code>:PVT:ULIN:MINT 5</code> <code>:PVT:ULIN:MINT?</code>
Dependencies	This control appears only when Radio Direction is Uplink
Couplings	This value will be preset when the action “Apply Preset (to All CCs)” is executed. For the preset value, see Transmit On Off Power in Values for Meas Standard.
Preset	6
State Saved	Yes

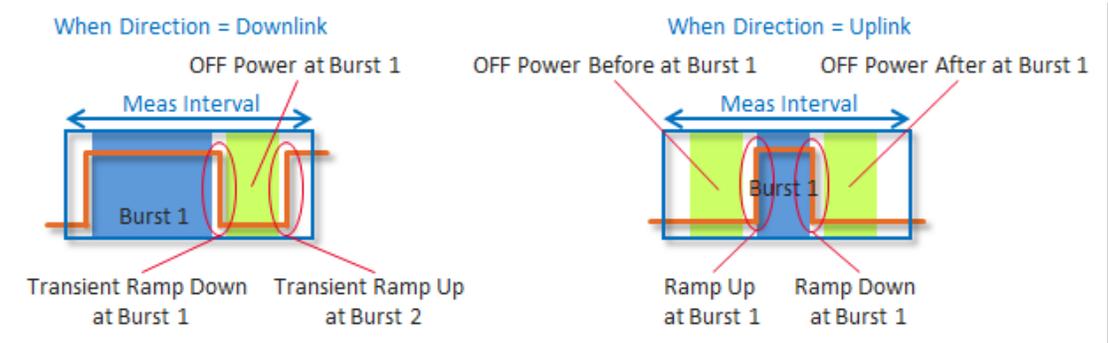

Min	1
Max	Depends on the combination of values of Frequency Range and SCS after executing Apply Preset (to All CCs).

Meas Range

Enables you to select the measurement range from all bursts or specific burst within the Meas Interval. If there are multiple bursts within the Meas Interval, the burst number in the Metrics window are determined as follows and returned values of :MEAS|READ|FETCh:PVT1 are the values at that burst number. The burst number in the Metrics window can be obtained by :MEAS|READ|FETCh:PVT13.

- All Bursts: the burst number determined with the following criteria is displayed in the Metrics window.
 - On Power and Burst Width:
 - Downlink: The same burst number as Off Power.
 - Uplink with UL On Pwr Limit Test = On: The burst number that contains the maximum deviation from the UL On Pwr Reference value among all detected bursts
 - Uplink with UL On Pwr Limit Test = Off: The burst number right before or after the Off Power period that contains the maximum RMS Off Power value among all detected Off Power Before/After periods
 - Off Power (Downlink): The burst number right before the Off Power period that contains the maximum Off Power peak value among all detected Off Power periods
 - Off Power After (Uplink): The burst number right before the Off Power After period whose measured RMS Off Power value is the maximum among all detected Off Power After periods
 - Off Power Before (Uplink only): The burst number right after the Off Power Before period whose measured RMS Off Power value is the maximum among all detected Off Power Before periods
 - Ramp Up / Transient Ramp Up: The burst number whose measured ramp up period is the worst one among all detected bursts
 - Ramp Down / Transient Ramp Down: The burst number whose measured ramp down period is the worst one among all detected bursts
- Specific Burst: the burst number specified by the Specific Burst Number is displayed in the Metrics window.

Note that when in downlink, the results of Ramp Down / Transient Ramp Down of Specific Burst Number and Ramp Up / Transient Ramp Up of Specific Burst Number + 1 are displayed. When in uplink, the results of Specific Burst Number itself are displayed.

Remote Command	<code>CALCulate:PVTime:MRANge ALL SPECific</code> <code>CALCulate:PVTime:MRANge?</code>
Example	<code>CALC:PVT:MRAN ALL</code> <code>CALC:PVT:MRAN?</code>
Preset	SPECific
State Saved	Yes
Range	All Bursts Specific Burst

Specific Burst Number

Specifies the burst to be analyzed.

Remote Command	<code>:CALCulate:PVTime:SBNumber <integer></code> <code>:CALCulate:PVTime:SBNumber?</code>
Example	<code>:CALC:PVT:SBN 8</code> <code>:CALC:PVT:SBN?</code>
Dependencies	This control is grayed out when Meas Range is All Bursts
Preset	1
State Saved	Yes
Min	1
Max	10

3.8.8.6 Limits

Accesses the setup menu for the measurement ramp up, ramp down time and threshold for off power.

Please note, whether the pass/fail shown in measurement bar (at upper-left corner of screen) will be pass or fail is just determined by the threshold listed in Limits menu, they are Max Ramp Up Time, Max Ramp Down Time, Downlink Off Power and Uplink Off Power. If and only if ramp up time, ramp down time and off power (downlink or uplink) measured are all less than Max Ramp Up Time, Max Ramp Down Time and Off Power (downlink or uplink) separately, the Pass/Fail flag is set to pass (green), otherwise Pass/Fail flag is set to fail (red). The limit mask shown on screen is just to indicate which part is active burst and which part is inactive burst, the mask is nothing to do with the Pass/Fail criteria.

Max Ramp Up Time

It is used as threshold which can judge whether the real measured ramp up time can be passed or not. If real measured ramp up time exceeds Max Ramp Up Time, then ramp up time measurement fails, otherwise, it passes. This is used to determine the end position of the Transmitter OFF period when Auto Timing Adjust is On.

Remote Command	<code>[:SENSe]:PVTime:LIMit:RAMP:URTime <time></code> <code>[:SENSe]:PVTime:LIMit:RAMP:URTime?</code>
Example	<code>:PVT:LIM:RAMP:URT 10.0e-6</code> <code>:PVT:LIM:RAMP:URT?</code>
Dependencies	This control is available when Direction is Downlink and Auto Timing Adjust is On or when Direction is Uplink
Couplings	This value will be preset when the action “Apply Preset (to All CCs)” is executed. See Transmit On Off Power in Values for Meas Standard.
Preset	10.0 us
State Saved	Yes
Min/Max	1.0 us/100.0 us

Max Ramp Down Time

It is used as threshold which can judge whether the real measured ramp down time can be passed or not. If real measured ramp down time exceeds Max Ramp Down Time, then ramp down time measurement fails, otherwise, it passes. This is used to determine the start position of the Transmitter OFF period when Auto Timing Adjust is On.

Remote Command	<code>[:SENSe]:PVTime:LIMit:RAMP:DRTTime <time></code> <code>[:SENSe]:PVTime:LIMit:RAMP:DRTTime?</code>
Example	<code>:PVT:LIM:RAMP:DRT 10.0e-6</code> <code>:PVT:LIM:RAMP:DRT?</code>

Dependencies	This control is available when Direction is Downlink and Auto Timing Adjust is On or when Direction is Uplink
Couplings	This value will be preset when the action “Apply Preset (to All CCs)” is executed. See Transmit On Off Power in Values for Meas Standard.
Preset	10.0 us
State Saved	Yes
Min/Max	1.0 us/100.0 us

Downlink Transient Period

This parameter sets the threshold for downlink transient period which is calculated from expected burst boundary to the point of the specified OFF power limit. The Transmitter OFF period is determined by this parameter when Auto Timing Adjust is Off.

If the measured ramp up or ramp down transient period of downlink signal exceeds the threshold, the ramp up or ramp down transient period measurements fail.

Remote Command	<code>[:SENSe]:PVTime:LIMit:TRANsient:DLINK <time></code> <code>[:SENSe]:PVTime:LIMit:TRANsient:DLINK?</code>
Example	<code>:PVT:LIM:TRAN:DLIN 10.0e-6</code> <code>:PVT:LIM:TRAN:DLIN?</code>
Dependencies	This control appears only when the Radio Direction is Downlink and available when Auto Timing Adjust is Off
Preset	10.0 us
State Saved	Yes
Min/Max	1.0 us/100.0 us

Downlink Off Power

It is used as threshold in downlink which can judge whether the real measured off power can be passed or not. If real measured off power exceeds Downlink Off Power, then off power measurement fails, otherwise, it passes. Note that the unit of this parameter is dBm/MHz.

Remote Command	<code>[:SENSe]:PVTime:LIMit:POFF:DLINK <real></code> <code>[:SENSe]:PVTime:LIMit:POFF:DLINK?</code>
Example	<code>:PVT:LIM:POFF:DLIN -83.0</code> <code>:PVT:LIM:POFF:DLIN?</code>
Dependencies	This control appears only when the Radio Direction is Downlink
Couplings	This value will be preset when the action “Apply Preset (to All CCs)” is executed. See Transmit On Off Power

	Power in Values for Meas Standard.
Preset	-83.00
State Saved	Yes
Min/Max	-150.00/0.00

Uplink Off Power

It is used as threshold in uplink which can judge whether the real measured off power can be passed or not. If real measured off power exceeds Uplink Off Power, then off power measurement fails, otherwise, it passes. Note that the unit of this parameter is dBm.

Remote Command	<code>[:SENSe]:PVTime:LIMit:POFF:ULINK <real></code> <code>[:SENSe]:PVTime:LIMit:POFF:ULINK?</code>
Example	<code>:PVT:LIM:POFF:ULIN -50.0</code> <code>:PVT:LIM:POFF:ULIN?</code>
Dependencies	This control appears only when the Radio Direction is Uplink
Couplings	This value will be preset when the action "Apply Preset (to All CCs)" is executed. See Transmit On Off Power in Values for Meas Standard.
Preset	-48.3
State Saved	Yes
Min/Max	-150.00 dBm/0.00 dBm

Uplink On Power Reference

This is used as an Expected Transmission ON Measured power reference in uplink, which judges whether the real measured on power is passed or not when "[Uplink On Power Limit Test](#)" on page 2091 is set to on. If the real measured on power is within the Uplink On Power Reference +/- Uplink On Power Tolerance, then the on power measurement passes, otherwise, it fails.

Remote Command	<code>[:SENSe]:PVTime:LIMit:PON:ULINK:REFeRence <real></code> <code>[:SENSe]:PVTime:LIMit:PON:ULINK:REFeRence?</code>
Example	<code>:PVT:LIM:PON:ULIN:REF 9.8</code> <code>:PVT:LIM:PON:ULIN:REF?</code>
Dependencies	This control appears only when the Radio Direction is Uplink
Couplings	This value will be preset when the action "Apply Preset (to All CCs)" is executed. See Transmit On Off Power in Values for Meas Standard.
Preset	9.8
State Saved	Yes

Min	-150 dBm
Max	150 dBm

Uplink On Power Tolerance

This is used as the pass/fail margin from the UL On Power Reference value for the UL On Power measurement limit test when "Uplink On Power Limit Test" on page 2091 is set to on.

Remote Command	<code>[:SENSe]:PVTime:LIMit:PON:ULINK:TOLerance <real></code> <code>[:SENSe]:PVTime:LIMit:PON:ULINK:TOLerance?</code>
Example	<code>:PVT:LIM:PON:ULIN:TOL 10.7</code> <code>:PVT:LIM:PON:ULIN:TOL?</code>
Dependencies	This control appears only when the Radio Direction is Uplink
Couplings	This value will be preset when the action "Apply Preset (to All CCs)" is executed. See Transmit On Off Power in Values for Meas Standard.
Preset	10.70 dB !when FR1 100MHz with SCS 30 kHz
State Saved	Yes
Min	0 dB
Max	100 dB

Uplink On Power Limit Test

When it is set to on, the measurement judges whether the real measured on power is passed or not. If the real measured on power is within Uplink On Power Reference +/- Uplink On Power Tolerance, the on power measurement passes, otherwise, it fails.

Remote Command	<code>[:SENSe]:PVTime:LIMit:PON:ULINK:STATe OFF ON 0 1</code> <code>[:SENSe]:PVTime:LIMit:PON:ULINK:STATe?</code>
Example	<code>:PVT:LIM:PON:ULIN:STAT 1</code> <code>:PVT:LIM:PON:ULIN:STAT?</code>
Dependencies	This control appears only when the Radio Direction is Uplink
Preset	OFF
State Saved	Yes

3.8.8.7 Threshold

Accesses the setup menu to set the thresholds used to find ramp up and ramp down part in burst signal.

These parameters are used when

- Direction is Downlink and Auto Timing Adjust is On
- Direction is Uplink

Ramp Up Start Level

Specifies the relative power level to active burst average power level at which the ramp-up starts.

Remote Command	<code>[:SENSe]:PVTIme:THReshold:UP:STARt <rel_amp1></code> <code>[:SENSe]:PVTIme:THReshold:UP:STARt?</code>
Example	<code>:PVT:THR:UP:STAR -50.0</code> <code>:PVT:THR:UP:STAR?</code>
Preset	-20.000 dB
State Saved	Yes
Min/Max	-120.000 dB/0.000 dB

Ramp Up End Level

Specifies the relative power level to active slots average power level at which the ramp-up ends.

Remote Command	<code>[:SENSe]:PVTIme:THReshold:UP:END <rel_amp1></code> <code>[:SENSe]:PVTIme:THReshold:UP:END?</code>
Example	<code>:PVT:THR:UP:END -50.0</code> <code>:PVT:THR:UP:END?</code>
Preset	-0.915 dB
State Saved	Yes
Min/Max	-120.000 dB/0.000 dB

Ramp Down Start Level

Specifies the relative power level to active slots average power level at which the ramp-down starts.

Remote Command	<code>[:SENSe]:PVTIme:THReshold:DOWN:STARt <rel_amp1></code> <code>[:SENSe]:PVTIme:THReshold:DOWN:STARt?</code>
Example	<code>:PVT:THR:DOWN:STAR -50.0</code> <code>:PVT:THR:DOWN:STAR?</code>

Preset	-0.915 dB
State Saved	Yes
Min/Max	-120.000 dB/0.000 dB

Ramp Down End Level

Specifies the relative power level to active slots average power level at which the ramp-down ends.

Remote Command	<code>[:SENSe]:PVTIme:THReshold:DOWN:END <rel_amp></code> <code>[:SENSe]:PVTIme:THReshold:DOWN:END?</code>
Example	<code>:PVT:THR:DOWN:END -50.0</code> <code>:PVT:THR:DOWN:END?</code>
Preset	-20.000 dB
State Saved	Yes
Min/Max	-120.000 dB/0.000 dB

3.8.8.8 Advanced

The Advanced tab contains controls for setting advanced functions of the analyzer.

Noise Floor Extension

Turns on the **Noise Floor Extension** function. When this function is On, the expected noise power of the analyzer (derived from a factory calibration) is subtracted from the trace data. This will usually reduce the apparent noise level by about 10 dB in low band, and 8 dB in high band (>~3.6 GHz).

When Noise Floor Extension is on, the Off power results (signal plus analyzer noise) will be compensated by subtracting the estimated noise power, leaving just the signal power. For downlink, the 70us RMS Off power trace will be compensated, and for uplink, both Off Power Before and Off Power After results will be compensated.

Remote Command	<code>[:SENSe]:CORRection:NOISe:FLOor ON OFF 1 0</code> <code>[:SENSe]:CORRection:NOISe:FLOor?</code>
Example	<code>:CORR:NOIS:FLO ON</code> <code>:CORR:NOIS:FLO?</code>
Dependencies	This control only appears in instruments with the NFE or NF2 license installed. In all others, the control does not appear, however the SCPI command will be accepted without error (but will have no effect)

Couplings	When NFE is enabled in any mode manually, a prompt will be displayed reminding you to perform the Characterize Noise Floor operation if it is needed. If NFE is enabled through SCPI and a Characterize Noise Floor operation is needed, an error will be entered in the system error queue
Preset	Unaffected by Mode Preset. Turned off by Restore Mode Defaults
State Saved	No

Noise Correction

Sets the noise floor correction function to On or Off. On enables measurement noise correction when the measured power in the reference channel or any offset is close to the noise floor of the analyzer. Off turns these corrections off.

Remote Command	<code>[:SENSe]:PVTime:CORRection:NOISe[:AUTO] OFF ON 0 1</code> <code>[:SENSe]:PVTime:CORRection:NOISe[:AUTO]?</code>
Example	<code>:PVT:CORR:NOIS OFF</code> <code>:PVT:CORR:NOIS?</code>
Preset	0
State Saved	Yes
Range	On Off

Ramp Time Length

Indicates the searching window length in which the start of ramp up or the end of ramp down is searched. If it is set shorter than actual ramp time, the ramp may be lost. The start of the searching window is derived from the external trigger when auto timing adjust is off, and is at the actual burst boundary when auto timing adjust is on.

Remote Command	<code>[:SENSe]:PVTime:RAMP:SEARch:LENGth <time></code> <code>[:SENSe]:PVTime:RAMP:SEARch:LENGth?</code>
Example	<code>:PVT:RAMP:SEAR:LENG 50us</code> <code>:PVT:RAMP:SEAR:LENG?</code>
Preset	10.0 us
State Saved	Yes
Min/Max	1.0 us/100.0 us

Off Power Meas Rules

Indicates which way to calculate 70us RMS Off Power over the entire OFF period. When it is "Speed," 70 us averaged power is calculated in 35us granularity during

OFF period. When it is “Accuracy,” the 70us RMS Off Power is calculated for each sample points during OFF period.

Remote Command	<code>[:SENSe]:PVTime:POFF:MEAS:RULes SPEed ACCuracy</code> <code>[:SENSe]:PVTime:POFF:MEAS:RULes?</code>
Example	<code>:PVT:POFF:MEAS:RUL SPE</code> <code>:PVT:POFF:MEAS:RUL?</code>
Preset	SPEed
State Saved	Yes
Range	Speed Accuracy

IF Gain

Sets ranging in the digital IF when acquiring an I/Q time record.

See ["More Information about IF Gain" on page 2096](#).

This function is not affected by RF Input Range attenuation.

The IF Gain control is used to set the IF Gain function to Auto, Low Gain or High Gain

On sets the high gain option, which allows for better noise level measurements.

Off sets low gain when measuring large signals.

When this parameter is changed manually from front panel, IF Gain Auto will become Man.

Remote Command	<code>[:SENSe]:PVTime:IF:GAIN[:STATe] ON OFF 1 0</code> <code>[:SENSe]:PVTime:IF:GAIN[:STATe]?</code> <code>[:SENSe]:PVTime:IF:GAIN:AUTO[:STATe] ON OFF 1 0</code> <code>[:SENSe]:PVTime:IF:GAIN:AUTO[:STATe]?</code>
Example	<code>:PVT:IF:GAIN ON</code> <code>:PVT:IF:GAIN?</code> <code>:PVT:IF:GAIN:AUTO ON</code> <code>:PVT:IF:GAIN:AUTO?</code>
Notes	where ON = high gain OFF = low gain
Dependencies	This control does not appear in VXT or UXM
Couplings	When either the auto attenuation is active (for example, with an electrical attenuator), or the optimize mechanical attenuator range is requested, the IF Gain setting is changed using the following rule The Auto selection sets IF Gain On under any of the following conditions: the input attenuator is set to 0 dB

	the preamp is turned on, the Max Mixer Level is -20 dBm or lower For other settings, Auto sets IF Gain to Off
Preset	OFF OFF
State Saved	Yes
Range	Low Gain High Gain

More Information about IF Gain

To take full advantage of the RF dynamic range of the analyzer, you can manually turn on or turn off a switched digital IF amplifier. When it is turned on, the signal will get approximately 10 dB of gain.

Setting IF Gain to Man and selecting High Gain will turn on the digital IF amplifier and get an extra 10 dB gain.

Setting IF Gain to Auto will activate the Auto rules for IF Gain.

These settings affect sensitivity and IF overloads.

3.8.8.9 Global

The controls in this menu apply to all Modes in the instrument.

Some controls (for example, **Global Center Freq**) allow you to switch certain Meas Global parameters to a Mode Global state. These switches apply to all Modes that support global settings. For example, no matter what Mode you are in when you set **Global Center Freq** to **ON**, it applies to all Modes that support Global Settings.

Other controls (for example, **Extend Low Band**) are actually set in this menu, but apply to all Modes.

Global Center Freq

The software maintains a Mode Global value called **Global Center Freq**.

When **Global Center Freq** is switched **ON**, the current Mode's center frequency is copied into the **Global Center Frequency**, and from then on all Modes that support global settings use the **Global Center Frequency**, so you can switch between any of these Modes and the **Center Freq** will remain unchanged.

Adjusting the Center Freq of any Mode that supports Global Settings, while **Global Center Freq** is **ON**, modifies the **Global Center Freq**.

When **Global Center Freq** is switched **OFF**, the Center Freq of the current Mode is unchanged, but now the Center Freq of each Mode is once again independent.

When **Mode Preset** is pressed while **Global Center Freq** is **ON**, the **Global Center Freq** is preset to the preset Center Freq of the current Mode.

This function is reset to **OFF** when "**Restore Defaults**" on page 2680 (in this tab) is pressed, or when **System, Restore Defaults, All Modes** is pressed.

Remote Command	<code>:INSTrument:COUPlE:FREQuency:CENTer ALL NONE</code> <code>:INSTrument:COUPlE:FREQuency:CENTer?</code>
Example	<code>:INST:COUP:FREQ:CENT ALL</code> <code>:INST:COUP:FREQ:CENT?</code>
Preset	Set to OFF on Global Settings, Restore Defaults and System, Restore Defaults, All Modes
Range	ALL NONE
Preset	OFF
Backwards Compatibility SCPI	<code>:GLOBal:FREQuency:CENTer[:STATe] 1 0 ON OFF</code> <code>:GLOBal:FREQuency:CENTer[:STATe]?</code>

Extend Low Band

The software maintains a Mode Global value called **Extend Low Band**.

Under the current sweep configuration crossing over two bands, when **Extend Low Band** is turned **ON**, the instrument checks whether one band can cover the whole sweep frequency range or not. If it can, then the instrument locks the band; otherwise, it does nothing (the band crossover occurs).

This function does *not* work when **Band Lock** under **System > Service > Lock Functions** is not -1 (no Band Lock). In that case, **Band Lock** takes priority over **Extend Low Band**.

This function is reset to **OFF** when "**Restore Defaults**" on page 2680 (in this tab) is pressed, or when **System, Restore Defaults, All Modes** is pressed.

This parameter is available for SA, RTSA, WCDMA, LTEAFDD, and LTEATDD Modes.

Remote Command	<code>:INSTrument:COUPlE:FREQuency:BAND:EXTend 0 1 ON OFF</code> <code>:INSTrument:COUPlE:FREQuency:BAND:EXTend?</code>
Example	<code>:INST:COUP:FREQ:BAND:EXT 1</code> <code>:INST:COUP:FREQ:BAND:EXT?</code>
Dependencies	Only applies to UXA, PXA, MXA and EXA
Preset	Set to OFF by Global Settings > Restore Defaults and System > Restore Defaults > All Modes
Range	ON OFF

Restore Defaults

Resets all the functions in the **Global > Settings** menu to **OFF**. This also occurs when **System, Restore Defaults, All Modes** is pressed.

Remote Command	:INSTrument:COUPle:DEFault
Example	:INST:COUP:DEF
Backwards Compatibility SCPI	:GLOBal:DEFault

3.8.9 Sweep

The Sweep key contains controls which allow you to control the sweep and measurement functions of the analyzer, such as the sweep or measurement time and whether in Single sweep/measure or Continuous sweep/measure mode.

3.8.9.1 Sweep/Control

Accesses controls that enable you to operate the sweep and control functions of the instrument, such as **Sweep Time** and **Continuous/Single**.

Sweep/Measure

Allows you to toggle between **Continuous** and **Single** sweep or measurement operation. The single/continuous state is Meas Global, so the setting affects all measurements.

The front-panel key **Single/Cont** performs exactly the same function

See "[More Information](#)" on page 2099

Remote Command	:INITiate:CONTinuous OFF ON 0 1 :INITiate:CONTinuous?
Example	Put instrument into Single measurement operation: :INIT:CONT 0 :INIT:CONT OFF Put instrument into Continuous measurement operation: :INIT:CONT 1 :INIT:CONT ON
Preset	ON Note that :SYST:PRES sets :INIT:CONT to ON, but *RST sets :INIT:CONT to OFF

State Saved	Saved in instrument state
Annunciation	<p>The Single/Continuous icon in the Meas Bar changes depending on the setting:</p> <ul style="list-style-type: none"> - A line with an arrow is Single - A loop with an arrow is Continuous
Backwards Compatibility Notes	<p>For Spectrum Analysis Mode in ESA and PSA, there is no Cont hardkey, instead there is a Sweep Single/Cont softkey. In these instruments, switching the Sweep Single/Cont softkey from Single to Cont restarts averages (displayed average count reset to 1), but does not restart Max Hold and Min Hold</p> <p>X-Series A-models have Single and Cont hardkeys in place of the SweepSingleCont softkey. In the X-Series A-models, if in single measurement, the Cont hardkey (and INIT:CONT ON) switches to continuous measurement, but never restarts a measurement and never resets a sweep</p> <p>X-Series B-models have a Cont/Single toggle control instead of Single and Cont hardkeys, but it is still true that, if in single measurement, the Cont/Single toggle control never restarts a measurement and never resets a sweep</p> <p>For Spectrum Analysis Mode in ESA and PSA, the Single hardkey and the INITiate:IMM switched from continuous measurement to single measurement and restarted sweeps and averages (displayed average count reset to 1), but did not restart Max Hold and Min Hold. In the X-Series, the Restart control and the INITiate:IMM command initiate a sweep/ measurement/ average sequence/hold sequence including MaxHold and MinHold</p> <p>For Spectrum Analysis Mode in ESA and PSA, the Single hardkey restarted the sweep regardless of whether or not you were in an active sweep or sweep sequence. In the X-Series, Restart does this</p> <p>More Information</p> <p>Continuous Mode The instrument takes repetitive sweeps, averages, measurements, etc., when in continuous mode. If in average or Max/Min Hold, and the average/hold count reaches the Average/Hold Num, the count stops incrementing, but the instrument keeps sweeping</p> <p>See the Trace key description under Trace Average for the averaging formula used both before and after the Average/Hold Num is reached. The trigger condition must be met prior to each sweep</p> <p>The type of trace processing for multiple sweeps is set under the Trace key, with choices of Trace Average, Max Hold, or Min Hold</p> <p>Single Mode The instrument takes a single sweep when in Single mode, or if in average or Max/Min Hold, or if there is a Waterfall window displayed, it takes multiple sweeps until the average/hold count reaches the Average/Hold Num, then the count stops incrementing, and the instrument stops sweeping</p> <p>See the Trace key description under Trace Average for the averaging formula used. The trigger condition must be met prior to the sweep</p> <p>The type of trace processing for multiple sweeps is set under the Trace key, with choices of Trace Average, Max Hold, or Min Hold</p>

If the instrument is in **Single** measurement mode, pressing the **Cont/Single** toggle control does not zero the count and does not cause the sweep to be reset; the only action is to put the instrument into Continuous measurement operation.

If it is already in continuous sweep:

- `:INIT:CONT 1` has no effect
- `:INIT:CONT 0` places the instrument in Single Sweep but has no effect on the current sequence until $k = N$, at which point the current sequence will stop and the instrument will go to the idle state

See the "[Restart](#)" on page 2683 control description for details of `:INIT:IMMEDIATE`.

If the instrument is already in **Single** sweep, `:INIT:CONT OFF` has no effect.

If the instrument is already in **Single** sweep, then pressing **Cont/Single** in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing **Cont/Single** does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the instrument is waiting for a trigger). Even though pressing **Cont/Single** in the middle of a sweep does not restart the sweep, sending `:INIT:IMM` does reset it.

If the instrument is in **Single** sweep, and *not* Averaging/Holding, and you want to take one more sweep, press **Restart**.

If the instrument is in **Single** sweep, *and* Averaging/Holding, and you want to take one more sweep without resetting the Average trace or count, go to **Meas Setup** and increment the average count by 1 by pressing the **Step Up** key while **Average/Hold Num** is the active function. You can also do this by sending `:CALC:AVER:TCON UP`.

Restart

Restarts the current sweep, or measurement, or set of averaged/held sweeps or measurements. If you are Paused, pressing **Restart** performs a Resume.

The front-panel key **Restart** performs exactly the same function.

The **Restart** function is accessed in several ways:

- Pressing the **Restart** key
- Sending `:INIT:IMM`
- Sending `:INIT:REST`

See "[More Information](#)" on page 2101

Remote Command	<code>:INITiate[:IMMEDIATE]</code> <code>:INITiate:REStart</code>
Example	<code>:INIT:IMM</code> <code>:INIT:REST</code>
Notes	<code>:INIT:REST</code> and <code>:INIT:IMM</code> perform exactly the same function
Couplings	Resets average/hold count k. For the first sweep overwrites all active (update = on) traces with new current data. For application modes, it resets other parameters as required by the measurement
Status Bits/OPC dependencies	This is an Overlapped command The <code>STATus:OPERation</code> register bits 0 through 8 are cleared , <i>except</i> bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous The <code>STATus:QUESTionable</code> register bit 9 (<code>INTEgrity</code> sum) is cleared The <code>SWEEPING</code> bit is set The <code>MEASURING</code> bit is set
Backwards Compatibility Notes	For Spectrum Analysis Mode in ESA and PSA, the Restart hardkey and the <code>:INIT:REST</code> command restart trace averages (displayed average count reset to 1) for a trace in Clear Write , but did not restart Max Hold and Min Hold In X-Series, the Restart hardkey and the <code>:INIT:REST</code> command restart not only Trace Average , but MaxHold and MinHold traces as well For wireless comms modes in ESA and PSA, the Restart hardkey and the <code>:INIT:REST</code> command restart every measurement, which includes all traces and numeric results. There is no change to this operation

More Information

The **Restart** function first aborts the current sweep or measurement as quickly as possible. It then resets the sweep and trigger systems, sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is in the process of aligning when a **Restart** is executed, the alignment finishes before the restart function is performed.

Even when set for **Single** operation, multiple sweeps may be taken when **Restart** is pressed (for example, when averaging/holding is on). Thus when we say that **Restart** "restarts a measurement", depending on the current settings, we may mean that it:

- Restarts the current sweep
- Restarts the current measurement
- Restarts the current set of sweeps if any trace is in Trace Average, Max Hold or Min Hold

- Restarts the current set of measurements if Averaging, or Max Hold, or Min Hold is on for the measurement

If there is no Average or Max/Min Hold function (no trace in Trace Average or Hold, or **Average/Hold Num** set to 1), and no **Waterfall** window is being displayed, a single sweep is equivalent to a single measurement. A single sweep is taken after the trigger condition is met; and the instrument stops sweeping once that sweep has completed. However, with **Average/Hold Num** >1, and at least one trace set to Trace Average, Max Hold, or Min Hold, or a **Waterfall** window being displayed, multiple sweeps/data acquisitions are taken for a single measurement. The trigger condition must be met prior to each sweep. The sweep is stopped when the average count k equals the number N set for **Average/Hold Num**.

Once the full set of sweeps has been taken, the instrument goes to the idle state. To take one more sweep without resetting the average count, increment the average count by 1, by pressing the **Step Up** key while **Average/Hold Number** is the active function, or by sending the remote command **:CALC:AVER:TCON UP**.

Trace Update

The numeric results are not blanked at any time during the restart cycle.

For slow sweeps (see **Trace Update** section in **Trace/Detector**), the traces are updated real-time during the sweep. There may be a special circumstance in application mode measurements where an exception is made and the traces and/or results need to be blanked before displaying the new results.

To summarize, the following list shows what happens to the trace data on various events:

Event	Trace Effect
Clear/Write pressed (even if already in Clear/Write)	Set to mintracevalue
Max Hold pressed (even if already in Max Hold)	Set to mintracevalue
Min Hold pressed (even if already in Min Hold)	Set to maxtracevalue
Trace Average pressed (even if already in Trace Average)	Trace data unaffected but start new sweep/avg/hold
Restart pressed	Trace data unaffected but start new sweep/avg/hold
Parameter requiring restart changed (e.g., RBW)	Trace data unaffected but start new sweep/avg/hold

Sweep and Trigger Reset

Resetting the sweep system resets the average/hold count k to 0. It also resets the set point counter to 0. Resetting the trigger system resets the internal auto trig timer to the value set by the **Auto Trig** control.

Averaging

The weighting factor used for averaging is k . This k is also the average/hold count for how many valid sweeps (data acquisitions) have been done. This k is used for comparisons with N , as those comparisons always needs to be based on valid completed sweeps.

The displayed average/hold, K , shows the count for the sweep (data acquisition) in progress. $K = k + 1$, with a limit of N . The displayed value K changes from its previous value to 1 as soon as the trigger condition for the first data acquisition (sweep) is met.

Pause/Resume

Pauses a measurement after the current data acquisition is complete.

When paused, the label on the control changes to **Resume**. Pressing **Resume** unpauses the measurement. When paused, pressing **Restart** performs a Resume.

Remote Command	<code>:INITiate:PAUse</code> <code>:INITiate:RESume</code>
Example	<code>:INIT:PAUS</code> <code>:INIT:RES</code>
Dependencies	Not displayed in Modes that do not support Pausing
Annotation	Only on control

Abort (Remote Command Only)

Stops the current measurement. Aborts the current measurement as quickly as possible, resets the sweep and trigger systems, and puts the measurement into an "idle" state. If the instrument is in the process of aligning when `:ABORT` is sent, the alignment finishes *before* the abort function is performed, so `:ABORT` does not abort an alignment.

If the instrument is set for **Continuous** measurement, it sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is set for **Single** measurement, it remains in the "idle" state until an **:INIT:IMM** command is received.

Remote Command	:ABORt
Example	:ABOR
Notes	<p>If :INIT:CONT is ON, then a new continuous measurement will start immediately, with sweep (data acquisition) occurring once the trigger condition has been met</p> <p>If :INIT:CONT is OFF, then :INIT:IMM is used to start a single measurement, with sweep (data acquisition) occurring once the trigger condition has been met</p>
Dependencies	<p>For continuous measurement, :ABORt is equivalent to the Restart key</p> <p>Not all measurements support this command</p>
Status Bits/OPC dependencies	<p>The STATUS:OPERation register bits 0 through 8 are cleared , <i>except</i> bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous</p> <p>The STATUS:QUESTionable register bit 9 (INTegrity sum) is cleared</p> <p>Since all the bits that feed into OPC are cleared by :ABORt, the Abort command will cause the *OPC query to return true</p>

3.8.9.2 X Scale

This tab accesses controls that enable you to set the horizontal scale parameters.

Ref Value

Enables you to set the display X reference value.

Remote Command	:DISPlay:PVTime:WINDow[1] 2 3:TRACe:X[:SCALE]:RLEVel <time> :DISPlay:PVTime:WINDow[1] 2 3:TRACe:X[:SCALE]:RLEVel?
	<p>Window numbers are as follows:</p> <p>Burst: 1</p> <p>Rise: 2</p> <p>Fall: 3</p>
Example	:DISP:PVT:WIND:TRACE:X:RLEV 1s 1-Burst for Transmit On Off Power :DISP:PVT:WIND:TRACE:X:RLEV? 1-Burst for Transmit On Off Power :DISP:PVT:WIND2:TRAC:X:RLEV 1s 2-Rise for Transmit On Off Power

	<code>:DISP:PVT:WIND3:TRAC:X:RLEV 1s</code> 3-Fall for Transmit On Off Power
Couplings	If X Auto Scaling is On, this value is automatically determined by the measurement result. When you set a value manually, X Auto Scaling automatically changes to Off
Preset	Automatically calculated
State Saved	Yes
Min/Max	-10.0 s/10.0s ! 1-Burst -1.0s/1.0s ! 2-Rise, 3-Fall
Annotation	<value> s bottom left of graph

Scale/Div

Enables you to set the display X scale/division value.

Remote Command	<code>:DISPlay:PVTIme:WINDow[1] 2 3:TRACe:X[:SCALe]:PDIVision <time></code> <code>:DISPlay:PVTIme:WINDow[1] 2 3:TRACe:X[:SCALe]:PDIVision?</code> Window numbers are as follows: Burst: 1 Rise: 2 Fall: 3
Example	<code>:DISP:PVT:WIND:TRACE:X:PDIV 1ms</code> 1-Burst for Transmit On Off Power <code>:DISP:PVT:WIND:TRACE:X:PDIV?</code> 1-Burst for Transmit On Off Power <code>:DISP:PVT:WIND2:TRAC:X:PDIV 1ms</code> 2-Rise for Transmit On Off Power <code>:DISP:PVT:WIND3:TRAC:X:PDIV 1ms</code> 3-Fall for Transmit On Off Power
Couplings	If X Auto Scaling is On, this value is automatically determined by the measurement result. When you set a value manually, X Auto Scaling automatically changes to Off
Preset	Automatically calculated
State Saved	Yes
Min/Max	1.00 ns /1.0 s

Ref Position

Sets the reference position for the X axis to Left, Center or Right.

3 5G NR Mode
3.8 Transmit On|Off Power

Remote Command	<pre>:DISPlay:PVTiMe:WINDow[1] 2 3:TRACe:X[:SCALe]:RPOSition LEFT CENTer RIGHt</pre> <pre>:DISPlay:PVTiMe:WINDow[1] 2 3:TRACe:X[:SCALe]:RPOSition?</pre> <p>Window numbers are as follows: Burst: 1 Rise: 2 Fall: 3</p>
Example	<pre>:DISP:PVT:WIND:TRACE:X:RPOS LEFT</pre> <p>1-Burst for Transmit On Off Power :DISP:PVT:WIND:TRACE:X:RPOS?</p> <p>1-Burst for Transmit On Off Power :DISP:PVT:WIND2:TRAC:X:RPOS LEFT</p> <p>2-Rise for Transmit On Off Power :DISP:PVT:WIND3:TRAC:X:RPOS RIGHT</p> <p>3-Fall for Transmit On Off Power</p>
Preset	LEFT
State Saved	Yes
Range	Left Center Right

Auto Scaling

Toggles the scale coupling function between On and Off.

Remote Command	<pre>:DISPlay:PVTiMe:WINDow[1] 2 3:TRACe:X[:SCALe]:COUPlE 0 1 OFF ON</pre> <pre>:DISPlay:PVTiMe:WINDow[1] 2 3:TRACe:X[:SCALe]:COUPlE?</pre> <p>Window numbers are as follows: Burst: 1 Rise: 2 Fall: 3</p>
Example	<pre>:DISP:PVT:WIND:TRAC:X:COUP OFF</pre> <p>1-Burst for Transmit On Off Power :DISP:PVT:WIND:TRAC:X:COUP?</p> <p>1-Burst for Transmit On Off Power :DISP:PVT:WIND2:TRAC:X:COUP OFF</p> <p>2-Rise for Transmit On Off Power :DISP:PVT:WIND3:TRAC:X:COUP ON</p> <p>3-Fall for Transmit On Off Power</p>
Couplings	When Auto Scaling is On and the Restart front-panel key is pressed, this function automatically

	determines the scale per division and reference values based on the measurement results When you set a value to either Scale/Div or Ref Value manually, Auto Scaling automatically changes to Off
Preset	ON
State Saved	Yes

3.8.10 Trace

Lets you control the acquisition, display, storage, detection and manipulation of trace data for the available traces. The Trace Control tab of this menu contains radio-button selections for the trace type (**Clear/Write**, **Trace Average**, **Max Hold**, **Min Hold**) and **View/Blank** setting for the selected trace.

3.8.10.1 Select Trace

Specifies the *selected trace*, which is the trace that will be affected when you change trace settings.

Select Trace appears above the menu panel, indicating that it applies to *all* controls in the menu panel. **Select Trace** is blanked if you select a tab whose controls do *not* depend on the selected trace (for example, **Trace Function**).

Notes	The selected trace is remembered even when not in the Trace menu
Dependencies	For the Swept SA measurement: <ul style="list-style-type: none"> - In Image Suppress mode, when you select a trace it becomes the active trace, and the formerly active trace goes into View - When you turn on Image Suppress, Update turns off for all traces except the selected trace For the ACP measurement, when Meas Method is RBW , FAST or FPOwer , Select Trace is disabled
Preset	Trace 1
State Saved	Yes

3.8.10.2 Trace Control

The controls on this tab allow you to set the "Trace Type" on page 2393 and its update mode.

There are four Trace Types:

- **Clear/Write**
- **Trace Average**

- Max Hold
- Min Hold

Each type handles data in a different way.

Each trace also has two values that determine whether it is being written or not, and whether it is being displayed or not. These values, **Update** and **Display**, are described fully in the "View/Blank" on page 2398 control description. Essentially, when **Update** is **ON**, a trace is updating, and when **Update** is **OFF** it is not. When **Display** is **ON**, it is visible and when **Display** is **OFF** it is not. These terms are used throughout the descriptions in this section.

Trace Type

Allows you to select the type of trace you want to use for the current measurement. There are four trace Types: Clear/Write, Trace Average, Max Hold and Min Hold.

Besides the **Trace Type**, the **View/Blank** state must be set to **Active (Update On, Display On)** for a trace to be updating and visible. Selecting any **Trace Type** automatically makes the trace **Active**. See also the **View/Blank** menu description.

Remote Command	<code>:TRACe[1] 2 3:PVTIme:TYPE WRITe AVERAge MAXHold MINHold</code> <code>:TRACe[1] 2 3:PVTIme:TYPE?</code>
Example	<code>:TRAC:PVT:TYPE WRIT</code> <code>:TRAC:PVT:TYPE?</code>
Notes	WRITe = Clear Write. In Clear/Write type each trace update replaces the old data in the trace with new data AVERAge = Average. In Trace Average type the instrument maintains and displays an average trace, which represents the cumulative average on a point-by-point basis of the new trace data and previous averaged trace data MAXHold = Maximum Hold. In Max Hold type the instrument maintains and displays a max hold trace, which represents the maximum data value on a point-by-point basis of the new trace data and previous trace data MINHold = Minimum Hold. In Min Hold type the instrument maintains and displays a min hold trace, which represents the minimum data value on a point-by-point basis of the new trace data and previous trace data
Dependencies	When the backwards Compatibility SCPI command, <code>:DISPlay:PVTIme:VIEW[1]:WINDow[1]:TRACe:MAXHold[:STATe]</code> is set to On, this parameter for Trace 2 is changed to MaxHold. Conversely, set to Off, the parameter is not changed When the backwards Compatibility SCPI command, <code>:DISPlay:PVTIme:VIEW[1]:WINDow[1]:TRACe:MINHold[:STATe]</code> is set to On, this parameter for Trace 3 is changed to MinHold. Conversely, set to Off, the parameter is not changed

Preset	AVERAge MAXH MINH
State Saved	Yes
Range	Clear / Write Trace Average Max Hold Min Hold
Backwards Compatibility SCPI	:DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:MAXHold[:STATE]
	:DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:MINHold[:STATE]

Clear and Write | Restart Averaging | Restart Max/Min Hold

Starts the trace writing, as though the "Trace Type" on page 2393 had just been selected. The effect is exactly the same as reselecting the current **Trace Type** again – the control is provided because it may not be obvious that reselecting the same selection from a radio button menu will take any action.

This control displays different labels, depending on the selected Trace Type:

- **Clear/Write:** Clear and Write
- **Trace Average:** Restart Averaging
- **Max Hold:** Restart Max Hold
- **Min Hold:** Restart Min Hold

View/Blank

This radio button box lets you set the state of the two trace values, Update and Display. The four choices available are:

Active	Update and Display both ON
View	Update OFF , Display ON
Blank	Update OFF , Display OFF
Background	Update ON , Display OFF

This allows a trace to be blanked and continue to update “in the background”, which was not possible in the past

See the tables below for details on the SCPI remote commands to control these two variables.

Preset	Trace On
State Saved	Yes
Range	Trace On Blank

Trace Update State On/Off

Toggles a trace Update state between On and Off. The Off selection makes the trace inactive. This does not affect whether the trace is visible or not. To change the trace visibility, see ["Trace Display State On/Off" on page 2110](#)

Remote Command	<code>:TRACe[1] 2 3:PVTIme:UPDate[:STATe] ON OFF 0 1</code> <code>:TRACe[1] 2 3:PVTIme:UPDate[:STATe]?</code>
Example	<code>:TRAC:PVT:UPD ON</code> <code>:TRAC:PVT:UPD?</code>
Dependencies	The backwards Compatibility SCPI command, <code>:DISPlay:PVTIme:VIEW[1]:WINDow[1]:TRACe: MAXHold[:STATe]</code> is set to On, this parameter for Trace2 is changed to On and vice versa The backwards Compatibility SCPI command, <code>:DISPlay:PVTIme:VIEW[1]:WINDow[1]:TRACe: MINHold[:STATe]</code> is set to On, this parameter for Trace3 is changed to On and vice versa
Couplings	Whenever you set Update to On for any trace, the Display is set to On for that trace
Preset	1 0 0 (On for Trace 1; Off for 2 & 3)
State Saved	Yes
Backwards Compatibility SCPI	<code>:DISPlay:PVTIme:VIEW[1]:WINDow[1]:TRACe: BURSt[:STATe]</code> <code>:DISPlay:PVTIme:VIEW[1]:WINDow[1]:TRACe: MAXHold[:STATe]</code> <code>:DISPlay:PVTIme:VIEW[1]:WINDow[1]:TRACe: MINHold[:STATe]</code>

Trace Display State On/Off

Toggles a trace Display state between On and Off. The Off selection makes the trace not visible. This does not affect whether the trace is updating or not.

Even when not visible, traces may be queried and markers may be placed on them.

Remote Command	<code>:TRACe[1] 2 3:PVTIme:DISPlay[:STATe] ON OFF 0 1</code> <code>:TRACe[1] 2 3:PVTIme:DISPlay[:STATe]?</code>
Example	<code>:TRAC:PVT:DISP ON</code> <code>:TRAC:PVT:DISP?</code>
Dependencies	The backwards Compatibility SCPI command, <code>:DISPlay:PVTIme:VIEW[1]:WINDow[1]:TRACe: BURSt[:STATe]</code> is set to On, this parameter for Trace1 is changed to On and vice versa The backwards Compatibility SCPI command, <code>:DISPlay:PVTIme:VIEW[1]:WINDow[1]:TRACe: MAXHold[:STATe]</code> is set to On, this parameter for Trace2 is changed to On and vice versa The backwards Compatibility SCPI command, <code>:DISPlay:PVTIme:VIEW[1]:WINDow[1]:TRACe: MINHold[:STATe]</code> is set to On, this parameter for Trace3 is changed to On and vice versa
Couplings	Whenever you set Update to On for any trace, the Display is set to On for that trace
Preset	1 0 0 (On for Trace 1; Off for 2 & 3)
State Saved	Yes
Range	0 1

Backwards :DISPLAY:PVTime:VIEW[1]:WINDOW[1]:TRACE:BURSt[:STATe]
 Compatibility SCPI :DISPLAY:PVTime:VIEW[1]:WINDOW[1]:TRACE:MAXHold[:STATe]
 :DISPLAY:PVTime:VIEW[1]:WINDOW[1]:TRACE:MINHold[:STATe]

3.8.10.3 Math

Lets you turn on and configure Trace Math functions.

Math Function

Trace Math functions perform mathematical operations between traces and, in some cases, user-specified offsets. When in a Trace Math function, the indicated function is performed during the sweep with the math function used in place of a detector. The trace operands for the math function are set using the ["Operand 1 / Operand 2" on page 2117](#) controls.

- See ["How trace math is processed" on page 2115](#)

Remote Command For option details, see ["Trace Math Options" on page 2113](#)
 For Swept SA Measurement (in SA Mode):
 :CALCulate:MATH <trace_num>, PDIFference | PSUM | LOFFset | LDIFference
 | OFF, <trace_num>, <trace_num>, <real>,<real>
 :CALCulate:MATH? <trace_num>
 where <trace_num> is any one of:
 TRACE1|...|TRACE6
 For all other measurements:
 :CALCulate:<meas>:MATH <trace_num>, PDIFference | PSUM | LOFFset |
 LDIFference | OFF, <trace_num>, <trace_num>, <real>,<real>
 :CALCulate[:<meas>]:MATH? <trace_num>
 where:
 <meas> is the identifier for the current measurement, and
 <trace_num> is any one of:
 TRACe1|TRACe2|TRACe3
 Note that the format of the TRACe<n> parameter differs from that for the Swept SA Measurement

Example :CALC:MATH TRACE3,PDIF,TRACE1,TRACE2,0,0
 Sets Trace 3 to Power Diff trace math function, and sets the First Trace operand (for Trace 3) to Trace 1 and the Second Trace operand (for Trace 3) to Trace 2
 :CALC:MATH TRACE3,PSUM,TRACE1,TRACE2,0,0
 Sets Trace 3 to Power Sum trace math function and sets the First Trace operand (for Trace 3) to Trace 1 and the Second Trace operand (for Trace 3) to Trace 2

	<p><code>:CALC:MATH TRACE3,LOFF,TRACE1,TRACE2,-6.00,0</code></p> <p>Sets Trace 3 to Log Offset trace math function, sets the First Trace operand (for Trace 3) to Trace 1, leaves the Second Trace operand (for Trace 3) unchanged (it is irrelevant for this function) and sets the Log Offset (for Trace 3) to -6 dB</p> <p><code>:CALC:MATH TRACE3,LDIF,TRACE1,TRACE2,0,-6.00</code></p> <p>Sets Trace 3 to Log Diff trace math function, sets the First Trace operand (for Trace 3) to Trace 1, sets the Second Trace operand (for Trace 3) to Trace 2, and sets the Log Difference reference (for Trace 3) to -6 dBm</p> <p><code>:CALC:MATH TRACE1,OFF,TRACE2,TRACE3,0,0</code></p> <p>Turns off trace math for trace 1</p>
Notes	<p>The Trace Math Function command has 6 main set of parameters:</p> <ul style="list-style-type: none"> - Set 1 defines the “result trace”: <code>TRACE1 ... TRACE6</code> -Set 2 defines the “function”: <code>PDIFference PSUM LOFFset LDIFference OFF</code> - Set 3 is a “trace operand” (1): <code>TRACE1 ... TRACE6</code> - Set 4 is a “trace operand” (2): <code>TRACE1 ... TRACE6</code> - Set 5 defines the “Log Offset” (in dB) - Set 6 defines the “Log Difference Reference” (in dBm) <p>Note that the trace math mode is an enumeration; that is, when a math function is set for a trace, it turns off any math function that is on for that trace, then sets the new math function</p> <p>The parameters sent in the command are reflected in the values in the control menu. There is no default for any parameter; all 6 parameters must be sent to satisfy the parser. Failure to specify a parameter will result in a missing parameter message</p> <p>The query returns the math mode, the operand traces, the offset and the reference for the specified trace, all separated by commas</p>
Dependencies	<p>Trace Math is not available if Normalize is on</p> <p>Trace Math is not available if Signal ID is on</p> <p>None of the trace operands can be the destination trace. If any of the three trace math commands is sent with a destination trace number matching one of the operands, a warning is generated and the function does not turn on</p>
Couplings	<p>When a math function is changed for a trace, that trace is set to Display = ON; and Update = ON</p>
Preset	<p>For Swept SA Measurement (in SA Mode):</p> <p><code>OFF,TRACE5,TRACE6,0,0 OFF,TRACE6,TRACE1,0,0 OFF,TRACE1,TRACE2,0,0 </code> <code>OFF,TRACE2,TRACE3,0,0 OFF,TRACE3,TRACE4,0,0 OFF,TRACE4,TRACE5,0,0</code></p> <p>For all other measurements:</p> <p><code>OFF,TRACE2,TRACE3,0,0 OFF,TRACE3,TRACE1,0,0 OFF,TRACE1,TRACE2,0,0</code></p>
State Saved	<p>The trace math function for each trace is saved in instrument state</p>

Annunciation	An “P” is shown on the trace annunciation panel in the Measurement Bar when a math function is on; and the function is annotated on the trace if Trace Annotation is on
Status Bits/OPC dependencies	*OPC can be used to detect the completion of a sweep, which will also correspond to the completion of the math operation, since all math takes place during the sweep

Trace Math Options

IMPORTANT

To generate a trace math result, *you must take a sweep*. The trace math engine, described below, operates in concert with the sweep engine in the instrument. Until a sweep has been taken, even if the constituent traces are not in Update mode, no result is generated.

Note that certain events can affect the trace in ways that affects all points at once. This can happen in any number of ways, including:

- A trace clear taking place
- A trace being loaded from the file system
- Trace data being sent in from the remote interface
- A copy or exchange of trace data

You should try to avoid these occurrences during a sweep, as they will tend to invalidate the math result being accumulated.

The Trace Math functions are:

Power Diff (Op1 - Op2)

Calculates a power difference between the **First Trace** operand and the **Second Trace** operand and puts the result in the destination trace.

During the sweep, the following formula is executed for each point in the trace operands, and the corresponding point is generated for the destination trace:

$$\text{DestinationTrace} = 10 \log_{10}(1/10)(\text{FirstTrace}) - 10(1/10)(\text{SecondTrace})$$

The values of the trace points are assumed to be in a decibel scale, as they are internally stored.

If a point in **FirstTrace** is equal to **maxtracevalue**, the resultant point is also **maxtracevalue**.

Otherwise, if the result of the subtraction is less than or equal to 0, the resultant point is **mintracevalue**.

Power Sum (Op1 + Op2)

Calculates a power sum between the **First Trace** operand and the **Second Trace** operand and puts the result in the destination trace.

During the sweep, the following formula is executed for each point in the trace operands, and the corresponding point is generated for the destination trace.

$$\text{DestinationTrace} = 10 \log_{10}(10^{(1/10)(\text{FirstTrace})} + 10^{(1/10)(\text{SecondTrace})})$$

The values of the trace points are assumed to be in a decibel scale, as they are internally stored.

If a point in either trace operand is equal to **maxtracevalue**, the resultant point is also **maxtracevalue**.

Log Offset (Op1 + Offset)

Calculates a log offset from the **First Trace** operand and puts the result in the destination trace. This is like the B-DL function in some older instruments. The offset is entered on the **Offset** control, which only appears when this math function is in force for the selected trace. Each destination trace has its own offset.

During the sweep, the following formula is executed for each point in the trace operand, and the corresponding point is generated for the destination trace.

$$\text{DestinationTrace} = \text{FirstTrace} + \text{Offset}$$

The values of the trace points are assumed to be in dBm (as they are internally stored) and the offset is in dB.

If a point in the trace operand is equal to **maxtracevalue**, the resultant point is also **maxtracevalue**.

If a point in the trace operand is equal to **mintracevalue**, the resultant point is also **mintracevalue**.

Example: If offset is 25 dB, then our destination trace will be higher than the operand trace by 25 dB.

Note that the **Second Trace** operand is not used for this function.

Log Diff (Op1 - Op2 + Ref)

Offsets the difference between the **First Trace** operand and the **Second Trace** operand by a reference and puts the result in the destination trace. This is like the A-B+DL function in some older instruments. The Reference is entered on the **Reference** control, which only appears when this math function is in force for the selected trace. Each destination trace has its own reference.

Offsets the difference between the **First Trace** operand and the **Second Trace** operand by a reference and puts the result in the destination trace. This is like the

A-B+DL function in some older instruments. The Reference is entered on the **Reference** control, which only appears when this math function is in force for the selected trace. Each destination trace has its own reference.

During the sweep, the following formula is executed for each point in the trace operands, and the corresponding point is generated for the destination trace.

$$\text{DestinationTrace} = (\text{FirstTrace} - \text{SecondTrace}) + \text{Reference}$$

The values of the operand trace points are assumed to be in decibel units (as they are internally stored) and the reference is in dBm so the result is in dBm.

Example: If the first operand trace 1 is at 5 dBm, the second operand trace 2 is at -5 dBm, and the reference is -25 dBm, then the destination trace will be -15 dBm.

Example: If the first operand trace 1 is at 60 dBuV, the second operand trace 2 is at 50 dBuV, and the reference is 35 dBuV, then the destination trace will be 45 dBuV.

If a point in **FirstTrace** is equal to **maxtracevalue**, the resultant point is also **maxtracevalue**.

If a point in **FirstTrace** is equal to **mintracevalue**, the resultant point is also **mintracevalue**.

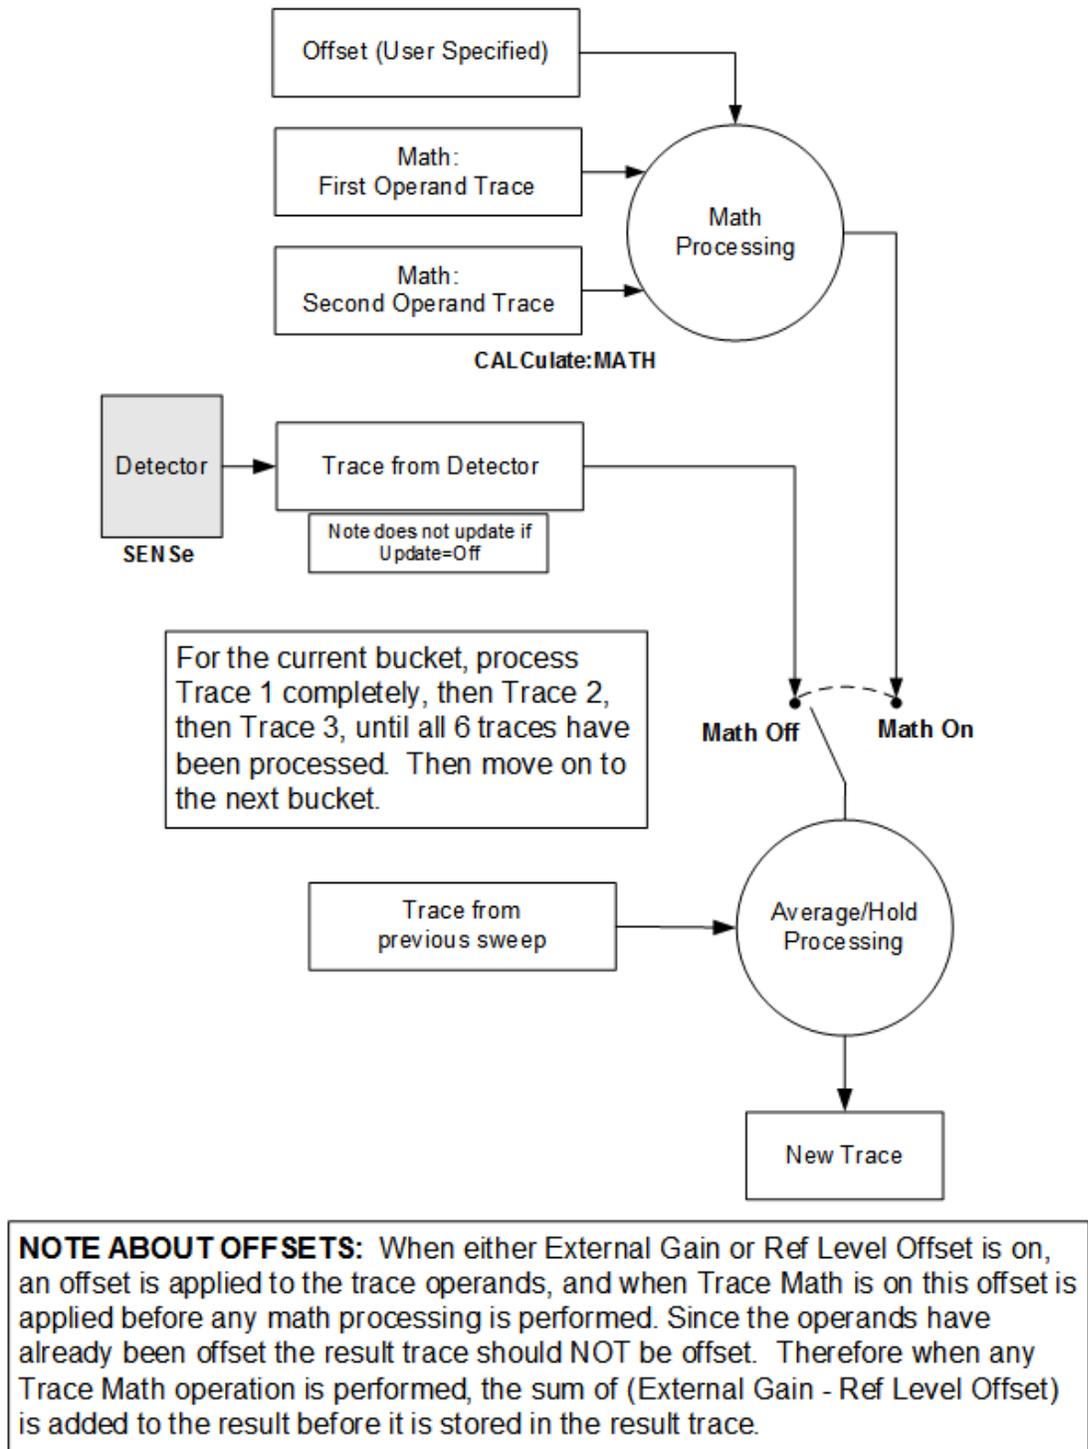

If neither of the above is true for a given point, then:

- If that point in **SecondTrace** is equal to **maxtracevalue**, the resultant point is **mintracevalue**.
- If that point in **SecondTrace** is equal to **mintracevalue**, the resultant point is **maxtracevalue**.

How trace math is processed

Whenever a trace math function is turned on, or the parameters and/or operands of an existing trace math function are changed, the destination trace is cleared. After the trace is cleared, all x-axis values in the trace, and the domain of the trace, are set to match the X-Axis settings of the first trace operand. When this is complete, a new sweep is initiated.

The process of acquiring data, processing it using the math and Average/Hold functions, and presenting it as trace data, consists of several functional blocks, as shown below:

For each active trace, the current trace point is processed for **Trace 1**, then **Trace 2**, then **Trace 3**, etc. Trace data is taken from either the detector for that trace, or

from the mathematical result of up to two other traces and an offset, depending on whether trace math is on or not. The resultant data is then fed to the Average/Hold processing block, where (if the trace type is **Average**, **Max Hold**, or **Min Hold**) it is processed with previous trace data. The new trace data resulting from this process is then available for display, storage or remote output.

When the processing is complete for **Trace 1**, **Trace 2** is processed, and so on until all six traces have been processed. This allows a downstream trace to use as one of its math components a fully processed upstream trace. In other words, if math is **ON** for **Trace 4**, and its operand traces are **Trace 2** and **Trace 3**, then all detector, math, average and hold processing for Traces 2 and 3 is completed before the math is performed for **Trace 4**. When the current trace point is completed for all traces, the instrument moves on to the next trace point.

This allows very flexible and powerful math functions to be configured. For example, **Trace 1** can be an average trace, which can be fed with an offset to **Trace 2**, which can also be in **Max Hold**, allowing you to obtain the **Max Hold** of an Average trace.

Note that none of this processing is performed on inactive traces.

Note also that for any active trace with math **ON**, the Operand traces should have *lower* numbers than the trace (for example, using **Trace 4** as an operand for **Trace 1** will cause the data coming from **Trace 4** to be delayed by one sweep).

Operand 1 / Operand 2

These two controls select the first and second trace operands to be used for the trace math functions for the destination trace. The operands are common to all math functions for a given trace. The most recently sent **:CALCulate:MATH** command for a given trace sets the operands for that trace. Those settings are displayed on the trace operand controls for that trace.

Example	<p>The following examples are for the Swept SA measurement</p> <p>Set Trace 3 to Power Diff trace math function. Set the First Trace operand (for Trace 3) to Trace 1 and the Second Trace operand (for Trace 3) to Trace 2:</p> <pre>:CALC:MATH TRACE3,PDIF,TRACE1,TRACE2,0,0</pre> <p>Set Trace 3 to Log Offset trace math function. Set the First Trace operand (for Trace 3) to Trace 1, leave the Second Trace operand (for Trace 3) unchanged (it is irrelevant for this function) and set the Log Offset (for Trace 3) to -6 dB:</p> <pre>:CALC:MATH TRACE3,LOFF,TRACE1,TRACE2,-6.00,0</pre>
Notes	See " Math Function " on page 2111 for how to specify Operands 1 and 2 using :CALCulate:MATH
Dependencies	The destination trace cannot be an operand. The destination trace number is grayed-out on the dropdown
Preset	Operand 1: Trace number minus 2 (wraps at 1). For example, for Trace 1, Operand 1 presets to Trace

	5; for Trace 6, it presets to Trace 4 Operand 2: Trace number minus 1 (wraps at 1). For example, for Trace 1, Operand 2 presets to Trace 6; for Trace 6, it presets to Trace 5
State Saved	Operands 1 and 2 for each trace are stored in instrument state

Offset

Used by the Log Offset math function.

Example	The following example is for the Swept SA measurement Set Trace 3 to Log Offset trace math function, set the First Trace operand (for Trace 3) to Trace 1, leave the Second Trace operand (for Trace 3) unchanged (it is irrelevant for this function) and set the Log Offset (for Trace 3) to -6 dB: <code>:CALC:MATH TRACE3,LOFF,TRACE1,TRACE2,-6.00,0</code>
State Saved	The Log Offset value for each trace is saved in Instrument State
Min	-100 dB
Max	100 dB

Reference

Used by the Log Diff math function.

Example	The following example is for the Swept SA measurement Set Trace 3 to Log Diff trace math function, set the First Trace operand (for Trace 3) to Trace 1, set the Second Trace operand (for Trace 3) to Trace 2, and set the Log Difference reference (for Trace 3) to -6 dBm: <code>:CALC:MATH TRACE3,LDIF,TRACE1,TRACE2,0,-6.00</code>
State Saved	The Log Difference reference value for each trace is saved in instrument state
Min/Max	Same as reference level

3.8.10.4 Trace Function

Contains controls to:

- Copy and Exchange traces
- Preset or Clear all traces

From Trace

Selects the trace to be copied to or exchanged with the **"To Trace" on page 2119** when a **"Copy" on page 2119** or **"Exchange" on page 2120** is performed

Preset 1

To Trace

Selects the trace to be copied from or exchanged with the **"From Trace" on page 2119** when a **"Copy" on page 2119** or **"Exchange" on page 2120** is performed

Preset 2

Copy

Executes a Trace Copy based on the **"From Trace" on page 2119** and **"To Trace" on page 2119** parameters. The copy operation is from the **From Trace** to the **To Trace**. The action is performed once.

The X-Axis settings and domain of a trace are also copied.

Remote Command For Swept SA Measurement (in SA Mode):
`:TRACe:COPIY TRACE1 | ... | TRACE6, TRACE1 | ... | TRACE6`
 For all other measurements:
`:TRACe:<meas>:COPIY TRACE1 | TRACe2 | TRACe3, TRACe1 | TRACe2 | TRACe3`
 where `<meas>` is the identifier for the current measurement
 Note that the format of the `TRACe<n>` parameter differs from that for the Swept SA Measurement

Example Copy Trace 1 to Trace 3 and put Trace 3 in Update=Off, Display=On
`:TRAC:COPIY TRACE1,TRACE3`

Notes The command is of the form:
`:TRACe:COPIY <source_trace>,<dest_trace>`

Dependencies When Signal ID is on, this key is grayed-out

Couplings The destination trace is put in **View** (Update = Off, Display = On) after the copy

Preset For Swept SA Measurement (in SA Mode):
`TRACE1, TRACE2`
 For all other measurements:
`TRACe1, TRACe2`

Exchange

Executes a Trace Exchange based on the "From Trace" on page 2119 and "To Trace" on page 2119 parameters. The **From Trace** and **To Trace** values are exchanged with each other. The action is performed once.

The X-Axis settings and domain of a trace are also copied when it is exchanged with another trace.

Remote Command	<p>For Swept SA Measurement (in SA Mode): <code>:TRACe:EXCHange TRACE1 ... TRACE6, TRACE1 ... TRACE6</code></p> <p>For all other measurements: <code>:TRACe:<meas>:EXCHange TRACE1 TRACE2 TRACE3, TRACE1 TRACE2 TRACE3</code></p> <p>where <code><meas></code> is the identifier for the current measurement</p> <p>Note that the format of the <code>:TRACe<n></code> parameter differs from that for the Swept SA Measurement</p>
Example	<p>Exchange Trace 1 and Trace 2 and put both traces in Update=OFF, Display=ON: <code>:TRAC:EXCH TRACE1,TRACE2</code></p>
Notes	<p>The command is of the form: <code>:TRACe:EXCHange <trace_1>,<trace_2></code></p>
Couplings	<p>Both traces are put in View (Update=Off, Display=On) after the exchange</p>

Preset All Traces

Turns on Trace 1 and blanks all other traces. This is useful when you have many traces on and you want to return to having only Trace 1 on the display. Does not affect the trace type, detector or any other aspect of the trace system.

Remote Command	<code>:TRACe[:<meas>]:PRESet:ALL</code>
Example	<code>:TRAC:PRES:ALL</code>
Dependencies	When Signal ID is on, this key is grayed-out

Clear All Traces

Clears all traces. Does not affect the state of any function or variable in the instrument. Loads `mintracevalue` into all of the points for all traces, except traces in **Min Hold**, in which case it loads `maxtracevalue`, even if **Update = OFF**.

Remote Command	<code>:TRACe[:<meas>]:CLEar:ALL</code>
Example	<code>:TRAC:CLE:ALL</code>
Dependencies	When Signal ID is on, this key is grayed-out

Multiple Traces for EIRP

Enables you to preset the following parameters.

Multi Channel Synchronous Acquisition	Off		
"From Trace" on page 2119	Trace 1		
"To Trace" on page 2119	Trace 2		
	Trace 1	Trace 2	Trace 3
"Trace Type" on page 2393	Trace Average	Trace Average	Clear / Write
"View/Blank" on page 2398	Active	View	Active
"Math Function" on page 2111	Off	Off	Power Sum =Trace 1 + 2
Operand 1	N/A	N/A	Trace 1
Operand 2	N/A	N/A	Trace 2

Remote Command **:TRACe:<meas>:PRESet:EIRP**

Example For OBW Meas:
:TRAC:OBW:PRES:EIRP

3.8.10.5 Advanced

Contains controls for setting advanced trace functions of the instrument.

Measure Trace

Specifies which trace's scalar results are displayed in the **Metrics** window, and retrieved by sending a **:READ** or **:FETCh** query:

- Trace 1
- Trace 2
- Trace 3

Remote Command **:CALCulate:<meas>:MTRace TRACe1 | TRACe2 | TRACe3**
:CALCulate:<meas>:MTRace?

<meas> is the identifier for the current measurement; any one of **CHPower | ACPower | OBWidth | SEMask | SPURious | PVTime**

Example Channel Power
:CALC:CHP:MTR TRAC1
:CALC:CHP:MTR?

3 5G NR Mode
3.8 Transmit On|Off Power

Dependencies	In the ACP measurement, this control is grayed-out when Meas Method is set to RBW or FAST , and only Trace 1 is enabled
Preset	TRACe1
State Saved	No
Range	Trace 1 Trace 2 Trace 3

3.9 Power Stat CCDF Measurement

Many modern digitally-modulated signals look noise-like in the time and frequency domain, requiring statistical measurement of these signals for meaningful characterization and differentiation. The **Power Statistics Complementary Cumulative Distribution Function (CCDF)** measurement displays curves to characterize the higher level power statistics of digitally modulated signals. The curves can be useful in determining design parameters for digital communications systems.

The Power Statistics CCDF measurement displays probability on the Y-Axis and amplitude on the X-axis, for a display of the statistical amplitude distribution of a signal. This distribution can be affected by many factors. For example, modulation filtering, modulation format, combining the multiple signals at different frequencies, number of active codes, and correlation between symbols on different codes with spread spectrum systems will all affect measurement results. These factors are all related to modulation and signal parameters. External factors such as signal compression and expansion by nonlinear components, group delay distortion from filtering, and power control within the observation interval also affect the measurement.

The power measured in power statistics CCDF curves is actually instantaneous envelope power defined by the equation:

$$P = (I^2 + Q^2) / Z_0$$

where I & Q are the quadrature voltage components of the waveform, and Z_0 is the characteristic impedance.

A CCDF curve is defined by how much time the waveform spends at or above a given power level. The percent of time the signal spends at or above the level defines the probability for that particular power level. For capturing a lower probability down to 0.0001%, this measurement is made in the single mode by pressing Single. To make the power statistics CCDF measurement, the instrument uses digital signal processing (DSP) to sample the input signal in the channel bandwidth. The Gaussian distribution line as the band-limited Gaussian noise CCDF reference line, the user-definable reference trace, and the currently measured trace can be displayed on a semi-log graph. If the currently measured trace is above the user reference trace, it means that the higher peak power levels against the average power are included in the input signal.

Power Stat CCDF Measurement Commands

The general functionality of ["CONFigure" on page 3414](#), ["INITiate" on page 3415](#), ["FETCh" on page 3415](#), ["MEASure" on page 3417](#), and ["READ" on page 3416](#) are described in the section **SCPI Operation and Results Query** in the topic

Programming the Instrument.

The following measurement commands and queries are used to configure the measurement:

<code>:INITiate:PSTatistic</code>	Initiates a trigger cycle for the PST measurement, but does not return any data. You must then use <code>:FETC:PST[n]?</code> to retrieve data
<code>:CONFigure?</code>	Does not change any measurement settings Returns the long form name of current measurement, in this case, PSTatistic
<code>:CONFigure:PSTatistic</code>	Selects PST measurement with Meas Setup settings in preset state – same as "Meas Preset" on page 2202
<code>:CONFigure:PSTatistic:NDEFault</code>	Selects PST measurement <i>without</i> affecting settings

The following queries are used to retrieve the results:

<code>:FETCh:PSTatistic?</code>	Retrieves the data specified by n
<code>:MEASure:PSTatistic[n]?</code>	Switches to PST measurement, restores default values, starts the measurement, then retrieves the data specified by n
<code>:READ:PSTatistic[n]?</code>	Starts the measurement, then retrieves the data specified by n

Measurement Results for Power Stat CCDF

The following table describes the results returned by the `:FETCh`, `:MEASure`, and `:READ` queries listed above, according to the index value **n**.

n	Results Returned																								
0	Returns unprocessed I/Q trace data, as a series of trace point values, in volts. The I values are listed first in each pair, using the 0 through even-indexed values. The Q values are the odd-indexed values																								
1, or not specified	Returns 10 scalar results: <table border="1" data-bbox="354 1430 1406 1757"> <thead> <tr> <th>#</th> <th>Item</th> <th>Unit, if any</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>Average input power</td> <td>dBm</td> </tr> <tr> <td>2</td> <td>Probability at the average input power level</td> <td>%</td> </tr> <tr> <td>3</td> <td>Power level that has 10 % of the power</td> <td></td> </tr> <tr> <td>4</td> <td>Power level that has 1 % of the power</td> <td></td> </tr> <tr> <td>5</td> <td>Power level that has 0.1 % of the power</td> <td></td> </tr> <tr> <td>6</td> <td>Power level that has 0.01 % of the power</td> <td></td> </tr> <tr> <td>7</td> <td>Power level that has 0.001 % of the power</td> <td></td> </tr> </tbody> </table>	#	Item	Unit, if any	1	Average input power	dBm	2	Probability at the average input power level	%	3	Power level that has 10 % of the power		4	Power level that has 1 % of the power		5	Power level that has 0.1 % of the power		6	Power level that has 0.01 % of the power		7	Power level that has 0.001 % of the power	
#	Item	Unit, if any																							
1	Average input power	dBm																							
2	Probability at the average input power level	%																							
3	Power level that has 10 % of the power																								
4	Power level that has 1 % of the power																								
5	Power level that has 0.1 % of the power																								
6	Power level that has 0.01 % of the power																								
7	Power level that has 0.001 % of the power																								

n	Results Returned												
	<table border="1"> <thead> <tr> <th>#</th> <th>Item</th> <th>Unit, if any</th> </tr> </thead> <tbody> <tr> <td>8</td> <td>Power level that has 0.0001 % of the power</td> <td></td> </tr> <tr> <td>9</td> <td>Peak power</td> <td>dB</td> </tr> <tr> <td>10</td> <td>Count</td> <td></td> </tr> </tbody> </table>	#	Item	Unit, if any	8	Power level that has 0.0001 % of the power		9	Peak power	dB	10	Count

Probability at 0.02 dB power <p>...</p> <ol style="list-style-type: none"> 5000. Probability at 49.9 dB power 5001. Probability at 50.0 dB power 												

3.9.1 Views

In the [LTEATDD](#) and [5GNR](#) Modes, this measurement has two views: "[Normal](#)" on [page 2126](#) and "[Slot](#)" on [page 2126](#). In all other Modes, there is only a single view ([Normal](#)).

For the SCPI command to select [Slot View](#), see "[Slot View](#)" on [page 2177](#).

These are multiple-window Views. When in a multiple-window View, you select a window by touching it. The menu controls may sometimes change depending on which window is selected.

3.9.1.1 Normal

Windows: ["Metrics" on page 2128](#), ["Graph" on page 2126](#)

The Power Stat CCDF measurement provides CCDF curves and power statistics metrics. This is common for both Uplink (MS) and Downlink (BTS).

Example `:PST:SLTV OFF`

3.9.1.2 Slot

Windows: ["Metrics" on page 2128](#), ["Graph" on page 2126](#), ["Slot" on page 2127](#)

Adds the signal wave window to Power Stat CCDF measurement curves and Power statistics metrics.

To select this view, set **Display** > **Settings** > ["Slot View" on page 2177](#). to **ON**.

Example `:PST:SLTV ON`

Dependencies Only available in LTEATDD and 5G NR Modes

3.9.2 Windows

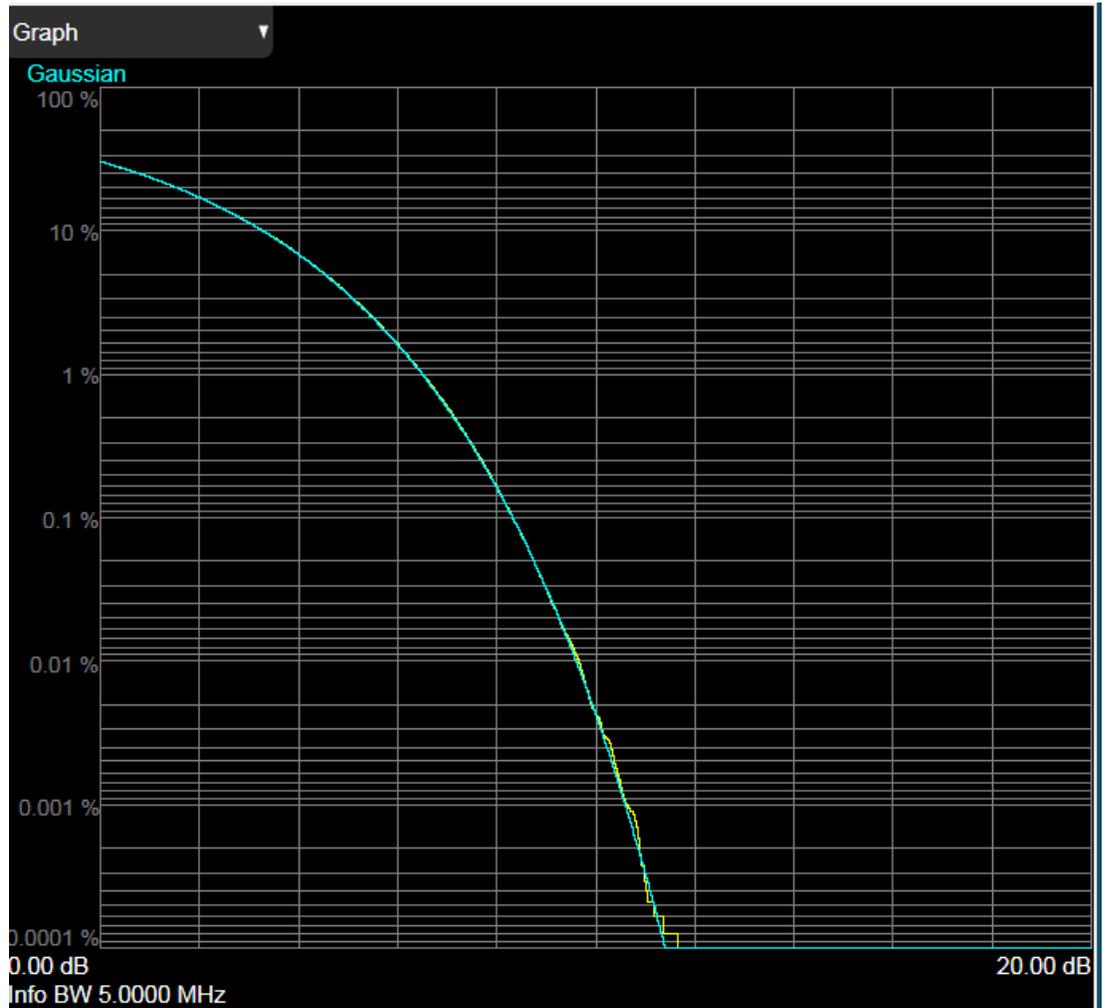

Three window types are defined:

1. ["Graph" on page 2126](#)
2. ["Slot" on page 2127](#)
3. ["Metrics" on page 2128](#)

Slot only appears in LTEATDD and 5G NR Modes.

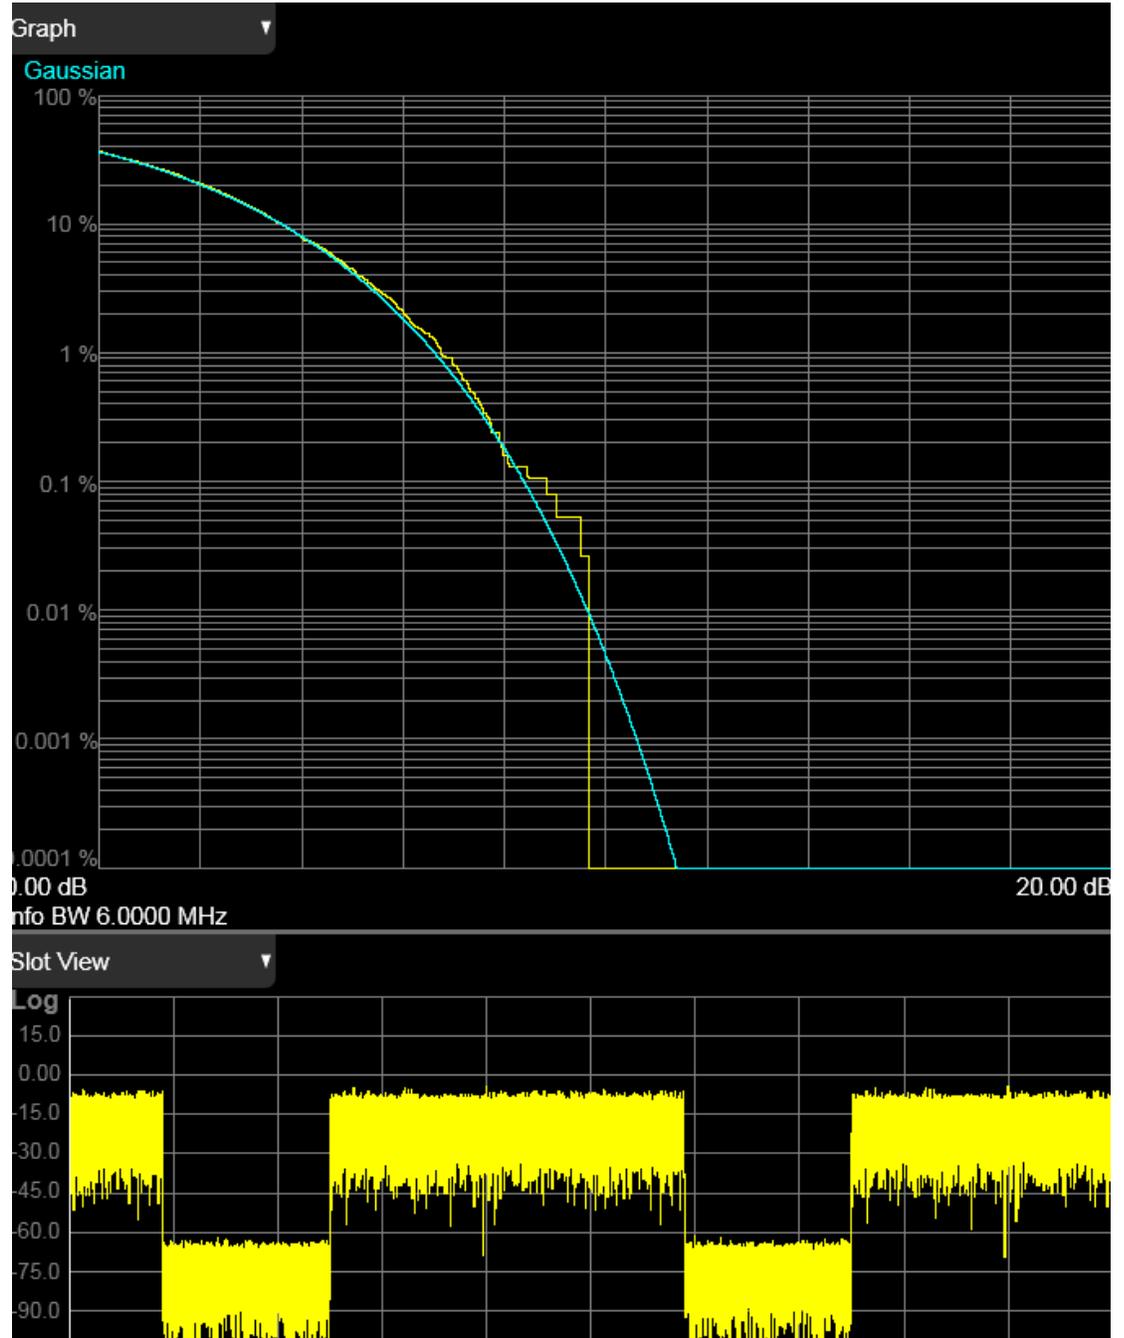

3.9.2.1 Graph

Displays Amplitude versus probability

3.9.2.2 Slot

Only appears in LTEATDD and 5GNR Modes, and only in the View called "Slot" on [page 2126](#).

3.9.2.3 Metrics

Displays the textual results of the Power Stat CCDF measurement.

Average Power	
-72.46 dBm	
36.77 % at 0 dB	

10.0 %	3.63 dB
1.0 %	6.65 dB
0.1 %	8.39 dB
0.01 %	9.69 dB
0.001 %	10.65 dB
0.0001 %	11.65 dB

Peak	
12.19 dB	
-60.27 dBm	

For the list of $n = 1$ measurement results, see "[Measurement Results for Power Stat CCDF](#)" on page 2124 above.

Name	Unit	Corresponding Results	Results Item for $n = 1$	Explanation
Average Power	dBm	Average input power	1	99.99 dBm
Average Power	%	Probability at the average input power level	2	99.99 %
10.0%	dB	Power level that has 10 % of the power	3	99.99 dB
1.0%	dB	Power level that has 1 % of the power	4	99.99 dB
0.1%	dB	Power level that has 0.1 % of the power	5	99.99 dB

Name	Unit	Corresponding Results	Results Item for n = 1	Explanation
0.01%	dB	Power level that has 0.01 % of the power	6	99.99 dB
0.001%	dB	Power level that has 0.001 % of the power	7	99.99 dB
0.0001%	dB	Power level that has 0.0001 % of the power	8	99.99 dB
Peak	dB	Peak power	9	99.99 dB
Peak	dBm	Not available via remote commands	n/a	99.99 dBm

3.9.3 Amplitude

Activates the **Amplitude** menu and selects **Reference Level** or **Reference Value** as the active function, depending on the measurement.

Some features in this menu apply to multiple measurements. Some other features apply only to specific measurements and their controls are blanked or grayed-out in measurements that do not support the feature.

3.9.3.1 Y Scale

Contains controls that pertain to the Y axis parameters of the measurement. These parameters control how data on the vertical (Y) axis is displayed and control instrument settings that affect the vertical axis.

3.9.3.2 Attenuation

Controls the attenuator functions and interactions between the attenuation system components.

There are two attenuator configurations in the X-Series. One is a Dual-Attenuator configuration consisting of a mechanical attenuator and an optional electronic attenuator. The other configuration uses a single attenuator with combined mechanical and electronic sections that controls all the attenuation functions. Different models in the X-Series come with different configurations.

- See "[Dual-Attenuator Configurations](#) " on page 2131
- See "[Single-Attenuator Configuration](#) " on page 2131

Most attenuation settings are the same for all measurements – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by Meas Preset.

This tab is only available when the hardware set includes an input attenuator, which is typically only the case for Keysight’s benchtop instruments. For example, this tab does not appear in:

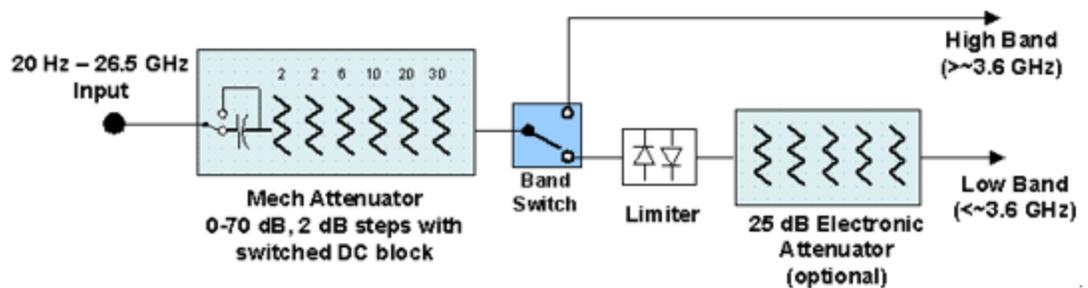

- VXT models SP900B/10A/11A

This tab also does not appear in UXM. In UXM all Attenuation and Range settings are disabled, as the expected input power level is handled by the Call Processing App that drives the DUT power control.

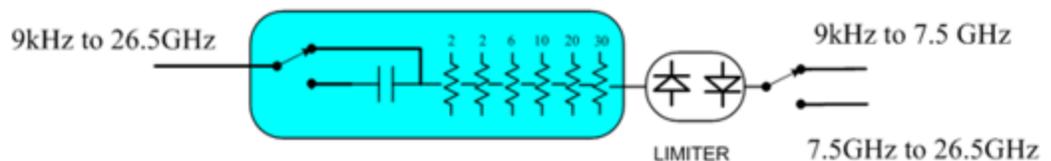

Dependencies In measurements that support the I/Q inputs, this tab is unavailable when I/Q is the selected input, and is replaced by the **Range** tab in that case

Dual-Attenuator Configurations

Configuration 1: Mechanical attenuator + optional electronic attenuator

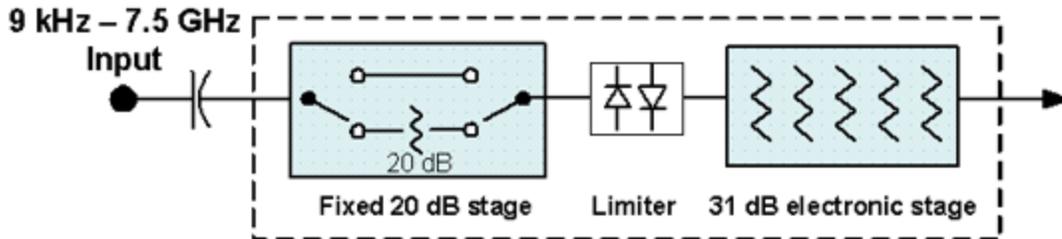

Configuration 2: Mechanical attenuator, no optional electronic attenuator

Note that Configuration 2 is not strictly speaking a dual-section attenuator, since there is no electronic section available. However, it behaves exactly like Configuration 1 without the Electronic Attenuator option EA3, therefore for the sake of this document it is grouped into the “Dual-Attenuator” configuration.

Single-Attenuator Configuration

You can tell which attenuator configuration you have by pressing the Attenuation tab, which (in most Modes) opens the Attenuation menu. If the first control in the Attenuation menu says **Mech Atten** you have the Dual-Attenuator configuration. If the first control says **Atten** you have the Single-Attenuator configuration.

(Note that depending on the measurement, there may be no Auto/Man functionality on the Mech Atten control.)

In the Single-Attenuator configuration, you control the attenuation with a single control, as the fixed stage has only two states. In the Dual-Attenuator configuration, both stages have significant range, so you are given separate control of the mechanical and electronic attenuator stages.

When you have the Dual-Attenuator configuration, you may still have only a Single-Attenuator, because unless option EA3 (the Electronic Attenuator option) is available, and you purchase it, you will have only the mechanical attenuator.

Full Range Atten

This control and **Attenuator Summary** only appear in SP900S, when the RF input is selected and the RF Input Port is set to RF Input 2, and the Full Range Attenuator is installed. The Full Range Attenuator adds a second input attenuator at the beginning of the RF Input 2, which enhances the protection and optimizes the performance of the extra internal mixers used by RF Input 2.

Remote Command	<code>[:SENSe]:POWer[:RF]:FRATten <rel_amp1></code> <code>[:SENSe]:POWer[:RF]:FRATten?</code>
Example	<code>:POW:FRAT 14</code> <code>:POW:FRAT?</code>
Notes	When you enter an amplitude value that falls between valid values, the value will be incremented to

	the next smallest valid value
Dependencies	Only appears if input RF is selected, and RF Input Port 2 is selected, and the Full Range Attenuator exists
Couplings	This value is never changed by any coupling, but other couplings use this value. See Reference Level and " Mech Atten " on page 2568 command descriptions
Preset	20 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Only valid values are 0, 6, 14, 20 dB
Annotation	<p>When the Input is RF, and the Input Port is RF Input 2, and the Full Range Attenuator is installed: On the Meas Bar, the field "Atten" displays as follows:</p> <ul style="list-style-type: none"> - If the sweep is entirely < 50 GHz, the value shown after "Atten:" is equal to Mech Atten + Elec Atten + Full Range Atten - If the sweep is entirely > 50 GHz, the value shown after "Atten:" is equal to Full Range Atten - If the sweep straddles 50 GHz, the value shown after "Atten:" is preceded by the symbol ">=" and is equal to Full Range Atten <p>In the Amplitude, "Y Scale" on page 2562 menu, and the Atten Meas Bar dropdown menu panel, a summary is displayed as follows:</p> <p>"Total Atten below 50 GHz" followed by the value of Full Range Atten + Mech Atten + Elec Atten</p> <p>"Total Atten above 50 GHz" followed by the value of Full Range Atten</p> <p>For example, if Mech Atten = 6 dB, Elec Atten = 4 dB, and Full Range Atten = 20 dB, the summary below is shown:</p> <ul style="list-style-type: none"> - Attenuator summary: - Total Atten below 50 GHz: 30 dB - Total Atten above 50 GHz: 20 dB

Mech Atten

This control is labeled **Mech Atten** in Dual-Attenuator models and **Atten** in Single-Attenuator models. In the Dual-Attenuator configuration, this control only affects the mechanical attenuator.

This control lets you modify the attenuation applied to the RF input signal path. This value is normally auto-coupled to the Ref Level, the Internal Preamp Gain, any External Gain that is entered, and the Max Mixer Level, as described in the table below.

See "**Attenuator Configurations and Auto/Man**" on page 2135

3 5G NR Mode
3.9 Power Stat CCDF Measurement

Remote Command	<pre>[:SENSe]:POWer[:RF]:ATTenuation <rel_amp1> [:SENSe]:POWer[:RF]:ATTenuation? [:SENSe]:POWer[:RF]:ATTenuation:AUTO OFF ON 0 1 [:SENSe]:POWer[:RF]:ATTenuation:AUTO?</pre>
Example	<pre>:POW:ATT 20</pre> <p>Dual-Attenuator configuration: sets the mechanical attenuator to 20 dB Single-Attenuator mode: sets the main attenuation to 20 dB (see below for definition of “main” attenuation) In either case, if the attenuator was in Auto, it is set to Manual <pre>:POW:ATT:AUTO ON</pre> Turn Auto Mech Atten ON</p>
Dependencies	<p>Some measurements do not support the Auto setting of "Mech Atten" on page 2133. In these measurements, the Auto/Man selection is not available, and the Auto/Man toggle function is not available</p> <p>In Dual-Attenuator configurations, when the electronic attenuator is enabled, the mechanical attenuator has no auto setting, and the Auto/Man toggle function is not available. The state of Auto/Man is remembered and restored when the electronic attenuator is once again disabled. This is described in more detail in "Elec Atten" on page 2571</p> <p>See "Attenuator Configurations and Auto/Man " on page 2135 for more information on the Auto/Man functionality</p> <p><pre>:POW:ATT:AUTO</pre> is only available in measurements that support Mech Atten Auto, such as Swept SA</p>
Couplings	<p>If the RF Input Port is the RF Input:</p> <ul style="list-style-type: none"> – If the USB Preamp is connected to USB, use 0 dB for Mech Atten – Otherwise compute the auto-selected value of Mech Atten based on Reference Level, Int Preamp, External Gain, Ref Level Offset, Max Mixer Level, μW Path Control and IF Gain settings. Limit this value to be no less than 6 dB (total attenuation below 6 dB can never be chosen by Auto) – In the SP900S, if the RF Input Port is RF Input 2, use the formula above and subtract the Full Range Atten value from the result to determine the Mech Atten. Limit the value so that it is never lower than 0 dB and so that total attenuation, including Full Range Atten, is never less than 6 dB (total attenuation, including Full Range Atten below 6 dB, can never be chosen by Auto) <p>In External Mixing and BBIQ, where the Attenuator is not in the signal path, the Attenuator setting changes as described above when "Mech Atten" on page 2133 is in Auto, but no changes are made to the actual attenuator hardware setting until the input is changed back to the RF Input</p> <p>For CXA-m with option FSA (Fine-Step Attenuator or 2 dB steps), the FSA-like behavior is only available when the frequency setting is ≤ 7.5GHz. So, when the frequency is changed from below 7.5GHz to above 7.5GHz, the attenuation setting will be changed to a multiple of 10dB which will be no smaller than the previous setting. For example, 4dB attenuation will be changed to 10dB</p>
Preset	<p>The preset for Mech Attenuation is “Auto”</p> <p>The Auto value of attenuation is 10 dB</p> <p>ON</p>

State Saved	Saved in instrument state
Min	<p>0 dB</p> <p>The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. Values below 6 dB must be directly entered from the keypad or via SCPI. This protects against setting a dangerously small attenuation value, which can put the instrument at risk of damage to input circuitry. If the current mechanical attenuation is below 6 dB, it can be increased with the knob and step keys, but not decreased</p>
Max	<p>CXA Option 503 or 507: 50 dB</p> <p>EXA: 60 dB</p> <p>All other models: 70 dB</p> <p>Note that in the Single-Attenuator configuration, the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB</p>
Annotation	<p>The current value for Total Atten is displayed in the Measurement Bar at the top of the display. A value appears for Electronic Attenuation only if the Electronic Attenuator is enabled. The annotation appears as</p> <p>Atten: <total> dB (e<elec>)</p> <p>The e letter is in amber in Single-Attenuator configurations</p> <p>For example:</p> <p>Dual-Attenuator configuration:</p> <p>Atten: 24 dB (e14)</p> <p>Indicating the total attenuation is at 24 dB and the electronic attenuation is at 14 dB</p> <p>Single-Attenuator configuration:</p> <p>A: 24 dB (e14)</p> <p>Indicating the total attenuation is at 24 dB and the “soft” attenuation is at 14 dB (see below for definition of “soft” attenuation)</p> <p>When in Manual, a # sign appears in front of Atten in the annotation</p>

Attenuator Configurations and Auto/Man

As described in ["Y Scale" on page 2562](#), there are two distinct attenuator configurations available in the X-Series, the single attenuator and Dual-Attenuator configurations. In Dual-Attenuator configurations, we have the mechanical attenuation and the electronic attenuation, and the current total attenuation is the sum of the electronic + mechanical attenuation. In Single-Attenuator configurations, we refer to the attenuation set using ["Mech Atten" on page 2133](#) (or `:POW:ATT`) as the “main” attenuation; and the attenuation that is set by `:POW:EATT` as the “soft” attenuation (`:POW:EATT` is honored even in the Single-Attenuator configuration, for compatibility purposes). Then the current total attenuation is the sum of the main + soft attenuation. See ["Elec Atten" on page 2571](#) for more on “soft” attenuation.

NOTE

In some measurements, the **Mech Atten** control has an Auto/Man function. In these measurements, an Auto/Man switch is shown on the **Mech Atten** control:

Note that in configurations that include an Electronic Attenuator, this switch is only shown when the Electronic Attenuator is disabled.

In other measurements, **Mech Atten** has no Auto/Man function. In these measurements, no switch is shown on the **Mech Atten** control:

Mech Atten also appears with no switch, as above, in configurations that include an Electronic Attenuator but when the Electronic Attenuator is enabled.

Elec Atten

Controls the Electronic Attenuator in Dual-Attenuator configurations. This control does not appear in Single-Attenuator configurations, as the control of both the mechanical and electronic stages of the Single-Attenuator is integrated into the single **Atten** control.

This control includes an Enable/Disable toggle switch; it is only possible to enter a value for the Electronic Attenuator when this switch is in the "Enable" position.

For more details about the Electronic Attenuator, see ["More Information" on page 2138](#)

Remote Command	<pre>[:SENSe]:POWer[:RF]:EATTenuation <rel_amp1> [:SENSe]:POWer[:RF]:EATTenuation? [:SENSe]:POWer[:RF]:EATTenuation:STATe OFF ON 0 1 [:SENSe]:POWer[:RF]:EATTenuation:STATe?</pre>
Example	<pre>:POW:EATT 10 :POW:EATT? :POW:EATT:STAT ON :POW:EATT:STAT?</pre>

Notes	Electronic Attenuation's specification is defined only when Mechanical Attenuation is 6 dB
Dependencies	<p>This control only appears in Dual-Attenuator models with an Electronic Attenuator installed and licensed. It does not appear in models with the Single-Attenuator configuration, as in the Single-Attenuator configuration there is no "electronic attenuator" there is only a single integrated attenuator (which has both a mechanical and electronic stage). However, in the Single-Attenuator configuration, EATT SCPI commands are accepted for compatibility with other X-series instruments and set a "soft" attenuation as described in . The "soft" attenuation is treated as an addition to the "main" attenuation value set by the Atten control or :POW:ATT and affects the total attenuation displayed on the Atten control and the Meas Bar</p> <p>The electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable above the low band (0-3.6 GHz, 0-3.4 GHz 0-3GHz, depending on the model). If the low band ranges from 0-3.6GHz, and Stop Frequency of the instrument is > 3.6 GHz, then the Enabled/Disabled section of the Elec Atten control will be OFF and grayed-out</p> <p>If the Internal Preamp is on, meaning it is set to Low Band or Full, the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the Enabled/Disabled section of the Elec Atten control will be OFF and grayed-out</p> <p>If either of the above is true, and the SCPI command is sent, an error indicating that the electronic attenuator is unavailable will be sent</p> <p>If both of the above are true, pressing the control will generate error message -221, in other words, the frequency range lockout takes precedence</p> <p>If the electronic/soft Attenuator is enabled, then the Stop Freq of the instrument is limited to 3.6 GHz and the Internal Preamp is unavailable</p> <p>If the LNA is on, the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the Enabled/Disabled section of the Elec Atten control will be OFF and grayed-out. This coupling works in the following modes/measurements:</p> <ul style="list-style-type: none"> - Channel Power, Occupied BW, ACP, SEM, Spurious Emissions, Power Stat CCDF measurements in all Modes - Transmit On Off Power measurement in 5G NR Mode - Power vs. Time and Transmit Power measurement in GSM/EDGE Mode - Burst Power measurement in Spectrum Analyzer Mode <p>The SCPI-only "soft" electronic attenuation for the single-attenuator configuration is not available in all measurements; in particular, it is not available in the Swept SA measurement</p>
Couplings	Enabling and disabling the Electronic Attenuator affects the setting of the Mechanical Attenuator (in Dual-Attenuator configurations). This is described in more detail below and in " Mechanical Attenuator Transition Rules " on page 2138
Preset	0 dB OFF (Disabled) for Swept SA measurement ON (Enabled) for all other measurements that support the electronic attenuator
State Saved	Saved in instrument state
Min	0 dB
Max	Dual-Attenuator configuration: 24 dB

Single-Attenuator configuration: the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB

Annotation

See Annotation under the **Mech Atten** control description

More Information

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear. These advantages primarily aid in remote operation and are negligible for front panel use. See "[Using the Electronic Attenuator: Pros and Cons](#)" on page 2139 for a detailed discussion of the pros and cons of using the electronic attenuator.

For the Single-Attenuator configuration, for SCPI backwards compatibility, the "soft" attenuation feature replaces the Dual-Attenuator configuration's electronic attenuator. All the same couplings and limitations apply. See "[Attenuator Configurations and Auto/Man](#)" on page 2570

Mechanical Attenuator Transition Rules

When the Electronic Attenuator is enabled, the Mechanical Attenuator transitions to a state that has no Auto function. Below are the rules for transitioning the Mechanical Attenuator. Note that the information below *only* applies to the Dual-Attenuator configurations, and *only* when the Electronic Attenuator is installed:

When the Electronic Attenuation is enabled from a disabled state:

- The Mechanical Attenuator is initialized to 10 dB (this is its optimal performance setting). You can then set it as desired with SCPI, numeric keypad, step keys, or knob, and it behaves as it normally would in manual mode
- The Auto/Man state of (Mech) Atten is saved
- The Auto/Man toggle on the (Mech) Atten control disappears and the auto rules are disabled
- The Electronic Attenuator is set to 10 dB less than the previous value of the Mechanical Attenuator, within the limitation that it must stay within the range of 0 to 24 dB of attenuation

Examples in the Dual-Attenuator configuration:

- Mech Atten at 20 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 10 dB. New total attenuation equals the value before Elec Atten enabled
- Mech Atten at 0 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 0 dB. New total attenuation does not equal the value before Elec Atten enabled

- Mech Atten at 40 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 24 dB. New total attenuation does not equal the value before Elec Atten enabled

When the Electronic Attenuation is disabled from an enabled state:

- The Elec Atten control is grayed out
- The Auto/Man state of (Mech) Atten is restored
- If now in Auto, (Mech) Atten recouples
- If now in Man, (Mech) Atten is set to the value of total attenuation that existed before the Elec Atten was disabled. The resulting value is rounded up to the smallest value possible given the (Mech) Atten Step setting - (That is, 57 dB changes to 58 dB when (Mech) Atten Step is 2 dB)

Using the Electronic Attenuator: Pros and Cons

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear.

The “finer steps” advantage of the electronic attenuator is beneficial in optimizing the alignment of the instrument dynamic range to the signal power in the front panel as well as remote use. Thus, you can achieve improved relative signal measurement accuracy. Compared to a mechanical attenuator with 2 dB steps, the 1 dB resolution of the electronic attenuator only gives better resolution when the odd-decibel steps are used. Those odd-decibel steps are less accurately calibrated than the even-decibel steps, so one tradeoff for this superior relative accuracy is reduced absolute amplitude accuracy.

Another disadvantage of the electronic attenuator is that the spectrum analyzer loses its “Auto” setting, making operation less convenient.

Also, the relationship between the dynamic range specifications (TOI, SHI, compression, and noise) and instrument performance are less well-known with the electrical attenuator. With the mechanical attenuator, TOI, SHI, and compression threshold levels increase dB-for-dB with increasing attenuation, and the noise floor does as well. With the electronic attenuator, there is an excess attenuation of about 1 to 3 dB between 0 and 3.6 GHz, making the effective TOI, SHI, and so forth, less well known. Excess attenuation is the actual attenuation relative to stated attenuation. Excess attenuation is accounted for in the instrument calibration.

Adjust Atten for Min Clipping

Sets the combination of mechanical and electronic attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an immediate action function, that is, it executes once, when the control is pressed.

The algorithms that are used for the adjustment are documented under "[Pre-Adjust for Min Clipping](#)" on page 2575.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE</code>
Example	<code>:POW:RANG:OPT IMM</code>
Notes	Executing Adjust Atten for Min Clipping initiates the measurement
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements For the Waveform measurement, this control is available only in 5G NR Mode

Restart Meas on Adjust Atten

Toggles the force restart switch for the "[Adjust Atten for Min Clipping](#)" on page 2574 function.

When **ON**, pressing **Adjust Atten for Min Clipping**, or sending `[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE` restarts the measurement and then executes the function.

When **OFF**, pressing the control or sending the command neither restarts the measurement nor executes the function until you restart or continue averaging. In this case, pressing the control generates the following advisory message:

"Adjust Atten is deferred until "Restart" or "Continue Averaging" is executed"

This message is *not* generated if the command is sent.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:REStart OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:REStart?</code>
Example	<code>:POW:RANG:OPT:REST OFF</code> <code>:POW:RANG:OPT:REST?</code>
Dependencies	This parameter is available only in the measurements that support continuous averaging in 5G NR
Preset	ON
State Saved	Saved

Adjust Atten

Allows you to select;

- Electric attenuator only
- Combination of Electric attenuator and Mechanical attenuator

when `[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE` is executed.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE EONLY COMBined</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE?</code>
Example	<code>:POW:RANG:OPT:TYPE EONL</code> <code>:POW:RANG:OPT:TYPE?</code>
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements For the Waveform measurement, this control is available only in 5G NR Mode
Preset	<code>COMBined</code>
State Saved	Saved in instrument state

Pre-Adjust for Min Clipping

If this function is **ON**, it applies the adjustment described under "[Adjust Atten for Min Clipping](#)" on page 2574 each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

In Dual-Attenuator models, you can set **Elec+Mech Atten**, in which case both attenuators participate in the autoranging, or **Elec Atten Only**, in which case the mechanical attenuator does not participate in the autoranging. This latter case results in less wear on the mechanical attenuator and is usually faster.

See "[Adjustment Algorithm](#)" on page 2142

Selection	Example	Note
Off	<code>:POW:RANGe:OPT:ATT OFF</code>	This is the default setting
Elec Atten Only	<code>:POW:RANGe:OPT:ATT ELEC</code>	Selects only the electric attenuator to participate in auto ranging. This offers less wear on the mechanical attenuator and is usually faster
Mech + Elec Atten	<code>:POW:RANGe:OPT:ATT COMB</code>	In Dual-Attenuator models, this selects both attenuators to participate in the autoranging

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF ON ELECtrical COMBined</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?</code>
Example	<code>:POW:RANG:OPT:ATT OFF</code> <code>:POW:RANG:OPT:ATT?</code>
Notes	The parameter option <code>ELECtrical</code> sets this function to ON in Single-Attenuator models The parameter option <code>COMBined</code> is mapped to <code>ELECtrical</code> in Single-Attenuator models. If you send <code>COMBined</code> , it sets the function to ON and returns <code>ELEC</code> to a query For SCPI compatibility with models that do not have an input attenuator, the ON parameter is honored and mapped to <code>COMBined</code>
Dependencies	This control only appears in Dual-Attenuator models with an Electronic Attenuator installed

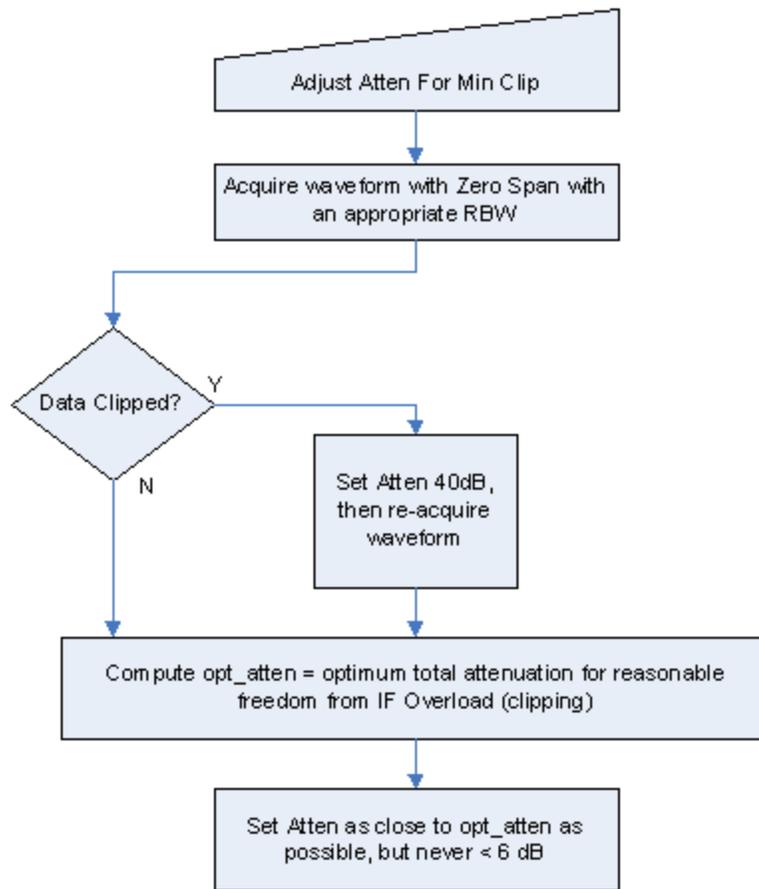

3 5G NR Mode
 3.9 Power Stat CCDF Measurement

	<p>In instruments with Dual-Attenuator model, when "Elec Atten" on page 2571 is OFF or grayed-out, "Pre-Adjust for Min Clipping" on page 2141 is grayed-out</p> <p>This control does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements</p> <p>For the Waveform measurement, this control is available only in 5G NR Mode</p>
Preset	OFF when Elec Atten is Disabled at preset, otherwise ELEC
State Saved	Saved in instrument state
Range	<p>Dual-Attenuator models: Off Elec Atten Only Mech + Elec Atten</p> <p>Single-Attenuator models: Off On</p>
Notes	<p>ON aliases to "Elec Atten Only" (:POW:RANG:OPT:ATT ELEC)</p> <p>OFF aliases to "Off" (:POW:RANG:OPT:ATT OFF)</p> <p>:POW:RANG:AUTO? returns true if :POW:RANG:OPT:ATT is not OFF</p>
Backwards Compatibility SCPI	<p>[:SENSe] :POWer [:RF] :RANGe :AUTO ON OFF 1 0</p> <p>[:SENSe] :POWer [:RF] :RANGe :AUTO?</p>

Adjustment Algorithm

The algorithms for the adjustment are documented below:

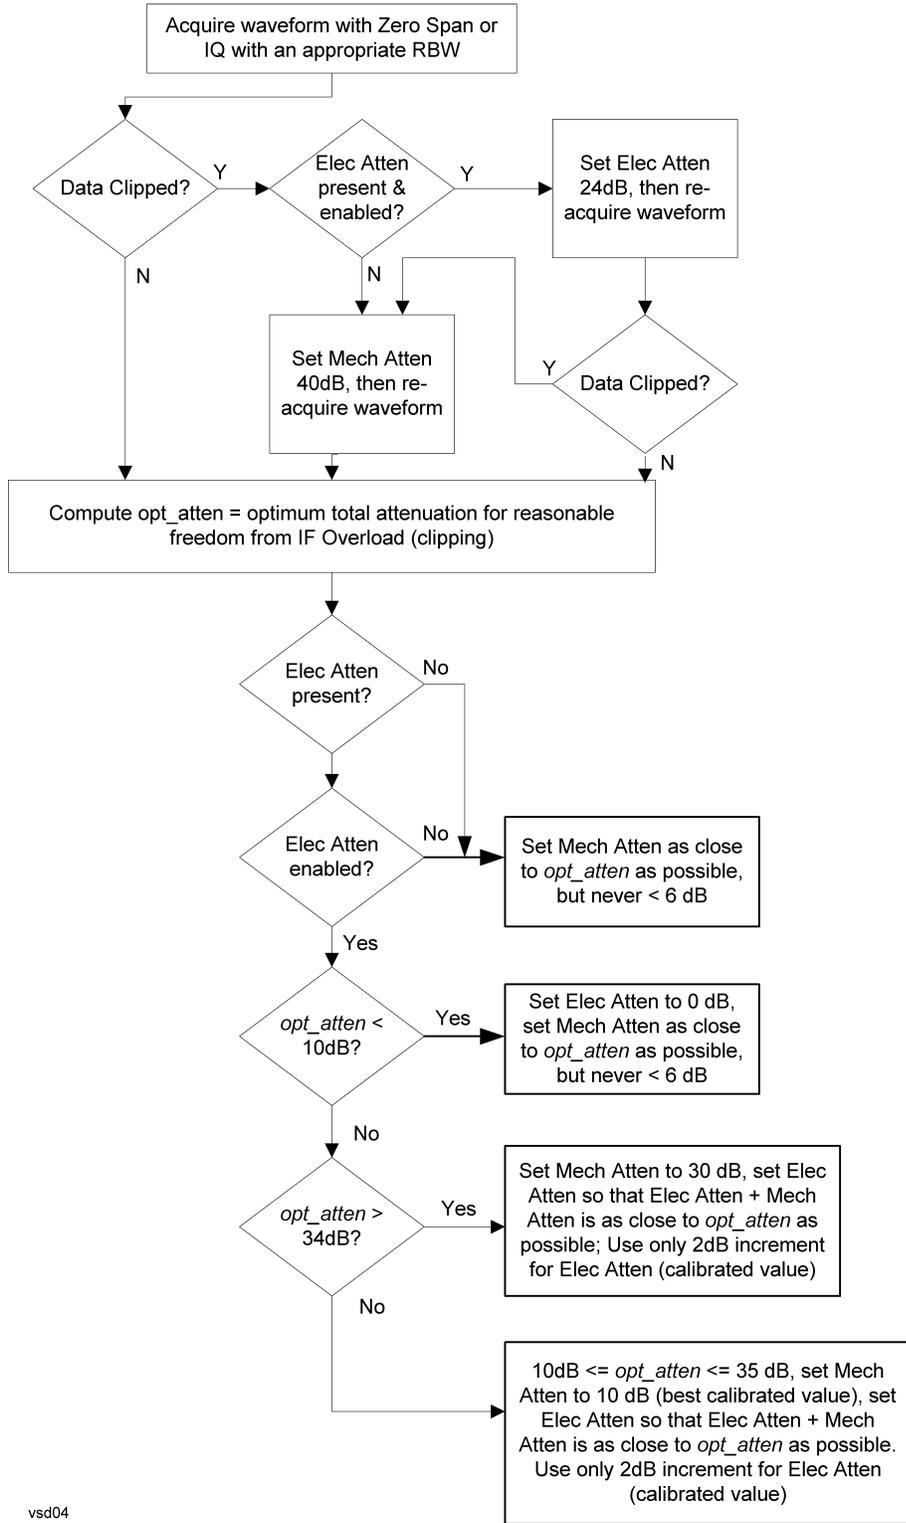

Single-Attenuator Models

Dual-Attenuator models

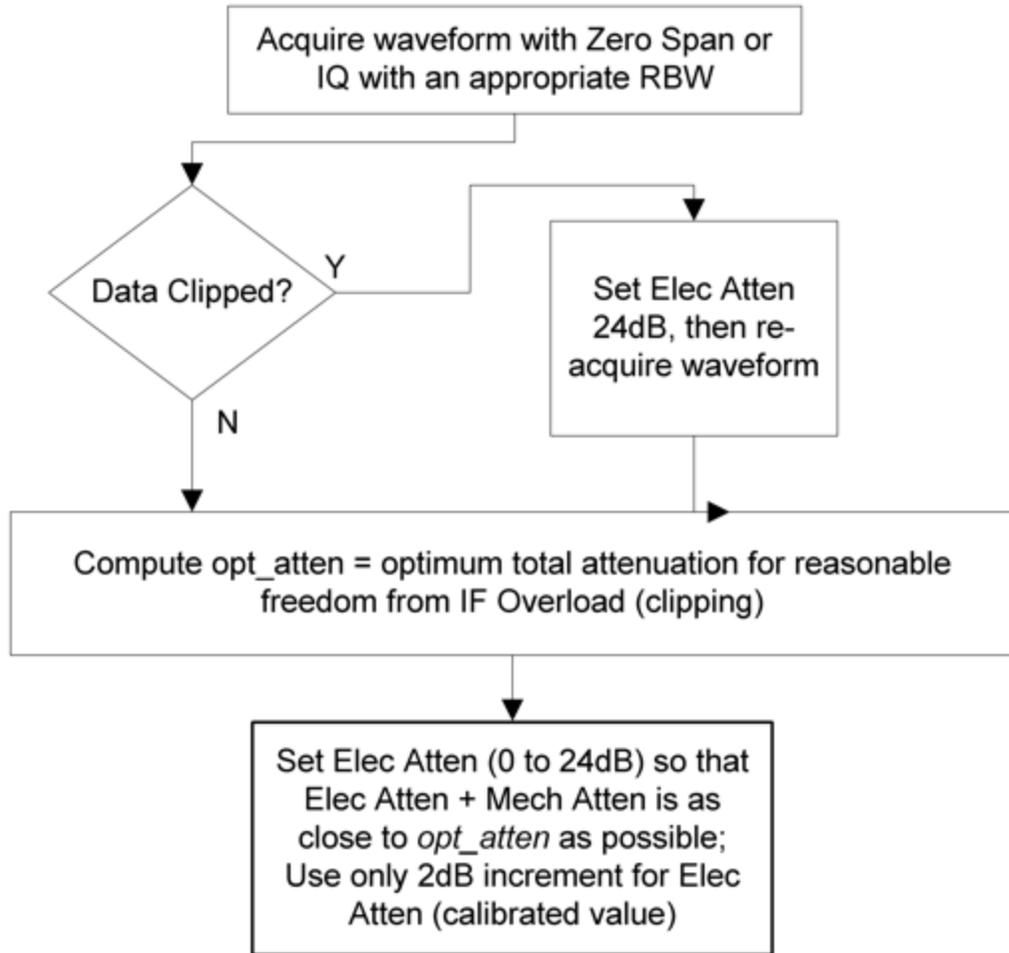

"Adjust Atten for Min Clipping" on page 2574 or "Pre-Adjust for Min Clipping" on page 2141 selection is Mech + Elec Atten:

3 5G NR Mode
 3.9 Power Stat CCDF Measurement

"Pre-Adjust for Min Clipping" on page 2141 selection is Elec Only.

Note that the **Mech Atten** value is not adjusted, and the value previously set is used. Therefore, there is a case that IF Overload is still observed depending on the input signal level and the Mech Atten setting.

Mech Atten Step

Controls the step size used when making adjustments to the input attenuation.

This control is labeled **Mech Atten Step** in Dual-Attenuator models and **Atten Step** in Single-Attenuator models. In the Dual-Attenuator configuration, this control only affects the step size of the mechanical attenuator.

Remote Command `[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement] 10 dB | 2 dB`
`[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement]?`

Example `:POW:ATT:STEP 2`

:POW:ATT:STEP?	
Notes	This feature has a toggle choice from the front panel, but it takes a specific value (in dB) when used remotely. The only valid values are 2 and 10
Dependencies	Blanked in EXA, CXA and CXA-m if option FSA (2 dB steps) is not present. If blanked, attempts to set it via SCPI yield an error
Couplings	When the attenuation step size changes, the current mechanical attenuation value is adjusted (if necessary) to be quantized to the new step size. That is, if step is set to 10 dB, mech atten is increased if necessary so it is a multiple of 10 dB
Preset	EXA, CXA and CXA-m: 10 dB (2 dB with option FSA) All other models: 2 dB
State Saved	Saved in instrument state

Max Mixer Level

Allows you to set the maximum level to be applied to the mixer for a signal at the top of the screen. By setting this value up or down you can allow more or less signal through the system.

The major impact of changes to **Max Mixer Level** is seen in changes to the value to which **Reference Level** is limited. Max Ref Level depends on Max Mixer Level and Attenuation, and therefore a higher Max Mixer Level may let you set Ref Level higher. However, changing this value can impact your TOI, compression, or dynamic range. The preset value of this function is best for most measurements.

See also "[Max Mixer Lvl Rules](#)" on page 2580.

Remote Command	<code>[:SENSe]:POWer[:RF]:MIXer:RANGe[:UPPer] <real></code> <code>[:SENSe]:POWer[:RF]:MIXer:RANGe[:UPPer]?</code>
Example	<code>:POW:MIX:RANG -15 dBm</code> <code>:POW:MIX:RANG?</code>
Dependencies	Only appears in Swept SA and RTSA measurements
Preset	-10 dBm
State Saved	Saved in instrument state
Min	-50 dBm
Max	0 dBm

Max Mixer Lvl Rules

Allows you to optimize the Max Mixer Level setting for certain kinds of measurements.

- **NORMa1** – The historical, and thus backwards compatible, setting range (–50 to 0 dBm) and default setting (–10 dBm). The instrument has been designed so that, at the default setting, any signal below the **Reference Level** is extremely unlikely to create ADC overloads. At this mixer level the scale fidelity will be within specifications, thus compression will be negligible
- **TOI** – Allows a range of settings of the "**Max Mixer Level**" on page 2580, –50 to –10 dBm, that can be optimum for measurements limited by the instrument third-order dynamic range. The default setting, –25 dBm, is commonly appropriate but RBW affects this. A good setting for Max Mixer Level would be higher than the optimum mixer level by half of the attenuator step size
- **COMPression** – Allows a range of settings of the Max Mixer Level, –10 to +10 dBm or more, that can be optimum for measurements limited by the tradeoffs between instrument accuracy due to compression, and dynamic range due to the noise floor. The default setting, –3 dBm, is commonly appropriate, representing mixer drive levels that cause 1 dB or less compression at most carrier frequencies. Typical measurements that would be optimized by this setting are the measurement of low sideband levels, including nulls, in angle-modulated signals (FM and PM). Also pulsed-RF measurements, including finding nulls to estimate pulse width, which are often best done with significant overdrive (compression) of the front end

Setting Name (readback)	Setting Name (verbose)	Max Mixer Level Preset Value, dBm	Max Mixer Level minimum value, dBm	Max Mixer Level maximum value, dBm
NORMa1	Normal – balance TOI, noise, and compression	–10	–50	0
TOI	TOI-limited dynamic range	–25	–50	–10
COMPression	Compression-limited dynamic range	–3	–10	+30

Remote Command	<code>[:SENSe] :POWer [:RF] :MIXer :RULEs NORMa1 TOI COMPression</code> <code>[:SENSe] :POWer [:RF] :MIXer :RULEs?</code>
Example	<code>:POW:MIX:RULE:COMP</code>
Dependencies	Only appears in Swept SA and RTSA
Preset	NORM

3.9.3.3 Range (Baseband Input models)

This tab is only available when Option BBA is present (I/Q Baseband Inputs), the current measurement supports option BBA, and I/Q is the selected input. It replaces the Attenuation tab in that case.

Each input channel (I and Q) has four internal gain ranges. The maximum allowed voltage in each gain range is slightly more than the nominal value, so the break point between ranges is a few millivolts higher than the nominal (setting a peak voltage of 0.502 mV will still map to the 0.5 V Peak range).

Gain Setting	Volts RMS	Volts Peak	Volts Peak - Peak	dBm (50Ω)	Break Point
0 dB	0.7071	1.0	2.0	10	n/a
6 dB	0.3536	0.5	1.0	4	0.502 V Peak
12 dB	0.1768	0.25	0.5	-2	0.252 V Peak
18 dB	0.0884	0.125	0.25	-8	0.127 V Peak

Dependencies Available only when the selected input is I/Q. If the current measurement does not support baseband inputs, an error will be displayed: "No result; Meas invalid with I/Q inputs"

State Saved No

Range Auto/Man

The Auto setting for Range causes the range to be set based on the Y Scale settings. When Range is "Auto", the I & Q Range are set based on the top of the Y Scale when the Y scale is in dB units (for example, power), or to the max(abs(top), abs(bottom)) when the Y scale reference is not at the top of the screen.

Not all measurements support **Range Auto/Man**. If Auto is not supported in the current measurement, this control is grayed-out displaying "Man", and **MAN** is returned to a SCPI query, but this does *not* change the Auto/Man setting for Range. When you switch to a measurement that supports Auto, it goes back to Auto if it was previously in Auto mode.

Remote Command `[:SENSe] :VOLTage :IQ :RANGe :AUTO OFF | ON | 0 | 1`
`[:SENSe] :VOLTage :IQ :RANGe :AUTO?`

Example Put the I Range and Q Range in manual
`:VOLT:IQ:RANG:AUTO OFF`
`:VOLT:IQ:RANG:AUTO?`

Dependencies If Auto is not supported, sending the SCPI command generates an error

Couplings When in Auto, both I Range and Q Range are set to the same value, computed as follows:
 Maximum absolute value is computed for the Y Scale. The top and bottom of the graph are computed based on Ref Value, Scale/Div, and Ref Position. Formula: $Y_{Max} = \max(\text{abs}(\text{top}), \text{abs}(\text{bottom}))$

	The I Range and Q Range are then set to Y_{Max}
Preset	ON
State Saved	Saved in instrument state
Annotation	When in Man, the Range annotation is preceded by "#" This is an alternate form of the command to match the POWer form of the I Range and Q Range SCPI.
Remote Command	<code>[:SENSE]:POWer:IQ:RANGe:AUTO OFF ON 0 1</code> <code>[:SENSE]:POWer:IQ:RANGe:AUTO?</code>
Example	Put the I Range and Q Range in manual <code>:POW:IQ:RANG:AUTO OFF</code> <code>:POW:IQ:RANG:AUTO?</code>
Notes	<code>:POW:IQ:RANG:AUTO</code> is an alternate form of <code>:VOLT:IQ:RANG:AUTO</code> , to maintain consistency with I Range and Q Range, which support both the POWer and VOLTage forms of the command
Preset	ON
Range	Auto Man

I Range

The internal gain range for the I channel when the Input Path is I Only or I and I/Q. Used for both the I and Q channels when the Input Path is I+jQ.

Remote Command	<code>[:SENSe]:VOLTage:IQ[:I]:RANGe[:UPPer] <voltage></code> <code>[:SENSe]:VOLTage:IQ[:I]:RANGe[:UPPer]?</code>
Example	Set the I Range to 0.5 V Peak <code>:VOLT:IQ:RANG 0.5 V</code> <code>:VOLT:IQ:RANG?</code>
Notes	The numeric entries are mapped to the smallest gain range whose break point is greater than or equal to the value, or 1 V Peak if the value is greater than 1 V
Couplings	When " Q Same as I " on page 2586 is On, the I Range value will be copied to " Q Range " on page 2584 Changing the value also sets Range = Man
Preset	1 V Peak
State Saved	Saved in instrument state
Range	1 V Peak (10 dBm @ 50Ω) 0.5 V Peak (4 dBm @ 50Ω) 0.25 V Peak (-2 dBm @ 50Ω) 0.125 V Peak (-8 dBm @ 50Ω)
Min	0.125 V
Max	1 V
Annotation	The Range annotation replaces the RF Input context's "Atten" annotation "Rng: <I Range>". When Range = Man the annotation is preceded by "#"

The I Range is not annotated in Input Path Q Only. When I Range and Q Range are the same, the annotation is "Rng: <Range>". When I Range and Q Range are different and the Input Path is Ind I/Q, the annotation is "Rng: <I Range>, <Q Range>" and "Peak" is removed from the text. Examples:

"Rng: 1 V Peak" the I Range is 1 V Peak

"Rng: 1 V, 0.5 V " the I Range is 1 V Peak and the Q Range is 0.5 V Peak

This is an alternate form of the command to allow entry as a power.

Remote Command	<code>[:SENSe] :POWer :IQ [:I] :RANGe [:UPPer] <amp;lt;1></code> <code>[:SENSe] :POWer :IQ [:I] :RANGe [:UPPer] ?</code>
Example	Set the I Range to 0.5 V Peak when Reference Z is 50 Ω , and to 1.0 V Peak when Reference Z is 75 Ω <code>:POW:IQ:RANG 4 dBm</code> <code>:POW:IQ:RANG?</code>
Notes	The POWer form of the command is provided for convenience. It maps to the same underlying gain range parameter as the VOLTage form The Reference Z (not the I channel Input Z) is used to convert the power to peak voltage, which is then used to set the I Range as with the VOLTage form of the command. The power values of the 4 range states (1V Peak, 0.5V Peak, 0.25V Peak, and 0.125V Peak) will vary with Reference Z. Here are some examples: 50 Ω : 10, 4, -2, -8 75 Ω : 8.2, 2.2, -3.8, -9.8 600 Ω : -0.8, -6.8, -12.8, -18.9
Preset	10.0 dBm
Range	-20 dBm to 10 dBm
Min	-20 dBm
Max	10 dBm

Q Range

The internal gain range for the Q channel. **Q Range** only applies to Input Path Q Only and Ind I/Q. For input I+jQ "**I Range**" on page 2583 determines both I and Q channel range settings.

Remote Command	<code>[:SENSe] :VOLTage :IQ :Q :RANGe [:UPPer] <voltage></code> <code>[:SENSe] :VOLTage :IQ :Q :RANGe [:UPPer] ?</code>
Example	Set the Q Range to 0.5 V Peak: <code>:VOLT:IQ:Q:RANG 0.5 V</code> <code>:VOLT:IQ:Q:RANG?</code>
Notes	The numeric entries are mapped to the smallest gain range whose break point is greater than or equal to the value, or 1 V Peak if the value is greater than 1 V Q Range is only used for Input Path Q Only and Ind I/Q. For input I+jQ, " I Range " on page 2583

	determines both I and Q channel range settings
Couplings	When "Q Same as I" on page 2586 is On, the "I Range" on page 2583 value is copied to Q Range and the range value keys are disabled Changing the value also sets Range = Man
Preset	1 V Peak
State Saved	Saved in instrument state
Range	1 V Peak (10 dBm @ 50Ω) 0.5 V Peak (4 dBm @ 50Ω) 0.25 V Peak (-2 dBm @ 50Ω) 0.125 V Peak (-8 dBm @ 50Ω)
Min	0.125 V
Max	1 V
Annotation	The Range annotation replaces the RF Input context's "Atten" annotation "Rng: <Q Range>". When Range = Man the annotation is preceded by "#" The Q Range is not annotated in Input Path I Only or I+jQ. When I Range and Q Range are the same, the annotation is "Rng: <Range>". When I Range and Q Range are different and the Input Path is Ind I/Q, the annotation is "Rng: <I Range>, <Q Range>" and "Peak" is removed from the text. Examples: "Rng: 1 V Peak" the Q Range is 1 V Peak "Rng: 1 V, 0.5 V " the I Range is 1 V Peak and the Q Range is 0.5 V Peak This is an alternate form of the command to allow entry as a power.
Remote Command	<code>[:SENSE] :POWer :IQ :Q :RANGe [:UPPer] <amp;pl></code> <code>[:SENSE] :POWer :IQ :Q :RANGe [:UPPer] ?</code>
Example	Sets the Q Range to 0.5 V Peak when Reference Z is 50 Ω, and to 1.0 V Peak when Reference Z is 75 Ω: <code>:POW:IQ:Q:RANG 4 dBm</code> <code>:POW:IQ:Q:RANG?</code>
Notes	The POWer form of the command is provided for convenience. It maps to the same underlying gain range parameter as the VOLTage form of the command The Reference Z (not the Q channel Input Z) is used to convert the power to peak voltage, which is then used to set the Q Range as with the VOLTage form of the command. The power values of the 4 range states (1V Peak, 0.5V Peak, 0.25V Peak, and 0.125V Peak) will vary with Reference Z. Here are some examples: 50 Ω: 10, 4, -2, -8 75 Ω: 8.2, 2.2, -3.8, -9.8 600 Ω: -0.8, -6.8, -12.8, -18.9
Preset	10.0 dBm
Range	-20 dBm to 10 dBm
Min	-20 dBm
Max	10 dBm

Q Same as I

Many, but not all, usages require the I and Q channels to have an identical setup. To simplify channel setup, **Q Same as I** causes the Q channel range to be mirrored from the I channel. That way you only need to set up one channel (the I channel). The I channel values are copied to the Q channel, so at the time **Q Same as I** is Off, the I and Q channel setups will be identical.

Remote Command	<code>[:SENSe]:VOLTage POWer:IQ:MIRROred OFF ON 0 1</code> <code>[:SENSe]:VOLTage POWer:IQ:MIRROred?</code>
Example	Turn off the mirroring of I Range to Q Range <code>:VOLT:IQ:MIRR OFF</code> <code>:POW:IQ:MIRR OFF</code>
Couplings	When ON , the "I Range" on page 2583 value is mirrored (copied) to the "Q Range" on page 2584
Preset	ON
State Saved	Saved in instrument state
Range	OFF ON

3.9.3.4 Range (Non-attenuator models)

This tab is only available for Keysight's modular signal analyzers and certain other Keysight products. Examples include:

- VXT

State Saved	No
-------------	----

Range

Represents the amplitude of the largest sinusoidal signal that could be present within the IF without being clipped by the ADC. For signals with high peak-to-average ratios, the range may need to exceed the rms signal power by a significant amount to avoid clipping.

This is a measurement global setting.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe <real></code> <code>[:SENSe]:POWer[:RF]:RANGe?</code>
Example	<code>:POW:RANG 10 dBm</code> <code>:POW:RANG?</code>
Notes	The MIN and MAX values are affected by the External Gain parameters, and by the Center Frequency

	The hardware compensates for frequency response and alters the Range setting
Preset	0 dBm
State Saved	Yes
Min	-100
Max	100
Annotation	Meas Bar

Adjust Range for Min Clipping

Sets the combination of attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an "immediate action" function, that is, it executes once, when the key is pressed.

This key does not appear in measurements that do not support this functionality.

Remote Command	<code>[:SENSe] : POWer [:RF] : RANGe : OPTimize IMMEDIATE</code>
Notes	Executing Adjust Range for Min Clipping initiates the measurement
Dependencies	This control does not appear in the Swept SA and Monitor Spectrum measurements

Restart Meas on Adjust Range

This control is the same as ["Restart Meas on Adjust Atten" on page 2574](#) under ["Attenuation" on page 2565](#).

Pre-Adjust for Min Clipping

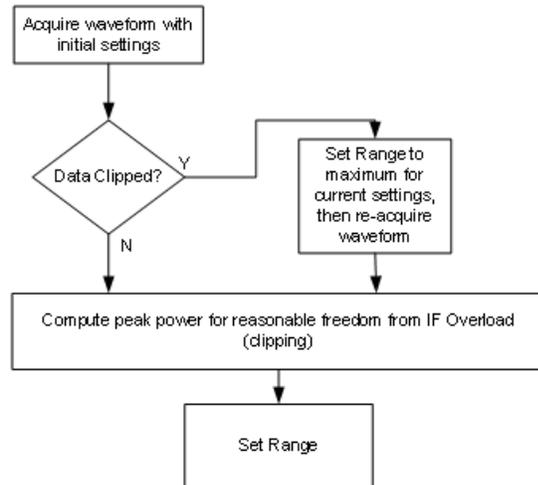

If this function is **ON**, it applies the adjustment described under Adjust Range For Min Clipping each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

Remote Command	<code>[:SENSe] : POWer [:RF] : RANGe : OPTimize : ATTenuation OFF ON ELEctrical COMBined</code> <code>[:SENSe] : POWer [:RF] : RANGe : OPTimize : ATTenuation?</code>
Notes	Because there is no attenuator control available in these models, the control displays only ON and OFF choices. However, for SCPI compatibility with other platforms, all three parameters (ELEctrical , COMBined , and ON) are honored and all are mapped to ELEctrical , so if any of these three parameters is sent, a subsequent query will return ELEC
Dependencies	This control does not appear in the Swept SA and Monitor Spectrum measurements
Preset	OFF for Swept SA measurement; ON for all other measurements that support Pre-Adjust for Min Clipping

State Saved Saved in instrument state

Adjustment Algorithm

The algorithm for the adjustment is documented below:

Peak-to-Average Ratio

Used with "[Range \(Non-attenuator models\)](#)" on page 2586 to optimize the level control in the instrument. The value is the ratio, in dB, of the peak power to the average power of the signal to be measured. A ratio of 0 should be used for sinusoidal signals; for 802.11g OFDM signals use 9 dB.

All Applications (Modes) show the current value of Peak-to-Average ratio on the control. However, some applications do not permit changing the value. In these situations, the control is grayed-out.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:PARatio <real></code> <code>[:SENSe]:POWer[:RF]:RANGe:PARatio?</code>
Example	<code>:POW:RANG:PAR 12 dB</code>
Notes	In some Applications (Modes) this parameter is read-only; meaning the value will appear on the control and query via SCPI, but is not changeable. In such applications the control is grayed-out. Attempting to change the value via SCPI will be ignored but no error message will be generated
Dependencies	Does not appear in Spectrum Analyzer Mode
Preset	10 dB VXT Models SP900B/11A: 0
State Saved	0 dB Saved in instrument state
Min	0 dB

Max	20 dB
	VXT Models SP900B/11A: 50 dB

Mixer Lvl Offset

This is an advanced setting to adjust target Range at the input mixer, which in turn affects the signal level in the instrument's IF. This setting can be used when additional optimization is needed after setting "[Peak-to-Average Ratio](#)" on page 2588. Positive values of offset optimize noise performance over distortion, negative values optimize distortion performance over noise.

Remote Command	<code>[:SENSe] :POWer [:RF] :RANGe :MIXer :OFFSet <real></code> <code>[:SENSe] :POWer [:RF] :RANGe :MIXer :OFFSet ?</code>
Example	<code>:POW:RANG:MIX:OFFS -5 dB</code>
Preset	0 dB
State Saved	Saved in instrument state
Min	-35 dB VXT Models SP900B/11A: -34
Max	0 dB

3.9.3.5 Signal Path

Contains controls that pertain to the routing of the signal through the frontend of the instrument.

In general, this tab only appears in instruments whose hardware supports this signal routing. For example, this tab does not appear in many of the modular instrument products, including VXT Models M9420/21A. It also does not appear in UXM.

This tab *does* appear in VXT Models SP900B/11A because the Software Preselection control is in this tab, and VXT Models SP900B/11A implement a version of Software Preselection.

Presel Center

Pressing this control adjusts the centering of the preselector filter to optimize the amplitude accuracy at the frequency of the selected marker. If the selected marker is not on when **Presel Center** is pressed, the instrument turns on the selected marker, performs a peak search, and then performs centering on the marker's center frequency. If the selected marker is already on and between the start and stop frequencies of the instrument, the instrument performs the preselector calibration on that marker's frequency. If the selected marker is already on, but

outside the frequency range between Start Freq and Stop Freq, the instrument first performs a peak search, and then performs centering on the marker's center frequency.

The value displayed on **"Preselector Adjust" on page 2591** will change to reflect the new preselector tuning.

A number of considerations should be observed to ensure proper operation. See **"Proper Preselector Operation " on page 2156.**

Remote Command	<code>[:SENSe] :POWer [:RF] :PCENter</code>
Example	<code>:POW:PCEN</code>
Notes	Note that the rules outlined above under the control description apply for the remote command as well as the key. The result of the command is dependent on marker position, etc. Any message shown by the control press is also shown in response to the remote command
Dependencies	Does not appear in CXA-m Does not appear in VXT Models SP900B/11A Grayed-out if the microwave preselector is off if the selected marker's frequency is below Band 1, an advisory message is generated "Preselector not used in this frequency range" and no action is taken <ul style="list-style-type: none"> - Grayed-out if entirely in Band 0, that is, if Stop Freq is below about 3.6 GHz Grayed-out if entirely above 50 GHz, that is, if Start Freq is above 50 GHz - Blank in models that do not include a preselector, such as option 503. If the remote command is sent in these instruments, it is accepted without error, and the query always returns 0 - Grayed-out in the Spectrogram View
Couplings	The active marker position determines where the centering will be attempted If the instrument is in a measurement such as averaging when centering is initiated, the act of centering the preselector restarts averaging, but the first average trace will not be taken until the centering is completed The offset applied to do the centering reads out on the "Preselector Adjust" on page 2591 control
Status Bits/OPC dependencies	When centering the preselector, *OPC does not return true until the process is complete and a subsequent measurement has completed, nor are results returned in response to <code>:READ</code> or <code>:MEASure</code> queries The Measuring bit remains set while this command is operating, and does not go false until the subsequent sweep/measurement has completed

Proper Preselector Operation

Certain considerations should be observed to ensure proper operation:

1. If the selected marker is **Off**, the instrument turns on a marker, performs a peak search, and adjusts the preselector using the selected marker's frequency. It uses the "highest peak" peak search method unqualified by threshold or excursion, so that there is no chance of a 'no peak found' error. It continues with that peak, even if it is the peak of just noise. Therefore, for this operation to work properly, there should be a signal on-screen in a preselected range for the peak

search to find

2. If the selected marker is already **On**, the instrument attempts the centering at that marker's frequency. There is no preselector for signals below about 3.6 GHz, so if the marker is on a signal below 3.6 GHz, no centering will be attempted, and an advisory message generated
3. In some models, the preselector can be bypassed. If it is bypassed, no centering will be attempted in that range and a message will be generated

Preselector Adjust

Allows you to manually adjust the preselector filter frequency to optimize its response to the signal of interest. This function is only available when "**Presel Center**" on page 2589 is available.

For general purpose signal analysis, using **Presel Center** is recommended. Centering the filter minimizes the impact of long-term preselector drift. **Preselector Adjust** can be used instead to manually optimize the preselector. One application of manual optimization would be to peak the preselector response, which both optimizes the signal-to-noise ratio and minimizes amplitude variations due to small (short-term) preselector drifting.

When **Presel Center** is performed, the offset applied to do the centering becomes the new value of **Preselector Adjust**.

Remote Command	<code>[:SENSe] :POWer [:RF] :PADJust <freq></code> <code>[:SENSe] :POWer [:RF] :PADJust?</code>
Example	<code>:POW:PADJ 100KHz</code> <code>:POW:PADJ?</code>
Notes	The value on the control reads out to 0.1 MHz resolution
Dependencies	<ul style="list-style-type: none"> - Does not appear in CXA-m - Does not appear in VXT Models SP900B/11A - Grayed-out if microwave preselector is off - Grayed-out if entirely in Band 0, that is, if Stop Freq is lower than about 3.6 GHz - Grayed-out if entirely above 50 GHz, that is, if Start Freq is higher than 50 GHz - Blank in models that do not include a preselector, such as Option 503. If the command is sent in these instruments, it is accepted without error, and the query always returns 0 - Grayed-out in the Spectrogram View
Preset	0 MHz
State Saved	The Preselector Adjust value set by " Presel Center " on page 2589, or by manually adjusting

	Preselector Adjust Not saved in instrument state, and does not survive a Preset or power cycle
Min	-500 MHz
Max	500 MHz
Backwards Compatibility SCPI	<code>[:SENSe] :POWer [:RF] :MW :PADJust</code> <code>[:SENSe] :POWer [:RF] :MMW :PADJust</code>
Notes	The command has no effect, and the query always returns MWAVe
Backwards Compatibility SCPI	<code>[:SENSe] :POWer [:RF] :PADJust :PRESelector MWAVe MMWave EXTERNAL</code> <code>[:SENSe] :POWer [:RF] :PADJust :PRESelector?</code>

Internal Preamp

Accesses a menu of controls for the internal preamps. Turning on the preamp gives a better noise figure, but a poorer inter-modulation distortion (TOI) to noise floor dynamic range. You can optimize this setting for your measurement.

The instrument takes the preamp gain into account as it sweeps. If you sweep outside of the range of the preamp, the instrument will also account for that. The displayed result always reflects the correct gain.

For some measurements, when the preamp is on and any part of the displayed frequency range is below the lowest frequency for which the preamp has specifications, a warning condition message appears in the status line. For example, for a preamp with a 9 kHz lowest specified frequency: "Preamp: Accy unspec'd below 9 kHz".

Selection	Example	Note
Off	<code>:POW:GAIN OFF</code>	
Low Band	<code>:POW:GAIN ON</code> <code>:POW:GAIN:BAND LOW</code>	Sets the internal preamp to use only the low band. The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Low Band selection in the dropdown
Full Range	<code>:POW:GAIN ON</code> <code>:POW:GAIN:BAND FULL</code>	Sets the internal preamp to use its full range. The low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model) is supplied by the low band preamp and the frequencies above low band are supplied by the high band preamp The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Full Range selection in the dropdown. If the high band option is not installed the Full Range selection does not appear

NOTE

The maximum **Center Frequency** for Low Band, displayed in square brackets, can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as SP900S& SP900P), IFBW values ≤ 40 MHz have a maximum Low Band frequency of 3.6 GHz, while $40 \text{ MHz} < \text{IFBW} \leq 1 \text{ GHz}$ have a maximum of 3.3 GHz, and $1 \text{ GHz} < \text{IFBW} \leq 1.5 \text{ GHz}$ have a maximum of 3.5 GHz. IFBW values $> 1.5 \text{ GHz}$ do not support a **Center Frequency** that can reach the Low Band maximum frequency. In these cases, **N/A** is displayed in the square brackets for Low Band.

Remote Command	<pre>[:SENSe]:POWer[:RF]:GAIN:BAND LOW FULL [:SENSe]:POWer[:RF]:GAIN:BAND? [:SENSe]:POWer[:RF]:GAIN[:STATe] OFF ON 0 1 [:SENSe]:POWer[:RF]:GAIN[:STATe]?</pre>
Example	<pre>:POW:GAIN:BAND LOW :POW:GAIN:BAND? :POW:GAIN OFF :POW:GAIN?</pre>
Dependencies	<p>Not available on all hardware platforms. If the preamp is not present or is unlicensed, this control is not shown</p> <p>Does not appear in VXT Models SP900B/11A/15A/16A</p> <p>If <code>:POW:GAIN:BAND FULL</code> is sent when a low band preamp is available, the preamp band parameter is set to <code>LOW</code> instead of <code>FULL</code>, and an "Option not installed" message is generated</p> <p>Not available when the electronic/soft attenuator is enabled</p>
Preset	<pre>LOW OFF</pre>
State Saved	Saved in instrument state
Annotation	<p>When the USB Preamp is not connected to USB, the Preamp annotation in the Meas Bar says "Off" if the preamp is off and displays the frequency range of the low band or full range preamp depending on the setting. For example, if the Preamp is set to Low Band and the Low Band is 3.6 GHz the annotation says "3.6 GHz". If it is a 13.6 GHz preamp and it is set to Full Range the annotation says "13.6 GHz"</p> <p>When the USB Preamp is connected to USB, the Preamp annotation says "Preamp: USB" if the internal preamp is off or "Preamp: USB, Int" if the internal preamp is on (only for measurements that support the USB preamp)</p>

LNA

Lets you turn the Low Noise Amplifier (**LNA**) on or off.

LNA is an additional preamplifier that provides superior DANL and frequency range compared to **"Internal Preamp"** on page 2592. LNA provides lower system noise figure, especially at frequencies above 100 MHz, and can be operated up to the full range of 50 GHz instruments.

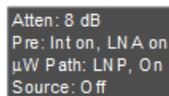

For best possible sensitivity, **LNA** can be turned on *together* with **"Internal Preamp"** on page 2592, although if you operate both preamps together, note that the TOI (distortion) specifications are impacted. The sensitivity improvement of this combination is substantial when operating in high band (frequencies above 3.6 GHz).

For more details about annotation, see **"More Information"** on page 2160

Remote Command	<code>[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe] OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe]?</code>
Example	<code>:POW:GAIN:LNA ON</code>
Dependencies	Requires Option LNA, except for VXT models SP900B/16A Does not appear in VXT models SP900B/10A/11A May not appear in some measurements LNA is not available when the electronic/soft attenuator is enabled
Preset	OFF
State Saved	Saved in State

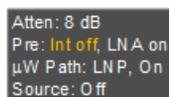

More Information

When **LNA** is installed, the preamp annotation changes to show the state of both **LNA** and **Internal Preamp**. Below is an example:

Atten: 8 dB
Pre: Int on, LNA on
μW Path: LNP, On
Source: Off

Note that when operating entirely in the low band (below about 3.6 GHz), if **LNA** is on, **Internal Preamp** is switched off (even if you have its switch set to **ON**). This is because the noise performance is actually degraded in low band if both preamps are on. In this case, the annotation reflects the actual state of the two preamps, but the **Internal Preamp** annotation displays in amber, to warn you that the actual state of **Internal Preamp** does not match its switch control display:

Atten: 8 dB
Pre: Int off, LNA on
μW Path: LNP, On
Source: Off

μW Path Control

Options for this control include **μW Preselector Bypass** (Option MPB), **Low Noise Path** (Option LNP) and **Full Bypass Enable** in the High Band path circuits.

When the μ W Preselector is bypassed, flatness is improved, but will be subject to spurs from out of band interfering signals. When **Low Noise Path Enable** is selected, the instrument automatically bypasses certain circuitry in the high frequency bands that can contribute to noise, when it is appropriate based on other instrument settings.

For most applications, the preset state is **Standard Path**, which provides the best remote-control throughput, minimizes acoustic noise from switching and minimizes the risk of wear in the hardware switches, particularly in remote test scenarios where both low band and high band setups will follow in rapid succession. In this path, the bypass of the low band/high band switch and microwave preamp is never activated, which can cause some noise degradation but preserves the life of the bypass switch.

For applications that utilize the wideband IF paths, the preset state is **μ W Preselector Bypass**, if option MPB is present. This is because, when using a wideband IF such as the 140 MHz IF, the μ W Preselector's bandwidth can be narrower than the available IF bandwidth, causing degraded amplitude flatness and phase linearity, so it is desirable to bypass the preselector in the default case.

You may choose **Low Noise Path Enable** for a lower noise floor, especially in the 21–26.5 GHz region, though without improving many measures of dynamic range, and without giving the best possible noise floor. The preamp, if purchased and used, gives better noise floor than does **Low Noise Path Enable**, but the preamp's compression threshold and third-order intercept are much poorer than that of **Low Noise Path Enable**.

A fourth choice is **Full Bypass Enable**, which combines **μ W Preselector Bypass** and **Low Noise Path Enable**. Because this can bypass most of the circuitry between the input and the first mixer, care should be taken when using this setting to avoid damaging the mixer. **Full Bypass Enable** is only available if both options LNP and MPB are present, as well as option FBP.

Path	Example	Note
Standard Path	:POW:MW:PATH STD	Normal setting for most measurements. μ W Preselector in circuit, Low Noise Path disabled
Low Noise Path Enable	:POW:MW:PATH LNP	See " Low Noise Path Enable " on page 2165
μ W Preselector Bypass	:POW:MW:PATH MPB	See " μW Preselector Bypass " on page 2167
Full Bypass Enable	:POW:MW:PATH FULL	See " Full Bypass Enable " on page 2168

Remote Command [:SENSe]:POWer[:RF]:MW:PATH STD | LNPath | MPBypass | FULL
[:SENSe]:POWer[:RF]:MW:PATH?

Example :POW:MW:PATH LNP
Enables the Low Noise path

: POW : MW : PATH ?

Notes If "**Presel Center**" on page 2589 is performed, the instrument will momentarily switch to the Standard Path, regardless of the setting of **μW Path Control**

The DC Block will always be switched in when the low noise path is switched in, to protect succeeding circuitry from DC. Note that this does not mean "when the low noise path is enabled" but when, based on the Low Noise Path rules, the path is actually switched in. This can happen when the selection is **Low Noise Path Enable** or **Full Bypass Enable**. In the case where the DC Block is switched in the instrument is now AC coupled. However, if you selected DC coupling, the UI would still behave as though it were DC coupled, including all annunciation, warnings, status bits, and responses to SCPI queries. This is because, based on other settings, the instrument could switch out the low noise path at any time and hence go back to being DC coupled

Alignment switching ignores the settings in this menu, and restores them when finished

Dependencies Does not appear in CXA-m, VXT Models SP900B/11A, nor in BBIQ and External Mixing

- The **Low Noise Path Enable** selection does not appear unless Option LNP is present and licensed
- The **μW Preselector Bypass** selection does not appear unless Option MPB is present and licensed
- The **Full Bypass Enable** selection does not appear unless options LNP and MPB are both present as well as option FBP

In any of these cases, if the required options are not present and the SCPI command is sent, error - 241, "Hardware missing; Option not installed" is generated

Low Noise Path Enable and **Full Bypass Enable** are grayed-out if the current measurement does not support them

Low Noise Path Enable and **Full Bypass Enable** are not supported in Avionics and MMR Modes (non-modulation measurements). In any of these cases (that is, the feature is not supported in either measurement or Mode), if the SCPI command is sent, the following error is generated: -221, "Setting Conflict; Feature not supported for this measurement"

Preset	Mode	Value
	IQ Analyzer	MPB option present and licensed: MPB
	Pulse	MPB option not present and licensed: STD
	Avionics	
	All other Modes	STD
	-	

State Saved Save in instrument state

Range Standard Path | Low Noise Path Enable | μW Presel Bypass | Full Bypass Enable

Annotation In the Meas Bar, if the Standard path is chosen, it says:
 μW Path: Standard
 If Low Noise Path is enabled but the LNP switch is not thrown, it shows:
 μW Path: LNP,Off
 If the Low Noise Path is enabled and the LNP switch IS thrown, it shows:
 μW Path: LNP,On

If the preselector is bypassed, it says:

μW Path: Bypass

If Full Bypass Enable is selected but the LNP switch is not thrown, it shows:

μW Path: FByp,Off

If Full Bypass Enable is selected and the LNP switch IS thrown, it shows:

μW Path: FByp,On

μW Path Control Auto [Mode: VMA, WLAN, NR5G, CQM]

In VMA, WLAN, 5G NR, CQM Modes, an **Auto/Man** switch is added to **μW Path Control**:

This allows the function to automatically switch based on certain Auto Rules as shown below:

VMA Mode

Measurement	When μW Path Control is in Auto
Digital Demod	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Monitor Spectrum	Always Presel Bypass
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Custom OFDM	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Channel Power	Always Presel Bypass
Occupied BW	Always Presel Bypass
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
ACP	Always Presel Bypass
SEM	Always Presel Bypass

Low Noise Path Enable

Low Noise Path Enable provides a lower noise floor under some circumstances, particularly when operating in the 21–26.5 GHz region. With the Low Noise Path enabled, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz
- The internal preamp is not installed, or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Low Noise Path Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

For measurements that use IQ acquisition, the low noise path is used when **Center Frequency** is in High Band (> 3.6 GHz) and no preamp is in use. In other words, the rules above are modified to use only the center frequency to qualify which path to switch in. This is not the case for FFTs in the Swept SA measurement; they use the same rules as swept measurements.

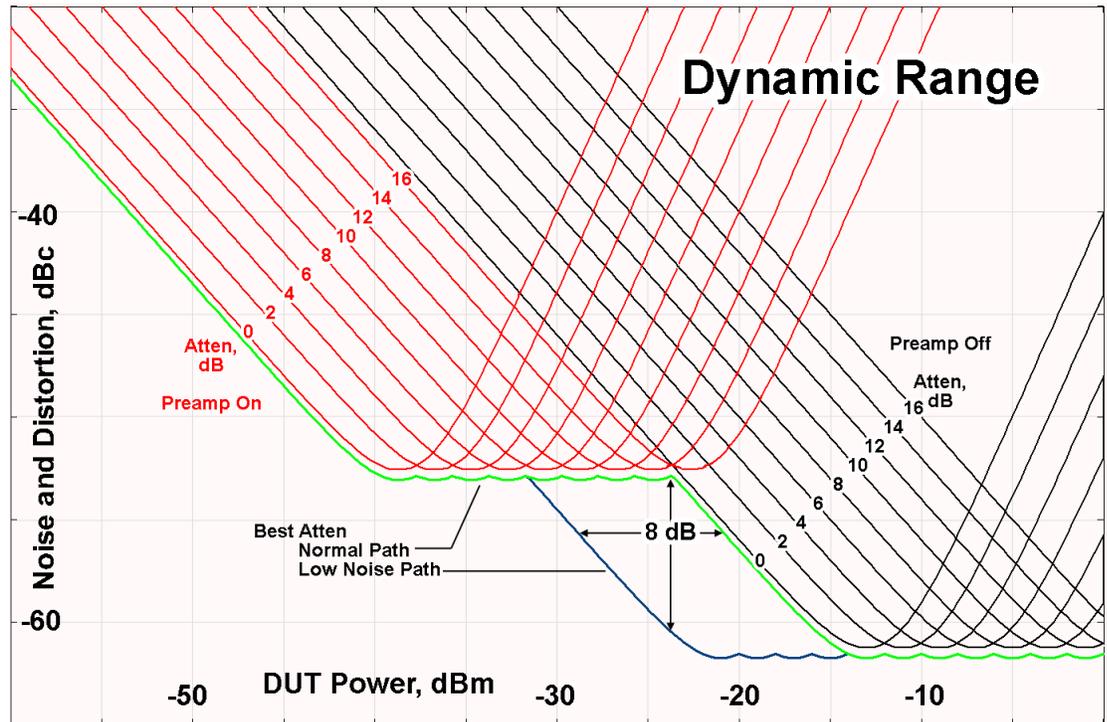

Note that the Low Noise Path, while giving improved DANL, has the disadvantage of decreased TOI performance and decreased gain compression performance relative to the standard path.

Note also that the bypass switch is a mechanical switch and has finite life, so if the **Low Noise Path Enable** is selected, it is possible to cause frequent cycling of this switch by frequently changing instrument settings such that the above conditions hold true only some of the time. A user making tests of this nature should consider opting for the **Standard Path**, which will never throw the bypass switch, at the expense of some degraded noise performance.

The low noise path is useful for situations where the signal level is so low that the instrument performance is dominated by noise even with 0 dB attenuation, but still high enough that the preamp option would have excessive third-order intermodulation or compression. The preamp, if purchased and used, gives better noise floor than does the “Low Noise Path.” However, its compression threshold and third-order intercept are much poorer than that of the non-preamp path.

There are some applications, typically for signals around -30 dBm, for which the third-order dynamic range of the standard path is good enough, but the noise floor is not low enough even with 0 dB input attenuation. When the third-order dynamic range of the preamp path is too little and the noise floor of the standard path is too high, the Low Noise Path can provide the best dynamic range

The graph below illustrates the concept. It shows, in red, the performance of an instrument at different attenuation settings, both with the preamp on and off, in a measurement that is affected by both instrument noise and instrument TOI. The green shows the best available dynamic range, offset by 0.5 dB for clarity. The blue shows how the best available dynamic range improves for moderate signal levels with the low noise path switched in. In this illustration, the preamp improves the noise floor by 15 dB while degrading the third-order intercept by 30 dB, and the low noise path reduces loss by 8 dB. The attenuator step size is 2 dB.

There are other times where selecting the low noise path improves performance, too. Compression-limited measurements such as finding the nulls in a pulsed-RF spectrum can profit from the low noise path in a way similar to the TOI-limited measurement illustrated. Accuracy can be improved when the low noise path allows the optimum attenuation to increase from a small amount like 0, 2 or 4 dB to a larger amount, giving better return loss at the instrument input. Harmonic measurements, such as second and third harmonic levels, are much improved using the low noise path because of the superiority of that path for harmonic (though not intermodulation) distortion performance.

µW Preselector Bypass

Toggles the preselector bypass switch for band 1 and higher. When the microwave preselector is on, the signal path is preselected. When the microwave preselector is off, the signal path is not preselected. The preselected path is the normal path for the instrument.

The preselector is a tunable bandpass filter which prevents signals away from the frequency of interest from combining in the mixer to generate in-band spurious signals (images). The consequences of using a preselector filter are its limited bandwidth, the amplitude and phase ripple in its passband, and any amplitude and phase instability due to center frequency drift.

Option MPB or pre-selector bypass provides an unpreselected input mixer path for certain X-Series signal analyzers with frequency ranges above 3.6 GHz. This signal path allows a wider bandwidth and less amplitude variability, which is an advantage

when doing modulation analysis and broadband signal analysis. The disadvantage is that, without the preselector, image signals will be displayed. Another disadvantage of bypassing the preselector is increased LO emission levels at the front panel input port.

Image responses are separated from the real signal by twice the 1st IF. For IF Paths of 10 MHz and 25 MHz, the 1st IF is 322.5 MHz, so the image response and the real signal will be separated by 645 MHz. The 1st IF will be different for other IF Path settings. When viewing a real signal and its corresponding image response in internal mixing, the image response will be to the left of the real signal.

Also, the image response and the real signal typically have the same amplitude and exhibit the same shape factor.

However, if Option FS1 (Fast Sweep Capability) is enabled, the image response in the Swept SA measurement appears lower in amplitude and has a much wider shape factor compared to the real signal.

Full Bypass Enable

With **Full Bypass Enable** selected, the microwave preselector is bypassed. In addition, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
 - the start frequency is above 3.5 GHz and
 - the stop frequency is above 3.6 GHz.
- the internal preamp is not installed or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Full Bypass Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

CAUTION

When **Full Bypass Enable** is selected, and "**Y Scale**" on page 2562 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq >3.6 GHz and the Preamp is either not licensed, set to Low Band, or Off). This puts the first converter at high risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:

Full Bypass Enabled, maximum safe input power reduced

Microwave Preselector Bypass Backwards Compatibility

Example	<code>:POW:MW:PRES OFF</code> Bypasses the microwave preselector
Notes	Included for Microwave Preselector Bypass backwards compatibility The ON parameter sets the STD path (<code>:POW:MW:PATH STD</code>) The OFF parameter sets path MPB (<code>:POW:MW:PATH MPB</code>)
Preset	ON
Backwards Compatibility SCPI	<code>[:SENSE] :POWer [:RF] :MW:PRESelector [:STATe] ON OFF 0 1</code> <code>[:SENSE] :POWer [:RF] :MW:PRESelector [:STATe] ?</code>

Frequency Extender Preselection Bypass

Only applies to the high frequency path of the Frequency Extender, and only if the Frequency Extender allows it. For example, the V3050A high frequency path is 50 – 110 GHz and *does* allow control of the preselector bypass.

When the Frequency Extender’s preselection is bypassed, flatness is improved, but will be subject to spurs from out-of-band interfering signals. For bandwidths greater than 2.5 [GHz], it is recommended that the signal bypass the Frequency Extender Preselector since the max bandwidth of the Preselector can be as narrow as 2.5 [GHz].

For most applications, the preset state is **OFF**, which gives the best remote-control throughput, minimizes acoustic noise from switching, minimizes out of band spurs, and minimizes the risk of wear in the hardware switches.

Preselector and Bandwidth Conflict

When the Frequency Extender Preselector is applied and the signal bandwidth is greater than 2.5 [GHz], then a settings alert message will show to warn the user that the signal may be distorted due to the limitation of the Frequency Extender Preselector bandwidth.

An example of the settings alert message is shown below.

Settings Alert message in the Status Bar at the bottom of the display.

Settings Alert message in the error queue

Type	ID	
	159	Settings Alert - DETECTED; Presel/Meas BW conflict

Allow Full Bypass in Auto

Enable or disable Full Bypass in μ W Path Auto rule. See " [\$\mu\$ W Path Control](#)" on page 2594.

When this function is **ON**, and " [\$\mu\$ W Path Control](#)" on page 2594 is in **AUTO**, it is possible for the auto rules to select the **FULL** Bypass state, wherein both the Preamp and the Microwave Preselector are bypassed. Otherwise, the auto rules never select the **FULL** Bypass state. This is convenient when making wideband measurements, but it also adds some risk of damage to the first converter.

CAUTION

When **Full Bypass Enable** is selected, and "[Y Scale](#)" on page 2562 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq > 3.6 GHz and the Preamp is either not licensed, set to **Low Band** or **Off**). This puts the first converter at high risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:

Full Bypass Enabled, maximum safe input power reduced

Software Preselection

Provided in some instruments, either to compensate for issues with provided hardware preselection or to provide the preselection function when there is no hardware preselector.

SP900S

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The

specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

In SP900S, **Software Preselection** only applies for frequencies above 50 GHz, therefore it is only used for RF Input 2. Even if turned on, it is not used for other inputs, and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that in SP900S, in Swept SA measurement, **Software Preselection** works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT sweep type.

SP900S+V3050A

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

For SP900S+V3050A, Software Preselection only applies for frequencies above 50 GHz, therefore it is only used for External RF. Even if it is turned on, it will not be used for other inputs and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that for SP900S+V3050A, in the Swept SA measurement, Software Preselection works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT Sweep Type.

VXT models SP900B/11A

Software Preselection is used to provide the preselection function, as there is no hardware preselector in these models. Two background traces are taken and compared point by point, and the point with the lowest amplitude from the two traces is used. This provides a method to reduce spurs that are internally generated within the VXT, but you should note the following when using Software Preselection:

- There is some speed cost due to the need to take multiple captures
- Taking the point with the lowest amplitude in each trace will make the average noise level lower at all points that do not have a spur. This can reduce the accuracy of the measurement of noise and noise-like signals

Because of the difficulty in identifying spurs manually, you are recommended to leave Software Preselection **ON** at all times in VXT models SP900B/11A. If you turn it off in order to speed up your measurement or improve noise accuracy, be aware of unwanted onscreen spurs.

Remote Command	<code>[:SENSe]:POWer[:RF]:SWPResel:STATE 0 1 ON OFF</code> <code>[:SENSe]:POWer[:RF]:SWPResel:STAT?</code>						
Example	<code>:POW:SWPR:STAT 1</code> <code>:POW:SWPR:STAT?</code>						
Dependencies	Only appears in SP900S, SP900S+V2050A, and VXT models SP900B/11A. Does not appear in all measurements						
Couplings	Affects Sweep Time Auto Tune supports Software Preselection , so Auto Tune should be performed after setting the Software Preselection state						
Preset	<table border="1"> <tr> <td>SP900S</td> <td>OFF</td> </tr> <tr> <td>SP900S+V3050A</td> <td>ON</td> </tr> <tr> <td>SP900B/11A</td> <td>ON</td> </tr> </table>	SP900S	OFF	SP900S+V3050A	ON	SP900B/11A	ON
SP900S	OFF						
SP900S+V3050A	ON						
SP900B/11A	ON						
State Saved	Saved in instrument state						

SW Preselection Type

Specifies the algorithm used for software preselection.

Two hidden sweeps are taken in succession. The second sweep is offset in LO frequency by $2 * IF / N$. For each point in each trace, the smaller amplitude from the two traces is taken and placed in that point in the selected trace. The Peak detector is auto-selected to improve the image suppression effectiveness. Responses of each trace that lie on top of one another will remain and are valid signals. Other signals are images and are suppressed. The action of taking the smaller of the two traces will make the average noise level lower in all points that do not have an image, thus reducing the accuracy of the measurement of noise and noise-like signals.

- **NORMa1** - mathematically removes all image and multiple responses of signals present at the input
- **ADVanced** - any trace processing (such as “max hold” or trace averaging) is performed on the points of both candidate traces before the “select minimum” operation occurs. This form of processing works better for non-stationary signals, such as pulsed-RF signals

Remote Command	<code>[:SENSe]:POWer[:RF]:SWPResel NORMa1 ADVanced</code> <code>[:SENSe]:POWer[:RF]:SWPResel?</code>
Example	<code>:POW:SWPR NORM</code> <code>:POW:SWPR?</code>
Dependencies	Only appears in SP900Sand SP900S+V3050A. Only appears in measurements that use the Swept

	method	
	When " Software Preselection " on page 2604 is disabled, this control is grayed-out. The grayout message is "Unavailable unless SW Presel enabled"	
Preset	SP900S	ADVanced
	SP900S+V3050A	NORMa1
State Saved	Saved in instrument state	

SW Preselection BW

Specifies the effective bandwidth to be used for Software Preselection.

The options are:

- **NORMa1** – when making Swept measurements, a software preselection algorithm is used which takes up to 4 background acquisitions, then post-processes the result. This algorithm can remove images from signals with an occupied bandwidth up to around 3 GHz. (Default/Preset setting). When making FFT measurements, this algorithm is not used, instead the same algorithm is used as for **NARRow** (below)
- **NARRow** – a software preselection algorithm is used which takes two background acquisitions, then post-processes the result to detect and remove images from wideband signals with occupied bandwidths up to 2 GHz. This increases the risk of images failing to be rejected, but improves the measurement speed

Remote Command	<code>[:SENSe] :POWer [:RF] :SWPResel :BW NORMa1 NARRow</code> <code>[:SENSe] :POWer [:RF] :SWPResel :BW?</code>	
Example	<code>:POW:SWPR:BW NARR</code>	
Dependencies	Only appears in SP900S and SP900S+V3050A. Only appears in measurements that use the Swept method When " Software Preselection " on page 2604 is disabled, this control is grayed-out. The grayout message is "Unavailable unless SW Presel enabled" For SP900S+V3050A, the parameter is SCPI-only, and always set to NARRow when Software Preselection is enabled	
Preset	SP900S	NORMa1
	SP900S+V3050A	NARRow
State Saved	Saved in instrument state	

High Freq Prefilter

Lets you set the state of Prefilter for Center Frequencies above 1310 MHz.

In VXT Models SP900B/11A, the Receiver RF path has a bank of filters that come after the RF Attenuator in the signal path. Since this bank of filters precedes the mixer they are known as the “Prefilter” bank. Their purpose is to eliminate unwanted in-band mixing products by filtering out all but the desired frequencies before the signals get to the mixer. There are 13 prefilter bands to cover the frequencies between 9 kHz and 6000 MHz. The Prefilter provides the necessary rejection of the unwanted signal.

Remote Command	<code>[:SENSe]:<measurement>:PFILter[:STATe] ON OFF 1 0</code> <code>[:SENSe]:<measurement>:PFILter[:STATe]?</code>
Example	For example, to enable High Freq Prefilter in IQ Analyzer Mode: For the Complex Spectrum Measurement: <code>:SPEC:PFIL ON</code> For the IQ Waveform Measurement: <code>:WAV:PFIL ON</code>

802.11ac(160 MHz)	160 MHz												

3.9.5 Display

Lets you configure display items for the current Mode, Measurement View or Window.

3.9.5.1 Settings

Contains a control to turn on or turn off ["Slot" on page 2126](#). When **Slot View** is switched **OFF**, **Normal View** is selected.

Slot View

Toggles ["Slot" on page 2126](#) On or Off. When **ON**, **Slot View** is selected. When **OFF**, **Normal View** is selected.

Remote Command	<code>[:SENSe]:PStatistic:SLTView[:STATE] OFF ON 0 1</code> <code>[:SENSe]:PStatistic: SLTView[:STATE]?</code>
Example	<code>:PST:SLTV ON</code> <code>:PST:SLTV?</code>
Dependencies	Only available in LTEATDD and 5GNR Modes
Preset	OFF
State Saved	Yes
Range	OFF ON

3.9.5.2 View

Contains controls for selecting the current **View**, and for editing User Views.

View

See ["Views" on page 2125](#).

User View

Lets you choose a View from the saved User Views for the current measurement. This panel only appears if a User View exists for the current measurement.

Remote Command	<code>:DISPlay:VIEW:ADVanced:SElect <alphanumeric></code> <code>:DISPlay:VIEW:ADVanced:SElect?</code>
----------------	--

Example	Select Baseband as the current View <code>:DISP:VIEW:ADV:SEL "Baseband"</code>
Notes	<p>You must be in the measurement whose View you are trying to set to send the command. You can only set Views for the current measurement using this command</p> <p>For predefined views, the parameter is derived from the view name that is shown in the View list in the user interface. For example, if you are trying to select the Trace Zoom view in the Swept SA measurement, you send:</p> <pre>:DISP:VIEW:ADV:SEL "Trace Zoom"</pre> <p>because "Trace Zoom" is the name of the View as seen in the Mode/Meas dialog or in the Display, View menu</p> <p>You <i>cannot</i> use the legacy View parameter (which in this case would be <code>TZOOM</code>) with</p> <pre>:DISP:VIEW:ADV:SEL</pre> <p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case. Thus, both of the following forms work:</p> <pre>:DISP:VIEW:ADV:SEL "Trace Zoom"</pre> <pre>:DISP:VIEW:ADV:SEL "TRACE ZOOM"</pre> <p>If the specified view is not a valid View, the query returns the error message "-224, Illegal parameter value; View with the name <alphanumeric> does not exist"</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated</p>
Backwards Compatibility SCPI	<p>The legacy node</p> <pre>:DISPlay:VIEW[:SElect]</pre> <p>is retained for backwards compatibility, but it only supports predefined views</p>

Restore Layout to Default

Restores the Layout to the default for Basic.

Modified Views are very temporary; if you exit the current measurement they are discarded, and they are not saved in State. To retain this View for later use, and to be able to return easily to your original Basic View, you can save your edited View as a "User View".

Save Layout as New View

Saves your new View as a User View. An alpha keyboard appears, which lets you name your new View; the default is the old View name plus a number.

Remote Command	<code>:DISPlay:VIEW:ADVanced:NAME <alphanumeric></code>
Example	<pre>:DISP:VIEW:ADV:NAME "Baseband"</pre> <p>Creates a new View named <code>Baseband</code> from the current View, and selects it as the current View</p>

Notes	<p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case</p> <p>If <code><alphanumeric></code> name already exists as a View, the error message “-224, Illegal parameter value; View <code><alphanumeric></code> already exists” is generated</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message “-221, Settings conflict; User View SCPI cannot be used while Display is disabled” is generated</p>
-------	---

Re-Save User View

You can re-edit a User View; if you make changes, then an asterisk will appear next to the User View’s name. You can then tap **Re-Save User View** to save it back to its existing name, or **Save Layout as New View** to add another, new User View.

This is a front panel function only, there is no remote command available to perform this function. To do this remotely, you must first perform **Save Layout as New View**, then delete the old User View and rename the new one with the name of the View you just deleted.

Rename User View

You can rename the current View by giving it a new unique name. Only User Views can be renamed, if the current View is a Predefined View, an error occurs.

Remote Command	<code>:DISPlay:VIEW:ADVanced:REName <alphanumeric></code>
Example	<code>:DISP:VIEW:ADV:REN “Baseband”</code>
Notes	<p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case</p> <p>If the <code><alphanumeric></code> specifying the new name is already present in the list of View names, the error message “-224, Illegal parameter value; View <code><alphanumeric></code> already exists” is generated</p> <p>If the current View is a Predefined View, the error message “-224, Illegal parameter value; Cannot rename a Predefined View” is generated</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message “-221, Settings conflict; View SCPI cannot be used while Display is disabled” is generated</p>

Delete User View

You can delete the current View if it is a User View. The default view becomes the current view for the Measurement.

Remote Command	<code>:DISPlay:VIEW:ADVanced:DELeTe</code>
----------------	--

Example	<code>:DISP:VIEW:ADV:DEL</code>
Notes	<p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case</p> <p>If the <code><alphanumeric></code> is not present in the list of View names, the error message “-224, Illegal parameter value; View <alphanumeric> does not exist” is generated</p> <p>If the current View is a Predefined View, the error message “-224, Illegal parameter value; Cannot delete a Predefined View” is generated</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message “-221, Settings conflict; View SCPI cannot be used while Display is disabled” is generated</p>

Delete All User Views

Deletes all previously saved User Views. The default view becomes the current view for the Measurement if a User View was the current view when this command was executed.

Remote Command	<code>:DISPlay:VIEW:ADVanced:DElete:ALL</code>
Example	<code>:DISP:VIEW:ADV:DEL:ALL</code>
Notes	Disabled if there are no User Views

View Editor Remote Commands

The following remote commands help you manage Views and User Views. Note that the SCPI node for User Views handles both Predefined and User Views. The legacy nodes, `:DISPlay:VIEW[:SElect]` and `:DISPlay:VIEW:NSEL`, are retained for backwards compatibility, but they only support predefined views.

View Listing Query

Returns a string containing a comma-separated list of names for *all* the Views, including User Views, available for the current Measurement.

Remote Command	<code>:DISPlay:VIEW:ADVanced:CATalog?</code>
Example	<code>:DISP:VIEW:ADV:CAT?</code>
Notes	<p>Returns a quoted string of the available Views for the current measurement, separated by commas. The list includes names for <i>all</i> the Views, including User Views, available for the current Measurement</p> <p>Example:</p> <p><code>"Normal,Trace Zoom,Spectrogram,Baseband,myView1,yourView1"</code></p> <p>No distinction is made between Predefined and User Views</p> <p>If you switch measurements with the display disabled (via <code>:DISP:ENAB OFF</code>), then query the list of available Views, the result is undefined</p>

User View Listing Query

Returns a string containing a comma-separated list of names for *only* the User Views available for the current Measurement.

Remote Command	<code>:DISPlay:VIEW:ADVanced:USER:CATalog?</code>
Example	<code>:DISP:VIEW:ADV:USER:CAT?</code>
Notes	Returns a quoted string of the available User Views for the current measurement, separated by commas. Example: <code>"Baseband,myView1,yourView1"</code> If you switch measurements with the display disabled (see "Display Enable (Remote Command Only)" on page 2616), then query the list of available Views, the result is undefined

3.9.5.3 Annotation

Contains controls for setting up the annotation for the current Mode or Measurement.

Graticule

Turns the display graticule On or Off for all windows with graticules in all measurements in the current Mode. Also turns the graticule Y-Axis annotation on and off.

Remote Command	<code>:DISPlay:GRATicule[:STATe] OFF ON 0 1</code> <code>:DISPlay:GRATicule[:STATe]?</code>
Example	<code>:DISP:GRAT OFF</code>
Notes	The graticule is the set of horizontal and vertical lines that make up the grid/divisions for the X-Axis and Y-Axis
Preset	<code>ON</code>
State Saved	Saved in instrument state
Backwards Compatibility SCPI	<code>:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe] OFF ON 0 1</code> <code>:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe]?</code> This command is accepted for backwards compatibility with older instruments, but the <code>WINDow</code> , <code>TRACe</code> and <code>GRID</code> parameters are ignored

Screen Annotation

Controls the display of the annunciation and annotation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) and the Y-Axis annotation, for all windows with screen annotation in all measurements in the current Mode.

This does *not* include marker annotation (or the N dB result). When **OFF**, the graticule expands to fill the entire graticule area, leaving only the 1.5% gap above the graticule, as described in the **Trace** section.

Remote Command	<code>:DISPlay:ANNotation:SCReen[:STATe] OFF ON 0 1</code> <code>:DISPlay:ANNotation:SCReen[:STATe]?</code>
Example	<code>:DISP:ANN:SCR OFF</code>
Dependencies	Grayed-out and forced to OFF when System Display Settings, Annotation is OFF
Preset	ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF
State Saved	Saved in instrument state

Trace Annotation

Turns on and off the labels on the traces, showing their detector (or their Math Mode) as described in the **Trace** section, for all windows in all measurements in the current Mode for which Trace Annotation on/off is supported.

If Trace Math is being performed on a trace, then the Trace Math annotation replaces the detector annotation.

For measurements that support limit lines, this key also turns on and off the labels on the Limit Lines. The label is the Limit number annotation and Limit Comment displayed on the graph. If the length of the comment is greater than 20 characters, the first 8 characters and the last 8 characters are displayed, joined with

Remote Command	<code>:DISPlay:ANNotation:TRACe[:STATe] ON OFF 1 0</code> <code>:DISPlay:ANNotation:TRACe[:STATe]?</code>
Example	<code>:DISP:ANN:TRAC OFF</code>
Preset	OFF
State Saved	Saved in instrument state

Control Annotation

Turns on and off the display of values on the Active Function controls for all measurements in the current Mode. This is a security feature.

Remote Command	<code>:DISPlay:ACTivefunc[:STATe] ON OFF 1 0</code> <code>:DISPlay:ACTivefunc[:STATe]?</code>
Example	<code>:DISP:ACT OFF</code>
Dependencies	Grayed out and forced to OFF when System Display Settings, Annotation is OFF
Preset	ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF
State Saved	Saved in instrument state

Meas Bar

Turns the Measurement Bar at the top of the screen on and off for all measurements in the current Mode. When **OFF**, the graticule area expands to fill the area formerly occupied by the Measurement Bar.

Remote Command	<code>:DISPlay:ANNotation:MBAR[:STATe] OFF ON 0 1</code> <code>:DISPlay:ANNotation:MBAR[:STATe]?</code>
Example	<code>:DISP:ANN:MBAR OFF</code>
Dependencies	Grayed out and forced to OFF when System Display Settings, Annotation is OFF
Preset	ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF
State Saved	Saved in instrument state

Display Enable (Remote Command Only)

Turns the display on/off, including the display drive circuitry. The backlight stays lit to confirm that the instrument is on. The display enable setting is mode global. There are three reasons for turning the display off:

1. To increase speed as much as possible by freeing the instrument from having to update the display
2. To reduce emissions from the display, drive circuitry
3. For security purposes

If you have turned off the display:

3 5G NR Mode
3.9 Power Stat CCDF Measurement

- and you are in local operation, the display can be turned back on by pressing any key or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor `:SYSTem:PRESet` enable the display)
- and you are in remote operation, the display can be turned back on by pressing the **Local** or **Esc** keys, or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor `:SYSTem:PRESet` enable the display)
- and you are using either the `:SYSTem:KLOCK` command or GPIB local lockout, then *no* front-panel key press will turn the display back on. You must turn it back on remotely.

If the display is **OFF**, many SCPI commands related to User Views and Multiscreen functionality do not work, and return the error messages “-221, Settings conflict; Screen SCPI cannot be used when Display is disabled” or “221, Settings conflict; View SCPI cannot be used while Display is disabled”. These commands include:

Name	Command
Select User View	<code>:DISPlay:VIEW:ADVanced:SElect</code>
Rename User View	<code>:DISPlay:VIEW:ADVanced:REName</code>
Delete User View	<code>:DISPlay:VIEW:ADVanced:DElete</code>
Create User View	<code>:DISPlay:VIEW:ADVanced:NAME</code>
Select Screen	<code>:INSTrument:SCReen:SElect</code>
Delete Screen	<code>:INSTrument:SCReen:DElete</code>
Delete All But This Screen	<code>:INSTrument:SCReen:DElete:ALL</code>
Add Screen	<code>:INSTrument:SCReen:CREate</code>
Rename Screen	<code>:INSTrument:SCReen:REName</code>
Sequencer On/Off	<code>:SYSTem:SEQuencer</code>

Remote Command	<code>:DISPlay:ENABle OFF ON 0 1</code> <code>:DISPlay:ENABle?</code>
Example	<code>:DISP:ENAB OFF</code>
Couplings	<code>:DISP:ENAB OFF</code> turns Backlight OFF and <code>:DISP:ENAB ON</code> turns Backlight ON , but changing Backlight settings does <i>not</i> change the state of <code>:DISP:ENAB</code>
Preset	ON Set by <code>:SYST:DEF MISC</code> , but not affected by <code>*RST</code> or <code>:SYSTem:PRESet</code>
State Saved	Not saved in instrument state
Backwards Compatibility Notes	<code>:SYST:PRES</code> no longer turns on <code>:DISPlay:ENABle</code> as it did in legacy analyzers

3.9.6 Frequency

Opens the **Frequency** menu, which contains controls that allow you to control the frequency and channel parameters of the instrument.

Some features in this menu are the same for all measurements in the current Mode – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by Meas Preset. For example, **Center Frequency** is the same for all measurements – it does not change as you change measurements.

3.9.6.1 Settings

Contains controls that pertain to the X-Axis parameters of the measurement. These parameters control how data on the vertical (X) axis is displayed and control instrument settings that affect the horizontal axis.

Carrier Reference Frequency

Sets carrier reference frequency. The center frequencies of carriers are defined as offset frequency from this value. This reference frequency is also the reference of carrier configuration preset.

Because LTE-A, MSR and 5G NR Mode measurements often deal with multiple carriers with distinct bandwidths, the simple "**Center Frequency**" on page 2186 parameter used in most measurements does not apply here. Instead, **Carrier Reference Frequency** is the key parameter. This must be distinct from the **Center Frequency** parameter used in other measurements, as **Center Frequency** can be a global parameter, and it would not make sense for **Carrier Reference Frequency** to use this global value.

In LTE-A and 5G NR Modes, if the following conditions are satisfied at the same time:

- the **Number of Component Carriers** is 1
- the **Center Freq Offset** is 0 Hz
- the **Center Frequency Mode** is Auto

then **Center Frequency** is equivalent to **Carrier Reference Frequency**. When **Center Frequency** changes in such conditions, the mode of **Center Frequency** remains as Auto and the Carrier Ref Freq changes to the same value. The main purpose of this coupling is to maintain backwards compatibility with legacy LTE/LTE TDD Modes, in which **:SENSe:FREQUENCY:CENTer** is used to set up the frequency of the measurement.

See ["More Information" on page 2186](#)

Remote Command	For LTE-A, 5G NR <code>[:SENSe]:CCARrier:REFeRence <freq></code> <code>[:SENSe]:CCARrier:REFeRence?</code> For MSR <code>[:SENSe]:CARRier:REFeRence <freq></code> <code>[:SENSe]:CARRier:REFeRence?</code>
Example	For LTE-A, 5G NR <code>:CCAR:REF 2GHz</code> <code>:CCAR:REF?</code> For MSR <code>:CARR:REF 2GHz</code> <code>:CARR:REF?</code>
Dependencies	Only available in LTEAFDD/LTEATDD, 5GNR and MSR Modes
Preset	1 GHz
State Saved	Saved in instrument state
Min/Max	Depends on instrument minimum center frequency. Same as "Center Frequency" on page 2186

More Information

In most applications, **Center Frequency** is generally where the carrier center is located at and thus plays a very important role. However, in LTE-Advanced TDD/FDD Modes, the measurements are done based on carrier center frequencies and its bandwidths, both of which are calculated or obtained according to the carriers' configuration.

Center Frequency

Sets the frequency that corresponds to the horizontal center of the graticule. While adjusting **Center Frequency**, **Span** is held constant.

The **Center Frequency** setting is the same for all measurements within a mode, that is, it is Meas Global. Some Modes are also able to share a Mode Global center frequency value. If this is the case, the Mode will have a **Global** tab in its **Meas Setup** menu.

Center Frequency sets (and queries) the center frequency for the currently selected input. If your instrument has multiple inputs, and you select another input, **Center Frequency** changes to the value for that input. SCPI commands are available to directly set the center frequency for a specific input.

Center Frequency is remembered as you go from input to input. Thus you can set a **Center Frequency** of 10 GHz with the RF Input selected, change to BBIQ and set a

Center Frequency of 20 MHz, then switch to External Mixing and set a Center Freq of 60 GHz, and when you go back to the RF Input, **Center Frequency** will go back to 10 GHz; back to BBIQ and it is 20 MHz; back to External Mixing and it is 60 GHz.

See:

- ["Center Frequency Presets" on page 2188](#)
- ["VXT Models with Radio Heads/CIU Frequency Range" on page 2190](#)
- ["RF Center Freq" on page 2190](#)
- ["Ext Mix Center Freq" on page 2191](#)
- ["I/Q Center Freq" on page 2192](#)

Remote Command	<code>[:SENSe] :FREQuency :CENTer <freq></code> <code>[:SENSe] :FREQuency :CENTer?</code>
Example	Set Center Frequency to 50 MHz: <code>:FREQ:CENT 50 MHz</code> Increment Center Frequency by the value of CF Step : <code>:FREQ:CENT UP</code> Return the current value of Center Frequency: <code>:FREQ:CENT?</code>
Notes	Sets the RF, External Mixing or I/Q Center Frequency depending on the selected input: <ul style="list-style-type: none"> – For RF input it is equivalent to <code>:FREQ:RF:CENT</code> – For I/Q input it is equivalent to <code>:FREQ:IQ:CENT</code> – For External Mixer it is equivalent to <code>:FREQ:EMIX:CENT</code> Preset and Max values are dependent on Hardware Options If no terminator (for example, MHz) is sent, the terminator Hz is used. If a terminator with unit other than Frequency is used, an invalid suffix error message is generated
Preset	Depends on instrument maximum frequency, mode, measurement, and selected input See "Center Frequency Presets" on page 2188 , "RF Center Freq" on page 2190 , "Ext Mix Center Freq" on page 2191 , "I/Q Center Freq" on page 2192 , and "VXT Models with Radio Heads/CIU Frequency Range" on page 2190
State Saved	Saved in instrument state
Min/Max	Depends on instrument maximum frequency, mode, measurement, and selected input See "Center Frequency Presets" on page 2188 , "RF Center Freq" on page 2190 , "I/Q Center Freq" on page 2192 , and "VXT Models with Radio Heads/CIU Frequency Range" on page 2190
Status Bits/OPC dependencies	Non-overlapped

3 5G NR Mode
 3.9 Power Stat CCDF Measurement

The following command and parameters apply only to MSR, LTE-Advanced FDD/TDD and 5G NR Modes.

Remote Command	<code>[:SENSe]:FREQuency:CENTer:AUTO ON OFF 1 0</code> <code>[:SENSe]:FREQuency:CENTer:AUTO?</code>						
Example	<code>:FREQ:CENT:AUTO OFF</code> <code>:FREQ:CENT:AUTO?</code>						
Dependencies	Only available for the Monitor Spectrum, Power Stat CCDF and IQ waveform measurements in MSR, LTE-Advanced FDD/TDD and 5G NR Modes						
Couplings	When Center Frequency changes, state automatically changes to Manual (OFF) Center Frequency, Center Frequency Offset and Carrier Reference Frequency are coupled. When Carrier Reference Frequency changes:						
	<table border="1"> <thead> <tr> <th>Center Frequency</th> <th>Relationship</th> </tr> </thead> <tbody> <tr> <td>Auto</td> <td>Center Frequency = Carrier Reference Frequency + Center Frequency Offset (fixed)</td> </tr> <tr> <td>Man</td> <td>Center Frequency (fixed) = Carrier Reference Frequency + Center Frequency Offset</td> </tr> </tbody> </table>	Center Frequency	Relationship	Auto	Center Frequency = Carrier Reference Frequency + Center Frequency Offset (fixed)	Man	Center Frequency (fixed) = Carrier Reference Frequency + Center Frequency Offset
Center Frequency	Relationship						
Auto	Center Frequency = Carrier Reference Frequency + Center Frequency Offset (fixed)						
Man	Center Frequency (fixed) = Carrier Reference Frequency + Center Frequency Offset						
Preset	ON						
State Saved	Saved in instrument state						
Range	Auto Man						

Center Frequency Presets

The following table provides the Center Frequency Presets for the Spectrum Analyzer mode, and the Max Freq, for the various frequency options:

Freq Option	CF after Mode Preset	Stop Freq after Mode Preset	Max Freq (can't tune above)
503 (all but CXA)	1.805 GHz	3.6 GHz	3.7 GHz
503 (CXA)	1.505 GHz	3.0 GHz	3.08 GHz
507 (all but CXA)	3.505 GHz	7.0 GHz	7.1 GHz
507 (CXA)	3.755 GHz	7.5 GHz	7.58 GHz
508 (all but MXE)	1.805 GHz	3.6 GHz	8.5 GHz
508 (MXE)	4.205 GHz	8.4 GHz	8.5 GHz
513	6.805 GHz	13.6 GHz	13.8 GHz
526 (except CXA and MXE)	13.255 GHz	26.5 GHz	27.0 GHz*
526 (CXA)	13.255 GHz	26.5 GHz	26.55 GHz
526 (MXE)	1.805 GHz	3.6 GHz	27.0 GHz

Freq Option	CF after Mode Preset	Stop Freq after Mode Preset	Max Freq (can't tune above)
532	16.005 GHz	32.0 GHz	32.5 GHz
540	20.005 GHz	40.0 GHz	40.5 GHz
543	21.505 GHz	43.0 GHz	43.0 GHz
544	22.005 GHz	44.0 GHz	45.0 GHz
550	25.005 GHz	50.0 GHz	52 GHz
F03 (CXA-m)	1.505 GHz	3.0 GHz	3.08 GHz
F07 (CXA-m)	3.755 GHz	7.5 GHz	7.575 GHz
F13 (CXA-m)	6.805 GHz	13.6 GHz	13.8 GHz
F26 (CXA-m)	13.255 GHz	26.5 GHz	26.55 GHz
504 (SP900B/21A ,M8920A)	2.145 GHz	3.88GHz	3.88 GHz
506 (SP900B/21A ,M8920A)	3.245 GHz	6.08GHz	6.08 GHz
F06 (SP900B/11A)F06 (SP900B)	1.0 GHz	6.08 GHz	6.08 GHz
F08 (SP900B)	1 GHz	1.08 GHz	6.6 GHz
F12 (SP900B)	1 GHz	1.08 GHz	8.6 GHz
			12.9 GHz

*For option 526, the Max CF in RTSA is 26.999999995 GHz.

SP900SCenter Freq Presets

Input	CF after Mode Preset	Stop Freq after Mode Preset	Max Freq (can't tune above)
Input 1, all models	25.005 GHz	50.0 GHz	52 GHz
Input 2, opt 585	42.505 GHz	85.0 GHz	86 GHz
Input 2, opt 590	45.005 GHz	90.0 GHz	92 GHz
Input 2, opt 5CX	55.005 GHz	110.0 GHz	110 GHz

Input 2, CXA and MXE

Model	CF after Mode Preset	Stop Freq after Mode Preset	Max Freq (can't tune above)
CXA opt C75	0.7505 GHz	1.5 GHz	1.58 GHz
MXE	505 MHz	1 GHz	1.000025 GHz

Tracking Generator Frequency Limits (CXA only)

Tracking Generator Option	Min Freq (clips to this freq when turn TG on and can't tune below while TG on)	If above this Freq, Stop Freq clipped to this Freq when TG turned on	Max Freq (can't tune above) while TG on
T03	9 kHz	3.0 GHz	3.08 GHz
T06	9 kHz	6.0 GHz	6.05 GHz

Tracking Generator Frequency Limits(CXA-m only)

Tracking Generator Option	Min Freq (clips to this freq when turn TG on and can't tune below while TG on)	If above this Freq, Stop Freq clipped to this Freq when TG turned on	Max Freq (can't tune above) while TG on
T03	2 MHz	3.08 GHz	3.08 GHz
T07	2 MHz	7.575 GHz	7.575 GHz
T13	2 MHz	13.8 GHz	13.8 GHz
T26	2 MHz	26.55 GHz	26.55 GHz

VXT Models with Radio Heads/CIU Frequency Range

The following table shows the Center Frequency Presets and Range for VXT modes with Radio Heads/CIU.

Products with Radio Heads/CIU	Preset	Start frequency	Stop frequency
M9421A + CIU	6 GHz	5.9 GHz	12 GHz
SP900B+ CIU	6 GHz	5.9 GHz	12 GHz
SP900B+ CIU + RRH	25 GHz	24.25 GHz	43.5 GHz

RF Center Freq

Lets you specify the RF Center Frequency. Sets the Center Frequency to use when the RF input is selected, even if the RF input is not selected at the time the command is sent. Note that **Center Frequency** in the **Frequency** menu on the front panel always applies to the currently selected input.

Remote Command	<code>[:SENSe]:FREQuency:RF:CENTer <freq></code> <code>[:SENSe]:FREQuency:RF:CENTer?</code>
Example	<code>:FREQ:RF:CENT 30 MHz</code> <code>:FREQ:RF:CENT?</code>
Notes	This command is the same in all Modes, but the parameter is Measurement Global, so the value is independent in each mode and common across all the measurements in the mode
Dependencies	If the electronic/soft attenuator is enabled, any attempt to set Center Frequency such that the Stop Frequency would be > 3.6 GHz fails and results in an advisory message

	If the equivalent SCPI command is sent, this same message is generated as part of a “-221, Settings conflict” warning
Preset	See " Center Frequency Presets " on page 2188
State Saved	Saved in instrument state
Min	-79.999995 MHz
Max	See " Center Frequency Presets " on page 2188. Basically, instrument maximum frequency - 5 Hz

Ext Mix Center Freq

Specifies the External Mixer Center Frequency. Sets the Center Frequency to use when the External Mixer is selected, even if the External Mixer input is not the input that is selected at the time the command is sent. Note that **Center Frequency** in the **Frequency** menu on the front panel always applies to the currently selected input.

Remote Command	<code>[:SENSe] :FREQuency:EMIXer:CENTer <freq></code> <code>[:SENSe] :FREQuency:EMIXer:CENTer?</code>
Example	<code>:FREQ:EMIX:CENT 60 GHz</code> <code>:FREQ:EMIX:CENT?</code>
Notes	This command is the same in all Modes, but the parameter is Measurement Global, so the value is independent in each Mode and common across all the measurements in the Mode
Couplings	When returning to External Mixing after having switched to one of the other inputs (for example, RF), you will come back into the settings that you had when you left External Mixing. So you will come back to the band you were in with the Center Frequency that you had. However, Span is not an input-dependent parameter, therefore you will bring the span over from the other input. Therefore, the instrument comes back with the span from the previous input, limited as necessary by the current mixer setup
Preset	When a Mode Preset is performed while in External Mixing, the Start frequency of the current Mode is set to the nominal Min Freq of the lowest harmonic range in the Harmonic Table for the current mixer setup. Similarly, the Stop frequency of the current Mode is set to the nominal Max Freq of the highest harmonic range in the Harmonic Table. The Center Freq thus presets to the point arithmetically equidistant from these two frequencies Note that, if the current measurement has a limited Span available to it, and cannot achieve the Span shown in the table (Span=Stop Freq – Start Freq), the instrument uses the maximum Span the measurement allows, and still sets the Center Freq to the midpoint of the Start and Stop Freq values in the Harmonic Table When Restore Input/Output Defaults is performed, the mixer presets to the 11970A, whose Start and Stop frequencies are 26.5 and 40 GHz respectively. The center of these two frequencies is 33.25 GHz Therefore, after Restore Input/Output Defaults , if you go to External Mixing and do a Mode Preset while in Spectrum Analyzer Mode, the resulting Center Freq is 33.25 GHz
State Saved	Yes
Min	The minimum frequency in the currently selected mixer band + 5 Hz
Max	The maximum frequency in the currently selected mixer band - 5 Hz

I/Q Center Freq

Specifies the I/Q Center Frequency. Sets the Center Frequency to be used when the I/Q input is selected, even if the I/Q input is not the input that is selected at the time the command is sent. Note that **Center Frequency** in the **Frequency** menu on the front panel always applies to the currently selected input.

Remote Command	<code>[:SENSe]:FREQuency:IQ:CENTer <freq></code> <code>[:SENSe]:FREQuency:IQ:CENTer?</code>
Example	<code>:FREQ:IQ:CENT 30 MHz</code>
Notes	This command is the same in all Modes, but the parameter is Measurement Global, so the value is independent in each Mode and common across all the measurements in the Mode
Preset	0 Hz
State Saved	Saved in instrument state
Min	-40.049995 MHz
Max	40.049995 MHz

Center Frequency Offset

Sets **Center Frequency Offset**, which is coupled with "**Center Frequency**" on page 2186, and only used in the Monitor Spectrum, IQ Waveform, Power Stat CCDF, and PAVT measurements. **Center Frequency**, **Center Frequency Offset** and **Carrier Reference Frequency** are coupled by this equation:

$$\text{Center Frequency} = \text{Carrier Reference Frequency} + \text{Center Frequency Offset}$$

When you change **Center Frequency Offset**, **Center Frequency** is updated, but **Carrier Reference Frequency** is not.

Remote Command	<code>[:SENSe]:FREQuency:CENTer:OFFSet <freq></code> <code>[:SENSe]:FREQuency:CENTer:OFFSet?</code>
Example	<code>:FREQ:CENT:OFFS 100kHz</code> <code>:FREQ:CENT:OFFS?</code>
Dependencies	Only available in MSR, LTEAFDD/LTEATDD and 5G NR Modes
Preset	0 GHz
State Saved	Saved in instrument state
Min	-500 GHz
Max	500 GHz

Adjust Center Frequency to Carrier Config

This immediate action control adjusts "Center Frequency" on page 2186 to cover all the configured carriers when "Info BW" on page 2175 is Auto.

Remote Command	<code>[:SENSe] :PStatistic :FREQuency :CENTer :ADJust</code>
Example	<code>:PST :FREQ :CENT :ADJ</code>
Couplings	When "Info BW" on page 2175 is Man , pressing this control automatically changes it to Auto

3.9.7 Marker

Accesses a menu that enables you to select, set up and control the markers for the current measurement. If there are no active markers, **Marker** selects marker 1, sets it to **Normal** and places it at the center of the display. If the selected marker is **Off**, it is set to **Normal** and placed at the center of the screen on the trace determined by the Marker Trace rules.

3.9.7.1 Select Marker

Specifies the selected marker. The term "selected marker" is used throughout this document to specify which marker will be affected when you change marker settings, perform a Peak Search, etc.

The **Select Marker** control appears above the menu panel, indicating that it applies to all controls in the **Marker** menu panels. **Select Marker** is blanked if you select a tab whose controls do *not* depend on the selected marker (for example, Counter).

For any menu that includes **Select Marker**, the first control is always **Marker Frequency|Time**.

Notes	The selected marker is remembered even when not in the Marker menu, and is used if a search is done, or a Band Function is turned on, or for Signal Track or Continuous Peak
Preset	Marker 1
State Saved	The number of the selected marker is saved in instrument state
Annunciation	Appears in the marker results block label for Normal and Delta markers

3.9.7.2 Settings

The controls on this tab include the Marker active function and a radio button selection of the marker control mode (**Position/Normal**, **Delta** or **Off**) for the selected marker, as well as additional functions that help you use markers.

Marker X-Axis Value

Sets the marker X-Axis value in the current marker X-Axis Scale unit. This function has no effect if the control mode is **Off**, but is the remote command equivalent of entering an X value if the control mode is **Normal** or **Delta**.

Remote Command	<code>:CALCulate:PStatistic:MARKer[1] 2 ... 12:X <rel_amp1></code> <code>:CALCulate:PStatistic:MARKer[1] 2 ... 12:X?</code>
Example	<code>:CALC:PST:MARK3:X 0</code> <code>:CALC:PST:MARK3:X?</code>
Notes	If no suffix is sent, uses the fundamental units for the current marker X-Axis Scale. If a suffix is sent that does not match the current marker X-Axis Scale unit, an error "Invalid suffix" is generated The query returns the marker's absolute X Axis value if the control mode is Normal , or the offset from the marker's reference marker if the control mode is Delta . The query is returned in the fundamental units for the current marker X-Axis scale: Hz for Frequency and Inverse Time , seconds for Period and Time . If the marker is Off the response is Not A Number
Preset	After a preset, all Markers are turned OFF , so Marker X-Axis Value query returns Not a Number (NAN)
State Saved	No
Min	-9.9E+37
Max	9.9E+37
Annotation	Mkr # <X value> and <Marker value> upper right on graph

Marker Y Axis Value (Remote Command Only)

Queries the marker Y-Axis value in the current marker Y-Axis unit.

Remote Command	<code>:CALCulate:PStatistic:MARKer[1] 2 ... 12:Y?</code>
Example	<code>:CALC:PST:MARK11:Y?</code>
Notes	Returns the marker Y-Axis result, if the control mode is Normal , or Delta . If the marker is Off , the response is <i>Not a Number</i>
Preset	0
State Saved	No
Backwards Compatibility SCPI	<code>:CALCulate:PStatistic:MARKer[1] 2 ... 12:FUNction:RESult?</code>

Marker Mode

Sets the marker control mode to **Normal** (**POSition**), **Delta**, or **Off**. All interactions and dependencies detailed under the control description are enforced when the

remote command is sent. If the selected marker is **Off**, pressing **Marker** sets it to **Normal** and places it at the center of the screen on the trace determined by the **Marker Trace** rules. At the same time, **Marker X Axis Value** appears on the Active Function area.

The default active function is the active function for the currently selected marker control mode. If the current control mode is **OFF**, there is no active function and the active function is turned off.

Remote Command	<code>:CALCulate:PStatistic:MARKer[1] 2 ... 12:MODE POSition DELTa OFF</code> <code>:CALCulate:PStatistic:MARKer[1] 2 ... 12:MODE?</code>
Example	<code>:CALC:PST:MARK:MODE POS</code> <code>:CALC:PST:MARK:MODE?</code>
Preset	OFF
State Saved	Saved in instrument state
Range	POSition DELTA OFF
Annotation	Mkr # <X value> and <Marker value> upper right on graph When Marker Trace is Polar in WCDMA mode: Mkr # <Chip Value (RHO & QPSKEVM)/Symbol Value (CDP)>, <X value> and <Y value> upper right on graph

Backwards Compatibility SCPI Commands

Sets or queries the state of a marker. Setting a marker that is **OFF** to **ON** (1) puts it into **Normal** mode and places it at the center of the screen.

Example	<code>:CALC:PST:MARK3:STAT 1</code> <code>:CALC:PST:MARK3:STAT?</code>
Preset	OFF
State Saved	Saved in instrument state
Range	OFF ON
Backwards Compatibility SCPI	<code>:CALCulate:PStatistic:MARKer[1] 2 ... 12:STATe OFF ON 0 1</code> <code>:CALCulate:PStatistic:MARKer[1] 2 ... 12:STATe?</code>

Delta Marker (Reset Delta)

Pressing this button has exactly the same effect as pressing **Delta** in "**Marker Mode**" on page 2194. The selected marker becomes a **Delta** marker. If the selected marker is already a **Delta** marker, the reference marker is moved to the current position of the selected marker, thus resetting the Delta to zero.

Marker Settings Diagram

Lets you configure the Marker system using a visual utility.

All Markers Off

Turns off all markers.

Remote Command	:CALCulate:PStatistic:MARKer:AOff
----------------	-----------------------------------

Example	:CALC:PST:MARK:AOff
---------	---------------------

Couple Markers

When this function is **ON**, moving any marker causes an equal X-Axis movement of every other marker that is not **Off**. By “equal X-Axis movement” we mean that we preserve the difference between each marker’s X-Axis value (in the fundamental x-axis units of the trace that marker is on) and the X-Axis value of the marker being moved (in the same fundamental x-axis units).

This may result in markers going off screen.

Remote Command	:CALCulate:PStatistic:MARKer:COUPle[:STATe] ON OFF 1 0 :CALCulate:PStatistic:MARKer:COUPle[:STATe]?
----------------	--

Example	:CALC:PST:MARK:COUP ON :CALC:PST:MARK:COUP?
---------	--

Preset	OFF Presets on Mode Preset and All Markers Off
--------	---

State Saved	Saved in instrument state
-------------	---------------------------

3.9.7.3 Properties

The controls on this tab are used to set certain properties of the selected marker.

Marker X-Axis Value

This is the fundamental control that you use to move a marker around on the trace. This is the same as "[Marker X-Axis Value](#)" on [page 2194](#) in **Settings**.

Relative To

Selects the marker to which the selected marker is relative (its reference marker).

Every marker has another marker to which it is relative. This marker is referred to as the “reference marker” for that marker. This attribute is set by the **Marker, Properties, Relative To** key. The marker must be a **Delta** marker to make this attribute relevant. If it is a **Delta** marker, the reference marker determines how the marker is controlled and how its value is displayed. A marker cannot be relative to itself.

Remote Command	<code>:CALCulate:PStatistic:MARKer[1] 2 ... 12:REFerence <integer></code> <code>:CALCulate:PStatistic:MARKer[1] 2 ... 12:REFerence?</code>
Example	<code>:CALC:PST:MARK:REF 3</code> <code>:CALC:PST:MARK:REF?</code>
Notes	Causes the marker specified with the subopcode to become selected Range (for SCPI command): 1 to 12. If the range is exceeded the value is clipped A marker cannot be relative to itself so that choice is not available, and if sent from SCPI generates error -221: “Settings conflict; marker cannot be relative to itself” When queried, a single value is returned (the specified marker numbers relative marker)
Couplings	The act of specifying the selected marker’s reference marker makes the selected marker a Delta marker If the reference marker is off it is turned on in Fixed or Normal mode at the delta marker location
Preset	The preset default “Relative To” marker (reference marker) is the next higher numbered marker (current marker +1). For example, if marker 2 is selected, then it’s default reference marker is marker 3. The exception is marker 12, which has a default reference of marker 1 Set to the defaults by using Restore Mode Defaults . This is not reset by Marker Off, All Markers Off, or Preset
State Saved	Saved in instrument state. Not affected by Marker Off and hence not affected by Preset or power cycle
Min	1
Max	12
Annunciation	Appears in the marker label of a Delta marker

Marker Trace

Assigns the specified marker to the designated trace. The trace choices are:

- MEASured
- GAUSSian
- REFerence

Remote Command	<code>:CALCulate:PStatistic:MARKer[1] 2 ... 12:TRACe MEASured GAUSSian REFerence</code> <code>:CALCulate:PStatistic:MARKer[1] 2 ... 12:TRACe?</code>
Example	<code>:CALC:PST:MARK3:TRAC MEAS</code>

	:CALC:PST:MARK:TRACE?
Preset	MEASured
State Saved	Yes
Range	MEASured GAUSSian REFerence

Marker Settings Diagram

Lets you configure the Marker system using a visual utility. This is the same as "[Marker Settings Diagram](#)" on page 2196 in **Settings**.

3.9.8 Meas Setup

Contains functions for setting up the measurement parameters and also contains functions for setting up parameters global to all measurements in the mode.

3.9.8.1 Settings

Contains frequently used functions to which you will want the fastest access.

Counts

Sets the accumulated number of sampling points for data acquisition. The range is 1.000 kpt (k point) to 2.00000 Gpt (G point) with 1 kpt resolution.

Remote Command	[:SENSe]:PStatistic:COUNTs <integer> [:SENSe]:PStatistic:COUNTs?
Example	:PST:COUN 5001 :PST:COUN?
Couplings	This value is coupled to " Meas Cycles " on page 2198, as: Counts = "Meas Cycles" on page 2198 * SamplingFrequency * "Meas Interval" on page 2199
Preset	10000000
State Saved	Saved in instrument state
Min/Max	1000/2000000000

Meas Cycles

Sets the number of measurement cycles to calculate power statistic data. This number couples to "[Counts](#)" on page 2198, by:

Meas Cycles = "Counts" on page 2198 / (Sampling Frequency * "Meas Interval" on page 2199)

When the "Counts" on page 2198 value cannot be divided by (Sampling Frequency * "Meas Interval" on page 2199), this value is displayed as a decimal fraction.

Remote Command	<code>[:SENSe]:PStatistic:SWEep:CYCLes <real></code> <code>[:SENSe]:PStatistic:SWEep:CYCLes?</code>
Example	<code>:PST:SWE:CYCL 1001</code> <code>:PST:SWE:CYCL?</code>
Preset	Depends on the sampling frequency
Min	0.001
Max	Depends on the sampling frequency

Meas Interval

Sets the number of data points to be used as the measurement interval. This value couples to "Counts" on page 2198, as:

Meas Interval = "Counts" on page 2198 / ("Meas Cycles" on page 2198 * Sampling Frequency)

Remote Command	<code>[:SENSe]:PStatistic:SWEep:TIME <time></code> <code>[:SENSe]:PStatistic:SWEep:TIME?</code>
Example	<code>:PST:SWE:TIME 2 ms</code> <code>:PST:SWE:TIME?</code>
Preset	1.0 ms !unless noted below LTEATDD, 5G NR: 500 us
Min/Max	50.0 us/10.0 ms !unless noted below LTEATDD, 5G NR: 1 us/10.0 ms

Meas Offset

Sets the value of time to be used as the measurement interval start.

Remote Command	<code>[:SENSe]:PStatistic:MEAS:OFFSet <time></code> <code>[:SENSe]:PStatistic:MEAS:OFFSet?</code>
Example	<code>:PST:MEAS:OFFS 2 ms</code> <code>:PST:MEAS:OFFS?</code>
Dependencies	Only available in LTEAFDD/LTEATDD and 5GNR Modes
Preset	0.0s for LTEATDD, 5G NR

State Saved	Saved in instrument state
Min/Max	0.0 s/10.0 ms for LTEATDD, 5G NR

Meas Setup Summary Table

Lets you view and access many of the parameters in the **Meas Setup** menus on one screen.

Auto Couple

Immediately puts all Auto/Man functions into Auto. The **Auto Couple** action is confined to the current measurement only. It does not affect other measurements in the Mode.

In the Auto state, Auto/Man functions are said to be “coupled”, meaning their values change as you make changes to other values in the measurement. This helps ensure accurate measurements and optimum dynamic range. **Auto Couple** is an immediate action function, and when it is executed, all the Auto/Man controls for the current measurement are set to Auto, and all measurement settings coupled to the Auto/Man parameters are automatically set to their optimal values.

For further details of measurement-specific settings (if any), see ["Measurement-Specific Details" on page 2201](#) below.

Remote Command	:COUPle ALL
Example	:COUP ALL
Backwards Compatibility SCPI	:COUPLE ALL NONE
Backwards Compatibility Notes	:COUP:NONE puts all Auto/Man parameters in manual mode, decoupling all the coupled instrument parameters. It is retained for backwards compatibility and is <i>not</i> recommended for making measurements or new designs

All Auto/Man parameter couplings in the measurement are set to Auto. This includes couplings that may be unavailable or grayed-out due to the current state. For example, in the Swept SA measurement, there is no Auto/Man coupling for **RBW** while in Zero Span. Nonetheless, if **Auto Couple** were executed while in Zero Span it would set **RBW** to Auto "behind the scenes" so that, on exit from Zero Span, it would be in Auto.

Any Auto/Man selection specific (local) to the other measurements in the current Mode will not be affected by **Auto Couple**. Any functions that are *not* coupled with other instrument parameters, such as ranging or leveling variables, such as "AutoRange" or "AutoScale", will not be affected.

Executing the **Auto Couple** command generates the informational message, "All Auto/Man functions have been set to Auto".

Each parameter, upon being set to Auto, selects and sets the appropriate auto-coupled value based on that parameter's coupling rules. The Dependency Resolver orchestrates the couplings for parameters that are dependent on one or more other parameters. The coupling and dependency rules for each parameter are defined in the chapter describing that parameter.

Executing the **Auto Couple** command *does not* affect markers, marker functions, trace or display attributes, or any other instrument setting other than those specifically mentioned above.

Measurement-Specific Details

TOI

Parameters affected by Auto Couple are:

- Center Frequency Step
- Resolution Bandwidth
- Span/RBW Ratio
- Sweep Time
- Video BandwidthVBW/RBW ratio
- Upper and Lower Tone (set to Sense)
- Zero span measurement Resolution Bandwidth
- Zero span measurement Dwell Time
- Center Frequency Step
- Resolution Bandwidth
- Span/RBW Ratio
- Sweep Time
- Video BandwidthVBW/RBW ratio
- Upper and Lower Tone (set to Sense)
- Zero span measurement Resolution Bandwidth
- Zero span measurement Dwell Time

Harmonics

For Harmonics, these parameters are:

- Resolution Bandwidth
- Fundamental Frequency
- Dwell Time
- Range Table Resolution Bandwidths
- Range Table Dwell Times

Meas Preset

Restores all the measurement parameters to their default values.

Remote Command	<code>:CONFigure:PStatistic</code>
Example	<code>:CONF:PST</code>
Couplings	Selecting Meas Preset restores all measurement parameters to their default values

3.9.8.2 Radio

The Radio tab contains controls to select link direction.

Direction

Direction specifies whether the 5G NR signal is an uplink signal or a downlink signal.

This control allows you to set the Direction of the signal being measured.

Remote Command	<code>[:SENSe]:RADio:STANdard:DIRectioN DLINK ULINK</code> <code>[:SENSe]:RADio:STANdard:DIRectioN?</code>
Example	<code>:RAD:STAN:DIR DLIN</code>
Dependencies	When N9085EM0E is not installed and N9085EM4E is installed, only Uplink is available
Couplings	Changing the direction affects the gate source as follows <ul style="list-style-type: none">– If changed to uplink: RF burst– If changed to downlink: External 1 In Transmit On Off Power, changing the direction affects the trigger source as follows <ul style="list-style-type: none">– If changed to uplink: Periodic

- If changed to downlink: External 1 except for models with the H1G option. With the H1G option, the trigger source changes as follows.
 - External 1, when Info BW \leq 255 MHz
 - External 3, when Info BW \geq 256 MHz

Changing the direction affects many other modulation analysis setup parameters

Preset	ULINK when N9085EM0E is not installed and N9085EM4E is installed Otherwise, DLINK
State Saved	Yes
Range	Uplink only when N9085EM0E is not installed and N9085EM4E is installed Otherwise, Downlink Uplink

3.9.8.3 Component Carriers

Contains settings that let you configure the analyzer to match the component carriers in your 5G NR signal.

Number of Component Carriers

Specifies how many component carriers are included in the 5G NR measurements. The 5G NR supports the maximum of 16 component carriers.

Remote Command	<code>[:SENSe]:CCARrier:COUNT <integer></code> <code>[:SENSe]:CCARrier:COUNT?</code>
Example	<code>:CCAR:COUN 1</code> <code>:CCAR:COUN?</code>
Preset	1
State Saved	Yes
Min	1
Max	16

Carrier Allocation

Specifies the carrier frequency allocation. There are two types of allocation, contiguous and non-contiguous. Non-Contiguous frequency allocation is defined as an allocation where two sub-blocks are separated with a sub-block gap:

- Contiguous – All the component carriers belong to one block and no sub-block gap exists

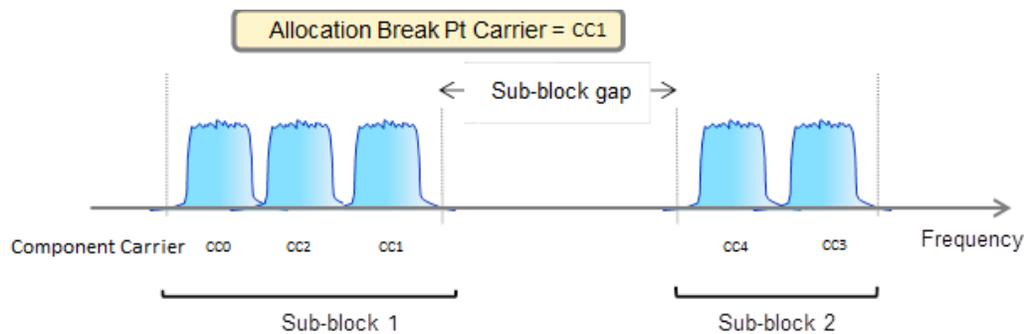

- Non-Contiguous – Component carriers are separated into two sub-blocks. Allocation Break Pt Carrier determines how sub-blocks are configured

Remote Command	<code>[:SENSe]:CCARrier:CONFig:ALLocation CONTiguous NCONtiguous</code> <code>[:SENSe]:CCARrier:CONFig:ALLocation?</code>
Example	<code>:CCAR:CONF:ALL CONT</code> <code>:CCAR:CONF:ALL?</code>
Preset	<code>CONtiguous</code>
State Saved	Saved in instrument state
Range	Contiguous Non-Contiguous

Non-Contiguous Break at

Specifies an allocation break point in non-contiguous carrier allocation. First sub-block starts from the lowest frequency carrier and stops at the allocation break point carrier. Next sub-block starts from the next upper frequency carrier and ends at the highest frequency carrier.

one example is shown below. In the example carrier indices are not in the order of carrier frequency. In the example, Allocation Break Pt Carrier is CC1. It means that sub-block 1 ends at carrier CC1 and sub-block 2 starts at carrier CC4. Sub-block gap is located between carrier CC1 and CC4.

Remote Command	<code>[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint CC0 ... CC15</code> <code>[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint?</code>
Example	<code>:CCAR:CONF:ALL:NCON:ABP CC0</code> <code>:CCAR:CONF:ALL:NCON:ABP?</code>
Dependencies	Allocation Break Point is coupled to Number of Component Carriers. For example, Allocation Break Point list will include CC0~CC1 if the number of Component Carriers is 2
Preset	<code>CC0</code>
State Saved	Saved in instrument state
Range	<code>CC0 ... CC15</code>

Configure Comp Carriers

This dialog lets you perform a detailed configuration of your component carriers, including number of carriers, bandwidth, offset, integration bandwidth, and so on.

Configure CCs

Lets you configure bandwidth, frequency offsets, and integration bandwidth, and also lets you exclude certain carriers from the measurement.

More Information

"Measure Carrier" on page 2636	"Sidelink" on page 2637	"Bandwidth" on page 2637	"Freq Range" on page 2638
"Freq Offset" on page 2638	"Cell ID Auto" on page 2639	"Cell ID Value" on page 2639	"Demod Spectrum" on page 2639
"CHP Power Integration Bandwidth" on page 2640	"ACP Power Integration Bandwidth" on page 2640	"SEM Power Integration Bandwidth" on page 2642	"N_Grid_Size (Display Only)" on page 1491
"SCS (Power Meas)" on page 2642			

Number of Component Carriers

This is the same as the control on the menu panel. See "[Number of Component Carriers](#)" on page 2633.

Auto Frequency Offset

Changing this value will automatically calculate frequency offset based on a specified set of rules (For the rules, see 5.4.1.1 and 5.4.1.2 in 3GPP TS 38.104 V15.4.0).

Remote Command	<code>[:SENSe]:CCARrier:AFOffset OFF ACRA100K ACRA15K ACRA60K CARA100K CARA15K CARA60K</code> <code>[:SENSe]:CCARrier:AFOffset?</code>
Example	<code>:CCAR:AFOF ACRA100K</code> <code>:CCAR:AFOF?</code>
Notes	When you change the value to OFF , nothing happens
Dependencies	Changing Number of Component Carriers, CC's Bandwidth, or CC's Frequency Range will recalculate

	frequency offset unless OFF is selected When CC's Frequency Offset is manually changed, this parameter is set to OFF This feature isn't supported when Carrier Allocation is set to Non-Contiguous. When Auto Freq Offset is set to a value other than OFF with Number of Component Carriers = 1, then, CCO Freq Offset is automatically adjusted to 0 Hz
Preset	OFF
State Saved	Yes
Range	The cascading list is shown below
	Channel Spacing for Channel Raster
	Adjacent NR Carriers 100 kHz
	Carrier Aggregation 15 kHz
	Off 60 kHz
	Channel Spacing for Channel Raster
	Adjacent NR Carriers 100 kHz
	Carrier Aggregation 15 kHz
	Off 60 kHz
	Channel Spacing for Channel Raster
	Adjacent NR Carriers
	Carrier Aggregation
	Off

Carrier Allocation

This is the same as the control on the menu panel. See ["Carrier Allocation" on page 2633](#).

Non-Contiguous Break at

This is the same as the control on the menu panel. See ["Non-Contiguous Break at" on page 2634](#).

Measure Carrier

This column sets whether to measure this component carrier or not.

Remote Command	[:SENSe]:CCARrier[0] 1 ... 15[:STATe] OFF ON 0 1 [:SENSe]:CCARrier[0] 1 ... 15[:STATe]?
----------------	---

Example	<code>:CCAR0 ON</code> <code>:CCAR0?</code>
Notes	The command is used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers
Couplings	Measure Carrier of the CCs that are within "Number of Component Carriers" is set to ON when the action "Apply Preset (to All CCs)" is executed X
Preset	ON
State Saved	Saved in instrument state

Sidelink

Allows the user to select the mode of component carrier from either normal 5G NR uplink or 5G NR V2X sidelink when Direction is Uplink.

- OFF: The component carrier is 5G NR uplink carrier. The 5G NR uplink parameters per carrier are in scope.
- ON: The component carrier is 5G NR V2X sidelink carrier. The sidelink parameters per carrier are in scope.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:SLInk ON OFF 1 0</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:SLInk?</code>
Example	<code>CCAR4:RAD:SLIN ON</code> <code>CCAR4:RAD:SLIN?</code>
Dependencies	Available when the required license is installed and Direction is Uplink Unavailable when " Bandwidth " on page 2637 is 35 MHz, 45 MHz, 800 MHz, 1600 MHz, and 2000 MHz
Preset	OFF
State Saved	Saved

Bandwidth

This column enables you to set the bandwidth of each component carrier for 5G NR signal (which also determines the total number of resource blocks for Modulation Analysis measurement).

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:BANDwidth B5M B10M B15M B20M B25M B30M B35M B40M B45M B50M B60M B70M B80M B90M B100M B200M B400M B800M B1600M B2000M</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:BANDwidth?</code>
Example	<code>:CCAR4:RAD:STAN:BAND B50M</code>
Dependencies	When " Sidelink " on page 2637 is enabled, 35 MHz, 45 MHz, 800 MHz, 1600 MHz, and 2000 MHz are

	not available. Selecting any of those BWs turns Sidelink off and the column becomes grayed out
Couplings	This value will be preset to the Bandwidth value in the Meas Standard menu when the action "Apply Preset (to All CCs)" is executed
Preset	B100M
State Saved	Yes
Range	5 MHz 10 MHz 15 MHz 20 MHz 25 MHz 30 MHz 35 MHz 40 MHz 45 MHz 50 MHz 60 MHz 70 MHz 80 MHz 90 MHz 100 MHz 200 MHz 400 MHz 800 MHz 1600 MHz 2000 MHz

Freq Range

This column enables you to set which frequency range to which each component carrier belongs.

Frequency Range affects CC Bandwidth, Max RB Numbers, ACP Measurement Noise Bandwidth and SEM Integ BW.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:FRANge FR1 FR2</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:FRANge?</code>
Example	<code>:CCAR1:RAD:STAN:FRAN FR1</code>
Dependencies	Available selections differ depending on "Bandwidth" on page 2637 as follows: <ul style="list-style-type: none"> - 50 MHz and 100 MHz: FR1 and FR2 - 200 MHz or wider: FR2 only - Other than above: FR1 only
Couplings	This value will be preset to the Frequency Range value in the Meas Standard menu when the action "Apply Preset (to All CCs)" is executed
Preset	FR1
State Saved	Yes
Range	FR1 FR2

Freq Offset

This column sets the component carrier center frequency as offset from the Carrier Ref Frequency.

Remote Command	<code>[:SENSe]:CCARrier<n>:FREQuency:OFFSet <freq></code> <code>[:SENSe]:CCARrier<n>:FREQuency:OFFSet?</code>
Example	<code>:CCAR4:FREQ:OFFS 10MHz</code> <code>:CCAR4:FREQ:OFFS?</code>
Notes	Used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range

of the sub-op code is determined by the number of component carriers
Frequency Offset of CC0 to CC15 is recommended to be set in ascending order for the best related couplings. You can see whether sub-blocks are configured as you expect in the trace of Monitor Spectrum by turning on Sub-block Attribute under Display > Meas Display. If sub-blocks are not configured correctly, results related to sub-block gap such as ACP/SEM inner offset results are not measured correctly

Also, in some cases, make sure if the “Non-Contiguous Break at” parameter is set to the intended value since it’s often left unchanged after Frequency Offset of CCs are changed

Preset	0 Hz
State Saved	Saved in instrument state
Min	-50 GHz
Max	50 GHz

Cell ID Auto

Enable and disable Cell ID auto detection based on SSB.

NOTE

This setting is available for EVM measurement only.

Remote Command	<code>[[:SENSe]:EVM:CCARrier[0] 1 ... 15:CID:MODE AUTO MANua1 [:SENSe]:EVM:CCARrier[0] 1 ... 15:CID:MODE?</code>
Example	<code>:EVM:CCAR:CID:MODE MAN :EVM:CCAR:CID:MODE?</code>
Preset	<code>MANua1</code>
State Saved	Saved in instrument state

Cell ID Value

Specify Cell ID for the component carrier.

NOTE

This setting is available for EVM measurement only.

Remote Command	<code>[[:SENSe]:EVM:CCARrier[0] 1 ... 15:CID <integer> [:SENSe]:EVM:CCARrier[0] 1 ... 15:CID?</code>
Example	<code>:EVM:CCAR4:CID 0 :EVM:CCAR4:CID?</code>
Couplings	Invalid when Cell ID Auto is on
Preset	0

State Saved	Saved in instrument state
Min	0
Max	1007

Demod Spectrum

This column determines if the spectrum of the incoming data is mirrored or not. The actual mirroring is accomplished by conjugating the complex time data.

Note that only the Modulation Analysis measurement and Conformance EVM measurement support this feature.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:SPECTrum NORMa1 INVert</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:SPECTrum?</code>
Example	<code>:CCAR0:SPEC INV</code> <code>:CCAR0:SPEC?</code>
Preset	<code>NORM</code>
State Saved	Yes
Range	Normal Invert

CHP Power Integration Bandwidth

This column specifies the range of integration used in calculating the power in the component carrier s in the CHP measurement.

NOTE This setting is *not* available for EVM.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:CHPower:BANDwidth:INTEgration <freq></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:CHPower:BANDwidth:INTEgration?</code>
Example	<code>:CCAR0:CHP:BAND:INT 20MHz</code> <code>:CCAR0:CHP:BAND:INT?</code>
Couplings	When Bandwidth of the parameter set is changed, this parameter also changes to that value
Preset	100 MHz
State Saved	Saved in instrument state
Min	100 kHz
Max	2000 MHz

ACP Power Integration Bandwidth

This column specifies the Measurement Noise Bandwidth used to calculate the power in the component carriers in the ACP measurement.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:ACPower:BANDwidth[1] 2:INTEgration <freq></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:ACPower:BANDwidth[1] 2:INTEgration?</code>
Example	<code>:CCAR0:ACP:BAND:INT 20MHz</code> <code>:CCAR0:ACP:BAND:INT?</code>
Notes	Carrier sub op code, 1 is for BTS, 2 for MS. Default is BTS

Couplings When either Bandwidth of the parameter set, Freq Range, or Direction is changed, the value of this parameter also changes as shown in the following table

When Freq Range is FR1

Bandwidth	Downlink ACP Meas Noise BW (MHz)	Uplink ACP Meas Noise BW (MHz)
5 MHz	4.500	4.515
10 MHz	9.360	9.375
15 MHz	14.220	14.235
20 MHz	19.080	19.095
25 MHz	23.940	23.955
30 MHz	28.800	28.815
35 MHz	33.840	33.855
40 MHz	38.880	38.895
45 MHz	43.560	43.575
50 MHz	48.600	48.615
60 MHz	58.320	58.350
70 MHz	68.040	68.070
80 MHz	78.120	78.150
90 MHz	88.200	88.230
100 MHz	98.280	98.310

When Freq Range is FR2

Bandwidth	Downlink ACP Meas Noise BW (MHz)	Uplink ACP Meas Noise BW (MHz)
50 MHz	47.520	47.580

3 5G NR Mode
3.9 Power Stat CCDF Measurement

	100 MHz	95.040	95.160
	200 MHz	190.080	190.20
	400 MHz	380.160	380.280
	800 MHz	714.24	715.20
	1600 MHz	1428.48	1429.44
	2000 MHz	1704.96	1705.92
Preset	98.280 MHz 98.310 MHz		
State Saved	Yes		
Min	100 kHz		
Max	2000 MHz		

SEM Power Integration Bandwidth

This column specifies the integration bandwidth used to calculate the power in the component carriers in SEM measurement.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:SEMAsk:BANDwidth[1] 2:INTEgration <freq></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:SEMAsk:BANDwidth[1] 2:INTEgration?</code>
Example	<code>:CCAR0:SEM:BAND:INT 20MHz</code> <code>:CCAR0:SEM:BAND:INT?</code>
Notes	Bandwidth sub op code, 1 is for BTS, 2 for MS. Default is BTS
Couplings	When Bandwidth of the parameter set is changed, this parameter also changes to that value
Preset	100 MHz
State Saved	Saved in instrument state
Min	100 kHz
Max	2000 MHz

SCS (Power Meas)

Queries the SCS (Power Meas), the smallest SCS among the enabled SCSs of the selected component carrier set with ["SCS Enabled" on page 1547](#).

It is used to calculate the aggregated channel bandwidth when Power Reference is set to Aggregated Chan BW.

Power Integration Bandwidth values are not affected even if SCS (Power Meas) is changed.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RGRid:PMSCs?</code>
----------------	--

Example	<code>:CCAR3:RGR:PMSC?</code>
Notes	Query-only Returns one of the following values: NONE, SCS15K, SCS30K, SCS60K, SCS120K, SCS240K, SCS480K, SCS960K

3.9.8.4 Meas Standard

The tab contains settings which let you configure the analyzer to match the measurement standard in your 5G NR signal.

The section entitled “Configure Preset” lets you configure the preset values for the Component Carriers. Once you have set all the controls in the “Configure Preset” section to the desired value, press the “Apply Preset (to all CCs)” control and your presets will be applied to each Component Carrier. Furthermore, any new Component Carriers will take on the same values you have applied.

NOTE You must press **Apply Preset (to all CCs)** or the values on the controls will *not* affect the Component Carriers.

When you need to configure more parameters, select Advanced Preset Parameters to open a dialog and set advanced parameters for multiple measurements on one screen.

Bandwidth

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the **"Bandwidth" on page 2637** of each component carrier in the same way you would do so using the table in the **Configure Comp Carriers** dialog on the **Component Carriers** tab.

Set the value you want for this control and the other controls in the “**Configure Preset**” section then press **Apply Preset (to all CCs)**.

NOTE You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

Once you have applied this preset value, any new CCs created by setting the **"Number of Component Carriers" on page 2633** will also take on this value.

Remote Command	<pre>[:SENSe]:RADio:STANdard:PRESet:CARRier[:BANDwidth] B5M B10M B15M B20M B25M B30M B35M B40M B45M B50M B60M B70M B80M B90M B100M B200M B400M B800M B1600M B2000M [:SENSe]:RADio:STANdard:PRESet:CARRier[:BANDwidth]?</pre>
----------------	---

Example	<code>:RAD:STAN:PRES:CARR B5M</code> <code>:RAD:STAN:PRES:CARR?</code>
Dependencies	Selections other than 10 MHz, 20 MHz, 30 MHz, and 40 MHz are unavailable when "Uplink Carrier Mode" on page 2648 is Sidelink - V2X If you change "Uplink Carrier Mode" on page 2648 to Sidelink - V2X when this parameter is set to a value other than 10 MHz, 20 MHz, 30 MHz, or 40 MHz, it is forcefully set to 10 MHz
Preset	When N9085EM0E is not installed and N9085EM4E is installed: B10M Otherwise: B100M
State Saved	Yes
Range	5 MHz 10 MHz 15 MHz 20 MHz 25 MHz 30 MHz 35 MHz 40 MHz 45 MHz 50 MHz 60 MHz 70 MHz 80 MHz 90 MHz 100 MHz 200 MHz 400 MHz 800 MHz 1600 MHz 2000 MHz
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:STANdard:PRESet[:BANDwidth]</code>

Frequency Range

This control is part of the "Configure Presets" section of **Meas Standard**. It lets you set the "Freq Range" on page 2638 of each component carrier in the same way you would do so using the table in the **Configure Comp Carriers** dialog on the **Component Carriers** tab.

Set the value you want for this control and the other controls in the "Configure Preset" section then press **Apply Preset (to all CCs)**.

NOTE

You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the **Component Carriers**.

Once you have applied this preset value, any new CCs created by setting the "Number of Component Carriers" on page 2633 will also take on this value.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:FREQuency:RANGe FR1 FR2</code> <code>[:SENSe]:RADio:STANdard:PRESet:FREQuency:RANGe?</code>
Example	<code>:RAD:STAN:PRES:FREQ:RANG FR1</code> <code>:RAD:STAN:PRES:FREQ:RANG?</code>
Dependencies	Available selections differ depending on Bandwidth as follows: <ul style="list-style-type: none"> - 50 MHz and 100 MHz: FR1 and FR2 - 200 MHz or wider: FR2 only - Other than above: FR1 only <p>When "Uplink Carrier Mode" on page 2648 is Sidelink - V2X, FR2 is unavailable</p>

Preset	FR1
State Saved	Yes
Range	FR1 FR2
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:STANdard:PRESet:FRANge</code>

Duplex Mode

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the Duplex Mode of each component carrier. Set the value you want for this control and the other controls in the “Configure Preset” section then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the **“Number of Component Carriers” on page 2633** will also take on this value.

Two types of Duplex Mode (FDD and TDD) are supported.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DMODE FDD TDD</code> <code>[:SENSe]:RADio:STANdard:PRESet:DMODE?</code>
Example	<code>:RAD:STAN:PRESet:DMOD TDD</code> <code>:RAD:STAN:PRESet:DMOD?</code>
Dependencies	Available selections depend on Frequency Range When FR1 is selected, both TDD and FDD are available. When FR2 is selected, only TDD is available
Preset	TDD
State Saved	Yes
Range	FDD TDD

SCS

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the subcarrier spacing of each component carrier. Set the value you want for this control and the other controls in the “Configure Preset” section then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

3 5G NR Mode
 3.9 Power Stat CCDF Measurement

Once you have applied this preset value, any new CCs created by setting the "Number of Component Carriers" on page 2633 will also take on this value.

In 5G, subcarrier spacing is governed by $2^n * 15$ kHz subcarrier spacings (where n is 0, 1, 2, or 3). 15, 30, and 60 kHz subcarrier spacings are used for the lower frequency bands, and 60 and 120 kHz subcarrier spacings are used for the higher frequency bands.

Remote Command	<pre>[:SENSe]:RADio:STANdard:PRESet:SCS SCS15K SCS30K SCS60K SCS120K SCS480K SCS960K [:SENSe]:RADio:STANdard:PRESet:SCS? [:SENSe]:RADio:STANdard:PRESet:SCS:AUTO[:STATe] OFF ON 0 1 [:SENSe]:RADio:STANdard:PRESet:SCS:AUTO[:STATe]?</pre>																																	
Example	<pre>:RAD:STAN:PRE:SCS SCS30K :RAD:STAN:PRE:SCS? :RAD:STAN:PRE:SCS:AUTO 0 :RAD:STAN:PRE:SCS:AUTO?</pre>

RB Alloc Preset

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the Resource Block Allocation Preset of each component carrier. Set the value you want for this control and the other controls in the “Configure Preset” section then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the **“Number of Component Carriers” on page 2633** will also take on this value.

The RB Alloc Preset presets the Resource Block (RB) allocation mapping to a selected predefined pattern in the list:

“Fulfilled-xxx” is to fill out all maximum available RBs in each CC with one specified modulation type (Pi/2-BPSK | QPSK | 16 QAM | 64 QAM | 256 QAM | 1024 QAM), and “DL-NR-TM x.x” is to map RBs in each CC based on the NR Test Model definition according to the section 4.9.2 in 3GPP TS38.141-1 or -2.

Remote Command `[:SENSe]:RADio:STANdard:PRESet:RBAlloc FQPSK | FQAM16 | FQAM64 | FQAM256 | FQAM1024 | DLTM1DOT1 | DLTM1DOT2 | DLTM2 | DLTM2Q16 | DLTM2QPS | DLTM2A | DLTM2B | DLTM3DOT1 | DLTM3DOT1Q16 | DLTM3DOT1QPS | DLTM3DOT1A | DLTM3DOT1B | DLTM3DOT2 | DLTM3DOT3 | FPIBPSK | DLTM1DOT1P1 | DLTM1DOT1L2`

`[:SENSe]:RADio:STANdard:PRESet:RBAlloc?`

Example `:RAD:STAN:PRES:RBAL DLTM1DOT1`

`:RAD:STAN:PRES:RBAL?`

Notes Resource Block Allocation Preset will not be preset to the selected one until the action “Apply Preset (to All CCs)” is executed

Dependencies Available selections vary depending on the Radio Direction and Frequency Range as follows:

Uplink:

- Fulfilled xxxx except for Fulfilled 1024 QAM
- Note that Fulfilled Pi/2-BPSK is available only when OFDM Type is DFT-s-OFDM

Downlink:

- FR1: All except for Fulfilled Pi/2-BPSK/TM2 (16-QAM)/TM2 (QPSK)/TM3.1 (16-QAM)/TM3.1 (QPSK)
- FR2: All except for Fulfilled Pi/2-BPSK/TM1.2/TM2b/TM3.1b/TM3.2/TM3.3

Advanced Preset Parameters

Lets you access advanced preset parameters on one screen.

Uplink Carrier Mode

Allows you to select the uplink carrier mode: either Normal Uplink or Sidelink - V2X.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:CARRier NORMal V2X</code>
----------------	---

	<code>[:SENSe]:RADio:STANdard:PRESet:ULINk:CARRier?</code>
Example	<code>RAD:STAN:PRES:ULIN:CARR NORM</code> <code>RAD:STAN:PRES:ULIN:CARR?</code>
Dependencies	Available when the required license is installed and Direction is Uplink
Preset	When N9085EMOE is not installed and N9085EM4E is installed: V2X Otherwise: NORMa1
State Saved	Saved
Range	Normal Uplink Sidelink-V2X

DL FR1 NR-TM Reference Standard Selection

Enables you to select the 3GPP Standard for the DL FR1 TDD NR-TM lists of Resource Block Allocation Preset to be referred to; one is 3GPP TS38.141-1 and the other is 3GPP TS37.141 BC3 CS16/17, which define different TDD burst On/Off profiles.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DLINk:NRTM TS38 TS37CS1617</code> <code>[:SENSe]:RADio:STANdard:PRESet:DLINk:NRTM?</code>
Example	<code>RAD:STAN:PRES:DLIN:NRTM TS38</code> <code>RAD:STAN:PRES:DLIN:NRTM?</code>
Dependencies	Grayed out when Radio Direction is Uplink.
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed.
Preset	TS38
State Saved	Yes
Range	TS38.141-1 TS37.141 BC3 CS16/17

OFDM Type

This control is part of the “Preset for Mod Analysis” section of the Advanced Preset Parameters dialog. It lets you specify the OFDM Type to configure preset values for the Component Carriers:

- CP-OFDM
- DFT-s-OFDM

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press *Apply Preset (to all CCs)* or the value on this controls will *not* affect the Component Carriers.

Once you have applied this preset value, any new CCs created by setting the Number of Component Carriers will also take on this value.

This parameter is valid only for the Modulation Analysis measurement.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:OTYPe CPOFdm DFTSofdm</code> <code>[:SENSe]:RADio:STANdard:PRESet:OTYPe?</code>
Example	<code>:RAD:STAN:PRES:OTYP CPOF</code> <code>:RAD:STAN:PRES:OTYP?</code>
Dependencies	DFT-s-OFDM is grayed out when Radio Direction is Downlink DFT-s-OFDM is grayed-out when "Uplink Carrier Mode" on page 2648 is Sidelink - V2X
Couplings	Values to be preset will not be preset until the action "Apply Preset (to All CCs)" is executed
Preset	<code>CPOFdm</code>
State Saved	Yes
Range	CP-OFDM DFT-s-OFDM

Adjust Limit Mask for Freq Range

This control is part of the "Preset for ACP, SEM, Spur, Tx On|Off Power" section of the Advanced Preset Parameters dialog. It lets you specify the frequency range for preset.

Set the value you want for this control and the other controls in the "Configure Preset" section, and then press "Apply Preset (to all CCs)".

NOTE

You must press *Apply Preset (to all CCs)* or the value on this controls will *not* affect the Component Carriers.

When in Auto, this value changes when f value is changed, where f is the center frequency of Component Carrier 0. Values to be preset will be preset to the values described in the Values for Meas Standard section when Apply Preset is executed.

When in Manual, values to be preset will be preset to the values described in Values or Meas Standard according to this value when Apply Preset is executed.

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ADJust:FRANge NONE FT01 F1T03 F3T04P2 F4P2T06 F6T07 F24P25T029P5 F37T040 F43T048 F52T071</code>

BS Type

This control is part of the “Preset for ACP, SEM, Spur, Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you specify the BS Type for preset:

- 1-C (FR1 Conducted)
- 1-O (FR1 Radiated)
- 2-O (FR2 Radiated)

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DLINK:BS:TYPE FR1C FR1O FR2O</code> <code>[:SENSe]:RADio:STANdard:PRESet:DLINK:BS:TYPE?</code>
Example	<code>:RAD:STAN:PRES:DLIN:BS:TYPE FR1C</code> <code>:RAD:STAN:PRES:DLIN:BS:TYPE?</code>
Dependencies	Grayed out when Radio Direction is Uplink
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	FR1C
State Saved	Yes
Range	1-C (FR1 Conducted) 1-O (FR1 Radiated) 2-O (FR2 Radiated)

BS Category

This control is part of the “Preset for ACP, SEM, Spur, Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you specify the BS Category for preset:

- Category A Wide Area BS
- Category B Wide Area BS
- Category A Medium Range BS
- Category B Medium Range BS
- Category A Medium Range BS (Low Power rated)
- Category B Medium Range BS (Low Power rated)
- Category A Local Area BS
- Category B Local Area BS

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press *Apply Preset (to all CCs)* or the value on this controls will *not* affect the Component Carriers.

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command	<code>[:SENSe] :RADio:STANdard:PRESet:DLINK:BS:CATegory AwARea BWARea AMRRange BMRRange AMRLow BMLow ALARea BLARea</code> <code>[:SENSe] :RADio:STANdard:PRESet:DLINK:BS:CATegory?</code>
Example	<code>:RAD:STAN:PRES:DLIN:BS:CAT BWAR</code> <code>:RAD:STAN:PRES:DLIN:BS:CAT?</code>
Dependencies	Grayed-out when Radio Direction is Uplink
Couplings	Values to be preset will not be preset to the selected one until the action “Apply Preset (to All CCs)” is executed
Preset	<code>BWARea</code>
State Saved	Yes
Range	Category A Wide Area BS Category B Wide Area BS Category A Medium Range BS Category B Medium Range BS Category A Medium Range BS (Low Power rated) Category B Medium Range BS (Low Power rated) Category A Local Area BS Category B Local Area BS

Assumed Adjacent Channels

This control is part of the “Preset for ACP, Mod Analysis” section of the Advanced Preset Parameters dialog. It lets you set the Assumed Adjacent Channels for carrier configuration preset. Set the value you want for this control and the other controls

in the “Configure Preset” section, then press “Apply Preset (to all CCs)” to execute preset. See the Values for Meas Standard section for the parameters to be preset.

Downlink

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DLINK:ACHannel[:TYPE] NR EUTra NREutra</code> <code>[:SENSe]:RADio:STANdard:PRESet:DLINK:ACHannel[:TYPE]?</code>
Example	<code>:RAD:STAN:PRES:DLIN:ACH NR</code> <code>:RAD:STAN:PRES:DLIN:ACH?</code>
Dependencies	UTRA and NR+UTRA are grayed-out when “Uplink Carrier Mode” on page 2648 is Sidelink - V2X
Preset	NR
State Saved	Yes
Range	NR (same BW) E-UTRA NR + E-UTRA

Uplink

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:ACHannel[:TYPE] NR UTRa NRUTra</code> <code>[:SENSe]:RADio:STANdard:PRESet:ULINK:ACHannel[:TYPE]?</code>
Example	<code>:RAD:STAN:PRES:ULIN:ACH NR</code> <code>:RAD:STAN:PRES:ULIN:ACH?</code>
Preset	NR
State Saved	Yes
Range	NR (same BW) UTRA NR + UTRA

UE Power Class

This control is part of the “Preset for ACP, Mod Analysis” section of the Advanced Preset Parameters dialog. It lets you select the UE Power Class for preset from Power Class 1 to 4.

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

This parameter is valid for the ACP and Mod Analysis measurement.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:PClass CLASS1 ... CLASS4</code>
----------------	---

	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:PCLass?</code>
Example	<code>:RAD:STAN:PRES:ULIN:PCL CLASS3</code> <code>:RAD:STAN:PRES:ULIN:PCL?</code>
Dependencies	Grayed out when Radio Direction is Downlink Power Class 4 is grayed out when Frequency Range is FR1 Power Class 1, 2, and 4 are grayed-out when " Uplink Carrier Mode " on page 2648 is Sidelink - V2X
Preset	<code>CLASS3</code>
State Saved	Yes
Range	1 2 3 4

Uplink Channel Type

This control is part of the “Preset for Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you set the Uplink Channel Type to preset parameters for the Transmit On|Off Power measurement. Set the value you want for this control and the other controls in the “Configure Preset” section, then press “Apply Preset (to all CCs)” to execute preset. See the Values for Meas Standard section for the parameters to be preset.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:CTYPe NONE PUS PRA4 PRA160S15 PRA160S30 PRA12 PRA123S15 PRA123S30 SRS PRA0S60 PRA0S120</code> <code>[:SENSe]:RADio:STANdard:PRESet:ULINK:CTYPe?</code>
Example	<code>:RAD:STAN:PRES:ULIN:CTYP PUS</code> <code>:RAD:STAN:PRES:ULIN:CTYP?</code>
Dependencies	Available selections differ depending on the combination of Freq Range and Duplex Mode as follows: When Freq Range is FR1 and Duplex Mode is FDD: - PUSCH, PRACH Config Index4, PRACH Config Index160 and SRS When Freq Range is FR1 and Duplex Mode is TDD: - PUSCH, PRACH Config Index12, PRACH Config Index123 and SRS When Freq Range is FR2: - PUSCH, PRACH Config Index0, SRS
Preset	<code>PUS</code>
State Saved	Yes
Range	PUSCH PRACH Config Index 4 PRACH Config Index 160 (15 kHz SCS) PRACH Config Index 160 (30 kHz SCS) PRACH Config Index 12 PRACH Config Index 123 (15 kHz SCS) PRACH Config Index 123 (30 kHz SCS) PRACH Config Index 0 (60 kHz SCS) PRACH Config Index 0 (120 kHz SCS) SRS

More Advanced Preset Parameters

Enables you to configure more advanced Apply Preset features.

Include RB Alloc Preset for Mod Analysis

Enables you to select whether or not RB Alloc Preset is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EVM:RBALloc OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EVM:RBALloc?</code>
Example	<code>:RAD:STAN:PRES:INCL:EVM:RBAL 1</code> <code>:RAD:STAN:PRES:INCL:EVM:RBAL?</code>
Notes	When Exclude is selected, the indicator “Exclude EVM RB Alloc” appears on the Meas Setup menu panel
Preset	ON
State Saved	Yes

Include Gate Source

Enables you to select whether or not Gate Source is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EGATe:SOURce OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EGATe:SOURce?</code>
Example	<code>:RAD:STAN:PRES:INCL:EGAT:SOUR 1</code> <code>:RAD:STAN:PRES:INCL:EGAT:SOUR?</code>
Preset	ON
State Saved	Yes

Include Periodic Timer Period

Enables you to select whether or not Periodic Timer Period is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:PERiod OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:PERiod?</code>
Example	<code>:RAD:STAN:PRES:INCL:FRAM:PER 1</code> <code>:RAD:STAN:PRES:INCL:FRAM:PER?</code>
Preset	ON
State Saved	Yes

Include Periodic Timer Sync Source

Enables you to select whether or not Periodic Timer Sync Source is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC[:SOURce] OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC[:SOURce]?</code>
Example	<code>:RAD:STAN:PRESet:INCL:FRAM:SYNC 1</code> <code>:RAD:STAN:PRESet:INCL:FRAM:SYNC?</code>
Preset	ON
State Saved	Yes

Include Periodic Timer Sync Holdoff

Enables you to select whether or not Periodic Timer Sync Holdoff is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC:HOLDoff OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC:HOLDoff?</code>
Example	<code>:RAD:STAN:PRESet:INCL:FRAM:SYNC:HOLD 1</code> <code>:RAD:STAN:PRESet:INCL:FRAM:SYNC:HOLD?</code>
Preset	ON
State Saved	Yes

Apply Preset (to All CCs)

This is the same as the Apply Preset (to All CCs) control on the Meas Standard menu panel tab under Meas Standard.

See ["Apply Preset \(to All CCs\)" on page 2657](#).

Apply Preset (to All CCs)

When you press this control, parameters of each component carrier are configured to the values set on the ["Bandwidth" on page 2643](#), ["Frequency Range" on page 2644](#), ["Duplex Mode" on page 2644](#), ["SCS" on page 2645](#) and ["RB Alloc Preset" on page 2646](#) controls in the "Configure Presets" section of the menu panel. These values will also be used for any subsequent Component Carriers created.

NOTE

You must press “**Apply Preset (to all CCs)**” or the values on the controls in the “**Configure Presets**” section of the menu panel will *not* affect the Component Carriers.

Remote Command	<code>[:SENSe] :RADio :STANdard :PRESet :IMMediate</code>
Example	<code>:RAD :STAN :PRES :IMM</code>
Notes	Whenever any preset parameter is changed, including the following cases, the color of this control changes to amber, until “Apply Preset” is executed again <ul style="list-style-type: none"> - Start-up - Mode Preset - Recall

Values for Meas Standard

Meas Standard Setting Parameters for Apply Preset

The following parameters in Meas Setup > Meas Standard let you configure the preset values for Component Carriers.

Direction	Downlink	Uplink
Bandwidth	5, 10, 15, 20, 25, 30, 35, 40, 45, 50, 60, 70, 80, 90, 100, 200, 400, 800, 1600, 2000 MHz	5, 10, 15, 20, 25, 30, 35, 40, 45, 50, 60, 70, 80, 90, 100, 200, 400, 800, 1600, 2000 MHz
Frequency Range	FR1 FR2	FR1 FR2
Duplex Mode	FDD TDD	FDD TDD
SCS	$\mu = 0$ (15 kHz), 1(30 kHz), 2 (60 kHz), 3 (120 kHz), 5 (480 kHz), 6 (960 kHz)	$\mu = 0$ (15 kHz), 1(30 kHz), 2 (60 kHz), 3 (120 kHz), 5 (480 kHz), 6 (960 kHz)
RB Alloc Preset	Fulfilled QPSK, Fulfilled 16 QAM, Fulfilled 64 QAM, Fulfilled 256 QAM, 1024 QAM NR-TM1.1 (port 0), 1.1 (port 1), 1.1 (2 layers), 1.2, 2 (64 QAM/16 QAM/QPSK), 2a, 2b, 3.1 (64 QAM/16 QAM/QPSK), 3.1a, 3.1b, 3.2, 3.3	Fulfilled Pi/2-BPSK (for DFT-s-OFDM only), Fulfilled QPSK, Fulfilled 16 QAM, Fulfilled 64 QAM, Fulfilled 256 QAM
UL Carrier Mode	n/a	Normal Uplink, Sidelink-V2X
OFDM Type (for Mod Analysis)	CP-OFDM	CP-OFDM, DFT-s-OFDM
Adjust Limit Mask for Freq Range (for ACP, SEM, PvT)	None, $f \leq 1.0$ GHz (FR1), $1.0 < f \leq 3.0$ GHz (FR1),	None, $f \leq 1.0$ GHz (FR1), $1.0 < f \leq 3.0$ GHz (FR1),

and Spur only)	3.0 < f ≤ 4.2 GHz (FR1), 4.2 < f ≤ 6.0 GHz (FR1), 6.0 < f ≤ 7.125 GHz (FR1), 24.25 < f ≤ 29.5 GHz (FR2), 37.0 < f ≤ 43.5 GHz (FR2), 43.5 < f ≤ 48.2 GHz (FR2), 52.6 < f ≤ 71.0 GHz (FR2)	3.0 < f ≤ 4.2 GHz (FR1), 4.2 < f ≤ 6.0 GHz (FR1), 6.0 < f ≤ 7.125 GHz (FR1), 24.25 < f ≤ 29.5 GHz (FR2), 37.0 < f ≤ 43.5 GHz (FR2), 43.5 < f ≤ 48.2 GHz (FR2), 52.6 < f ≤ 71.0 GHz (FR2)
BS Type (for ACP, SEM, PvT and Spur only)	1-C (FR1 Conducted), 1-O (FR1 Radiated), 2-O (FR2 Radiated)	n/a
BS Category (for ACP, SEM, PvT, and Spur only)	Cat A Wide Area BS, Cat B Wide Area BS, Cat A Medium Range BS, Cat B Medium Range BS, Cat A Medium Range BS (Low Pr), Cat B Medium Range BS (Low Pr), Cat A Local Area BS, Cat B Local Area BS	n/a
Assumed Adj Channels (for ACP, FR1)	NR (same BW), E-UTRA, NR + E-UTRA	NR (same BW), UTRA, NR+UTRA
UE Power Class (for ACP: FR1 and Mod Analysis: FR2 UE IBE)	n/a	When Freq Range is FR1: Power Class 2, Power Class 3 When Freq Range is FR2: Power Class 1, Power Class 2, Power Class 3, Power Class 4
UL Channel Type (for Tx On Off Power)	n/a	When Freq Range is FR1: PUSCH, PRACH Config Index 4 (FDD), PRACH Config Index 160 (15 kHz SCS, FDD), PRACH Config Index 160 (30 kHz SCS, FDD), PRACH Config Index 12 (TDD), PRACH Config Index 123 (15 kHz SCS, TDD), PRACH Config Index 123 (30 kHz SCS, TDD), SRS When Freq Range is FR2:

PUSCH,
 PRACH Config Index 0 (60 kHz SCS),
 PRACH Config Index 0 (120 kHz SCS),
 SRS

TS38.521-2 v.17.0.0 (v.2022-09) The following PvT limit requirements are still FFS:

Clause 6.3.3.2, Table 6.3.3.2.5-3: Test Tolerance for OFF power ... still FFS.

Clause 6.3.3.2, Table 6.3.3.2.5-4: Test Tolerance for ON power ... still FFS.

Clause 6.3.3.4, Table 6.3.3.4.5-1: PRACH time mask ... for On power and On power Tolerance ... still FFS.

Clause 6.3.3.6 SRS time mask ... still all FFS.

When "[Apply Preset \(to All CCs\)](#)" on page 2657 is pressed, related measurement parameters and Gate parameters are changed to the values described in the following sections in this chapter.

Reference Standard version and ACP & SEM table indicator

The following reference 3GPP test spec doc with its version number, ACP and SEM table numbers are displayed in the **Advanced Preset Parameters** dialog menu.

e.g.)

Measurement-Global parameters

The following parameters are configured as preset values.

- "Configure Component Carriers" on page 2664
- "Trigger/Gate Parameters" on page 2664

Configure Component Carriers

When Direction = Uplink:

Preset Configuration	Preset Value
UL Carrier Mode	Sidelink
Normal Uplink	Disabled (for all CCs)
Sidelink / V2X	Enabled (for all CCs)

Trigger/Gate Parameters

When executing "Apply Preset", preset the following parameters:

Trigger menu	Parameter	Preset values		
		Downlink (*1) FR1	Downlink (*1) FR2	Uplink
Trigger	Select Trigger Source (*2)	(no preset)	(no preset)	(no preset)
	Period (Periodic Timer) (*3)	5.000 ms	1.250 ms	10.000 ms
	(Periodic) Sync Source (*4)	RF Burst	RF Burst	RF Burst
Gate Source	Select Gate Source	Periodic	Periodic	Periodic
	Period (Periodic Timer) (*3)	5.000 ms	1.250 ms	10.000 ms
	(Periodic) Sync Source (*4)	RF Burst	RF Burst	RF Burst
	Sync Holdoff	On, 250 us	On, 250 us	On, 250 us
Gate Settings	Gate (*5)	On	On	(no preset)
	Gate Delay	5.000 ms	1.250 ms	(no preset)
	Gate Length	3.700 ms (*6) or 2.700 ms (*6)	927.5 us	(no preset)
	Gate Holdoff	(no preset)	(no preset)	(no preset)
Periodic Sync Src	Select Periodic Trigger Sync Source (*4)	RF Burst	RF Burst	RF Burst

3 5G NR Mode
3.9 Power Stat CCDF Measurement

	Absolute Trig Level	(no preset)	(no preset)	(no preset)
	Trigger Slope	(no preset)	(no preset)	Positive
Auto Holdoff	Trig Holdoff	(no preset)	(no preset)	On, 250 us (*7)
	Holdoff Type	(no preset)	(no preset)	Below (*7)

Notes:

(*1) For Downlink case, these values are preset with the Apply Preset action when ["RB Alloc Preset" on page 2646](#) is any of NR-TM and ["Duplex Mode" on page 2644](#) is TDD.

(*2) Trigger Source is a separate parameter in each measurement, and is not preset with the Apply Preset action. Note that in the Tx On/Off Power measurement, it is forcefully changed to Periodic when the direction is switched to Uplink or to External 1 when the direction is switched to Downlink except for models with the H1G option. With the H1G option, it is changed to either External 1 (when Info BW \leq 255 MHz) or External 3 (when Info BW \geq 256 MHz) depending on the Info BW determined by the component carrier configuration.

(*3) Periodic Trigger Period and Gate Period are the same/shared parameter, so called "Periodic Timer Period".

(*4) Periodic Trigger Sync Source and Periodic Gate Sync Source are the same/shared parameter.

(*5) Gate is preset to Off with the Apply Preset action when ["Duplex Mode" on page 2644](#) is FDD.

(*6) Gate Length preset value for DL FR1 depends on ["DL FR1 NR-TM Reference Standard Selection" on page 2357](#) under the Advanced Preset Parameters menu: 3.700 ms for TS38.141-1 or 2.700 ms for TS37.141 BC3 CS16/17.

(*7) These Trig Holdoff & Holdoff Type settings make the trigger holdoff wait for an OFF power period at least 250 us (in any burst configuration preset in Uplink), and then triggers at the beginning of the power raise timing (with Trigger Slope = Positive) of the Burst ON power as expected. This is to avoid an unexpected triggering with other random power up or down.

Power Stat CCDF

When executing Apply Preset, preset the following parameter:

- Frequency > Settings tab, execute Adjust Center Freq to Carrier Config action (which presets Info BW in the BW menu to Auto)

3.9.8.5 Advanced

Contains controls for setting advanced functions of the instrument.

IF Gain

Used to set the IF Gain function to: Auto, Low Gain or High Gain. These settings affect sensitivity and IF overloads.

Only applies to the RF input. Does not apply to baseband I/Q input.

Remote Command	<code>[[:SENSe]:PStatistic:IF:GAIN[:STATe] ON OFF 1 0 [:SENSe]:PStatistic:IF:GAIN[:STATe]? [:SENSe]:PStatistic:IF:GAIN:AUTO[:STATe] ON OFF 1 0 [:SENSe]:PStatistic:IF:GAIN:AUTO[:STATe]?</code>
Example	<code>:PST:IF:GAIN ON :PST:IF:GAIN? :PST:IF:GAIN:AUTO ON :PST:IF:GAIN:AUTO?</code>
Notes	ON = high gain OFF = low gain
Dependencies	Not available when IQ Input is selected Has no effect when the U7227A USB Preamplifier is connected. This is not annotated or reflected on any control; there are no controls grayed out nor any SCPI locked out. The instrument simply behaves as though both IF Gain is set to Low regardless of the setting on the control Not available in VXT, EXM, or UXM
Couplings	Sending this command forces IF Gain Auto to OFF (Man) Auto sets IF Gain to High Gain if the input attenuator is set to 0 dB, or the preamp is turned on, or the Max Mixer Level is -20 dBm or lower For other conditions, Auto sets IF Gain to Low Gain
Preset	OFF OFF
State Saved	Saved in instrument state
Range	Low Gain High Gain

IF Upsampling Ratio

Allows you to select the upsampling ratio after data is captured for a measurement. Using this method, mitigation of peak detection error can be expected when upsampling ratio is set to > x1.

Remote Command	<code>[[:SENSe]:PStatistic:URATio X1 X2 X4 X8 X16 X32 [:SENSe]:PStatistic:URATio?</code>
Example	<code>:PST:URAT X8</code>

	<code>:PST:URAT?</code>
Notes	X1 is for backwards compatibility
Preset	<code>X1</code>
State Saved	Yes, Saved in instrument state
Range	<code>X1 X2 X4 X8 X16 X32</code>

3.9.8.6 Global

The controls in this menu apply to all Modes in the instrument.

Some controls (for example, **Global Center Freq**) allow you to switch certain Meas Global parameters to a Mode Global state. These switches apply to all Modes that support global settings. For example, no matter what Mode you are in when you set **Global Center Freq** to **ON**, it applies to all Modes that support Global Settings.

Other controls (for example, **Extend Low Band**) are actually set in this menu, but apply to all Modes.

Global Center Freq

The software maintains a Mode Global value called **Global Center Freq**.

When **Global Center Freq** is switched **ON**, the current Mode's center frequency is copied into the **Global Center Frequency**, and from then on all Modes that support global settings use the **Global Center Frequency**, so you can switch between any of these Modes and the **Center Freq** will remain unchanged.

Adjusting the Center Freq of any Mode that supports Global Settings, while **Global Center Freq** is **ON**, modifies the **Global Center Freq**.

When **Global Center Freq** is switched **OFF**, the Center Freq of the current Mode is unchanged, but now the Center Freq of each Mode is once again independent.

When **Mode Preset** is pressed while **Global Center Freq** is **ON**, the **Global Center Freq** is preset to the preset Center Freq of the current Mode.

This function is reset to **OFF** when "**Restore Defaults**" on page 2680 (in this tab) is pressed, or when **System, Restore Defaults, All Modes** is pressed.

Remote Command	<code>:INSTrument:COUPle:FREQuency:CENTer ALL NONE</code>
Example	<code>:INST:COUP:FREQ:CENT ALL</code> <code>:INST:COUP:FREQ:CENT?</code>
Preset	Set to OFF on Global Settings, Restore Defaults and System, Restore Defaults, All Modes
Range	<code>ALL NONE</code>

Preset	OFF
Backwards Compatibility SCPI	:GLOBal:FREQuency:CENTer[:STATE] 1 0 ON OFF :GLOBal:FREQuency:CENTer[:STATE]?

Global EMC Std

When this control is switched **ON**, the current Mode's EMC Std is copied into the **Global EMC Std**, and from then on all Modes that support global settings use the Global EMC Std, so you can switch between any of these Modes and the EMC Std will remain unchanged.

Adjusting the EMC Std of any Mode that supports Global Settings, while Global EMC Std is **ON**, will modify the **Global EMC Std**.

When **Global EMC Std** is switched **OFF**, the EMC Std of the current Mode is unchanged, but now the EMC Std of each Mode is once again independent. When **Mode Preset** is pressed while **Global EMC Std** is **ON**, the Global EMC Std is preset to the preset EMC Std of the current Mode.

This function is reset to **OFF** when "**Restore Defaults**" on page 2680 (in this tab) is pressed, or when **System, Restore Defaults, All Modes** is pressed.

Remote Command	:INSTrument:COUPle:EMC:STANdard ALL NONE :INSTrument:COUPle:EMC:STANdard?
Example	:INST:COUP:EMC:STAN ALL :INST:COUP:EMC:STAN?
Dependencies	Only available if option EMC is installed
Preset	Set to OFF on Global Settings , Restore Defaults and System, Restore Defaults, All Modes
Range	ALL NONE

Extend Low Band

The software maintains a Mode Global value called **Extend Low Band**.

Under the current sweep configuration crossing over two bands, when **Extend Low Band** is turned **ON**, the instrument checks whether one band can cover the whole sweep frequency range or not. If it can, then the instrument locks the band; otherwise, it does nothing (the band crossover occurs).

This function does *not* work when **Band Lock** under **System > Service > Lock Functions** is not -1 (no Band Lock). In that case, **Band Lock** takes priority over **Extend Low Band**.

This function is reset to **OFF** when "**Restore Defaults**" on page 2680 (in this tab) is pressed, or when **System, Restore Defaults, All Modes** is pressed.

This parameter is available for SA, RTSA, WCDMA, LTEAFDD, and LTEATDD Modes.

Remote Command	<code>:INSTRument:COUPle:FREQuency:BAND:EXTend 0 1 ON OFF</code> <code>:INSTRument:COUPle:FREQuency:BAND:EXTend?</code>
Example	<code>:INST:COUP:FREQ:BAND:EXT 1</code> <code>:INST:COUP:FREQ:BAND:EXT?</code>
Dependencies	Only applies to UXA, PXA, MXA and EXA
Preset	Set to OFF by Global Settings > Restore Defaults and System > Restore Defaults > All Modes
Range	ON OFF

Restore Defaults

Resets all the functions in the **Global > Settings** menu to **OFF**. This also occurs when **System, Restore Defaults, All Modes** is pressed.

Remote Command	<code>:INSTRument:COUPle:DEFault</code>
Example	<code>:INST:COUP:DEF</code>
Backwards Compatibility SCPI	<code>:GLOBal:DEFault</code>

3.9.9 Sweep

Accesses controls to configure and control the acquisition of data, and the X-axis parameters of the instrument.

Depending on the selected mode and measurement, these controls might include: **Sweep Time, Continuous/Single, Pause/Resume, X Scale** and **Number of Points**.

3.9.9.1 Sweep/Control

Accesses controls that enable you to operate the sweep and control functions of the instrument, such as **Sweep Time** and **Continuous/Single**.

Sweep/Measure

Allows you to toggle between **Continuous** and **Single** sweep or measurement operation. The single/continuous state is Meas Global, so the setting affects all measurements.

The front-panel key **Single/Cont** performs exactly the same function

See ["More Information" on page 2241](#)

Remote Command	<code>:INITiate:CONTInuous OFF ON 0 1</code> <code>:INITiate:CONTInuous?</code>
Example	Put instrument into Single measurement operation: <code>:INIT:CONT 0</code> <code>:INIT:CONT OFF</code> Put instrument into Continuous measurement operation: <code>:INIT:CONT 1</code> <code>:INIT:CONT ON</code>
Preset	ON Note that <code>:SYST:PRES</code> sets <code>:INIT:CONT</code> to ON , but <code>*RST</code> sets <code>:INIT:CONT</code> to OFF
State Saved	Saved in instrument state
Annunciation	The Single/Continuous icon in the Meas Bar changes depending on the setting: <ul style="list-style-type: none"> - A line with an arrow is Single - A loop with an arrow is Continuous
Backwards Compatibility Notes	<p>For Spectrum Analysis Mode in ESA and PSA, there is no Cont hardkey, instead there is a Sweep Single/Cont softkey. In these instruments, switching the Sweep Single/Cont softkey from Single to Cont restarts averages (displayed average count reset to 1), but does not restart Max Hold and Min Hold</p> <p>X-Series A-models have Single and Cont hardkeys in place of the SweepSingleCont softkey. In the X-Series A-models, if in single measurement, the Cont hardkey (and <code>INIT:CONT ON</code>) switches to continuous measurement, but never restarts a measurement and never resets a sweep</p> <p>X-Series B-models have a Cont/Single toggle control instead of Single and Cont hardkeys, but it is still true that, if in single measurement, the Cont/Single toggle control never restarts a measurement and never resets a sweep</p> <p>For Spectrum Analysis Mode in ESA and PSA, the Single hardkey and the <code>INITiate:IMM</code> switched from continuous measurement to single measurement and restarted sweeps and averages (displayed average count reset to 1), but did not restart Max Hold and Min Hold. In the X-Series, the Restart control and the <code>INITiate:IMM</code> command initiate a sweep/ measurement/ average sequence/hold sequence including MaxHold and MinHold</p> <p>For Spectrum Analysis Mode in ESA and PSA, the Single hardkey restarted the sweep regardless of whether or not you were in an active sweep or sweep sequence. In the X-Series, Restart does this</p>

More Information

Continuous Mode	<p>The instrument takes repetitive sweeps, averages, measurements, etc., when in continuous mode. If in average or Max/Min Hold, and the average/hold count reaches the Average/Hold Num, the count stops incrementing, but the instrument keeps sweeping</p> <p>See the Trace key description under Trace Average for the averaging formula used both before and after the Average/Hold Num is reached. The trigger condition must be met prior to each sweep</p>
-----------------	--

	The type of trace processing for multiple sweeps is set under the Trace key, with choices of Trace Average , Max Hold , or Min Hold
Single Mode	<p>The instrument takes a single sweep when in Single mode, or if in average or Max/Min Hold, or if there is a Waterfall window displayed, it takes multiple sweeps until the average/hold count reaches the Average/Hold Num, then the count stops incrementing, and the instrument stops sweeping</p> <p>See the Trace key description under Trace Average for the averaging formula used. The trigger condition must be met prior to the sweep</p> <p>The type of trace processing for multiple sweeps is set under the Trace key, with choices of Trace Average, Max Hold, or Min Hold</p>

If the instrument is in **Single** measurement mode, pressing the **Cont/Single** toggle control does not zero the count and does not cause the sweep to be reset; the only action is to put the instrument into Continuous measurement operation.

If it is already in continuous sweep:

- **:INIT:CONT 1** has no effect
- **:INIT:CONT 0** places the instrument in Single Sweep but has no effect on the current sequence until $k = N$, at which point the current sequence will stop and the instrument will go to the idle state

See the "**Restart**" on page 2683 control description for details of **:INIT:IMMEDIATE**.

If the instrument is already in **Single** sweep, **:INIT:CONT OFF** has no effect.

If the instrument is already in **Single** sweep, then pressing **Cont/Single** in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing **Cont/Single** does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the instrument is waiting for a trigger). Even though pressing **Cont/Single** in the middle of a sweep does not restart the sweep, sending **:INIT:IMM** does reset it.

If the instrument is in **Single** sweep, and *not* Averaging/Holding, and you want to take one more sweep, press **Restart**.

If the instrument is in **Single** sweep, *and* Averaging/Holding, and you want to take one more sweep without resetting the Average trace or count, go to **Meas Setup** and increment the average count by 1 by pressing the **Step Up** key while **Average/Hold Num** is the active function. You can also do this by sending **:CALC:AVER:TCON UP**.

Restart

Restarts the current sweep, or measurement, or set of averaged/held sweeps or measurements. If you are Paused, pressing **Restart** performs a Resume.

The front-panel key **Restart** performs exactly the same function.

The **Restart** function is accessed in several ways:

- Pressing the **Restart** key
- Sending **:INIT:IMM**
- Sending **:INIT:REST**

See "[More Information](#)" on page 2243

Remote Command	:INITiate[:IMMEDIATE] :INITiate:REStart
Example	:INIT:IMM :INIT:REST
Notes	:INIT:REST and :INIT:IMM perform exactly the same function
Couplings	Resets average/hold count k. For the first sweep overwrites all active (update = on) traces with new current data. For application modes, it resets other parameters as required by the measurement
Status Bits/OPC dependencies	This is an Overlapped command The STATUS:OPERation register bits 0 through 8 are cleared , <i>except</i> bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous The STATUS:QUESTionable register bit 9 (INTEgrity sum) is cleared The SWEEPING bit is set The MEASURING bit is set
Backwards Compatibility Notes	For Spectrum Analysis Mode in ESA and PSA, the Restart hardkey and the :INIT:REST command restart trace averages (displayed average count reset to 1) for a trace in Clear Write , but did not restart Max Hold and Min Hold In X-Series, the Restart hardkey and the :INIT:REST command restart not only Trace Average , but MaxHold and MinHold traces as well For wireless comms modes in ESA and PSA, the Restart hardkey and the :INIT:REST command restart every measurement, which includes all traces and numeric results. There is no change to this operation

More Information

The **Restart** function first aborts the current sweep or measurement as quickly as possible. It then resets the sweep and trigger systems, sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is in the process of aligning when a **Restart** is executed, the alignment finishes before the restart function is performed.

Even when set for **Single** operation, multiple sweeps may be taken when **Restart** is pressed (for example, when averaging/holding is on). Thus when we say that

Restart "restarts a measurement", depending on the current settings, we may mean that it:

- Restarts the current sweep
- Restarts the current measurement
- Restarts the current set of sweeps if any trace is in Trace Average, Max Hold or Min Hold
- Restarts the current set of measurements if Averaging, or Max Hold, or Min Hold is on for the measurement

If there is no Average or Max/Min Hold function (no trace in Trace Average or Hold, or **Average/Hold Num** set to 1), and no **Waterfall** window is being displayed, a single sweep is equivalent to a single measurement. A single sweep is taken after the trigger condition is met; and the instrument stops sweeping once that sweep has completed. However, with **Average/Hold Num** >1, and at least one trace set to Trace Average, Max Hold, or Min Hold, or a **Waterfall** window being displayed, multiple sweeps/data acquisitions are taken for a single measurement. The trigger condition must be met prior to each sweep. The sweep is stopped when the average count k equals the number N set for **Average/Hold Num**.

Once the full set of sweeps has been taken, the instrument goes to the idle state. To take one more sweep without resetting the average count, increment the average count by 1, by pressing the **Step Up** key while **Average/Hold Number** is the active function, or by sending the remote command `:CALC: AVER: TCON UP`.

Trace Update

The numeric results are not blanked at any time during the restart cycle.

For slow sweeps (see **Trace Update** section in **Trace/Detector**), the traces are updated real-time during the sweep. There may be a special circumstance in application mode measurements where an exception is made and the traces and/or results need to be blanked before displaying the new results.

To summarize, the following list shows what happens to the trace data on various events:

Event	Trace Effect
Clear/Write pressed (even if already in Clear/Write)	Set to mintracevalue
Max Hold pressed (even if already in Max Hold)	Set to mintracevalue
Min Hold pressed (even if already in Min Hold)	Set to maxtracevalue
Trace Average pressed (even if already in Trace Average)	Trace data unaffected but start new sweep/avg/hold

Event	Trace Effect
Restart pressed	Trace data unaffected but start new sweep/avg/hold
Parameter requiring restart changed (e.g., RBW)	Trace data unaffected but start new sweep/avg/hold

Sweep and Trigger Reset

Resetting the sweep system resets the average/hold count k to 0. It also resets the set point counter to 0. Resetting the trigger system resets the internal auto trig timer to the value set by the **Auto Trig** control.

Averaging

The weighting factor used for averaging is k . This k is also the average/hold count for how many valid sweeps (data acquisitions) have been done. This k is used for comparisons with N , as those comparisons always needs to be based on valid completed sweeps.

The displayed average/hold, K , shows the count for the sweep (data acquisition) in progress. $K = k + 1$, with a limit of N . The displayed value K changes from its previous value to 1 as soon as the trigger condition for the first data acquisition (sweep) is met.

Pause/Resume

Pauses a measurement after the current data acquisition is complete.

When paused, the label on the control changes to **Resume**. Pressing **Resume** unpauses the measurement. When paused, pressing **Restart** performs a Resume.

Remote Command	<code>:INITiate:PAUSE</code> <code>:INITiate:RESume</code>
Example	<code>:INIT:PAUS</code> <code>:INIT:RES</code>
Dependencies	Not displayed in Modes that do not support Pausing
Annotation	Only on control

Abort (Remote Command Only)

Stops the current measurement. Aborts the current measurement as quickly as possible, resets the sweep and trigger systems, and puts the measurement into an

"idle" state. If the instrument is in the process of aligning when **:ABORt** is sent, the alignment finishes *before* the abort function is performed, so **:ABORt** does not abort an alignment.

If the instrument is set for **Continuous** measurement, it sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is set for **Single** measurement, it remains in the "idle" state until an **:INIT:IMM** command is received.

Remote Command	:ABORt
Example	:ABOR
Notes	If :INIT:CONT is ON , then a new continuous measurement will start immediately, with sweep (data acquisition) occurring once the trigger condition has been met If :INIT:CONT is OFF , then :INIT:IMM is used to start a single measurement, with sweep (data acquisition) occurring once the trigger condition has been met
Dependencies	For continuous measurement, :ABORt is equivalent to the Restart key Not all measurements support this command
Status Bits/OPC dependencies	The STATUS:OPERation register bits 0 through 8 are cleared , <i>except</i> bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous The STATUS:QUESTionable register bit 9 (INTegrity sum) is cleared Since all the bits that feed into OPC are cleared by :ABORt , the Abort command will cause the *OPC query to return true

3.9.9.2 X Scale

Accesses controls that enable you to set the horizontal scale parameters.

Scale/Div

Enables you to enter a time value to change the horizontal scale.

Remote Command	:DISPlay:PStatistic:VIEW[1]:WINDow2:TRACe:X[:SCALE]:PDIVision <rel_amp1> :DISPlay:PStatistic:VIEW[1]:WINDow2:TRACe:X[:SCALE]:PDIVision?
Example	:DISP:PST:VIEW:WIND2:TRAC:X:PDIV 10 :DISP:PST:VIEW:WIND2:TRAC:X:PDIV?
Notes	The CCDF measurement has the trace display only in Window 2, because values other than "2" are <i>not</i> available as the sub-op code
Preset	2.00
State Saved	Saved in instrument state
Min	0.1
Max	20

Backwards :DISPlay:PSTatistic:XScale
Compatibility
SCPI

3.9.10 Trace

Lets you control the display and storage of trace data for the available traces.

3.9.10.1 Trace Control

The controls on this tab allow you to select display of the Reference Trace and the Gaussian Line, and store the Reference Trace.

Store Ref Trace

Copies the currently measured curve as the user-definable reference trace. The captured data remains until the other mode is chosen. Pressing this key also refreshes the reference trace.

No query is available.

Remote Command :CALCulate:PSTatistic:STORe:REFerence
Example :CALC:PST:STOR:REF
Backwards Compatibility [:SENSe]:PSTatistic:SRTRace
SCPI

Ref Trace

Toggles the reference trace display On or Off.

Remote Command :DISPlay:PSTatistic:RTRace[:STATe] OFF | ON | 0 | 1
 :DISPlay:PSTatistic:RTRace[:STATe]?
Example :DISP:PST:RTR OFF
 :DISP:PST:RTR?
Preset OFF
State Saved Saved in instrument state
Range OFF | ON
Backwards Compatibility [:SENSe]:PSTatistic:RTRace[:STATe]
SCPI

Gaussian Line

Toggles the Gaussian trace display On or Off.

Remote Command	<code>:DISPlay:PStatistic:GAUSSian[:STATe] OFF ON 0 1</code>
Example	<code>:DISP:PST:GAUS OFF</code> <code>:DISP:PST:GAUS?</code>
Preset	ON
State Saved	Saved in instrument state
Range	OFF ON
Backwards Compatibility SCPI	<code>[:SENSe]:PStatistic:GAUSSian[:STATe]</code>

3.10 Monitor Spectrum Measurement

The Monitor Spectrum measurement provides a quick, convenient means of looking at the entire spectrum. While the look and feel are similar to Spectrum Analyzer Mode, the functionality is greatly reduced for easy operation. The main purpose of this measurement is to show the spectrum. The default span should cover an appropriate frequency range of the application.

Monitor Spectrum Measurement Commands

The following commands can be used to configure the measurement and retrieve results:

```
:CONFigure:MONitor
:CONFigure:MONitor:NDEFault
:INITiate:MONitor
:FETCh:MONitor[n]?
:READ:MONitor[n]?
:MEASure:MONitor[n]?
```

Remote Command Results for Monitor Spectrum Measurement

The following table describes the results returned by the queries listed above, according to the index value **n**.

n	Results Returned
1 (or not specified)	Returns trace1 data with comma separated floating numbers
2	Returns trace2 data with comma separated floating numbers
3	Returns trace3 data with comma separated floating numbers

3.10.1 Views

For modes other than MSR, LTEAFDD/LTEATDD and 5GNR, there is a single view, **Normal**.

For the MSR, LTEAFDD/LTEATDD and 5GNR modes, there are two views, **Normal** and **Carrier Info**, as described in the table below. The **Normal** view is the same as the common Monitor Spectrum view in other Modes. Carrier Info is available on the spectrum trace.

3 5G NR Mode
 3.10 Monitor Spectrum Measurement

"Normal" on page 2250	This is a single window view of the spectrum In MSR, LTEAFDD/LTEATDD and 5GNR Modes, you can turn on attributes that show the defined carriers and the sub-blocks also
Carrier Info	This view shows the spectrum in the top window and a carrier configuration summary in the bottom window Carrier center frequency can be displayed in either offset or absolute frequency depending on Carrier Freq

View Selection by Name (MSR, LTEAFDD/LTEATDD and 5GNR only)

Remote Command	<code>:DISPlay:MONitor:VIEW[:SElect] RTRace CINformation</code> <code>:DISPlay:MONitor:VIEW[:SElect]?</code>
Example	<code>:DISP:MON:VIEW RTR</code> <code>:DISP:MON:VIEW?</code>
Preset	<code>RTRace</code>
State Saved	Saved in instrument state
Range	Power Results Carrier Info

View Selection by Number (MSR, LTE-A FDD/TDD and 5G NR only)

Remote Command	<code>:DISPlay:MONitor:VIEW:NSElect <integer></code> <code>:DISPlay:MONitor:VIEW:NSElect?</code>
Example	<code>:DISP:MON:VIEW:NSEL 1</code> <code>:DISP:MON:VIEW:NSEL?</code>
Preset	1
State Saved	Saved in instrument state
Min/Max	1/2

3.10.1.1 Normal

Windows: **"Spectrum" on page 2251**

Single window view of the graph.

Example	<code>:DISP:MON:VIEW RTR</code>
Dependencies	This command is only available in the MSR, LTE-A FDD/TDD and 5G NR modes. In other Modes this is the only View

3.10.1.2 Carrier Info

This view shows the spectrum in the top window and a carrier configuration summary in the bottom window.

Carrier center frequency can be displayed in either offset or absolute frequency, depending on Carrier Freq.

Windows: "Spectrum" on page 2251, "Carrier Info" on page 2253

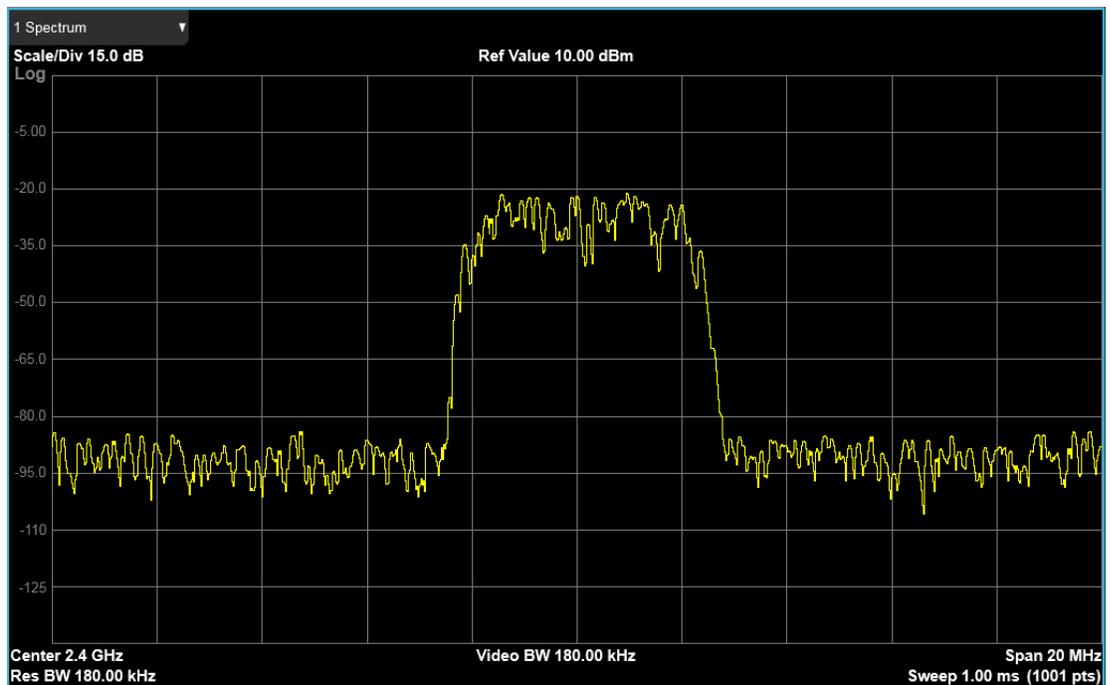

Example	:DISP:MON:VIEW CINF
Dependencies	Only available in the MSR, LTEAFDD/LTEATDD and 5GNR modes

3.10.2 Windows

This section describes the windows used in the Monitor Spectrum measurement.

3.10.2.1 Spectrum

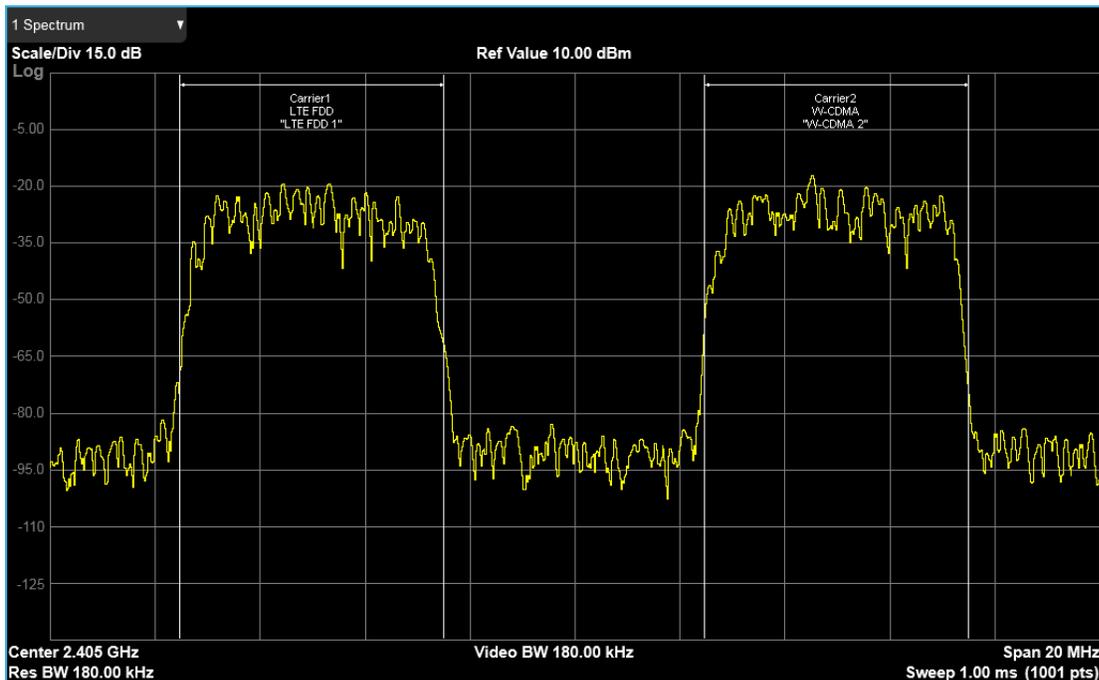

In all modes except MSR, LTEAFDD/LTEATDD, and 5GNR, this is a single trace window showing the spectrum.

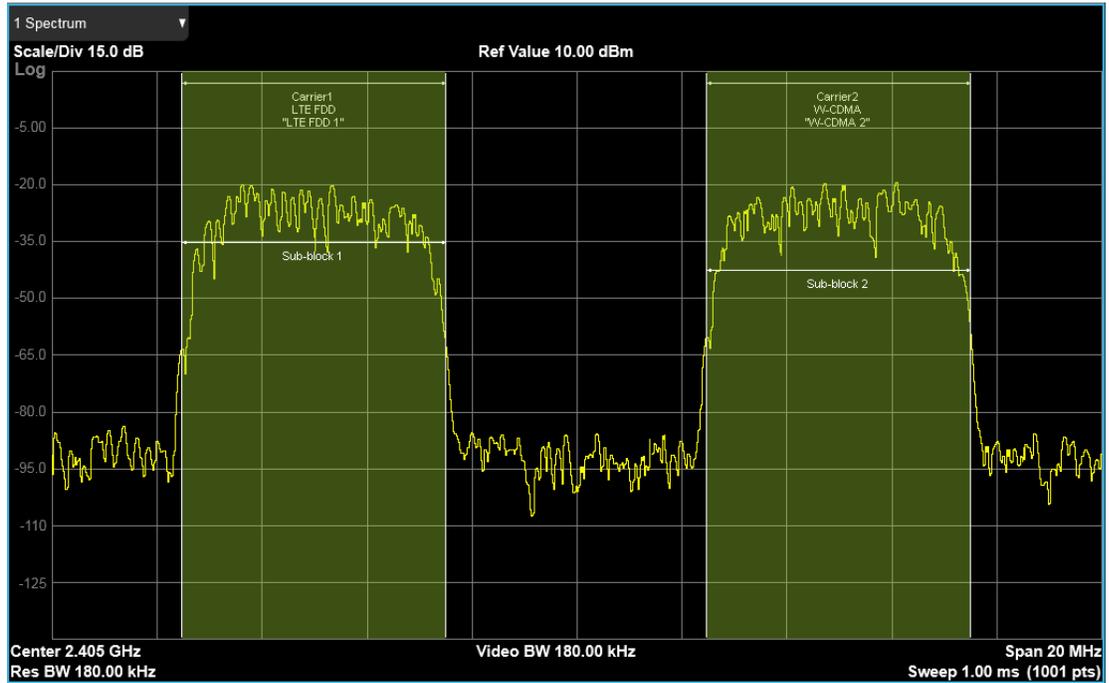

3 5G NR Mode
3.10 Monitor Spectrum Measurement

In **LTEAFDD/LTEATDD, MSR and 5GNR Modes**, multi-carriers are supported. The Carrier Attribute on/off and Sub-block Attribute on/off settings (under Display, Meas Display) are defined to allow the carrier and sub-block legends to display.

When the Carrier Attribute is on, the carrier identification and name are shown on the spectrum trace:

When Carrier and Sub-block attributes are both on, the sub-block scope and name are also shown on the spectrum trace:

3.10.2.2 Carrier Info

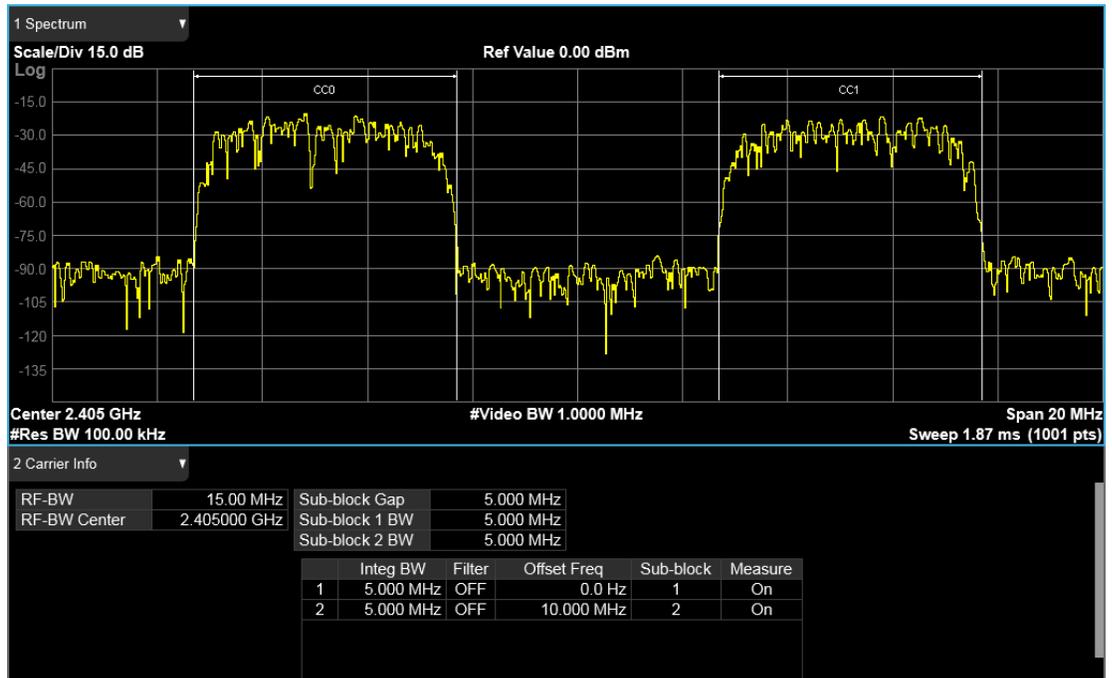

In the Carrier Info window, the Carrier configuration is summarized in the lower window.

LTEAFDD/LTEATDD, 5G NR Modes

The Carrier configuration is summarized in the lower window as below:

3 5G NR Mode

3.10 Monitor Spectrum Measurement

The text window displays the following results:

RF-BW and RF-BW Center

It shows the RF bandwidth calculated from the outermost component carriers and their freq offset, and the center frequency of the RF Bandwidth.

Sub-block configuration

As for intra-band non-contiguous spectrum operation, the sub-block concept is introduced, which refers to one contiguous allocated block of spectrum for transmission and reception in the intra-band non-contiguous aggregation mode. So far we support the two sub-blocks. It summarizes each sub-block bandwidth and the frequency gap between the two consecutive sub-blocks. The Sub-block gap and Sub-block 2 BW are displayed when Component Carrier Allocation is Non-Contiguous and two sub-blocks are separated.

Integration Bandwidth

It displays the transmission bandwidth each component carrier.

Filter

It displays whether RRC filter is used for MON measurement or not.

Offset Frequency

It shows the offset frequency from the carrier reference frequency in multi-carrier measurements. The carrier frequency display type determines whether the relative frequency or absolute frequency will be displayed.

Sub-block

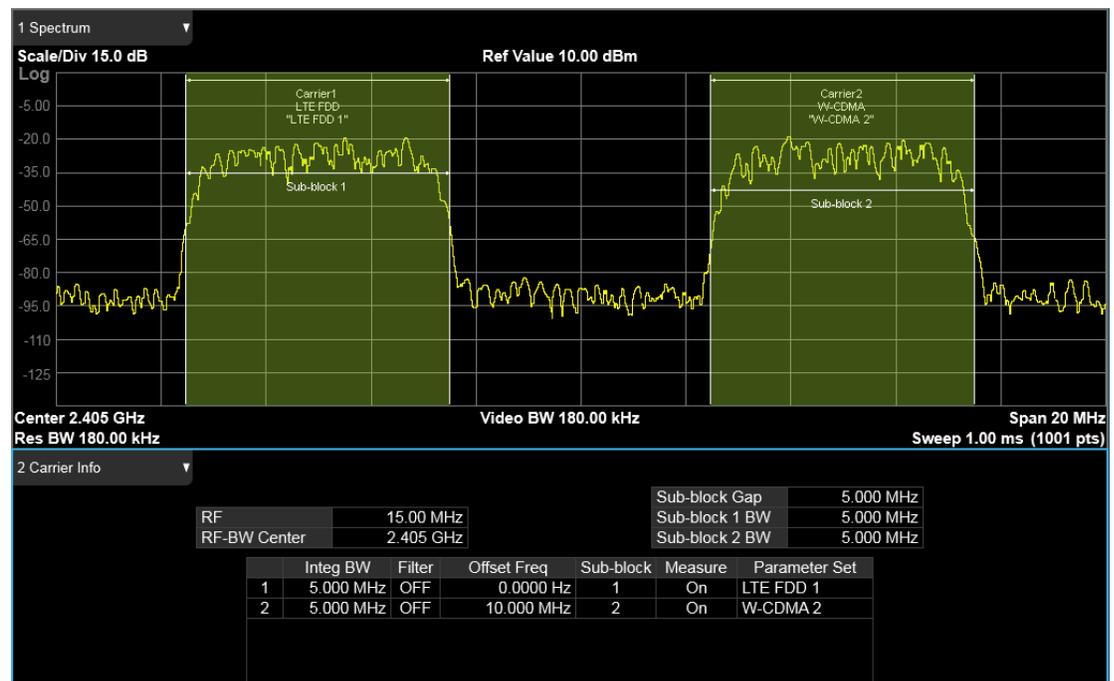

It displays which sub-block the carrier belongs to in the intra-band non-contiguous aggregation mode. The column will be displayed when the carrier allocation mode is non-contiguous.

Measure

Shows whether the carrier is measured or not.

MSR

The Carrier configuration is summarized in the lower window as below:

The text window displays the following results:

RF-BW and RF-BW Center

It shows the RF bandwidth calculated from the outermost component carriers and their freq offset, and the center frequency of the RF Bandwidth.

Sub-block configuration

As for intra-band non-contiguous spectrum operation, the sub-block concept is introduced, which refers to one contiguous allocated block of spectrum for

transmission and reception in the intra-band non-contiguous aggregation mode. So far we support the two sub-blocks. It summarizes each sub-block bandwidth and the frequency gap between the two consecutive sub-blocks. The Sub-block gap and Sub-block 2 BW are displayed when Component Carrier Allocation is Non-Contiguous and two sub-blocks are separated.

Integration Bandwidth

It displays the transmission bandwidth each component carrier.

Filter

It displays whether RRC filter is used for MON measurement or not.

Offset Frequency

It shows the offset frequency from the carrier reference frequency in multi-carrier measurements. The carrier frequency display type determines whether the relative frequency or absolute frequency will be displayed.

Sub-block

It displays which sub-block the carrier belongs to in the intra-band non-contiguous aggregation mode. The column will be displayed when the carrier allocation mode is non-contiguous.

Measure

It shows whether the carrier is measured or not.

Parameter Set

It displays which format parameter set is selected.

3.10.3 Amplitude

Activates the **Amplitude** menu and selects **Reference Level** or **Reference Value** as the active function, depending on the measurement.

Some features in this menu apply to multiple measurements. Some other features apply only to specific measurements and their controls are blanked or grayed-out in measurements that do not support the feature.

3.10.3.1 Y Scale

Contains controls that pertain to the Y axis parameters of the measurement. These parameters control how data on the vertical (Y) axis is displayed and control instrument settings that affect the vertical axis.

Ref Value

Sets the value for the absolute power reference. The reference line is at the top, center, or bottom of the graticule, depending on the value of "Ref Position" on page 2258.

Remote Command	<code>:DISPlay:MONitor:WINDow[1]:TRACe:Y[:SCALe]:RLEVe1 <real></code> <code>:DISPlay:MONitor:WINDow[1]:TRACe:Y[:SCALe]:RLEVe1?</code>
Example	<code>:DISP:MON:WIND:TRAC:Y:RLEV 2.0</code> <code>:DISP:MON:WIND:TRAC:Y:RLEV?</code>
Couplings	When "Auto Scaling" on page 2259 is ON (default), this value is automatically determined by the measurement result. When you set a value manually, Auto Scaling changes to OFF Attenuation is not coupled to "Ref Value" on page 2257
Preset	10.00 dBm
State Saved	Saved in instrument state
Min/Max	-250.00 dBm / 250.00 dBm
Annotation	Ref <value> top left of graph
Backwards Compatibility SCPI	<code>:DISPlay:MONitor:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RLEVe1</code>

Scale/Div

For measurements that support a logarithmic Y-Axis, **Scale/Div** sets the height of one division of the graticule in the current Y-Axis unit.

Scale/Div also determines the displayed amplitude range in the log plot graph. Since there are usually 10 vertical graticule division on the display, the total amplitude range of the graph is typically 10x this amount. For example, if **Scale/Div** is 10 dB, then the total range of the graph is 100 dB.

Remote Command	<code>:DISPlay:MONitor:WINDow[1]:TRACe:Y[:SCALe]:PDIVision <rel_amp1></code> <code>:DISPlay:MONitor:WINDow[1]:TRACe:Y[:SCALe]:PDIVision?</code>
Example	<code>:DISP:MON:WIND:TRAC:Y:PDIV 5.0 dB</code> <code>:DISP:MON:WIND:TRAC:Y:PDIV?</code>
Couplings	Coupled to Scale Range as follows Scale/Div = Scale Range/10 (number of divisions) When "Auto Scaling" on page 2259 is ON , this value is automatically determined by the measurement result When you change a value, Auto Scaling automatically changes to OFF

3 5G NR Mode

	Reference Position
Backwards Compatibility SCPI	<code>:DISPlay:MONitor:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RPOsition</code>

Auto Scaling

Toggles the **Auto Scaling** function On or Off.

Remote Command	<code>:DISPlay:MONitor:WINDow[1]:TRACe:Y[:SCALe]:COUPlE 0 1 OFF ON</code>
	<code>:DISPlay:MONitor:WINDow[1]:TRACe:Y[:SCALe]:COUPlE?</code>
Example	<code>:DISP:MON:WIND:TRAC:Y:COUP OFF</code> <code>:DISP:MON:WIND:TRAC:Y:COUP?</code>
Couplings	When Auto Scaling is ON , and the Restart front-panel key is pressed, this function automatically sets the scale per division to 10 dB and determines the reference values based on the measurement results When you change a value of Scale/Div , Ref Value , or Scale Range , Auto Scaling automatically changes to OFF
Preset	1
State Saved	Saved in instrument state
Range	OFF ON
Backwards Compatibility SCPI	<code>:DISPlay:MONitor:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:COUPlE</code>

3.10.3.2 Attenuation

Controls the attenuator functions and interactions between the attenuation system components.

There are two attenuator configurations in the X-Series. One is a Dual-Attenuator configuration consisting of a mechanical attenuator and an optional electronic attenuator. The other configuration uses a single attenuator with combined mechanical and electronic sections that controls all the attenuation functions. Different models in the X-Series come with different configurations.

- See ["Dual-Attenuator Configurations "](#) on page 2260
- See ["Single-Attenuator Configuration "](#) on page 2260

Most attenuation settings are the same for all measurements – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by Meas Preset.

This tab is only available when the hardware set includes an input attenuator, which is typically only the case for Keysight's benchtop instruments. For example, this tab does not appear in:

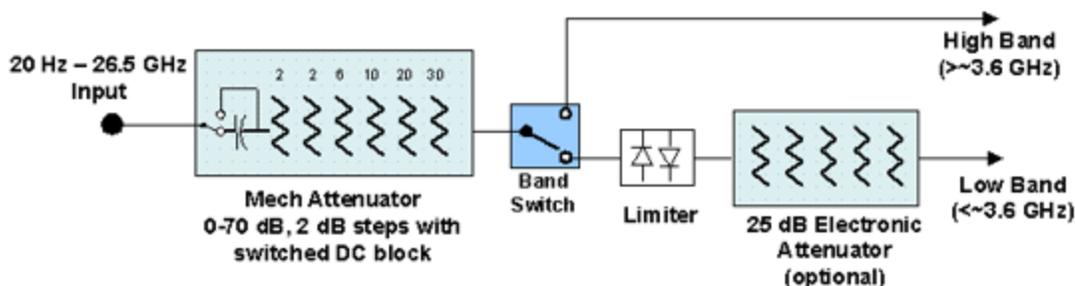

- VXT models SP900B/10A/11A

This tab also does not appear in UXM. In UXM all Attenuation and Range settings are disabled, as the expected input power level is handled by the Call Processing App that drives the DUT power control.

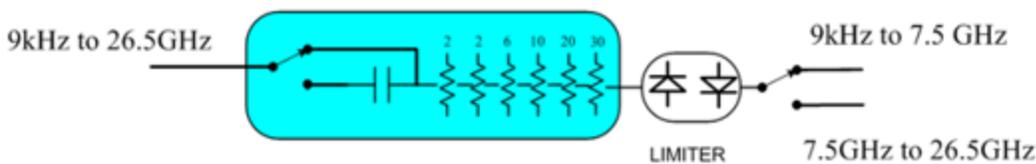

Dependencies In measurements that support the I/Q inputs, this tab is unavailable when I/Q is the selected input, and is replaced by the **Range** tab in that case

Dual-Attenuator Configurations

Configuration 1: Mechanical attenuator + optional electronic attenuator

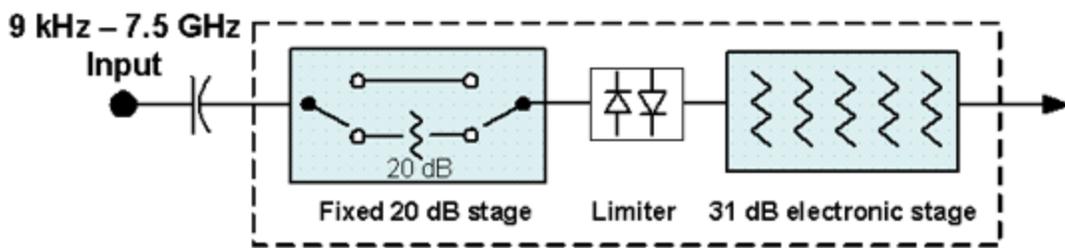

Configuration 2: Mechanical attenuator, no optional electronic attenuator

Note that Configuration 2 is not strictly speaking a dual-section attenuator, since there is no electronic section available. However, it behaves exactly like Configuration 1 without the Electronic Attenuator option EA3, therefore for the sake of this document it is grouped into the “Dual-Attenuator” configuration.

Single-Attenuator Configuration

You can tell which attenuator configuration you have by pressing the Attenuation tab, which (in most Modes) opens the Attenuation menu. If the first control in the Attenuation menu says **Mech Atten** you have the Dual-Attenuator configuration. If the first control says **Atten** you have the Single-Attenuator configuration.

(Note that depending on the measurement, there may be no Auto/Man functionality on the Mech Atten control.)

In the Single-Attenuator configuration, you control the attenuation with a single control, as the fixed stage has only two states. In the Dual-Attenuator configuration, both stages have significant range, so you are given separate control of the mechanical and electronic attenuator stages.

When you have the Dual-Attenuator configuration, you may still have only a Single-Attenuator, because unless option EA3 (the Electronic Attenuator option) is available, and you purchase it, you will have only the mechanical attenuator.

Full Range Atten

This control and **Attenuator Summary** only appear in SP900S, when the RF input is selected and the RF Input Port is set to RF Input 2, and the Full Range Attenuator is installed. The Full Range Attenuator adds a second input attenuator at the beginning of the RF Input 2, which enhances the protection and optimizes the performance of the extra internal mixers used by RF Input 2.

Remote Command	<code>[:SENSe]:POWer[:RF]:FRATten <rel_amp1></code> <code>[:SENSe]:POWer[:RF]:FRATten?</code>
Example	<code>:POW:FRAT 14</code> <code>:POW:FRAT?</code>
Notes	When you enter an amplitude value that falls between valid values, the value will be incremented to the next smallest valid value
Dependencies	Only appears if input RF is selected, and RF Input Port 2 is selected, and the Full Range Attenuator exists
Couplings	This value is never changed by any coupling, but other couplings use this value. See Reference Level and " Mech Atten " on page 2568 command descriptions
Preset	20 dB
State Saved	Saved in instrument state

Min	0 dB
Max	Only valid values are 0, 6, 14, 20 dB
Annotation	<p>When the Input is RF, and the Input Port is RF Input 2, and the Full Range Attenuator is installed: On the Meas Bar, the field “Atten” displays as follows:</p> <ul style="list-style-type: none"> - If the sweep is entirely < 50 GHz, the value shown after “Atten:” is equal to Mech Atten + Elec Atten + Full Range Atten - If the sweep is entirely > 50 GHz, the value shown after “Atten:” is equal to Full Range Atten - If the sweep straddles 50 GHz, the value shown after “Atten:” is preceded by the symbol “>=” and is equal to Full Range Atten <p>In the Amplitude, "Y Scale" on page 2562 menu, and the Atten Meas Bar dropdown menu panel, a summary is displayed as follows: “Total Atten below 50 GHz” followed by the value of Full Range Atten + Mech Atten + Elec Atten “Total Atten above 50 GHz” followed by the value of Full Range Atten For example, if Mech Atten = 6 dB, Elec Atten = 4 dB, and Full Range Atten = 20 dB, the summary below is shown:</p> <ul style="list-style-type: none"> - Attenuator summary: - Total Atten below 50 GHz: 30 dB - Total Atten above 50 GHz: 20 dB

Mech Atten

This control is labeled **Mech Atten** in Dual-Attenuator models and **Atten** in Single-Attenuator models. In the Dual-Attenuator configuration, this control only affects the mechanical attenuator.

This control lets you modify the attenuation applied to the RF input signal path. This value is normally auto-coupled to the Ref Level, the Internal Preamp Gain, any External Gain that is entered, and the Max Mixer Level, as described in the table below.

See "[Attenuator Configurations and Auto/Man](#)" on page 2264

Remote Command	<pre>[:SENSe]:POWer[:RF]:ATTenuation <rel_amp1> [:SENSe]:POWer[:RF]:ATTenuation? [:SENSe]:POWer[:RF]:ATTenuation:AUTO OFF ON 0 1 [:SENSe]:POWer[:RF]:ATTenuation:AUTO?</pre>
Example	<pre>:POW:ATT 20</pre> <p>Dual-Attenuator configuration: sets the mechanical attenuator to 20 dB Single-Attenuator mode: sets the main attenuation to 20 dB (see below for definition of “main”)</p>

	<p>attenuation)</p> <p>In either case, if the attenuator was in Auto, it is set to Manual</p> <p>:POW:ATT:AUTO ON</p> <p>Turn Auto Mech Atten ON</p>
Dependencies	<p>Some measurements do not support the Auto setting of "Mech Atten" on page 2262. In these measurements, the Auto/Man selection is not available, and the Auto/Man toggle function is not available</p> <p>In Dual-Attenuator configurations, when the electronic attenuator is enabled, the mechanical attenuator has no auto setting, and the Auto/Man toggle function is not available. The state of Auto/Man is remembered and restored when the electronic attenuator is once again disabled. This is described in more detail in "Elec Atten" on page 2571</p> <p>See "Attenuator Configurations and Auto/Man" on page 2264 for more information on the Auto/Man functionality</p> <p>:POW:ATT:AUTO is only available in measurements that support Mech Atten Auto, such as Swept SA</p>
Couplings	<p>If the RF Input Port is the RF Input:</p> <ul style="list-style-type: none"> - If the USB Preamp is connected to USB, use 0 dB for Mech Atten - Otherwise compute the auto-selected value of Mech Atten based on Reference Level, Int Preamp, External Gain, Ref Level Offset, Max Mixer Level, μW Path Control and IF Gain settings. Limit this value to be no less than 6 dB (total attenuation below 6 dB can never be chosen by Auto) - In the SP900S, if the RF Input Port is RF Input 2, use the formula above and subtract the Full Range Atten value from the result to determine the Mech Atten. Limit the value so that it is never lower than 0 dB and so that total attenuation, including Full Range Atten, is never less than 6 dB (total attenuation, including Full Range Atten below 6 dB, can never be chosen by Auto) <p>In External Mixing and BBIQ, where the Attenuator is not in the signal path, the Attenuator setting changes as described above when "Mech Atten" on page 2262 is in Auto, but no changes are made to the actual attenuator hardware setting until the input is changed back to the RF Input</p> <p>For CXA-m with option FSA (Fine-Step Attenuator or 2 dB steps), the FSA-like behavior is only available when the frequency setting is ≤ 7.5GHz. So, when the frequency is changed from below 7.5GHz to above 7.5GHz, the attenuation setting will be changed to a multiple of 10dB which will be no smaller than the previous setting. For example, 4dB attenuation will be changed to 10dB</p>
Preset	<p>The preset for Mech Attenuation is "Auto"</p> <p>The Auto value of attenuation is 10 dB</p> <p>ON</p>
State Saved	<p>Saved in instrument state</p>
Min	<p>0 dB</p> <p>The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. Values below 6 dB must be directly entered from the keypad or via SCPI. This protects against setting a dangerously small attenuation value, which can put the instrument at risk of damage to input circuitry. If the current mechanical attenuation is below 6 dB, it can be increased with the knob and step keys, but not decreased</p>

3 5G NR Mode
3.10 Monitor Spectrum Measurement

Max	CXA Option 503 or 507: 50 dB EXA: 60 dB All other models: 70 dB Note that in the Single-Attenuator configuration, the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB
-----	---

Annotation	The current value for Total Atten is displayed in the Measurement Bar at the top of the display. A value appears for Electronic Attenuation only if the Electronic Attenuator is enabled. The annotation appears as Atten: <total> dB (e<elec>) The e letter is in amber in Single-Attenuator configurations For example: Dual-Attenuator configuration: Atten: 24 dB (e14) Indicating the total attenuation is at 24 dB and the electronic attenuation is at 14 dB Single-Attenuator configuration: A: 24 dB (e14) Indicating the total attenuation is at 24 dB and the “soft” attenuation is at 14 dB (see below for definition of “soft” attenuation) When in Manual, a # sign appears in front of Atten in the annotation
------------	---

Attenuator Configurations and Auto/Man

As described in ["Y Scale" on page 2562](#), there are two distinct attenuator configurations available in the X-Series, the single attenuator and Dual-Attenuator configurations. In Dual-Attenuator configurations, we have the mechanical attenuation and the electronic attenuation, and the current total attenuation is the sum of the electronic + mechanical attenuation. In Single-Attenuator configurations, we refer to the attenuation set using ["Mech Atten" on page 2262](#) (or `:POW:ATT`) as the “main” attenuation; and the attenuation that is set by `:POW:EATT` as the “soft” attenuation (`:POW:EATT` is honored even in the Single-Attenuator configuration, for compatibility purposes). Then the current total attenuation is the sum of the main + soft attenuation. See ["Elec Atten" on page 2571](#) for more on “soft” attenuation.

NOTE

In some measurements, the **Mech Atten** control has an Auto/Man function. In these measurements, an Auto/Man switch is shown on the **Mech Atten** control:

Note that in configurations that include an Electronic Attenuator, this switch is only shown when the Electronic Attenuator is disabled.

In other measurements, **Mech Atten** has no Auto/Man function. In these measurements, no switch is shown on the **Mech Atten** control:

Mech Atten also appears with no switch, as above, in configurations that include an Electronic Attenuator but when the Electronic Attenuator is enabled.

Elec Atten

Controls the Electronic Attenuator in Dual-Attenuator configurations. This control does not appear in Single-Attenuator configurations, as the control of both the mechanical and electronic stages of the Single-Attenuator is integrated into the single **Atten** control.

This control includes an Enable/Disable toggle switch; it is only possible to enter a value for the Electronic Attenuator when this switch is in the “Enable” position.

For more details about the Electronic Attenuator, see ["More Information " on page 2267](#)

Remote Command	<pre>[:SENSe]:POWer[:RF]:EATTenuation <rel_amp1> [:SENSe]:POWer[:RF]:EATTenuation? [:SENSe]:POWer[:RF]:EATTenuation:STATe OFF ON 0 1 [:SENSe]:POWer[:RF]:EATTenuation:STATe?</pre>
Example	<pre>:POW:EATT 10 :POW:EATT? :POW:EATT:STAT ON :POW:EATT:STAT?</pre>
Notes	Electronic Attenuation's specification is defined only when Mechanical Attenuation is 6 dB
Dependencies	This control only appears in Dual-Attenuator models with an Electronic Attenuator installed and

3 5G NR Mode
 3.10 Monitor Spectrum Measurement

licensed. It does not appear in models with the Single-Attenuator configuration, as in the Single-Attenuator configuration there is no “electronic attenuator” there is only a single integrated attenuator (which has both a mechanical and electronic stage). However, in the Single-Attenuator configuration, EATT SCPI commands are accepted for compatibility with other X-series instruments and set a “soft” attenuation as described in . The “soft” attenuation is treated as an addition to the “main” attenuation value set by the Atten control or **:POW:ATT** and affects the total attenuation displayed on the Atten control and the Meas Bar

The electronic attenuator (and the “soft” attenuation function provided in Single-Attenuator configurations) is unavailable above the low band (0-3.6 GHz, 0-3.4 GHz 0-3GHz, depending on the model). If the low band ranges from 0-3.6GHz, and Stop Frequency of the instrument is > 3.6 GHz, then the **Enabled/Disabled** section of the **Elec Atten** control will be OFF and grayed-out

If the Internal Preamp is on, meaning it is set to Low Band or Full, the electronic attenuator (and the “soft” attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be OFF and grayed-out

If either of the above is true, and the SCPI command is sent, an error indicating that the electronic attenuator is unavailable will be sent

If both of the above are true, pressing the control will generate error message -221, in other words, the frequency range lockout takes precedence

If the electronic/soft Attenuator is enabled, then the Stop Freq of the instrument is limited to 3.6 GHz and the Internal Preamp is unavailable

If the LNA is on, the electronic attenuator (and the “soft” attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be OFF and grayed-out. This coupling works in the following modes/measurements:

- Channel Power, Occupied BW, ACP, SEM, Spurious Emissions, Power Stat CCDF measurements in all Modes
- Transmit On|Off Power measurement in 5GNR Mode
- Power vs. Time and Transmit Power measurement in GSM/EDGE Mode
- Burst Power measurement in Spectrum Analyzer Mode

The SCPI-only “soft” electronic attenuation for the single-attenuator configuration is not available in all measurements; in particular, it is not available in the Swept SA measurement

Couplings	Enabling and disabling the Electronic Attenuator affects the setting of the Mechanical Attenuator (in Dual-Attenuator configurations). This is described in more detail below and in " Mechanical Attenuator Transition Rules " on page 2267
Preset	0 dB OFF (Disabled) for Swept SA measurement ON (Enabled) for all other measurements that support the electronic attenuator
State Saved	Saved in instrument state
Min	0 dB
Max	Dual-Attenuator configuration: 24 dB Single-Attenuator configuration: the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if

	the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB
Annotation	See Annotation under the Mech Atten control description

More Information

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear. These advantages primarily aid in remote operation and are negligible for front panel use. See ["Using the Electronic Attenuator: Pros and Cons "](#) on page 2268 for a detailed discussion of the pros and cons of using the electronic attenuator.

For the Single-Attenuator configuration, for SCPI backwards compatibility, the “soft” attenuation feature replaces the Dual-Attenuator configuration’s electronic attenuator. All the same couplings and limitations apply. See ["Attenuator Configurations and Auto/Man "](#) on page 2570

Mechanical Attenuator Transition Rules

When the Electronic Attenuator is enabled, the Mechanical Attenuator transitions to a state that has no Auto function. Below are the rules for transitioning the Mechanical Attenuator. Note that the information below *only* applies to the Dual-Attenuator configurations, and *only* when the Electronic Attenuator is installed:

When the Electronic Attenuation is enabled from a disabled state:

- The Mechanical Attenuator is initialized to 10 dB (this is its optimal performance setting). You can then set it as desired with SCPI, numeric keypad, step keys, or knob, and it behaves as it normally would in manual mode
- The Auto/Man state of (Mech) Atten is saved
- The Auto/Man toggle on the (Mech) Atten control disappears and the auto rules are disabled
- The Electronic Attenuator is set to 10 dB less than the previous value of the Mechanical Attenuator, within the limitation that it must stay within the range of 0 to 24 dB of attenuation

Examples in the Dual-Attenuator configuration:

- Mech Atten at 20 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 10 dB. New total attenuation equals the value before Elec Atten enabled
- Mech Atten at 0 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 0 dB. New total attenuation does not equal the value before Elec Atten enabled
- Mech Atten at 40 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 24 dB. New total attenuation does not equal the value before Elec Atten enabled

When the Electronic Attenuation is disabled from an enabled state:

- The Elec Atten control is grayed out
- The Auto/Man state of (Mech) Atten is restored
- If now in Auto, (Mech) Atten recouples
- If now in Man, (Mech) Atten is set to the value of total attenuation that existed before the Elec Atten was disabled. The resulting value is rounded up to the smallest value possible given the (Mech) Atten Step setting - (That is, 57 dB changes to 58 dB when (Mech) Atten Step is 2 dB)

Using the Electronic Attenuator: Pros and Cons

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear.

The “finer steps” advantage of the electronic attenuator is beneficial in optimizing the alignment of the instrument dynamic range to the signal power in the front panel as well as remote use. Thus, you can achieve improved relative signal measurement accuracy. Compared to a mechanical attenuator with 2 dB steps, the 1 dB resolution of the electronic attenuator only gives better resolution when the odd-decibel steps are used. Those odd-decibel steps are less accurately calibrated than the even-decibel steps, so one tradeoff for this superior relative accuracy is reduced absolute amplitude accuracy.

Another disadvantage of the electronic attenuator is that the spectrum analyzer loses its “Auto” setting, making operation less convenient.

Also, the relationship between the dynamic range specifications (TOI, SHI, compression, and noise) and instrument performance are less well-known with the electrical attenuator. With the mechanical attenuator, TOI, SHI, and compression threshold levels increase dB-for-dB with increasing attenuation, and the noise floor does as well. With the electronic attenuator, there is an excess attenuation of about 1 to 3 dB between 0 and 3.6 GHz, making the effective TOI, SHI, and so forth, less well known. Excess attenuation is the actual attenuation relative to stated attenuation. Excess attenuation is accounted for in the instrument calibration.

Adjust Atten for Min Clipping

Sets the combination of mechanical and electronic attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an immediate action function, that is, it executes once, when the control is pressed.

The algorithms that are used for the adjustment are documented under ["Pre-Adjust for Min Clipping" on page 2575](#).

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE</code>
Example	<code>:POW:RANG:OPT IMM</code>
Notes	Executing Adjust Atten for Min Clipping initiates the measurement
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements For the Waveform measurement, this control is available only in 5G NR Mode

Restart Meas on Adjust Atten

Toggles the force restart switch for the "Adjust Atten for Min Clipping" on page 2574 function.

When **ON**, pressing **Adjust Atten for Min Clipping**, or sending `[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE` restarts the measurement and then executes the function.

When **OFF**, pressing the control or sending the command neither restarts the measurement nor executes the function until you restart or continue averaging. In this case, pressing the control generates the following advisory message:

"Adjust Atten is deferred until "Restart" or "Continue Averaging" is executed"

This message is *not* generated if the command is sent.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:REStart OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:REStart?</code>
Example	<code>:POW:RANG:OPT:REST OFF</code> <code>:POW:RANG:OPT:REST?</code>
Dependencies	This parameter is available only in the measurements that support continuous averaging in 5G NR
Preset	ON
State Saved	Saved

Adjust Atten

Allows you to select;

- Electric attenuator only
- Combination of Electric attenuator and Mechanical attenuator

when `[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE` is executed.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE EONLY COMBined</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE?</code>
Example	<code>:POW:RANG:OPT:TYPE EONL</code>

	:POW:RANG:OPT:TYPE?
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements For the Waveform measurement, this control is available only in 5G NR Mode
Preset	COMBined
State Saved	Saved in instrument state

Pre-Adjust for Min Clipping

If this function is **ON**, it applies the adjustment described under "[Adjust Atten for Min Clipping](#)" on page 2574 each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

In Dual-Attenuator models, you can set **Elec+Mech Atten**, in which case both attenuators participate in the autoranging, or **Elec Atten Only**, in which case the mechanical attenuator does not participate in the autoranging. This latter case results in less wear on the mechanical attenuator and is usually faster.

See "[Adjustment Algorithm](#)" on page 2271

Selection	Example	Note
Off	:POW:RANG:OPT:ATT OFF	This is the default setting
Elec Atten Only	:POW:RANG:OPT:ATT ELEC	Selects only the electric attenuator to participate in auto ranging. This offers less wear on the mechanical attenuator and is usually faster
Mech + Elec Atten	:POW:RANG:OPT:ATT COMB	In Dual-Attenuator models, this selects both attenuators to participate in the autoranging

Remote Command	[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF ON ELECtrical COMBined [:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?
Example	:POW:RANG:OPT:ATT OFF :POW:RANG:OPT:ATT?
Notes	The parameter option ELECtrical sets this function to ON in Single-Attenuator models The parameter option COMBined is mapped to ELECtrical in Single-Attenuator models. If you send COMBined , it sets the function to ON and returns ELEC to a query For SCPI compatibility with models that do not have an input attenuator, the ON parameter is honored and mapped to COMBined
Dependencies	This control only appears in Dual-Attenuator models with an Electronic Attenuator installed In instruments with Dual-Attenuator model, when " Elec Atten " on page 2571 is OFF or grayed-out, " Pre-Adjust for Min Clipping " on page 2270 is grayed-out This control does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements

	For the Waveform measurement, this control is available only in 5G NR Mode
Preset	OFF when Elec Atten is Disabled at preset, otherwise ELEC
State Saved	Saved in instrument state
Range	Dual-Attenuator models: Off Elec Atten Only Mech + Elec Atten Single-Attenuator models: Off On
Notes	ON aliases to "Elec Atten Only" (: POW:RANG:OPT:ATT ELEC) OFF aliases to "Off" (: POW:RANG:OPT:ATT OFF) :POW:RANG:AUTO? returns true if :POW:RANG:OPT:ATT is not OFF
Backwards Compatibility SCPI	[:SENSe]: POWer [:RF]: RANGe:AUTO ON OFF 1 0 [:SENSe]: POWer [:RF]: RANGe:AUTO?

Adjustment Algorithm

The algorithms for the adjustment are documented below:

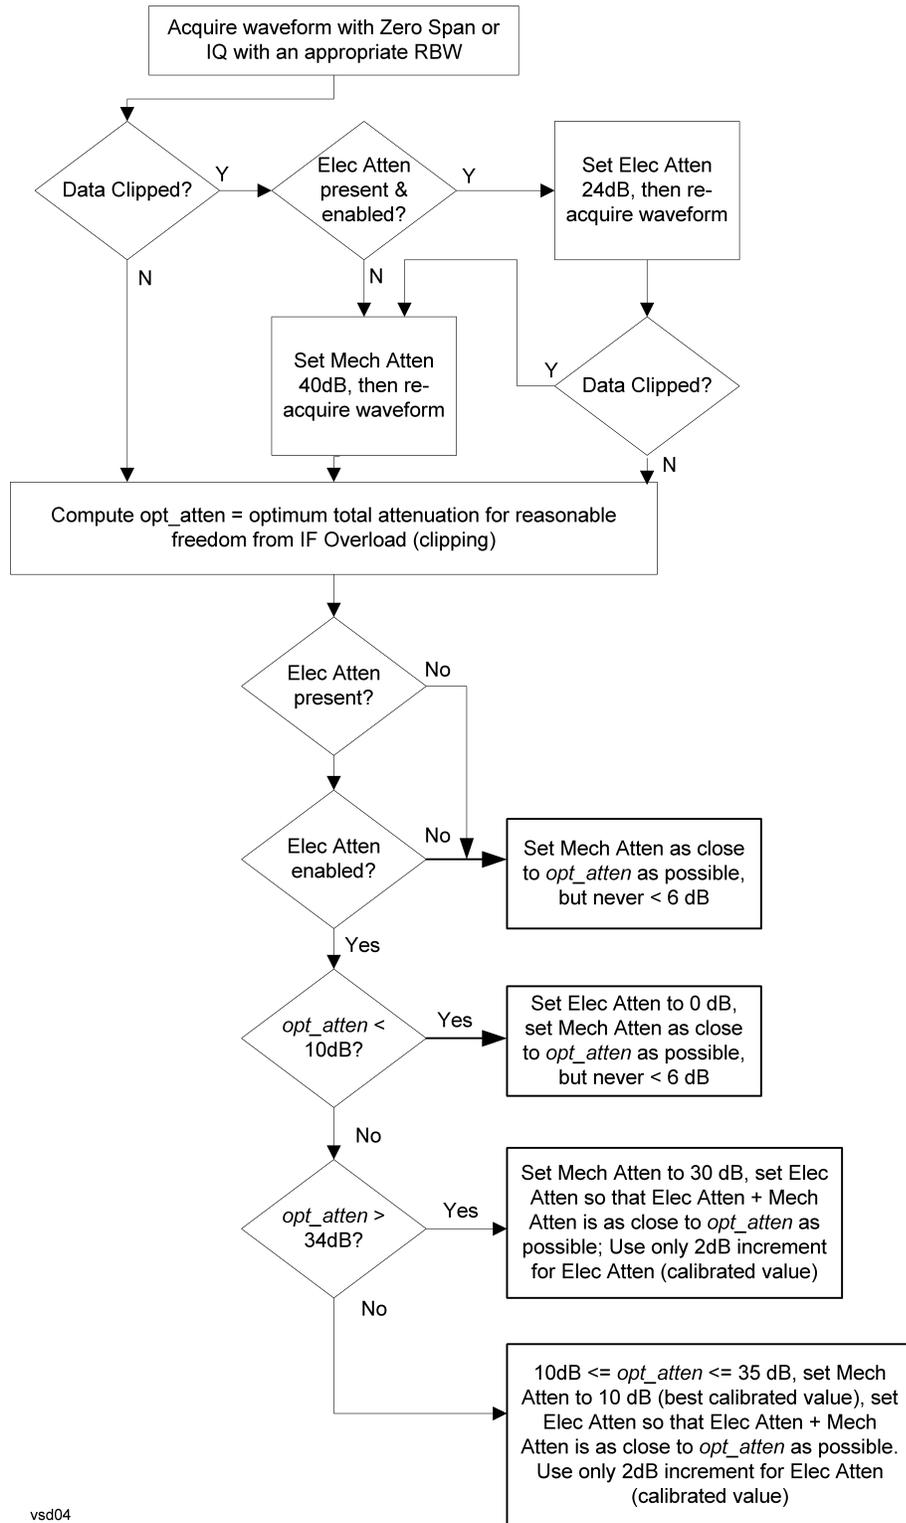

Single-Attenuator Models

3 5G NR Mode
3.10 Monitor Spectrum Measurement

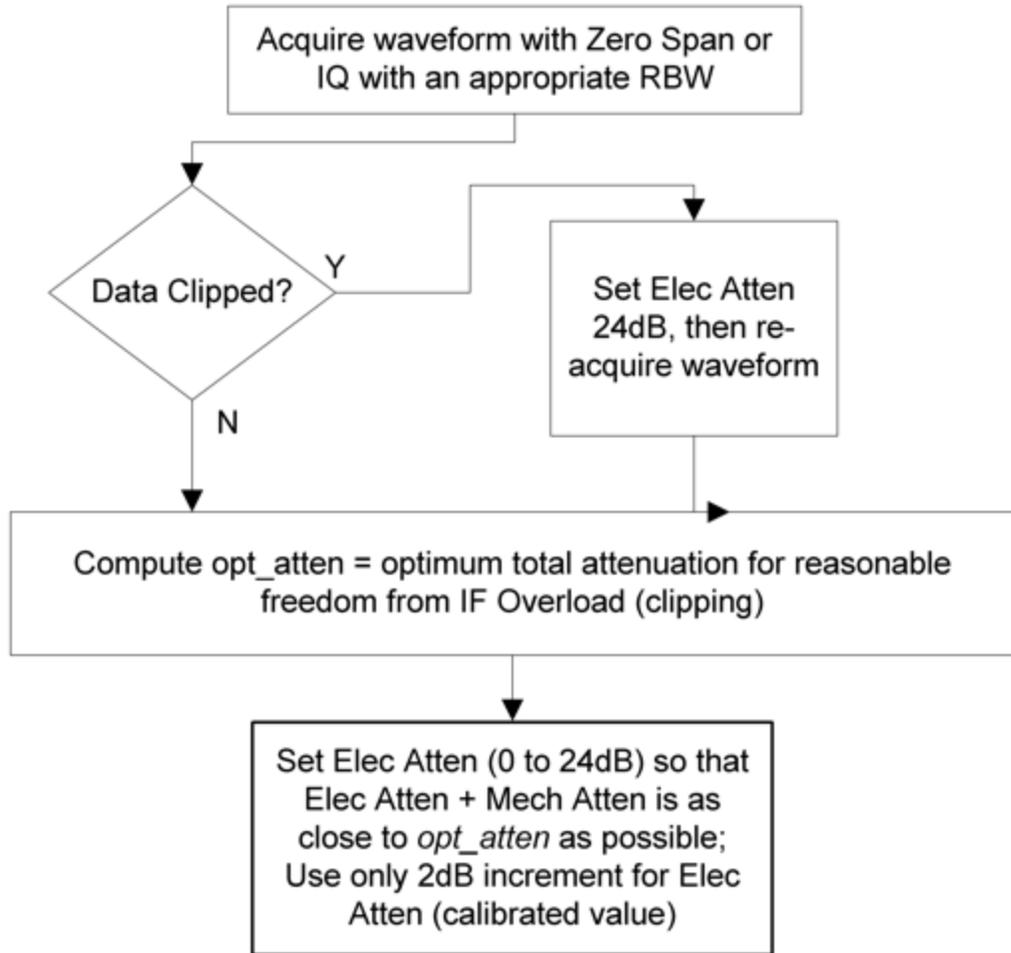

Dual-Attenuator models

"Adjust Atten for Min Clipping" on page 2574 or "Pre-Adjust for Min Clipping" on page 2270 selection is Mech + Elec Atten:

"Pre-Adjust for Min Clipping" on page 2270 selection is Elec Only.

Note that the **Mech Atten** value is not adjusted, and the value previously set is used. Therefore, there is a case that IF Overload is still observed depending on the input signal level and the Mech Atten setting.

Mech Atten Step

Controls the step size used when making adjustments to the input attenuation.

This control is labeled **Mech Atten Step** in Dual-Attenuator models and **Atten Step** in Single-Attenuator models. In the Dual-Attenuator configuration, this control only affects the step size of the mechanical attenuator.

Remote Command `[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement] 10 dB | 2 dB`
`[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement]?`

Example `:POW:ATT:STEP 2`

<code>:POW:ATT:STEP?</code>	
Notes	This feature has a toggle choice from the front panel, but it takes a specific value (in dB) when used remotely. The only valid values are 2 and 10
Dependencies	Blanked in EXA, CXA and CXA-m if option FSA (2 dB steps) is not present. If blanked, attempts to set it via SCPI yield an error
Couplings	When the attenuation step size changes, the current mechanical attenuation value is adjusted (if necessary) to be quantized to the new step size. That is, if step is set to 10 dB, mech atten is increased if necessary so it is a multiple of 10 dB
Preset	EXA, CXA and CXA-m: 10 dB (2 dB with option FSA) All other models: 2 dB
State Saved	Saved in instrument state

Max Mixer Level

Allows you to set the maximum level to be applied to the mixer for a signal at the top of the screen. By setting this value up or down you can allow more or less signal through the system.

The major impact of changes to **Max Mixer Level** is seen in changes to the value to which **Reference Level** is limited. Max Ref Level depends on Max Mixer Level and Attenuation, and therefore a higher Max Mixer Level may let you set Ref Level higher. However, changing this value can impact your TOI, compression, or dynamic range. The preset value of this function is best for most measurements.

See also "[Max Mixer Lvl Rules](#)" on page 2580.

Remote Command	<code>[:SENSe] :POWer [:RF] :MIXer :RANGe [:UPPer] <real></code> <code>[:SENSe] :POWer [:RF] :MIXer :RANGe [:UPPer] ?</code>
Example	<code>:POW:MIX:RANG -15 dBm</code> <code>:POW:MIX:RANG?</code>
Dependencies	Only appears in Swept SA and RTSA measurements
Preset	-10 dBm
State Saved	Saved in instrument state
Min	-50 dBm
Max	0 dBm

Max Mixer Lvl Rules

Allows you to optimize the Max Mixer Level setting for certain kinds of measurements.

3 5G NR Mode
 3.10 Monitor Spectrum Measurement

- **NORMal** – The historical, and thus backwards compatible, setting range (–50 to 0 dBm) and default setting (–10 dBm). The instrument has been designed so that, at the default setting, any signal below the **Reference Level** is extremely unlikely to create ADC overloads. At this mixer level the scale fidelity will be within specifications, thus compression will be negligible
- **TOI** – Allows a range of settings of the "Max Mixer Level" on page 2580, –50 to –10 dBm, that can be optimum for measurements limited by the instrument third-order dynamic range. The default setting, –25 dBm, is commonly appropriate but RBW affects this. A good setting for Max Mixer Level would be higher than the optimum mixer level by half of the attenuator step size
- **COMPression** – Allows a range of settings of the Max Mixer Level, –10 to +10 dBm or more, that can be optimum for measurements limited by the tradeoffs between instrument accuracy due to compression, and dynamic range due to the noise floor. The default setting, –3 dBm, is commonly appropriate, representing mixer drive levels that cause 1 dB or less compression at most carrier frequencies. Typical measurements that would be optimized by this setting are the measurement of low sideband levels, including nulls, in angle-modulated signals (FM and PM). Also pulsed-RF measurements, including finding nulls to estimate pulse width, which are often best done with significant overdrive (compression) of the front end

Setting Name (readback)	Setting Name (verbose)	Max Mixer Level Preset Value, dBm	Max Mixer Level minimum value, dBm	Max Mixer Level maximum value, dBm
NORMal	Normal – balance TOI, noise, and compression	–10	–50	0
TOI	TOI-limited dynamic range	–25	–50	–10
COMPression	Compression-limited dynamic range	–3	–10	+30

Remote Command	<code>[:SENSe]:POWer[:RF]:MIXer:RULEs NORMal TOI COMPression</code> <code>[:SENSe]:POWer[:RF]:MIXer:RULEs?</code>
Example	<code>:POW:MIX:RULE:COMP</code>
Dependencies	Only appears in Swept SA and RTSA
Preset	NORM

3.10.3.3 Range (Non-attenuator models)

This tab is only available for Keysight's modular signal analyzers and certain other Keysight products. Examples include:

- VXT

State Saved	No
-------------	----

Range

Represents the amplitude of the largest sinusoidal signal that could be present within the IF without being clipped by the ADC. For signals with high peak-to-average ratios, the range may need to exceed the rms signal power by a significant amount to avoid clipping.

This is a measurement global setting.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe <real></code> <code>[:SENSe]:POWer[:RF]:RANGe?</code>
Example	<code>:POW:RANG 10 dBm</code> <code>:POW:RANG?</code>
Notes	The MIN and MAX values are affected by the External Gain parameters, and by the Center Frequency . The hardware compensates for frequency response and alters the Range setting.
Preset	0 dBm
State Saved	Yes
Min	-100
Max	100
Annotation	Meas Bar

Adjust Range for Min Clipping

Sets the combination of attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an "immediate action" function, that is, it executes once, when the key is pressed.

This key does not appear in measurements that do not support this functionality.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE</code>
Notes	Executing Adjust Range for Min Clipping initiates the measurement
Dependencies	This control does not appear in the Swept SA and Monitor Spectrum measurements

Restart Meas on Adjust Range

This control is the same as "Restart Meas on Adjust Atten" on page 2574 under "Attenuation" on page 2565.

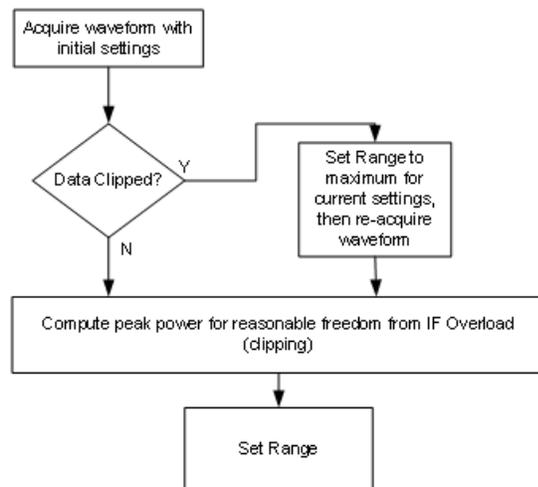

Pre-Adjust for Min Clipping

If this function is **ON**, it applies the adjustment described under Adjust Range For Min Clipping each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF ON ELEctrical COMBined</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?</code>
Notes	Because there is no attenuator control available in these models, the control displays only ON and OFF choices. However, for SCPI compatibility with other platforms, all three parameters (ELEctrical , COMBined , and ON) are honored and all are mapped to ELEctrical , so if any of these three parameters is sent, a subsequent query will return ELEC
Dependencies	This control does not appear in the Swept SA and Monitor Spectrum measurements
Preset	OFF for Swept SA measurement; ON for all other measurements that support Pre-Adjust for Min Clipping
State Saved	Saved in instrument state

Adjustment Algorithm

The algorithm for the adjustment is documented below:

Peak-to-Average Ratio

Used with "[Range \(Non-attenuator models\)](#)" on page 2586 to optimize the level control in the instrument. The value is the ratio, in dB, of the peak power to the average power of the signal to be measured. A ratio of 0 should be used for sinusoidal signals; for 802.11g OFDM signals use 9 dB.

All Applications (Modes) show the current value of Peak-to-Average ratio on the control. However, some applications do not permit changing the value. In these situations, the control is grayed-out.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:PARatio <real></code> <code>[:SENSe]:POWer[:RF]:RANGe:PARatio?</code>
Example	<code>:POW:RANG:PAR 12 dB</code>
Notes	In some Applications (Modes) this parameter is read-only; meaning the value will appear on the control and query via SCPI, but is not changeable. In such applications the control is grayed-out. Attempting to change the value via SCPI will be ignored but no error message will be generated
Dependencies	Does not appear in Spectrum Analyzer Mode
Preset	10 dB VXT Models SP900B/11A: 0
State Saved	0 dB Saved in instrument state
Min	0 dB
Max	20 dB VXT Models SP900B/11A: 50 dB

Mixer Lvl Offset

This is an advanced setting to adjust target Range at the input mixer, which in turn affects the signal level in the instrument's IF. This setting can be used when additional optimization is needed after setting "[Peak-to-Average Ratio](#)" on page 2588. Positive values of offset optimize noise performance over distortion, negative values optimize distortion performance over noise.

Remote Command	<code>[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet <real></code> <code>[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet?</code>
Example	<code>:POW:RANG:MIX:OFFS -5 dB</code>
Preset	0 dB
State Saved	Saved in instrument state
Min	-35 dB VXT Models SP900B/11A: -34
Max	0 dB

3.10.3.4 Signal Path

Contains controls that pertain to the routing of the signal through the frontend of the instrument.

In general, this tab only appears in instruments whose hardware supports this signal routing. For example, this tab does not appear in many of the modular instrument products, including VXT Models M9420/21A. It also does not appear in UXM.

This tab *does* appear in VXT Models SP900B/11A because the Software Preselection control is in this tab, and VXT Models SP900B/11A implement a version of Software Preselection.

Presel Center

Pressing this control adjusts the centering of the preselector filter to optimize the amplitude accuracy at the frequency of the selected marker. If the selected marker is not on when **Presel Center** is pressed, the instrument turns on the selected marker, performs a peak search, and then performs centering on the marker's center frequency. If the selected marker is already on and between the start and stop frequencies of the instrument, the instrument performs the preselector calibration on that marker's frequency. If the selected marker is already on, but outside the frequency range between Start Freq and Stop Freq, the instrument first performs a peak search, and then performs centering on the marker's center frequency.

The value displayed on "**Preselector Adjust**" on page 2591 will change to reflect the new preselector tuning.

A number of considerations should be observed to ensure proper operation. See "**Proper Preselector Operation**" on page 2281.

Remote Command	<code>[:SENSe] :POWer [:RF] :PCENter</code>
Example	<code>:POW:PCEN</code>
Notes	Note that the rules outlined above under the control description apply for the remote command as well as the key. The result of the command is dependent on marker position, etc. Any message shown by the control press is also shown in response to the remote command
Dependencies	Does not appear in CXA-m Does not appear in VXT Models SP900B/11A Grayed-out if the microwave preselector is off if the selected marker's frequency is below Band 1, an advisory message is generated "Preselector not used in this frequency range" and no action is taken – Grayed-out if entirely in Band 0, that is, if Stop Freq is below about 3.6 GHz Grayed-out if entirely above 50 GHz, that is, if Start Freq is above 50 GHz

Couplings	<ul style="list-style-type: none"> - Blank in models that do not include a preselector, such as option 503. If the remote command is sent in these instruments, it is accepted without error, and the query always returns 0 - Grayed-out in the Spectrogram View
-----------	---

Status Bits/OPC dependencies	<p>The active marker position determines where the centering will be attempted</p> <p>If the instrument is in a measurement such as averaging when centering is initiated, the act of centering the preselector restarts averaging, but the first average trace will not be taken until the centering is completed</p> <p>The offset applied to do the centering reads out on the "Preselector Adjust" on page 2591 control</p> <p>When centering the preselector, *OPC does not return true until the process is complete and a subsequent measurement has completed, nor are results returned in response to :READ or :MEASure queries</p> <p>The Measuring bit remains set while this command is operating, and does not go false until the subsequent sweep/measurement has completed</p>
------------------------------	---

Proper Preselector Operation

Certain considerations should be observed to ensure proper operation:

1. If the selected marker is **Off**, the instrument turns on a marker, performs a peak search, and adjusts the preselector using the selected marker's frequency. It uses the "highest peak" peak search method unqualified by threshold or excursion, so that there is no chance of a 'no peak found' error. It continues with that peak, even if it is the peak of just noise. Therefore, for this operation to work properly, there should be a signal on-screen in a preselected range for the peak search to find
2. If the selected marker is already **On**, the instrument attempts the centering at that marker's frequency. There is no preselector for signals below about 3.6 GHz, so if the marker is on a signal below 3.6 GHz, no centering will be attempted, and an advisory message generated
3. In some models, the preselector can be bypassed. If it is bypassed, no centering will be attempted in that range and a message will be generated

Preselector Adjust

Allows you to manually adjust the preselector filter frequency to optimize its response to the signal of interest. This function is only available when **"Presel Center" on page 2589** is available.

For general purpose signal analysis, using **Presel Center** is recommended. Centering the filter minimizes the impact of long-term preselector drift. **Preselector Adjust** can be used instead to manually optimize the preselector. One application of manual optimization would be to peak the preselector response, which both optimizes the signal-to-noise ratio and minimizes amplitude variations due to small (short-term) preselector drifting.

When **Presel Center** is performed, the offset applied to do the centering becomes the new value of **Preselector Adjust**.

Remote Command	<code>[:SENSe]:POWer[:RF]:PADJust <freq></code> <code>[:SENSe]:POWer[:RF]:PADJust?</code>
Example	<code>:POW:PADJ 100KHz</code> <code>:POW:PADJ?</code>
Notes	The value on the control reads out to 0.1 MHz resolution
Dependencies	<ul style="list-style-type: none"> - Does not appear in CXA-m - Does not appear in VXT Models SP900B/11A - Grayed-out if microwave preselector is off - Grayed-out if entirely in Band 0, that is, if Stop Freq is lower than about 3.6 GHz - Grayed-out if entirely above 50 GHz, that is, if Start Freq is higher than 50 GHz - Blank in models that do not include a preselector, such as Option 503. If the command is sent in these instruments, it is accepted without error, and the query always returns 0 - Grayed-out in the Spectrogram View
Preset	0 MHz
State Saved	The Preselector Adjust value set by " Presel Center " on page 2589, or by manually adjusting Preselector Adjust Not saved in instrument state, and does not survive a Preset or power cycle
Min	-500 MHz
Max	500 MHz
Backwards Compatibility SCPI	<code>[:SENSe]:POWer[:RF]:MW:PADJust</code> <code>[:SENSe]:POWer[:RF]:MMW:PADJust</code>
Notes	The command has no effect, and the query always returns MWAVe
Backwards Compatibility SCPI	<code>[:SENSe]:POWer[:RF]:PADJust:PRESelector MWAVe MMWave EXTERNAL</code> <code>[:SENSe]:POWer[:RF]:PADJust:PRESelector?</code>

Internal Preamp

Accesses a menu of controls for the internal preamps. Turning on the preamp gives a better noise figure, but a poorer inter-modulation distortion (TOI) to noise floor dynamic range. You can optimize this setting for your measurement.

The instrument takes the preamp gain into account as it sweeps. If you sweep outside of the range of the preamp, the instrument will also account for that. The displayed result always reflects the correct gain.

For some measurements, when the preamp is on and any part of the displayed frequency range is below the lowest frequency for which the preamp has specifications, a warning condition message appears in the status line. For example, for a preamp with a 9 kHz lowest specified frequency: "Preamp: Accy unspec'd below 9 kHz".

Selection	Example	Note
Off	<code>:POW:GAIN OFF</code>	
Low Band	<code>:POW:GAIN ON</code> <code>:POW:GAIN:BAND LOW</code>	Sets the internal preamp to use only the low band. The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Low Band selection in the dropdown
Full Range	<code>:POW:GAIN ON</code> <code>:POW:GAIN:BAND FULL</code>	Sets the internal preamp to use its full range. The low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model) is supplied by the low band preamp and the frequencies above low band are supplied by the high band preamp The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Full Range selection in the dropdown. If the high band option is not installed the Full Range selection does not appear

NOTE

The maximum **Center Frequency** for Low Band, displayed in square brackets, can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as SP900S& SP900P), IFBW values ≤ 40 MHz have a maximum Low Band frequency of 3.6 GHz, while $40 \text{ MHz} < \text{IFBW} \leq 1 \text{ GHz}$ have a maximum of 3.3 GHz, and $1 \text{ GHz} < \text{IFBW} \leq 1.5 \text{ GHz}$ have a maximum of 3.5 GHz. IFBW values $> 1.5 \text{ GHz}$ do not support a **Center Frequency** that can reach the Low Band maximum frequency. In these cases, **N/A** is displayed in the square brackets for Low Band.

Remote Command	<code>[:SENSe]:POWer[:RF]:GAIN:BAND LOW FULL</code> <code>[:SENSe]:POWer[:RF]:GAIN:BAND?</code> <code>[:SENSe]:POWer[:RF]:GAIN[:STAtE] OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:GAIN[:STAtE]?</code>
Example	<code>:POW:GAIN:BAND LOW</code> <code>:POW:GAIN:BAND?</code> <code>:POW:GAIN OFF</code> <code>:POW:GAIN?</code>
Dependencies	Not available on all hardware platforms. If the preamp is not present or is unlicensed, this control is not shown Does not appear in VXT Models SP900B/11A/15A/16A

	If :POW:GAIN:BAND FULL is sent when a low band preamp is available, the preamp band parameter is set to LOW instead of FULL , and an "Option not installed" message is generated Not available when the electronic/soft attenuator is enabled
Preset	LOW OFF
State Saved	Saved in instrument state
Annotation	When the USB Preamp is not connected to USB, the Preamp annotation in the Meas Bar says "Off" if the preamp is off and displays the frequency range of the low band or full range preamp depending on the setting. For example, if the Preamp is set to Low Band and the Low Band is 3.6 GHz the annotation says "3.6 GHz". If it is a 13.6 GHz preamp and it is set to Full Range the annotation says "13.6 GHz" When the USB Preamp is connected to USB, the Preamp annotation says "Preamp: USB" if the internal preamp is off or "Preamp: USB, Int" if the internal preamp is on (only for measurements that support the USB preamp)

LNA

Lets you turn the Low Noise Amplifier (**LNA**) on or off.

LNA is an additional preamplifier that provides superior DANL and frequency range compared to "**Internal Preamp**" on page 2592. LNA provides lower system noise figure, especially at frequencies above 100 MHz, and can be operated up to the full range of 50 GHz instruments.

For best possible sensitivity, **LNA** can be turned on *together* with "**Internal Preamp**" on page 2592, although if you operate both preamps together, note that the TOI (distortion) specifications are impacted. The sensitivity improvement of this combination is substantial when operating in high band (frequencies above 3.6 GHz).

For more details about annotation, see "**More Information**" on page 2284

Remote Command	[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe] OFF ON 0 1 [:SENSe]:POWer[:RF]:GAIN:LNA[:STATe]?
Example	:POW:GAIN:LNA ON
Dependencies	Requires Option LNA, except for VXT models SP900B/16A Does not appear in VXT models SP900B/10A/11A May not appear in some measurements LNA is not available when the electronic/soft attenuator is enabled
Preset	OFF
State Saved	Saved in State
	More Information

When **LNA** is installed, the preamp annotation changes to show the state of both **LNA** and **Internal Preamp**. Below is an example:

```
Atten: 8 dB
Pre: Int on, LNA on
μW Path: LNP, On
Source: Off
```

Note that when operating entirely in the low band (below about 3.6 GHz), if **LNA** is on, **Internal Preamp** is switched off (even if you have its switch set to **ON**). This is because the noise performance is actually degraded in low band if both preamps are on. In this case, the annotation reflects the actual state of the two preamps, but the **Internal Preamp** annotation displays in amber, to warn you that the actual state of **Internal Preamp** does not match its switch control display:

```
Atten: 8 dB
Pre: Int off, LNA on
μW Path: LNP, On
Source: Off
```

μW Path Control

Options for this control include **μW Preselector Bypass** (Option MPB), **Low Noise Path** (Option LNP) and **Full Bypass Enable** in the High Band path circuits.

When the μW Preselector is bypassed, flatness is improved, but will be subject to spurs from out of band interfering signals. When **Low Noise Path Enable** is selected, the instrument automatically bypasses certain circuitry in the high frequency bands that can contribute to noise, when it is appropriate based on other instrument settings.

For most applications, the preset state is **Standard Path**, which provides the best remote-control throughput, minimizes acoustic noise from switching and minimizes the risk of wear in the hardware switches, particularly in remote test scenarios where both low band and high band setups will follow in rapid succession. In this path, the bypass of the low band/high band switch and microwave preamp is never activated, which can cause some noise degradation but preserves the life of the bypass switch.

For applications that utilize the wideband IF paths, the preset state is **μW Preselector Bypass**, if option MPB is present. This is because, when using a wideband IF such as the 140 MHz IF, the μW Preselector's bandwidth can be narrower than the available IF bandwidth, causing degraded amplitude flatness and phase linearity, so it is desirable to bypass the preselector in the default case.

You may choose **Low Noise Path Enable** for a lower noise floor, especially in the 21–26.5 GHz region, though without improving many measures of dynamic range, and without giving the best possible noise floor. The preamp, if purchased and used, gives better noise floor than does **Low Noise Path Enable**, but the preamp's compression threshold and third-order intercept are much poorer than that of **Low Noise Path Enable**.

A fourth choice is **Full Bypass Enable**, which combines **μW Preselector Bypass** and **Low Noise Path Enable**. Because this can bypass most of the circuitry between the input and the first mixer, care should be taken when using this setting to avoid damaging the mixer. **Full Bypass Enable** is only available if both options LNP and MPB are present, as well as option FBP.

Path	Example	Note
Standard Path	:POW:MW:PATH STD	Normal setting for most measurements. μW Preselector in circuit, Low Noise Path disabled
Low Noise Path Enable	:POW:MW:PATH LNP	See " Low Noise Path Enable " on page 2289
μW Preselector Bypass	:POW:MW:PATH MPB	See " μW Preselector Bypass " on page 2291
Full Bypass Enable	:POW:MW:PATH FULL	See " Full Bypass Enable " on page 2292

Remote Command	:SENSe:POWer[:RF]:MW:PATH STD LNPath MPBypass FULL [:SENSe]:POWer[:RF]:MW:PATH?
Example	:POW:MW:PATH LNP Enables the Low Noise path :POW:MW:PATH?
Notes	If " Presel Center " on page 2589 is performed, the instrument will momentarily switch to the Standard Path, regardless of the setting of μW Path Control The DC Block will always be switched in when the low noise path is switched in, to protect succeeding circuitry from DC. Note that this does not mean "when the low noise path is enabled" but when, based on the Low Noise Path rules, the path is actually switched in. This can happen when the selection is Low Noise Path Enable or Full Bypass Enable . In the case where the DC Block is switched in the instrument is now AC coupled. However, if you selected DC coupling, the UI would still behave as though it were DC coupled, including all annunciation, warnings, status bits, and responses to SCPI queries. This is because, based on other settings, the instrument could switch out the low noise path at any time and hence go back to being DC coupled Alignment switching ignores the settings in this menu, and restores them when finished
Dependencies	Does not appear in CXA-m, VXT Models SP900B/11A, nor in BBIQ and External Mixing <ul style="list-style-type: none"> - The Low Noise Path Enable selection does not appear unless Option LNP is present and licensed - The μW Preselector Bypass selection does not appear unless Option MPB is present and licensed - The Full Bypass Enable selection does not appear unless options LNP and MPB are both present as well as option FBP <p>In any of these cases, if the required options are not present and the SCPI command is sent, error - 241, "Hardware missing; Option not installed" is generated</p> <p>Low Noise Path Enable and Full Bypass Enable are grayed-out if the current measurement does not support them</p> <p>Low Noise Path Enable and Full Bypass Enable are not supported in Avionics and MMR Modes (non-</p>

modulation measurements). In any of these cases (that is, the feature is not supported in either measurement or Mode), if the SCPI command is sent, the following error is generated: -221, "Setting Conflict; Feature not supported for this measurement"

Preset	Mode	Value

	Avionics	
	All other Modes	STD
	-	

State Saved Save in instrument state

Range Standard Path | Low Noise Path Enable | μ W Presel Bypass | Full Bypass Enable

Annotation In the Meas Bar, if the Standard path is chosen, it says:
 μ W Path: Standard
 If Low Noise Path is enabled but the LNP switch is not thrown, it shows:
 μ W Path: LNP,Off
 If the Low Noise Path is enabled and the LNP switch IS thrown, it shows:
 μ W Path: LNP,On
 If the preselector is bypassed, it says:
 μ W Path: Bypass
 If Full Bypass Enable is selected but the LNP switch is not thrown, it shows:
 μ W Path: FByp,Off
 If Full Bypass Enable is selected and the LNP switch IS thrown, it shows:
 μ W Path: FByp,On

μ W Path Control Auto [Mode: VMA, WLAN, NR5G, CQM]

In VMA, WLAN, 5G NR, CQM Modes, an **Auto/Man** switch is added to μ W Path Control:

This allows the function to automatically switch based on certain Auto Rules as shown below:

VMA Mode

3 5G NR Mode

3.10 Monitor Spectrum Measurement

Measurement	When μ W Path Control is in Auto
Digital Demod	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Monitor Spectrum	Always Presel Bypass
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Custom OFDM	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Channel Power	Always Presel Bypass
Occupied BW	Always Presel Bypass
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
ACP	Always Presel Bypass
SEM	Always Presel Bypass
Spurious Emissions	Always Standard Path

WLAN Mode

Measurement	When μ W Path Control is in Auto
Modulation Analysis	Always Presel Bypass
Spectral Flatness	Always Presel Bypass
Power vs Time	Always Presel Bypass
Monitor Spectrum	Always Presel Bypass
IQ Waveform	Always Presel Bypass
Channel Power	Always Presel Bypass
Occupied BW	Always Presel Bypass
CCDF	Always Presel Bypass
SEM	For 11be 320M, when 'Enabled Wideband IF for FFT' is OFF or 'Sweep Type Rule' is Best Dynamic Range, auto μ W path is standard For other cases, auto μ W path is presel bypass if presel bypass is enabled, auto μ W path is standard if presel bypass is not enabled
Spurious Emissions	Always Standard Path

5G NR Mode

Measurement	When μ W Path Control is in Auto
Modulation Analysis	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Full Bypass if conditions warrant(FBP Option is available and "Allow Full Bypass in Auto" is On), otherwise choose Preselector Bypass
Monitor Spectrum	Always Standard Path

Measurement	When μ W Path Control is in Auto
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Full Bypass if conditions warrant(FBP Option is available and "Allow Full Bypass in Auto" is On), otherwise choose Preselector Bypass
Channel Power	Always Standard Path
Occupied BW	Always Standard Path
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
ACP	Always Standard Path
SEM	Always Standard Path
Spurious Emissions	Always Standard Path
Transmit On Off Power	Use Standard Path unless tuned frequency > 3.6 GHz and Info BW > 15 MHz, in which case choose Preselector Bypass

Channel Quality Mode

Measurement	When μ W Path Control is in Auto
Group Delay	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Full Bypass if conditions warrant(FBP Option is available and "Allow Full Bypass in Auto" is On), otherwise choose Preselector Bypass
Monitor Spectrum	Always Standard Path
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass

Remote Command	<code>[:SENSe] :POWer [:RF] :MW:PATH:AUTO ON OFF 1 0</code> <code>[:SENSe] :POWer [:RF] :MW:PATH:AUTO?</code>

Range	<code>ON OFF</code>

Low Noise Path Enable

Low Noise Path Enable provides a lower noise floor under some circumstances, particularly when operating in the 21–26.5 GHz region. With the Low Noise Path enabled, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

3 5G NR Mode

3.10 Monitor Spectrum Measurement

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz
- The internal preamp is not installed, or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Low Noise Path Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

For measurements that use IQ acquisition, the low noise path is used when **Center Frequency** is in High Band (> 3.6 GHz) and no preamp is in use. In other words, the rules above are modified to use only the center frequency to qualify which path to switch in. This is not the case for FFTs in the Swept SA measurement; they use the same rules as swept measurements.

Note that the Low Noise Path, while giving improved DANL, has the disadvantage of decreased TOI performance and decreased gain compression performance relative to the standard path.

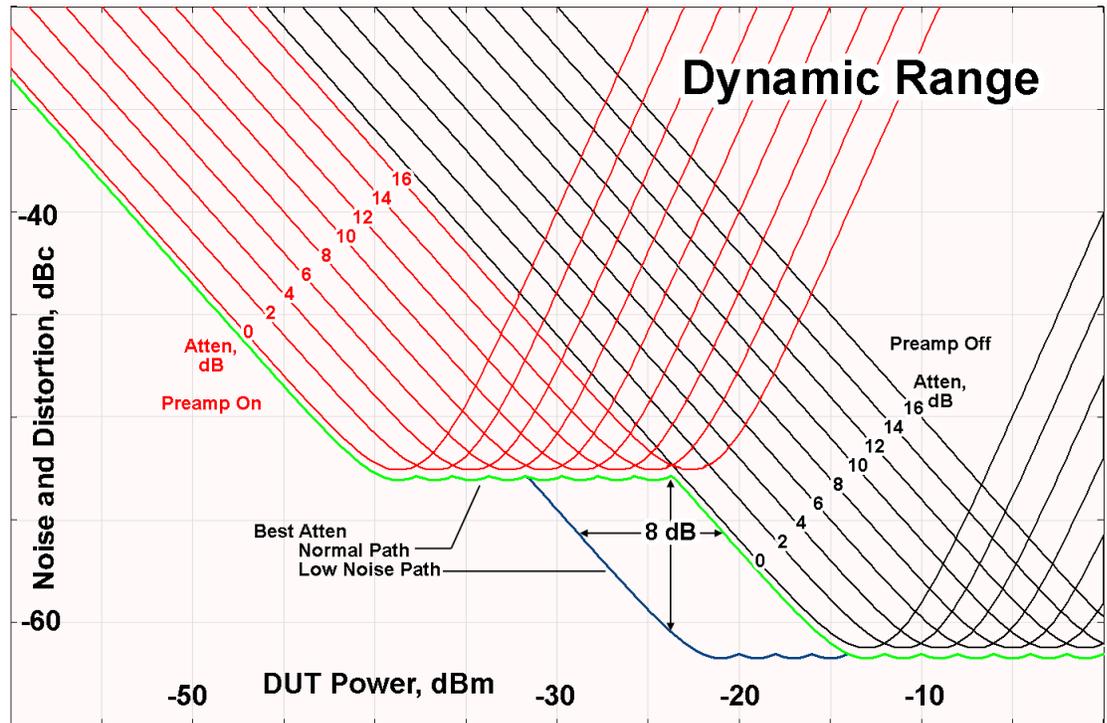

Note also that the bypass switch is a mechanical switch and has finite life, so if the **Low Noise Path Enable** is selected, it is possible to cause frequent cycling of this switch by frequently changing instrument settings such that the above conditions hold true only some of the time. A user making tests of this nature should consider opting for the **Standard Path**, which will never throw the bypass switch, at the expense of some degraded noise performance.

The low noise path is useful for situations where the signal level is so low that the instrument performance is dominated by noise even with 0 dB attenuation, but still high enough that the preamp option would have excessive third-order intermodulation or compression. The preamp, if purchased and used, gives better noise floor than does the “Low Noise Path.” However, its compression threshold and third-order intercept are much poorer than that of the non-preamp path.

There are some applications, typically for signals around –30 dBm, for which the third-order dynamic range of the standard path is good enough, but the noise floor is not low enough even with 0 dB input attenuation. When the third-order dynamic range of the preamp path is too little and the noise floor of the standard path is too high, the Low Noise Path can provide the best dynamic range

The graph below illustrates the concept. It shows, in red, the performance of an instrument at different attenuation settings, both with the preamp on and off, in a measurement that is affected by both instrument noise and instrument TOI. The green shows the best available dynamic range, offset by 0.5 dB for clarity. The blue

shows how the best available dynamic range improves for moderate signal levels with the low noise path switched in. In this illustration, the preamp improves the noise floor by 15 dB while degrading the third-order intercept by 30 dB, and the low noise path reduces loss by 8 dB. The attenuator step size is 2 dB.

There are other times where selecting the low noise path improves performance, too. Compression-limited measurements such as finding the nulls in a pulsed-RF spectrum can profit from the low noise path in a way similar to the TOI-limited measurement illustrated. Accuracy can be improved when the low noise path allows the optimum attenuation to increase from a small amount like 0, 2 or 4 dB to a larger amount, giving better return loss at the instrument input. Harmonic measurements, such as second and third harmonic levels, are much improved using the low noise path because of the superiority of that path for harmonic (though not intermodulation) distortion performance.

μW Preselector Bypass

Toggles the preselector bypass switch for band 1 and higher. When the microwave preselector is on, the signal path is preselected. When the microwave preselector is off, the signal path is not preselected. The preselected path is the normal path for the instrument.

The preselector is a tunable bandpass filter which prevents signals away from the frequency of interest from combining in the mixer to generate in-band spurious signals (images). The consequences of using a preselector filter are its limited

bandwidth, the amplitude and phase ripple in its passband, and any amplitude and phase instability due to center frequency drift.

Option MPB or pre-selector bypass provides an unpreselected input mixer path for certain X-Series signal analyzers with frequency ranges above 3.6 GHz. This signal path allows a wider bandwidth and less amplitude variability, which is an advantage when doing modulation analysis and broadband signal analysis. The disadvantage is that, without the preselector, image signals will be displayed. Another disadvantage of bypassing the preselector is increased LO emission levels at the front panel input port.

Image responses are separated from the real signal by twice the 1st IF. For IF Paths of 10 MHz and 25 MHz, the 1st IF is 322.5 MHz, so the image response and the real signal will be separated by 645 MHz. The 1st IF will be different for other IF Path settings. When viewing a real signal and its corresponding image response in internal mixing, the image response will be to the left of the real signal.

Also, the image response and the real signal typically have the same amplitude and exhibit the same shape factor.

However, if Option FS1 (Fast Sweep Capability) is enabled, the image response in the Swept SA measurement appears lower in amplitude and has a much wider shape factor compared to the real signal.

Full Bypass Enable

With **Full Bypass Enable** selected, the microwave preselector is bypassed. In addition, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz.
- the internal preamp is not installed or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Full Bypass Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

CAUTION

When **Full Bypass Enable** is selected, and "**Y Scale**" on page 2562 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq >3.6 GHz and the Preamp is either not licensed, set to Low Band, or Off). This puts the first converter at high risk

to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:
Full Bypass Enabled, maximum safe input power reduced

Microwave Preselector Bypass Backwards Compatibility

Example	<code>:POW:MW:PRES OFF</code> Bypasses the microwave preselector
Notes	Included for Microwave Preselector Bypass backwards compatibility The ON parameter sets the STD path (<code>:POW:MW:PATH STD</code>) The OFF parameter sets path MPB (<code>:POW:MW:PATH MPB</code>)
Preset	ON
Backwards Compatibility SCPI	<code>[:SENSe] :POWer [:RF] :MW:PRESelector [:STATe] ON OFF 0 1</code> <code>[:SENSe] :POWer [:RF] :MW:PRESelector [:STATe] ?</code>

Frequency Extender Preselection Bypass

Only applies to the high frequency path of the Frequency Extender, and only if the Frequency Extender allows it. For example, the V3050A high frequency path is 50 – 110 GHz and *does* allow control of the preselector bypass.

When the Frequency Extender’s preselection is bypassed, flatness is improved, but will be subject to spurs from out-of-band interfering signals. For bandwidths greater than 2.5 [GHz], it is recommended that the signal bypass the Frequency Extender Preselector since the max bandwidth of the Preselector can be as narrow as 2.5 [GHz].

For most applications, the preset state is **OFF**, which gives the best remote-control throughput, minimizes acoustic noise from switching, minimizes out of band spurs, and minimizes the risk of wear in the hardware switches.

Preselector and Bandwidth Conflict

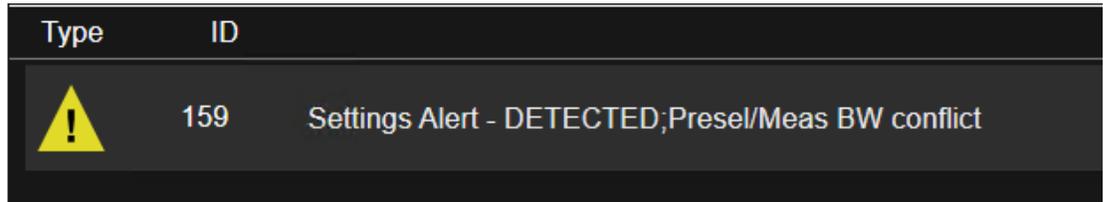

When the Frequency Extender Preselector is applied and the signal bandwidth is greater than 2.5 [GHz], then a settings alert message will show to warn the user that the signal may be distorted due to the limitation of the Frequency Extender Preselector bandwidth.

An example of the settings alert message is shown below.

Settings Alert message in the Status Bar at the bottom of the display.

Settings Alert message in the error queue

Allow Full Bypass in Auto

Enable or disable Full Bypass in μ W Path Auto rule. See " [\$\mu\$ W Path Control](#)" on page 2594.

When this function is **ON**, and " [\$\mu\$ W Path Control](#)" on page 2594 is in **AUTO**, it is possible for the auto rules to select the **FULL** Bypass state, wherein both the Preamp and the Microwave Preselector are bypassed. Otherwise, the auto rules never select the **FULL** Bypass state. This is convenient when making wideband measurements, but it also adds some risk of damage to the first converter.

CAUTION

When **Full Bypass Enable** is selected, and "[Y Scale](#)" on page 2562 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq > 3.6 GHz and the Preamp is either not licensed, set to **Low Band** or **Off**). This puts the first converter at high risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:

Full Bypass Enabled, maximum safe input power reduced

Preset	OFF
State Saved	Saved in instrument state

Software Preselection

Provided in some instruments, either to compensate for issues with provided hardware preselection or to provide the preselection function when there is no hardware preselector.

SP900S

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

In SP900S, **Software Preselection** only applies for frequencies above 50 GHz, therefore it is only used for RF Input 2. Even if turned on, it is not used for other inputs, and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that in SP900S, in Swept SA measurement, **Software Preselection** works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT sweep type.

SP900S+V3050A

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

For SP900S+V3050A, Software Preselection only applies for frequencies above 50 GHz, therefore it is only used for External RF. Even if it is turned on, it will not be used for other inputs and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that for SP900S+V3050A, in the Swept SA measurement, Software Preselection works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT Sweep Type.

VXT models SP900B/11A

Software Preselection is used to provide the preselection function, as there is no hardware preselector in these models. Two background traces are taken and compared point by point, and the point with the lowest amplitude from the two traces is used. This provides a method to reduce spurs that are internally generated

within the VXT, but you should note the following when using Software Preselection:

- There is some speed cost due to the need to take multiple captures
- Taking the point with the lowest amplitude in each trace will make the average noise level lower at all points that do not have a spur. This can reduce the accuracy of the measurement of noise and noise-like signals

Because of the difficulty in identifying spurs manually, you are recommended to leave Software Preselection **ON** at all times in VXT models SP900B/11A. If you turn it off in order to speed up your measurement or improve noise accuracy, be aware of unwanted onscreen spurs.

Remote Command	<code>[:SENSe]:POWer[:RF]:SWPreSel:STATe 0 1 ON OFF</code> <code>[:SENSe]:POWer[:RF]:SWPreSel:STAT?</code>						
Example	<code>:POW:SWPR:STAT 1</code> <code>:POW:SWPR:STAT?</code>						
Dependencies	Only appears in SP900S, SP900S+V2050A, and VXT models SP900B/11A. Does not appear in all measurements						
Couplings	Affects Sweep Time Auto Tune supports Software Preselection , so Auto Tune should be performed after setting the Software Preselection state						
Preset	<table border="1"> <tr> <td>SP900S</td> <td>OFF</td> </tr> <tr> <td>SP900S+V3050A</td> <td>ON</td> </tr> <tr> <td>SP900B/11A</td> <td>ON</td> </tr> </table>	SP900S	OFF	SP900S+V3050A	ON	SP900B/11A	ON

SP900S+V3050A	ON						
SP900B/11A	ON						
State Saved	Saved in instrument state						

SW Preselection Type

Specifies the algorithm used for software preselection.

Two hidden sweeps are taken in succession. The second sweep is offset in LO frequency by $2 * IF / N$. For each point in each trace, the smaller amplitude from the two traces is taken and placed in that point in the selected trace. The Peak detector is auto-selected to improve the image suppression effectiveness. Responses of each trace that lie on top of one another will remain and are valid signals. Other signals are images and are suppressed. The action of taking the smaller of the two traces will make the average noise level lower in all points that do not have an image, thus reducing the accuracy of the measurement of noise and noise-like signals.

- **NORMa1** - mathematically removes all image and multiple responses of signals present at the input
- **ADVanced** - any trace processing (such as “max hold” or trace averaging) is performed on the points of both candidate traces before the “select minimum” operation occurs. This form of processing works better for non-stationary signals, such as pulsed-RF signals

Remote Command	<code>[:SENSe]:POWer[:RF]:SWPResel NORMa1 ADVanced</code> <code>[:SENSe]:POWer[:RF]:SWPResel?</code>
Example	<code>:POW:SWPR NORM</code> <code>:POW:SWPR?</code>
Dependencies	Only appears in SP900Sand SP900S+V3050A. Only appears in measurements that use the Swept method When " Software Preselection " on page 2604 is disabled, this control is grayed-out. The grayout message is “Unavailable unless SW Presel enabled”
Preset	SP900S ADVanced SP900S+V3050A NORMa1
State Saved	Saved in instrument state

SW Preselection BW

Specifies the effective bandwidth to be used for Software Preselection.

The options are:

- **NORMa1** – when making Swept measurements, a software preselection algorithm is used which takes up to 4 background acquisitions, then post-processes the result. This algorithm can remove images from signals with an occupied bandwidth up to around 3 GHz. (Default/Preset setting). When making FFT measurements, this algorithm is not used, instead the same algorithm is used as for **NARRow** (below)
- **NARRow**– a software preselection algorithm is used which takes two background acquisitions, then post-processes the result to detect and remove images from wideband signals with occupied bandwidths up to 2 GHz. This increases the risk of images failing to be rejected, but improves the measurement speed

Remote Command	<code>[:SENSe]:POWer[:RF]:SWPResel:BW NORMa1 NARRow</code> <code>[:SENSe]:POWer[:RF]:SWPResel:BW?</code>
Example	<code>:POW:SWPR:BW NARR</code>
Dependencies	Only appears in SP900Sand SP900S+V3050A. Only appears in measurements that use the Swept

	method				
	When " Software Preselection " on page 2604 is disabled, this control is grayed-out. The grayout message is "Unavailable unless SW Presel enabled"				
	For SP900S+V3050A, the parameter is SCPI-only, and always set to NARRow when Software Preselection is enabled

High Freq Prefilter

Lets you set the state of Prefilter for Center Frequencies above 1310 MHz.

In VXT Models SP900B/11A, the Receiver RF path has a bank of filters that come after the RF Attenuator in the signal path. Since this bank of filters precedes the mixer they are known as the "Prefilter" bank. Their purpose is to eliminate unwanted in-band mixing products by filtering out all but the desired frequencies before the signals get to the mixer. There are 13 prefilter bands to cover the frequencies between 9 kHz and 6000 MHz. The Prefilter provides the necessary rejection of the unwanted signal.

Remote Command	<code>[:SENSe] : <measurement> : PFILter [:STATe] ON OFF 1 0</code> <code>[:SENSe] : <measurement> : PFILter [:STATe] ?</code>
Example	For example, to enable High Freq Prefilter in IQ Analyzer Mode: For the Complex Spectrum Measurement: <code>:SPEC:PFIL ON</code> For the IQ Waveform Measurement: <code>:WAV:PFIL ON</code>
Dependencies	Only appears in VXT models SP900B/11A with center frequency above 1310 MHz

3.10.4 BW

Opens the Bandwidth (**BW**) menu, which contains controls for the Resolution Bandwidth and Video Bandwidth functions of the instrument.

3.10.4.1 Settings

Contains the basic bandwidth functions. It is the only tab under **BW**.

Res BW

Activates the resolution bandwidth active function, which allows you to manually set the Resolution Bandwidth (RBW) of the instrument.

Normally, **Res BW** (Auto) selects automatic coupling of the Res BW to Span using the ratio set by the Span:3 dB RBW control (some measurements do not have a Span:3 dB RBW control, in which case the measurement chooses the optimal ratio). To decouple the resolution bandwidth, press the **Auto/Man** toggle on the **Res BW** control, or simply enter a different value for **Res BW**.

When the **Res BW** is manually selected, it may be returned to the coupled state by pressing the **Auto/Man** toggle on the **Res BW** control. This may also be done by pressing Auto Couple or by performing a **Preset**.

Only certain discrete resolution bandwidths are available. The available bandwidths are dependent on the **EMC Standard**. If an unavailable bandwidth is entered with the numeric keypad, the closest available bandwidth is selected.

See "[RBW Presets](#)" on page 2300

Remote Command	<pre>[:SENSe]:MONitor:BANDwidth[:RESolution] <bandwidth> [:SENSe]:MONitor:BANDwidth[:RESolution]? [:SENSe]:MONitor:BANDwidth[:RESolution]:AUTO ON OFF 1 0 [:SENSe]:MONitor:BANDwidth[:RESolution]:AUTO?</pre>
Example	<pre>:MON:BAND 5 MHz :MON:BAND? :MON:BAND:AUTO ON :MON:BAND:AUTO?</pre>
Notes	<p>For numeric entries, all RBW Types choose the nearest (arithmetically, on a linear scale, rounding up) available RBW to the value entered</p> <p>The setting and querying of values depends on the current bandwidth type</p>
Couplings	<p>Sweep time is coupled to the RBW. As the RBW changes, the sweep time (if set to Auto) is changed to maintain amplitude calibration</p> <p>Video bandwidth (VBW) is coupled to the RBW. As the resolution bandwidth changes, the video bandwidth (if set to Auto) changes to maintain the ratio of VBW/RBW (10:1)</p> <p>When the Res BW is set to Auto, the resolution bandwidth is auto-coupled to the span. The ratio of Span/RBW is approximately 106:1 when auto coupled. When Res BW is set to Man, and the bandwidths are entered manually, these bandwidths are used regardless of other instrument settings</p>
Preset	<p>Auto (unless noted in the table below)</p> <p>See "RBW Presets" on page 2300 below</p>
State Saved	Saved in instrument state
Min	1 Hz
Max	8 MHz is the max equivalent -3 dB RBW, which means that the named RBW (the one shown on the control etc.) can actually exceed 8 MHz if using a filter other than -3 dB Gaussian
Annotation	A “#” mark appears before “RBW” in the annotation when it is switched from Auto to Manual coupling
Backwards Compatibility Notes	<p>For backwards compatibility this command obeys both the BANDwidth and BWIDth forms</p> <p>For ESA, the maximum Res BW was 5 MHz; on X-Series it is 8 MHz</p>

RBW Presets

Unless noted in the table below, the Preset value of RBW is **Auto**.

Mode	Preset RBW
WLAN	100 kHz
LTE, LTETDD, LTEAFDD, LTEATDD	100 kHz

Mode	Preset RBW
5GNR	100 kHz

Video BW

Lets you change the instrument post-detection filter (VBW or “video bandwidth”) from 1 Hz to 8 MHz in approximately 10% steps. In addition, a wide-open video filter bandwidth may be chosen by selecting 50 MHz. The VBW is annotated at the bottom of the display, in the center.

Normally, **Video BW (Auto)** selects automatic coupling of the Video BW to RBW using the ratio set by the VBW:3 dB RBW control. To decouple the resolution bandwidth, press the **Auto/Man** toggle on the **Video BW** control, or simply enter a different value for **Video BW**.

When the **Video BW** is manually selected, it may be returned to the coupled state by pressing the **Auto/Man** toggle on the **Video BW** control. This may also be done by pressing Auto Couple or by performing a **Preset**.

Remote Command	<pre>[:SENSe]:MONitor:BANDwidth:VIDeo <bandwidth> [:SENSe]:MONitor:BANDwidth:VIDeo? [:SENSe]:MONitor:BANDwidth:VIDeo:AUTO ON OFF 1 0 [:SENSe]:MONitor:BANDwidth:VIDeo:AUTO?</pre>
Example	<pre>:MON:BAND:VID 2.4 MHz :MON:BAND:VID? :MON:BAND:VID:AUTO ON :MON:BAND:VID:AUTO?</pre>
Notes	<p>For numeric entries, the instrument chooses the nearest (arithmetically, on a linear scale, rounding up) available VBW to the value entered. The 50 MHz VBW is defined to mean “wide open”</p> <p>The values shown in this table reflect the conditions after a Mode Preset</p>
Dependencies	<p>Sometimes the displayed Video BW is not actually used to process the trace data:</p> <ul style="list-style-type: none"> – When the Average Detector is selected and Sweep Type is set to Swept, the video bandwidth filter cannot be used, because it uses the same hardware as the Average Detector – When the Quasi-Peak, EMI Average or RMS Average detector is selected the VBW is implemented by the digital IF as part of the detector <p>When this is the case, the VBW still acts to change the Sweep Time, if Sweep Time is in Auto, and still affects the data on other traces for which this is not the case</p>
Couplings	<p>Video bandwidth (VBW) is normally coupled to RBW. If VBW is set to Auto, then the VBW is changed as the RBW changes, to maintain the ratio set by the VBW:3 dB RBW control (usually 10:1 for measurements that do not have a VBW:3 dB RBW control)</p>
Preset	<p>Auto (unless noted in table below)</p>

	ON
State Saved	Saved in instrument state
Min	1 Hz
Max	50 MHz
Annunciation	A “#” mark appears before “VBW” in the annotation when it is not coupled
Annotation	In the bottom center of the screen, “VBW <value> <units>” indicates the current video bandwidth value. Note that for some detectors this is not the value actually used for VBW (see above)
Backwards Compatibility Notes	For backwards compatibility this command obeys both the BANDwidth and BWIDth forms

VBW Presets

Unless noted in the table below, the Preset value of VBW is **Auto**.

Mode	Preset VBW
WLAN	1 MHz
LTE, LTETDD, LTEAFDD, LTEATDD	1 MHz
5GNR	1 MHz

VBW:3dB RBW

Selects the ratio between the video bandwidth and the equivalent 3 dB resolution bandwidth to be used for setting VBW when VBW is in Auto.

VBW:3dB RBW (Auto) selects automatic coupling of the VBW:3 dB RBW ratio to Detector using the rules described below in ["Coupling Auto Rules" on page 2303](#). To decouple the ratio, press the **Auto/Man** toggle on the VBW:3 dB RBW control, or simply enter a different value for VBW:3 dB RBW.

When the VBW:3dB RBW is manually selected, it may be returned to the coupled state by setting the toggle on the VBW:3 dB RBW control back to **Auto**. This may also be done by pressing Auto Couple or by performing a **Preset**.

Remote Command	<pre>[:SENSe]:MONitor:BANDwidth:VIDeo:RATio <real> [:SENSe]:MONitor:BANDwidth:VIDeo:RATio? [:SENSe]:MONitor:BANDwidth:VIDeo:RATio:AUTO OFF ON 0 1 [:SENSe]:MONitor:BANDwidth:VIDeo:RATio:AUTO?</pre>
Example	<pre>:MON:BAND:VID:RAT 2 :MON:BAND:VID:RAT? :MON:BAND:VID:RAT:AUTO 0</pre>

:MON:BAND:VID:RAT:AUTO?	
Notes	The values shown in this table reflect the conditions after a Mode Preset
Couplings	See " Coupling Auto Rules " on page 2303
Preset	1 ON
State Saved	Saved in instrument state
Min	0.00001
Max	3000000
Backwards Compatibility Notes	For backwards compatibility this command accepts both the BANDwidth and BWIDth forms

Coupling Auto Rules

The Auto Rules for the **VBW:3dB RBW** function are as follows.

First, if Source Mode is set to "Tracking": Use 1.0

Otherwise, we go through the following list of detector numbers and find the lowest numbered detector being used on any active traces (traces for which Update is On):

1. Peak
2. Normal
3. Average
4. Sample
5. Negative Peak
6. EMI Average
7. Quasi Peak
8. RMS Average

Use that detector to pick the ratio based on the following criteria:

1. If the measurement supports EMC Standard, and the detector is Peak and the EMC Standard is set to either CISPR or MIL, use 10.0 (we use wide VBWs to capture peak levels accurately).
2. Otherwise, if the detector is **Negative Peak**, use 1.0 (in the Negative Peak case, there are no known significant use models so we use a medium ratio).
3. Otherwise, if the detector is **Normal**, use 1.0.

4. Otherwise, if the detector is **Average**, and the span is nonzero, use 0.1. The use of a small ratio in Average detection is desirable because of its effect on the sweep time equations. The VBW filter is not actually in-circuit when the average detector is on. If the detector is Average, and the span is zero, use 10.0, which gives optimal behavior for Interval Markers in zero span. Note that only the Swept SA measurement supports Zero Span.
5. Otherwise, if the detector is EMI Average, Quasi Peak or RMS Average, use 10.0. In fact, this is a “don’t care” since no VBW is used for these detectors, as noted under “Dependencies” for the VBW control
6. Otherwise, the detector is simply **Peak** or **Sample**. These two detectors can use the same rules. In these cases, if any active trace is in max hold or min hold, use 10.0, because Max and Min Hold operations will usually be intended to capture peaks and pits without smoothing from the VBW filter; otherwise, use 1.0 as a compromise, because you have not set the instrument in a way that implies that you are measuring noise, pulsed-RF or CW signals, and for backward compatibility with earlier instruments.

Note that because the above couplings depend on which traces are active, they are re-examined whenever any trace goes active or inactive, except when this leaves no traces active. Transitioning to the state where no traces are active should not affect the couplings; in that way, the annotation will always reflect the state of the last trace which was active.

Note also that some detectors are not available in some measurements, but because of the way the above rules that does not change the logic of the rules.

Span:3dB RBW

Selects the ratio between span and resolution bandwidth.

Normally, Span:3dB RBW (Auto) selects a Span:3 dB RBW ratio of 106:1. If you manually enter the ratio, the toggle on the Span:3dB RBW control will change to **Man**. This enables you to manually select ratios more suitable for certain measurements.

When the Span:3dB RBW is manually selected, it may be returned to the coupled state by setting the toggle on the RBW:3 dB RBW control back to **Auto**. This may also be done by pressing Auto Couple or by performing a **Preset**.

Remote Command	<pre>[:SENSe]:MONitor:FREQuency:SPAN:BANDwidth[:RESolution]:RATio <integer> [:SENSe]:MONitor:FREQuency:SPAN:BANDwidth[:RESolution]:RATio? [:SENSe]:MONitor:FREQuency:SPAN:BANDwidth[:RESolution]:RATio:AUTO OFF ON 0 1 [:SENSe]:MONitor:FREQuency:SPAN:BANDwidth[:RESolution]:RATio:AUTO?</pre>
----------------	---

Example	<code>:MON:FREQ:SPAN:BAND:RAT 200</code> <code>:MON:FREQ:SPAN:BAND:RAT?</code> <code>:MON:FREQ:SPAN:BAND:RAT:AUTO ON</code> <code>:MON:FREQ:SPAN:BAND:RAT:AUTO?</code>
Notes	The values shown in this table reflect the conditions after a Mode Preset
Preset	106 ON
State Saved	Saved in instrument state
Min	2
Max	10000
Backwards Compatibility SCPI	<code>[:SENSe] :MONitor :FREQuency :SPAN :BWIDth [:RESolution] :RATio</code>

3.10.5 Display

Opens the **Display** menu, which lets you configure display items for the current Mode, Measurement View or Window.

3.10.5.1 Meas Display

Contains controls for setting up the display for the current Measurement, View or Window.

Carrier Attribute

Toggles whether or not carrier information is shown on the spectrum trace.

Carrier information is displayed when carrier attribute is on . When the Span is greater, there is insufficient space to display the texts. In this case, only vertical lines and arrows are displayed, without text.

Remote Command	<code>:DISPlay:MONitor:VIEW:WINDow:CATTribute OFF ON 0 1</code> <code>:DISPlay:MONitor:VIEW:WINDow:CATTribute?</code>
Example	<code>:DISP:MON:VIEW:WIND:CATT 0</code> <code>:DISP:MON:VIEW:WIND:CATT?</code>
Dependencies	Only available in MSR, LTEAFDD/LTEATDD and 5GNR Modes
Preset	ON
State Saved	Saved in instrument state
Range	OFF ON

Sub-block Attribute

Toggles the sub-block information on the spectrum trace. Sub-block attributes are displayed when the setting is selected as on.

Remote Command	<code>:DISPlay:MONitor:VIEW:WINDow:SATtribute[:STATe] OFF ON 0 1</code> <code>:DISPlay:MONitor:VIEW:WINDow:SATtribute[:STATe]?</code>
Example	<code>:DISP:MON:VIEW:WIND:SATT 0</code> <code>:DISP:MON:VIEW:WIND:SATT?</code>
Dependencies	Only available in MSR, LTEAFDD/LTEATDD and 5GNR Modes
Preset	<code>OFF</code>
State Saved	Saved in instrument state
Range	<code>OFF ON</code>

Carrier Freq

Selects frequency display type between:

- `OFFSet`: carrier frequencies in the carrier table are shown as offsets from Carrier Ref Freq
- `ABSolute`: absolute frequencies are displayed

Remote Command	<code>:DISPlay:MONitor:VIEW:WINDow:CINformation:FREQuency OFFSet ABSolute</code> <code>:DISPlay:MONitor:VIEW:WINDow:CINformation:FREQuency?</code>
Example	<code>:DISP:MON:VIEW:WIND:CINF:FREQ ABS</code> <code>:DISP:MON:VIEW:WIND:CINF:FREQ?</code>
Dependencies	Only available in MSR, LTEAFDD/LTEATDD and 5GNR Modes
Preset	<code>OFFSet</code>
State Saved	Saved in instrument state
Range	<code>OFFSet ABSolute</code>

3.10.5.2 View

Contains controls for selecting the current **View**, and for editing User Views.

View

See "[Views](#)" on page 2249

User View

Lets you choose a View from the saved User Views for the current measurement. This panel only appears if a User View exists for the current measurement.

Remote Command	<code>:DISPlay:VIEW:ADVanced:SElect <alphanumeric></code> <code>:DISPlay:VIEW:ADVanced:SElect?</code>
Example	Select Baseband as the current View <code>:DISP:VIEW:ADV:SEL "Baseband"</code>
Notes	<p>You must be in the measurement whose View you are trying to set to send the command. You can only set Views for the current measurement using this command</p> <p>For predefined views, the parameter is derived from the view name that is shown in the View list in the user interface. For example, if you are trying to select the Trace Zoom view in the Swept SA measurement, you send:</p> <pre>:DISP:VIEW:ADV:SEL "Trace Zoom"</pre> <p>because "Trace Zoom" is the name of the View as seen in the Mode/Meas dialog or in the Display, View menu</p> <p>You <i>cannot</i> use the legacy View parameter (which in this case would be <code>TZOOM</code>) with <code>:DISP:VIEW:ADV:SEL</code></p> <p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case. Thus, both of the following forms work:</p> <pre>:DISP:VIEW:ADV:SEL "Trace Zoom" :DISP:VIEW:ADV:SEL "TRACE ZOOM"</pre> <p>If the specified view is not a valid View, the query returns the error message "-224, Illegal parameter value; View with the name <alphanumeric> does not exist"</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated</p>
Backwards Compatibility SCPI	<p>The legacy node <code>:DISPlay:VIEW[:SElect]</code> is retained for backwards compatibility, but it only supports predefined views</p>

Restore Layout to Default

Restores the Layout to the default for Basic.

Modified Views are very temporary; if you exit the current measurement they are discarded, and they are not saved in State. To retain this View for later use, and to be able to return easily to your original Basic View, you can save your edited View as a "User View".

Save Layout as New View

Saves your new View as a User View. An alpha keyboard appears, which lets you name your new View; the default is the old View name plus a number.

Remote Command	<code>:DISPlay:VIEW:ADVanced:NAME <alphanumeric></code>
Example	<code>:DISP:VIEW:ADV:NAME "Baseband"</code> Creates a new View named Baseband from the current View, and selects it as the current View
Notes	<code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If <code><alphanumeric></code> name already exists as a View, the error message "-224, Illegal parameter value; View <alphanumeric> already exists" is generated If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message "-221, Settings conflict; User View SCPI cannot be used while Display is disabled" is generated

Re-Save User View

You can re-edit a User View; if you make changes, then an asterisk will appear next to the User View's name. You can then tap **Re-Save User View** to save it back to its existing name, or **Save Layout as New View** to add another, new User View.

This is a front panel function only, there is no remote command available to perform this function. To do this remotely, you must first perform **Save Layout as New View**, then delete the old User View and rename the new one with the name of the View you just deleted.

Rename User View

You can rename the current View by giving it a new unique name. Only User Views can be renamed, if the current View is a Predefined View, an error occurs.

Remote Command	<code>:DISPlay:VIEW:ADVanced:REName <alphanumeric></code>
Example	<code>:DISP:VIEW:ADV:REN "Baseband"</code>
Notes	<code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If the <code><alphanumeric></code> specifying the new name is already present in the list of View names, the error message "-224, Illegal parameter value; View <alphanumeric> already exists" is generated If the current View is a Predefined View, the error message "-224, Illegal parameter value; Cannot rename a Predefined View" is generated If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated

Delete User View

You can delete the current View if it is a User View. The default view becomes the current view for the Measurement.

Remote Command	<code>:DISPlay:VIEW:ADVanced:DELeTe</code>
Example	<code>:DISP:VIEW:ADV:DEL</code>
Notes	<p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case</p> <p>If the <code><alphanumeric></code> is not present in the list of View names, the error message “-224, Illegal parameter value; View <code><alphanumeric></code> does not exist” is generated</p> <p>If the current View is a Predefined View, the error message “-224, Illegal parameter value; Cannot delete a Predefined View” is generated</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message “-221, Settings conflict; View SCPI cannot be used while Display is disabled” is generated</p>

Delete All User Views

Deletes all previously saved User Views. The default view becomes the current view for the Measurement if a User View was the current view when this command was executed.

Remote Command	<code>:DISPlay:VIEW:ADVanced:DELeTe:ALL</code>
Example	<code>:DISP:VIEW:ADV:DEL:ALL</code>
Notes	Disabled if there are no User Views

View Editor Remote Commands

The following remote commands help you manage Views and User Views. Note that the SCPI node for User Views handles both Predefined and User Views. The legacy nodes, `:DISPlay:VIEW[:SElect]` and `:DISPlay:VIEW:NSEL`, are retained for backwards compatibility, but they only support predefined views.

View Listing Query

Returns a string containing a comma-separated list of names for *all* the Views, including User Views, available for the current Measurement.

Remote Command	<code>:DISPlay:VIEW:ADVanced:CATalog?</code>
----------------	--

Example	<code>:DISP:VIEW:ADV:CAT?</code>
Notes	<p>Returns a quoted string of the available Views for the current measurement, separated by commas. The list includes names for <i>all</i> the Views, including User Views, available for the current Measurement</p> <p>Example: <code>"Normal,Trace Zoom,Spectrogram,Baseband,myView1,yourView1"</code></p> <p>No distinction is made between Predefined and User Views</p> <p>If you switch measurements with the display disabled (via <code>:DISP:ENAB OFF</code>), then query the list of available Views, the result is undefined</p>

User View Listing Query

Returns a string containing a comma-separated list of names for *only* the User Views available for the current Measurement.

Remote Command	<code>:DISPlay:VIEW:ADVanced:USER:CATalog?</code>
Example	<code>:DISP:VIEW:ADV:USER:CAT?</code>
Notes	<p>Returns a quoted string of the available User Views for the current measurement, separated by commas.</p> <p>Example: <code>"Baseband,myView1,yourView1"</code></p> <p>If you switch measurements with the display disabled (see "Display Enable (Remote Command Only)" on page 2616), then query the list of available Views, the result is undefined</p>

3.10.5.3 Annotation

Contains controls for setting up the annotation for the current Mode or Measurement.

Graticule

Turns the display graticule On or Off for all windows with graticules in all measurements in the current Mode. Also turns the graticule Y-Axis annotation on and off.

Remote Command	<code>:DISPlay:GRATicule[:STATe] OFF ON 0 1</code> <code>:DISPlay:GRATicule[:STATe]?</code>
Example	<code>:DISP:GRAT OFF</code>
Notes	The graticule is the set of horizontal and vertical lines that make up the grid/divisions for the X-Axis and Y-Axis

Preset	ON
State Saved	Saved in instrument state
Backwards Compatibility SCPI	:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe] OFF ON 0 1 :DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe]? This command is accepted for backwards compatibility with older instruments, but the WINDow , TRACe and GRID parameters are ignored

Screen Annotation

Controls the display of the annunciation and annotation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) and the Y-Axis annotation, for all windows with screen annotation in all measurements in the current Mode.

This does *not* include marker annotation (or the N dB result). When **OFF**, the graticule expands to fill the entire graticule area, leaving only the 1.5% gap above the graticule, as described in the **Trace** section.

Remote Command	:DISPlay:ANNotation:SCReen[:STATe] OFF ON 0 1 :DISPlay:ANNotation:SCReen[:STATe]?
Example	:DISP:ANN:SCR OFF
Dependencies	Grayed-out and forced to OFF when System Display Settings, Annotation is OFF
Preset	ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF
State Saved	Saved in instrument state

Trace Annotation

Turns on and off the labels on the traces, showing their detector (or their Math Mode) as described in the **Trace** section, for all windows in all measurements in the current Mode for which Trace Annotation on/off is supported.

If Trace Math is being performed on a trace, then the Trace Math annotation replaces the detector annotation.

For measurements that support limit lines, this key also turns on and off the labels on the Limit Lines. The label is the Limit number annotation and Limit Comment displayed on the graph. If the length of the comment is greater than 20 characters, the first 8 characters and the last 8 characters are displayed, joined with

Remote Command	:DISPlay:ANNotation:TRACe[:STATe] ON OFF 1 0 :DISPlay:ANNotation:TRACe[:STATe]?
----------------	--

Example	<code>:DISP:ANN:TRAC OFF</code>
Preset	<code>OFF</code>
State Saved	Saved in instrument state

Control Annotation

Turns on and off the display of values on the Active Function controls for all measurements in the current Mode. This is a security feature.

Remote Command	<code>:DISPlay:ACTivefunc[:STATe] ON OFF 1 0</code> <code>:DISPlay:ACTivefunc[:STATe]?</code>
Example	<code>:DISP:ACT OFF</code>
Dependencies	Grayed out and forced to <code>OFF</code> when System Display Settings, Annotation is <code>OFF</code>
Preset	<code>ON</code> This remains <code>OFF</code> through a Preset when System Display Settings, Annotation is set to <code>OFF</code>
State Saved	Saved in instrument state

Meas Bar

Turns the Measurement Bar at the top of the screen on and off for all measurements in the current Mode. When `OFF`, the graticule area expands to fill the area formerly occupied by the Measurement Bar.

Remote Command	<code>:DISPlay:ANNotation:MBAR[:STATe] OFF ON 0 1</code> <code>:DISPlay:ANNotation:MBAR[:STATe]?</code>
Example	<code>:DISP:ANN:MBAR OFF</code>
Dependencies	Grayed out and forced to <code>OFF</code> when System Display Settings, Annotation is <code>OFF</code>
Preset	<code>ON</code> This remains <code>OFF</code> through a Preset when System Display Settings, Annotation is set to <code>OFF</code>
State Saved	Saved in instrument state

Display Enable (Remote Command Only)

Turns the display on/off, including the display drive circuitry. The backlight stays lit to confirm that the instrument is on. The display enable setting is mode global. There are three reasons for turning the display off:

1. To increase speed as much as possible by freeing the instrument from having to update the display

2. To reduce emissions from the display, drive circuitry
3. For security purposes

If you have turned off the display:

- and you are in local operation, the display can be turned back on by pressing any key or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor `:SYSTem:PRESet` enable the display)
- and you are in remote operation, the display can be turned back on by pressing the **Local** or **Esc** keys, or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor `:SYSTem:PRESet` enable the display)
- and you are using either the `:SYSTem:KLOCK` command or GPIB local lockout, then *no* front-panel key press will turn the display back on. You must turn it back on remotely.

If the display is **OFF**, many SCPI commands related to User Views and Multiscreen functionality do not work, and return the error messages “-221, Settings conflict; Screen SCPI cannot be used when Display is disabled” or “221, Settings conflict; View SCPI cannot be used while Display is disabled”. These commands include:

Name	Command
Select User View	<code>:DISPlay:VIEW:ADVanced:SElect</code>
Rename User View	<code>:DISPlay:VIEW:ADVanced:REName</code>
Delete User View	<code>:DISPlay:VIEW:ADVanced:DELeTe</code>
Create User View	<code>:DISPlay:VIEW:ADVanced:NAME</code>
Select Screen	<code>:INSTrument:SCReen:SElect</code>
Delete Screen	<code>:INSTrument:SCReen:DELeTe</code>
Delete All But This Screen	<code>:INSTrument:SCReen:DELeTe:ALL</code>
Add Screen	<code>:INSTrument:SCReen:CREate</code>
Rename Screen	<code>:INSTrument:SCReen:REName</code>
Sequencer On/Off	<code>:SYSTem:SEQuencer</code>

Remote Command	<code>:DISPlay:ENABle OFF ON 0 1</code> <code>:DISPlay:ENABle?</code>
Example	<code>:DISP:ENAB OFF</code>
Couplings	<code>:DISP:ENAB OFF</code> turns Backlight OFF and <code>:DISP:ENAB ON</code> turns Backlight ON , but changing Backlight settings does <i>not</i> change the state of <code>:DISP:ENAB</code>
Preset	ON Set by <code>:SYST:DEF MISC</code> , but not affected by <code>*RST</code> or <code>:SYSTem:PRESet</code>

State Saved	Not saved in instrument state
Backwards Compatibility Notes	:SYST:PRES no longer turns on :DISPlay:ENABLE as it did in legacy analyzers

3.10.6 Frequency

Opens the **Frequency** menu, which contains controls that allow you to control the Frequency and Channel parameters of the instrument.

Some features in this menu are the same for all measurements in the current Mode – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by Meas Preset. For example, the Center Freq setting is the same for all measurements – it does not change as you change measurements.

3.10.6.1 Settings

The Settings tab contains the basic Bandwidth functions. In most measurements it is the only tab under Bandwidth.

Carrier Reference Frequency

Sets carrier reference frequency. The center frequencies of carriers are defined as offset frequency from this value. This reference frequency is also the reference of carrier configuration preset.

Because LTE-A, MSR and 5G NR measurements often deal with multiple carriers with distinct bandwidths, the simple Center Frequency parameter used in most measurements does not apply here. Instead, the Carrier Reference Frequency is the key parameter. This must be distinct from the Center Frequency parameter used in other measurements, as Center Frequency can be a global parameter, and it would not make sense for Carrier Reference Frequency to take on this global value.

In LTE-A and 5G NR, if the following conditions are satisfied at the same time:

- the Number of Component Carrier equals 1
- the Center Freq Offset equals to 0 Hz
- the mode of the Center Freq is Auto

then the Center Freq is equivalent to Carrier Ref Freq. When the Center Freq changes in such conditions, the mode of the Center Freq remains as Auto and the

Carrier Ref Freq will be changed to same value. The major purpose of this coupling is to keep BWCC with legacy LTE/LTE TDD, in which `:SENSe:FREQUENCY:CENTer` is used to set up the Frequency of the measurement.

See ["More Information" on page 2315](#).

Remote Command	For LTEAFDD/LTEATDD, 5GNR: <code>[:SENSe]:CCARrier:REFeRence <freq></code> <code>[:SENSe]:CCARrier:REFeRence?</code> For MSR: <code>[:SENSe]:CARRier:REFeRence <freq></code> <code>[:SENSe]:CARRier:REFeRence?</code>
Example	For LTEAFDD/LTEATDD, 5GNR: <code>:CCAR:REF 2GHz</code> <code>:CCAR:REF?</code> For MSR: <code>:CARR:REF 2GHz</code> <code>:CARR:REF?</code>
Dependencies	Only available in LTEAFDD/LTEATDD, 5GNR and MSR Modes
Preset	1 GHz
State Saved	Saved in instrument state
Min/Max	Depends on instrument minimum center frequency. Same as Center Freq

More Information

In most applications, Center Frequency is generally where the carrier center is located at and thus plays a very important role. However, in LTE-Advanced TDD/FDD mode, the measurements are done based on carrier center frequencies and its bandwidths, both of which are calculated or obtained according to the carriers' configuration.

The Center Frequency defined here only for the Monitor Spectrum, IQ Waveform and CCDF measurements, because these three are general type measurements and focus on a certain frequency range, which may be the entire BS RF bandwidth, a frequency range of one of the component carriers or a range far away from the component carriers to see spurious. The Center Frequency in these three measurements has a different meaning, therefore it should be a separate setting from Carrier Reference Frequency.

Carrier center frequencies are defined using offsets from Carrier Reference Frequency which determines absolute frequency locations, which can be set as both absolute and relative frequency from the carrier reference frequency.

Since Center Frequency is only used in those three measurements, Monitor Spectrum, IQ Waveform and CCDF, this control only appears on the Frequency menu of these measurements.

Considering the legacy LTE usability in the converged LTE & LTE-A application, when the mode of the Center Frequency is Auto and the Number of Component Carrier equals to 1 and the Center Frequency Offset equals to 0 Hz, the Center Frequency is equivalent to Carrier Reference Frequency, which is used to set up the Frequency of all the measurements.

Center Frequency

Sets the frequency that corresponds to the horizontal center of the graticule. While adjusting the Center Frequency the Span is held constant.

The center frequency setting is the same for all measurements within a mode, that is, it is Meas Global. Some modes are also able to share a Mode Global center frequency value. If this is the case, the Mode will have a **Global** tab in its **Meas Setup** menu.

The **Center Freq** function sets (and queries) the Center Frequency for the currently selected input. If your instrument has multiple inputs, and you select another input, the Center Freq changes to the value for that input. SCPI commands are available to directly set the Center Freq for a specific input.

Center Freq is remembered as you go from input to input. Thus, you can set a Center Freq of 10 GHz with the RF Input selected, change to BBIQ, and set a Center Freq of 20 MHz, then switch to External Mixing and set a Center Freq of 60 GHz, and when you go back to the RF Input the Center Freq will go back to 10 GHz; back to BBIQ and it is 20 MHz; back to External Mixing and it is 60 GHz.

See:

- ["Center Frequency Presets" on page 2318](#)
- ["VXT Models with Radio Heads/CIU Frequency Range" on page 2320](#)
- ["RF Center Freq" on page 2321](#)
- ["Ext Mix Center Freq" on page 2321](#)
- ["I/Q Center Freq" on page 2322](#)

Remote Command	<code>[:SENSe]:FREQuency:CENTer <freq></code> <code>[:SENSe]:FREQuency:CENTer?</code>
----------------	--

Example	<code>:FREQ:CENT 50 MHz</code> Sets Center Frequency to 50 MHz <code>:FREQ:CENT UP</code>
---------	---

	<p>Increments the Center Frequency by the value of CF Step :FREQ:CENT?</p> <p>Returns the current value of Center Frequency</p>
Notes	<p>Sets the RF, External Mixing or I/Q Center Frequency depending on the selected input:</p> <ul style="list-style-type: none"> - For RF input it is equivalent to :FREQ:RF:CENT - For I/Q input it is equivalent to :FREQ:IQ:CENT - For External Mixer it is equivalent to :FREQ:EMIX:CENT <p>Preset and Max values are dependent on Hardware Options (5xx) If no terminator (for example, MHz) is sent, the terminator Hz is used. If a terminator with unit other than Frequency is used, an invalid suffix error message is generated</p>
Couplings	<p>In LTEAFDD/LTEATDD and 5GNR Modes:</p> <p>Center Frequency, Center Frequency Offset and Carrier Reference Frequency are coupled with the following equation: Center Frequency = Carrier Reference Frequency + Center Frequency Offset If the following conditions are satisfied at the same time:</p> <ul style="list-style-type: none"> - the Num Component Carrier equals to 1 - the Center Frequency Offset equals to 0 Hz - the mode of the Center Frequency is Auto <p>The Center Frequency is equivalent to Carrier Reference Frequency The major purpose of this coupling is to keep BWCC with legacy LTE, in which :SENSe:FREQUency:CENTer is used to set up the Frequency of the measurement Otherwise, the Center Frequency Offset is changed following the Center Frequency and the Carrier Reference Frequency keeps intact In MSR, Center Freq, Center Freq Offset and Carrier Ref Freq are coupled with the equation, Center Freq = Carrier Ref Freq + Center Freq Offset. When Center Freq is changed, Center Freq Offset is updated and Carrier Ref Freq is not changed When auto, Center Freq Offset remains the same value. Thus, Center Freq changes the same amount of Carrier Ref Freq change when Carrier Ref Freq is changed. The auto state changes to manual when either Center Freq is changed</p> <p>In Bluetooth Mode:</p> <p>Center Frequency is coupled to Channel and Geography</p> <ul style="list-style-type: none"> - If Geography is France: Center Frequency 2454 MHz + (channel number* channel space) MHz - If Geography is Others: Center Frequency 2402 MHz + (channel number* channel space) MHz - If Radio Stand is Basic or EDR, channel space is 1 MHz - If Radio Stand is Low Energy, channel space is 2 MHz

	<p>In other modes:</p> <p>Any value of the Center Frequency or Span that keeps start frequency and stop frequency within the frequency range of the instrument is allowed when the value is being set through the front panel numeric keypad or the SCPI command. Other frequency parameters are forced to different values if needed, to keep the start and stop frequencies within the instrument's frequency range</p>
Preset	<p>Depends on instrument maximum frequency, mode, measurement, and selected input</p> <p>See "Center Frequency Presets" on page 2318, "RF Center Freq" on page 2321, "Ext Mix Center Freq" on page 2321, "I/Q Center Freq" on page 2322 and "VXT Models with Radio Heads/CIU Frequency Range" on page 2320</p>
State Saved	Saved in instrument state
Min/Max	<p>Depends on instrument maximum frequency, mode, measurement, and selected input</p> <p>See "Center Frequency Presets" on page 2318, "RF Center Freq" on page 2321, "Ext Mix Center Freq" on page 2321, "I/Q Center Freq" on page 2322 and "VXT Models with Radio Heads/CIU Frequency Range" on page 2320</p>
Annotation	Center <value> appears in the lower left corner of the display
Status Bits/OPC dependencies	Non-overlapped

Center Frequency Auto State

Remote Command	<pre>[:SENSe]:FREQuency:CENTer:AUTO ON OFF 1 0 [:SENSe]:FREQuency:CENTer:AUTO?</pre>
Example	<pre>:FREQ:CENT:AUTO OFF :FREQ:CENT:AUTO?</pre>
Dependencies	This is only available in MSR, LTEAFDD/LTEATDD and 5GNR Modes
Couplings	<p>When the Center Frequency is changed, the state is automatically changed to Manual</p> <p>Center Frequency, Center Frequency Offset and Carrier Reference Frequency are coupled. When Carrier Reference Frequency changes:</p> <ul style="list-style-type: none"> - Center Frequency : Auto Center Frequency = Carrier Reference Frequency + Center Frequency Offset (fixed) - Center Frequency : Man Center Frequency (fixed) = Carrier Reference Frequency + Center Frequency Offset
Preset	ON
State Saved	Saved in instrument state
Range	Auto Man

Center Frequency Presets

The following table provides the Center Frequency Presets for the Spectrum Analyzer mode, and the Max Freq, for the various frequency options:

Freq Option	CF after Mode Preset	Stop Freq after Mode Preset	Max Freq (can't tune above)
503 (all but CXA)	1.805 GHz	3.6 GHz	3.7 GHz
503 (CXA)	1.505 GHz	3.0 GHz	3.08 GHz
507 (all but CXA)	3.505 GHz	7.0 GHz	7.1 GHz
507 (CXA)	3.755 GHz	7.5 GHz	7.58 GHz
508 (all but MXE)	1.805 GHz	3.6 GHz	8.5 GHz
508 (MXE)	4.205 GHz	8.4 GHz	8.5 GHz
513	6.805 GHz	13.6 GHz	13.8 GHz
526 (except CXA and MXE)	13.255 GHz	26.5 GHz	27.0 GHz*
526 (CXA)	13.255 GHz	26.5 GHz	26.55 GHz
526 (MXE)	1.805 GHz	3.6 GHz	27.0 GHz
532	16.005 GHz	32.0 GHz	32.5 GHz
540	20.005 GHz	40.0 GHz	40.5 GHz
543	21.505 GHz	43.0 GHz	43.0 GHz
544	22.005 GHz	44.0 GHz	45.0 GHz
550	25.005 GHz	50.0 GHz	52 GHz
F03 (CXA-m)	1.505 GHz	3.0 GHz	3.08 GHz
F07 (CXA-m)	3.755 GHz	7.5 GHz	7.575 GHz
F13 (CXA-m)	6.805 GHz	13.6 GHz	13.8 GHz
F26 (CXA-m)	13.255 GHz	26.5 GHz	26.55 GHz
504 (SP900B/21A, M8920A)	2.145 GHz	3.88GHz	3.88 GHz
506 (SP900B/21A, M8920A)	3.245 GHz	6.08GHz	6.08 GHz
F06 (SP900B/11A)	1.0 GHz	6.08 GHz	6.08 GHz
F06 (SP900B)	1 GHz	1.08 GHz	6.6 GHz
F08 (SP900B)	1 GHz	1.08 GHz	8.6 GHz
F12 (SP900B)	1 GHz	1.08 GHz	12.9 GHz

*For option 526, the Max CF in RTSA is 26.999999995 GHz.

SP900SCenter Freq Presets

Input	CF after Mode Preset	Stop Freq after Mode Preset	Max Freq (can't tune above)
Input 1, all models	25.005 GHz	50.0 GHz	52 GHz

3 5G NR Mode
3.10 Monitor Spectrum Measurement

Input	CF after Mode Preset	Stop Freq after Mode Preset	Max Freq (can't tune above)
Input 2, opt 585	42.505 GHz	85.0 GHz	86 GHz
Input 2, opt 590	45.005 GHz	90.0 GHz	92 GHz
Input 2, opt 5CX	55.005 GHz	110.0 GHz	110 GHz

Input 2, CXA and MXE

Model	CF after Mode Preset	Stop Freq after Mode Preset	Max Freq (can't tune above)
CXA opt C75	0.7505 GHz	1.5 GHz	1.58 GHz
MXE	505 MHz	1 GHz	1.000025 GHz

Tracking Generator Frequency Limits (CXA only)

Tracking Generator Option	Min Freq (clips to this freq when turn TG on and can't tune below while TG on)	If above this Freq, Stop Freq clipped to this Freq when TG turned on	Max Freq (can't tune above) while TG on
T03	9 kHz	3.0 GHz	3.08 GHz
T06	9 kHz	6.0 GHz	6.05 GHz

Tracking Generator Frequency Limits(CXA-m only)

Tracking Generator Option	Min Freq (clips to this freq when turn TG on and can't tune below while TG on)	If above this Freq, Stop Freq clipped to this Freq when TG turned on	Max Freq (can't tune above) while TG on
T03	2 MHz	3.08 GHz	3.08 GHz
T07	2 MHz	7.575 GHz	7.575 GHz
T13	2 MHz	13.8 GHz	13.8 GHz
T26	2 MHz	26.55 GHz	26.55 GHz

VXT Models with Radio Heads/CIU Frequency Range

The following table shows the Center Frequency Presets and Range for VXT modes with Radio Heads/CIU.

Products with Radio Heads/CIU	Preset	Start frequency	Stop frequency
M9421A + CIU	6 GHz	5.9 GHz	12 GHz
SP900B+ CIU	6 GHz	5.9 GHz	12 GHz
SP900B+ CIU + RRH	25 GHz	24.25 GHz	43.5 GHz

RF Center Freq

Specifies the RF Center Frequency. This command sets the Center Frequency to be used when the RF input is selected, even if the RF input is not the input that is selected at the time the command is sent. Note that **"Center Frequency" on page 2316** in the **Frequency** menu on the front panel always applies to the currently selected input.

Remote Command	<code>[:SENSe] :FREQuency:RF:CENTer <freq></code> <code>[:SENSe] :FREQuency:RF:CENTer?</code>
Example	<code>:FREQ:RF:CENT 30 MHz</code> <code>:FREQ:RF:CENT?</code>
Notes	This command is the same in all Modes, but the parameter is Measurement Global, so the value is independent in each Mode and common across all the measurements in the Mode
Dependencies	If the electronic/soft attenuator is enabled, any attempt to set Center Frequency such that the Stop Frequency would be >3.6 GHz fails and results in an advisory message. If the equivalent SCPI command is sent, this same message is generated as part of a "-221, Settings conflict" warning
Preset	See "Center Frequency Presets" on page 2318 above
State Saved	Saved in instrument state
Min	-79.999995 MHz
Max	See table above. Basically, instrument maximum frequency - 5 Hz If the knob or step keys are being used, also depends on the value of Span

Ext Mix Center Freq

Specifies the External Mixer Center Frequency. This command sets the Center Frequency to be used when the External Mixer is selected, even if the External Mixer input is not the input that is selected at the time the command is sent. Note that **"Center Frequency" on page 2316** in the **Frequency** menu on the front panel always applies to the currently selected input.

Remote Command	<code>[:SENSe] :FREQuency:EMIXer:CENTer <freq></code> <code>[:SENSe] :FREQuency:EMIXer:CENTer?</code>
Example	<code>:FREQ:EMIX:CENT 60 GHz</code> <code>:FREQ:EMIX:CENT?</code>
Notes	This command is the same in all Modes, but the parameter is Measurement Global, so the value is independent in each Mode and common across all the measurements in the Mode
Couplings	When returning to External Mixing after having been switched to one of the other inputs (e.g., RF), you will come back into the settings that you had when you left External Mixing. So, you will come back to the band you were in with the Center Frequency that you had. However, Span is not an input-dependent parameter, therefore you will bring the span over from the other input. Therefore, the instrument comes back with the span from the previous input, limited as necessary by the current mixer setup

3 5G NR Mode
3.10 Monitor Spectrum Measurement

Preset	<p>When a Mode Preset is performed while in External Mixing, the Start frequency of the current Mode is set to the nominal Min Freq of the lowest harmonic range in the Harmonic Table for the current mixer setup. Similarly, the Stop frequency of the current Mode is set to the nominal Max Freq of the highest harmonic range in the Harmonic Table. The Center Freq thus presets to the point arithmetically equidistant from these two frequencies</p> <p>Note that, if the current measurement has a limited Span available to it, and cannot achieve the Span shown in the table (Span=Stop Freq – Start Freq), the instrument uses the maximum Span the measurement allows, and still sets the Center Freq to the midpoint of the Start and Stop Freq values in the Harmonic Table</p> <p>When Restore Input/Output Defaults is performed, the mixer presets to the 11970A, whose Start and Stop frequencies are 26.5 and 40 GHz respectively. The center of these two frequencies is 33.25 GHz. Therefore, after a Restore Input/Output Defaults, if you go into External Mixing and do a Mode Preset while in the Spectrum Analyzer Mode, the resulting Center Freq is 33.25 GHz</p>
State Saved	Yes
Min	<p>The minimum frequency in the currently selected mixer band + 5 Hz</p> <p>If the knob or step keys are being used, also depends on Span</p>
Max	<p>The maximum frequency in the currently selected mixer band - 5 Hz</p> <p>If the knob or step keys are being used, also depends on Span</p>

I/Q Center Freq

Specifies the I/Q Center Frequency. This command sets the Center Frequency to be used when the I/Q input is selected, even if the I/Q input is not the input that is selected at the time the command is sent. Note that "**Center Frequency**" on page 2316 in the **Frequency** menu on the front panel always applies to the currently selected input.

Remote Command	<code>[:SENSe] :FREQuency:IQ:CENTer <freq></code>
	<code>[:SENSe] :FREQuency:IQ:CENTer?</code>
Example	<code>:FREQ:IQ:CENT 30 MHz</code>
Notes	This command is the same in all Modes, but the parameter is Measurement Global, so the value is independent in each Mode and common across all the measurements in the Mode
Preset	0 Hz
State Saved	Saved in instrument state
Min	-40.049995 MHz
Max	40.049995 MHz

Center Frequency Offset

This setting is coupled with Center Frequency, and is only used in Monitor Spectrum, IQ Waveform, Power Stat CCDF and PAVT measurements. **Center**

Frequency, Center Frequency Offset and **Carrier Reference Frequency** are coupled with this equation:

$$\text{Center Frequency} = \text{Carrier Reference Frequency} + \text{Center Frequency Offset}$$

If you change **Center Frequency Offset**, **Center Frequency** is updated and **Carrier Reference Frequency** is not.

Remote Command	<code>[:SENSe]:FREQuency:CENTer:OFFSet <freq></code> <code>[:SENSe]:FREQuency:CENTer:OFFSet?</code>
Example	<code>:FREQ:CENT:OFFS 100kHz</code> <code>:FREQ:CENT:OFFS?</code>
Preset	0 GHz
State Saved	Saved in instrument state
Min	-500 GHz
Max	500 GHz

Span

Changes the displayed frequency range symmetrically about the center frequency. While adjusting the Span, the Center Frequency is held constant, this means that both Start Frequency and Stop Frequency will change.

If the Span is set to a value greater than the maximum allowable span of the instrument, an error message is generated indicating the data is out of range and was clipped to upper limit.

See "[Span Presets](#)" on page 2324

Remote Command	<code>[:SENSe]:MONitor:FREQuency:SPAN <freq></code> <code>[:SENSe]:MONitor:FREQuency:SPAN?</code>
Example	<code>:MON:FREQ:SPAN 10 MHz</code> <code>:MON:FREQ:SPAN?</code>
Dependencies	If the electrical attenuator is enabled, any attempt to set Span such that the Stop Frequency would be >3.6 GHz results in an error In instruments with an RF Preselector, such as MXE, you cannot sweep across the band break at 3.6 GHz while the RF Preselector is on in Continuous sweep, as there is a mechanical switch which bypasses the RF Preselector above 3.6 GHz
Couplings	Span affects RBW, sweeptime, FFT & Sweep choice (including FFT Width, Phase Noise Optimization and ADC Dither auto couplings) <ul style="list-style-type: none"> - Any value of the Center Frequency or Span that is within the frequency range of the instrument is allowed when the value is being set through the front panel numeric keypad or the SCPI command. The other parameter is forced to a different value if needed, to keep the Start and the Stop Frequencies within the instrument's frequency range

3 5G NR Mode
3.10 Monitor Spectrum Measurement

	<ul style="list-style-type: none"> When using the knob or the step up/down keys or the UP DOWN keywords in SCPI, the value that is being changed i.e., the Center Frequency or Span, is limited so that the other parameter is not forced to a new value
Preset	Depends on instrument maximum frequency, mode, measurement, and selected input See "Span Presets" on page 2324
State Saved	Saved in instrument state
Min	10 Hz
Max	Depends on instrument maximum frequency, mode, measurement, and selected input; see "Span Presets" on page 2324 If the knob or step keys are being used, depends on the value of the other three interdependent parameters Center Frequency, Start Frequency, Stop Frequency
Annunciation	Data out of range, value clipped to upper limit
Annotation	Span <value> appears on the first line of the annotation in the lower right corner of display

Span Presets

The following table provides the Max Span, for the various frequency options:

Freq Option	Max Span (can't set higher than this)
503 (all but CXA)	3.7 GHz
503, F03 (CXA, CXA-m)	3.08 GHz
507 (all but CXA)	7.1 GHz
507 (CXA, CXA-m)	7.575 GHz
508 (all but MXE)	8.5 GHz
508 (MXE)	8.5 GHz
513, F13	13.8 GHz
526 (all but CXA and MXE)	27.0 GHz
526 (MXE)	27.0 GHz
526, F26 (CXA, CXA-m)	26.55 GHz
544	44.5 GHz
550	52 GHz
SP900B-F06	6.27 GHz
SP900B-F08	8.27 GHz
SP900B-F12	12.57 GHz

Input 2:

Model	Max Span (can't set higher than this)
CXA opt C75	1.58 GHz
MXE	1.000025 GHz

Note that if you are in External Mixing, the maximum Span will be equal to the Maximum Stop Frequency – Minimum Start Frequency for the currently selected mixer.

Span Presets by Mode

Mode	Radio Std	Preset Value
WCDMA		10.0 MHz
PN		1.0 MHz
GSM/EDGE		1.0 MHz
WLAN	802.11a/b/g/n/ac/ax/be (20 MHz)	25 MHz
	802.11n/ac/ax/be (40MHz)	50 MHz
	802.11ac/ax/be (80MHz)	100 MHz
	802.11ac /ax/be (160MHz)	200 MHz
	802.11be (320MHz)	400 MHz
MSR		20 MHz
LTEAFDD, LTEATDD		20 MHz
5G NR		150 MHz
RTS		40 kHz
CQM		10 MHz

CF Step

Changes the step size for the center frequency and start and stop frequency functions. Once a step size has been selected and the center frequency function is active, the step keys (and the UP/DOWN parameters for Center Frequency from remote commands) change the center frequency by the step-size value. The step size function is useful for finding harmonics and sidebands beyond the current frequency span of the instrument.

Note that the start and stop frequencies also step by the CF Step value.

Remote Command `[:SENSe] :FREQuency:CENTer:STEP[:INCRement] <freq>`
`[:SENSe] :FREQuency:CENTer:STEP[:INCRement]?`
`[:SENSe] :FREQuency:CENTer:STEP:AUTO OFF | ON | 0 | 1`
`[:SENSe] :FREQuency:CENTer:STEP:AUTO?`

Example `:FREQ:CENT:STEP 500 MHz`
`:FREQ:CENT UP`
 Increases the current center frequency value by 500 MHz
`:FREQ:CENT:STEP?`
`:FREQ:CENT:STEP:AUTO ON`

:FREQ:CENT:STEP:AUTO?	
Notes	Preset and Max values are dependent on Hardware Options
Dependencies	Not available in MSR, LTEAFDD/LTEATDD, 5GNR and Channel Quality Modes If the electronic/soft attenuator is enabled, any attempt to change the value of the center frequency >3.6 GHz by pressing the Up-arrow key, fails and results in an advisory message. If the equivalent SCPI command is sent, this same message is generated as part of a “-221, Settings conflict” warning
Couplings	When auto-coupled, the center frequency step size is set to 10% of the span
Preset	Auto ON
State Saved	Saved in instrument state
Min	– (the maximum frequency of the instrument). That is, 27 GHz max freq instrument has a CF step range of +/- 27 GHz. Note that this is the maximum frequency given the current settings of the instrument, so in External Mixing, for example, it is the maximum frequency of the current mixer band
Max	The maximum frequency of the instrument. That is, 27 GHz max freq instrument has a CF step range of +/- 27 GHz. Note that this is the maximum frequency given the current settings of the instrument, so in External Mixing, for example, it is the maximum frequency of the current mixer band
Status Bits/OPC dependencies	non-overlapped

Adjust Span to Carrier Config

This immediate-action control sets Span and Center Frequency to monitor all the configured carriers.

When executed, Span will be set based on the bandwidth and frequency offset of each carrier regardless of Measure Carrier state. Center Frequency will be set to the center of the Span

Remote Command	[:SENSe] :MONitor :FREQuency :SPAN :ADJust
Example	:MON:FREQ:SPAN:ADJ

3.10.7 Marker

Accesses a menu that enables you to select, set up and control the markers for the current measurement. If there are no active markers, **Marker** selects marker 1, sets it to Normal and places it at the center of the display. If the selected marker is Off, it is set to Normal and placed it at the center of the screen on the trace determined by the **Marker Trace** rules.

For more detailed information on the types of Markers and the interaction between Markers, see the Marker section of the Swept SA measurement.

3.10.7.1 Select Marker

Specifies the *selected marker*. The term “selected marker” is used throughout this document to specify which marker will be affected when you change marker settings, perform a Peak Search, etc.

This control appears above the menu panel, indicating that it applies to all controls in the Marker menu panels. Select Marker is blanked if you select a tab whose controls do *not* depend on the selected marker (for example, Counter).

On any menu tab for which Select Marker displays, the first control is always **Marker Frequency|Time**.

Notes	The selected marker is remembered even when not in the Marker menu and is used if a Search is done or a Band Function is turned on or for Signal Track or Continuous Peak
Preset	Marker 1
State Saved	The number of the selected marker is saved in instrument state
Annunciation	Appears in the marker results block label for Normal and Delta markers

3.10.7.2 Settings

The controls on this tab include the Marker active function and a radio button selection of the marker control mode (Normal, Delta, or Off) for the selected marker, as well as additional functions that help you use markers.

Marker Frequency

Sets the marker X Axis value in the current marker X Axis Scale unit. It has no effect if the control mode is **Off**, but is the SCPI equivalent of entering an X value if the control mode is **Normal** or **Delta**.

Remote Command	<code>:CALCulate:MONitor:MARKer[1] 2 ... 12:X <freq></code> <code>:CALCulate:MONitor:MARKer[1] 2 ... 12:X?</code>
Example	<code>:CALC:MON:MARK3:X 0</code> <code>:CALC:MON:MARK3:X?</code>
Notes	If no suffix is sent, uses the fundamental units for the current marker X Axis Scale. If a suffix is sent that does not match the current marker X Axis Scale unit, an error “Invalid suffix” is generated The query returns the marker’s absolute X Axis value if the control mode is Normal , or the offset from the marker’s reference marker if the control mode is Delta . The query is returned in the fundamental units for the current marker X Axis scale: Hz for Frequency and Inverse Time, seconds for Period and Time
Preset	After a preset, all markers are turned OFF, so Marker X Axis Value query returns a not a number (NAN)

State Saved	Saved in instrument state
Min	-9.9E+37
Max	9.9E+37
Annotation	Mkr # <X value> and <Marker value> upper right on graph

Marker X Axis Position (Remote Command Only)

Sets the marker X Axis Scale position in trace points. This setting has no effect if the control mode is Off, but is the SCPI equivalent of entering a value if the control mode is Normal or Delta - except in trace points rather than X Axis Scale units. The entered value is immediately translated into the current X Axis Scale units for setting the value of the marker.

Remote Command	<code>:CALCulate:MONitor:MARKer[1] 2 ... 12:X:POSition <real></code> <code>:CALCulate:MONitor:MARKer[1] 2 ... 12:X:POSition?</code>
Example	<code>:CALC:MON:MARK:X:POS 0</code> <code>:CALC:MON:MARK:X:POS?</code>
Notes	The query returns the marker's absolute X Axis value in trace points if the control mode is Normal , or the offset from the marker's reference marker in trace points if the control mode is Delta . The value is returned as a real number, not an integer, corresponding to the translation from X Axis Scale units to trace points . When a Marker is turned on, it is placed center of the screen on the trace. Therefore, the default value depends on instrument condition. If the marker is Off the response is not a number
Preset	After a preset, all markers are turned OFF , so Marker X Axis Value query returns a not a number (NAN)
State Saved	Saved in instrument state
Min	-9.9E+37
Max	9.9E+37

Marker Y Axis Value (Remote Command only)

Returns the marker Y Axis value in the current marker Y Axis unit.

Remote Command	<code>:CALCulate:MONitor:MARKer[1] 2 ... 12:Y?</code>
Example	<code>:CALC:MON:MARK11:Y?</code>
Notes	Returns the marker Y-axis result if the control mode is Normal or Delta . If the marker is Off , the response is Not A Number
Preset	Result dependent on Markers setup and signal source
State Saved	No
Backwards Compatibility SCPI	<code>:CALCulate:MONitor:MARKer[1] 2 ... 12:FUNCtion:RESult?</code>

Marker Mode

Sets the marker control mode to **Normal** (**POSition**), **Delta**, or **Off**. All interactions and dependencies detailed under the control description are enforced when the remote command is sent. If the selected marker is Off, pressing Marker sets it to Normal and places it at the center of the screen on the trace determined by the **Marker Trace** rules. At the same time, **Marker X Axis Value** appears on the Active Function area.

The default active function is the active function for the currently selected marker control mode. If the current control mode is **Off**, there is no active function and the active function is turned off.

Remote Command	<code>:CALCulate:MONitor:MARKer[1] 2 ... 12:MODE POSition DELTa OFF</code> <code>:CALCulate:MONitor:MARKer[1] 2 ... 12:MODE?</code>
Example	<code>:CALC:MON:MARK:MODE POS</code> <code>:CALC:MON:MARK:MODE?</code>
Preset	<code>OFF</code>
State Saved	Saved in instrument state
Range	<code>POSition DELTA OFF</code>
Annotation	Mkr # <X value> and <Marker value> upper right on graph

Backward Compatibility SCPI Commands

Sets or queries the state of a marker. Setting a marker that is **OFF** to **ON** (1) puts it in **Normal** mode and places it at the center of the screen.

Remote Command	<code>:CALCulate:MONitor:MARKer[1] 2 ... 12:STATE OFF ON 0 1</code> <code>:CALCulate:MONitor:MARKer[1] 2 ... 12:STATE?</code>
Example	<code>:CALC:MON:MARK3:STAT ON</code> <code>:CALC:MON:MARK3:STAT?</code>
Preset	<code>OFF</code>
State Saved	Saved in instrument state
Range	<code>OFF ON</code>

Delta Marker (Reset Delta)

Pressing this button has exactly the same effect as selecting the **Delta** selection in **"Marker Mode" on page 2329**. The selected marker becomes a Delta Marker. If the

selected marker is already a Delta marker, the reference marker is moved to the current position of the selected marker, thus resetting the Delta to zero.

Marker Settings Diagram

Lets you configure the Marker system using a visual utility.

All Markers Off

Turns off all markers.

Remote Command	:CALCulate:MONitor:MARKer:AOff
----------------	--------------------------------

Example	:CALC:MON:MARK:AOff
---------	---------------------

Couple Markers

When this function is **ON**, moving any marker causes an equal X Axis movement of every other marker that is not Off. By “equal X Axis movement” we mean that we preserve the difference between each marker’s X Axis value (in the fundamental x-axis units of the trace that marker is on) and the X Axis value of the marker being moved (in the same fundamental x-axis units).

This may result in markers going off screen.

Remote Command	:CALCulate:MONitor:MARKer:COUPle[:STATe] ON OFF 1 0 :CALCulate:MONitor:MARKer:COUPle[:STATe]?
----------------	--

Example	:CALC:MON:MARK:COUP ON :CALC:MON:MARK:COUP?
---------	--

Preset	OFF Presets on Mode Preset and All Markers Off
--------	---

State Saved	Saved in instrument state
-------------	---------------------------

3.10.7.3 Peak Search

The controls on this tab allow you to move the marker to selected peaks of the signal, giving you enormous analysis capabilities, particularly when combined with the Delta Marker function.

NOTE

Pressing the **Peak Search** hardkey automatically moves you to the **Peak Search** page of the **Marker** menu and performs a Peak Search.

Pressing the **Peak Search** tab once you are already *in* the **Marker** menu does *not* perform a Peak Search.

Marker Frequency

This is the fundamental control that you use to move a marker around on the trace. This is the same as "[Marker Frequency](#)" on page 2327 on the **Settings** tab.

Peak Search

Moves the selected marker to the trace point which has the maximum y-axis value for that marker's trace.

NOTE

Pressing the **Peak Search** hardkey automatically moves you to the **Peak Search** page of the **Marker** menu and performs a Peak Search.

If the selected marker was off, then it is turned on as a normal marker, and a Peak Search is performed.

Remote Command	<code>:CALCulate:MONitor:MARKer[1] 2 ... 12:MAXimum</code>
----------------	--

Example	<code>:CALC:MON:MARK2:MAX</code> <code>:SYST:ERR?</code>
---------	---

can be used to query the errors to determine if a peak is found. If a search is unsuccessful, then the message "Execution error; No peak found" (-200) will be returned

Notes	Sending this command selects the subopcoded marker
-------	--

Next Peak

Moves the selected marker to the peak that is next lower in amplitude than the current marker value. If there is no valid peak lower than the current marker value, an "Execution error; No peak found" message is generated and the marker is not moved.

If the selected marker was off, then it is turned on as a normal marker and a peak search is performed.

Remote Command	<code>:CALCulate:MONitor:MARKer[1] 2 ... 12:MAXimum:NEXT</code>
----------------	---

Example	<code>:CALC:MON:MARK2:MAX:NEXT</code>
---------	---------------------------------------

selects marker 2 and moves it to the peak that is next lower in amplitude than the current marker value

Notes	Sending this command selects the subopcoded marker
State Saved	Not part of saved state

Marker Delta

Pressing this control has exactly the same effect as selecting the **Delta** selection in "[Marker Mode](#)" on page 2329 on the **Settings** tab. The selected marker becomes a Delta Marker. If the selected marker is already a Delta marker, the reference marker is moved to the current position of the selected marker, thus resetting the Delta to zero.

The control is duplicated here to allow you to conveniently perform a peak search and change the marker's control mode to Delta without having to access two separate menus.

3.10.7.4 Properties

The controls on this tab are used to set certain properties of the selected marker.

Marker Frequency

This is the fundamental control that you use to move a marker around on the trace. This is the same as "[Marker Frequency](#)" on page 2327 on the **Settings** tab.

Relative To

Selects the marker to which the selected marker is relative (its reference marker).

Every marker has another marker to which it is relative. This marker is referred to as the "reference marker" for that marker. This attribute is set by the **Marker, Properties, Relative To** key. The marker must be a **Delta** marker to make this attribute relevant. If it is a **Delta** marker, the reference marker determines how the marker is controlled and how its value is displayed. A marker cannot be relative to itself.

Remote Command	<code>:CALCulate:MONitor:MARKer[1] 2 ... 12:REFerence <integer></code>
Example	<code>:CALC:MON:MARK2:REF 1</code> <code>:CALC:MON:MARK2:REF ?</code>
Notes	This command causes the marker specified with the subopcode to become selected Range (for SCPI command): 1 to 12. If the range is exceeded the value is clipped A marker cannot be relative to itself so that choice is not available, and if sent from SCPI generates

	error -221: "Settings conflict; marker cannot be relative to itself" When queried a single value is returned (the specified marker numbers relative marker)
Couplings	The act of specifying the selected marker's reference marker makes the selected marker a Delta marker If the reference marker is off it is turned on in Normal mode at the delta marker location
Preset	The preset default "Relative To" marker (reference marker) is the next higher numbered marker (current marker +1). For example, if marker 2 is selected, then it's default reference marker is marker 3. The exception is marker 12, which has a default reference of marker 1 Set to the defaults by using Restore Mode Defaults . This is not reset by Marker Off , All Markers Off , or Preset
State Saved	Saved in instrument state. Not affected by Marker Off and hence not affected by Preset or power cycle
Min	1
Max	12
Annunciation	Appears in the marker label of a Delta marker

Marker Trace

Selects the trace on which you want your marker placed. A marker is associated with one and only one trace. This trace is used to determine the placement, result, and X-Axis Scale of the marker. All markers have an associated trace; it is from that trace that they determine their attributes and behaviors, and it is to that trace that they go when they become Normal markers.

Specifying a Marker Trace manually or with this command associates the marker with the specified trace. If the marker is not **OFF**, it moves the marker from the trace it was on to the new trace. If the marker is **OFF**, it stays off but is now associated with the specified trace.

The query returns the number of the trace on which the marker is currently placed.

Remote Command	<code>:CALCulate:MONitor:MARKer[1] 2 ... 12:TRACe 1 2 3</code> <code>:CALCulate:MONitor:MARKer[1] 2 ... 12:TRACe?</code>
Example	<code>:CALC:MON:MARK:TRAC 1</code> <code>:CALC:MON:MARK:TRAC?</code>
Notes	A marker may be placed on a blanked and/or inactive trace, even though the trace is not visible and/or updating An application may register a trace name to be displayed on the control instead of a trace number
Couplings	The state of Marker Trace is not affected by the "Auto Couple" on page 2629 key Sending the remote command causes the addressed marker to become selected
Preset	1
State Saved	Saved in instrument state
Min	1

Max 3

Marker Settings Diagram

Lets you configure the Marker system using a visual utility. This is the same as the ["Marker Settings Diagram" on page 2330](#) control on the **Settings** tab.

3.10.7.5 Marker Function

The controls on this tab allow you to control the Marker Functions of the instrument. Marker Functions perform post-processing operations on marker data.

The **Marker Function** menu controls which marker functions are turned on and allows you to adjust the setup parameters for each function. These parameters include the following, but only one parameter can be assigned to a given marker:

- Marker Noise
- Band Power
- Band Density
- Off

Marker Frequency

This is the fundamental control that you use to move a marker around on the trace. This is the same as ["Marker Frequency" on page 2327](#) on the **Settings** tab.

Marker Function

Sets the marker control function type to one of the following:

NOISe	Marker Noise
BPOWer	Band Power
BDENsity	Band Density
OFF	Marker Function Off

Remote Command `:CALCulate:MONitor:MARKer[1]|2|...|12:FUNCtion NOISe | BPOWer | BDENsity | OFF`

`:CALCulate:MONitor:MARKer[1]|2|...|12:FUNCtion?`

Example `:CALC:MON:MARK:FUNC NOIS`

`:CALC:MON:MARK:FUNC?`

Preset	OFF
State Saved	Yes
Range	NOISe BPOwer BDENSity OFF
Annotation	Mkr # <X value> and <Marker value> upper right on graph

Band Span

Sets the width of the frequency span for the selected marker.

Remote Command	:CALCulate:MONitor:MARKer[1] 2 ... 12:FUNCtion:BAND:SPAN <freq> :CALCulate:MONitor:MARKer[1] 2 ... 12:FUNCtion:BAND:SPAN?
Example	:CALC:MON:MARK12:FUNC:BAND:SPAN 20 MHz :CALC:MON:MARK12:FUNC:BAND:SPAN?
Couplings	Changing the Band Span necessarily changes the Band Left and Band Right values
Preset	Depends on X axis range of selected Trace 10% of Span
State Saved	Yes
Min	-9.9E+37 0
Max	9.9E+37 26.5GHz

Band Left

Sets the left edge frequency or time value for the band of the selected marker.

Remote Command	:CALCulate:MONitor:MARKer[1] 2 ... 12:FUNCtion:BAND:LEFT <freq> :CALCulate:MONitor:MARKer[1] 2 ... 12:FUNCtion:BAND:LEFT?
Example	:CALC:MON:MARK12:FUNC:BAND:LEFT 20 GHz :CALC:MON:MARK12:FUNC:BAND:LEFT?
Couplings	Changing the Band Left necessarily changes the Band Span value
Preset	Depends on X axis range of selected Trace
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

Band Right

Sets the right edge frequency or time value for the band of the selected marker.

Remote Command	<code>:CALCulate:MONitor:MARKer[1] 2 ... 12:FUNction:BAND:RIGHT <freq></code> <code>:CALCulate:MONitor:MARKer[1] 2 ... 12:FUNction:BAND:RIGHT?</code>
Example	<code>:CALC:MON:MARK12:FUNC:BAND:RIGH 20 GHz</code> <code>:CALC:MON:MARK12:FUNC:BAND:RIGH?</code>
Couplings	Changing the Band Right necessarily changes the Band Span value
Preset	Depends on X axis range of selected Trace
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

3.10.8 Meas Setup

This menu panel contains functions for setting up the measurement parameters and also contains functions for setting up parameters global to all measurements in the Mode.

3.10.8.1 Settings

Contains frequently used Meas Setup functions to which you will want the fastest access.

Avg|Hold Num

Specifies the number of measurement averages used when calculating the measurement result. The average is displayed at the end of each sweep.

After the specified number of average counts, the averaging mode (terminal control) setting determines the averaging action.

Remote Command	<code>[:SENSe]:MONitor:AVERage:COUNT <integer></code> <code>[:SENSe]:MONitor:AVERage:COUNT?</code>
Example	<code>:MON:AVER:COUN 25</code> <code>:MON:AVER:COUN?</code>
Preset	10
State Saved	Yes
Min/Max	1/1000
Annotation	The average count is displayed in the measurement bar on the front panel display. The annotation appears in the format n/N where n is the current average and N is the average count

Averaging On/Off

Turns averaging on or off.

Remote Command	<code>[:SENSe]:MONitor:AVERage[:STATe] OFF ON 0 1</code> <code>[:SENSe]:MONitor:AVERage[:STATe]?</code>
Example	<code>:MON:AVER ON</code> <code>:MON:AVER?</code>
Preset	<code>OFF</code>
State Saved	Yes
Range	<code>OFF ON</code>

Average Mode

Toggles the Average Mode:

- **EXponential**- continues measurement averaging, using the specified number of averages to compute each averaged value. The average is displayed at the end of each sweep
- **REPeat**- causes the measurement to reset the average counter each time the specified number of averages is reached

Remote Command	<code>[:SENSe]:MONitor:AVERage:TCONtrol EXPonential REPeat</code> <code>[:SENSe]:MONitor:AVERage:TCONtrol?</code>
Example	<code>:MON:AVER:TCON EXP</code> <code>:MON:AVER:TCON?</code>
Preset	<code>EXPonential</code>
State Saved	Yes
Range	<code>EXPonential REPeat</code>

Spur Avoidance

Because the VXT models SP900B/11A/15A are direct-conversion (zero-IF) receivers, feedthrough leakage from the local oscillator appears as a spurious signal (spur) at the center frequency. The **Spur Avoidance** function is provided to eliminate this spur, at the expense of some measurement speed. For Spur Avoidance, the instrument uses a software algorithm to remove this spur from the displayed measurement data.

Some measurements allow you to turn off **Spur Avoidance**, but in this measurement it is always enabled. Therefore, in this measurement the Spur Avoidance switch is unavailable (grayed out) and set to Enabled.

Furthermore, if you press the grayed-out switch, this popup message appears:

[Always enabled in this measurement. See manual for details](#)

Remote Command	<code>[:SENSe]:MONitor:SAVoid[:STATe]?</code>
Example	<code>:MON:SAV?</code> Always returns ON
Dependencies	This control only appears in VXT models SP900B/11A/15A
Preset	ON
State Saved	Saved in instrument state
Range	ON

Meas Setup Summary Table

Lets you view and access many of the parameters in the Meas Setup menus on one screen.

Auto Couple

Immediately puts all Auto/Man functions into Auto. The **Auto Couple** action is confined to the current measurement only. It does not affect other measurements in the Mode.

In the Auto state, Auto/Man functions are said to be “coupled”, meaning their values change as you make changes to other values in the measurement. This helps ensure accurate measurements and optimum dynamic range. **Auto Couple** is an immediate action function, and when it is executed, all the Auto/Man controls for the current measurement are set to Auto, and all measurement settings coupled to the Auto/Man parameters are automatically set to their optimal values.

For further details of measurement-specific settings (if any), see ["Measurement-Specific Details" on page 2339](#) below.

Remote Command	<code>:COUPle ALL</code>
Example	<code>:COUP ALL</code>
Backwards Compatibility SCPI	<code>:COUPLE ALL NONE</code>
Backwards Compatibility Notes	<code>:COUP:NONE</code> puts all Auto/Man parameters in manual mode, decoupling all the coupled instrument parameters. It is retained for backwards compatibility and is <i>not</i> recommended for making measurements or new designs

All Auto/Man parameter couplings in the measurement are set to Auto. This includes couplings that may be unavailable or grayed-out due to the current state. For example, in the Swept SA measurement, there is no Auto/Man coupling for **RBW** while in Zero Span. Nonetheless, if **Auto Couple** were executed while in Zero Span it would set **RBW** to Auto "behind the scenes" so that, on exit from Zero Span, it would be in Auto.

Any Auto/Man selection specific (local) to the other measurements in the current Mode will not be affected by **Auto Couple**. Any functions that are *not* coupled with other instrument parameters, such as ranging or leveling variables, such as "AutoRange" or "AutoScale", will not be affected.

Executing the **Auto Couple** command generates the informational message, "All Auto/Man functions have been set to Auto".

Each parameter, upon being set to Auto, selects and sets the appropriate auto-coupled value based on that parameter's coupling rules. The Dependency Resolver orchestrates the couplings for parameters that are dependent on one or more other parameters. The coupling and dependency rules for each parameter are defined in the chapter describing that parameter.

Executing the **Auto Couple** command *does not* affect markers, marker functions, trace or display attributes, or any other instrument setting other than those specifically mentioned above.

Measurement-Specific Details

TOI

Parameters affected by Auto Couple are:

- Center Frequency Step
- Resolution Bandwidth
- Span/RBW Ratio
- Sweep Time
- Video BandwidthVBW/RBW ratio
- Upper and Lower Tone (set to Sense)
- Zero span measurement Resolution Bandwidth
- Zero span measurement Dwell Time
- Center Frequency Step
- Resolution Bandwidth

3 5G NR Mode

3.10 Monitor Spectrum Measurement

- Span/RBW Ratio
- Sweep Time
- Video BandwidthVBW/RBW ratio
- Upper and Lower Tone (set to Sense)
- Zero span measurement Resolution Bandwidth
- Zero span measurement Dwell Time

Harmonics

For Harmonics, these parameters are:

- Resolution Bandwidth
- Fundamental Frequency
- Dwell Time
- Range Table Resolution Bandwidths
- Range Table Dwell Times

Meas Preset

Restores all the measurement parameters to their default values.

Remote Command	<code>:CONFigure:MONitor</code>
----------------	---------------------------------

Example	<code>:CONF:MON</code>
---------	------------------------

3.10.8.2 Radio

The Radio tab contains controls to select link direction.

Direction

Direction specifies whether the 5G NR signal is an uplink signal or a downlink signal.

This control allows you to set the Direction of the signal being measured.

Remote Command	<code>[:SENSe]:RADio:STANdard:DIRectioN DLINK ULINK</code>
----------------	---

	<code>[:SENSe]:RADio:STANdard:DIRectioN?</code>
--	--

Example	<code>:RAD:STAN:DIR DLIN</code>
Dependencies	When N9085EM0E is not installed and N9085EM4E is installed, only Uplink is available
Couplings	<p>Changing the direction affects the gate source as follows</p> <ul style="list-style-type: none"> - If changed to uplink: RF burst - If changed to downlink: External 1 <p>In Transmit On Off Power, changing the direction affects the trigger source as follows</p> <ul style="list-style-type: none"> - If changed to uplink: Periodic - If changed to downlink: External 1 except for models with the H1G option. With the H1G option, the trigger source changes as follows. <ul style="list-style-type: none"> - External 1, when Info BW \leq 255 MHz - External 3, when Info BW \geq 256 MHz <p>Changing the direction affects many other modulation analysis setup parameters</p>
Preset	ULINK when N9085EM0E is not installed and N9085EM4E is installed Otherwise, DLINK
State Saved	Yes
Range	Uplink only when N9085EM0E is not installed and N9085EM4E is installed Otherwise, Downlink Uplink

3.10.8.3 Component Carriers

Contains settings that let you configure the analyzer to match the component carriers in your 5G NR signal.

Number of Component Carriers

Specifies how many component carriers are included in the 5G NR measurements. The 5G NR supports the maximum of 16 component carriers.

Remote Command	<code>[:SENSe]:CCARrier:COUNT <integer></code> <code>[:SENSe]:CCARrier:COUNT?</code>
Example	<code>:CCAR:COUN 1</code> <code>:CCAR:COUN?</code>
Preset	1
State Saved	Yes
Min	1
Max	16

Carrier Allocation

Specifies the carrier frequency allocation. There are two types of allocation, contiguous and non-contiguous. Non-Contiguous frequency allocation is defined as an allocation where two sub-blocks are separated with a sub-block gap:

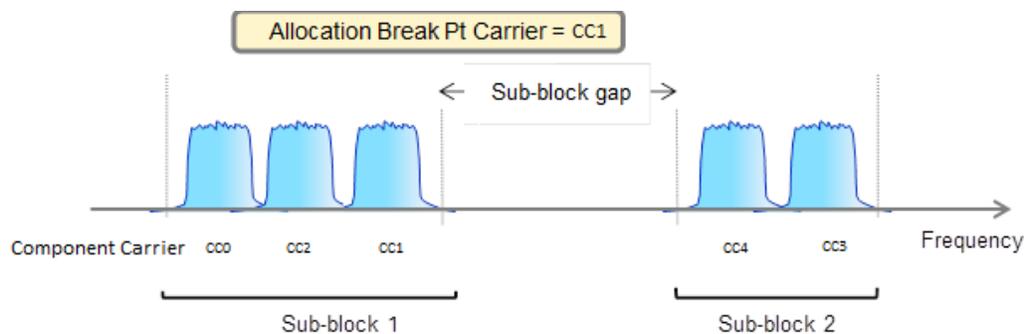

- Contiguous – All the component carriers belong to one block and no sub-block gap exists
- Non-Contiguous – Component carriers are separated into two sub-blocks. Allocation Break Pt Carrier determines how sub-blocks are configured

Remote Command	<code>[[:SENSe]:CCARrier:CONFig:ALLocation CONTiguous NCONtiguous</code> <code>[[:SENSe]:CCARrier:CONFig:ALLocation?</code>
Example	<code>:CCAR:CONF:ALL CONT</code> <code>:CCAR:CONF:ALL?</code>
Preset	<code>CONtiguous</code>
State Saved	Saved in instrument state
Range	Contiguous Non-Contiguous

Non-Contiguous Break at

Specifies an allocation break point in non-contiguous carrier allocation. First sub-block starts from the lowest frequency carrier and stops at the allocation break point carrier. Next sub-block starts from the next upper frequency carrier and ends at the highest frequency carrier.

one example is shown below. In the example carrier indices are not in the order of carrier frequency. In the example, Allocation Break Pt Carrier is CC1. It means that sub-block 1 ends at carrier CC1 and sub-block 2 starts at carrier CC4. Sub-block gap is located between carrier CC1 and CC4.

Remote Command	<code>[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint CC0 ... CC15</code> <code>[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint?</code>
Example	<code>:CCAR:CONF:ALL:NCON:ABP CC0</code> <code>:CCAR:CONF:ALL:NCON:ABP?</code>
Dependencies	Allocation Break Point is coupled to Number of Component Carriers. For example, Allocation Break Point list will include CC0~CC1 if the number of Component Carriers is 2
Preset	<code>CC0</code>
State Saved	Saved in instrument state
Range	<code>CC0 ... CC15</code>

Configure Comp Carriers

This dialog lets you perform a detailed configuration of your component carriers, including number of carriers, bandwidth, offset, integration bandwidth, and so on.

Configure CCs

Lets you configure bandwidth, frequency offsets, and integration bandwidth, and also lets you exclude certain carriers from the measurement.

More Information

"Measure Carrier" on page 2636	"Sidelink" on page 2637	"Bandwidth" on page 2637	"Freq Range" on page 2638

Number of Component Carriers

This is the same as the control on the menu panel. See ["Number of Component Carriers" on page 2633](#).

Auto Frequency Offset

Changing this value will automatically calculate frequency offset based on a specified set of rules (For the rules, see 5.4.1.1 and 5.4.1.2 in 3GPP TS 38.104 V15.4.0).

Remote Command	<code>[:SENSe]:CCARrier:AFOffset OFF ACRA100K ACRA15K ACRA60K CARA100K CARA15K CARA60K</code> <code>[:SENSe]:CCARrier:AFOffset?</code>																								
Example	<code>:CCAR:AFOF ACRA100K</code> <code>:CCAR:AFOF?</code>																								
Notes	When you change the value to OFF , nothing happens																								
Dependencies	Changing Number of Component Carriers, CC's Bandwidth, or CC's Frequency Range will recalculate frequency offset unless OFF is selected When CC's Frequency Offset is manually changed, this parameter is set to OFF This feature isn't supported when Carrier Allocation is set to Non-Contiguous. When Auto Freq Offset is set to a value other than OFF with Number of Component Carriers = 1, then, CCO Freq Offset is automatically adjusted to 0 Hz																								
Preset	OFF																								
State Saved	Yes																								
Range	The cascading list is shown below <table border="1" data-bbox="402 1115 1406 1669"> <tr> <td>Channel Spacing for</td> <td>Channel Raster</td> </tr> <tr> <td>Adjacent NR Carriers</td> <td>100 kHz</td> </tr> <tr> <td>Carrier Aggregation</td> <td>15 kHz</td> </tr> <tr> <td>Off</td> <td>60 kHz</td> </tr> <tr> <td>Channel Spacing for</td> <td>Channel Raster</td> </tr> <tr> <td>Adjacent NR Carriers</td> <td>100 kHz</td> </tr> <tr> <td>Carrier Aggregation</td> <td>15 kHz</td> </tr> <tr> <td>Off</td> <td>60 kHz</td> </tr> <tr> <td>Channel Spacing for</td> <td>Channel Raster</td> </tr> <tr> <td>Adjacent NR Carriers</td> <td></td> </tr> <tr> <td>Carrier Aggregation</td> <td></td> </tr> <tr> <td>Off</td> <td></td> </tr> </table>	Channel Spacing for	Channel Raster	Adjacent NR Carriers	100 kHz	Carrier Aggregation	15 kHz	Off	60 kHz	Channel Spacing for	Channel Raster	Adjacent NR Carriers	100 kHz	Carrier Aggregation	15 kHz	Off	60 kHz	Channel Spacing for	Channel Raster	Adjacent NR Carriers		Carrier Aggregation		Off

Carrier Allocation

This is the same as the control on the menu panel. See ["Carrier Allocation" on page 2633](#).

Non-Contiguous Break at

This is the same as the control on the menu panel. See ["Non-Contiguous Break at" on page 2634](#).

Measure Carrier

This column sets whether to measure this component carrier or not.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15[:STATe] OFF ON 0 1</code> <code>[:SENSe]:CCARrier[0] 1 ... 15[:STATe]?</code>
Example	<code>:CCAR0 ON</code> <code>:CCAR0?</code>
Notes	The command is used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers
Couplings	Measure Carrier of the CCs that are within "Number of Component Carriers" is set to ON when the action "Apply Preset (to All CCs)" is executed X
Preset	ON
State Saved	Saved in instrument state

Sidelink

Allows the user to select the mode of component carrier from either normal 5G NR uplink or 5G NR V2X sidelink when Direction is Uplink.

- OFF: The component carrier is 5G NR uplink carrier. The 5G NR uplink parameters per carrier are in scope.
- ON: The component carrier is 5G NR V2X sidelink carrier. The sidelink parameters per carrier are in scope.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:SLINk ON OFF 1 0</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:SLINk?</code>
Example	<code>CCAR4:RAD:SLIN ON</code> <code>CCAR4:RAD:SLIN?</code>

3 5G NR Mode
3.10 Monitor Spectrum Measurement

Dependencies	Available when the required license is installed and Direction is Uplink Unavailable when " Bandwidth " on page 2637 is 35 MHz, 45 MHz, 800 MHz, 1600 MHz, and 2000 MHz
Preset	OFF
State Saved	Saved

Bandwidth

This column enables you to set the bandwidth of each component carrier for 5G NR signal (which also determines the total number of resource blocks for Modulation Analysis measurement).

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:BANDwidth B5M B10M B15M B20M B25M B30M B35M B40M B45M B50M B60M B70M B80M B90M B100M B200M B400M B800M B1600M B2000M</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:BANDwidth?</code>
Example	<code>:CCAR4:RAD:STAN:BAND B50M</code>
Dependencies	When " Sidelink " on page 2637 is enabled, 35 MHz, 45 MHz, 800 MHz, 1600 MHz, and 2000 MHz are not available. Selecting any of those BWs turns Sidelink off and the column becomes grayed out
Couplings	This value will be preset to the Bandwidth value in the Meas Standard menu when the action "Apply Preset (to All CCs)" is executed
Preset	B100M
State Saved	Yes
Range	5 MHz 10 MHz 15 MHz 20 MHz 25 MHz 30 MHz 35 MHz 40 MHz 45 MHz 50 MHz 60 MHz 70 MHz 80 MHz 90 MHz 100 MHz 200 MHz 400 MHz 800 MHz 1600 MHz 2000 MHz

Freq Range

This column enables you to set which frequency range to which each component carrier belongs.

Frequency Range affects CC Bandwidth, Max RB Numbers, ACP Measurement Noise Bandwidth and SEM Integ BW.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:FRANge FR1 FR2</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:RADio:STANdard:FRANge?</code>
Example	<code>:CCAR1:RAD:STAN:FRAN FR1</code>
Dependencies	Available selections differ depending on " Bandwidth " on page 2637 as follows: <ul style="list-style-type: none"> - 50 MHz and 100 MHz: FR1 and FR2 - 200 MHz or wider: FR2 only - Other than above: FR1 only

Couplings	This value will be preset to the Frequency Range value in the Meas Standard menu when the action “Apply Preset (to All CCs)” is executed
Preset	FR1
State Saved	Yes
Range	FR1 FR2

Freq Offset

This column sets the component carrier center frequency as offset from the Carrier Ref Frequency.

Remote Command	<code>[:SENSe]:CCARrier<n>:FREQuency:OFFSet <freq></code> <code>[:SENSe]:CCARrier<n>:FREQuency:OFFSet?</code>
Example	<code>:CCAR4:FREQ:OFFS 10MHz</code> <code>:CCAR4:FREQ:OFFS?</code>
Notes	Used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers Frequency Offset of CC0 to CC15 is recommended to be set in ascending order for the best related couplings. You can see whether sub-blocks are configured as you expect in the trace of Monitor Spectrum by turning on Sub-block Attribute under Display > Meas Display. If sub-blocks are not configured correctly, results related to sub-block gap such as ACP/SEM inner offset results are not measured correctly Also, in some cases, make sure if the “Non-Contiguous Break at” parameter is set to the intended value since it’s often left unchanged after Frequency Offset of CCs are changed
Preset	0 Hz
State Saved	Saved in instrument state
Min	-50 GHz
Max	50 GHz

Cell ID Auto

Enable and disable Cell ID auto detection based on SSB.

NOTE

This setting is available for EVM measurement only.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:CID:MODE AUTO MANua1</code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:CID:MODE?</code>
Example	<code>:EVM:CCAR:CID:MODE MAN</code> <code>:EVM:CCAR:CID:MODE?</code>

Preset	MANual
State Saved	Saved in instrument state

Cell ID Value

Specify Cell ID for the component carrier.

NOTE This setting is available for EVM measurement only.

Remote Command	<code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:CID <integer></code> <code>[:SENSe]:EVM:CCARrier[0] 1 ... 15:CID?</code>
Example	<code>:EVM:CCAR4:CID 0</code> <code>:EVM:CCAR4:CID?</code>
Couplings	Invalid when Cell ID Auto is on
Preset	0
State Saved	Saved in instrument state
Min	0
Max	1007

Demod Spectrum

This column determines if the spectrum of the incoming data is mirrored or not. The actual mirroring is accomplished by conjugating the complex time data.

Note that only the Modulation Analysis measurement and Conformance EVM measurement support this feature.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:SPECTrum NORMal INVert</code> <code>[:SENSe]:CCARrier[0] 1 ... 15:SPECTrum?</code>
Example	<code>:CCAR0:SPEC INV</code> <code>:CCAR0:SPEC?</code>
Preset	NORM
State Saved	Yes
Range	Normal Invert

CHP Power Integration Bandwidth

This column specifies the range of integration used in calculating the power in the component carrier s in the CHP measurement.

NOTE This setting is *not* available for EVM.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:CHPower:BANDwidth:INTEgration <freq></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:CHPower:BANDwidth:INTEgration?</code>
Example	<code>:CCAR0:CHP:BAND:INT 20MHz</code> <code>:CCAR0:CHP:BAND:INT?</code>
Couplings	When Bandwidth of the parameter set is changed, this parameter also changes to that value
Preset	100 MHz
State Saved	Saved in instrument state
Min	100 kHz
Max	2000 MHz

ACP Power Integration Bandwidth

This column specifies the Measurement Noise Bandwidth used to calculate the power in the component carriers in the ACP measurement.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:ACPower:BANDwidth[1] 2:INTEgration <freq></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:ACPower:BANDwidth[1] 2:INTEgration?</code>	
Example	<code>:CCAR0:ACP:BAND:INT 20MHz</code> <code>:CCAR0:ACP:BAND:INT?</code>	
Notes	Carrier sub op code, 1 is for BTS, 2 for MS. Default is BTS	
Couplings	When either Bandwidth of the parameter set, Freq Range, or Direction is changed, the value of this parameter also changes as shown in the following table When Freq Range is FR1	
	Bandwidth	Uplink ACP Meas Noise BW (MHz)
		Downlink ACP Meas Noise BW (MHz)
	5 MHz	4.515
	10 MHz	9.375
	15 MHz	14.235
	20 MHz	19.095
	25 MHz	23.955
	30 MHz	28.815
	35 MHz	33.855
	40 MHz	38.895

3 5G NR Mode
3.10 Monitor Spectrum Measurement

45 MHz	43.560	43.575
50 MHz	48.600	48.615
60 MHz	58.320	58.350
70 MHz	68.040	68.070
80 MHz	78.120	78.150
90 MHz	88.200	88.230
100 MHz	98.280	98.310

When Freq Range is FR2

Bandwidth	Downlink ACP Meas Noise BW (MHz)	Uplink ACP Meas Noise BW (MHz)
50 MHz	47.520	47.580
100 MHz	95.040	95.160
200 MHz	190.080	190.20
400 MHz	380.160	380.280
800 MHz	714.24	715.20
1600 MHz	1428.48	1429.44
2000 MHz	1704.96	1705.92

Preset	98.280 MHz 98.310 MHz
State Saved	Yes
Min	100 kHz
Max	2000 MHz

SEM Power Integration Bandwidth

This column specifies the integration bandwidth used to calculate the power in the component carriers in SEM measurement.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:SEMAsk:BANDwidth[1] 2:INTEgration <freq></code> <code>[:SENSe]:CCARrier[0] 1 ... 15:SEMAsk:BANDwidth[1] 2:INTEgration?</code>
Example	<code>:CCAR0:SEM:BAND:INT 20MHz</code> <code>:CCAR0:SEM:BAND:INT?</code>
Notes	Bandwidth sub op code, 1 is for BTS, 2 for MS. Default is BTS
Couplings	When Bandwidth of the parameter set is changed, this parameter also changes to that value
Preset	100 MHz
State Saved	Saved in instrument state

Min	100 kHz
Max	2000 MHz

SCS (Power Meas)

Queries the SCS (Power Meas), the smallest SCS among the enabled SCSs of the selected component carrier set with "[SCS Enabled](#)" on page 1547.

It is used to calculate the aggregated channel bandwidth when Power Reference is set to Aggregated Chan BW.

Power Integration Bandwidth values are not affected even if SCS (Power Meas) is changed.

Remote Command	<code>[:SENSe]:CCARrier[0] 1 ... 15:RGRid:PMSCs?</code>
Example	<code>:CCAR3:RGR:PMSC?</code>
Notes	Query-only Returns one of the following values: NONE, SCS15K, SCS30K, SCS60K, SCS120K, SCS240K, SCS480K, SCS960K

3.10.8.4 Meas Standard

The tab contains settings which let you configure the analyzer to match the measurement standard in your 5G NR signal.

The section entitled "Configure Preset" lets you configure the preset values for the Component Carriers. Once you have set all the controls in the "Configure Preset" section to the desired value, press the "Apply Preset (to all CCs)" control and your presets will be applied to each Component Carrier. Furthermore, any new Component Carriers will take on the same values you have applied.

NOTE

You must press **Apply Preset (to all CCs) or the values on the controls will *not* affect the Component Carriers.**

When you need to configure more parameters, select Advanced Preset Parameters to open a dialog and set advanced parameters for multiple measurements on one screen.

Bandwidth

This control is part of the "Configure Presets" section of **Meas Standard**. It lets you set the "[Bandwidth](#)" on page 2637 of each component carrier in the same way you

would do so using the table in the **Configure Comp Carriers** dialog on the **Component Carriers** tab.

Set the value you want for this control and the other controls in the “**Configure Preset**” section then press **Apply Preset (to all CCs)**.

NOTE You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

Once you have applied this preset value, any new CCs created by setting the **"Number of Component Carriers" on page 2633** will also take on this value.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:CARRier[:BANDwidth] B5M B10M B15M B20M B25M B30M B35M B40M B45M B50M B60M B70M B80M B90M B100M B200M B400M B800M B1600M B2000M</code> <code>[:SENSe]:RADio:STANdard:PRESet:CARRier[:BANDwidth]?</code>
Example	<code>:RAD:STAN:PRES:CARR B5M</code> <code>:RAD:STAN:PRES:CARR?</code>
Dependencies	Selections other than 10 MHz, 20 MHz, 30 MHz, and 40 MHz are unavailable when "Uplink Carrier Mode" on page 2648 is Sidelink - V2X If you change "Uplink Carrier Mode" on page 2648 to Sidelink - V2X when this parameter is set to a value other than 10 MHz, 20 MHz, 30 MHz, or 40 MHz, it is forcefully set to 10 MHz
Preset	When N9085EM0E is not installed and N9085EM4E is installed: B10M Otherwise: B100M

Range	5 MHz 10 MHz 15 MHz 20 MHz 25 MHz 30 MHz 35 MHz 40 MHz 45 MHz 50 MHz 60 MHz 70 MHz 80 MHz 90 MHz 100 MHz 200 MHz 400 MHz 800 MHz 1600 MHz 2000 MHz
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:STANdard:PRESet[:BANDwidth]</code>

Frequency Range

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the **"Freq Range" on page 2638** of each component carrier in the same way you would do so using the table in the **Configure Comp Carriers** dialog on the **Component Carriers** tab.

Set the value you want for this control and the other controls in the “**Configure Preset**” section then press **Apply Preset (to all CCs)**.

NOTE You must press **Apply Preset (to all CCs)** or the value on this controls will *not* affect the Component Carriers.

Once you have applied this preset value, any new CCs created by setting the "Number of Component Carriers" on page 2633 will also take on this value.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:FREQuency:RANGe FR1 FR2</code> <code>[:SENSe]:RADio:STANdard:PRESet:FREQuency:RANGe?</code>
Example	<code>:RAD:STAN:PRES:FREQ:RANG FR1</code> <code>:RAD:STAN:PRES:FREQ:RANG?</code>
Dependencies	Available selections differ depending on Bandwidth as follows: <ul style="list-style-type: none"> - 50 MHz and 100 MHz: FR1 and FR2 - 200 MHz or wider: FR2 only - Other than above: FR1 only <p>When "Uplink Carrier Mode" on page 2648 is Sidelink - V2X, FR2 is unavailable</p>
Preset	FR1
State Saved	Yes
Range	FR1 FR2
Backwards Compatibility SCPI	<code>[:SENSe]:RADio:STANdard:PRESet:FRANge</code>

Duplex Mode

This control is part of the "Configure Presets" section of **Meas Standard**. It lets you set the Duplex Mode of each component carrier. Set the value you want for this control and the other controls in the "Configure Preset" section then press "Apply Preset (to all CCs)".

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the "Number of Component Carriers" on page 2633 will also take on this value.

Two types of Duplex Mode (FDD and TDD) are supported.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DMODE FDD TDD</code> <code>[:SENSe]:RADio:STANdard:PRESet:DMODE?</code>
Example	<code>:RAD:STAN:PRES:DMOD TDD</code> <code>:RAD:STAN:PRES:DMOD?</code>
Dependencies	Available selections depend on Frequency Range When FR1 is selected, both TDD and FDD are available. When FR2 is selected, only TDD is available

Preset	TDD
State Saved	Yes
Range	FDD TDD

SCS

This control is part of the “Configure Presets” section of **Meas Standard**. It lets you set the subcarrier spacing of each component carrier. Set the value you want for this control and the other controls in the “Configure Preset” section then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the **“Number of Component Carriers” on page 2633** will also take on this value.

In 5G, subcarrier spacing is governed by $2^n * 15$ kHz subcarrier spacings (where n is 0, 1, 2, or 3). 15, 30, and 60 kHz subcarrier spacings are used for the lower frequency bands, and 60 and 120 kHz subcarrier spacings are used for the higher frequency bands.

Remote Command	<pre>[:SENSe]:RADio:STANdard:PRESet:SCS SCS15K SCS30K SCS60K SCS120K SCS480K SCS960K [:SENSe]:RADio:STANdard:PRESet:SCS? [:SENSe]:RADio:STANdard:PRESet:SCS:AUTO[:STATe] OFF ON 0 1 [:SENSe]:RADio:STANdard:PRESet:SCS:AUTO[:STATe]?</pre>
----------------	--

Example	<pre>:RAD:STAN:PRE:SCS SCS30K :RAD:STAN:PRE:SCS? :RAD:STAN:PRE:SCS:AUTO 0 :RAD:STAN:PRE:SCS:AUTO?</pre>
---------	--

Notes SCS will not be preset to the selected one until the action “Apply Preset (to All CCs)” is executed

Dependencies Available selections depend on a combination of Bandwidth and Frequency Range as follows

- When “Adjust Limit Mask for Freq Range” is set to a value other than “52.6 < f ≤ 71.0 GH” (FR2-2):

FR	Bandwidth	SCS
FR1	5 MHz	15K*/30K
FR1	10 – 50 MHz	15K*/30K/60K
FR1	60 – 100 MHz	30K*/60K

FR2	50, 100, 200 MHz	60K*/120K
FR2	400 MHz	120K*
- When "Adjust Limit Mask for Freq Range" is set to "52.6 < f ≤ 71.0 GHz" (FR2-2):		
FR	Bandwidth	SCS
FR2	100 MHz	120K*
FR2	400 MHz	120K*/480K/960K
FR2	800, 1600 MHz	480K*/960K
FR2	2000 MHz	960K*
(*) When AUTO is selected, the narrowest available SCS is selected.		
Preset	SCS30K ON	
State Saved	Yes Yes	
Range	u = 0: 15 kHz u = 1: 30 kHz u = 2: 60 kHz u = 3: 120 kHz u = 5: 480 kHz u = 6: 960 kHz Auto Man	

RB Alloc Preset

This control is part of the "Configure Presets" section of **Meas Standard**. It lets you set the Resource Block Allocation Preset of each component carrier. Set the value you want for this control and the other controls in the "Configure Preset" section then press "Apply Preset (to all CCs)".

NOTE

You must press Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.

Once you have applied this preset value, any new CCs created by setting the **"Number of Component Carriers" on page 2633** will also take on this value.

The RB Alloc Preset presets the Resource Block (RB) allocation mapping to a selected predefined pattern in the list:

"Fulfilled-xxx" is to fill out all maximum available RBs in each CC with one specified modulation type (Pi/2-BPSK | QPSK | 16 QAM | 64 QAM | 256 QAM | 1024 QAM), and "DL-NR-TM x.x" is to map RBs in each CC based on the NR Test Model definition according to the section 4.9.2 in 3GPP TS38.141-1 or -2.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:RBAlloc FQPSK FQAM16 FQAM64 FQAM256 FQAM1024 DLTm1DOT1 DLTm1DOT2 DLTm2 DLTm2Q16 DLTm2QPS DLTm2A DLTm2B DLTm3DOT1 DLTm3DOT1Q16 DLTm3DOT1QPS DLTm3DOT1A DLTm3DOT1B DLTm3DOT2 DLTm3DOT3 FPIBPSK DLTm1DOT1P1</code>

Advanced Preset Parameters

Lets you access advanced preset parameters on one screen.

Uplink Carrier Mode

Allows you to select the uplink carrier mode: either Normal Uplink or Sidelink - V2X.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:CARRier NORMa1 V2X</code> <code>[:SENSe]:RADio:STANdard:PRESet:ULINK:CARRier?</code>
Example	<code>RAD:STAN:PRES:ULIN:CARR NORM</code> <code>RAD:STAN:PRES:ULIN:CARR?</code>
Dependencies	Available when the required license is installed and Direction is Uplink
Preset	When N9085EMOE is not installed and N9085EM4E is installed: V2X Otherwise: NORMa1
State Saved	Saved
Range	Normal Uplink Sidelink-V2X

DL FR1 NR-TM Reference Standard Selection

Enables you to select the 3GPP Standard for the DL FR1 TDD NR-TM lists of Resource Block Allocation Preset to be referred to; one is 3GPP TS38.141-1 and the other is 3GPP TS37.141 BC3 CS16/17, which define different TDD burst On/Off profiles.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DLINK:NRTM TS38 TS37CS1617</code> <code>[:SENSe]:RADio:STANdard:PRESet:DLINK:NRTM?</code>
Example	<code>RAD:STAN:PRES:DLIN:NRTM TS38</code> <code>RAD:STAN:PRES:DLIN:NRTM?</code>

Dependencies	Grayed-out when Radio Direction is Uplink
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	TS38
State Saved	Yes
Range	TS38.141-1 TS37.141 BC3 CS16/17

OFDM Type

This control is part of the “Preset for Mod Analysis” section of the Advanced Preset Parameters dialog. It lets you specify the OFDM Type to configure preset values for the Component Carriers:

- CP-OFDM
- DFT-s-OFDM

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

Once you have applied this preset value, any new CCs created by setting the Number of Component Carriers will also take on this value.

This parameter is valid only for the Modulation Analysis measurement.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:OTYPe CPOFdm DFTSofdm</code> <code>[:SENSe]:RADio:STANdard:PRESet:OTYPe?</code>
Example	<code>:RAD:STAN:PRES:OTYP CPOF</code> <code>:RAD:STAN:PRES:OTYP?</code>
Dependencies	DFT-s-OFDM is grayed out when Radio Direction is Downlink DFT-s-OFDM is grayed-out when "Uplink Carrier Mode" on page 2648 is Sidelink - V2X
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	CPOFdm
State Saved	Yes
Range	CP-OFDM DFT-s-OFDM

Adjust Limit Mask for Freq Range

This control is part of the “Preset for ACP, SEM, Spur, Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you specify the frequency range for

preset.

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press *Apply Preset (to all CCs)* or the value on this controls will *not* affect the Component Carriers.

When in Auto, this value changes when f value is changed, where f is the center frequency of Component Carrier 0. Values to be preset will be preset to the values described in the Values for Meas Standard section when Apply Preset is executed.

When in Manual, values to be preset will be preset to the values described in Values or Meas Standard according to this value when Apply Preset is executed.

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command `[:SENSe]:RADio:STANdard:PRESet:ADJJust:FRANge NONE | FT01 | F1T03 | F3T04P2 | F4P2T06 | F6T07 | F24P25T029P5 | F37T040 | F43T048 | F52T071`

Dependencies Available selections depend on Frequency Range and Bandwidth

When Freq Range = FR1

- $f \leq 1.0$ GHz
- $< f \leq 3.0$ GHz
- $3.0 < f \leq 4.2$ GHz
- $4.2 < f \leq 6.0$ GHz
- $6.0 < f \leq 7.125$ GHz

When Freq Range = FR2 and Bandwidth = 50 or 200 MHz

- $24.25 < f \leq 29.5$ GHz
- $37.0 < f \leq 43.5$ GHz
- $43.5 < f \leq 48.2$ GHz

When Freq Range = FR2 and Bandwidth = 100 or 400 MHz

	<ul style="list-style-type: none"> - 24.25 < f ≤ 29.5 GHz - 37.0 < f ≤ 43.5 GHz - 43.5 < f ≤ 48.2 GHz - 52.6 < f ≤ 71.0 GHz <p>When Freq Range = FR2 and Bandwidth = 800 MHz or wider</p> <ul style="list-style-type: none"> - 52.6 < f ≤ 71.0 GHz
Couplings	<p>When in Auto, this value changes when f value is changed, where f is the center frequency of Component Carrier 0</p> <p>Adjust Limit Mask for freq Range will not be preset to the selected one until the action “Apply Preset (to All CCs)” is executed</p>
Preset	<p>Automatically selected</p> <p>The selection depends on which listed range the CC0 center freq is in</p> <p>ON</p>
State Saved	<p>Yes</p> <p>Yes</p>
Range	<p>None f ≤ 1.0 GHz 1.0 < f ≤ 3.0 GHz 3.0 < f ≤ 4.2 GHz 4.2 < f ≤ 6.0 GHz 6.0 < f ≤ 7.125 GHz 24.25 < f ≤ 29.5 GHz 37.0 < f ≤ 43.5 GHz 43.5 < f ≤ 48.2 GHz 52.6 < f ≤ 71.0 GHz</p>

BS Type

This control is part of the “Preset for ACP, SEM, Spur, Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you specify the BS Type for preset:

- 1-C (FR1 Conducted)
- 1-O (FR1 Radiated)
- 2-O (FR2 Radiated)

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command	<pre>[:SENSe]:RADio:STANdard:PRESet:DLINK:BS:TYPE FR1C FR1O FR2O [:SENSe]:RADio:STANdard:PRESet:DLINK:BS:TYPE?</pre>
----------------	---

Example	<code>:RAD:STAN:PRES:DLIN:BS:TYPE FR1C</code> <code>:RAD:STAN:PRES:DLIN:BS:TYPE?</code>
Dependencies	Grayed out when Radio Direction is Uplink
Couplings	Values to be preset will not be preset until the action “Apply Preset (to All CCs)” is executed
Preset	<code>FR1C</code>
State Saved	Yes
Range	1-C (FR1 Conducted) 1-0 (FR1 Radiated) 2-0 (FR2 Radiated)

BS Category

This control is part of the “Preset for ACP, SEM, Spur, Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you specify the BS Category for preset:

- Category A Wide Area BS
- Category B Wide Area BS
- Category A Medium Range BS
- Category B Medium Range BS
- Category A Medium Range BS (Low Power rated)
- Category B Medium Range BS (Low Power rated)
- Category A Local Area BS
- Category B Local Area BS

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

This parameter is valid for the ACP, SEM, Transmit On|Off Power, and Spurious Emissions measurements.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DLINK:BS:CATegory AWARea BWARea AMRRange BMRRange AMRLow BMRLow ALARea BLARea</code> <code>[:SENSe]:RADio:STANdard:PRESet:DLINK:BS:CATegory?</code>

Dependencies	Grayed-out when Radio Direction is Uplink
Couplings	Values to be preset will not be preset to the selected one until the action “Apply Preset (to All CCs)” is executed
Preset	BWARea
State Saved	Yes
Range	Category A Wide Area BS Category B Wide Area BS Category A Medium Range BS Category B Medium Range BS Category A Medium Range BS (Low Power rated) Category B Medium Range BS (Low Power rated) Category A Local Area BS Category B Local Area BS

Assumed Adjacent Channels

This control is part of the “Preset for ACP, Mod Analysis” section of the Advanced Preset Parameters dialog. It lets you set the Assumed Adjacent Channels for carrier configuration preset. Set the value you want for this control and the other controls in the “Configure Preset” section, then press “Apply Preset (to all CCs)” to execute preset. See the Values for Meas Standard section for the parameters to be preset.

Downlink

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:DLINK:ACHannel[:TYPE] NR EUTRa NREutra</code> <code>[:SENSe]:RADio:STANdard:PRESet:DLINK:ACHannel[:TYPE]?</code>
Example	<code>:RAD:STAN:PRES:DLIN:ACH NR</code> <code>:RAD:STAN:PRES:DLIN:ACH?</code>
Dependencies	UTRA and NR+UTRA are grayed-out when " Uplink Carrier Mode " on page 2648 is Sidelink - V2X
Preset	NR
State Saved	Yes
Range	NR (same BW) E-UTRA NR + E-UTRA

Uplink

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:ULINK:ACHannel[:TYPE] NR UTRa NRUTra</code> <code>[:SENSe]:RADio:STANdard:PRESet:ULINK:ACHannel[:TYPE]?</code>
Example	<code>:RAD:STAN:PRES:ULIN:ACH NR</code> <code>:RAD:STAN:PRES:ULIN:ACH?</code>
Preset	NR
State Saved	Yes
Range	NR (same BW) UTRA NR + UTRA

UE Power Class

This control is part of the “Preset for ACP, Mod Analysis” section of the Advanced Preset Parameters dialog. It lets you select the UE Power Class for preset from Power Class 1 to 4.

Set the value you want for this control and the other controls in the “Configure Preset” section, and then press “Apply Preset (to all CCs)”.

NOTE

You must press **Apply Preset (to all CCs) or the value on this controls will *not* affect the Component Carriers.**

This parameter is valid for the ACP and Mod Analysis measurement.

Remote Command	<code>[:SENSe] :RADio:STANdard:PRESet:ULINK:PCLass CLASS1 ... CLASS4</code> <code>[:SENSe] :RADio:STANdard:PRESet:ULINK:PCLass?</code>
Example	<code>:RAD:STAN:PRES:ULIN:PCL CLASS3</code> <code>:RAD:STAN:PRES:ULIN:PCL?</code>
Dependencies	Grayed out when Radio Direction is Downlink Power Class 4 is grayed out when Frequency Range is FR1 Power Class 1, 2, and 4 are grayed-out when "Uplink Carrier Mode" on page 2648 is Sidelink - V2X
Preset	<code>CLASS3</code>
State Saved	Yes
Range	1 2 3 4

Uplink Channel Type

This control is part of the “Preset for Tx On|Off Power” section of the Advanced Preset Parameters dialog. It lets you set the Uplink Channel Type to preset parameters for the Transmit On|Off Power measurement. Set the value you want for this control and the other controls in the “Configure Preset” section, then press “Apply Preset (to all CCs)” to execute preset. See the Values for Meas Standard section for the parameters to be preset.

Remote Command	<code>[:SENSe] :RADio:STANdard:PRESet:ULINK:CTYPe NONE PUS PRA4 PRA160S15 PRA160S30 PRA12 PRA123S15 PRA123S30 SRS PRA0S60 PRA0S120</code> <code>[:SENSe] :RADio:STANdard:PRESet:ULINK:CTYPe?</code>
Example	<code>:RAD:STAN:PRES:ULIN:CTYP PUS</code> <code>:RAD:STAN:PRES:ULIN:CTYP?</code>
Dependencies	Available selections differ depending on the combination of Freq Range and Duplex Mode as follows:

3 5G NR Mode
3.10 Monitor Spectrum Measurement

	<p>When Freq Range is FR1 and Duplex Mode is FDD: - PUSCH, PRACH Config Index4, PRACH Config Index160 and SRS</p> <p>When Freq Range is FR1 and Duplex Mode is TDD: - PUSCH, PRACH Config Index12, PRACH Config Index123 and SRS</p> <p>When Freq Range is FR2: - PUSCH, PRACH Config Index0, SRS</p>
Preset	PUS

Range	PUSCH PRACH Config Index 4 PRACH Config Index 160 (15 kHz SCS) PRACH Config Index 160 (30 kHz SCS) PRACH Config Index 12 PRACH Config Index 123 (15 kHz SCS) PRACH Config Index 123 (30 kHz SCS) PRACH Config Index 0 (60 kHz SCS) PRACH Config Index 0 (120 kHz SCS) SRS

More Advanced Preset Parameters

Enables you to configure more advanced Apply Preset features.

Include RB Alloc Preset for Mod Analysis

Enables you to select whether or not RB Alloc Preset is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EVM:RBALloc OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EVM:RBALloc?</code>
Example	<code>:RAD:STAN:PRES:INCL:EVM:RBAL 1</code> <code>:RAD:STAN:PRES:INCL:EVM:RBAL?</code>
Notes	When Exclude is selected, the indicator “Exclude EVM RB Alloc” appears on the Meas Setup menu panel
Preset	ON
State Saved	Yes

Include Gate Source

Enables you to select whether or not Gate Source is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EGATe:SOURce OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:EGATe:SOURce?</code>
Example	<code>:RAD:STAN:PRES:INCL:EGAT:SOUR 1</code> <code>:RAD:STAN:PRES:INCL:EGAT:SOUR?</code>
Preset	ON
State Saved	Yes

Include Periodic Timer Period

Enables you to select whether or not Periodic Timer Period is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:PERiod OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:PERiod?</code>
Example	<code>:RAD:STAN:PRES:INCL:FRAM:PER 1</code> <code>:RAD:STAN:PRES:INCL:FRAM:PER?</code>
Preset	ON
State Saved	Yes

Include Periodic Timer Sync Source

Enables you to select whether or not Periodic Timer Sync Source is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC[:SOURce] OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC[:SOURce]?</code>
Example	<code>:RAD:STAN:PRES:INCL:FRAM:SYNC 1</code> <code>:RAD:STAN:PRES:INCL:FRAM:SYNC?</code>
Preset	ON
State Saved	Yes

Include Periodic Timer Sync Holdoff

Enables you to select whether or not Periodic Timer Sync Holdoff is preset when Apply Preset is executed.

Remote Command	<code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC:HOLDoff OFF ON 0 1</code> <code>[:SENSe]:RADio:STANdard:PRESet:INCLude:FRAMe:SYNC:HOLDoff?</code>
Example	<code>:RAD:STAN:PRES:INCL:FRAM:SYNC:HOLD 1</code> <code>:RAD:STAN:PRES:INCL:FRAM:SYNC:HOLD?</code>
Preset	ON
State Saved	Yes

Apply Preset (to All CCs)

This is the same as the Apply Preset (to All CCs) control on the Meas Standard menu panel tab under Meas Standard.

See ["Apply Preset \(to All CCs\)" on page 2657](#).

Apply Preset (to All CCs)

When you press this control, parameters of each component carrier are configured to the values set on the ["Bandwidth" on page 2643](#), ["Frequency Range" on page 2644](#), ["Duplex Mode" on page 2644](#), ["SCS" on page 2645](#) and ["RB Alloc Preset" on page 2646](#) controls in the "Configure Presets" section of the menu panel. These values will also be used for any subsequent Component Carriers created.

NOTE

You must press **"Apply Preset (to all CCs)"** or the values on the controls in the "Configure Presets" section of the menu panel will *not* affect the Component Carriers.

Remote Command	<code>[:SENSe] :RADio:STANdard:PRESet:IMMediate</code>
----------------	--

Example	<code>:RAD:STAN:PRES:IMM</code>
---------	---------------------------------

Values for Meas Standard

Meas Standard Setting Parameters for Apply Preset

The following parameters in Meas Setup > Meas Standard let you configure the preset values for Component Carriers.

Direction	Downlink	Uplink
Bandwidth	5, 10, 15, 20, 25, 30, 35, 40, 45, 50, 60, 70, 80, 90, 100, 200, 400, 800, 1600, 2000 MHz	5, 10, 15, 20, 25, 30, 35, 40, 45, 50, 60, 70, 80, 90, 100, 200, 400, 800, 1600, 2000 MHz

Frequency Range	FR1 FR2	FR1 FR2
Duplex Mode	FDD TDD	FDD TDD
SCS	$\mu = 0$ (15 kHz), 1(30 kHz), 2 (60 kHz), 3 (120 kHz), 5 (480 kHz), 6 (960 kHz)	$\mu = 0$ (15 kHz), 1(30 kHz), 2 (60 kHz), 3 (120 kHz), 5 (480 kHz), 6 (960 kHz)
RB Alloc Preset	Fulfilled QPSK, Fulfilled 16 QAM, Fulfilled 64 QAM, Fulfilled 256 QAM, 1024 QAM NR-TM1.1 (port 0), 1.1 (port 1), 1.1 (2 layers),1.2, 2 (64 QAM/16 QAM/QPSK), 2a, 2b, 3.1 (64 QAM/16 QAM/QPSK), 3.1a, 3.1b, 3.2, 3.3	Fulfilled Pi/2-BPSK (for DFT-s-OFDM only), Fulfilled QPSK, Fulfilled 16 QAM, Fulfilled 64 QAM, Fulfilled 256 QAM
UL Carrier Mode	n/a	Normal Uplink, Sidelink-V2X
OFDM Type (for Mod Analysis)	CP-OFDM	CP-OFDM, DFT-s-OFDM
Adjust Limit Mask for Freq Range (for ACP, SEM, PvT and Spur only)	None, $f \leq 1.0$ GHz (FR1), $1.0 < f \leq 3.0$ GHz (FR1), $3.0 < f \leq 4.2$ GHz (FR1), $4.2 < f \leq 6.0$ GHz (FR1), $6.0 < f \leq 7.125$ GHz (FR1), $24.25 < f \leq 29.5$ GHz (FR2), $37.0 < f \leq 43.5$ GHz (FR2), $43.5 < f \leq 48.2$ GHz (FR2), $52.6 < f \leq 71.0$ GHz (FR2)	None, $f \leq 1.0$ GHz (FR1), $1.0 < f \leq 3.0$ GHz (FR1), $3.0 < f \leq 4.2$ GHz (FR1), $4.2 < f \leq 6.0$ GHz (FR1), $6.0 < f \leq 7.125$ GHz (FR1), $24.25 < f \leq 29.5$ GHz (FR2), $37.0 < f \leq 43.5$ GHz (FR2), $43.5 < f \leq 48.2$ GHz (FR2), $52.6 < f \leq 71.0$ GHz (FR2)
BS Type (for ACP, SEM, PvT and Spur only)	1-C (FR1 Conducted), 1-O (FR1 Radiated), 2-O (FR2 Radiated)	n/a
BS Category (for ACP, SEM, PvT, and Spur only)	Cat A Wide Area BS, Cat B Wide Area BS, Cat A Medium Range BS, Cat B Medium Range BS, Cat A Medium Range BS (Low Pr), Cat B Medium Range BS (Low Pr), Cat A Local Area BS, Cat B Local Area BS	n/a
Assumed Adj Channels (for ACP, FR1)	NR (same BW), E-UTRA, NR + E-UTRA	NR (same BW), UTRA, NR+UTRA
UE Power Class (for ACP: FR1 and Mod Analysis: FR2 UE IBE)	n/a	When Freq Range is FR1: Power Class 2, Power Class 3 When Freq Range is FR2: Power Class 1, Power Class 2,

UL Channel Type (for Tx On Off Power)	n/a	Power Class 3, Power Class 4 When Freq Range is FR1: PUSCH, PRACH Config Index 4 (FDD), PRACH Config Index 160 (15 kHz SCS, FDD), PRACH Config Index 160 (30 kHz SCS, FDD), PRACH Config Index 12 (TDD), PRACH Config Index 123 (15 kHz SCS, TDD), PRACH Config Index 123 (30 kHz SCS, TDD), SRS When Freq Range is FR2: PUSCH, PRACH Config Index 0 (60 kHz SCS), PRACH Config Index 0 (120 kHz SCS), SRS
--	-----	--

TS38.521-2 v.17.0.0 (v.2022-09) The following PvT limit requirements are still FFS:

Clause 6.3.3.2, Table 6.3.3.2.5-3: Test Tolerance for OFF power ... still FFS.

Clause 6.3.3.2, Table 6.3.3.2.5-4: Test Tolerance for ON power ... still FFS.

Clause 6.3.3.4, Table 6.3.3.4.5-1: PRACH time mask ... for On power and On power Tolerance ... still FFS.

Clause 6.3.3.6 SRS time mask ... still all FFS.

When "[Apply Preset \(to All CCs\)](#)" on page 2657 is pressed, related measurement parameters and Gate parameters are changed to the values described in the following sections in this chapter.

Reference Standard version and ACP & SEM table indicator

The following reference 3GPP test spec doc with its version number, ACP and SEM table numbers are displayed in the **Advanced Preset Parameters** dialog menu.

e.g.)

(*) ACP reference table selection represents the Relative Limit for Outer Offsets. (The table numbers for Absolute limits, Test Tolerances, and the limits for Inner Offsets/CACLR are not displayed.)

Measurement-Global parameters

The following parameters are configured as preset values.

- ["Configure Component Carriers" on page 2664](#)
- ["Trigger/Gate Parameters" on page 2664](#)

Configure Component Carriers

When Direction = Uplink:

Preset Configuration	Preset Value
UL Carrier Mode	Sidelink
Normal Uplink	Disabled (for all CCs)
Sidelink / V2X	Enabled (for all CCs)

Trigger/Gate Parameters

When executing "Apply Preset", preset the following parameters:

Trigger menu	Parameter	Preset values		
		Downlink (*) FR1	Downlink (*) FR2	Uplink

Trigger	Select Trigger Source (*2)	(no preset)	(no preset)	(no preset)
	Period (Periodic Timer) (*3)	5.000 ms	1.250 ms	10.000 ms
	(Periodic) Sync Source (*4)	RF Burst	RF Burst	RF Burst
Gate Source	Select Gate Source	Periodic	Periodic	Periodic
	Period (Periodic Timer) (*3)	5.000 ms	1.250 ms	10.000 ms
	(Periodic) Sync Source (*4)	RF Burst	RF Burst	RF Burst
Gate Settings	Sync Holdoff	On, 250 us	On, 250 us	On, 250 us
	Gate (*5)	On	On	(no preset)
	Gate Delay	5.000 ms	1.250 ms	(no preset)
	Gate Length	3.700 ms (*6) or 2.700 ms (*6)	927.5 us	(no preset)
Periodic Sync Src	Gate Holdoff	(no preset)	(no preset)	(no preset)
	Select Periodic Trigger Sync Source (*4)	RF Burst	RF Burst	RF Burst
	Absolute Trig Level	(no preset)	(no preset)	(no preset)
Auto Holdoff	Trigger Slope	(no preset)	(no preset)	Positive
	Trig Holdoff	(no preset)	(no preset)	On, 250 us (*7)
	Holdoff Type	(no preset)	(no preset)	Below (*7)

Notes:

(*1) For Downlink case, these values are preset with the Apply Preset action when **"RB Alloc Preset" on page 2646** is any of NR-TM and **"Duplex Mode" on page 2644** is TDD.

(*2) Trigger Source is a separate parameter in each measurement, and is not preset with the Apply Preset action. Note that in the Tx On/Off Power measurement, it is forcefully changed to Periodic when the direction is switched to Uplink or to External 1 when the direction is switched to Downlink except for models with the H1G option. With the H1G option, it is changed to either External 1 (when Info BW \leq 255 MHz) or External 3 (when Info BW \geq 256 MHz) depending on the Info BW determined by the component carrier configuration.

(*3) Periodic Trigger Period and Gate Period are the same/shared parameter, so called "Periodic Timer Period".

(*4) Periodic Trigger Sync Source and Periodic Gate Sync Source are the same/shared parameter.

(*5) Gate is preset to Off with the Apply Preset action when **"Duplex Mode" on page 2644** is FDD.

(*6) Gate Length preset value for DL FR1 depends on **"DL FR1 NR-TM Reference Standard Selection" on page 2357** under the Advanced Preset Parameters menu: 3.700 ms for TS38.141-1 or 2.700 ms for TS37.141 BC3 CS16/17.

(*7) These Trig Holdoff & Holdoff Type settings make the trigger holdoff wait for an OFF power period at least 250 us (in any burst configuration preset in Uplink), and then triggers at the beginning of the power raise timing (with Trigger Slope = Positive) of the Burst ON power as expected. This is to avoid an unexpected triggering with other random power up or down.

Monitor Spectrum

When executing Apply Preset, preset the following parameter:

- Frequency > Settings tab: Execute Adjust Span to Carrier Config action

3.10.8.5 Advanced

Contains controls for setting advanced functions of the instrument.

This tab does not appear in EXM or VXT.

Noise Floor Extension

When this function is **ON**, the expected noise power of the instrument (derived from a factory calibration) is subtracted from the trace data. This will usually reduce the apparent noise level by about 10 dB in low band, and 8 dB in high band (>~3.6 GHz).

Noise Floor Extension works with any RBW, VBW, detector, any setting of Average Type, any amount of trace averaging, and any signal type. It is ineffective when the trace is not smoothed (smoothing processes include narrow VBWs, trace averaging, and long sweep times with the detector set to Average or Peak). It works best with extreme amounts of smoothing, and with the average detector, with the Average Type set to Power.

NOTE

Noise Floor Extension has no effect unless the RF Input is selected, therefore it does nothing when External Mixing is selected.

In those cases where the cancellation is ineffective, it nonetheless has no undesirable side-effects. There is no significant speed impact to having **Noise Floor Extension** on.

The best accuracy is achieved when substantial smoothing occurs in each point before trace averaging. Thus, when using the average detector, results are better with long sweep times and fewer trace averages. When using the sample detector, the VBW filter should be set narrow with less trace averaging, instead of a wide VBW filter with more trace averaging.

See "[More Information](#)" on page 2375.

Remote Command	<code>[:SENSe]:CORRection:NOISe:FLOor ON OFF 1 0</code> <code>[:SENSe]:CORRection:NOISe:FLOor?</code>
Example	<code>:CORR:NOIS:FLO ON</code>
Dependencies	This control only appears in instruments with the NFE or NF2 license installed. In all others, the control does not appear, however the SCPI command will be accepted without error (but will have no effect)
Couplings	When NFE is enabled in any mode manually, a prompt will be displayed reminding you to perform the Characterize Noise Floor operation if it is needed. If NFE is enabled through SCPI and a Characterize Noise Floor operation is needed, an error will be entered in the system error queue
Preset	Unaffected by Mode Preset. Turned off by Restore Mode Defaults
State Saved	No

More Information

The instrument is characterized in the factory (or during a field calibration) with a model of the noise, referred to the input mixer, versus frequency in each band and path combination. Bands are 0 (low band) and 1 through 4 (high band) in a 26.5 GHz instrument, for example. Paths include normal paths, preamp paths, the electronic attenuator, etc.

In most band/path combinations, the noise can be well characterized based on just two parameters and the instrument frequency response before compensation for frequency-dependent losses.

After the noise density at the input mixer is estimated, the effects of the input attenuator, RBW, detector, etc. are computed to get the estimated input-port-referred noise level.

In the simplest case, the measured power (signal plus analyzer noise) in each display point (bucket) is compensated by subtracting the estimated noise power, leaving just the signal power. This is the operation when the detector is Average and the Average Type is set to Power.

In other cases, operation is often not quite as good but still highly effective. With peak detection, the noise floor is estimated based on the RBW and the duration of the bucket using the same equations used in the noise marker function. The voltage of the noise is subtracted from the voltage of the observed signal-plus-noise measurement to compute the estimated signal voltage. The peak detector is one example of processing that varies with detector to give good estimates of the signal level without the analyzer noise.

For best operation, the average detector and the power scale are recommended, as already stated. Peak detection for pulsed-RF can still give excellent effectiveness. FFT analysis does not work well, and does not do NFE well, with pulsed-RF signals, so this combination is not recommended. Negative peak detection is not very useful, either. Sample detection works well, but is never better

than the average detector because it doesn't smooth as well. The Normal detector is a combination of peak and negative peak behaviors, and works about as well as these.

For best operation, extreme smoothing is desirable, as already stated. Using narrow VBWs works well, but using very long bucket durations and the average detector works best. Reducing the number of trace points will make the buckets longer.

For best operation, the power scale (Average Type = Power) is optimum. When making CW measurements in the presence of noise without NFE, averaging on the decibel scale has the advantage of reducing the effect of noise. When using NFE, the NFE does an even better job than using the log scale ever could. Using NFE with the log scale is not synergistic, though; NFE with the power scale works a little better than NFE with log averaging type.

The results from NFE with internal preamp can often be lower than the theoretical noise in a signal source at room temperature, a noise density of -174 dBm/Hz. This is expected and useful behavior, because NFE is designed to report the amount of input signal that is in excess of the thermal noise, not the amount that includes the thermal noise. This can be a useful behavior because thermal noise often interferes with what you want to measure, instead of being part of what you want to measure. Note that NFE is not adequately accurate to always be able to read below kTB.

On instruments with the NF2 license installed, the calibrated Noise Floor used by Noise Floor Extensions should be refreshed periodically. Keysight recommends that the **Characterize Noise Floor** operation be performed after the first 500 hours of operation, and once every calendar year. The key to perform this is located in the **System, Alignments, Advanced** menu. If you have not done this yourself at the recommended interval, then when you turn on Noise Floor Extensions, the instrument will prompt you to do so with a dialog that says:

This action will take several minutes to perform. Please disconnect all cables from the RF input and press Enter to proceed. Press ESC to cancel, or Postpone to postpone for a week

If you Cancel, you will be prompted again the next time you turn NFE on. If you postpone, you will be prompted again after a week passes and you then turn NFE on.

Conversion

Access a menu of functions that enable you to control the frequency conversion type for the current measurement. The following choices are available:

Auto	AUTO	Auto optimizes demodulation quality by selecting single conversion when available. Default value
Single High Side	SHSide	Single downconversion with the LO frequency above the receiver frequency. Not image protected, and available only above 400 MHz or at all frequencies under specific condition

	Single Low Side	SLSide	Single downconversion with the LO frequency below the receiver frequency. Not image protected, and available only above 1.1 GHz
	Image Protect	IPProtect	Double downconversion with pre-selection filtering. Available at all frequencies
Remote Command	[:SENSe]:MONitor:CONversion:TYPE AUTO SHSide SLSide IPProtect [:SENSe]:MONitor:CONversion:TYPE?		
Example	:MON:CON:TYPE AUTO :MON:CON:TYPE?		
Dependencies	This control only appears in the M9391A		
Couplings	The availabilities of SingleHighSide and SingleLowSide depend on the current Sweep Parameters such as Center Freq, Span, Res BW and Points		
Preset	AUTO		
State Saved	Yes		
Range	AUTO SHSide SLSide IPProtect		

Phase Noise Optimization

Access a menu of functions that enable you to control the phase noise optimization for the current measurement. The following choices are available:

	Normal	NORmal	Sets the Synthesizer's Phase Lock Loop to the Normal setting (Best Close-In)
	Best Wide Offset	BWOffset	Sets the Synthesizer's Phase Lock Loop for narrow bandwidth to improve ORFS and EVM measurements for wide modulation
Remote Command	[:SENSe]:MONitor:PNOise:OPTion NORmal BWOffset [:SENSe]:MONitor:PNOise:OPTion?		
Example	:MON:PNO:OPT NOR :MON:PNO:OPT?		
Dependencies	This control only appears in the M9391A		
Preset	NORmal		
State Saved	Yes		
Range	NORmal BWOffset		

3.10.8.6 Global

The controls in this menu apply to all Modes in the instrument.

Some controls (for example, **Global Center Freq**) allow you to switch certain Meas Global parameters to a Mode Global state. These switches apply to all Modes that

support global settings. For example, no matter what Mode you are in when you set **Global Center Freq** to **ON**, it applies to all Modes that support Global Settings.

Other controls (for example, **Extend Low Band**) are actually set in this menu, but apply to all Modes.

Global Center Freq

The software maintains a Mode Global value called **Global Center Freq**.

When **Global Center Freq** is switched **ON**, the current Mode's center frequency is copied into the **Global Center Frequency**, and from then on all Modes that support global settings use the **Global Center Frequency**, so you can switch between any of these Modes and the **Center Freq** will remain unchanged.

Adjusting the Center Freq of any Mode that supports Global Settings, while **Global Center Freq** is **ON**, modifies the **Global Center Freq**.

When **Global Center Freq** is switched **OFF**, the Center Freq of the current Mode is unchanged, but now the Center Freq of each Mode is once again independent.

When **Mode Preset** is pressed while **Global Center Freq** is **ON**, the **Global Center Freq** is preset to the preset Center Freq of the current Mode.

This function is reset to **OFF** when "**Restore Defaults**" on page 2680 (in this tab) is pressed, or when **System, Restore Defaults, All Modes** is pressed.

Remote Command	<code>:INSTrument:COUPle:FREQuency:CENter ALL NONE</code> <code>:INSTrument:COUPle:FREQuency:CENter?</code>
Example	<code>:INST:COUP:FREQ:CENT ALL</code> <code>:INST:COUP:FREQ:CENT?</code>
Preset	Set to OFF on Global Settings , Restore Defaults and System, Restore Defaults, All Modes
Range	ALL NONE
Preset	OFF
Backwards Compatibility SCPI	<code>:GLOBal:FREQuency:CENter[:STATe] 1 0 ON OFF</code> <code>:GLOBal:FREQuency:CENter[:STATe]?</code>

Global EMC Std

When this control is switched **ON**, the current Mode's EMC Std is copied into the **Global EMC Std**, and from then on all Modes that support global settings use the Global EMC Std, so you can switch between any of these Modes and the EMC Std will remain unchanged.

Adjusting the EMC Std of any Mode that supports Global Settings, while Global EMC Std is **ON**, will modify the **Global EMC Std**.

When **Global EMC Std** is switched **OFF**, the EMC Std of the current Mode is unchanged, but now the EMC Std of each Mode is once again independent. When **Mode Preset** is pressed while **Global EMC Std** is **ON**, the Global EMC Std is preset to the preset EMC Std of the current Mode.

This function is reset to **OFF** when "**Restore Defaults**" on page 2680 (in this tab) is pressed, or when **System, Restore Defaults, All Modes** is pressed.

Remote Command	<code>:INSTRument:COUPle:EMC:STANdard ALL NONE</code> <code>:INSTRument:COUPle:EMC:STANdard?</code>
Example	<code>:INST:COUP:EMC:STAN ALL</code> <code>:INST:COUP:EMC:STAN?</code>
Dependencies	Only available if option EMC is installed
Preset	Set to OFF on Global Settings, Restore Defaults and System, Restore Defaults, All Modes
Range	ALL NONE

Extend Low Band

The software maintains a Mode Global value called **Extend Low Band**.

Under the current sweep configuration crossing over two bands, when **Extend Low Band** is turned **ON**, the instrument checks whether one band can cover the whole sweep frequency range or not. If it can, then the instrument locks the band; otherwise, it does nothing (the band crossover occurs).

This function does *not* work when **Band Lock** under **System > Service > Lock Functions** is not -1 (no Band Lock). In that case, **Band Lock** takes priority over **Extend Low Band**.

This function is reset to **OFF** when "**Restore Defaults**" on page 2680 (in this tab) is pressed, or when **System, Restore Defaults, All Modes** is pressed.

This parameter is available for SA, RTSA, WCDMA, LTEAFDD, and LTEATDD Modes.

Remote Command	<code>:INSTRument:COUPle:FREQuency:BAND:EXTend 0 1 ON OFF</code> <code>:INSTRument:COUPle:FREQuency:BAND:EXTend?</code>
Example	<code>:INST:COUP:FREQ:BAND:EXT 1</code> <code>:INST:COUP:FREQ:BAND:EXT?</code>
Dependencies	Only applies to UXA, PXA, MXA and EXA
Preset	Set to OFF by Global Settings > Restore Defaults and System > Restore Defaults > All Modes
Range	ON OFF

Restore Defaults

Resets all the functions in the **Global > Settings** menu to **OFF**. This also occurs when **System, Restore Defaults, All Modes** is pressed.

Remote Command	:INSTrument:COUPle:DEFault
Example	:INST:COUP:DEF
Backwards Compatibility SCPI	:GLOBal:DEFault

3.10.9 Sweep

Accesses controls that enable you configure and control the acquisition of data and the X-axis parameters of the instrument. These controls might include Sweep Time, Continuous/Single, Pause/Resume, X Scale, and number of Points.

3.10.9.1 Sweep/Control

Accesses controls that enable you to operate the sweep and control functions of the instrument, such as **Sweep Time** and **Continuous/Single**.

Sweep Time

Controls the time the instrument takes to sweep the current frequency span in swept measurements, displays the sweep time in swept measurements, and displays the equivalent Sweep Time in FFT measurements.

When **Sweep Time** is in Auto, the instrument computes a time that will give accurate measurements based on other settings, such as RBW and VBW.

You can select a shorter sweep time to improve the measurement throughput (with some potential unspecified accuracy reduction), but the **Meas Uncal** indicator will appear if the sweep time you set is less than the calculated Auto Sweep time.

You can also select a longer sweep time, which can be useful (for example) for obtaining accurate insertion loss measurements on very narrowband filters.

NOTE

Significantly faster sweep times are available with Option FS1.

NOTE

The **Meas Uncal** (measurement uncalibrated) warning is displayed in the Status Bar at the bottom of the screen when the manual Sweep time entered is faster than

the time computed by the instrument's Sweep time equations, that is, the Auto Sweep Time. The instrument's computed Sweep time will provide accurate measurements; if you sweep faster than this your measurements may be inaccurate. A **Meas Uncal** condition may be corrected by returning the Sweep Time to Auto; by entering a longer Sweep Time; or by choosing a wider RBW and/or VBW.

NOTE	<p>On non-sweeping hardware, this control is grayed-out. The value shown on this control is an estimate. It is the measurement's turnaround time, which is the sum of signal acquisition time, FFT time, and other overhead time, to complete the entire span of the measurement. If you need to specify the same "Sweep Time" as you would for sweeping hardware, send <code>[:SENSe] : <meas> : SWEep : TIME <time></code>. The measurement emulates the "Sweep Time" effect, but this emulation is not straightforward, and therefore the behavior is not specified. Instead, we recommend using Minimum Acquisition Time, which provides better control.</p>
Remote Command	<pre>[:SENSe] : <meas> : SWEep : TIME <time> [:SENSe] : <meas> : SWEep : TIME ? [:SENSe] : <meas> : SWEep : TIME : AUTO OFF ON 0 1 [:SENSe] : <meas> : SWEep : TIME : AUTO ?</pre>
Example	<pre>Channel Power :CHP : SWE : TIME 25ms :CHP : SWE : TIME ? Channel Power :CHP : SWE : TIME : AUTO OFF :CHP : SWE : TIME : AUTO ?</pre>
Notes	<p>In the ACP measurement in WCDMA Mode, this parameter is preset by Meas Method selection. Preset values are as follows:</p> <ul style="list-style-type: none"> - IBW: 29 ms - IBWR: 108 ms - FAST 7.5 ms
Dependencies	<p>On non-sweeping hardware, this control is grayed-out, and the Auto/Man toggle disappears. The read-only control shows estimated sweep time In those instruments, "Minimum Acquisition Time" on page 2382 is available</p>
Couplings	<p>Coupled to Span, RBW, VBW, and Sweep Time Rules when Sweep Time is set to Auto; Sweep Time changes when these parameters are changed When you manually set a value when in the Auto state, the state automatically changes to Man</p>
Preset	Automatically Calculated unless noted below

	<p>WCDMA Mode</p> <ul style="list-style-type: none"> - Channel Power: 1.0 msOBW: 32.6 ms - ACP: 29 ms <p>WCDMA Mode: OFF All Other Modes: ON</p>
State Saved	Saved in instrument state
Min	<p>Non-sweeping hardware: N/A Other hardware: Typically 1 ms</p> <p>In the ACP measurement, when Meas Method is Fast Power, the minimum sweep time is 'span' dependent and automatically calculated</p>
Max	<p>Non-sweeping hardware: N/A Other hardware: 4000 s</p>
Annotation	<p>The sweep time is displayed in the lower-right corner of the screen. The number of points is displayed parenthetically, as: Sweep 13.3 ms (1001 points)</p> <p>A “#” mark appears before “Sweep” in the annotation when it is switched from Auto to Manual coupling</p>
Status Bits/OPC dependencies	Meas Uncal is Bit 0 in the STATus:QUESTionable:INTEgrity:UNCalibrated register

Minimum Acquisition Time

Available on non-sweeping hardware.

Specifies the minimum acquisition time for each “chunk” of the measurement result. The instrument automatically divides Span into multiple chunks if needed. Therefore, the total signal acquisition time for the entire Span is:

$$\sim(\sim\text{Minimum Acquisition Time}) * (\text{The number of chunks})$$

When in Auto, this parameter’s value is determined by other parameters, such as **Span**, **RBW** and **VBW**.

You can manually increase this parameter value from this Auto value.

If increased, the instrument acquires signal for the specified time duration for each chunk. It performs additional FFTs, and averages or peak-holds the FFT results for a chunk, depending on **Detector** settings.

Note that the actual acquisition time for each chunk may exceed the **Minimum Acquisition Time** value, in order to satisfy FFT time required by other parameters, and to perform an integral number of FFTs.

Remote Command	<pre>[:SENSe]:<meas>:SWEep:ACQuisition:TIME <time> [:SENSe]:<meas>:SWEep:ACQuisition:TIME? <meas> is the identifier for the current measurement; any one of CHPower- ACPower OBWidth MONitor [:SENSe]:<meas>:SWEep:ACQuisition:TIME:AUTO OFF ON 0 1 [:SENSe]:<meas>:SWEep:ACQuisition:TIME:AUTO? <meas> is the identifier for the current measurement; any one of CHPower- ACPower OBWidth MONitor</pre>
Example	<pre>Channel Power :CHP:SWE:ACQ:TIME 500 ms :CHP:SWE:ACQ:TIME? Channel Power :CHP:SWE:ACQ:TIME:AUTO OFF</pre>
Dependencies	Available only on non-sweeping hardware
Couplings	Coupled to Span , RBW , and VBW when in the Auto state When you manually set a value when in the Auto state, the state automatically changes to Man
Preset	Automatically calculated ON
State Saved	Saved in instrument state
Min	100 ns
Max	4.00 ks

Sweep/Measure

Allows you to toggle between **Continuous** and **Single** sweep or measurement operation. The single/continuous state is Meas Global, so the setting affects all measurements.

The front-panel key **Single/Cont** performs exactly the same function

See ["More Information" on page 2384](#)

Remote Command	<pre>:INITiate:CONTinuous OFF ON 0 1 :INITiate:CONTinuous?</pre>
Example	<pre>Put instrument into Single measurement operation: :INIT:CONT 0 :INIT:CONT OFF Put instrument into Continuous measurement operation: :INIT:CONT 1 :INIT:CONT ON</pre>

Preset	<p>ON</p> <p>Note that :SYST:PRES sets :INIT:CONT to ON, but *RST sets :INIT:CONT to OFF</p>
State Saved	Saved in instrument state
Annunciation	<p>The Single/Continuous icon in the Meas Bar changes depending on the setting:</p> <ul style="list-style-type: none"> - A line with an arrow is Single - A loop with an arrow is Continuous
Backwards Compatibility Notes	<p>For Spectrum Analysis Mode in ESA and PSA, there is no Cont hardkey, instead there is a Sweep Single/Cont softkey. In these instruments, switching the Sweep Single/Cont softkey from Single to Cont restarts averages (displayed average count reset to 1), but does not restart Max Hold and Min Hold</p> <p>X-Series A-models have Single and Cont hardkeys in place of the SweepSingleCont softkey. In the X-Series A-models, if in single measurement, the Cont hardkey (and INIT:CONT ON) switches to continuous measurement, but never restarts a measurement and never resets a sweep</p> <p>X-Series B-models have a Cont/Single toggle control instead of Single and Cont hardkeys, but it is still true that, if in single measurement, the Cont/Single toggle control never restarts a measurement and never resets a sweep</p> <p>For Spectrum Analysis Mode in ESA and PSA, the Single hardkey and the INITiate:IMM switched from continuous measurement to single measurement and restarted sweeps and averages (displayed average count reset to 1), but did not restart Max Hold and Min Hold. In the X-Series, the Restart control and the INITiate:IMM command initiate a sweep/ measurement/ average sequence/hold sequence including MaxHold and MinHold</p> <p>For Spectrum Analysis Mode in ESA and PSA, the Single hardkey restarted the sweep regardless of whether or not you were in an active sweep or sweep sequence. In the X-Series, Restart does this</p> <p>More Information</p> <p>Continuous Mode</p> <p>The instrument takes repetitive sweeps, averages, measurements, etc., when in continuous mode. If in average or Max/Min Hold, and the average/hold count reaches the Average/Hold Num, the count stops incrementing, but the instrument keeps sweeping</p> <p>See the Trace key description under Trace Average for the averaging formula used both before and after the Average/Hold Num is reached. The trigger condition must be met prior to each sweep</p> <p>The type of trace processing for multiple sweeps is set under the Trace key, with choices of Trace Average, Max Hold, or Min Hold</p> <p>Single Mode</p> <p>The instrument takes a single sweep when in Single mode, or if in average or Max/Min Hold, or if there is a Waterfall window displayed, it takes multiple sweeps until the average/hold count reaches the Average/Hold Num, then the count stops incrementing, and the instrument stops sweeping</p> <p>See the Trace key description under Trace Average for the averaging formula used. The trigger condition must be met prior to the sweep</p> <p>The type of trace processing for multiple sweeps is set under the Trace key, with choices of Trace Average, Max Hold, or Min Hold</p>

If the instrument is in **Single** measurement mode, pressing the **Cont/Single** toggle control does not zero the count and does not cause the sweep to be reset; the only action is to put the instrument into Continuous measurement operation.

If it is already in continuous sweep:

- `:INIT:CONT 1` has no effect
- `:INIT:CONT 0` places the instrument in Single Sweep but has no effect on the current sequence until $k = N$, at which point the current sequence will stop and the instrument will go to the idle state

See the "[Restart](#)" on page 2683 control description for details of `:INIT:IMMEDIATE`.

If the instrument is already in **Single** sweep, `:INIT:CONT OFF` has no effect.

If the instrument is already in **Single** sweep, then pressing **Cont/Single** in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing **Cont/Single** does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the instrument is waiting for a trigger). Even though pressing **Cont/Single** in the middle of a sweep does not restart the sweep, sending `:INIT:IMM` does reset it.

If the instrument is in **Single** sweep, and *not* Averaging/Holding, and you want to take one more sweep, press **Restart**.

If the instrument is in **Single** sweep, *and* Averaging/Holding, and you want to take one more sweep without resetting the Average trace or count, go to **Meas Setup** and increment the average count by 1 by pressing the **Step Up** key while **Average/Hold Num** is the active function. You can also do this by sending `:CALC:AVER:TCON UP`.

Restart

Restarts the current sweep, or measurement, or set of averaged/held sweeps or measurements. If you are Paused, pressing **Restart** performs a Resume.

The front-panel key **Restart** performs exactly the same function.

The **Restart** function is accessed in several ways:

- Pressing the **Restart** key
- Sending `:INIT:IMM`
- Sending `:INIT:REST`

See "[More Information](#)" on page 2386

Remote Command	<code>:INITiate[:IMMEDIATE]</code> <code>:INITiate:REStart</code>
Example	<code>:INIT:IMM</code> <code>:INIT:REST</code>
Notes	<code>:INIT:REST</code> and <code>:INIT:IMM</code> perform exactly the same function
Couplings	Resets average/hold count k. For the first sweep overwrites all active (update = on) traces with new current data. For application modes, it resets other parameters as required by the measurement
Status Bits/OPC dependencies	This is an Overlapped command The <code>STATus:OPERation</code> register bits 0 through 8 are cleared, <i>except</i> bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous The <code>STATus:QUESTionable</code> register bit 9 (<code>INTEgrity</code> sum) is cleared The <code>SWEEPING</code> bit is set The <code>MEASURING</code> bit is set
Backwards Compatibility Notes	For Spectrum Analysis Mode in ESA and PSA, the Restart hardkey and the <code>:INIT:REST</code> command restart trace averages (displayed average count reset to 1) for a trace in Clear Write , but did not restart Max Hold and Min Hold In X-Series, the Restart hardkey and the <code>:INIT:REST</code> command restart not only Trace Average , but MaxHold and MinHold traces as well For wireless comms modes in ESA and PSA, the Restart hardkey and the <code>:INIT:REST</code> command restart every measurement, which includes all traces and numeric results. There is no change to this operation

More Information

The **Restart** function first aborts the current sweep or measurement as quickly as possible. It then resets the sweep and trigger systems, sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is in the process of aligning when a **Restart** is executed, the alignment finishes before the restart function is performed.

Even when set for **Single** operation, multiple sweeps may be taken when **Restart** is pressed (for example, when averaging/holding is on). Thus when we say that **Restart** "restarts a measurement", depending on the current settings, we may mean that it:

- Restarts the current sweep
- Restarts the current measurement
- Restarts the current set of sweeps if any trace is in Trace Average, Max Hold or Min Hold

- Restarts the current set of measurements if Averaging, or Max Hold, or Min Hold is on for the measurement

If there is no Average or Max/Min Hold function (no trace in Trace Average or Hold, or **Average/Hold Num** set to 1), and no **Waterfall** window is being displayed, a single sweep is equivalent to a single measurement. A single sweep is taken after the trigger condition is met; and the instrument stops sweeping once that sweep has completed. However, with **Average/Hold Num** >1, and at least one trace set to Trace Average, Max Hold, or Min Hold, or a **Waterfall** window being displayed, multiple sweeps/data acquisitions are taken for a single measurement. The trigger condition must be met prior to each sweep. The sweep is stopped when the average count k equals the number N set for **Average/Hold Num**.

Once the full set of sweeps has been taken, the instrument goes to the idle state. To take one more sweep without resetting the average count, increment the average count by 1, by pressing the **Step Up** key while **Average/Hold Number** is the active function, or by sending the remote command `:CALC:AVER:TCON UP`.

Trace Update

The numeric results are not blanked at any time during the restart cycle.

For slow sweeps (see **Trace Update** section in **Trace/Detector**), the traces are updated real-time during the sweep. There may be a special circumstance in application mode measurements where an exception is made and the traces and/or results need to be blanked before displaying the new results.

To summarize, the following list shows what happens to the trace data on various events:

Event	Trace Effect
Clear/Write pressed (even if already in Clear/Write)	Set to mintracevalue
Max Hold pressed (even if already in Max Hold)	Set to mintracevalue
Min Hold pressed (even if already in Min Hold)	Set to maxtracevalue
Trace Average pressed (even if already in Trace Average)	Trace data unaffected but start new sweep/avg/hold
